5. In a dynamo-electric machine, the combination of two armatures and an electro magnet or magnets having pole-pieces on opposite sides of the machines, said armatures and magnet or magnets being relatively arranged substantially as described, whereby each of said armatures is located and adapted to be rotated within the inductive field of only one magnetic pole, substantially as set forth.

6. The combination, in a dynamo-electric machine, of two armatures and an electro magnet or magnets having pole-pieces on opposite sides, each of said armatures being located and adapted to rotate in the inductive field of only one pole of a magnet, said armatures and electro-magnets being connected substantially as described, whereby the circuit is direct from one armature to the other and through all the helices of the magnets successively, substantially as shown and described.

7. The combination of two armatures on independent shafts and an electro magnet or magnets having pole-pieces on opposite sides of said armatures, the latter being located and adapted to rotate each within the inductive field of only one magnetic pole, said armature and magnet or magnets being in the same circuits, substantially as set forth.

259,792. CAR-COUPLING. JAMES BARRETT, Bucyrus, Ohio, assignor of one-third to Benjamin Dennis, same place. Filed Mar. 31, 1882. (No model.)

Claim.—1. In a car-coupling, the combination, with the draw-head A, provided with the tapering recess *f*, the recess *f'*, the slot *h*, and the passage *g*, of the coupling-pin C, the hinged lever D, the connecting-chain *i*, and the cross-bar *j*, substantially as and for the purpose set forth.

2. In a car-coupling, the combination, with the draw-head A, provided with the recess *f*, the recess *f'*, the slot *h*, and the passage *g*, the lever D, and connecting-chain *i*, of the coupling-pin C, having the flattened and extended head *c*, substantially as and for the purpose set forth.

259,793. HARNESS-SADDLE. GEO. E. BAUSER and CHAS. C. BAUSER, Bonaparte, Iowa. Filed Nov. 10, 1881. (Model.)

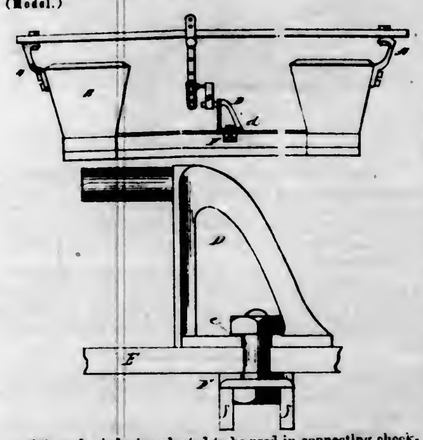
Claim.—In a saddle-tree, the combination, with the center piece, E, having slots D and grooves L, and the side pieces, A, having tenons C, cross-pins N, and grooves M, of the cap-plate J, hav-

259,793.

ing ribs K, substantially as herein shown and described, whereby the hinging connections of the center piece and side pieces are covered and protected, as set forth.

259,794. CRYSTALLIZED ANHYDROUS GRAPE-SUGAR. ANNO BERR, Jersey City, N. J. Filed Mar. 13, 1882. (No specimens.)

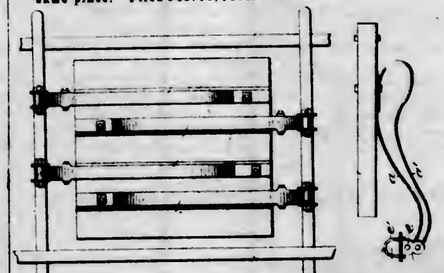
Brief.—The process of making this sugar is described in Letters Patent Nos. 250,333 and 250,334, dated December 6, 1881.



Claim.—As a new article of manufacture, crystallized anhydrous grape-sugar, free from any trace or flavor of alcohol or its impurities, produced from a watery solution of grape-sugar.

259,795. BAKER'S OVEN. JOHN BARDEN, Buffalo, N. Y. Filed Apr. 13, 1882. (No model.)

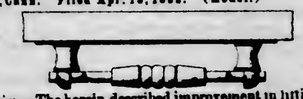
Claim.—The combination, with the oven C, provided with a front opening, *i*, having a door, I, of grates K K, arranged in the floor of the oven on opposite sides of the opening *i*, and provided with ash-pits *k*, having doors *k'*, flues *m*, provided with dampers *n*, and a chimney, H, having a damper, *o*, substantially as set forth.



259,796. DEVICE FOR CONNECTING CHECK-ROWERS TO PLANTERS. JAMES E. BRAIRD, Decatur, Ill., assignor to Chambers, Boring & Quinlan, same place. Filed Nov. 3, 1881. (Model.)

Claim.—1. A device adapted to be used in connecting check-rower attachments to the seed-boxes of corn-planters, consisting of a single casting, A, the lower end of which can be bolted to the seed-box, and provided at its upper end with a rounded top, *b*, provided with a slot, *c*, substantially as and for the purposes specified.

2. The reversible plate F, provided with slots *i* for the passage of attaching-bolts, and on one side with projections *f*, the opposite side being plane or smooth for the purpose of attaching the casting D to shake-bars of varying thickness, said plate being reversible to bring either its plane or smooth face or its projections against the under side of the shake-bar, substantially as and for the purpose described.



259,797. VEHICLE-SPRING. CHARLES C. BISHOP and JOSEPH A. BISHOP, Nashville, Tenn., assignors to Caswell C. Bishop, same place. Filed Feb. 16, 1882. (No model.)

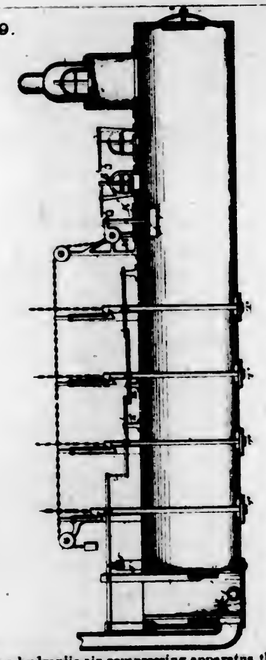
Claim.—1. An equalizing trussed spring for side-bar and other vehicles, composed of an upper and a lower plate formed in one continuous piece, and having at its outer end an eye integral with both plates; substantially as described.

2. The combination, with a vehicle-spring composed of the plates *a a'*, of a bearing-plate, F, arranged between the outer ends of said spring-plates, and having flanges *f*, adapted to clasp the same, substantially as shown and described.

259,798. HANDLE. ELI J. BLACKMAN, Bridgeport, assignor to the Benedict & Burnham Manufacturing Company, Waterbury, Conn. Filed Apr. 15, 1882. (Model.)

Claim.—The herein-described improvement in lifting-handles, consisting of the bow-shaped handle, its ends turned to the right and left to form pivots, combined with sockets to receive the said pivots, one or both of said sockets constructed with a shoulder, *b*, at substantially right angles to the axis of the socket, and so as to form stops for the handle, substantially as specified.

259,799. HYDRAULIC AIR-COMPRESSING APPARATUS. JAMES M. BOIS, East Aurora, N. Y. Filed Feb. 14, 1882. (No model.)



Claim.—1. In a hydraulic air-compressing apparatus, the combination, with two cylinders, of gates located between the cylinders and a water-supply, connection between said gates, floats located within the cylinders and arranged to actuate a system of levers to release the discharge-valves, and systems of levers actuated by the discharge-valves and arranged to close the gate of one cylinder and open the gate and close the discharge-valves of the other cylinder.

2. In a hydraulic air-compressing apparatus, the combination, with two cylinders, of gates located between the cylinders and a water-supply, connection between said gates, floats located within the cylinders and arranged to actuate a system of catch-levers, discharge-valves provided with stems adapted to engage with said catch-levers, and systems of levers actuated by the discharge-valves and arranged to close the gate of one cylinder and open the gate and close the discharge-valves of the other cylinder.

3. In a hydraulic air-compressing apparatus, the combination, with two cylinders, of gates located between the cylinders and a water-supply, connection between said gates, floats located within the cylinders and arranged to actuate a system of levers to release the discharge-valves, and a system of levers pivoted to the stems of the said discharge-valves and arranged to close the gate of one cylinder and open the gate and close the discharge-valves of the other cylinder, substantially as set forth.

4. In a hydraulic air-compressing apparatus, the combination, with two cylinders, of gates located between the cylinders and a water-supply, gate-levers to which the gates are attached, connection between said gate-levers, floats arranged to actuate a system of levers to release the discharge-valves, and a system of levers connecting the stems of the discharge-valves with the free ends of the gate-levers.

259,799.

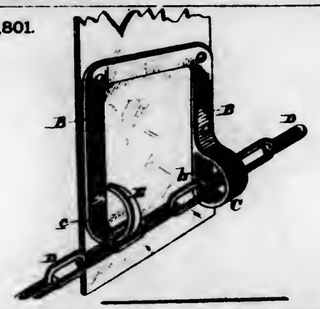
5. In a hydraulic air-compressing apparatus, the combination, with two cylinders, of gates located between the cylinders and a water-supply, discharge-valves provided with valve-stems, and connections between the stems of the corresponding valves of the two cylinders.

6. In a hydraulic air-compressing apparatus, the combination, with a primary reservoir and a secondary reservoir located below it, of two cylinders, gates located between them and the secondary reservoir, and connection between said gates, of floats located within the cylinders and arranged to actuate a system of levers to release the discharge-valves, and systems of levers actuated by the discharge-valves and arranged to close in one impulse the gate of one cylinder and to open the gate and close the discharge-valves of the other cylinder.

259,800. MEANS FOR SECURING COVERS UPON CANS. EPAMINONDAS BOTTENBERG, Asteria, Ill. Filed Mar. 14, 1882. (Model.)

Claim.—1. The plate-attachment hooks E and the can having flange *d*, in combination with the cover B, having a central upward projection, as and for the purpose specified.

2. The plate D, formed with the lips *i*, in combination with the attachment-wires E, formed with the loops *h* and hooks *k k*, substantially as described.

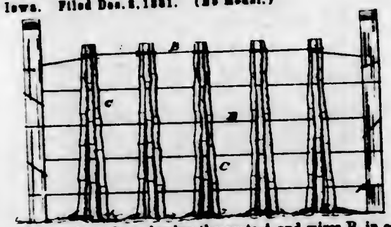


3. In a hermetically-sealing fruit-can, the cover B, plate D, looped and hooked attachment-wires E, packing C, and projection *d* on the body of the can, constructed and combined for joint operation substantially as shown and described.

259,801. BACK-STRAP FOR PLOW-HARNESS. GEORGE H. BOWEN, Talbott, Texas. Filed Dec. 13, 1881. (No model.)

Claim.—1. A back-strap attachment for plow-harness, consisting of a piece of metal adapted to be attached to the back-strap and provided with an eye at one end and with a hook at the other end.

2. The combination, with the back-strap A, made of any suitable material, of the metallic attaching devices B, each consisting of a rectangular frame, by which the device is secured to the back-strap, an eye or loop, C, for the passage of the chain, and a hook, E, adapted to engage the trace and hold the said back-strap in position.



259,801.

259,802. PROCESS OF OBTAINING FERROCYANIDES FROM GAS-LIQUOR. HENRY BOWER and WILLIAM L. ROWLAND, Philadelphia, Pa.; said Rowland assignor to said Bower. Filed Apr. 22, 1882. (No specimens.)

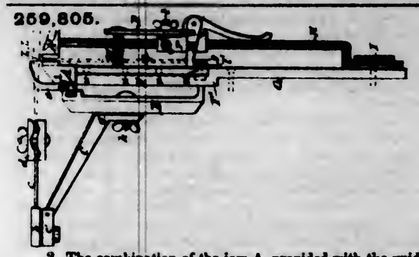
Claim.—The improvement in the process of obtaining ferrocyanides from ammoniacal liquor treated with iron and lime, as described, which consists in extracting the ferrocyanides from the sediment of the liquid by the addition of an alkaline salt.

259,803. WIRE FENCE. LEVI HERSHEY, Mount Vernon, Iowa. Filed Dec. 8, 1881. (No model.)

Claim.—1. A fence having the posts A and wires B, in combination with rows of growing cornstalks C, substantially as set forth.

2. A fence having the posts A and wires B, in combination with rows of growing cornstalks C and rows of growing cornstalks bent over to form braces D for the rows of cornstalks C, substantially as herein shown and described.

259,804. CAR-COUPLING. EUGENE H. BROOKS, Jenkinsville, Ga. Filed Apr. 24, 1882. (No model.)



Claim.—1. The combination, with the draw-heads and the coupling-link, of the obliquely-moving pawls, grooved and beveled as described, and the coupling-pins, shouldered near their lower ends, the whole arranged, substantially as set forth, to drop and engage the coupling-pins and hold them when fully down against accidental removal.

2. In combination with the draw-heads, the obliquely-movable pawls or dogs grooved at their lower ends, and adapted to hold the pins in a partly-elevated position and the link in horizontal position during coupling, substantially as and for the purpose specified.

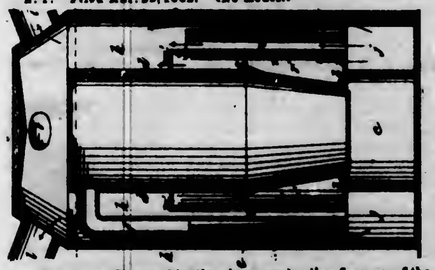
259,805. SAW SHARPENING AND CLAMPING DEVICE. ALBA W. BROUGHTON, Jordan, N. Y. Filed Mar. 9, 1882. (No model.)

Claim.—1. The combination, with a saw-filing clamp or vise, of an arm extended from the stationary jaw and adapted to slide bodily in a line parallel with the face of said jaw, a sleeve or guide connected to the free end of said arm, a rod or bar sliding longitudinally in said guide, and a file-clamp connected to said rod, all combined as set forth.

259,805.

2. The combination of the jaw A, provided with the guide *a*, the shank B, movably connected with said guide, the arm C, extended radially from said adjustable upon the shank B, the hinged extension *c'*, pivoted guide *b*, reciprocating rod *c*, and the file-clamp *d*, as shown and described.

3. The combination of the jaw A, provided with the guide *a*, the sliding shank B, provided with the vertical recess *e* and slot *f*, the arm C, having the rounded shoulder *g'*, resting in the recess *e*, the clamp-bolt *h*, the hinged arm-extension *c'*, pivoted guide *b*, reciprocating rod *c*, and the file-clamp *d*, all substantially as shown and set forth.



4. The combination, with the jaw A and the shank B, supporting the arm C, and file-guiding device connected therewith, of the nut *n*, connected to the shank B, and the screw-rod *l*, shouldered on the jaw A, as described and shown.

5. The combination, with the jaw A and the shank B, supporting the arm C, and file-guiding device connected therewith, of the nut *n*, pointer *o*, and adjusting-screw *l*, combined and operating as described, for the purpose set forth.

6. The combination, with the jaws A A', of the post *g*, provided with holes *u*, the sliding block *r*, clamp *m*, cam-lever *p*, and bolt *s*, as described and shown.

7. The combination, with the jaws A A', of the clamp *m*, adapted to be set at various heights on the supporting-arms of said jaws, the block *r*, provided with the stud-pin *t*, and the arm D, provided with the slot *v* and with the arbor *w*, all as described and shown, for the purpose set forth.

259,806. HEATING-FURNACE. GEORGE B. BROWN, Corning, N. Y. Filed Mar. 23, 1882. (No model.)

Claim.—1. The combination, in an air-heating furnace, of the auxiliary radiator *e* with the fender *m*, both supported upon the ash-pit casting *b*, and forming the spaces *n* and *n'*, opening directly into the bottom cold-air chamber, *j*, and directly into the top hot-air chamber, *k*, substantially as described.

2. The separate auxiliary radiator *e*, provided with the inner wall foot-brackets *o o*, in combination with the oblong ash-pit casting *b* and the outer casing, *h*, whereby the said separate auxiliary radiator is both supported and held in place over the bottom cold-air-inlet spaces, *r*, substantially as herein set forth.

3. The separate fender *m*, provided with the brackets *q*, in combination with the separate auxiliary radiator *e* and the oblong ash-pit casting *b*, the said fender being supported upon foot-brackets *o o* and upon the front part of the said ash-pit casting, and held in place, substantially as herein set forth.

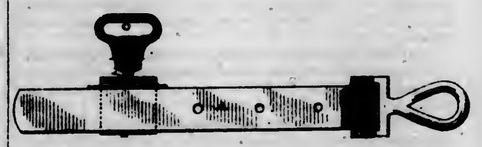
4. The auxiliary radiator *e*, surrounding the fire-pot, tapering from its base to its top, closed at top and bottom, and communicating at one end with the combustion-chamber and at the other end with the smoke-pipe *g*, both said connections being made at the narrow top of said radiator, substantially as described, for the purpose specified.

5. The fender *m*, having the inward-projecting top plate, *m'*, in combination with the brackets *o o* and *q* and the ash-pit casting *b*, whereby said fender is loosely supported to form the air-heating spaces *n n'*, open at top and bottom, as described.

6. The combination of the fender *m*, having the cap-plate *m'*, and supported as described, with the ring-plate *s*, the fire-pot *e*, and the radiator-drum *d*, substantially as herein set forth, and for the purpose specified.

7. The combination, in an air-heating furnace, of the auxiliary radiator *e*, having separate entrance and exit connections with the fire-pot radiator *d*, and the smoke-pipe *g*, with the ash-pit casting *b*, and the valved communications of the said auxiliary radiator with the said ash-pit, substantially as described, for the purpose specified.

8. The auxiliary radiator ends and the top of the ash-pit casting, provided with corresponding openings, in combination with the valves *u*, arranged within said radiator ends, substantially as described, for the purpose specified.



9. In combination, the auxiliary radiator *e* and the fender *m*, the oblong ash-pit casting *b*, the fire-pot radiator *d*, the outer casing, *h*, the valved communications between the auxiliary radiator and the ash-pit, and dampers arranged one in the ash-pit door and one in the smoke-pipe, and adapted to be controlled from the room above the furnace, substantially as described.

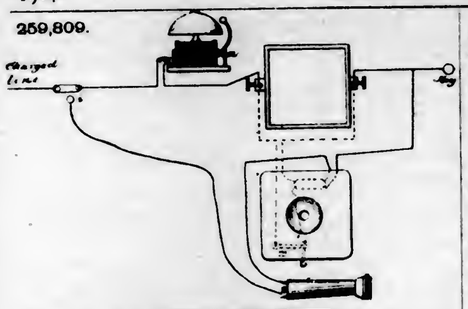
259,807. DUSTING-BRUSH. MARY S. W. BROWN, Boston, Mass. Filed Mar. 24, 1882. (No model.)

Claim.—In a knit duster, the combination, substantially as hereinbefore set forth, of the band A, knit with loops, as described, and made into a tubular shape, and the block B, adapted to receive a suitable handle, and to which the band A is secured with the loops outside, as and for the purposes set forth.

259,808. TRACE-SUPPORTER. JOHN BRUNSON, Berrien Springs, assignor of one-half to Abraham J. Kinsely, Benton Harbor, Mich. Filed Apr. 3, 1882. (Model.)

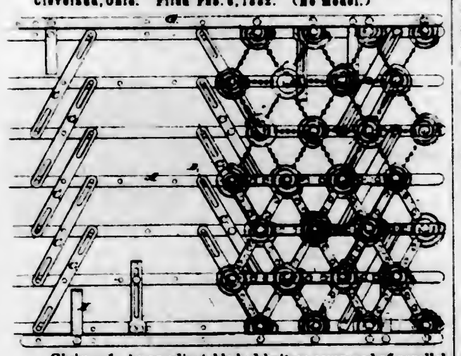
Claim.—1. In a trace-supporter, the combination of the trace, a metallic slide applied thereto, a fastening device for holding the slide in place, and a supporting-strap, substantially as shown.

2. The combination, in a trace-supporter, of a slide, a set-screw, and a ring or loop which is swiveled upon the upper end of the screw, substantially as set forth.



3. The combination, in a trace-supporter, of the slide, which is adjustable back and forth upon the trace, a set-screw which is passed through the upper part of the slide, and which is provided with a handle below its upper end, and a ring or loop which is swiveled upon the upper smooth portion of the screw, and which can be used to tighten or loosen the screw, substantially as specified.

4. The combination, in a trace-supporter, of a slide which is adjustable back and forth upon the trace, a set-screw fastening the slide in place, a plate which is interposed between the top of the trace and the lower end of the set-screw, a ring or loop which is swiveled upon the upper part of the set-screw, and a strap or other suspending device, substantially as shown and described.

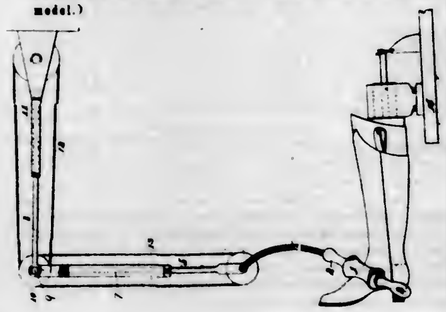


259,809. MEANS FOR UTILIZING SECONDARY BATTERIES ON TELEPHONE-CIRCUITS. CHARLES H. BUELL, New Haven, Conn. Filed Apr. 20, 1882. (No model.)

Claim.—A telephone-station apparatus provided with a transmitter and having its secondary circuit arranged for connection with the main line, a secondary electric pile or battery arranged for connection with a main line in a manner to be charged by an electric current flowing over said main line, and means for directing the current of said secondary electric pile or battery over the primary circuit of the transmitter.

259,809.

259,810. SPRING BED-BOTTOM. WORTHINGTON BULKLEY, Cleveland, Ohio. Filed Feb. 6, 1882. (No model.)



Claim.—1. In an adjustable bed-bottom composed of parallel supporting-slats connected by transverse strips, each confined to a slat, the combination of extended longitudinal slots formed in said strips at their intersection with the adjacent slats with pins projecting from said slats and fitted with rigid heads or adjustable nuts adapted to confine the strips, substantially as and for the purpose set forth.

2. In an adjustable bed-bottom, the combination, with its supporting-slats and one or more slotted transverse strips, of threaded pins and nuts, whereby the bed-bottom may be secured at any desired width, substantially as described.

3. In an adjustable bed-bottom, the combination with its parallel supporting-slats, of diagonal strips, each pivoted at its center to one of the slats and jointed to one or more of the adjacent slats at either end by means of a pin on the one passing into a longitudinal slot in the other, substantially as shown, and for the purpose set forth.

4. In an adjustable bed-bottom constructed of parallel slats carrying spiral springs, and made adjustable to and from each other, an upper outer rail, upheld over the longitudinal slats on each side of the bed-bottom upon interposed independent curved or C-shaped springs, substantially as described.

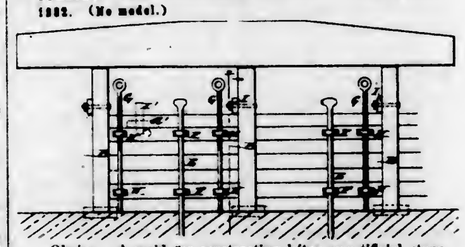
259,811. APPARATUS FOR TREEING BOOTS. JETHAM H. BURBANK, North Brookfield, Mass. Filed Oct. 29, 1881. (No model.)

Claim.—1. The combination of the toothed segments P, the perforated rim L, through which the teeth pass, the toggles R, connected by the segments P to the hub J and to the segments T, and means for protruding the teeth beyond the periphery of the rim and retracting the teeth, substantially as described.

2. In a traction or road engine, the reaches I, provided with cams and a toggle-connection for extending the reaches, in combination with transporting-wheels having radially-movable traction-teeth adjustable by means of said cams, substantially as described.

3. The combination of the perforated rim L, the traction-teeth N, fixed to radially-expansible segments P, the spokes K, having conical ends *d*, the springs coiled around these ends, the segments T, provided with projections *g*, the toggles R, and the cams on the adjustable reaches I, substantially as and for the purpose set forth.

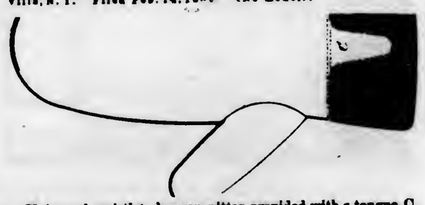
Claim.—1. In an apparatus for treeing boots, the rub-stick having a central rotary portion or "rubber," and a handle at each end, whereon the said rubber has bearing independently of other support, in combination with universally-flexible driving mechanism for rotating the said rubber, substantially as and for the purpose set forth.



2. A rub-stick for finishing the uppers of boots and shoes, having a central revolving portion or rubber, a handle at each end, whereon the said rubber has bearing, and a rotary flexible driving shaft passing through one of the said handles and rigidly attached to the said rubber, substantially as and for the purpose set forth.

3. In combination with a rub-stick longitudinally flexible between its handles, a universally-flexible driving mechanism for rotating the said rub-stick, substantially as and for the purpose set forth.

4. In combination with a rotary rub-stick and its flexible driving-shaft, the universal jointed mechanism for transmitting motion from the counter-shaft, substantially as shown and described.



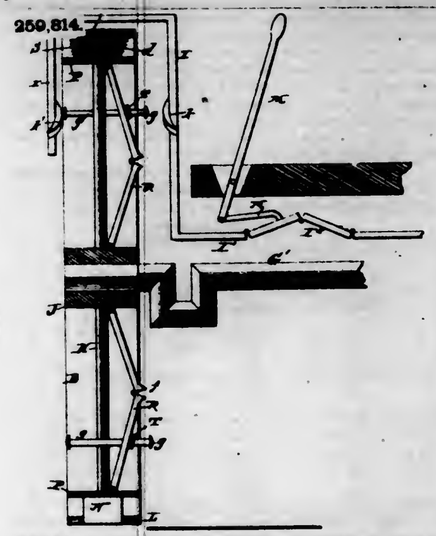
5. The mechanism for transmitting power from the counter-shaft to the tool being operated, consisting of a fixed bracket, 11, horizontal rod 8, swiveled therein, socket 7, hinged to rod 8, rod 5, swiveled in socket 7, spindle 4, flexible shaft 3, and suitable belts and pulleys, all arranged substantially as and for the purpose set forth.

259,812. CONSTRUCTING BÉTON OR ARTIFICIAL-STONE CURBING. JAMES BURNS, San Antonio, Tex. Filed Apr. 21, 1882. (No model.)

Claim.—A mold for constructing béton or artificial-stone curbing, which has sides held by clamps at top, at the sides by bolts and eyes E F, and made movable vertically by screw-bolts G, working in eyes H, as and for the purpose specified.

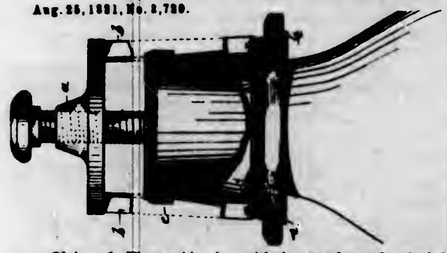
259,813. GLOVE OR MITTEN. HARVEY W. BURR, Gloversville, N. Y. Filed Feb. 14, 1881. (No model.)

Claim.—A wristlet glove or mitten provided with a tongue, C, extending from the middle of the rear edge of the palm to, or nearly to, the rear edge of the wristlet and sewed down to the latter, as and for the purpose specified.



259,814. TRACTION-ENGINE. NEWTON W. BUSHNELL, Minoa, N. Y. Filed Feb. 14, 1882. (No model.)

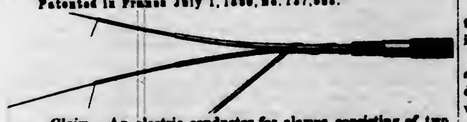
Claim.—1. The combination of the toothed segments P, the perforated rim L, through which the teeth pass, the toggles R, connected by the segments P to the hub J and to the segments T, and means for protruding the teeth beyond the periphery of the rim and retracting the teeth, substantially as described.



2. In a traction or road engine, the reaches I, provided with cams and a toggle-connection for extending the reaches, in combination with transporting-wheels having radially-movable traction-teeth adjustable by means of said cams, substantially as described.

3. The combination of the perforated rim L, the traction-teeth N, fixed to radially-expansible segments P, the spokes K, having conical ends *d*, the springs coiled around these ends, the segments T, provided with projections *g*, the toggles R, and the cams on the adjustable reaches I, substantially as and for the purpose set forth.

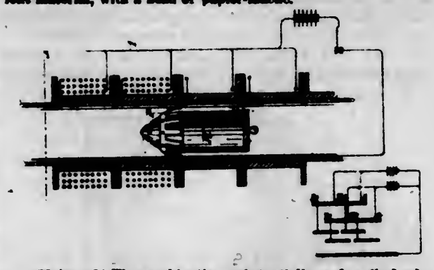
259,814.



259,815. APPARATUS FOR STOPPING BOTTLES. PIERRE JACQUES CARNIER, Issy, near Paris, France. Filed Oct. 11, 1881. (No model.) Patented in France Apr. 13, 1881, No. 143,277; in Belgium Aug. 23, 1881, No. 55,618, and in England Aug. 25, 1881, No. 3,730.

Claim.—1. The combination, with the capsule *c* and swiveled screw *f*, of the cap-nut *a*, having elastic arms *b*, with end hooks, *b'*, and foot-pieces *b²*, and the bottle-neck ring *d*, having projections *i*, and an inclined interior surface between said projections, whereby the capsule may be clamped to the mouth of the bottle, as described.

2. The combination, with the hook-ended bands *b b'*, having foot-pieces *b²*, of the ring *d*, having a projection, *i*, between the adjacent ends of its interior inclines, whereby the hooks *b'* cannot escape from one incline to another.



259,816. ELECTRIC CONDUCTOR FOR FIRE-ALARMS. P. A. CHARPENTIER, Paris, France. Filed Dec. 6, 1881. (No model.) Patented in France July 1, 1880, No. 137,568.

Claim.—An electric conductor for alarms, consisting of two insulated copper wires and an intermediate wire of tin or other easily-fusible metal, whereby the fusing of the tin wire will solder together the two copper wires connected with the two poles of a battery, thereby close the electric circuit and promptly sound an alarm in said circuit, as described.

259,817. ELECTRO-MAGNETIC DISPATCH-TUBE. CHARLES A. CHESMAN, New York, N. Y. Filed Feb. 25, 1882. (No model.)

Brief.—The tube is composed of a number of solenoids arranged end to end, with contact-strips inside of the tube so formed, one contact-strip being continuous and the other broken into sections of the same length as the solenoids. The continuous strip is connected with one pole of a generator and the broken strip has each section connected by a branch wire with the other pole. The carrier is provided at its forward end with a circuit-closer. The carrier is formed of a cylinder of sheet-iron, steel, or equivalent material, with a head of papier-maché.

Claim.—1. The combination, substantially as described, of a tube or guideway, a series of surrounding coils or helices, an electric generator one pole of which is connected by a series of branch wires, as shown, constantly connected to one end of each of the independent coils or helices, the other ends of said coils or helices being left open-circuited, a traveling carrier moving within the coils, and means, as described, for completing the circuit between the open end of each coil or helix as the carrier moves, and a common return wire or conductor permanently connected to the other pole of the battery.

2. The combination, substantially as described, of a tube or guideway, a series of surrounding coils or helices one end of each of which is permanently connected to a common wire leading from one pole of a galvanic battery or generator, contact plates, points, or strips upon the inside of the tube connected to the other ends of the coils, a traveling carrier provided with contact springs or brushes, and a conductor leading from the opposite pole of the battery and extending throughout the tube or guideway, between which conductor and the open end of each of the coils or helices in succession the circuit is completed as the carrier progresses.

3. The combination, substantially as described, of a series of coils or helices, contact plates or points in the magnetic field of said coils, a traveling carrier, and contact springs or brushes of a magnetizable material connected to said carrier.

4. The combination, substantially as described, of a tube or guideway, a series of surrounding coils or helices, insulated contact plates, points, or strips connected to said coils in succession, and arranged upon the inside of the tube or carrier, a continuous strip, plate, or surface, also arranged upon the inside of the tube, and a circuit-closing spring or brush mounted upon the traveling carrier for completing the circuit between the successive insulated plates and the continuous plate or surface.

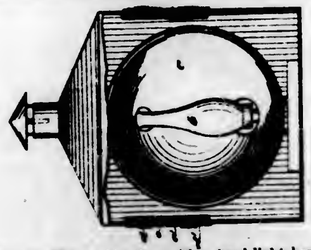
5. The combination, substantially as described, of a tube or guideway, a series of surrounding helices, and a carrier moving within the same, consisting of a hollow cylinder of sheet-iron, steel, or equivalent material, provided with means whereby it may be opened and closed to allow of the insertion and retention of the articles to be transported.

6. The combination of the hollow sheet-iron cylinder, the conical head of non-magnetic material, and the circuit-closing springs or brushes attached to the head.

7. A cylindrical carrier for an electro-magnetic dispatch-tube, provided with circuit-closing springs or brushes completely encircling said carrier.

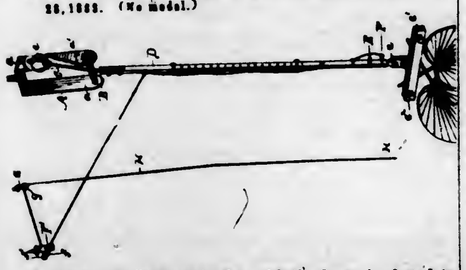
8. The combination of the hollow cylinder H, of steel or iron, the conical head I, of papier-maché, and the annular circuit-closing spring or brush P.

9. The combination, with an electro-magnetic dispatch-tube or carrier, of two or more sets of enveloping helices arranged, as described, so that the coils of one set will overlap or break joint with the coils of the others.



259,818.

259,818. COMBINED FOOT WIPER AND SCRAPER. ALFRED S. CLARK, New Orleans, La. Filed Feb. 28, 1882. (No model.)

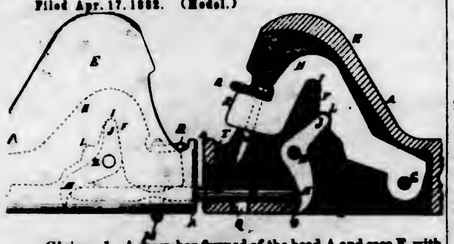


Claim.—The base B, combined by means of the pintles C C with the side brushes, A A, and scraper carrying double brush D, whereby the scraper and brushes may be held in the relative positions shown and the side brushes may be turned, as described.

259,819. HEAD-LIGHT FOR LOCOMOTIVES. GEORGE CLAY, Palatka, Fla. Filed Nov. 3, 1881. (No model.)

Claim.—The combination, with a head-light having a lamp and reflector, arranged as described, of the pairs of side-glasses, *d d d' d'*, provided with hinged shutters *e e'* and bolts *f*, the latter engaging with attachments on the head-light for keeping said glasses covered or uncovered, for the purpose specified.

259,820. FAN. MOSES COBBY, Hallettsville, Tex. Filed Mar. 28, 1882. (No model.)



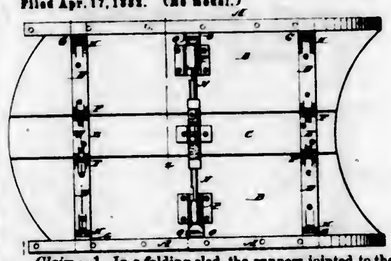
Claim.—1. The combination, with the frame A, adapted to be secured to a ceiling or frame-work, and provided with the pivot-bolt B, of the fan-bar D and rod C, provided with an adjustable weight, *c*, at its upper end, and passing through the pivot-bolt and secured to the upper end of the fan-bar at an angle thereto, substantially as described, and for the purpose set forth.

2. The combination, with the bar D, slotted at its lower end, arm *e*, pivoted in said slot by the bolt E, plate *d'*, secured to said arm, and plate *d''*, provided with set-screws, of the removable pin F, adapted to be inserted in holes in the lower end of the fan-bar, substantially as described, and for the purpose set forth.

3. The combination, with the frame A, provided with the pivot-bolt B, rod C, provided with the adjustable weight *c*, passing through the pivot-bolt and secured to the upper end of the fan-bar at an angle thereto, adjustable fan-bar D, arm *e*, clamp *d' d''*, and cord H, substantially as described.

259,821. CAR-COUPLING. STEPHEN C. COLLINS, Oregon, Mo. Filed Apr. 17, 1882. (Model.)

Claim.—1. A draw-bar formed of the head A and case E, with the chamber B and opening C, to adapt it to receive a tumbler and trip-dog, as shown and described.



2. The tumbler H, pivoted at G in the rear of draw-bead chamber B, and having notches I L, in combination with the lever trip-dog having the arms J N, arranged as shown and described.

3. The draw-bar having vertically-extending tumbler-chamber B behind the opening C for the link, with front opening into said chamber above the shoulder T, and provided with tumbler H, having lifting-bar R, connected with said tumbler through said opening, substantially as described.

4. The combination of lifting-rod R, with the tumbler H, and coupling-pin M, substantially as described.

5. The setting and tripping dog K, having setting-arm J, and overbalancing-arm N, for self-setting and for tripping said arm J, and being combined with tumbler H, substantially as described.

259,822. FOLDING SLED. JOHN A. CRUWELL, Aurora, Ind. Filed Apr. 17, 1882. (No model.)

Claim.—1. In a folding sled, the runners jointed to the outer portions, B, of the top, and the said outer portions, B, jointed to the middle portion, C, of said top, to fold substantially in the manner described.

2. The combination, with the runners A and top B C, of beams having joints F and H, substantially as described.

3. The combination, with the top B C and the runners A of a folding sled, of knees G, jointed to the beams, substantially as described.

4. In a sled having the knees G jointed to the beams, the said knees having extension I, in combination with joint H and shoulder J of the beams, substantially as described.

5. In a sled having the knees G jointed to the beams, the runners A, having dowel-pins K, in combination with top B, having sockets for said pins, substantially as described.

6. In a sled having sectional beams D and E, connected by joints F, the said joints F having shoulders L, substantially as described.

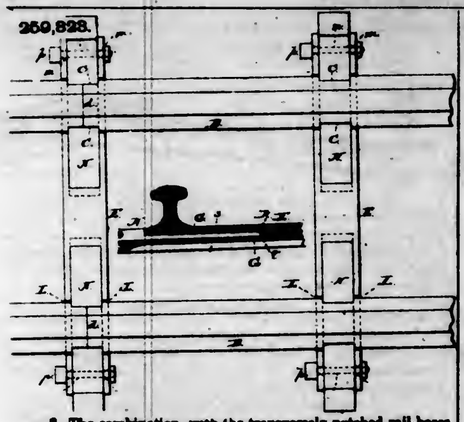
7. In a sled having sectional beams D and E, connected by joints F, the said joints F having shoulders L, in combination with abutting edges of sections B C of the top, substantially as described.

8. The combination, with runners A, jointed to the top B, of elbows O, adjustably arranged with the said runners and top, substantially as described.

9. The combination, with runners A, jointed to the top B, of the adjustable elbows O and the stud-clip Q, substantially as described.

10. The combination, with runners A, jointed to the top, and the top B C, jointed together, of shaft N, having elbows O, and being jointed at M, substantially as described.

11. The combination, with runners A, jointed to top B C, jointed together, of shaft N, having elbows O and being jointed at M, and also being arranged to shift in its bearings P, substantially as described.

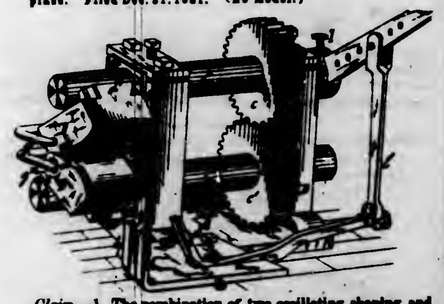


12. The shaft N, having elbows O and joints M, in combination with runners A, jointed to top B, and with top B C, jointed together, the said joints M being arranged to lock the top in the open condition, and the elbows to lock the runners open and to unlock the same, according as the said shaft is shifted from one position to another, substantially as described.

259,823. RAILROAD CROSS-TIE. ALFRED L. CUMBERLERY, Marshfield, Mo. Filed Jan. 23, 1882. (No model.)

Brief.—An under-recessed iron tie has longitudinal key-seats of dovetail form in cross-section in its upper surface and provided with transversely-notched rail-bearings. Longitudinal rail-keys having side channels are adapted to engage with the notched bearings. The keys are secured by a pin passing through perforations in the recessed walls.

Claim.—1. The under-recessed iron tie E, having longitudinal key-seats G in its upper surface, notched rail-bearings L in the walls of the key-seats, and longitudinal rail-keys N in said seats, engaging the bases of the rails, substantially as specified.



259,823.

2. The combination, with the transversely-notched rail-bases B and the iron ties having the longitudinal key-seats G and notched rail-bearings L, of the rail-keys N, having side channels, *c*, to engage the notches in the rail-bases and the fastening-pin *p*, substantially as specified.

3. The combination, with an iron tie, E, having a longitudinal key-recess, G, and transverse rail-seats L in the walls thereof, of a longitudinal key, N, in said recess engaging the rail-base, substantially as specified.

259,824. MACHINE FOR MAKING AXES. HENRY DANFEN, Pittsburg, Pa., assignor of one-half to Henry J. Danfen, same place. Filed Dec. 31, 1881. (No model.)

Claim.—1. The combination of two oscillating shaping and welding dies having the adjacent faces curved on arcs of circles whose centers are the same as their respective shafts and whose peripheries meet, each of said dies having a cavity or matrix corresponding to one-half of an ax-poll, substantially as and for the purpose specified.

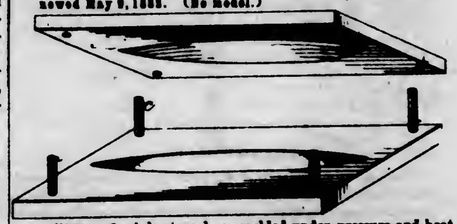
2. The combination, with the two oscillating welding and shaping dies having matrices corresponding to an ax-poll or like article to be produced, of the mandrel-guide arranged between the axes of the dies to maintain and guide the mandrel parallel with the axes of the dies, substantially as and for the purpose specified.

3. The combination, with two oscillating shaping and welding dies having matrices adapted to form an ax-poll or like article, of a mandrel-guide having guide-arms which extend in a horizontal plane between the axes of the dies and on the two sides of the dies and are adapted to guide both ends of the mandrel, substantially as and for the purpose specified.

4. The combination, with oscillating dies D D, of forked mandrel-guide *g' g'*, having its tines bent outward, as at *g² g²*, substantially as and for the purpose specified.

5. The ax-poll stripper composed of the fork or uprights and pivoted elbow-lever, the several parts relatively arranged and combined to coact, substantially as and for the purpose specified.

6. The combination of the uprights *h h*, the elbow-lever L, pivoted in front of and between the same, the crank-arm adjustably attached to the die-shaft, and the interposed adjustable link for connecting the elbow-lever and crank-arm, substantially as and for the purpose specified.



7. The combination of two oscillating shaping and welding dies having the adjacent faces curved on arcs of circles whose centers are the same as their respective shafts and whose peripheries meet, each of said dies having a matrix or cavity corresponding to one-half of an ax-poll, the walls of said matrices having mandrel-notches in the line of the eye of the ax-poll, substantially as and for the purpose specified.

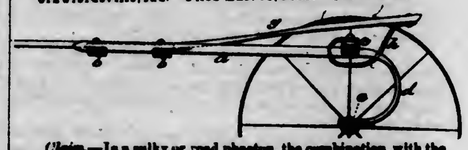
259,825. ELECTRICAL CONNECTION FOR BURGLAR-ALARMS. JOB A. DAVIS, Philadelphia, Pa. Filed Nov. 11, 1881. (No model.)

Claim.—The recessed base-plate A, contact-plate B, grooved stem C *c*, and slotted contact-plate B', connected with the groove *c* of the stem C, all combined and operating substantially as and for the purpose set forth.

259,826. MOLDED BOAT AND OTHER ARTICLES FROM CELLULOID, CELLULOSE, AND OTHER PLASTIC MATERIALS. MICHAEL F. DAVIS, Portland, Me. Filed May 23, 1866. Renewed May 9, 1882. (No model.)

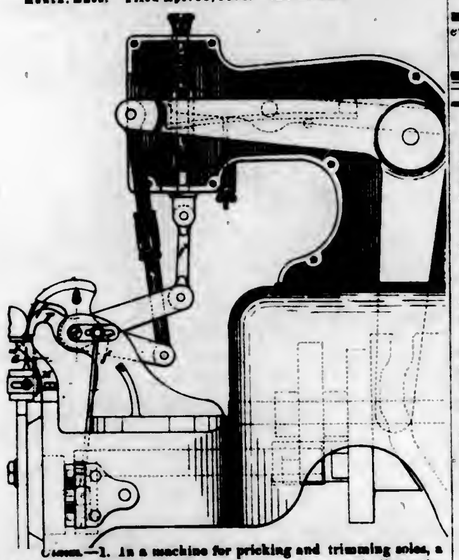
Claim.—1. A boat made or molded under pressure and heat from celluloid, cellulose, or other plastic materials, substantially in the manner and for the purposes set forth.

2. A boat made or molded under pressure and heat from wood, paper, celluloid, cellulose, linen or wood, and spermaceti, or a combination of these or any of them, substantially as described.



259,827. STEAM-VALVE. CLARENCE S. DEVES, Ashley, Pa. Filed Mar. 16, 1882. (No model.)

Claim.—1. The plug B, having a central groove, *c*, and supplementary grooves *c'*, adapted to admit steam into the space behind the plug, and with notches *c²*, arranged around its small end, substantially as and for the purpose set forth.



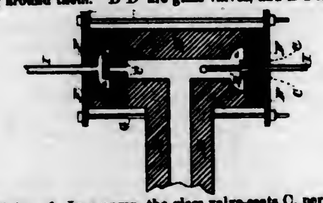
2. The combination of the casing A, having entrance-ports *a'*, inlet-ports *a²*, steam-space *a³*, cylinder-ports 2, and exhaust-cavity 3, head *a⁴*, stuffing-flange *a⁵*, and notches *c²* with the plug B, having a hollow head, *b'*, which projects from the large end of the cylinder and has attached to it the rocker-arm *b²*, which connects with the actuating machinery, having steam recess or inlet *b³*, cut-off ports *b⁴*, and exhaust-cavity *b⁵*, and notches *c*, *c'*, and *c²*, all arranged to operate substantially as shown and described.

259,828. SULKY. PIERRE DUBERTY and JAMES COLLINS, Crawfordsville, Ind. Filed Mar. 11, 1882. (No model.)

Claim.—In a sulky or road phaeton, the combination, with the boot side bars, *a a*, secured by their boot ends *d* to the axle, and the transverse bars *b b c*, of the inclined seat-supporting spring-bars *g g*, bolted to the bars *b b*, and the springs A, connecting said spring-bars to the rear transverse bar, substantially as specified.

259,829. MACHINE FOR PRICKING AND TRIMMING SOLES. HENRY L. DRAW, Rockland, assignor to John W. Hart, Weymouth, Mass. Filed Apr. 18, 1882. (No model.)

Claim.—1. In a machine for pricking and trimming soles, a presser-foot supported on journals attached eccentrically to the axle of the upper awl and knife, so that by turning this axle the presser-foot will be moved toward or from the awl and knife, substantially as and for the purposes hereinbefore set forth.



2. The combination, substantially as hereinbefore set forth, of the presser-foot journaled eccentrically to the axle of the upper awl and knife and the adjustable feed-regulating lever, to which the journals of the presser-foot are connected, so that the position of the presser-foot in relation to the upper awl will be changed when the length of the feed is changed, as and for the purposes specified.

3. The combination, substantially as hereinbefore set forth, of a straight awl and a straight knife and a curved awl and a curved knife, operating to puncture the soles and trim them nearly to their finished shape, as set forth.

4. In a machine for pricking and trimming soles, a sole-rest provided with a groove or slit to receive the lip of the channel, substantially as and for the purposes specified.

259,830. PUMP-VALVE GEAR. PIERRE C. DU BOIS, San Francisco, Cal. Filed Dec. 2, 1881. (No model.)

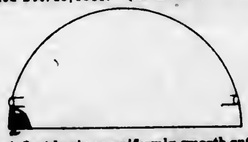
Brief.—C are glass valve-seats having elastic washers E sprung around them. D D′ are glass valves, and B a lead T.

Claim.—1. In a pump, the glass valve-seats C, perforated in the center, in combination with the inclosing elastic rings E, substantially as and for the purpose herein described.

2. In a pump, the valve mechanism consisting of the inlet and discharge passages B, formed in a T, as shown, in combination with the glass valve-seats C, inclosed by the elastic rings E, the disk H, and the end flanges, F, and securing-bolts G, substantially as herein described.

3. The improvement in pumps for moving corrosive gases under pressure, consisting of the perforated glass valve-seats C, and the glass valves D D′, in combination with the elastic rings E, surrounding the seats and forming a support and packing, so that the valve-seats may be secured in the chamber without breaking, substantially as herein described.

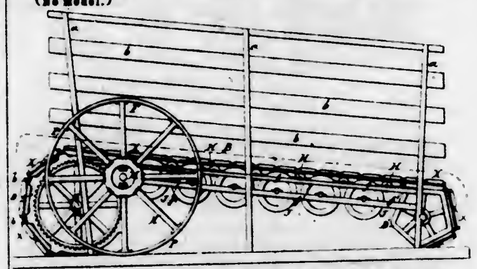
259,831. PIPE FOR UNDERGROUND ELECTRIC WIRES. PATRICK J. DUGGAN, Boston, Mass., assignor of one-half to George T. McLaughlin, same place. Filed Feb. 18, 1882. (No model.)



Claim.—In a pipe for underground electric wires, the combination of the main sections, man-hole pipes C A, having inclined terminals, and intermediate inclined sections, C′ C′ C′, connecting the said man-hole sections and the main sections, whereby a continuous conduit is secured free from all abrupt angles, substantially as described, and for the purpose set forth.

259,832. DISINFECTANT LAUNDRY BLUING. DANIEL DENSCOMB, New York, N. Y. Filed Mar. 3, 1882. (No specimens.)

Claim.—1. A bleaching, bluing, and disinfecting compound consisting of soluble blue, borax, gum-arabic, and a disinfecting agent, in substantially the proportions specified.



2. A bleaching, bluing, and disinfecting compound consisting of soluble blue, borax, gum-arabic, and carbolic acid, of substantially the proportion specified, mixed together, dried, and provided with an outer protective coating of some adhesive substance to prevent the evaporation of the carbolic acid, as set forth.

259,833. FLOAT FOR STEAM APPARATUS AND OTHER PURPOSES. FREDERICK C. DURANT and DAVID EDWARS, New York, N. Y. Filed Dec. 23, 1881. (No model.)

Claim.—A float having a uniformly-smooth outer surface, and composed of two half-shells, which are united by a male and female screw-thread, one of said half-shells being provided with an internal re-enforcing rim, *c*, substantially as shown and described.

259,834. HORSE-POWER. JOHN ELLIS, Pottstown, Pa., assignor to Ida K. B. Ellis, same place. Filed Apr. 24, 1882. (No model.)

Claim.—1. The combination of the chain the links of which have plates *d* with the supporting-wheels J, having grooved or U-shaped rims with flanges *h*, as set forth.

2. The combination of the chain the links of which have plates *d* with the supporting-wheels J, having grooved rims, and the intermediate supporting-wheels, H, as set forth.

3. The combination of the chain having links with plates *d* and ribs *i*, and the wheels adapted to support the plates *d* and form lateral guides for the ribs *i*, as set forth.

4. The combination of the links having interlocking lugs *p* and *s* with the connecting-pins having recesses *t*, as set forth.

5. The combination of the links having lugs *b* with the transverse lugs or strips X, bearing against said lugs *b*, as set forth.

6. The combination of the transverse lugs or strips X, having recesses in the under side, with the links having ribs *m*, adapted to said recesses, as set forth.

7. The combination of the endless chain with the sprocket-wheels having sprockets *b*, with guard-plates *w* on the outside, as set forth.

8. The fly-wheel having hollow spokes of V-shaped cross-section, as specified.

9. The combination, in a fly-wheel, of the hub M, having tapered and undercut recesses, the spokes N, having plates *x*, adapted to said recesses, and plates *y* at the outer ends, and the rim P, bolted to said plates *y*, as set forth.

10. The combination of the hub M, having tapered recesses and a rib, *z*, and the spokes N, having plates *x*, adapted to said recesses, and held in place therein by upturned portions of the rib *z*, as set forth.

259,835. LEAD-SHOT-POLISHING MACHINE. JOHN FARRELL, Pittsburg, Pa. Filed Apr. 13, 1882. (No model.)

Claim.—1. The horizontal rotary drum A, of conical form, in combination with segmental chute C, secured to the smaller end for continuous feed, a discharge-spout, E, at the larger end, and a series of pins, *a*, projecting into the interior of the drum in spiral direction around its surface, substantially as set forth.

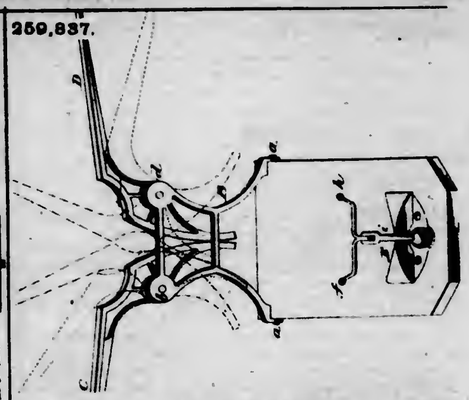
2. A shot-polishing drum, A, of wood, in combination with a segmental chute, C, at the receiving end for continuous feed, a rim, *a*, partially closing the delivery end for retaining a definite body of shot within the drum at its discharge end, and a series of wooden pins, *s*, projecting into the interior of the drum at intervals over its surface, substantially as set forth.

3. A rotary shot-polishing drum, A, of conical form, having a series of spirally-arranged pins, *s*, projecting into its interior, in combination with segmental receiving-chute C at the smaller end, discharge-spout E at the larger end separate from the drum, and a rim, *a*, in the delivery end of the drum, for retaining a quantity of shot therein, substantially as set forth.

259,836. HILLSIDE-PLOW. JOHN H. FELDMANN, St. Louis, Mo. Filed Feb. 14, 1882. (No model.)

Brief.—A pair of shares hinged under the point and arranged to slide together to or from the standard, each forming alternately the landside and mold-board.

Claim.—1. In a hillside-plow, the combination of concave mold-boards E E, having straight landsides e^2 e^2 in one piece therewith, the mold-boards being over the landsides, as shown and described.



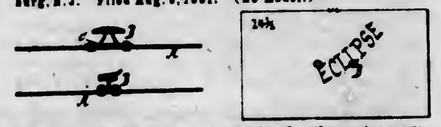
2. In a hillside-plow, the combination of concave mold-boards E E, having straight landsides e^2 e^2, the share D, shoe C, and rod F, the mold-boards with their landsides being hinged to the shoe, as set forth.

3. In a hillside-plow, the combination of mold-boards E E, having landsides e^2 e^2, share D, hinged to the mold-boards, rod F, sleeves e^3 e^3, and screw-bolt e^4, as set forth.

259,837. BOOK-SUPPORT. MYRON W. FILLEY, ALBERT S. TRAL, and ROBERT FIELDS, New Haven, Conn. Filed Feb. 14, 1882. (No model.)

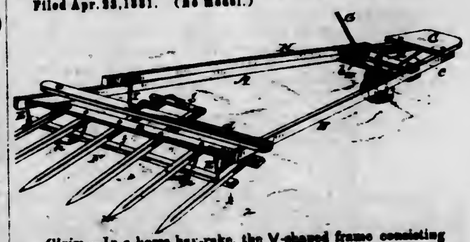
Claim.—1. In a book-holder, the combination of the two arms C D, hinged to the standard independent each of the other, but to swing in substantially the same plane, and constructed with engaging surfaces between their hinging or turning points, substantially as described.

2. In a book-holder, the combination of the two arms C D, hinged upon a standard, B, independent each of the other, but to swing in substantially the same plane, and constructed with engaging surfaces between their hinging or turning points, the standard hinged to its base, substantially as described.



3. In a book-holder, the combination of the two arms C D, hinged to the standard independent each of the other, but to swing in substantially the same plane, and constructed with engaging surfaces between their hinging or turning points, and the rest E for the heel of the book, substantially as described.

4. In a book-holder, the combination of the two arms C D, hinged to the standard independent each of the other, but to swing in substantially the same plane, and constructed with engaging surfaces between their hinging or turning points, and the hinged bifurcated arm *f h*, substantially as described.

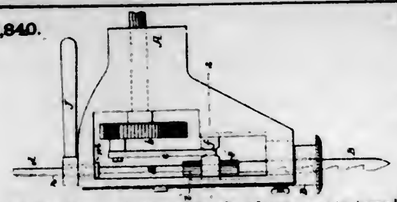


5. In a book-holder, the combination of the two arms C D, hinged to swing in substantially the same plane, and constructed with engaging surfaces between their hinging or turning points, and the arm *i*, hung by a ball-and-socket joint, and carrying the arm *f h*, substantially as described.

259,838. ADVERTISING-CARD. CORNELIUS H. FISCH, Jamesburg, N. J. Filed Aug. 9, 1881. (No model.)

Claim.—The card A, having suitable advertisements on one side, in combination with the stud or button B, secured to the other side of the card, said button being provided with a broad circular base, C, by which it is fastened to the card with rivets, substantially as described.

259,839. HAY-RAKE. PETER F. FLEMING, Salisbury, Md. Filed Apr. 22, 1881. (No model.)



Claim.—In a horse hay-rake, the V-shaped frame consisting of the beams A B, braces *d a* *b*, and the central beam, H, having connected thereto crank-handle G, in combination with the rake F, connected to the beams A B by spring-brackets E and to the beam H by rod I, substantially as and for the purpose set forth.

259,840. CLOTH-CUTTING MACHINE. WILLIAM R. FOWLER, Philadelphia, Pa., assignor to Martin J. Myers, same place. Filed Nov. 21, 1881. (No model.)

Brief.—The knife and slotted plate in which it works turn together.

Claim.—1. The combination, in a cloth-cutting machine, of an arm or bar adapted to travel over the cloth, a slotted plate free to turn in or on said arm or bar, and a knife free to turn in bear-

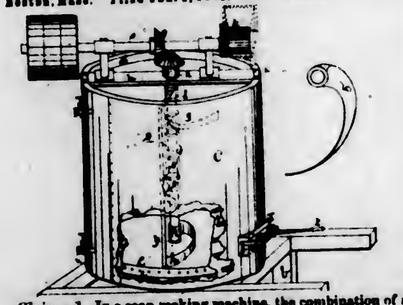
259,840.

ings, and adapted to reciprocate through and to turn or be turned by the said slotted plate, all substantially as specified.

2. The combination, in a cloth-cutting machine, of a presser-bar vertically adjustable on the arm A, a slotted plate free to turn on or in said presser-bar, and a knife free to turn in bearings and adapted to reciprocate through and to turn or be turned by the said slotted plate, all substantially as set forth.

3. The combination of the arm or bar adapted to travel over the cloth, a slotted plate carried by but free to turn on or in said arm or bar, and a knife free to turn in bearings and adapted to reciprocate through and to turn the said slotted plate, as specified.

259,841. CAR-COUPLING. DAVID FRENCH, Cromwell, assignor of one-half to Edward Sheldon Norton, St. Paul, and Eugene Edwards Luce, Wadena, Minn. Filed Apr. 27, 1882. (No model.)



Claim.—1. In a car-coupling, the combination, with a head, B, formed with front inclined faces, *b b*, a hollow or space, D, and a semicircular seat, *b'*, as described, of the locking-piece C, elongated slot c^3, pin *c*, plate C', lug F^2, ring F^3, cord or chain F^4, and semicircular opening *c'*, the whole being constructed and adapted to operate in conjunction with a ball or knob ended link, E, substantially as shown and described.

2. The combination, with the head B of a car-coupling provided with a link-locking piece, C, operating substantially as set forth, of a locking-bolt, *f*, pivoted lever f^2, and a releasing-lever, H, all constructed and adapted to operate substantially as shown and described.

3. The combination, in a car-coupling, of a head, B, formed with inclined faces *b b*, a hollow or space, D, and seat *c'*, as described, and a pivoted locking-piece, C, having a semicircular opening, *c'*, and bearing-plate C', of the bolts f^2 H, lever F, plate F', and chain F^4, or equivalent operating means, constructed and adapted to operate substantially as shown and described.

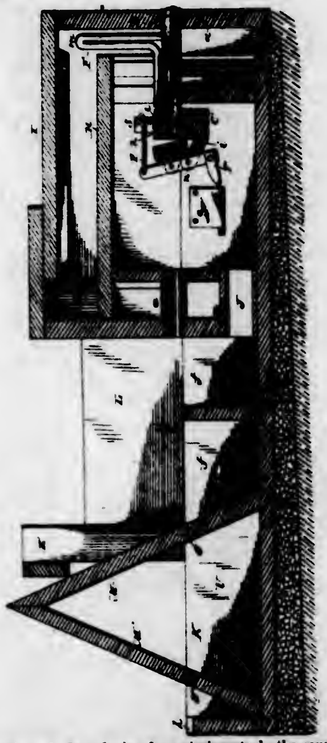
259,842. SOAP-MAKING MACHINERY. ROBERT FERRLAND, Boston, Mass. Filed Jan. 3, 1882. (No model.)

Claim.—1. In a soap-making machine, the combination of an upright cylindrical jacketed tank and fluid-inlets, horizontal driving-shaft with feed-rolls attached or geared thereto, vertical centrally-located bridge, supported rotating shaft therein, and carved centripetal or centrifugal acting mixer-blades attached thereto, with the centrifugal emptying blade or blades and gate, constructed in the manner as and for the purpose substantially as described.

2. In a soap-making machine, the shell *e*, surrounded by the continuous pipe-coil jacket *v* and covering thereon, with the double bottom *s f* riveted to the said shell and strengthened by the bushing and flanges, as described.

3. In a soap-making machine, the shaft *p* and feed-rolls *w*, for the purpose described.

4. The angle-iron band *d* and the channel-iron bridge *m* and step *n*, with an upright cylindrical tank, constructed as set forth.



5. The carved sharp-edged centripetal and centrifugal acting mixer-blades *g*, with the upright rotating shaft *l*, constructed in the manner as and for the purpose described.

6. A vertical rotating shaft, centrifugal emptying-blade *h*, attached thereto, and scraper-blade *y*, with the emptying-gate *i* and cam-lever *k*, substantially as described.

7. The combination of the bushing *q* with the flanges *r* and *s* and packing *t*, constructed in the manner and for the purpose substantially as described.

8. The shaft *l* and holes or passages *a*, combined with the bushing *q* and cock *u*, for the purpose described.

259,843. DEVICE FOR WATERING STOCK. FRANK FUNK, Beverly, Ill. Filed Mar. 1, 1882. (No model.)

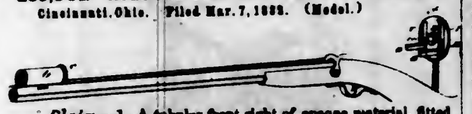
Claim.—1. In a device for watering stock, the combination, with a combined stationary and removable curbing, of a valve-chamber arranged within said curbing so as to leave a space between said chamber and curbing, as and for the purpose set forth.

2. In a device for watering stock, the combination, with a combined stationary and removable curbing and a valve-chamber within said curbing, the said curbing and valve-chamber being provided with removable covers, of a supply-pipe and automatic regulator for controlling the flow of water into the said valve-chamber, substantially as set forth.

3. In a device for watering stock, the combination, with the stationary and removable curbing, a valve-chamber within said curbing, and removable covers for the said curbing and valve-compartment, of a trough communicating with said valve-compartment and provided with curbing and removable side pieces, substantially as and for the purpose described.

4. In a device for watering stock, the combination, with a stationary and removable curbing and a valve-chamber situated inside said curbing, of a trough communicating with said valve-compartment and provided throughout part its length with curbing and removable side pieces and the inclined pieces for forming a separate drinking-compartment, substantially as set forth.

5. In a device for watering stock, the combination, with the supply-pipe, of an automatic regulator secured thereto and adapted to allow a limited constant flow of water from the said pipe, whether the valve be closed or not.



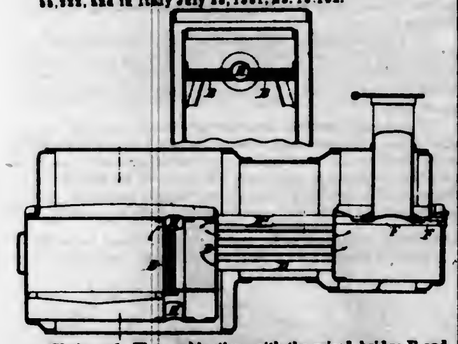
6. In a device for watering stock, the combination, with the supply-pipe screw-threaded on its outer end, of the mouth-piece of the regulator secured thereon, a valve automatically closed and opened by the rise and fall of the water in the valve-chamber, and a cam-valve for allowing the passage of a continuous stream of water from the said regulator when the valve is closed, substantially as set forth.

7. In a device for watering stock, the combination, with the supply-pipe A, mouth-piece C', provided with depending brackets for the support of the valve, valve P, lever P', float Q, cam R, arm E, and link *d'*, compartment or chamber, and trough, all of the above parts adapted to operate substantially as set forth.

8. In a device for watering stock, the combination, with the supply-pipe A, of the overflow-pipe F, the latter constructed and adapted to operate as described.

9. In a device for watering stock, the combination, with suitable curbing and trough, of a supply-pipe and an overflow-pipe connected thereto, and adapted to operate as described.

259,844. SIGHT FOR FIRE-ARMS. FREDERIC J. GARDNER, Cincinnati, Ohio. Filed Mar. 7, 1882. (Model.)

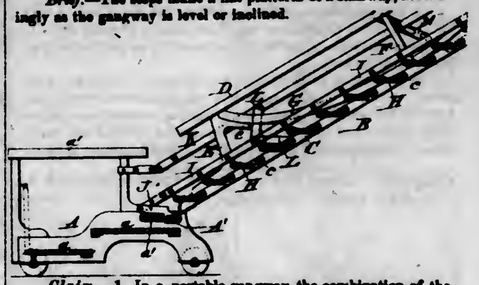


Claim.—1. A tubular front sight of opaque material, fitted with a transparent cross plate or disk of glass having a central sight-hole, substantially as specified.

2. A front sight for rifles and other guns, of opaque tubular construction, composed of an outer fixed tube and an inner slide or tube provided with a transparent cross plate or disk of glass having a central sight-hole in it, essentially as shown and described.

3. The combination of the eccentric *n*, the slotted plate or sight-body *f*, the adjustable cross-slide *i*, having a sight-hole, *k*, the partial tube *m*, the projections or finger-pieces *o o*, and the guards or springs *r r*, essentially as herein described.

259,845. TUBULAR BOILER AND FURNACE. RICHARD GARRETT and FRANK GARRETT, Leiston Works, Leiston, County of Suffolk, England. Filed June 18, 1881. (No model.) Patented in England Mar. 11, 1881, No. 1,060; in France July 7, 1881, No. 142,840; in Germany July 13, 1881, No. 16,761; in Austria July 9, 1881, No. 16,880; in Belgium July 21, 1881, No. 56,922, and in Italy July 30, 1881, No. 13,163.



Claim.—1. The combination, with the raised bridge B and the tubes D', situated at or immediately above the level of the bridge and extending from the combustion-chamber to the smoke-box, of the tubes F, extending through the smoke-box and entering the tubes D', whereby the combustion-chamber is brought into communication with the open air and streams of heated air are caused to meet and mingle with the gases of combustion as they rise over the bridge to reach the combustion-chamber, substantially as specified.

2. The raised bridge B, constructed of abutting doors, which are hinged vertically on opposite sides of the furnace, and which afford, on being thrown back, ready access to the flue-tubes for cleaning and repair, substantially as specified.

3. The combination, with the furnace having the circulating-pipe H, extending from top to bottom thereof, of the bridge-wall B, composed of two doors hinged vertically at the opposite sides of the furnace and closing against said pipe, substantially as specified.

259,846. GANGWAY FOR SHIPS. JAMES P. GARRON, Jersey City, N. J. Filed Mar. 25, 1882. (No model.)

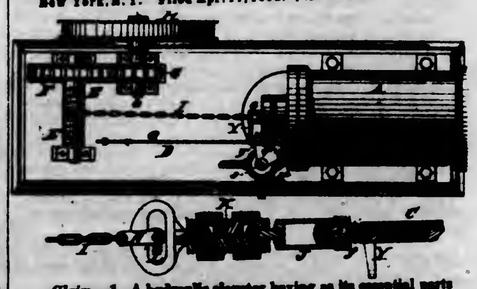
Brief.—The steps make a flat platform or a stairway, accordingly as the gangway is level or inclined.

Claim.—1. In a portable gangway, the combination of the truck A, having pivoted step *a*, with the adjustable bridge B, having pivoted steps H and the levers I J, substantially as shown and described.

2. In a portable gangway, the combination of the truck A with the adjustable bridge B, having sides C C, hand-rails D D, and pivoted steps H H, connected to levers I I, and the levers J J, substantially as shown and described.

3. In a portable gangway, the combination with the truck A, having steps *a a*, hand-rails *a' a'*, and cross-bar A', of the adjustable bridge B, composed of the sides C C, cross-bars *c c*, hand-rails D D, supported by the standards E E, having knees *e e*, and having pivoted steps H H and curved braces G G, the levers I J K L, and the slotted bars M M, all constructed and arranged substantially as shown and described.

259,847. RUBBER BUCKET FOR CHAIN-PUMPS. EDWARD W. GRANT, Ypsilanti, Mich. Filed Apr. 4, 1882. (No model.)



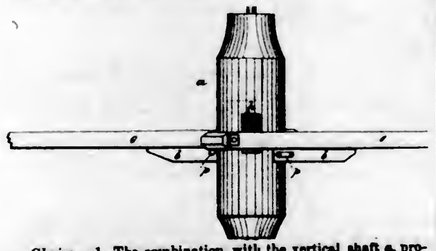
Claim.—1. The combination, in a pump-bucket, of the elastic body A, having bevels *c c* and an intermediate groove, *a*, with the parts B, *e*, *h*, and *f*, all arranged and adapted to operate in the manner and for the purpose substantially as described.

2. In a reversible chain-pump bucket, the combination of two elastic fronts of cones whose bases are of equal diameter, having flanges of equal diameter between their bases, and an annular groove, *a*, with a link-clamping device, substantially in the manner and for the purpose described.

3. A rubber chain-bucket consisting of the following elements in combination: a double-beveled annularly-grooved portion, A, having flanges *b* of equal diameter, the parts B *f*, the screw-stem on the part B, the prismatic nut h, and the washer *g*, all arranged and combined as an entirety, substantially as described.

259,848. HYDRAULIC ELEVATOR. ARTHUR GRANVILLE, New York, N. Y. Filed Apr. 17, 1882. (No model.)

Claim.—1. A hydraulic elevator having as its essential parts the cylinder A, piston B, piston-rod C, chain or rope I, spirally-grooved drum K, spur-wheel F, spur-pinion G, and hoisting-drum



H, the whole constructed and combined for joint use and operation substantially as and for the purpose herein set forth.

2. The combination, with the rod C of the piston B, the cylinder A, chain or rope I, and spirally-grooved drum E, of the yoke J, and turn-buckle K, having the nuts *m*, all substantially as and for the purpose herein set forth.

3. The combination of the clevis L and link N and roller *u* with the piston-rod C, the chain or rope I, the spirally-grooved drum E, the piston B, and cylinder A, all substantially as and for the purpose herein set forth.

4. The rod Q, having the rack *r*, the arm Y, attached to the piston-rod C, and toothed sector *q*, in combination with the cock or valve of the cylinder A, chain I, and winding mechanism, substantially as described, for operation in connection with the said mechanism, all substantially as and for the purpose herein set forth.

259,849. HORSE-POWER. JAMES T. GRAVES, Wilson, N. C. Filed May 3, 1882. (No model.)

Claim.—1. The combination, with the vertical shaft *a*, provided with the arms *b*, having recesses *c* in their ends, terminating inwardly in the oppositely-beveled ends *d*, and arm *h*, provided with angular recesses *i i*, having ridges *m m*, of the lever *e*, provided with notch *n* and curved rod *p*, substantially as described, and for the purpose set forth.

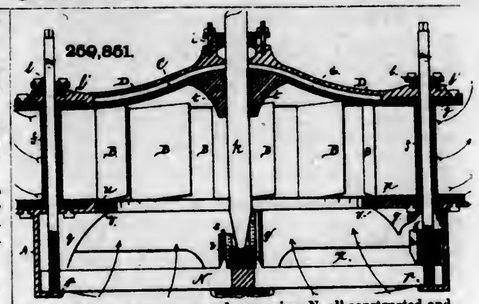
2. The combination, with the lever *e*, provided with notch *s* in its outer end, of the draft-hook *t*, secured to the outer end of the lever, and provided with the legs *u v* and catch *w*, substantially as described, and for the purpose set forth.

259,850. METHOD OF MANUFACTURING RUBBER-COATED BELTING. JOHN W. GRAY, Hartford, Conn. Filed Apr. 28, 1882. (No model.)

Claim.—1. The herein-described method of forming rubber-surfaced belting, consisting in coating or saturating the woven or textile web or body of the belt with rubber composition, drying the same, vulcanizing the faces of the belt, and then coiling it and subjecting its edges to pressure in a vulcanizing-press, and thereby vulcanizing and finishing the edges, as set forth.

2. The herein-described method of finishing the edges of rubber-surfaced belting, consisting in coiling the belt into a compact body and subjecting the ends of the coil or the edges of the belt to pressure, as set forth.

259,851. WATER-ELEVATOR. FRANK A. GRENOW, New Orleans, La. Filed Jan. 28, 1882. (No model.)



Brief.—The water-wheel is adjusted vertically by means of the elevating-rods *m*, whose lower ends are screw-threaded and enter the cross-bars M, which support the shaft *h*, to which the wheel is keyed. The dome D corresponds in shape to the solid top C of the water-wheel. There is a small vacuum-space between D and C, which admits of a slight elevation of the wheel caused by the action of the water on the concave inner surface of C, thereby diminishing the friction.

Claim.—1. In a water-elevator, a wheel having a solid top, C, and bottom ring, *u*, in combination with the angular knives connected to and supported by said top and ring, substantially as and for the purpose set forth.

2. In a water-elevator, the cylindrical section A, provided with seats *p* and ribs *q r*, to receive the outer ends of the cross-piece N, as described, and for the purpose set forth.

3. In combination with the running-wheel composed of top C, knives B, and annular ring *u*, the shaft *h*, cover D, lower section, A, elevating-screws *m*, and cross-piece N, all constructed and arranged to operate within a casing, for the purpose described.

259,851.

259,852. CLUTCH. WILLIAM P. HALE, Brookport, N. Y. Filed May 2, 1882. (No model.)

Claim.—1. A clutch consisting of a drum or barrel loosely mounted on the shaft, in combination with a sleeve secured to the shaft, a disk loosely mounted on said sleeve, and a pawl pivoted to an arm on the sleeve, the free end of the pawl being provided with a pin or stud that engages the inclined sides of an opening in the disk, substantially as set forth.

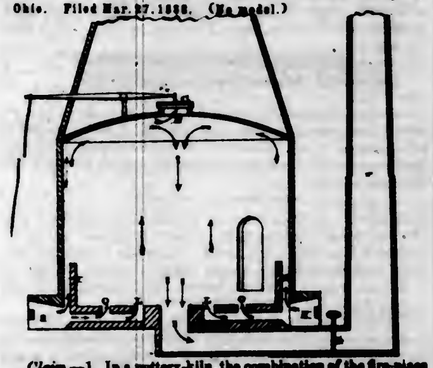
2. The combination, with a clutch drum or barrel loosely mounted on the shaft and provided with internal V-shaped notches, of a sleeve secured to the shaft, said sleeve having an arm provided with a circular groove, a pawl constructed with a circular bearing that fits in said groove, a disk loosely mounted on the sleeve, a spring for imparting a part rotary movement to the disk, and a stud on the pawl that extends through an irregular-shaped opening in the disk, substantially as set forth.

3. The combination, with the drum or barrel, sleeve, pawl, disk, and spring, constructed and arranged substantially as described, of the projection on the disk and the clutch-lever, substantially as set forth.

4. The combination, with the sleeve, pawl, and disk, the latter provided with a series of holes, of a spiral spring encircling the sleeve, and secured at one end in one of said holes and at the other to the sleeve or pin connecting the sleeve and shaft, substantially as set forth.

5. A clutch consisting essentially of a loosely-revolving barrel or drum, a sleeve secured to the shaft, a disk loosely mounted on the sleeve, a pawl arranged to lock the sleeve to the drum, a spring for imparting a part rotary movement to the disk, and a clutch-lever for engaging the disk and arresting its movement, said parts being constructed and arranged substantially as set forth.

259,853. VELOCIPEDE. WELCOME H. HULL and JAMES W. O'REAR, White Hall, Va. Filed Mar. 16, 1882. (No model.)

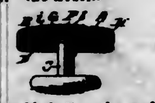


Claim.—1. The frame H, having the forked arms N connected to the hind axle, A, and supporting the seat J, having spring-extensions K, connected to said arms by links L, and standards M, substantially as specified.

2. A velocipede-saddle having the elastic side extension, K M, in combination with the link L, standard M, frame-branches N, and axle A, as shown and described.

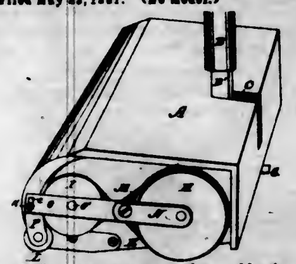
3. The combination, with the front axle and the socket P on the main supporting-frame, and the frame Q, having a stem, S, passing up through said socket, of the arms T Y, rods U, upright V, having arms W, and the frame having socket X, as and for the purpose specified.

4. The combination, with the front axle having upright Q, with stem S, passing through a socket of the main supporting-frame, of the hand-lever *a*, pivoted to the top of said stem, the rod *d*, pivoted to the end of said lever, the brake on the end of said rod, and the slotted arm *e* on the socket P, as and for the purpose specified.



259,854. POTTERY-KILN. JOHN HARDWICK, East Liverpool, Ohio. Filed Mar. 27, 1882. (No model.)

Claim.—1. In a pottery-kiln, the combination of the fire-place H, the flues J, leading therefrom and connecting with the opening I, and the flues N, connecting with the opening O, substantially as shown.

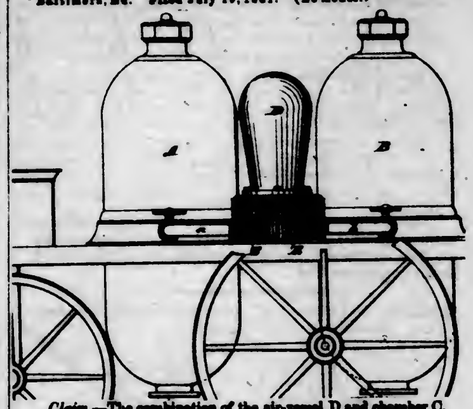


2. In a pottery-kiln, the combination of the two stacks D E, regulating-valves O G, fire-places H, flues J N, openings L O, and fire-bags I, substantially as specified.

259,855. BUTTON. FRANK S. HARRINGTON, Providence, R. I. Filed Nov. 29, 1881. (No model.)

Claim.—In a separable button, the perforated guide-plate D of the head A, recessed plate E, provided with the central elongated slot, *b*, tumbler-plate G, provided with the notches *f f'*, stop *h i*, and spring H, in combination with the shoe-post C, provided with the notched locking-spur F, substantially as described.

259,856. CARPET-SWEEPER. JOSIAS HINKLEY, Norwalk, Ohio. Filed May 23, 1881. (No model.)



Claim.—1. In a carpet-sweeper, the combination, with the casing A, provided with the slot C, of the arm B', handle B, pin V, crank W W', slotted headed arm *z*, and spiral spring Y, substantially as described, and for the purpose set forth.

2. In a carpet-sweeper, the combination, with the grooved endless belt M, of the grooved wheels I H, having their planes inclined to each other, substantially as described.

3. The combination, with the casing A and brush-cylinder Q *j*, of the arms O, having slots *c*, and angular arms P, pivoted thereto, and having holes *d*, and pins P' and wheels L, substantially as described, and for the purpose set forth.

259,857. FIRE-EXTINGUISHER. CHARLES T. HOLLOWAY, Baltimore, Md. Filed July 19, 1881. (No model.)

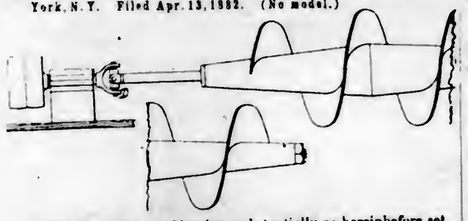
Claim.—The combination of the air-vessel D and chamber C, provided with nozzles E and pipes *a b*, having valves, with the gas-tanks A B, all constructed and arranged substantially as shown, and for the purpose specified.

259,858. ROLLER-MILL. NOAH W. HOLT, Buffalo, N. Y., assignor of one-third to Richard K. Hoyt, same place. Filed Mar. 28, 1882. (No model.)

Claim.—1. A roller for roller-mills, provided on its cylindrical surface with alternating sharp and dull ribs, substantially as set forth.

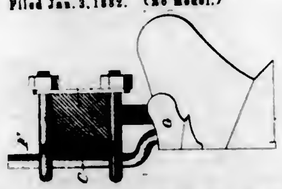
2. In a roller-mill, the combination of two rollers provided on their cylindrical surfaces with alternating sharp and dull ribs, and means whereby the rollers are rotated with different peripheral speeds, substantially as set forth.

259,859. CLOCK. ARTHUR E. HOTCHKISS, Cheshire, Conn. Filed Dec. 24, 1881. (No model.)



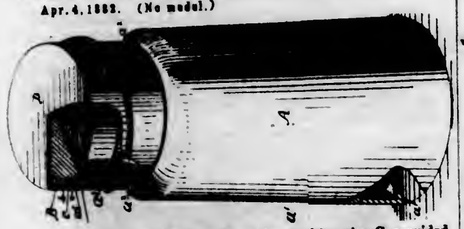
Claim.—1. In a clock-movement, the combination, with the mainspring located in the lower end of the case or frame and a mainspring-arbor arranged vertically, of the pinions of the train arranged vertically and supported in horizontal bridges attached to the opposite side, of the case or frame above the mainspring, and a center shaft arranged horizontally and extended through one side of the clock-frame, substantially as set forth.

2. The combination, with the mainspring arranged horizontally in a separate chamber at the bottom of the clock-frame or case, and a mainspring-arbor arranged vertically and extending through a horizontal partition-plate into an upper chamber, of the pinions of the train arranged vertically and supported in horizontal bridges attached to the opposite sides of the upper chamber of the case, and a center shaft arranged horizontally and extended through one side of the frame-case, substantially as set forth.



3. In a clock, the combination, with the mainspring arranged horizontally in the lower portion of the clock case or frame, and a mainspring-arbor arranged vertically, of the pinions of the train arranged vertically and supported in bridges attached to the opposite sides of the frame, above the mainspring and arbor, a horizontal center shaft, and dial-wheels and hands connected with the outer end of the center shaft and located on the outside of the frame or case, substantially as set forth.

259,860. TIDE-WAVE MOTOR. ROBERT HUMPHREYS, New York, N. Y. Filed Apr. 13, 1882. (No model.)



Claim.—The combination, substantially as hereinbefore set forth, of the screw having its body composed of a float, the driving-shaft, and the universal joint connecting the screw to the shaft, for the purpose specified.

259,861. PLOW-JOINTER. HORACE HUSTEMAN, Sacramento, Cal. Filed Jan. 3, 1882. (No model.)

Claim.—The combination of the crank-standard F, the jointer mold-board G, the bed-plate L, rivets J, clamping-bolts K, and plate N, substantially as shown and described.

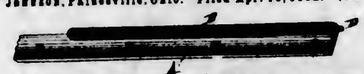
259,862. FRUIT-JAR. JOHNSTON IRVIN, Elk City, Pa. Filed Apr. 4, 1882. (No model.)

Claim.—1. In a fruit-jar, the rubber packing-ring C, provided with inclined sides and a wedge-shaped circular groove, *c*, substantially as described, and for the purpose set forth.

2. The combination, with the jar A, provided with the wedge-shaped upper edge, *a'*, and rubber packing-ring C, having inclined sides and a wedge-shaped circular groove, *c*, of the cover B, provided with the wedge-shaped annular recess *b*, substantially as described, and for the purpose set forth.

3. The combination, with the jar A, provided with the wedge-shaped upper edge, *a'*, of the cover B, provided with the wedge-shaped annular recess *b*, and conical hub *b'*, rubber packing-ring C, provided with wedge-shaped groove *c*, and screw-cap D, substantially as described, and for the purpose set forth.

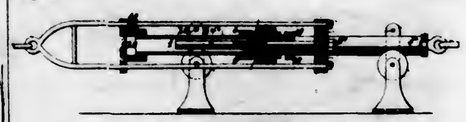
259,863. MANUFACTURE OF ARTIFICIAL STONE AND MARBLE. HENRY C. JEWELL, Georgetown, D. C. Filed Apr. 28, 1882. (No model.)



Claim.—1. The compound artificial stone or marble herein specified, composed of hydraulic cement, Roman cement, lime of Tiel, hydraulic lime, plaster-of-paris, and sand or marble-dust, and dcutcsulphate of copper, in about the proportions specified.

2. The solution or bath for the manufacture of artificial stone, composed of alum ammonia ferri, borate of soda, nitrate of potash, carbolic acid, muriate of ammonia, nitrate of ammonia, oxalic acid, and lime-water, in about the proportions set forth.

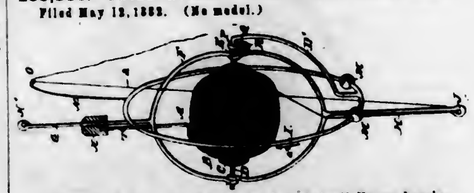
3. The method of inlaying artificial marble slabs and stone pavements by means of solid blocks of metal, wood, glass, or other suitable material, formed in any desired designs, to be employed substantially as specified.



259,864. CARPET OR OIL-CLOTH FASTENER. EDWARD E. JOHNSON, Painesville, Ohio. Filed Apr. 13, 1882. (No model.)

Claim.—The metallic carpet-binding herein shown and described, consisting of a plain or flat portion, A, and a tubular or rolled portion, B, said tubular portion B having a stiffening-wire, D, of requisite thickness inserted through it, as an improved article of manufacture.

259,865. APPARATUS FOR OPERATING RAILWAY-SIGNALS. HENRY JOHNSON, Eccles, County of Lancaster, England. Filed Jan. 7, 1882. (No model.) Patented in England Dec. 27, 1879, No. 5,297; in France July 8, 1880, No. 137,595; in Belgium July 19, 1880, No. 53,064, and in Germany July 20, 1880, No. 14,147.



Brief.—One end of a section of a signal-operating rod or wire is secured to a cylinder containing liquid, and the meeting end of the other section is secured to a piston or plunger working in said cylinder, whereby the expansion and contraction of the rods or wires is compensated for by the expansion and contraction of the liquid.

Claim.—1. The combination, with a railway-signal and its actuating lever or device, of a wire, chain, or other connection extending between them, and composed of sections, a cylinder containing liquid, and to which one section of said connection is attached, and a piston or ram to which the other section of said connection is attached, and which is adapted to move relatively to the cylinder as the liquid expands or contracts, substantially as and for the purpose specified.

2. The combination, with a railway-signal and its actuating lever or device, of a sectional connection extending between them, a liquid-reservoir, and a cylinder communicating therewith, and to which one section of said connection is attached, and a piston or ram to which the other section of said connection is attached, and which is adapted to move relatively to the cylinder as the liquid in said reservoir and cylinder expands or contracts, substantially as and for the purpose specified.

259,866. TWINE-HOLDER. CHAS. W. JONES, Lowell, Mass. Filed May 12, 1882. (No model.)

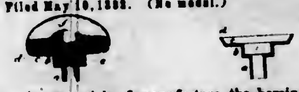
Claim.—1. A twine-holder made substantially as herein shown and described, and consisting of a twine-spool mounted on a shaft journaled in a ring and having an outer ring attached to one end of this shaft, as set forth.

2. In a twine-holder, the combination, with the twine-spool B, of the ring F, the shaft D, and the external ring, L, attached eccentrically to an arm, D', of this shaft D, substantially as herein shown and described, and for the purpose set forth.

3. In a twine-holder, the combination, with the twine-spool B, of the ring F, the shaft D, the external ring, L, attached to an arm of the shaft D, and the weights M, substantially as herein shown and described, and for the purpose set forth.

4. In a twine-holder, the combination, with the twine-spool B, of the ring F, the shaft D, the external ring, L, attached to an arm of the shaft D, and the spring-arm N, attached to the ring L, and provided at its outer end with a loop or eye, O, substantially as herein shown and described, and for the purpose set forth.

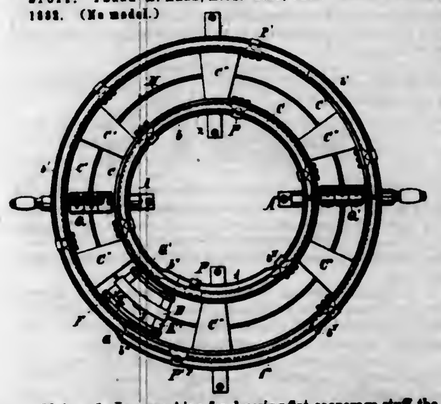
5. In a twine-holder, the combination, with the twine-spool B, of the ring F, the shaft D, the ring L, the arm N, provided with a loop, O, the rod G, projecting upward from the ring F, the rod H, projecting downward from the ring F, and the loops J and K' at the lower and upper ends of the rods H and G, substantially as herein shown and described, and for the purpose set forth.



6. In a twine-holder, the combination, with the twine-spool B, of the ring F, the shaft D, provided with a notched disk, P, the hook R on the ring F, and of the ring L, substantially as herein shown and described, and for the purpose set forth.

7. In a twine-holder, the combination, with the rings F and L, of the shaft D, the tube B', and the adjustable heads C on this tube B', substantially as herein shown and described, and for the purpose set forth.

8. In a twine-holder, the combination, with the twine ball and the devices for carrying it, of a weighted wire resting on the twine ball and operating as a brake or check, substantially as set forth and described.

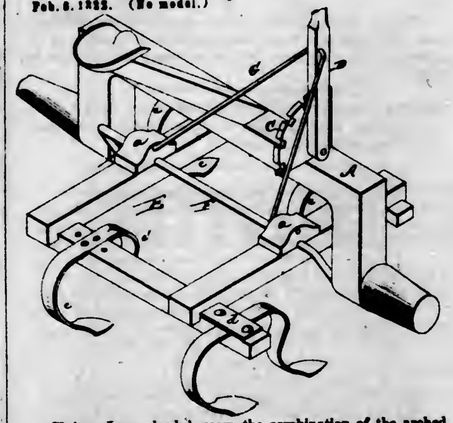


9. In a twine-holder, the combination, with the rings F and L, of the shaft D, the wire G, the sliding weight-block K, and the wire T, substantially as herein shown and described, and for the purpose set forth.

259,867. SHOE-LACING STUD. JOSEPH L. JOYCE, New Haven, Conn. Filed May 10, 1882. (No model.)

Claim.—As an article of manufacture, the herein-described shoe-stud, consisting of the metal back *c*, constructed with the upwardly-projecting flange *d*, body *b*, and tubular shank *a* in one and the same piece, combined with the head *f*, made from plastic material, closed over the flange of the back, substantially as described.

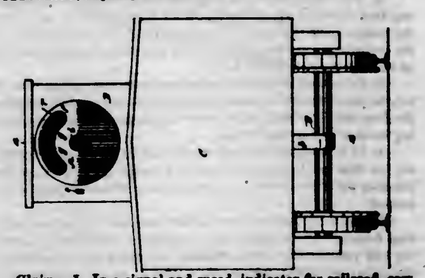
259,868. MACHINE FOR DRESSING FLAT COOPERAGE-STUFF. FRANK H. KANE, River Side, Ohio. Filed Feb. 23, 1882. (No model.)



Claim.—1. In a machine for dressing flat cooperage-stuff, the following elements, constructed and combined substantially as set forth, to wit: two annular series of horizontal track-pieces, B B', stationary cam troughs or troughs, as *b b'*, a continuously-revolving turn-table, C C' C'', having radial slots *c*, containing one or more pairs of dogs, P P', whose shanks *p* occupy said cam-troughs, a horizontal rest, D, to receive the stuff flatwise, and one or more revolving cutters, Q Q', journaled radially of the track, respectively, so far below and above the same as to impart the desired thickness and flat dressing to the stuff, in the manner explained.

2. In a machine for dressing flat cooperage-stuff, the combination, with a continuously-revolving turn-table, of the rest consisting of fixed bar D for the middle and the two yielding bars G G' for the ends of the stuff, the said rest being constructed, arranged, and adapted to operate substantially as set forth.

3. In a machine for dressing flat cooperage-stuff, the described combination, with a continuously-revolving turn-table, of the rest D G G', having the stem I occupying dovetail socket *a* in the supporting-frame, and having adjusting-screw J and clamping-bolt K, substantially as and for the purpose set forth.



4. In a machine for dressing flat cooperage-stuff, the combination of horizontal vertically-adjustable rest D G G', adapted to support the stuff flatwise and present it to the cutters edgewise, the stuff clamping and forwarding table C C' C'', turning in its own plane and parallel with the plane of said rest, and the cutters Q Q', journaled radially of said table, one below and the other above, and one or both of them adjustable relatively to the same, substantially as set forth

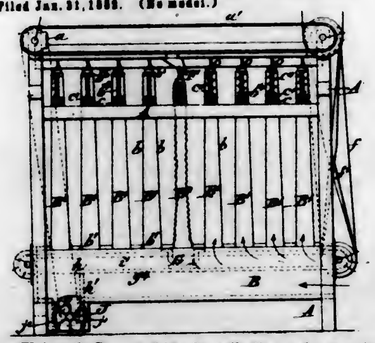
259,869. HARROW. WILLIAM KELLY, Saranac, Mich. Filed Feb. 6, 1882. (No model.)

Claim.—In a wheel-harrow, the combination of the arched axle A, having the arms rigidly fixed to it, the locking-lever D on this axle, the bail G, pivoted to lever D, the blocks *a a* on the suspended frame E, having bail G pivoted to them, the bail F, pivoted to said frame directly below the pivotal ends of bail G, and also pivoted to the axle, the front and rear transverse bars of frame E, and the double harrow-teeth crossing the tops of said bars and secured to them by plates *d*, all substantially as described.

259,870. SIGNAL AND SPEED-INDICATOR FOR CARS. WALTER J. KIRK, Logansport, Ind. Filed Jan. 14, 1882. (No model.)

Claim.—1. In a signal and speed-indicator for railroad-cars or other vehicles or vessels, the combination, with a series of stationary lamps or lights of different colors, of a rotating target or disk having an arc-shaped slot formed in it, and means, substantially as herein described, for rotating the same from the car-axle, as set forth.

2. In a signal and speed-indicator for railroad-cars or other vehicles or vessels, the combination, with the disk or target A, provided with the arc-shaped slot *f*, and means for rotating the same, of the different-colored stationary lamps or lights *l m n*, arranged at equal distances apart behind the said disk and within the range of the slot of the disk, substantially as and for the purpose set forth.



3. In a signal and speed-indicator for railroad-cars or other vehicles or vessels, the combination, with the axle B and the box D, carrying the stationary lights *l m n*, of the slotted target or disk A, the shaft *c*, the system of gearing *e d*, and belt *b*, substantially as and for the purpose set forth.

259,871. ARTIFICIAL FLOWER. EDWIN L. L. KIRK, Baltimore, Md. Filed Apr. 6, 1882. (Model.)

Claim.—Artificial flowers having their petals formed of sea-shells perforated near their bases and secured by wires, as described, whereby the petals are free to vibrate and move, as set forth.

259,872. MACHINE FOR COLLECTING DUST. ALVA H. KIRK, Minneapolis, Minn., assignor to Kirk & Pender, same place. Filed Jan. 31, 1882. (No model.)

Claim.—1. In a machine for collecting and separating dust from the air, the combination of the traveling wiper F, coiled springs d', the standing dust-catching bags B', and suitable supports for said springs and bags, whereby the dust-catching cloth b of the bags is wrinkled, and the springs, released from depression, act to throw off or clear the dust from said cloth, substantially as described.

2. The combination, in a machine for collecting and separating dust from the air, of the revolving shaft J, having dust-carrying wings j and india-rubber cushions j' at their extremities, and the concaves f', against which, at opposite sides, the cushions bear, as and for the purposes described.

3. In a machine for collecting and separating dust from the air, the combination of a traveling wiper, standing and compressible dust-catching bags, and a traveling dust-catching box, operating substantially as described.

4. In a machine for collecting and separating dust from the air, the dust-catching box G, having a hinged bottom, g''', in combination with the cut-off guideways g', as and for the purposes described.

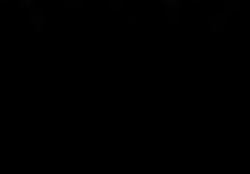
5. The combination, in a machine for catching and separating dust from air, of standing and compressible dust-bags, a traveling and compressing wiper, suitable mechanism for operating it, springs to return the bags to their normal condition after being compressed, a reciprocating dust-catching box, mechanism for causing it to travel back and forth, and an automatic revolving dust-discharging device, substantially as and for the purposes described.

259,873. MACHINE FOR COLLECTING DUST. ALVA H. KIRK, Minneapolis, Minn., assignor to Kirk & Pender, same place. Filed Feb. 28, 1882. (No model.)

Claim.—1. In a machine for collecting dust, the combination of the frame A, the frame A', having the wire-gauze a on its outside and the cloth a' upon the inside, with devices inclosed within for catching and separating dust from the air, substantially as described.

2. In a machine for collecting dust, the dust-box G and means for causing it to travel intermittingly underneath the dust-collecting cloth, in combination with the pivoted lever O, having tripping devices supported upon the wheel independently of the teeth, whereby the teeth can be removed without removing the adjusting devices, substantially as set forth.

7. The herein-described detachable sprocket-teeth, having the projections b^2 extending laterally on both sides of the teeth and adapted to prevent the chain from coming in contact with the wheel, substantially as set forth.



8. In a sprocket-wheel, a tooth which can be adjusted longitudinally in several positions relatively to the center of the wheel to vary the tension of a chain, in combination with clamping devices adapted to secure the tooth in said several positions, or relatively to the center of the wheel, substantially as set forth.

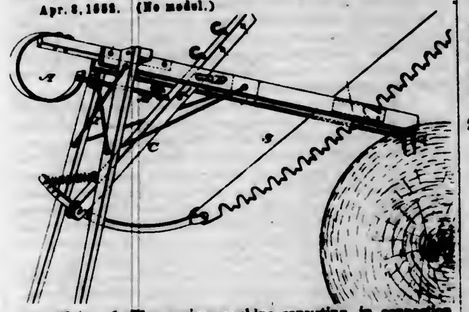
259,876. METHOD OR PROCESS OF DECORATING OR PRODUCING DESIGNS ON THE SURFACES OF EARTHENWARE TILES, &c. EDWARD LEE, Leeds, County of York, England. Filed Jan. 16, 1882. (No specimens.) Patented in England June 27, 1881, No. 3,018.

Claim.—1. The method of producing the said designs by setting off on the said surfaces prints or impressions which have been received from engraved blocks or plates or lithographic stones charged with the required pigments or material on blocks or cylinders having a yielding but practically non-extensible surface, essentially as hereinbefore described.

2. The method of breaking up the hard lines of designs produced as hereinbefore described and producing a tooled appearance in the said designs by rolling a cylindrical brush or roller over the surface on which the print or impression has been set off and while the varnish is fresh.

259,877. UNDER-GARMENT FOR INFANTS. CAROLINE E. LIGHTCAPP, Philadelphia, Pa. Filed May 1, 1882. (No model.)

Claim.—The within-described under-garment, comprising two disconnected drawer-legs, each constructed at the upper end for attachment to some other portion of the apparel, all substantially as set forth.

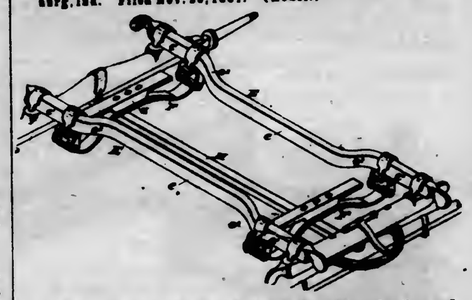


259,878. PLASTIC COMPOSITION FOR THE CORES OF BILLIARD-BALLS AND FOR OTHER PURPOSES. CHARLES B. Lockwood, Albany, N. Y., assignor to the Rosalate Company, (Limited), same place. Filed May 11, 1882. (No specimens.)

Claim.—1. An article of manufacture formed by agglutinating desiccated glue in a heated die or mold, substantially as set forth.

2. An article formed by agglutinating desiccated glue and bone, or its equivalent, with or without glycerine, by means of heat and pressure, substantially as described.

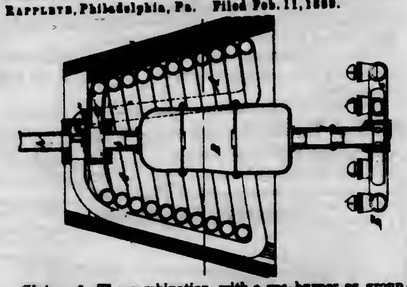
3. A core for billiard-balls, which consists essentially of glue agglutinated by pressure in a heated mold, substantially as set forth.



259,879. DRAG-SAW. THOMAS LOWDEN, Lowell, Mich. Filed Apr. 8, 1882. (No model.)

Claim.—1. The sawing-machine consisting, in connection with the standards and frame, of the C-spring secured to the rear end of the frame, the adjustable lever, its pivot-bolt, and series of hooks, the connecting-rod between the lever and spring, the pitman, and the spring connecting the rear extension of the pitman to the lever, substantially as specified.

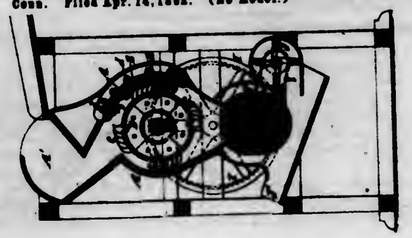
2. In a sawing-machine, the combination, with the main spring A and saw S, of the adjustable saw-lever C and the adjustable rod B, connecting the main spring to the saw-lever, substantially as specified.



259,880. SIDE-BAR VEHICLE. PETER LUDENBELL, Greensburg, Ind. Filed Nov. 30, 1881. (Model.)

Claim.—1. The side bars, E E, parallel with each other and with the body throughout their mid-length, at a greater distance apart than the width of the body, and bent outward at their ends to allow of the application of a longer cross-spring for the suspension of the body, as set forth.

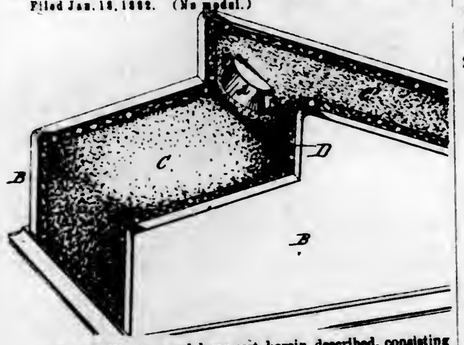
2. In combination with parallel side bars, E E, having portions e e at their mid-length, parallel with the body and end portions, e' e', bent outward, as shown, the cross-springs F F connecting corresponding out-bent portions of the side bars and supporting the body, as set forth.



259,881. APPARATUS FOR BURNING ILLUMINATING-GAS. PHILIP W. MACKENZIE, Blauvelt ville, N. Y., and HANNIBAL W. RAPPLEYE, Philadelphia, Pa. Filed Feb. 11, 1882.

Claim.—1. The combination, with a gas-burner or group of burners, of a heater arranged above and to be heated by said burner or group, and composed of a chamber, B, divided at different heights by transverse perforated diaphragms, whereby a reverberatory action of the gas is produced in its passage through the heater to said burner or group, substantially as specified.

2. The combination, with a gas-burner or group of burners, of the annular coil-heater A and the cylindric heater B, comprising perforated transverse diaphragms or partitions, and into and through which the gas passes after it has been partly heated in said coil-heater and before it is supplied to the burner, substantially as specified.

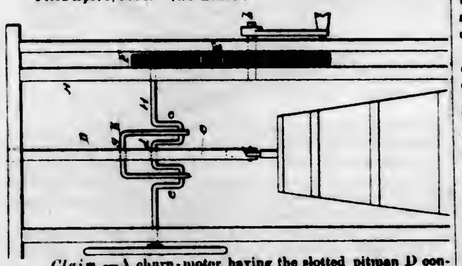


259,882. CORN-SHELLER. FRANCIS T. HALLOS, Pawcatuck, Conn. Filed Apr. 14, 1882. (No model.)

Claim.—1. In a corn-sheller, the combination, with the casing A and the cylinder D, provided with teeth set in spiral rows longitudinally thereof, of toothed hooks in the casing, set at a sufficient distance apart to enable the teeth to pass between them, and springs acting upon said hooks to press them inward independently of each other, substantially as herein described.

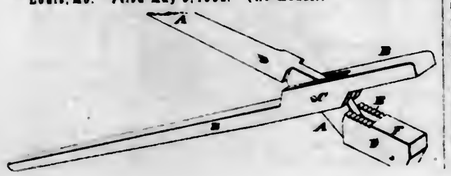
2. In a corn-sheller, the combination, with the casing A and cylinder D, of the hooked or curved teeth e, set in the cylinder, the toothed hooks E, pivoted in the casing and set a sufficient distance apart to enable the teeth e to pass between them, and springs *c*, applied to the hooks for pressing them inward, substantially as herein described.

259,883. FOOT-REST. GEORGE HARDER, Philadelphia, Pa. Filed Jan. 18, 1882. (No model.)



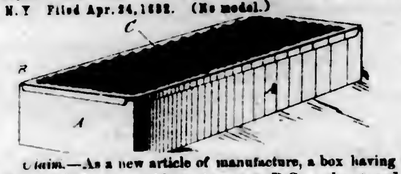
Claim.—The foot and knee rest herein described, consisting of the sides B B, the tread E for the knee, and the foot-tread C, the foot-tread C being set at an opposite angle to the knee-tread and elevated above said knee-tread so as to leave a riser or step, D, substantially as and for the purpose set forth.

259,884. HAIR-TONIC. WILLIAM E. HAROLD, Terre Haute, Ind. Filed Mar. 22, 1882. (No specimens.)



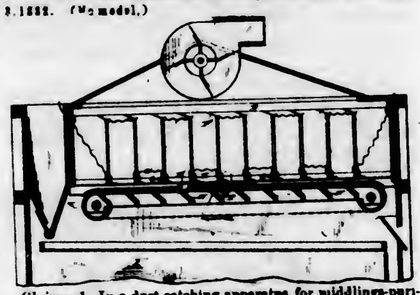
Claim.—A hair-restorative consisting of a filtered decoction in water of hop-root, grape-vine buds, and rosemary, in the proportions specified.

259,885. CHURN. ELIJAH H. MARSHALL, Cambria Mills, Mich. Filed Apr. 1, 1882. (No model.)



Claim.—A churn-motor having the slotted pitman D connected to the dasher-rod, the pinion-shaft H, having the central reverse bend, *d*, engaging the slot of the pitman and the crank-bends *c c* on each side of said pitman, and the bow-connection K, of greater length than the cranks, centrally engaging a bearing in the pitman and having its ends connected, one on each side thereof, to one of the cranks, substantially as specified.

259,886. UNIVERSAL TONGS. JEAN M. L. MATTHEY, St. Louis, Mo. Filed May 5, 1882. (No model.)



Claim.—The combination of arms A B, pivoted together at C, arm A being provided with an adjustable block, D, having teeth E and smooth portion F, as and for the purpose set forth.

259,887. CHOCOLATE-PACKAGE. HENRY MCCOBB, New York, N. Y. Filed Apr. 24, 1882. (No model.)

Claim.—As a new article of manufacture, a box having the body A and the removable grater-cover B C, as shown and described.

259,888. DUST-CATCHING APPARATUS FOR MIDDLINGS-PURIFIERS. JAS. MCDANIEL, Minneapolis, Minn. Filed Apr. 3, 1882. (No model.)

Claim.—1. In a dust-catching apparatus for middlings-purifiers, the combination, with vertical frames or diaphragms and a continuous dust-cloth attached closely to said frames, with slack portions of cloth intervening, said cloth being so arranged as to close the spaces between the frames alternately at top and bottom, of mechanism for jarring the frames separately, whereby they may be cleaned independent of each other, substantially as described.

2. In a dust-catching apparatus for middlings-purifiers, the combination, with the purifier-frame and vertical diaphragms arranged therein, of a continuous dust-cloth secured to the sides and ends of the purifier-frame and attached closely to the diaphragms, so as to close the spaces between said diaphragms, with slack portions of the cloth arranged alternately at the top and bottom of the spaces, whereby each frame or diaphragm is adapted to be moved or jarred independent of the others, substantially as described.

3. In a dust-catching apparatus for middlings-purifiers, the combination, with vertical moving frames having a continuous dust-cloth attached thereto, and a traveling apron arranged horizontally beneath said frames, of stationary horizontal bars placed between the apron and frames, and adapted to serve as supports for the vertical frames and provide a shut-off against the apron, whereby the passage of air-currents is prevented and the apron cleaned or scraped as it passes beneath said bars, substantially as described.

4. In a dust-catching apparatus for middlings-purifiers, the combination, with vertical frames supporting a dust-cloth, of a traveling apron having a cushion-pin adapted to work in an opening formed therein, and provided on its under side with a spring-knocker and mechanism for causing said knocker to strike against the cushion-pin at intervals, thereby jarring the vertical frames separately, substantially as described.

5. In a dust-catching apparatus for middlings-purifiers, the combination, with the cloth-supporting frames, a continuous dust-cloth secured to the sides and ends of the purifier, a traveling apron arranged beneath the cloth-supporting frames, and provided with a dust-receiving trough, and mechanism for jarring the frames separately and at intervals, of an endless carrying chain or chains, star-pulleys, and mechanism for actuating said pulleys, whereby the apron and its attachments are caused to shut off the air-currents, jar the dust-cloth and its supporting-frames, and convey the detached dust from the machine, substantially as described.

6. In a dust-catching apparatus for middlings-purifiers, the combination, with a traveling apron, of a trough attached thereto, and a series of bars arranged above the apron and adapted to scrape the dust therefrom and into the attached trough, substantially as described.

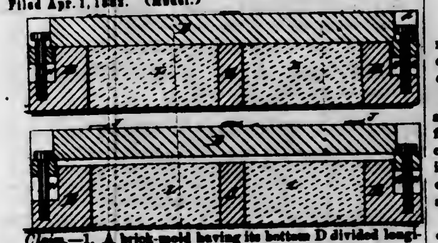
7. In a dust-catching apparatus for middlings-purifiers, the combination, with a traveling apron having a cushion-pin therein and a spring-knocker, of a longitudinal bar arranged beneath said apron, and provided with a series of inclined planes adapted to engage the spring-knocker and depress the same, thereby causing it to recoil against the cushion-pin arranged in the apron, whereby said pin is brought in forcible contact with one of the cloth-supporting frames, substantially as described.

8. In a dust-catching apparatus for middlings-purifiers, the combination, with vertical frames or diaphragms provided with continuous dust-cloth, of a longitudinal bar arranged above said frames, and provided with counter-springs adapted to bear upon the upper ends of the frames and hold them down against the action of the fan and jarring mechanism, substantially as described.

9. In a dust-catching apparatus for middlings-purifiers, the combination, with a fan and a sieve or shaker frame, of a series of vertical frames arranged between said fan and sieve, and provided with a continuous dust-cloth arranged to close the spaces between said vertical frames alternately at top and bottom, substantially as described.

10. In a dust-catching apparatus for middlings-purifiers, the combination of vertical frames provided with a continuous dust-cloth and metallic knee-pieces with horizontal stationary bars adapted to support said frames, a traveling apron, endless chains, a cushion-pin in said apron, a spring-knocker, a trough, inclined planes placed beneath the apron and adapted to engage with and actuate the knocker, thereby jarring the frames and raising them vertically, and counter-springs attached to a bar above the frames and adapted to force them down, substantially as described.

259,889. TOW-BOAT. ALEXANDER MCDOUGALL, Cleveland, Ohio. Filed Apr. 4, 1882. (No model.)



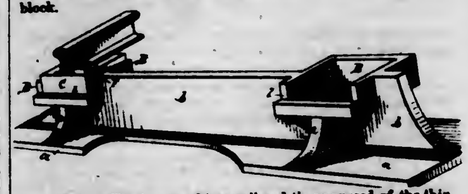
Claim.—1. A tow-boat having a flat bottom and vertical sides, except at the ends, a semi-cylindrical upper portion throughout its entire length, and having the bottom and sides toward the ends tapering in outwardly-curved lines to the extremities, so as to form a precisely similar conical bow and stern, substantially as described.

2. A tow-boat, substantially as described, having turrets rigidly secured to the same, each turret supporting a separate open working-deck, upon which is placed and worked the steering and hauling-in gear, substantially as described.

3. In a tow-boat, substantially as described, in combination with the turrets, and communicating with them, a water-tight cabin and forecastle arranged on the upper part of the hull and communicating with each other by means of a passage-way in the upper central portion of the hull and separated from the cargo-space, substantially as described.

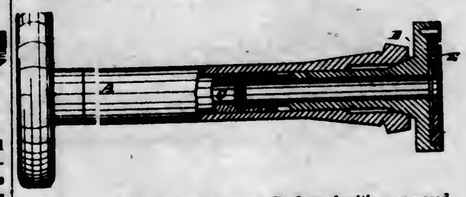
4. The skeleton of a tow-boat, substantially as described, consisting of numerous rib-frames precisely alike in size and form, each with substantially flat lower parts and vertical sides and rounded tops throughout the body of the hull, bow and stern frames nearly annular and precisely alike in size and form at equal distances from the extreme ends, and cross-beams and stanchions secured together at their points of contact, whereby a keel, keelson, and stem and stern-post are dispensed with.

259,890. BRICK-MOLD. THOMAS MCNICHOLAS, Memphis, Mo. Filed Apr. 1, 1882. (Model.)



Claim.—1. A brick-mold having its bottom D divided longitudinally into narrow strips corresponding in number to the number of the cells and connected at the ends by bars, whereby the air is freely admitted under all parts of the bottom of mold and the easy rise thereof at the start greatly facilitated.

2. The combination of scraper-cleats J with brick-molds used in brick-machines, substantially as specified.



259,891. RAILROAD CROSS-TIE. JAMES M. HEACHAM, Petersburg, Va. Filed Feb. 9, 1882. (No model.)

Brief.—An iron tie made in one piece is composed of a flat horizontal base-piece cut out in its middle portion and a vertical web extending the entire length of the base and terminating at the ends, with boxes adapted to receive wooden blocks, on which are secured the rails by bolts passing through the box and wooden block.

Claim.—The improved iron railroad-tie composed of the thin flat horizontal base-piece *a*, cut out in its middle portion as described, the thin vertical web *b*, extending the entire length of the base, the lateral vertical flanges *c c*, and the boxes B B, formed in one piece with said parts *b c c* at the intersection thereof, for receiving the wooden blocks C, all as shown and hereinbefore set forth.

259,892. CHUCK FOR WATCH-MAKERS' LATHES. GEORGE E. HUTTER, Helena, Mont. Filed Mar. 8, 1882. (No model.)

Claim.—1. The clamping-chuck D, formed with a recessed face, and the stepped holding-disk E, combined for use, substantially as shown and described.

2. The chucking-disk E, having a step on each side, in combination with a lathe-chuck, substantially as shown and described.

259,893. SHAFT FOR MACHINERY. BRADFORD S. MILES, Gray's Summit, Mo. Filed Mar. 3, 1882. (No model.)

Claim.—A rotating shaft wrapped and re-enforced along its effective length by one or more spiral bands clasping and binding the same, each made fast thereto at one end and at the other to a sleeve, collar, or cap fitted upon the shaft to engage the same, after a partial independent rotary movement thereon, substantially as herein described.

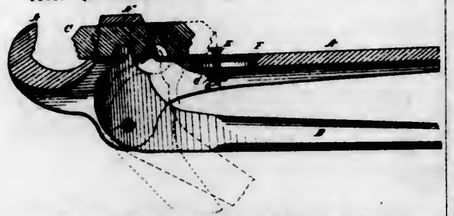
259,894. PLOW. ORRIN E. MILES, Cedar Rapids, Iowa, assignor to Daniel H. Richards, same place. Filed Apr. 7, 1882. (No model.)

Brief.—An obliquely-set rotary cutter excavates under a furrow-slice cut by a rolling colter, causing it to drop into the bottom of the furrow, to be covered by the earth from the subsequent cuts of the revolving cutter.

Claim.—1. The improved method of plowing herein shown and described, the same consisting in cutting a triangular slice from the soil along the furrow to be made by a vertical cut and excavating underneath said slice, causing it to drop, right side up, into the trench or furrow being made, and spreading the excavated earth over the slices of soil deposited in the trenches last made, substantially as shown and set forth.

2. A plow adapted to cut off a slice of earth triangular in cross-section from the surface of the soil by a vertical cut and excavating underneath the same, causing the slice of earth to drop

259,894.

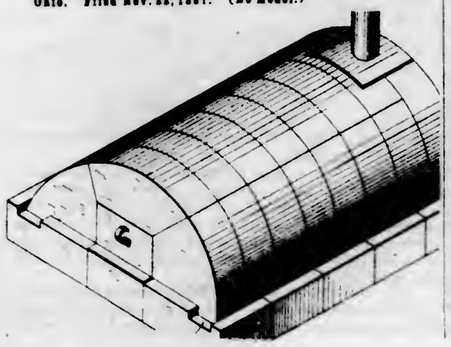


into the bottom of the trench or furrow right side up, substantially as set forth.

3. In a plow, the combination, with a rotary cutter or colter cutting in a vertical, or approximately vertical, plane, of an oblique cutter or cutter-head adapted to excavate earth in an oblique direction from the surface of the soil to its point of intersection with the cut made by the rotary cutter or colter, substantially as and for the purpose herein shown and set forth.

4. The combination, in a rotary plow, of the master-wheel C, shaft F, pinion E, bevel-wheel G, frame I, hung upon shaft F, and having the handle or lever I', shaft K, mounted in said frame and provided with the bevel-pinion N and rotary cutter-head L, and the rotary colter or cutting-disk O, all constructed and combined to operate substantially in the manner and for the purpose herein shown and specified.

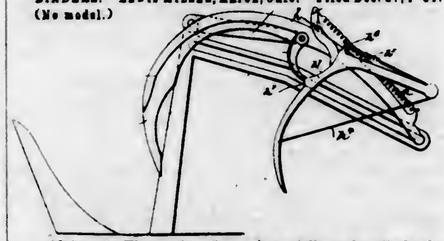
259,895. PIPE-TONGS. CHARLES H. MILLER, Erie, Pa., assignor of one-half to E. S. Noyes, same place. Filed Mar. 24, 1882. (No model.)



Claim.—1. In a pipe-tongs, the part A, having the stationary jaw A' thereon, and provided with a head, A'', which has an opening to receive the movable jaw, in combination with a cam-lever, pivoted thereto and connected therewith, back of said pivot, by a link, *a*, and the movable jaw C, having recesses *c c*, in which the point of the said cam-lever rests and operates, substantially as set forth.

2. In a pipe-tongs, the combination, with the parts A, B, and C, constructed substantially as shown, of the adjustable stop E, for the purposes mentioned.

3. In a pipe-tongs, the combination, with the parts A, B, and C, constructed substantially as shown, of the beveled slot F and beveled headed stop E, having a set-screw for holding the stop in place, said last-named parts operating together substantially as and for the purposes mentioned.

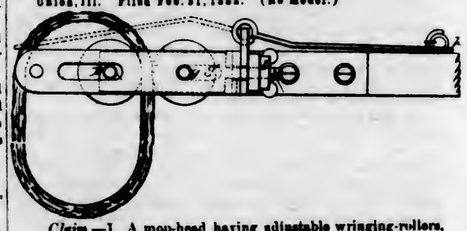


259,896. BAKING-OVEN. GEORGE L. MILLER, Youngstown, Ohio. Filed Nov. 22, 1881. (No model.)

Brief.—The bricks which form the bottom of the oven are grooved to hold the ends of the segmental bricks forming the top and sides, and the end bricks are made of a suitable fitting shape and size.

Claim.—The combination, in an oven, of the rectangular bricks arranged to form the bottom thereof and grooved or recessed, as described, the segmental bricks forming the main body of the oven, the segmental bricks forming the front of the oven, leaving a rectangular opening for the insertion of fuel or articles to be baked, and the rear segmental bricks closing the rear of the oven, the arched top of the oven being adapted to be covered with suitable cement, substantially as specified.

259,897. BUNDLE COMPRESSOR AND EJECTOR FOR GRAIN-BINDERS. LEWIS MILLER, Akron, Ohio. Filed Dec. 27, 1881. (No model.)



Claim.—1. The combination, substantially as described, of a rotating crank, a binding-arm mounted upon the wrist of said crank, means for controlling the movement of the binding-arm, a compressor supported wholly by the binding-arm and moving therewith, and an arm secured rigidly to the crank-wrist and adapted to strike the compressor and positively move it in advance of the binding-arm to eject the bundle.

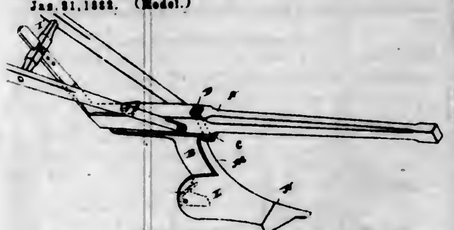
2. The combination of the binding-arm, the compressor mounted upon and moving with the binding-arm and having the shoulder, the spring connected at one end to the binding-arm and at the other to the compressor, and the curved arm or cam on the crank-wrist, operating in connection with the shoulder on the compressor, substantially as described.

3. The combination, with the crank, of the binding-arm mounted thereon, the compressing-arm supported by the binding-arm and having the shoulder h^1 and curved portion h^2, the spring connecting the binding-arm with the compressing-arm, and the curved arm secured rigidly to the crank and operating in connection with the shoulder h^1 and the curved portion h^2 of the compressing-arm, as set forth.

259,898. MOP HOLDER AND WRINGER. JOSEPH S. MILLS, Union, Ill. Filed Feb. 21, 1882. (No model.)

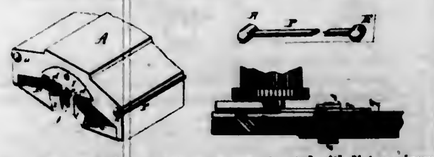
Claim.—1. A mop-head having adjustable wringing-rollers, an endless mop-cloth, and a holding-wire arranged to bear on the mop-cloth while being wrung, substantially as specified.

2. A mop holder or rest consisting of a pail or tub having a bail, Z, formed with forked bearings *v v* and pivoted to the same, substantially as and for the purposes set forth.



259,899. METALLIC CASE. DANIEL WOOD, Brooklyn, N. Y. Filed Apr. 26, 1882. (No model.)

Claim.—1. A cylindrical spirally-corrugated metallic case having a cap or cover of similar construction and provided with an adjustable locking-ring, substantially as described.

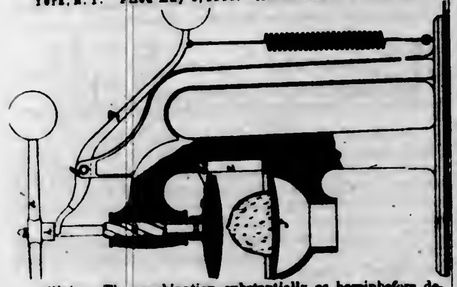


2. The combination of a cylindrical spirally-corrugated metallic case, a cap or cover of similar construction and having a stopper secured thereon, and an adjustable ring-lock, substantially as described.

259,900. PLOW. CHARLES L. MOSS, Carthage, Miss. Filed Jan. 31, 1882. (Model.)

Claim.—In combination with the plow-beam A, the curved standard B, having secured to its lower end a detachable point provided with an abutment, N, the curved mold-board L, resting against the abutment at its lower end, and provided with an extension, M, at its upper end, adapted to be secured to the standard by the bolt D, and the detachable heel-piece secured by the bolts S and G, substantially as specified.

259,901. CARPET-SWEEPER. HENRY A. MUELLER, New Haven, Conn., assignor to Maria Wiedersum, New York, N. Y. Filed June 6, 1881. Renewed Apr. 21, 1882. (No model.)



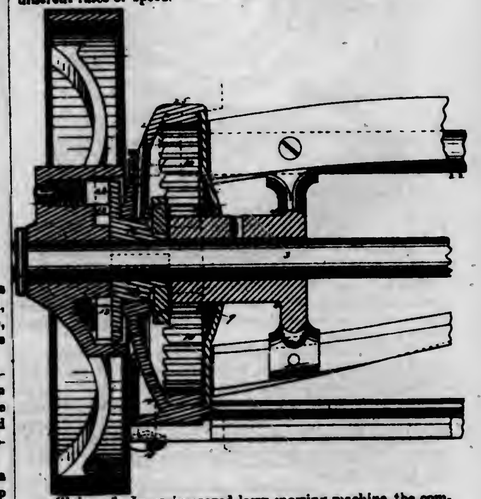
Claim.—1. In a carpet-sweeper constructed with dirt-receivers and open at one end, the plate I, secured to the box at the said end, constructed with a vertical slot, *f*, for the adjustment of the brush, and with arms *i* to support the dirt-receivers, combined with the flap H, hinged to the said plate, substantially as described.

2. In a carpet-sweeper, the vertically-slotted plate I, constructed with the seat *m* for the brush-pivot, and with a stud, *s*, on its opposite side, combined with a bolt, *r*, through the end A' of the box, and the slot in the plate, the said end A' of the box constructed with a vertical groove, *t*, on its inside to receive the stud *s*, substantially as described.

3. In a carpet-sweeper, an india-rubber guard consisting of a straight narrow strip, P, with a bead, R, at each end, the said strip introduced into a longitudinal groove on the side of the box, the said beads turned into the ends and inserted in corresponding recesses thereon, substantially as described.

259,902. LEMON-SQUEEZER. FREDERICK D. F. MELLER, New York, N. Y. Filed May 8, 1882. (No model.)

Claim.—The combination, substantially as hereinbefore described, of the follower B, loosely connected to its screw-stem, the projection *d*, for preventing said follower from turning with its stem, the handle for depressing the follower, and the reversing-lever D, for automatically raising the follower.



259,903. DEVICE FOR THREADING PLUGS. JAY H. NEWBURY and GORHAM A. CHAPMAN, Cohoes, N. Y. Filed Mar. 25, 1882. (No model.)

Claim.—The combination, with the lathe, dog, and rest I, of the shank or holder D, having centered recess E at one end and square recess J at the other, constructed as herein described, as and for the purpose set forth.

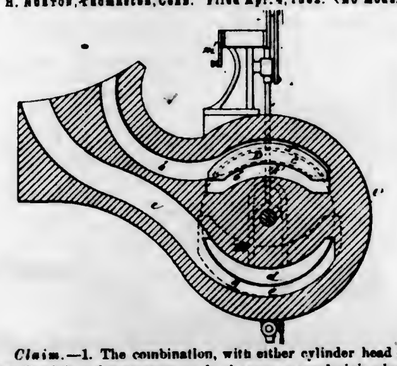
259,904. LAWN-MOWER. CYRUS NEWHALL, Hinsdale, N. H. Filed Apr. 1, 1882. (No model.)

Brief.—Cutting-cylinder and main axle upon which the cutting-cylinder is supported, each driven in same direction, but at different rates of speed.

Claim.—1. In an improved lawn-mowing machine, the combination of an axle supported by two driving-wheels, each provided with an actuating-dog, a clutch fixed to said axle inside of each driving-wheel and engaging with said dog, a stationary frame supported upon said clutch or axle at each end of the machine and provided with an internal gear, a saddle-piece secured to said clutch and provided with one or more toothed idler-wheels adapted to revolve thereon and engage with said internal gear, and a toothed wheel on the revolving knife-frame, adapted to engage with said idler-wheels, whereby said revolving knife is rotated by the movement of the driving-wheels, substantially as described.

2. An improved lawn-mowing machine, consisting of the combination of a main supporting axle or shaft, two driving-wheels secured thereon, a knife-frame supported by and adapted to revolve upon said main axle, and suitable mechanism for revolving said axle and said knife-frame both in the same direction and at different rates of speed, substantially as described.

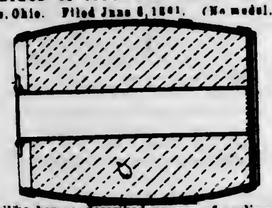
259,905. VALISE. FAYETTE G. NICHOLS, Richmond, Vt., assignor of one-half to Emory L. Freeman, same place. Filed Apr. 27, 1882. (No model.)



Claim.—1. In a valise, the halves or compartments C, composed of the parts D E F H, joined at the corners, as at G, and having extension-flaps I L P, substantially as shown, metal-bound, and provided with buckles and straps, as set forth.

2. The combination, with the halves or compartments C, the bottom and ends of which have extension-flaps L I, of the flaps P, extending from the upper edges of said sides and having box-edges Q, inclosing the other flaps when folded, and provided with suitable fastening devices, as set forth.

259,905.

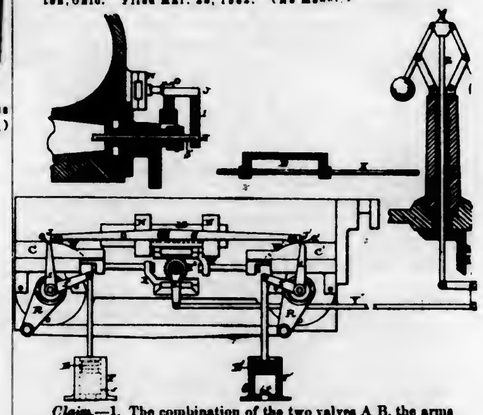


259,906. STEAM-ENGINE. WENDELL P. MORTON and CHARLES H. MORTON, Thomaston, Conn. Filed Apr. 4, 1882. (No model.)

Claim.—1. The combination, with either cylinder head or cover C, of the exhaust-passage *a*, having a concave draining-base within said head, the reversely-arched inlet and outlet ports *c d*, and the independent inlet and outlet slide-valves D E, for operation within the cylinder-heads and relatively to the ports, substantially as specified.

2. The combination, with a locomotive-engine cylinder and the independent slide-valves D E, of the heads C C, having the curved steam-inlet passages *b*, provided with the upper enlarged curved inlet-ports *c*, concaved on the upper side concentrically with the cylinder, and the reversely-arched exhaust-port *d*, having a passage, *a*, concaved on the upper side, the exhaust ports and passages being larger than the inlet ports and passages, as and for the purpose specified.

259,907. METHOD OF COOLING BUTTER. WALTER S. OGDEN, Toledo, Ohio. Filed June 6, 1881. (No model.)



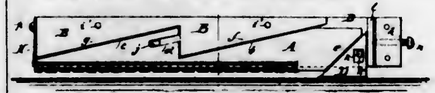
Claim.—The herein-described process of cooling butter in bulk, consisting in inserting vertically into the center of the mass of butter in the package a metallic cylinder or tube open at both ends, removing the butter incased in the tube, then removing the tube from the mass of batter, and then subjecting it to a temperature of about 53° Fahrenheit for a period of about twelve hours, substantially as specified.

259,908. PROCESS OF OBTAINING CYANIDES. CHARLES C. PARSONS and EDWARD F. CRUSÉ, New York, N. Y., assignors, by direct and mesne assignments, to HENRY BOWER, Philadelphia, Pa. Filed Oct. 7, 1879.

Claim.—1. The process of converting the cyanides of ammonium which are contained in ammoniacal gas-liquor into ferrocyanides of ammonia by adding iron in the form of a salt or in the insoluble form of hydrate, carbonate, oxide, or sulphide, or of metallic iron, and in the proportions above specified, to the said liquor in the absence of acid and without neutralizing the ammonia and before the ammonia is removed, substantially as specified.

2. The process herein described of treating gas-liquor for obtaining ammonia and Prussian blue by first adding iron in the form and proportions specified to said gas-liquor, thereby producing ferrocyanide of ammonia, then adding lime to free the ammonia and produce ferrocyanide of calcium, then distilling off the ammonia, and finally converting the ferrocyanide of calcium into Prussian blue by the addition of acid and a salt of iron, substantially as specified.

259,909. VALVE-MOTION. WILLIAM C. PENROCK, Cardington, Ohio. Filed Mar. 30, 1882. (No model.)



Claim.—1. The combination of the two valves A B, the arms 1 1′, weight, and cylinder, the valve A being provided with the crank R and the arm 1 being moved by the rod which is secured to the slide, substantially as shown.

2. The combination of the two rocking valves, each of which is provided with arms by means of which it may be moved, the slide M, carrying the two rods O O′, and the parts C C′, having curved surfaces and a suitable mechanism for moving them, substantially as specified.

3. The combination of the two parts C C′, connected together by the racks X X′, and pinion Y′, with the slide M, rods O O′, the governor, and the two valves, the valves B B′ being provided with the arms 1 1′ and weights to close them when left free to move, substantially as set forth.

4. The combination of the two parts C C′, connected together and operated by the governor, the valves, arms 1 1′, fastened to the valves B B′, the slide M, and arms or rods O O′, pivoted to the slide, the parts C C′ having curved surfaces, so that when the pressure of steam becomes too great the parts O O′ will be drawn together so as to prevent the rods O O′ from operating the valves B B′, substantially as specified.

259,910. PERFORATING DEVICE. EDWIN T. PETTIT, Marshalltown, Iowa, assignor to himself and George E. Keator, same place. Filed Dec. 29, 1881. (No model.)

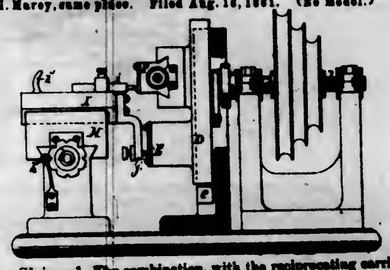
Claim.—1. The perforator-blade having inclined faces *b c*, inclined slot *d*, and end incline, *e*, in combination with the plate B, having pins *i′ i′*, inclined faces *f g*, offset *h*, and stud *k*, the plate C, having perforations *i i*, the sliding triangular plate D, having hole *k′*, the metal strip *l*, and the set-screw *n*, as and for the purpose described.

2. In combination with the blade A, plates B, C, and D, and the spring N, the screw *n* and the bar *l*, for adjusting the blade, substantially as described.

259,911. PILLOW-SHAM HOLDER. AUGUSTUS H. PHELPS, East Saginaw, Mich. Filed May 11, 1882. (No model.)

Claim.—1. The combination of the hinged rod C, having spring-latch *d* and arms D′ D′, and swinging frame E F, having buttons *e*, substantially as and for the purpose herein shown and set forth.

2. The swinging frame composed of the parallel bars E E and cross-bars F, made of strap-iron or similar material, bent to form



259,911.

the clasps or end loops, *g*, and eye *h* midway between said loops, substantially as and for the purpose herein shown and specified.

2. The combination, with the head-board or head-posts *a a* of a bedstead, having eyes *b b′*, one of which is notched at *c*, of the swinging frame composed of the rod C, having spring-latch *d* and bent wire D′ D D′, and posts E F, hinged upon said wire arms D′ D′, the whole constructed and arranged to operate substantially in the manner and for the purpose herein shown and described.

259,912. ENGRAVING AND CHASING MACHINE. ADDEL P. PHILLIPS, Providence, R. I., assignor of one-half to Frederick I. Marcy, same place. Filed Aug. 16, 1881. (No model.)

Claim.—1. The combination, with the reciprocating carriage D, provided with the work and pattern holders, of the slide I, provided with the graver and stylus holders, and having a movement toward and from the carriage, and capable of adjustment laterally with respect to said movement, substantially as described.

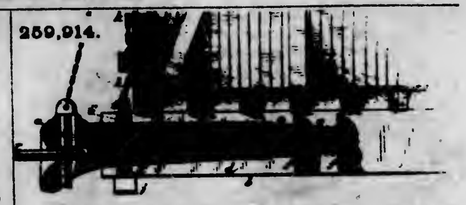
2. The combination, with the reciprocating carriage D, provided with the work and pattern holders, of the slide-rest H, having a movement in a plane parallel with the plane of movement of the carriage, and the slide I, mounted on said rest and having a movement toward and from the carriage, substantially as described.

3. The combination, with the reciprocating carriage D, provided with the work and pattern holders, of the slide-rest H, provided with an adjusting-screw and the index-plate A, and the slide I, provided with the graver *i* and the stylus *j*, constructed to operate as described.

4. The combination, with the pattern-plate *e*, of the marginal plate *f*, constructed to form, when secured together, the pattern by which the stylus guides the graver, as and for the purpose set forth.

259,913. WEAR-CLIP FOR HARNESS-IRONS. JAMES H. PHILPOTT, Rising City, Nebr., assignor of one-fourth to Henry Reinheimer, same place. Filed Apr. 10, 1882. (No model.)

Claim.—1. An improved wear-clip for rings, staples, cock-eyes, and other harness-irons adapted to fit the worn portion of the said irons and to be secured thereto, substantially as herein shown and described, and for the purpose set forth.



2. A wear-clip consisting of wear-iron C, filling-piece E, and attaching ear or wing clips D, constructed and arranged substantially as herein shown and described.

259,914. CAR-COUPLING. WILLIAM POWERS, Wyandotte, Mich., assignor of one-half to Richard Jones and John Allen, same place. Filed Apr. 17, 1882. (No model.)

Claim.—1. The draw-head provided with the opposite seats *n n*, opening into curved grooves *i* in its inner vertical walls, above its mouth, in combination with the coupling-pin *s*, having its lower end rounded or inclined on one side and provided with short side pins, *s′ s′*, adapted to fit the said groove-seats, substantially as described, whereby in raising the coupling-pin its side pins are automatically seated in the said groove-seats to support the coupling-pin in position within the mouth of the draw-head to be raised by the entering link, thus displacing the short side pins from their seats, and effect the release of the pin for automatic coupling.

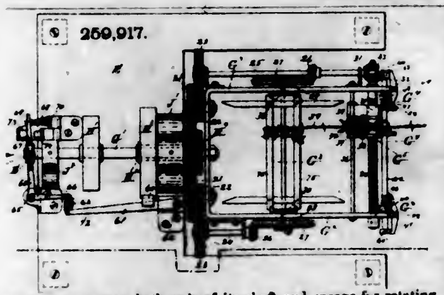
2. In combination, in a car-coupling, the pivoted draw-head *a*, the draw-bar *e f g*, the fixed slotted plates *c c′*, for the pivot of the draw-head, the strap *i*, chain *k*, lever *h l*, pin *n*, and the longitudinal timbers *b b*, having the guide-grooves for the said strap, the grooves for the draw-bars *f f*, and the slotted pivot-plates *c c*, all constructed as shown and described.

259,914.

259,915. TEMPORARY BINDER. ARTHUR L. PRATT, Kalamazoo, Mich. Filed Jan. 16, 1882. (No model.)

Claim.—In a temporary binder, the combination of a removable cover, a series of independent packages composed of blank leaves and stubs, and index-leaves interposed between the packages, said packages having transverse lines of perforations separating the stubs from the other parts of the leaves, and the whole detachably secured together by a cord passing through holes in the cover, index-leaves, and stubs, substantially as described.

259,916. VEHICLE-HUB. FORREST H. PRINDLEY, Grand Rapids, Mich., assignor of one-half to William B. Fox, same place. Filed Dec. 17, 1881. (No model.)



Claim.—1. A hub for vehicle-wheels, consisting of a sleeve, H, having the annular cast ring B, provided with semi-tubular standards, of the loose ring F, having corresponding standards, and adapted to fit upon the sleeve and the spoke S, each spoke being inclosed between a pair of such oppositely-placed standards.

2. The combination of the cast annular ring having the semi-tubular standards and the connecting-web, and provided with spurs P U, the spokes S, and the loose ring having corresponding standard and web, and spurs T X, each spoke being inclosed by the pressure of such standards and held by the spurs and by rivets passing through the web, as described.

259,917. MACHINE FOR TWISTING AND SPOOLING BARBED FENCE-WIRE. HENRY W. PRENTISS, LEVI BRADBURY, and LEWIS WILLIAMS, Bennington, Vt., assignors, by mesne assignments, to Washburn & Moen Manufacturing Company, Worcester, Mass., and Isaac L. Ellwood, De Kalb, Ill. Filed Sept. 30, 1881. (No model.)

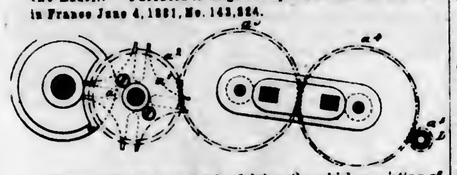
Claim.—1. The combination, with a twisting-frame, of a reel

259,917.

having gears upon both ends of its shaft and means for rotating the said gears, a feeding mechanism, and automatically-adjusting tension mechanism, substantially as shown and for the purposes set forth.

2. The combination, with reel-frame G^3 and means for rotating the same, of sliding shaft G′ and frictional mechanism, substantially as and for the purposes set forth.

3. The combination, with sliding shaft G′ and friction-wheel H^3, of brake 60, levers 61 64, spring 63, and means for connecting lever 64 to shaft G′, substantially as and for the purposes set forth.



4. The combination, with sliding shaft G′, lever 64, spring 63, and lever 61, of bumpers 73 and 74, spring 68, and pin 69, substantially as and for the purposes set forth.

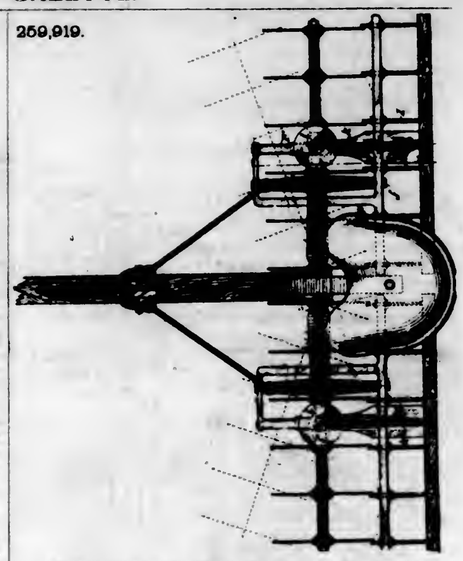
5. The combination, with frame G^3 and screw-shaft 34, of carriage G^2 and means for preventing said carriage from turning on said shaft, sliding shaft 42, provided with springs 46 and 47, collars 41, 43, 44, and 45, clutch 40, and gears 32 33, substantially as and for the purposes set forth.

6. The combination of clutch-rod 42, screw-shaft 34, and means for rotating the same with carriage G^2, provided with pins 50 and 51, and dogs 48 and 49, provided with springs 58, substantially as and for the purposes set forth.

7. The combination, with carriage G^2, adapted to traverse shaft 34, and provided with pins 50 and 51, holding and guiding rod 36, and sliding shaft 42, of spiral springs 46 and 47, collars 41, 43, 44, and 45, dogs 48 and 49, springs 58, clutch 40, and gears 32 33, substantially as and for the purposes set forth.

259,918. BOOT AND SHOE SEWING MACHINE. JOHN W. RAMSDEN, Leeds, County of York, England. Filed Sept. 8, 1881. (No model.) Patented in England Apr. 8, 1881, No. 1,546, and in France June 4, 1881, No. 143,824.

Claim.—The mechanism for driving the whirl, consisting of the combination of the driving-shaft A, the shaft D in the center of the horn-socket, the one-toothed wheel a on the driving-shaft, the star-wheel a', gearing with said wheel a, the pinion a^3, carried by said star-wheel, the pinion a^3 on said shaft D, and intermediate gearing between the said pinions a^3 and a^3, all substantially as herein described, for the purpose set forth.



259,919. DISK HARROW OR CULTIVATOR. SILAS G. RANDALL, Groton, N. Y. Filed Feb. 14, 1882. (No model.)

Brief.—Main frame consisting of central portion and pivoted side sections carrying disk-gang frames, and mechanism for swinging said side sections on their pivots to change the angle of disks. A scraper which reciprocates automatically across the face of the disk and a cleaner for the scraper. Friction-wheel adapted to operate the scrapers and receive end thrust of entire gang of disks.

Claim.—1. The combination of a draft-pole or tongue, a main frame consisting of a central portion and two pivoted side sections, disk-gangs carried by the side sections, and mechanism for swinging the side sections on their pivots to adjust the angle of the disks relatively to the line of draft.

2. The combination, substantially as set forth, of a draft-pole the main frame consisting of the central portion or section and the side sections pivoted thereto, a lever on the pole or tongue, connecting-rods between the lever and the side sections of the frame, and the disk-gangs carried by the side sections.

259,919.

3. The combination, substantially as set forth, of the disk-gang frame, the gang-shaft having bearings therein, the main frame, and connections between the main and gang frames in front and in rear of the gang-shaft, the connections being at or about in the horizontal plane of the gang-shaft.

4. In a harrow or earth-treating machine, the combination of a rotating cutting-disk and an automatically-reciprocating scraper which reciprocates across the face of the disk, for the purpose set forth.

5. In a harrow or earth-treating machine, the combination, substantially as set forth, of a rotating cutting-disk and a reciprocating scraper which reciprocates radially across the face of the disk.

6. In a harrow or earth-treating machine, the combination, substantially as set forth, of a rotating cutting-disk and a scraper which automatically reciprocates in a rectilinear line across the face of the disk.

7. In a harrow or earth-treating machine, the combination, substantially as set forth, of a rotating cutting-disk, a reciprocating scraper, and a cleaner for the scraper.

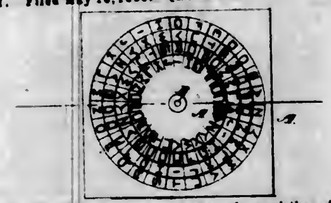
8. In a harrow or earth-treating machine, the combination, substantially as set forth, of a rotating cutting-disk, a scraper, and a cleaner for the scraper.

9. In a harrow, the combination, substantially as set forth, of a gang of cutting-disks, a series of reciprocating scrapers adapted to clean the faces of the cutting-disks, and a series of cleaners for clearing the scrapers.

10. The combination, substantially as set forth, of a gang of disk-cutters, a laterally shifting or reciprocating bar arranged at or about parallel to the disk-gang shaft, mechanism for shifting it, a series of scrapers carried by the reciprocating bar, and a series of cleaning-eyes through which the scrapers reciprocate.

11. The combination, substantially as set forth, of a gang of disk-cutters, a gang-frame in which the disk-gang shaft has its bearings, a bar carried by the gang-frame in rear of the disk-gang, a series of cleaning-eyes carried by the bar, a laterally shifting or reciprocating scraper-bar, a series of scrapers carried thereby, which pass through the cleaning-eyes, and mechanism actuated by the rotation of a cutting-disk for reciprocating the scrapers.

12. The combination, substantially as set forth, of a gang of disk-cutters, the gang-frame in which the gang-shaft has its bearings, a bar carried by the gang-frame in rear of the disk-gang, a series of scraper-cleaning eyes carried by the bar, a laterally shifting or reciprocating scraper-bar, a series of scrapers carried thereby, which pass through the cleaning-eyes, a guide plate or arm on the shifting scraper-bar, a friction crank-wheel mounted on the gang-frame and adapted to be rotated by the friction of a cutting-disk, and a pitman connecting the crank-wheel and shifting scraper-bar.

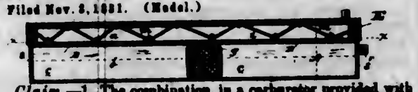


13. In a harrow, the combination, substantially as set forth, of a disk-gang shaft, its bearings, a gang of disk-cutters, and a rotating wheel or disk which receives the end-thrust of the entire gang.

14. In a harrow, the combination, substantially as set forth, of the gang-frame, the disk-gang shaft, its bearing in the frame, the gang of disk-cutters, and the disk on the frame which receives the end-thrust of the entire gang.

15. The combination, substantially as set forth, of a main frame, a disk-gang frame, a gang-shaft mounted therein, a gang of cutting-disks adapted to work at an angle to the line of draft, carried by said shaft, and a pivotal connection between the main frame and gang-frame at or about in the horizontal plane of the gang-shaft, which pivotal connection permits the latter to rock transversely to conform to the ground.

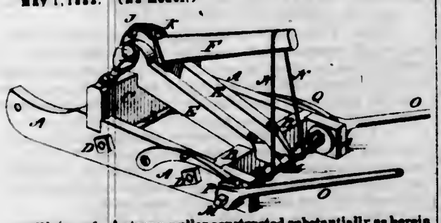
16. The combination, substantially as set forth, of a disk-gang frame, a gang-shaft mounted therein, and a series of bearings on the gang-frame for connection to the main frame, which bearings are at or about in the plane of the gang-shaft, for the purpose set forth.



259,920. SPELLING TOY AND PUZZLE. WILLIAM H. RUFF, Philadelphia, Pa., assignor to Rogers, Peet & Co., New York, N. Y. Filed May 16, 1882. (No model.)

Claim.—1. The spelling toy and puzzle consisting of the lettered dials A_2 connected together for revolution one upon the other, substantially as shown and described.

2. The combination of the lettered dials A, attached together by the center pin or rivet, B, substantially in the manner and for the purposes set forth.

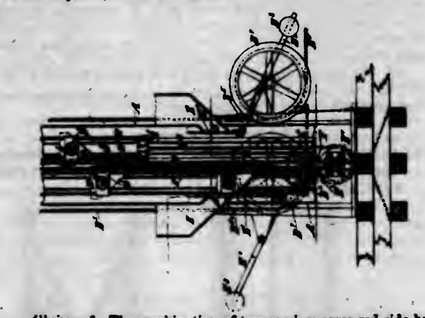


259,921. AIR-CARBURETOR. GEORGE RUNGE, Mercer, Pa. Filed Nov. 8, 1881. (Model.)

Claim.—1. The combination, in a carburetor provided with two horizontal chambers, a b, of the longitudinal vertical compartments d, communicating with the chamber a at their tops throughout their entire length, and the vertical chambers C, communicating with the compartments d at their bottoms and with the compartment b at their tops, the said compartments a, C, d, and b being provided with textile absorbent material arranged substantially in the manner and for the purpose specified.

2. In a carburetor, the combination of the upper and lower chambers constructed as described, and packed with textile material arranged substantially as specified, the upper chamber having partitions forming passages which communicate at alternate ends, and the textile absorbent material arranged in a zigzag course therein, substantially as and for the purpose specified.

259,922. STUMP-PULLER. OLIVER RICE, Enfield, Ill. Filed May 1, 1882. (No model.)



Claim.—1. A stump-puller constructed substantially as herein shown and described, and consisting of the frame A B C E, the lever F, having cam G, chain J, the shaft M, the rope or chain N, the levers O, and ratchet-wheels P and pawls Q, as set forth.

2. In a stump-puller, the combination, with the front cross-bar, C, of the frame, of the lever F, having cam G, and the chain J, substantially as herein shown and described, whereby a stump can be raised by operating the said lever, as set forth.

3. In a stump-puller, the combination, with the frame A B C E and the lever F, of the rope or chain N, the shaft M, and the levers O, substantially as herein shown and described, whereby the said lever can be readily operated, as set forth.

4. In a stump-puller, the combination, with the frame A B C E and the shaft M, of the ratchet-wheels P and pawls Q, substantially as herein shown and described, whereby the said shaft will be held against the strain of the rope or chain, as set forth.

259,923. ELEVATOR. JOHN D. RICHARDSON, New York, N. Y., assignor of one-half to Francis L. Manchester, same place. Filed Apr. 21, 1882. (No model.)

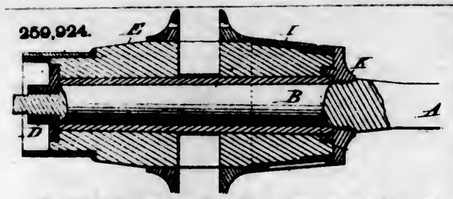
Claim.—1. The combination of two carriers arranged side by side, mechanism, substantially such as described, for imparting to them a direct rectilineal motion alternately in opposite directions, and two series of buckets attached to said carriers and arranged back to back, all being so organized that the buckets of each series, when in their highest position, will deliver their contents into the buckets of the other series, substantially as and for the purpose specified.

2. The combination, with two reciprocating carriers, two series of buckets attached thereto, and sliding gates or valves for said buckets, of carriers to which the gates or valves are attached, and means, substantially such as described, for arresting the movement of the gates or valves when the buckets approach the end of their upward movement, so as to allow the said buckets to move away from said gates or valves, substantially as described.

3. The combination, with two reciprocating carriers, buckets attached thereto, and sliding gates or valves for said buckets, of carriers to which said gates or valves are attached, and which are weighted to move the gates or valves upward, and stops for arresting said weights, and thereby stopping the gates or valves before the buckets reach the end of their upward movement, substantially as described.

4. The combination, with the elevator-tower having delivery-openings g, of two reciprocating carriers, two series of buckets attached thereto, the top buckets of the two series having delivery-openings in their sides, sliding gates or valves for said buckets, a reciprocating carrier to which said gates or valves are attached, and means, substantially such as described, for arresting the upward movement of the gates or valves before the completion of the upward movement of the buckets, substantially as described.

5. The combination, with two reciprocating carriers and two series of buckets attached thereto, of the feeders or feeding-hoppers E and the self-closing gates or valves E′, adapted to be opened by said buckets in their downward movement, substantially as described.

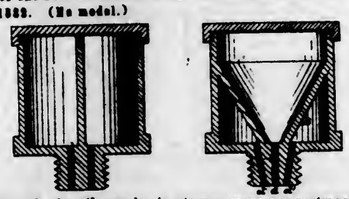


6. The combination of the tower A, provided on opposite sides with channels or guideways c, the two reciprocating carriers, each composed of a group of ropes, B, and cross-heads or frames B' B^2, the buckets D, the clamps D′, for attaching the buckets to said ropes, and the guide-rollers b on said clamps, substantially as specified.

7. The combination, with the two carriers connected at their lower ends and provided with buckets, of the ropes B^2, connected to the upper ends of said carriers, the sheaves B^3, over which said ropes pass, and the rotary wheels C, provided with crank-pins a, set diametrically opposite each other, and to which said ropes are attached, substantially as specified.

259,924. SAND-BAND. FRANK S. ROLFE and WILLIAM OOSLEY, Waterbury, Vt. Filed Apr. 18, 1882. (No model.)

Claim.—1. A metallic sand guard or protector consisting essentially of a perforated plate having an internal collar or annular projection adapted to receive the inner end of the axle-box, substantially as shown and described.



259,924.

2. The combination, with an axle, of a metallic sand guard or protector composed of a perforated plate, K, having an internal collar, *c*, with an annular recess inside to receive the round part of the axle-arm and square outside to receive the square part of the axle, substantially as shown and described.

3. The combination, with the axle A and its arm B, of the hub E, band I, and perforated plate K, having an internal collar, *c*, substantially as shown and described.

259,925. OIL-CUP. THOMAS D. RUSSELL, Kent, Ohio, assignor of one-half to Charles C. Byers, Meadville, Pa. Filed May 5, 1882. (No model.)

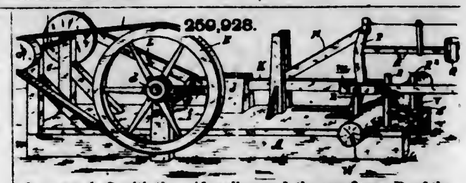
Claim.—1. An oil-cup having two or more compartments, each provided with a separate duct leading to the wearing-surfaces, substantially as and for the purpose hereinbefore set forth.

2. An oil-cup having two or more compartments, each provided with a separate duct, said ducts uniting before reaching the wearing-surfaces, substantially as hereinbefore described, and for the purpose specified.

259,926. FASTENING FOR GLOVES, &c. WILLIAM H. RUTTY, New York, N.Y. Filed Feb. 23, 1881. (No model.)

Claim.—1. The combination, with a lever adapted to be attached to any desired fabric, and to have an eyelet engaged with it, of arms to shield the lever when in its closed adjustment, substantially as set forth.

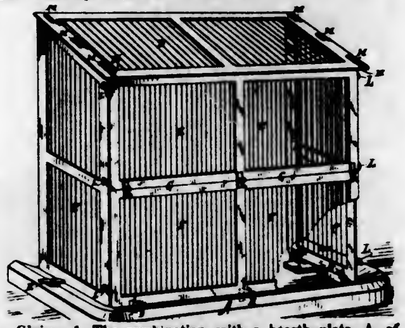
2. The combination, with a plate, of a lever pivoted thereto and provided with a long arm to engage with an eyelet, with a short arm, and with a lug, and a spring secured to the plate, said lever being held in closed adjustment by the engagement of an eyelet with its lug and by the impingement of the said spring upon its short arm, substantially as set forth.



3. The combination, with a recessed plate, of a lever pivotally secured to it and provided with a long and with a short arm, and a spring secured to the plate, its free end being located over the recess therein, said spring operating to hold the lever in its closed and open adjustment by impinging against its short arm, substantially as set forth.

259,927. APPARATUS FOR TRANSMITTING MOTION. ANTONIO SAMPER, Paris, France. Filed Apr. 24, 1882. (No model.)

Claim.—A frame provided with a counter-balance on one end shaft, *f*, a pulley, D, on the other, and intermediately a driving-pulley on shaft *e*, in combination with a similar frame carrying a pulley, D, at one end, connected to a hook at the other, and carrying a pulley to be driven on an intermediate shaft, as and for the purpose specified.



259,928. DRAG-SAW. JACOB F. SCHENCK, New Bremen, Ill. Filed Mar. 3, 1882. (No model.)

Claim.—1. In a sawing-machine, the combination, with the frame A, the drive-wheel E, the pulley *g*, the crank-wheel *h* on the same shaft with the said pulley, and the saw-frame P, of the pitman L, the reciprocating bar K, provided with the forked end *m*, and the brace-bar N, substantially as and for the purpose set forth.

2. In a sawing-machine, the combination, with the frame A and the driving mechanism, of the pitman L, the reciprocating bar K, the block J, the brace N, and the saw-frame P, provided with the adjustable weight Q, substantially as and for the purpose set forth.

259,929. FIRE-PLACE FENDER. ISAIAH W. SHOEMAKER, Royston, assignor to himself and John H. King, Saxonburg, Pa. Filed Apr. 13, 1881. (No model.)

Claim.—1. The combination, with a hearth-plate, A, of a fender constructed in side, front, and top sections, said side and front sections being hinged to and arranged to fold down within the said hearth-plate, substantially as specified.

2. The front section of a folding fender, hinged to the hearth-plate and jointed together, as at G, in two parts, E F, to fold within the hearth-plate, substantially as specified.

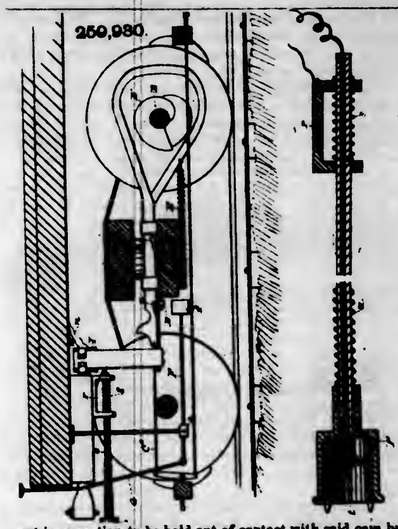
3. The hearth-plate A, constructed with supports I, in combination with side and front folding fender-sections, C F E, substantially as specified.

4. The combination, with hearth-plate A, having supports I, of folding side and front fender-sections, C F E, detachable top sections, B D, and buttons or equivalent fastening devices K, substantially as specified.

5. The combination, with the hearth-plate A, of folding front and side fender-sections, C F E, and fastening hooks and studs L, substantially as specified.

6. The combination of the folding side fender-sections, C, having tenons M, and the detachable top section having slots N, substantially as specified.

259,930. CAR-BRAKE. LOUIS H. SHELDEN, Cleveland, Ohio. Filed Feb. 13, 1882. (No model.)



Claim.—1. In a car-brake, the combination, with the brake-beams and connecting rods or chains, of a cam secured to or operated by the car-axle, a reciprocating yoke encircling the cam, a notched bar connected with said yoke, a pawl and means for actuating the same, and a spring for retracting the yoke, substantially as set forth.

2. In a car-brake, the combination, with the brake-beams and connecting rods or chains, of a double spiral cam secured to the car-axle, a reciprocating yoke encircling the cam, and means, substantially as described, for throwing the yoke into and out of engagement with said cam, substantially as set forth.

3. In a car-brake, the combination, with the brake-beams and connecting rods or chains, of a double spiral cam attached to the car-axle, a reciprocating yoke encircling the cam, a notched bar connected with the yoke, a pawl adapted to engage the notched bar, and a weighted lever for releasing the pawl, substantially as set forth.

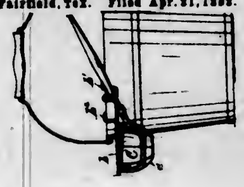
4. In a car-brake, the combination, with a notched bar adapted to be actuated by means of a cam secured to a car-axle and while

259,930.

not in operation to be held out of contact with said cam by means of a pawl engaging the notches of said bar, of a hammer or weighted lever adapted to disengage the pawl and permit the bar to come in contact with the cam, substantially as and for the purpose set forth.

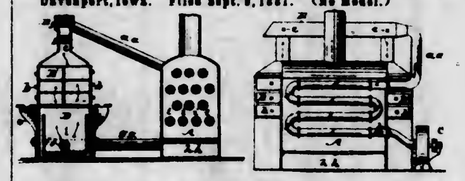
5. In a car-brake, the combination, with a bar, said bar being adapted to be actuated by means of a cam secured to a car-axle, of the teeth *a* and *b* and a pawl for engaging with said notches, one of the said teeth acting while engaged with the pawl to hold the bar out of contact with the cam while the brake is off and the other adapted to hold the bar out of contact with the cam while the brake is set and hold the brake set, substantially as and for the purpose set forth.

6. In a car-brake, the combination, with the notched bar and yoke, of a weighted lever, F, and an actuating-bar, G, pivoted to one end of said lever and extending upward to a point above the car-platform or above the top of a car, substantially as and for the purpose set forth.



7. In a car-brake, the combination, with the brake-beams and connecting rods or chains, of a spiral cam attached to the car-axle, a reciprocating yoke encircling the cam and provided with a notched bar, a pawl adapted to engage said notched bar, a weighted lever, and an electro-magnet for actuating said lever, substantially as set forth.

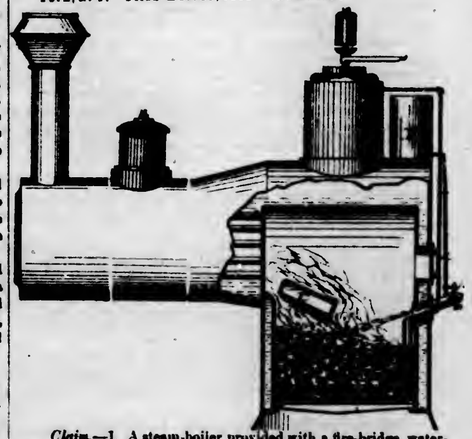
259,931. REVERSIBLE COAT. JACOB SIMMONS, Baltimore, Md., assignor of one-half to Joseph Goldstine, same place. Filed Feb. 20, 1882. (No model.)



Claim.—As a new article of manufacture, a reversible coat which consists of two complete coats placed back to back and secured together at the edges, and provided with a reversible turn-down collar and lapels faced on each side, respectively, with the same material as the side of the coat exposed to view when in use, substantially as specified.

259,932. HOUSEHOLD UTENSIL. THOMAS W. SIMS and FRED FISCHER, Fairfield, Tex. Filed Apr. 21, 1882. (No model.)

Claim.—A dipper-holder consisting of the rim *b*, wire *c*, and disk *d*, arranged to form a cup-shaped support, the ends of the rim being bent into hooks b' b^2, and a recess, b^3, substantially as shown and described.



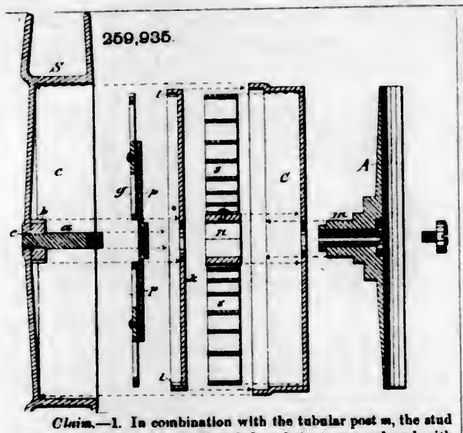
259,933. EVAPORATOR AND HEATER. ROBERT M. SEILES, Davenport, Iowa. Filed Sept. 8, 1881. (No model.)

Claim.—1. The combination of the heater A and drier B, arranged side by side, the sinuous air-flue, formed of pipes *i*, having inclined feed-pipe *a a*, fan C, and discharge-pipe *g g*, and the perforated distributing-pipe *f f* and drier B, having flues *e* and chamber E, for discharging moisture and supplying fresh air to the feed-pipe, substantially as shown and described.

2. The combination, with the heater A and its air-conducting pipes, of the drier B, having upright flues *e*, arranged at intervals apart, and the chamber E, having opening *d* for the admission of cold air and holes *e* for the escape of moisture, substantially as shown and described.

259,934. HYDROCARBON-FURNACE. BYRON SLOPER, New York, N.Y. Filed Mar. 21, 1882. (No model.)

Claim.—1. A steam-boiler provided with a fire-bridge, water-legs, and a bat-wing hydrocarbon-injector, slotted as described, whereby liquid fuel, in connection with superheated steam, may be projected into the fire-box, directly below the fire-bridge, in a broad thin stratum, so as to heat the boiler throughout, substantially as specified.



2. In combination with a bat-wing injector and the water-legs of the boiler, the steam-pipes covered with refractory material, and passing above the grate-bars back and forth horizontally directly through a body of incandescent material, whereby the steam is superheated and passed directly in a superheated state to the liquid-fuel injector, and discharged, in conjunction with the liquid hydrocarbon, in a broad thin sheet, forwardly and laterally immediately onto the incandescent fuel directly beneath the fire-bridge, substantially as and for the purposes specified.

3. The combination, with the outer cylindrical shell of the injector, of the inner cylindrical shell, the two having coincident transverse slots, as described, for the purpose of delivering the combustible gases in a lateral as well as forward direction, or in a bat-wing jet, to the water-legs, as specified.

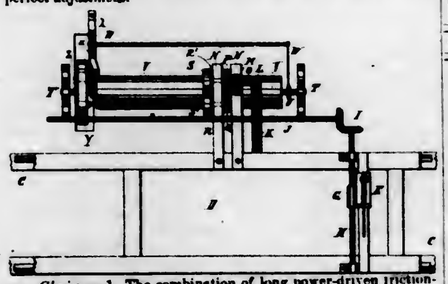
4. In combination with the outer and inner shells of the injector, having coincident transverse slots, as described, the nut embracing the inner shell and secured by a screw-thread to the outer shell, and the interposed packing, arranged as set forth.

259,935. FISHERMAN'S REEL. FRANKLIN R. SMITH, Syracuse, N. Y., assignor of one-half to Willis S. Barnum, same place. Filed Feb. 13, 1882. (No model.)

259,935.

Claim.—1. In combination with the tubular post *m*, the stud *a*, provided with a female threaded socket at one end and with external screw-threads at the opposite end, the interchangeable spool S, provided with a screw-threaded eye, *e*, for the reception of the externally-threaded end of the stud *a*, and the attaching-screw fitted to the cavity in the opposite end of the stud *a*, all as shown and described, for the purpose set forth.

2. In combination with the attaching-plate A and the spool S, pivoted thereon as shown, the combined line-guide and brake, consisting of an arm, B, pivoted on the attaching-plate in eccentric relation to the pivot of the spool, and having its free end extended across the periphery of the spool and provided with an eye, *i*, the whole constructed and operating to control the motion of the spool and guide the line, substantially as set forth.



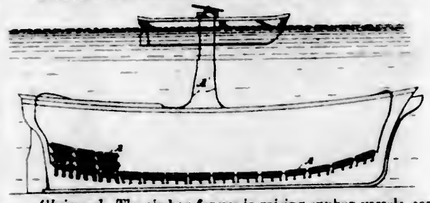
3. In combination with the spool S, the line-guide having a guarded lateral inlet, *o*, to the eye thereof, for the introduction and removal of the line to and from said eye, substantially as set forth.

4. The combination, with the pivoted spring-case C, of the geared plate K, rigidly attached to and closing the case, and provided with an axial bearing, substantially as described, for the purpose specified.

5. In combination with the spool S and case C, the post *m*, having inside of said case a square or polygonal form externally, the collar *n*, fitted detachably to the exterior of said post, and the spring *s*, connected at its inner end to the collar *n*, substantially as and for the purpose shown and set forth.

259,936. DEVICE FOR OPERATING SAW-MILL KNEES. SAMUEL R. SMITH and EDWARD MYERS, Cincinnati, Ohio, assignors to Smith, Myers & Schaler, same place. Filed Feb. 1, 1882. (No model.)

Brief.—Applicant employs a long friction-drum, with suitable connecting mechanism placed parallel to the carriage and extending from one end of its travel toward the other end, to communicate motion to the knees. This enables the connection to be made and the knees operated when the carriage is at any point approximating the end of its travel without loss of time in more perfect adjustment.



Claim.—1. The combination of long power-driven friction-drum V, parallel with the track, forwarding friction-wheel S, and retracting friction-wheel S', and suitable means, W, for bringing the drum and wheels into frictional contact, substantially as shown and described, for the purpose set forth.

2. The combination of long friction-drum V, forwarding and retracting friction-wheels S S', rock-arms U U, supporting said drum, and lever W, for engaging the drum with either friction-wheel, substantially as set forth.

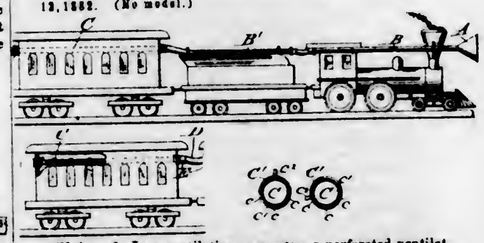
3. The combination of long friction-drum V, parallel with main shaft, and friction-wheels S S' and spur-wheel Q on shafts R R', with spur-wheel P and pinion L on shaft O, located over said drum and forming the means for communicating motion from the drum to the spur-wheel on the main shaft, as set forth.

259,937. APPARATUS FOR RAISING SUNKEN SHIPS. JOHN F. SPEARING, New Orleans, La. Filed Jan. 4, 1883. (No model.)

Claim.—1. The air-bag for use in raising sunken vessels, consisting essentially of the bag proper, the canvas or other bands encircling it and stitched or otherwise secured to it, and the ropes *b*, encircling the bag and stitched or otherwise secured to the encircling bands.

2. The combination, substantially as set forth, of the air-bag, the ropes *b*, encircling it, the brace-rod for bracing the bag, and the lifting chains or ropes.

3. The combination, substantially as set forth, of the air-bag, the lifting-chains connected therewith, and the bolts or staples adapted to be secured directly in the sides of the hull.



4. The combination of the air-bag, the end tube, the ring-aperature in the end of the air-bag, the funnel, and its flange, substantially as set forth.

5. The combination, substantially as set forth, of the series of air-bags, their connecting-tubes and coupling devices for connecting the bags directly to each other in connected series, the lifting-chains, the devices for connecting the lifting-chains of each bag directly to the hull of the vessel, and the inflating-tube A'.

6. The combination of one or more series of air-bags coupled together end to end in connected series by means of the connecting air-tubes, as set forth, one or more series being arranged on each side of the craft to be floated, lifting-ropes attached to the bags, devices for connecting the lifting-ropes of each bag directly with the hull of the vessel, and air-tubes connecting with the ends of each series of bags for introducing compressed air into them, substantially as shown and described.

7. The combination, substantially as set forth, of the air-bag, lifting-chains connected therewith, the bolts or staples constructed with pawls or dogs, as described, and adapted to be introduced into the hull of the vessel, and devices for connecting the lifting-ropes with the bolts or staples.

259,938. APPARATUS FOR VENTILATING RAILROAD-CARS. JOSEPH A. STEPHAN and JOHN GIBBIST, Fargo, Dak. Filed Mar. 13, 1882. (No model.)

Claim.—1. In a ventilating apparatus, a perforated ventilating-pipe provided with an exterior sliding section having bands or loops by which it is connected with said pipe, and adapted to be moved thereon for the purpose of covering or uncovering the perforations, substantially as described.

2. In a ventilating apparatus for railway-cars, the combination, with the horizontal pipes C C, having perforations *e e*, for the passage of air into the car, and slides C' and dampers *f*, for regulating the passage of air through said perforated pipes, of the flexible tubes or pipes D, having couplings E E, adapted to connect the opposite ends of the ventilating-pipes, substantially as described.

3. In an apparatus for ventilating railway-cars, the combination of the funnel A, having screw-conveyer *a* and valve *d*, provided with cord *d'*, conveying-pipes B' B', perforated ventilating-pipes C C, having slides C' and dampers *f*, and the flexible connecting-pipes D, having couplings E E, for connecting the conveying and ventilating pipes, substantially as shown and described.

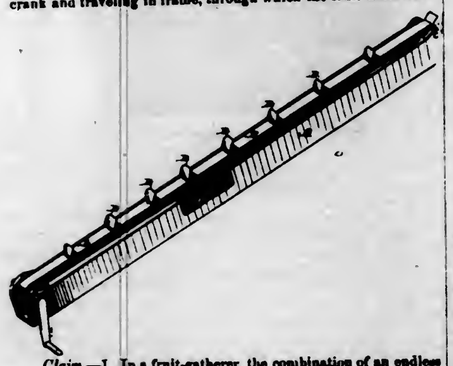
259,939. FLESH-BRUSHING APPARATUS. MARY V. STRYKER and WILLIAM RUSSELL, New York, N. Y. Filed Apr. 4, 1882. (No model.)

Claim.—1. In a flesh-brushing apparatus, the combination of a series or system of substantially vertical brushes and a support for sustaining the person to be acted upon by the rotation of said brushes, all substantially as and for the purpose herein set forth.

2. The combination of a circular, or substantially circular, series of longitudinal brushes, an annular base-plate, a top ring, a base for supporting the base-plate, and a pedestal for supporting the person to be operated upon, all substantially as and for the purpose herein set forth.

3. The combination of the annular base-plate C, the base A, spheres or rollers D, and the annular system of longitudinal brushes arranged to rotate around the axis of the pedestal, all substantially as and for the purpose herein set forth.

4. The combination of the plate E, pedestal B, base A, rollers or spheres D, annular base-plate C, top ring, G, and the system of longitudinal brushes, all substantially as and for the purpose herein set forth.



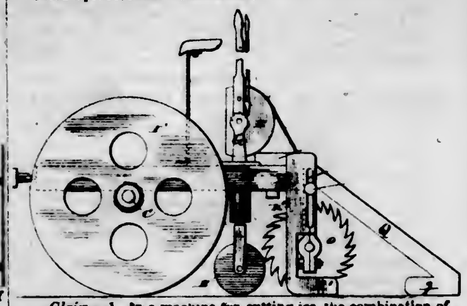
5. The combination, with the annular base-plate C, top ring, G, and bars F, of the longitudinal brushes, with the door composed of bars F', and sectors J and K, all substantially as and for the purpose herein set forth.

6. The combination of the bars F, which are provided with brushes and are curved outward at *d*, with the alternating straight bars F, which are devoid of brushes, the base-ring C, and the top ring, G, all substantially as and for the purpose herein set forth.

7. The top ring, G, constructed with the radial slots *a'*, the longitudinal series of bars F, provided with brushes, the base-ring C, and means, substantially as described, for fastening the upper ends of the bars F to the top ring, G, at a greater or less distance from the axis thereof, all substantially as and for the purpose herein set forth.

259,940. FRUIT-GATHERER. LEONARD STORR, San Luis Obispo, Cal. Filed Mar. 27, 1882. (No model.)

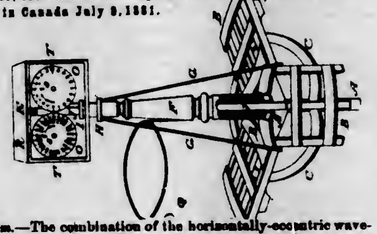
Brief.—Convexed cutters secured to endless belt turned by crank and traveling in frame, through which the fruit is carried.



Claim.—1. In a fruit-gatherer, the combination of an endless traveling belt, a frame or conveyer, and cutting devices, substantially as and for the purpose specified.

2. In a fruit-gatherer, an endless belt, a frame or tube, and convex cutters D, in combination, substantially as and for the purpose set forth.

3. A fruit-gatherer consisting of the tube or conveyer A, endless belt B, and the cutting and gathering devices D, secured upon said belt, in combination, substantially as set forth.

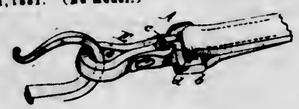


259,941. ICE-CUTTING MACHINE. JOHN STORK, Canton, Mo. Filed Apr. 15, 1882. (No model.)

Claim.—1. In a machine for cutting ice, the combination of the saws or cutters O, fixed guides or gages Q, for regulating the distance between the cuts or furrows, and vertically-adjustable gages R', for regulating the depth of the cuts, substantially as and for the purpose herein shown and described.

2. The combination of the platform A, drive-shaft C, drive-wheels I I', hinged frame H, carrying the saws O, guides Q, and depth-gages R', and mechanism for operating the saws, substantially as and for the purpose herein shown and described.

259,942. GRAIN-REGISTER. WESLEY STRINGER, Port Dover, Ontario, Canada. Filed Sept. 24, 1881. (No model.) Patented in Canada July 9, 1881.



Claim.—The combination of the horizontally-eccentric wave-ring or cam, revolving on anti-friction wheels, with the triple platform B B B, and hollow vertical revolving shaft F, and vertical stationary shaft J, and slide-collar I, and pawl L, in combination with the dial-plates O O, graduated on their faces and ratcheted on their backs and secured by the click-spring N, substantially as and for the purpose hereinbefore set forth.

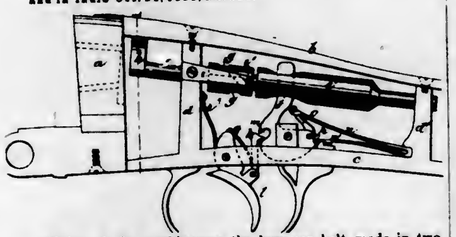
259,943. CULTIVATOR. ELDRED A. TABER, Hall's Mill, Tenn. Filed Jan. 30, 1882. (No model.)

Claim.—In a walking-cultivator, the combination, with the cultivator-frame composed of the beam or tongue A, slotted longitudinally at *a*, fixed and shouldered shovel-beams C C, and handles F F, braced by the yoke or stirrup H, straddling the rear end of the slotted beam A, and having perforations A A, of the vertically-adjustable middle beam, B, pivoted in the slotted tongue at *d* and adjustable by the bolt *i*, in the manner and for the purpose herein shown and specified.

259,944. CHECK-LOOP. ANTHONY THILLEN, Perry, N. Y. Filed Dec. 1, 1881. (No model.)

Claim.—A loop for overdraw check-reins, composed of a metallic portion, A, which consists of a horizontal loop, *b*, and a vertical loop, *c*, cast in one piece, the loop *b* being adapted to receive the check-rein, and a horizontal loop, E, of flexible material, secured to the loop *c* and adapted to engage over the saddle-hook, substantially as set forth.

259,945. PLANER-CHUCK. HUGH THOMAS, New York, N. Y. Filed Jan. 26, 1882. (No model.)



Claim.—1. The combination, in a planer-chuck, of a base-piece having a circular opening, a top piece provided with a sectional hub entering said opening, and devices for expanding the said sectional hub against the side of said opening, substantially as specified.

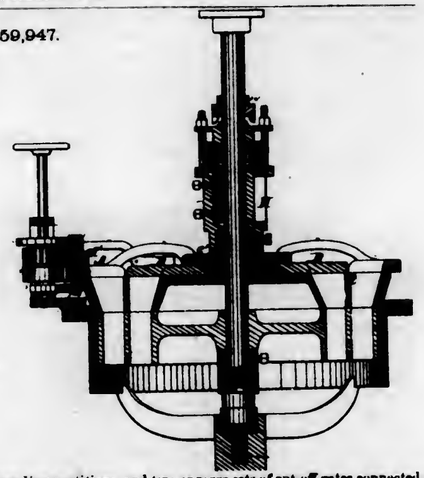
2. The combination, in a planer-chuck, of a base-piece having a circular opening the side of which is tapered or beveled upward, a top piece provided with a sectional hub entering said opening and correspondingly tapered or beveled, and devices for expanding said hub against the beveled side of said opening, substantially as specified.

3. The combination, in a chuck, of a base-piece having a circular opening, a top piece provided with a sectional hub entering said opening, and composed of two segments and an interposed wedge, and a screw for actuating said wedge to expand the segments, substantially as specified.

4. The combination of the base-piece A, having a tapered opening, A', the top piece, B, the segments C, the wedge C', tongued and grooved into the inner edges of the segments, and the screw D, substantially as specified.

259,946. GUN-LOCK. HENRY A. A. THORN, London, England. Filed Sept. 24, 1881. (No model.) Patented in England Mar. 21, 1881, No. 1,243; in Germany July 26, 1881, No. 17,097; in France July 28, 1881, No. 144,186; in Belgium Aug. 8, 1881, No. 55,399; in Austria Oct. 24, 1881, Nos. 24,075 and 38,994, and in India Oct. 24, 1881, No. 933.

Claim.—1. In combination, the hammer-bolt, made in two parts, connected by means of a reduced end of the part *e'* entering the bored-out part of part *e* and having the grooves *f g*, the tumbler *j*, trigger *l*, and trigger-lever *k*, and their respective springs, the combination operating substantially as and for the purposes described.

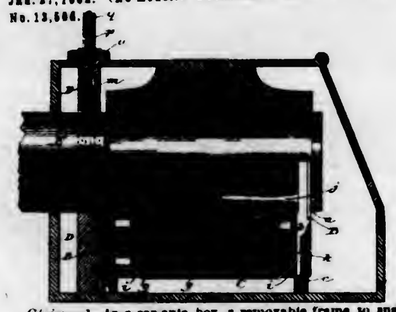


2. In a lock or action for breech-loading small-arms having several barrels and a single trigger, a hammer-bolt formed in two parts, *e e'*, the latter of which projects into the bored-out part *e*, and is also slotted to receive the upper end of the tumbler, and provided with a series of longitudinal slots, *f*, and with a corresponding number of inclined slots, *g*, between and opening into said slots *f*, as and for the purposes described.

3. In combination with the hammer-bolt, made in two parts, as described, one part being slotted and the two parts being connected together, as set forth, the trigger-lever *k*, having a nose at its upper end, tumbler *j*, provided with a curved slot, *m*, and projection *p*, lever or link *o*, and a spring, *n n'*, one end of which bears on the shoulder or projection of the tumbler and the other end on the link, the combination being and operating substantially as shown and described.

259,947. TURBINE WATER-WHEEL. CHARLES R. TOMPKINS, Rochester, N. Y. Filed July 26, 1880. (Model.)

Claim.—1. In a turbine water-wheel, the combination of a set of chutes divided in the direction of the course of the water by one or more partitions, a wheel the buckets of which have corresponding partitions, and two or more sets of cut-off gates connected to and working upon a central hub attached to the case of the wheel, substantially as shown and described.



259,947.

2. In a turbine water-wheel, the combination of chutes divided into two or more compartments, wheel-buckets corresponding thereto, independent sets of cut-off gates operated by a single shaft, and automatic devices for locking each set of gates while the others are being moved, substantially as set forth.

3. In combination with the shaft of a turbine water-wheel, a fixed collar having suitable wings or projections upon the under side and placed just above the stuffing-box for the purpose of agitating the water and preventing sand and other sediment from accumulating around the shaft and being drawn into the bearing, substantially as specified.

259,948. CAR-AXLE BOX. LOUIS H. TOURVILLE, Chicago, Ill., assignor of one-third to Noah Paquette, same place. Filed Jan. 27, 1882. (No model.) Patented in Canada Oct. 19, 1881, No. 13,506.

Claim.—1. In a car-axle box, a removable frame to sustain the lubricating-roll, said frame having recessed end plates and separable section-pieces which directly fit and fill the recesses and support the journals of the roll, substantially as described.

2. In a car-axle box, a removable frame to sustain the lubricating-roll, said frame having recessed end plates and separable central section-pieces, *e'*, and side pieces, *e*, which directly fit and fill the recesses, substantially as set forth.

3. In a car-axle box, the combination, with the recessed check-plate, of a movable slide located within the recess and adapted to bear against the body of the car-axle, substantially as described.

4. In a car-axle box, the combination of the recessed check-plate D with the movable slide *l*, located within the recess and provided with the rods *n n*, substantially as set forth.

5. In a car-axle box, the combination, with the check-plate D, made in manner substantially as described, of the recessed plate *o*, which rests upon the exterior of the box, and the sustaining-spring *p*, all substantially as set forth.

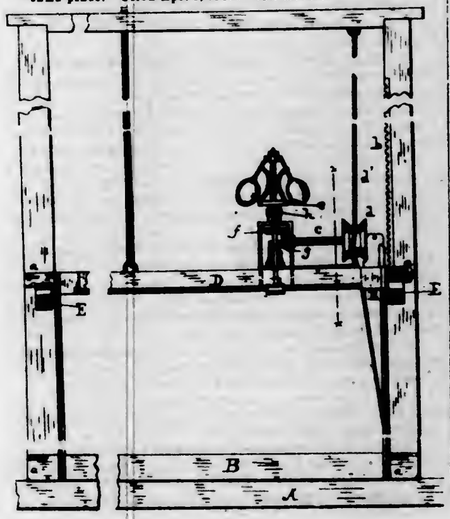
6. In a car-axle box, the combination, with the check-plate D, slide *l*, and spring *m*, of the plate *o* and spring *p*, substantially as set forth.

259,949. FRUIT-SLICING MACHINE. FRANK H. TRUMBULL, Marion, N. Y., assignor of eight-twelfths to Lorenzo R. Potter, Lewis Smith, and Stephen Trumbull, same place. Filed Feb. 20, 1880.

Claim.—1. In a fruit-slicer, the combination of the reel and the wire, the wire being coiled loosely around the reel and allowing the reel to rotate freely therein, the ends of the wire projecting above and below, and the whole serving to allow automatic feeding of the fruit to the knife, as specified.

2. In a fruit-slicer, the wire D, resting upon the reel C and having its lower end enlarged in tapering or conical form, largest at the bottom, as and for the purpose specified.

259,950. OPTICAL TOY. HENRY VAN HOEVENBERGH, Elizabeth, N. J. Filed May 24, 1882. (No model.)

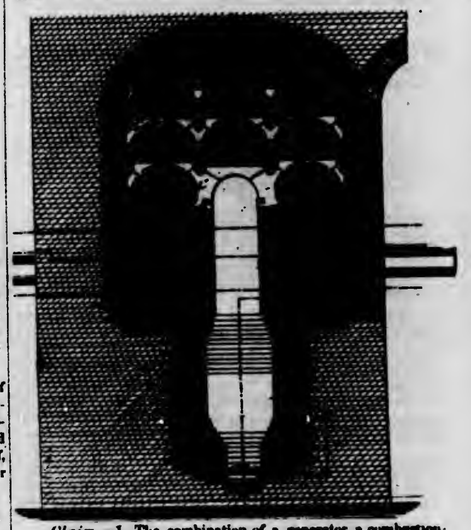


Brief.—Improvement on the invention in Letters Patent No. 258,164, dated May 16, 1872.

Claim.—1. The combination, substantially as hereinbefore set forth, of two or more series of superposed leaves, in which each successive leaf of each series bears a pictorial representation of an object in a different position, the leaves belonging to the different series being alternated, as described, and means, substantially such as described, for securing said leaves together bookwise by one margin thereof.

2. The combination, substantially as hereinbefore set forth, of two or more alternating series of superposed leaves united bookwise at one of their margins, each series bearing the pictorial representation of an object upon each of its leaves, and being provided with a corresponding projection upon the free end of each leaf, whereby one series may be exhibited without exposing another series.

259,951. SAFETY ATTACHMENT FOR ELEVATORS. FRANKLIN W. VERNON, Chicago, Ill., assignor to Peter J. Singer, same place. Filed Apr. 4, 1882. (No model.)



Claim.—1. The combination of a generator, a combustion-chamber vertically above the generator, a primary series of air-flues arranged in the side walls of the generator, a second series of air-flues arranged in the side walls of the combustion-chamber and connected with the first series of air-flues, a tier of heating-flues arranged in the walls of the combustion-chamber underneath the second series of air-flues, and connected with the combustion-chamber and with the chimney, and a third series of air-flues in the side walls of the combustion-chamber, adjacent to the inner face thereof, said third series being connected with the second series and provided with lateral channels for discharging the heated air into the combustion-chamber, substantially as described.

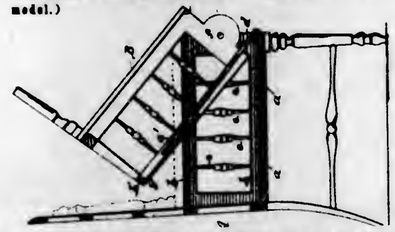
2. The combination of a generator, a combustion-chamber vertically above the generator, a primary series of air-flues arranged in the side walls of the generator, a second series of air-flues arranged in the side walls of the combustion-chamber and connected with the primary series of air-flues, a tier of heating-flues for the escaping gaseous products of combustion, connected with the combustion-chamber and arranged in the walls thereof over the second series of air-flues, a second tier of heating-flues arranged in the walls of the combustion-chamber, underneath the second series of air-flues, and connected with the said upper tier of heating-flues and with the chimney, and a third series of air-flues arranged in the side walls of the combustion-chamber, said third series being connected with the second series and provided with lateral channels for discharging the heated air into the combustion-chamber, substantially as described.

3. The combination of a gas-generator, a combustion-chamber above the generator, a retort-chamber above the combustion-chamber, a primary series of air-flues in the side walls of the generator, a second series of air-flues in the side walls of the combus-

259,952. GAS-GENERATING FURNACE FOR HEATING RETORTS. ADAM WEBER, New York, N. Y. Filed Mar. 24, 1882. (No model.)

Brief.—Gas for heating the retorts is generated in a furnace placed below their front ends. Air for supporting combustion of the gas is headed in flues in the walls of the generator and combustion-chamber, in the latter position the heating being effected to a large extent by waste products of combustion passing through contiguous flues to the chimney. Air to be heated passes through flues D D' D², while the waste products pass through flues E F.

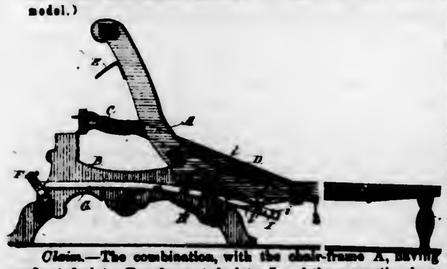
Claim.—1. The combination of one or more levers or handles, *i*, with the cross-head *h*, shaft or shafts D, and eccentrics E, substantially as specified.



2. A non-rotating cross-head adapted to rise and fall, in combination with a ball-governor, shafts carrying eccentrics, and devices connecting the cross-head with the said shafts, substantially as and for the purpose described.

3. The springs *j*, or their equivalent, in combination with the levers *i* and shafts D, for rotating the shafts sufficiently to bring the eccentrics into action, substantially as specified.

tion-chamber, connected with the primary series, a third series of air-flues in the side walls of the combustion-chamber, adjacent to the inner face thereof, and connected with said chamber by lateral exit-channels, a tier of heating-flues for the escaping products of combustion over the second series of air-flues, a second tier of heating-flues under the second series of air-flues and connected with the first tier of heating-flues, and flues connecting said heating-flues with the retort-chamber and chimney, substantially as described.

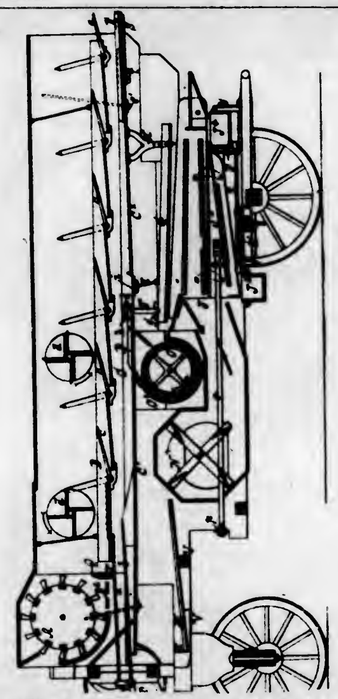


4. The combination of a generator, a combustion-chamber vertically above the generator, a primary series of horizontal air-flues arranged vertically in the side walls of the generator, a second series of horizontal air-flues connected with the first series and arranged horizontally in the side walls of the combustion-chamber, heating-flues for the escaping gaseous products of combustion, adjacent to the second series of air-flues, a third series of horizontal air-flues arranged vertically in the side walls of the combustion-chamber adjacent to the inner face thereof, the lower flue of said third series being connected with the second series of air-flues and the upper flue thereof having lateral exit-channels for discharging the heated air into the combustion-chamber, and flues connecting the heating-flues with the combustion-chamber and chimney, substantially as described.

259,953. COMBINED CHAIR AND CRIB. JOSEPH B. WELCH and HARRY TRUDELL, Richmond, Va. Filed Mar. 7, 1882. (No model.)

Claim.—The combination of the frame A, having upper and lower rails at the sides and back, the frame B, pivoted to the standards *d* of frame A, and having its upper and lower side rails provided with ledges on the inside thereof, and the extension-bottom *a'*, hinged to the bottom of frame A, substantially as shown and described, and for the purpose set forth, the frame B having its legs planed upon one side to adapt them to fit against and form facings for the back of the chair when the frames are folded together.

259,954. COMBINED CHAIR AND COUCH. JOSEPH B. WELCH and HARRY TRUDELL, Richmond, Va. Filed Mar. 3, 1882. (No model.)



Claim.—The combination, with the chair-frame A, having perforated plates E and serrated plates J, and the supporting-bars B, of the spring-actuated bars G, connected at their forward ends with pivoted catches, which are adapted to engage with the said perforated plates, and connected at their rear ends with the supporting-levers I, which are provided with means for engaging with the said serrated plates, substantially as shown and described, and for the purpose set forth.

259,955. THRASHING-MACHINE. JAY WESTINGHOUSE and WILLIAM WEBBER, Schenectady, N. Y., assignors to G. Westinghouse & Co., same place. Filed May 21, 1881. (No model.)

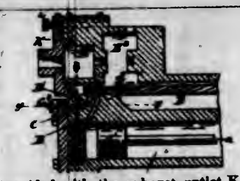
Claim.—1. The combination, substantially as hereinbefore set forth, of the grain-carrier divided into a forward and back section, the swinging suspension-rods supporting the sections on the machine-frame at their outer ends, and the T-arms pivoted to the machine-frame and to both sections of the grain-carrier at the inner ends of the sections to support and connect them with each other at that point.

259,955.

2. The combination, substantially as hereinbefore set forth, of the grain-carrier swinging upon pivoted suspension-rods, and having a grain-delivery opening at or near its center, the perforated distributer, the hangers of the grain-carrier, having the distributer pivoted thereto, and the swinging rods pivoted to the machine-frame and to the distributer, whereby the distributer is caused to move with the grain-carrier, and its front and rear ends obtain, respectively, a compound rising and back movement and a compound falling and back movement.

3. The combination, substantially as hereinbefore set forth, of the grain-carrier divided into a forward and a back section, the suspension-rods supporting the sections of the carrier at their outer ends, the swinging T-arms pivoted to both sections of the grain-carrier at the inner ends of the sections, the distributer, the hangers fixed to the grain-carrier and pivoted to the distributer at the rear end, and the swinging suspension-rods carrying the forward end of the distributer.

4. The combination, substantially as hereinbefore set forth, of the grain-carrier divided into a forward and back section, and provided with a grain-delivery opening at the junction of the sections, the suspension-rods supporting the sections at their outer ends, the swinging T-arms pivoted to the sections at their inner ends, the sliding leaf supported by and capable of moving on the grain-carrier, and acting as a cover for partially closing its delivery-opening, the vibratory distributer having its forward end arranged beneath the delivery-opening in the grain-carrier, and the clover-huller in communication with said opening, for the purpose specified.



5. The rock-shaft *r*, provided with the deflector O, and capable of rotating to adjust the deflector from a vertical to an inclined position, and conversely, in combination with the thrashing-cylinder, the concave, and the grating, substantially as described, whereby the grain thrashed from the straw is directed through the grating, as and for the purpose set forth.

6. The combination, substantially as hereinbefore set forth, with the grain-carrier, of the sliding adjustable extension, having a slotted arm and thumb-nut at the rear end of such carrier.

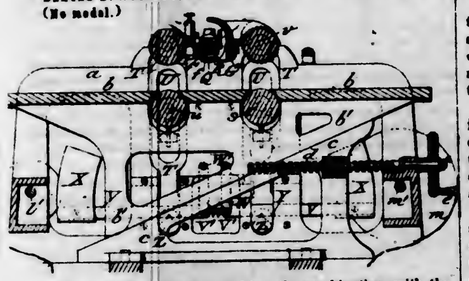
259,956. COAL-MINING MACHINE. GEORGE D. WHITCOMB, Chicago, Ill. Filed Nov. 14, 1881. (No model.)

Claim.—In a mining-machine, the main piston-cylinder provided with an air-space between the piston and the rear cylinder-head, in combination with a sliding valve to regulate the admission and escape of air or steam, an auxiliary engine to operate the

259,956.

said valve, provided with the exhaust-outlet K, and a valve for regulating the escape of air or steam through this outlet, substantially as and for the purposes described.

259,957. BALL-AND-SOCKET JOINT. OTIS C. WHITE, Hopkinton, Mass. Filed May 8, 1882. (No model.)



Claim.—1. The combination of the ball, made in sections as described, with the contractile socket-piece, provided with means of clamping or contracting it upon the ball.

2. The ball, contractile or made in sections and perforated diametrically, in combination with the slide-rod extended through the ball, and with the contractile socket-piece, provided with means of contracting or clamping it on the ball, as set forth.

3. The ball-socket provided with the annular or bolt-shaped bearings *e e* to rest against the ball, and with the intervening annular space to be out of contact with the ball.

4. The ball, made in sections and perforated diametrically to receive the slide-rod, in combination with the socket-piece, socketed to receive the ball, and having to the socket flaring mouths arranged therewith, as set forth.

259,958. BED AND PRESSER FOR PLANING-MACHINES. BAXTER D. WHITNEY, Winchenden, Mass. Filed Aug. 11, 1881. (No model.)

Claim.—1. In a planing-machine, the combination, with the cutting-cylinder *f* and its journal boxes or bearings, provided with curved grooves B, partly surrounding the journals of the cylinder and concentric, or nearly so, therewith, of the presser-bar G, having curved guides adapted to engage with and slide in the grooves B, whereby said bar is enabled to lift in a curved line substantially concentric with the cutting-edges of the revolving knives, substantially as shown and described.

2. The presser-bar G, provided with levers M M, curved guides H H, adapted to engage with and slide in curved grooves formed in or around the journal boxes or bearings of the cutter-cylinder concentrically with the journals of said cylinder, and a yielding presser-foot, G', consisting of an elastic plate or plates having an inductive bearing-surface adapted to regulate the pressure of the bar to correspond with the varying thickness of the advancing board, substantially as shown and described.

3. In a yielding presser-bar, the combination of a flexible pad or foot, G', with auxiliary supports G^2, to prevent undue deflection and injury of the flexible pad, substantially as shown and described.

4. In a planing-machine, the combination, with the cutting-cylinder having its journal boxes or bearings provided with curved grooves partly surrounding the journals of the cylinder and concentric therewith, of the pressure-bars G and P, having curved guides adapted to engage with and slide in the grooves, whereby said bars are enabled to lift in a curved line concentric with the cutting-edges of the revolving knives, substantially as shown and described.

5. In combination with the gears *d'*, *u'*, *q*, and *t*, the gears *v'* *w'*, and the central intermediate gear, *r*, connecting the wheels and arranged to admit of an adjustment of the feeding-rollers, substantially as shown and described.

6. The combination, with the gears of the upper and lower rollers and the gears *q r t*, of the gear *o* and pinion *o'* on stud *p* and the pinion *n* on shaft *n'*, substantially as and for the purpose shown and described.

7. The combination of the weighted levers V, having notches Y Y, with pivoted vibrating links or stirrups W, and with the bearings Z in the hangings T, or their equivalents, for adjusting the pressure of the feed-rolls, substantially as shown and described.

259,959. CAR-COUPLING LINK. JOHN T. WILSON, Pittsburg, Pa., assignor to Wilson, Walker & Co., (Limited,) same place. Filed Feb. 2, 1882. (No model.)

Claim.—A car-coupling link having a D form in cross-section of its sides and ends, with re-enforcement of the ends on their outer surface and rounded corners on their inner sides, substantially as set forth.

259,960. CAR-COUPLING. JOHN T. WILSON, Pittsburg, and JAMES H. SIMPSON, Millvale, assignors to Wilson, Walker & Co., (Limited,) Pittsburg, Pa. Filed Mar. 27, 1882. (No model.)

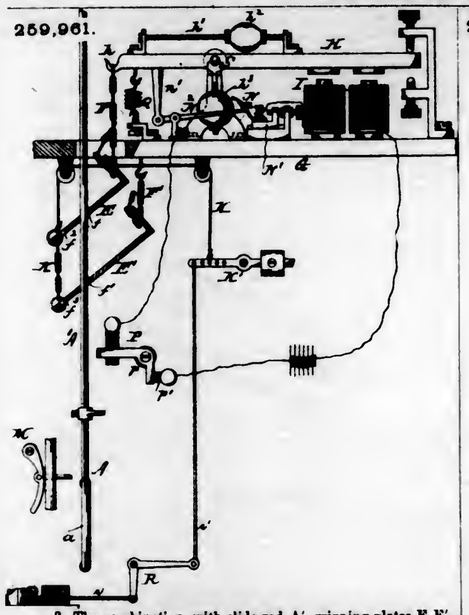
Claim.—1. A draw-car, A, having an interior link-opening therein, with shoulder-stops *e* raised on the inner face of its lower strap, in combination with a link, C, having shoulder-stops *d'* raised on the under face of its side bars and adapted to engage and form a draft-connection with the raised stops *e*, substantially as and for the purpose set forth.

2. The draw-bar A, having shoulder-stops *e* formed thereon, in combination with guide-pin B and link C, such link having openings C' in its front and rear parts, a hook, *s*, depending from the front part, and shoulder-stops *d'* on the rear part adapted to engage and form a draft-connection with the stops *e*, substantially as set forth.

3. The combination of draw-bar A, having two shoulder-stops, *e e*, formed on its lower strap, with passage *d* between them, and link C, having depending hook *s* in its central line and shoulder-stops *d'* on the under side of its side bars adapted to form draft-connection with stops *e e*, substantially as set forth.

4. The draw-bar A, having shoulder-stops *e e* formed thereon, in combination with link C, having stops *d'* on its under side adapted to form draft-connection with stops *e e*, and a check-stop on the draw-bar in rear of the link adapted, as described, to hold the link forward for coupling, substantially as set forth.

5. The draw-bar A, having recess *r'* and stops *e e* on the inner face of its bottom strap, each stops having rear vertical faces inclined inward and forward to a transverse line, in combination with link C, having a lug, *r*, and stops *d' d'* on its under side, the stops *d'* having inclined faces adapted to engage and afford side bearings on the stops *e e*, substantially as set forth.



6. The jointed coupling-link C, having elongated openings C' in both the front and rear portions, a depending hook, *s*, forward of the joint, and shoulder-stops *d' d'* on the under side in rear of the joint, substantially as set forth.

259,961. RAILROAD TIME-SIGNAL. WILLIAM V. WILSON, Dayton, N. J. Filed Feb. 28, 1882. (No model.)

Claim.—1. The combination, with a vertically-moving signal-slide, of an electro-magnet for operating such slide, and intermediate mechanism, substantially as described, between such magnet and slide, whereby the movement of the slide operates to complete the electric circuit to energize the magnet, as set forth.

2. The combination, with a vertically-moving signal-slide, A, having an extension or rod, A', of the suspended L-shaped plates E E', and operating mechanism, substantially as described, for holding and feeding the same.

259,961.

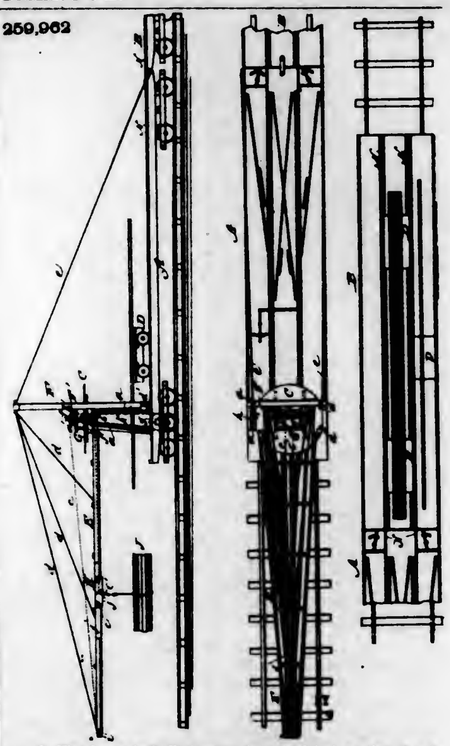
3. The combination, with slide-rod A', gripping-plates E E', and armature H, attached to one of said plates, of a tripping device connected to both of said plates, such tripping device being adapted to be operated by a moving train, substantially as described.

4. The combination, with the rod A', passing through the suspended L-shaped feed-plates E E', of draft-chain K and a tripping device, substantially as set forth, for bringing said plates into a horizontal position, as specified.

5. The combination, with rod A' and suspended gripping-plates E E', of armature H, magnet I, and circuit-breaker N, whereby motion is communicated to the armature and the suspended gripping-plates, substantially as described.

6. The combination of a vertically-moving signal, an electro-magnet and armature, and suitable intermediate mechanism, substantially as described, for communicating motion from the armature to the signal, with a pendulum and compensating balance attached to the said armature, whereby the rate of movement of the signal may be regulated, substantially as described.

7. The combination of electro-magnet I, armature H, gripping-plates E E', attached to said armature, and rod A', passing through said plates, with a circuit-breaker operated by the said armature, substantially as described, whereby an intermittent movement is communicated by the magnet to the armature, and through one of said gripping-plates to the rod, as set forth.

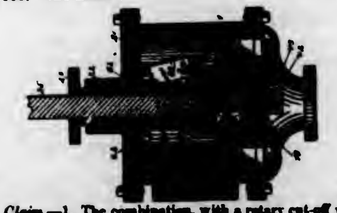


8. The combination of a vertically-moving signal-slide carrying a pointer, an exposed scale over which said pointer moves, a rod connected to and extending upwardly from said slide, a feed-movement for drawing said slide upwardly, an electro-magnet and generator, an armature with an automatic make and break, a contact maker or circuit between the battery or generator and magnet, and a tripping device connected to the feed-movement, whereby a passing train will cause the signal to be dropped, closing circuit on the magnet, thereby causing the armature to be vibrated, the feed-movement to be actuated, the slide to be raised, and the time since the train passed to be indicated, substantially as set forth.

259,962. CONSTRUCTION-TENDER FOR RAILROADS. E. N. WISE, Green Bay, Va. Filed Nov. 4, 1881. (No model.)

Brief.—The car is provided with a hinged truss-frame and a detachable derrick or boom. Suitable tracks are placed upon the car, on which trucks are adapted to run. Resting upon a platform supported on posts is a drum-shaft capable of longitudinal movement, and which has a cylindrical and square portion, on which is secured a rigid and a loose socketed drum adapted to operate a traveling block backward and forward upon the boom or derrick.

Claim.—1. The car A, provided with the hinged truss-frame F and the detachable derrick or boom E, substantially as and for the purposes set forth.



259,962

2. The drum-shaft F, having the cylindrical portion *e* and square portion *g*, in combination with the drum *f* and loose socketed drum *f*, the shaft being capable of longitudinal movement, substantially as and for the purposes set forth.

3. The car A, having the derrick E and truss-frame F, and having the tracks, in combination with the car B and the hand-trucks D, substantially as and for the purposes set forth.

259,963. COMBINED ROTARY, CUT-OFF, AND GOVERNOR VALVE. LEANDER J. WISE, Lexington, Mass. Filed Feb. 18, 1882. (No model.)

Claim.—1. The combination, with a rotary cut-off valve, of a rotary valve seated upon the cut-off valve, the adjacent faces of the two valves being constructed to form intervening steam-spaces for balancing the rotary valve, substantially as shown and described, and for the purposes herein set forth.

2. The combination, with a rotary valve provided with a steam-space between its lower face and seat, of a rotary governor-valve seated on the rotary valve, the adjacent faces of the two valves being constructed to provide an intervening steam-space, substantially as shown and described, and for the purposes herein set forth.

3. The combination, with a rotary valve, of a rotary governor-valve seated on the rotary valve, the adjacent faces of the two valves being recessed or grooved to provide an intervening steam-space, and suitable devices for automatically actuating the governor-valve, substantially as shown and described, and for the purposes herein set forth.

4. The combination, with a steam-balanced rotary valve, of a steam-balanced cut-off valve serving as a seat for the rotary valve, and a steam-balanced governor-valve seated on the upper face of the rotary valve, substantially as shown and described, and for the purposes herein set forth.

5. The combination, with the head of the valve-cylinder, having ports formed therein communicating with a steam pipe or passage leading to the engine-cylinder, of a cut-off valve seated on the inner face of the valve-cylinder head, such cut-off valve being constructed with outwardly-projecting flanges or ribs which encircle the cut-off valve and the ports formed therein, substantially as shown and described, and for the purposes herein set forth.

6. The valve-cylinder head constructed with a steam-passage cast on the outer portion of the head, the ends of the steam-passage extending through the head and forming steam-ports on opposite sides thereof, substantially as shown and described, and for the purposes herein set forth.

7. The cut-off valve constructed with steam recesses or cavities on opposite sides of its ports, and of substantially the same size and form as said ports, substantially as shown and described, and for the purposes herein set forth.

8. The combination, with the rotary valve provided with through-ports, of the cut-off valve constructed with ports and with steam cavities or recesses on opposite sides of said ports, the construction being substantially as described, whereby the rotary valve is balanced and steam cut off at any point of its rotation, substantially as shown and described, and for the purposes herein set forth.

9. The combination, with the rotary valve provided with radial grooves or steam-passages and an annular steam-chamber connecting said grooves or passages, of a governor-valve provided with radial recesses or grooves closed at opposite ends, substantially as shown and described, and for the purposes herein set forth.

10. The combination, with the rotary valve provided with a number of holes for the passage of steam through the valve, and an annular groove on the opposite side with which said holes connect, of the rotary governor-valve having a groove or recessed portion formed therein that registers with said annular groove, substantially as shown and described, and for the purposes herein set forth.

11. The combination, with the governor-valve, of a worm-gear connected thereto by pins, and a worm engaging said gear, substantially as shown and described, and for the purposes herein set forth.

12. The combination, with the governor-valve provided with a hub, of a worm-gear mounted on said hub and attached to the governor-valve by pins, and a worm for actuating the valve, substantially as shown and described, and for the purposes herein set forth.

13. The combination, with the governor-valve provided with a hub, of a step secured to the head of the valve-cylinder and provided with a recess for receiving the hub of the valve, substantially as shown and described, and for the purposes herein set forth.

14. The combination, with the rotary valve having radial bearing-surfaces on the back of the valve surrounding the ports therein, of a governor-valve provided with radial grooves of less width than the width of the bearing-surfaces at the ends of the steam-ports in the rotary valve, substantially as shown and described, and for the purposes herein set forth.

15. A rotary valve constructed with outwardly-projecting flanges around its central opening and around its ports and on each end of the ports, to form steam cavities or recesses on opposite sides of the ports and a steam-chamber in the central portion of the valve, substantially as shown and described, and for the purposes herein set forth.

16. The combination, with a rotary valve having a recess formed in its periphery, of a link and yoke secured within said recess by a screw, and a rod secured to the yoke, substantially as shown and described, and for the purposes herein set forth.

17. The combination, with the rotary valve and revolving shaft connected therewith by spline and feather, of the cut-off valve and arbor or pivot extending through the cut-off valve and entering the end of said shaft, substantially as shown and described, and for the purposes herein set forth.

259,964. ROTARY ENGINE. LEANDER J. WISE, Boston, Mass. Filed June 10, 1880. (No model.)

Claim.—1. In a rotary engine, the combination, with an annular steam-chamber, of a rotary disk having a beveled periphery, forming two flat wearing-faces inclined toward each other, which extend only partly through said annular steam-chamber, substantially as shown and described, and for the purposes herein set forth.

2. In a rotary engine, the combination, with an annular steam-chamber, of a rotary disk having a beveled periphery, forming two flat wearing-faces inclined toward each other, which extend only partly through the annular steam-chamber, said disk being furnished with steam packing-rings located between its beveled periphery and the shaft to which it is secured, substantially as shown and described, and for the purposes herein set forth.

3. In a rotary engine, the combination, with an annular steam-chamber, of a rotary disk having a beveled periphery, forming two flat wearing-faces inclined toward each other, which extend only partly through said annular steam-chamber, and a radially-adjustable piston, substantially as shown and described, and for the purposes herein set forth.

4. In a rotary engine, the combination, with an annular steam-chamber and rotary disk provided with two flat wearing-faces on the periphery, of a sectional abutment constructed and adapted to fit said wearing-faces on the periphery of the disk, and to open and move outwardly from opposite sides of a piston connected with said disk, substantially as shown and described, and for the purposes herein set forth.

5. In a rotary engine, the combination, with an annular steam-chamber and rotary disk having two flat wearing-faces on its periphery, of a sectional abutment constructed to fit said wearing-faces on the periphery of the disk, and mechanism for imparting simultaneous movement to said sections and move them in opposite directions away from a piston connected with said rotary disk, substantially as shown and described, and for the purposes herein set forth.

6. In a rotary engine, the combination, with an annular steam-chamber and rotary disk having a piston connected therewith, of a sectional swinging abutment, the adjacent edges of said abutment being furnished with compensating slides to form a steam-tight joint, substantially as shown and described, and for the purposes herein set forth.

7. In a rotary engine, the combination, with an annular steam-chamber and rotary disk having a radially-movable piston connected therewith, of a two-part swinging abutment, the sections of which are adapted to move outwardly from said piston when the latter passes the abutment, substantially as shown and described, and for the purposes herein set forth.

8. In a rotary engine, the combination, with an annular steam-chamber and rotary disk having a beveled periphery, of a sectional swinging abutment the sections of which are adapted to move toward and away from each other, such sections provided with spring-pressed packing-sections to pack the joint between the two sections and between the abutment and beveled periphery of the rotary disk, substantially as shown and described, and for the purposes herein set forth.

9. In a rotary engine, the combination, with an annular steam-chamber and rotary disk having a beveled periphery, of a sectional swinging abutment provided with spring-pressed packing-sections, which fit steam-tight against said beveled periphery, substantially as shown and described, and for the purposes herein set forth.

10. In a rotary engine, the combination, with an annular steam-chamber having an abutment-chamber formed therein, of a sectional swinging abutment having ribs formed on its rear edges, said ribs snugly fitting within the walls of the abutment-chamber, substantially as shown and described, and for the purposes herein set forth.

11. In a rotary engine, the combination, with the half-sections of the annular steam-chamber, of the sectional swinging abutment and abutment-pockets secured at opposite sides of the abutment-chamber, substantially as shown and described, and for the purposes herein set forth.

12. In a rotary engine, the combination, with the half-sections of the annular steam-chamber, of abutment-pockets secured to opposite sides of the abutment-chamber and a cap located over said abutment-chamber, substantially as shown and described, and for the purposes herein set forth.

13. In a rotary engine, the combination, with the annular steam-chamber and rotary disk, of sectional swinging abutments attached to rock-shafts, cams on the main shaft, and suitable devices between the cams and rock-shafts for actuating the latter and imparting a swinging movement to the two sections of the abutment, substantially as shown and described, and for the purposes herein set forth.

14. In a rotary engine, the combination, with the annular steam-chamber, rotary disk, and sectional swinging abutment, of cams attached to the main shaft, pivoted levers provided with anti-

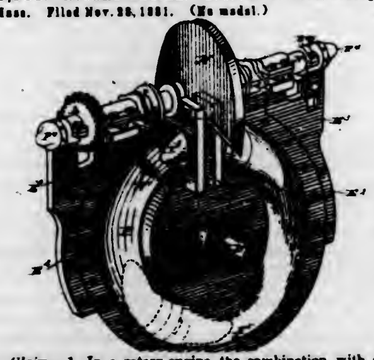
friction rollers which engage in the cam-grooves, and jointed arm for transmitting motion from the pivoted levers to the rock-shafts to which the abutments are attached, substantially as shown and described, and for the purposes herein set forth.

15. In a rotary engine, the combination, with the main shaft, of standards for supporting the same, said standards formed in two parts, the upper portion constituting the lower half of the shaft-bearing and provided with outwardly-projecting ears or flanges for the removable attachment of the cap of the journal-box, and secured to the lower section of the standard in a manner to prevent any longitudinal displacement, the upper portion of the standard made both vertically and laterally adjustable, substantially as shown and described, and for the purposes herein set forth.

16. The standards formed of upper and lower sections, the latter provided at its lower end with a perforated supporting-flange and at its upper end with a supporting-bracket, and wedges interposed between said sections of the standard, and set-screws for varying the adjustment of said wedges, and thereby raising or lowering the upper section of the standard, substantially as shown and described, and for the purposes herein set forth.

17. The combination, with the upper and lower sections of the main shaft standards, of wedges provided with elongated slots, bolts inserted through said slots for securing said sections together, and set-screws for varying the adjustment of said wedges, substantially as shown and described, and for the purposes herein set forth.

18. In a rotary engine, the combination, with the rotary disk, of a radially-movable piston provided with a split packing-ring, a right-and-left-hand screw, springs, and nuts for adjusting the packing-ring, substantially as shown and described, and for the purposes herein set forth.



19. In a rotary engine, the combination, with the rotary disk, of a radially-movable piston provided with a split packing-ring, and screw-shaft extending partly through the packing-ring for expanding said ring, substantially as shown and described, and for the purposes herein set forth.

20. In a rotary engine, the combination, with an annular steam-chamber and sectional swinging abutment, of a rotary disk provided with a radially-moving piston and tapering piston-extensions on opposite sides of said piston, substantially as shown and described, and for the purposes herein set forth.

21. In a rotary engine, the combination, with the reversing-valve, of the rack-plate, segmental gears, and rotary valves, the latter having narrow and wide ports on opposite sides thereof, substantially as shown and described, and for the purposes herein set forth.

22. In a rotary engine, the combination, with the balanced reversing-valve Z, having the ports Z' Z^2 and intermediate recess, Z^3, of the cylinder provided with ports Y', Y^2, and Y^3, substantially as shown and described, and for the purposes herein set forth.

259,965. ROTARY ENGINE. LEANDER J. WING, Lexington, Mass. Filed Nov. 28, 1881. (No model.)

Claim.—1. In a rotary engine, the combination, with a revolving piston, of a rotary disk-abutment arranged at right angles to the rotary piston, and suitable mechanism for imparting a continuous rotary motion thereto, substantially as shown and described, and for the purposes herein set forth.

2. In a rotary engine, the combination, with a rotary piston-disk, of a rotary abutment-disk arranged at right angles to the rotary piston-disk, and suitable mechanism for imparting a continuous rotary motion thereto, and having the periphery of said abutment arranged to snugly fit against the periphery of the piston-disk, substantially as shown and described, and for the purposes herein set forth.

3. In a rotary engine, the combination, with a rotary piston-disk having a concave periphery, of a rotary disk-abutment arranged at right angles to the piston-disk, and provided with a concave periphery and suitable mechanism for imparting a continuous rotary motion thereto, substantially as shown and described, and for the purposes herein set forth.

4. In a rotary engine, the combination, with a revolving piston and tapered piston-extensions, of a rotary disk-abutment arranged at right angles to the piston-disk, substantially as shown and described, and for the purposes herein set forth.

5. In a rotary engine, the combination, with a self-adjusting piston, of a rotary disk-abutment arranged to revolve at right angles to the line of movement of said piston, substantially as shown and described, and for the purposes herein set forth.

6. In a rotary engine, the combination, with the cylinder provided with an annular bore made circular in cross-section, of a rotary disk-abutment arranged to rotate at right angles to the annular bore and to open and close the same, and with suitable mechanism for imparting a continuous rotary motion thereto, substantially as shown and described, and for the purposes herein set forth.

7. In a rotary engine, the combination, with a rotary piston-disk, of a rotary disk-abutment arranged at right angles to the piston-disk, and cylinder-extensions located at opposite sides of said abutment and extending toward the center of the cylinder, substantially as shown and described, and for the purposes herein set forth.

8. In a rotary engine, the combination, with a cylinder and revolving piston, of a revolving disk-abutment arranged at right angles to the revolving piston and cylinder extensions, provided with a self-regulating packing-ring, substantially as shown and described, and for the purposes herein set forth.

9. In a rotary engine, the combination, with a cylinder and revolving piston and piston-disk, of a rotary disk-abutment arranged at right angles to the revolving piston and cylinder extensions, provided with self-adjusting packing for packing the sides of the abutment and piston-disk, substantially as shown and described, and for the purposes herein set forth.

10. In a rotary engine, the combination, with a rotary piston-disk provided with piston-extensions, and self-adjustable piston located between the adjacent ends of said extensions, of a rotary disk abutment arranged at right angles to the rotary piston and provided with an irregularly-curved cut-away portion for the passage of said piston and piston-extensions, substantially as shown and described, and for the purposes herein set forth.

11. In a rotary engine, the combination, with a revolving piston, of a rotary disk-abutment mounted on a shaft and arranged at right angles with the revolving piston, and devices for imparting vertical adjustment to said shaft and rotary disk-abutment, substantially as shown and described, and for the purposes herein set forth.

12. In a rotary engine, the combination, with a revolving-piston, of a rotary disk-abutment mounted on a shaft, and devices for imparting longitudinal adjustment to said shaft, substantially as shown and described, and for the purposes herein set forth.

13. In a rotary engine, the combination, with a revolving-piston, of a rotary disk-abutment mounted on a shaft, and bearings for receiving the end-thrust of said shaft, substantially as shown and described, and for the purposes herein set forth.

14. In a rotary engine, the combination, with a rotary piston-disk, of a piston provided with an expansible packing-ring formed with a projection which fits into a recess in the piston-disk, substantially as shown and described, and for the purposes herein set forth.

15. In a rotary engine, the combination, with a rotary piston-disk, of a piston connected therewith, said piston being provided with an expansible packing-ring constructed with a projection that is split by vertical and horizontal walls, substantially as shown and described, and for the purposes herein set forth.

16. In a rotary engine, the combination, with the main driving-shaft and the shaft carrying the rotating abutment, arranged at right angles with the revolving piston, of intermediate gearing for transmitting a positive motion to the rotary abutment-shaft from the main driving-shaft, substantially as shown and described, and for the purposes herein set forth.

17. In a rotary engine, the combination, with the revolving piston-disk, of a self-adjusting piston and devices for counteracting the effect of centrifugal force exerted on the piston, substantially as shown and described, and for the purposes herein set forth.

18. In a rotary engine, the combination, with a rotary piston-disk, of a piston, a weight, lever, and connecting-links for counterbalancing the piston, substantially as shown and described, and for the purposes herein set forth.

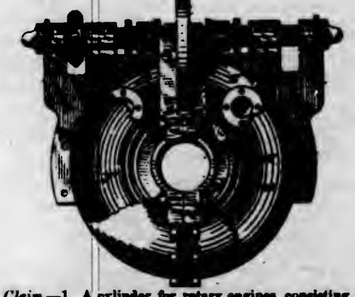
19. In a rotary engine, the combination, with a rotary piston-disk and a hollow piston-extension, of a weight located in the hollow piston-extension, and links and a lever for connecting the piston and weight, substantially as shown and described, and for the purposes herein set forth.

20. In a rotary engine, the combination, with a rotary piston-disk and a lever provided with an adjustable fulcrum located within a slot or opening in said piston-disk, of a piston connected by a rod to one end of said lever and a weight connected by a rod to the other end of said lever, substantially as shown and described, and for the purposes herein set forth.

21. In a rotary engine, the combination, with a rotating piston-disk and a piston provided with two expansible rings, of devices connected with the inner expansible ring for counterbalancing the action of centrifugal force on the piston, substantially as shown and described, and for the purposes herein set forth.

22. In a rotary engine, the combination, with the driving-shaft and rotary piston-disk having conical recesses in the ends of its hubs, of split conical rings and bolts for securing the piston-disk to the shaft, substantially as shown and described, and for the purposes herein set forth.

23. In a rotary engine, one section of the cylinder having the projections E^2 cast solid therewith, said projections being constructed to receive the bearings of the rotary disk-abutment shaft arranged to revolve the said abutment at right angles with the revolving piston, substantially as shown and described, and for the purposes herein set forth.



24. The combination, with the packing-rings of the cylinder-extensions, of devices for regulating the inward pressure on said packing-rings, substantially as shown and described, and for the purposes herein set forth.

25. The combination, with the packing-rings of the cylinder-extensions, of the springs L^2 and adjustable wedges L^3, substantially as shown and described, and for the purposes herein set forth.

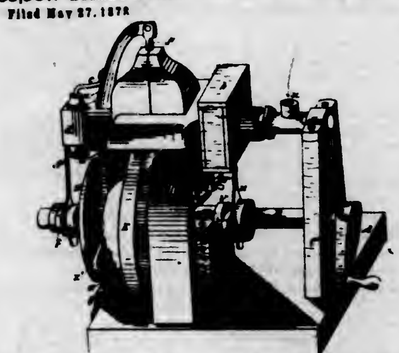
26. The combination, with the packing-rings of the cylinder-extensions, of the block L', the springs L^2, wedges L^3, and set-screws L^4, substantially as shown and described, and for the purposes herein set forth.

27. The rotary abutment-disk, cut away on one side for the passage of the piston and cored out on its opposite side to balance the disk, substantially as shown and described, and for the purposes herein set forth.

259,966. ROTARY ENGINE. LEANDER J. WING, Lexington, Mass. Filed Feb. 20, 1882. (No model.)

Claim.—1. A cylinder for rotary engines, consisting of two sections having one or more abutment-recesses located at right angles to the bore, and flanges between the hub and abutment-recesses for the insertion of bolts for fastening the sections together, substantially as shown and described, and for the purposes herein set forth.

2. A cylinder for rotary engines, consisting of two sections, each provided with a semicircular bore for the piston and a connecting-chamber for the piston-disk, and furnished with abutment-flanges on one or both sides, and with flanges between the hub and abutment-flanges, through which are inserted bolts for securing the sections together, substantially as shown and described, and for the purposes herein set forth.



3. A cylinder for rotary engines, consisting of two sections, each provided with a semicircular bore for the piston, a packing-ring groove located on the inside of the bore, and with flanges between the hub and bore for the insertion of bolts for securing the sections together, substantially as shown and described, and for the purposes herein set forth.

4. A cylinder for rotary engines, consisting of sections provided with interlocking lugs, substantially as shown and described, and for the purposes herein set forth.

5. A cylinder for rotary engines, consisting of two sections provided with interlocking lugs or projections on the hub portions constructed to interlock and to allow the sections to be interchangeable, substantially as shown and described, and for the purposes herein set forth.

6. A cylinder for rotary engines, constructed in sections and provided with an annular bore for the piston and intervening space for the piston-disk, the end of the section being grooved around the bore, said groove extending to the opposite sides of the space for the piston-disk, and provided with a series of pockets for the reception of springs for keeping the packing-rings pressed outwardly against the revolving abutment, substantially as shown and described, and for the purposes herein set forth.

259,967. ROTARY ENGINE. LEANDER J. WING, Boston, Mass. Filed May 27, 1878.

Claim.—1. In a rotary steam-engine, the annular steam-chamber F, which is bisected by the beveled disk I, and in which disk the piston G, constructed as shown, is rigidly fixed, substantially as shown and described, and for the purposes herein set forth.

2. The sliding abutment N, provided with the sliding beveled sections N' and N' and springs O, constructed and arranged substantially as shown and described, and for the purposes herein set forth.

3. The sliding abutment N, provided with the sliding beveled sections N' and N', the springs O, and the beveled slot in said abutment, in combination with the rotating beveled disk I, substantially as shown and described, and for the purposes herein set forth.

4. The annular steam-chamber F, bisected by the beveled disk I, provided with the piston G, in combination with the sliding abutment N, substantially as shown and described, and for the purposes herein set forth.

5. The cams Z and Z' and the slotted slide *a*, interposed between the cams, in combination with the arm Q, the connecting-rod *p*, and the abutment N, substantially as shown and described, and for the purposes herein set forth.

6. The steam-cylinder *d*, the cam *f*, and the connecting-rods *g* and *e*, in combination with the arm Q and abutment, substantially as shown and described, and for the purposes herein set forth.

7. The cams Z and Z' and slotted slide *a*, interposed between the cams, in combination with the cylinder *d*, connecting-rods *g* and *e*, arm Q, connecting-rod *p*, and abutment N, substantially as shown and described, and for the purposes herein set forth.

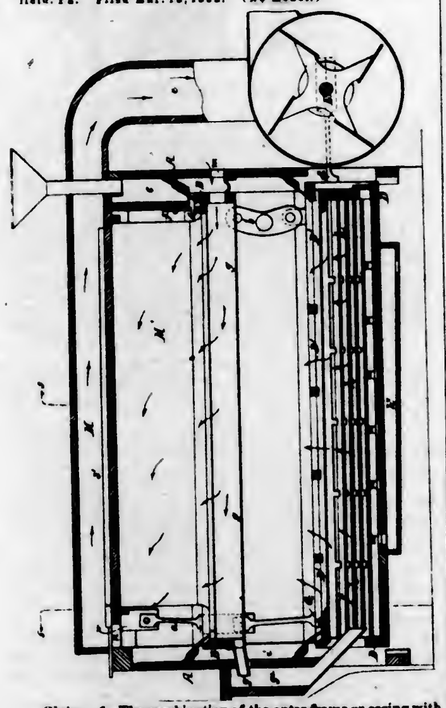
8. The steam-chamber A, containing the reversing-valve *w*, which is provided with the diagonally-arranged concave recesses *q* and *q'* and with the diagonally-arranged ports *p* and *p'*, in combination with the sliding valve *s*, substantially as shown and described, and for the purposes herein set forth.

9. In a rotary engine, the diagonally-slotted and vertically-movable valve-plate *t*, interposed between the reversing-valve *w* and the sliding valve *s*, substantially as shown and described, and for the purposes herein set forth.

10. The steam-chamber A, containing the reversing-valve *w*, which is provided with the diagonally-arranged concave recesses *q* and *q'* and with the diagonally-arranged ports *p* and *p'*, in combination with the sliding valve *s* and the interposed valve-plate *t*, substantially as shown and described, and for the purposes herein set forth.

11. The reversing-valve *w*, provided with the concave recesses *q* and *q'* and the ports *p* and *p'*, in combination with the ports *i* and *i'* and the exhausts *k* and *k'*, diagonally opposite of the valve-seat, said concave recesses *q* and *q'* adapted, as shown, to form alternately a continuous passage from the annular steam-chamber F through the ports W or X and the passage *s'* or *s* to the exhaust *p*, substantially as shown and described, and for the purposes herein set forth.

12. The combination of the steam-chamber h, provided with the valves s and w, the interposed plate t, and the valve-seat provided with the ports i and i', arranged diagonally opposite, and the exhausts k and k', in combination with the passages n or n', the ports X X' and W W', and the annular steam-chamber F, as shown and described, and for the purposes herein set forth.



13. The reversing-valve w, provided with the concave recesses q and q' and the ports p and p', diagonally opposite, in combination with the valve-seat of steam-chamber h, as shown and described, and for the purposes herein set forth.

14. The steam-chamber h, provided with the valves w and s, cam v, and connecting-rod u, in combination with the abutment N, the beveled disk I, and the annular steam-chamber F, substantially as shown and described, and for the purposes herein set forth.

15. The steam-chamber h, provided with the valves w and s, cam v, and connecting-rod u, in combination with the abutment N, the beveled disk I, the annular steam-chamber F, the cylinder d, the connecting-rod g, and the cam f, substantially as shown and described, and for the purposes herein set forth.

16. The cams Z and Z' and the slotted slide a, interposed between the cams, the abutment N, the beveled disk I, and the annular steam-chamber F, in combination with the steam-chamber h and the cylinder d, substantially as shown and described, and for the purposes herein set forth.

259,968. MIDDLINGS-PURIFIER. AUGUSTUS WOLF, Allentown, assignor of one-half to David L. Hamaker, East Hempfield, Pa. Filed Mar. 13, 1882. (No model.)

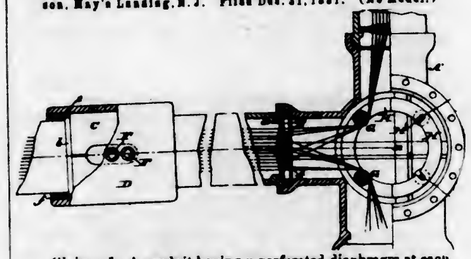
Claim.—1. The combination of the outer frame or casing with a screen-frame hung to the casing, so as to be free to reciprocate therein, and a trough-casing, A, secured to said reciprocating frame and having grated sides, whereby air is admitted to the trough directly beneath the screen, as set forth.

2. The combination of the outer casing of the machine, the air-box M on the top of the same, the upper screen-frame, with air-passage therein, the lower screen-frame, and the tube M' above the air-passage of the upper screen, whereby communication is afforded between the air-box and the space between the upper and lower screens, as set forth.

3. The combination of the air-box M, the casing A, having a longitudinal opening, e, and the valve e', adjustable to any desired angle in respect to said opening e, whereby the area of the latter is regulated and the direction and force of the draft controlled, as set forth.

4. The combination of the upper screen having trough-casing and air-passage, the lower screen having trough-casing and air-inlet, the casing A, having an inlet, m, valved transverse outlet n, and valved longitudinal outlet s, the air-box M, and the tube M' above the upper screen and in line with the air-passage therein and with the outlet s, as set forth.

259,969. METHOD OF MAKING LATCH-NEEDLES. FRANK E. WOODWARD, Hill, N. H. Filed Feb. 21, 1882. (No model.)



Claim.—The improvement in the method of making latch-needles for knitting-machines, which consists in upsetting at a short distance from the pointed end the wire from which the needle is being made, and thus forming a lug for the attachment of the latch, as described.

259,970. TRACE-BUCKLE. MELANCTHON E. ZELLER, Bluffton Ohio. Filed May 5, 1882. (No model.)

Claim.—In a harness or trace buckle, the combination, with a tug-bail, of a trace-frame having a lip or arm, a, provided with an inclined shoulder or elevation, A', the bail adapted to be passed over the projecting end of said plate, substantially as and for the purpose set forth.

259,971. UNDERGROUND CONDUIT FOR TELEGRAPH, TELEPHONE, AND OTHER WIRES. THOMAS J. AGNEW, Philadelphia, Pa., assignor of three-fourths to Harritt & Cattell and George W. Sheppard, Jr., same place, and Harrison A. Thompson, May's Landing, N. J. Filed Dec. 21, 1881. (No model.)

Claim.—1. A conduit having a perforated diaphragm at each end thereof, in combination with wires for conducting electricity, said wires being passed through the perforations in said diaphragms, and each of them having a stop, k, formed by solder on each wire outside of each of said diaphragms.

2. A pair of conduits or pipe-sections, in combination with a divided metallic sleeve inclosing their proximate ends, a coupling-cap which incloses said sleeve and extends beyond the ends of the latter, and packing-rings interposed between said cap and said pipe at the ends of said sleeve, substantially as set forth.

3. The conduits or pipes formed with an exterior bead near each end, in combination with a divided metallic sleeve inclosing their proximate ends and interposed between the exterior beads, b b, and a coupling-cap which incloses said sleeve and proximate conduit ends, substantially as set forth.

4. The combination of the bowed coupling-pieces B' with the line-wires, said coupling-pieces being detachable from said wires and bending more readily than the latter.

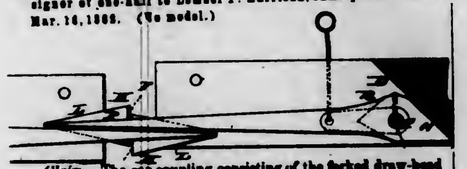
5. The coupling-cap D, constructed with openings provided with plugs F, in combination with sleeve C, having an opening below said plugs, and the conduit-sections, coupling-pieces, and line-wires, substantially as set forth.

6. The combination, with a conduit containing line-wires, of a chamber formed at the intersection of the pipes, constructed as described, and having posts provided with elastic cushions and located in said chamber, the line-wires passing partly around said posts in changing their direction, substantially as set forth.

7. The combination, with a conduit containing line-wires, of a chamber formed at the intersection of the pipes, having the slotted ring H and posts G, provided with elastic cushions and located in said chamber, the line-wires passing partly around said posts in changing their direction, substantially as set forth.

8. The line-wires, in combination with the posts G, the slotted rings H, bolts H', and elastic pieces m, constructed and operating substantially as set forth.

259,972. SEPARABLE BUTTON. ASAHEL H. ALDERMAN, Marietta, Ohio. Filed Jan. 31, 1882. (Model.)

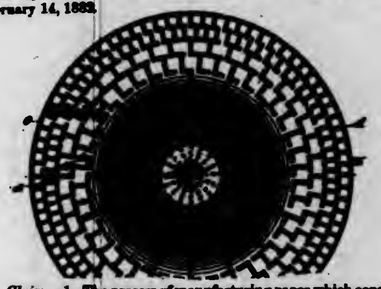


Claim.—1. In a separable button, the back or shoe E, having barbed shanks, needle-pointed so as to make their own perforations, in combination with the button-front having curved slots adapted to receive and removably hold the shanks, all substantially as set forth.

2. The spring-catch D d, combined with the back E, having barbed shanks e e', and front A a, having locking-recess b', as set forth.

3. The back E, having shanks e, beveled, as shown, to form shoulders e', points e', and flattened surfaces e, combined with the front A a, having cap B, with curved slots b b', and with a spring-catch, D, adapted to lock or liberate the said shanks at will, as specified.

4. The pivoted disk C, having apertures c c', the cap B, having curved slots b b', and spring-catch D, combined with the back E, having shanks e e' e', as set forth.



259,973. CAR-COUPLING. LEE ANDERSON, Paris, Tex., assignor of one-half to Lemuel P. Harrison, same place. Filed Mar. 16, 1882. (No model.)

Claim.—The car-coupling consisting of the forked draw-head having the lateral branches D and the rear under-beveled bearing, D, the pivotal shaft F, and the coupling-bar having the inclined rear end, H, the longitudinal slot S between the heel and point, and the central hook-lugs, K, of less width than the slot, and having the lateral bearings P, substantially as specified.

259,974. PROCESS OF AND MACHINE FOR REDUCING FIBERS IN THE MANUFACTURE OF PAPER, &c. DANIEL B. BURNS, Dayton, Ohio, assignor of one-half to Francis J. McCormick, same place. Filed May 20, 1882. (Model.)

Brief.—Improvement on Letters Patent No. 253,814, dated February 14, 1882.

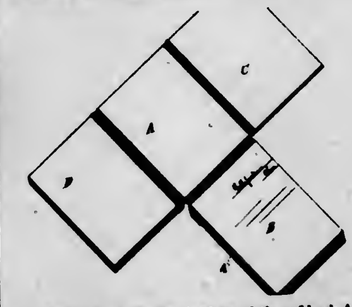
Claim.—1. The process of manufacturing paper which consists in feeding the material through an eccentrically-arranged feed-opening between two disks having cutting-ribs, by which it is carried outwardly and is torn and separated into fibers, and is finally reduced between a peripheral rib, substantially as and for the purpose set forth.

2. A mill for reducing rags and fibrous substances, consisting essentially of two disks having concave faces with a series of radial annular and irregular ribs, with flat faces to form the drum of the disks, substantially as specified.

3. A mill for reducing fibrous substances, consisting of two disks having a series of flat-faced ribs which form cutting-edges, and a concave central part, gradually diminishing in depth toward the periphery, substantially as specified.

4. A mill for reducing substances, consisting of two disks having a series of ribs, as shown, to form cutting-edges, and a central concave part, in combination with a feed-opening arranged eccentrically to the central axis, substantially as and for the purpose described.

5. A reducing-mill for fibrous substances, consisting of two disks having a central concave part with radial ribs and their faces gradually diminishing in depth toward the periphery and provided with a series of cutting-edges and furrows near the periphery, substantially as shown and specified.



6. A mill for reducing fibrous substances, consisting of the disks A A', having a concave face gradually diminishing toward the periphery and provided with a series of radial annular and segmental flat-faced ribs, all arranged, as shown, to form cutting-edges, substantially as and for the purpose set forth.

7. A reducing-mill having disks A A', provided with a series of radial ribs, b, intersecting or radial ribs a, and irregular passages d, formed between them, all substantially as shown and specified.

8. A reducing-mill having disks A A', provided with a series of radial ribs, b, annular ribs a, and irregular passages d, one of the disks made stationary and the other revolving, and the feed-orifice arranged eccentrically, substantially as set forth.

9. The process of making paper from rags or equivalent material by reducing it in a mill in a dry state, as herein described, to a fibrous condition and converting the lint into pulp and finishing it by the usual and wet card-board mechanism, substantially as herein set forth.

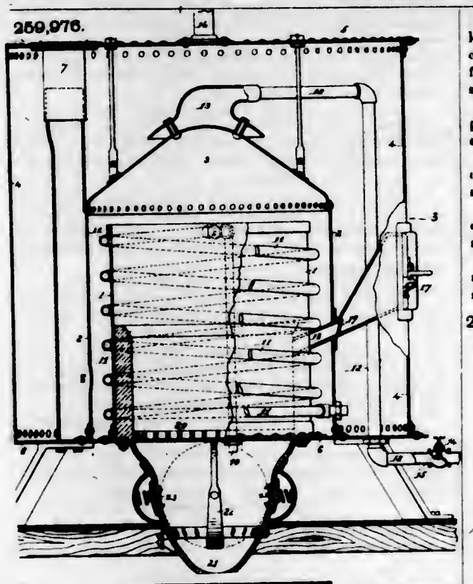
259,975. COPYING-BOOK. CHARLES D. CAMPBELL, Bellefontaine, Ohio. Filed Apr. 5, 1882. (Model.)

Claim.—1. A copying-book consisting of book A and writing-pad B, copying-pad C, and copying-leaves D, secured to the edges of the back, as set forth.

2. A book having letter bill, or other paper for writing on secured to one of the backs, while to one edge of the other back are fastened a number of sheets of tissue-paper arranged to fold singly or in a body over on the back and on another edge of the back a sheet of tin, wood, or gilded board faced with an impression-pad arranged to fold over onto the back in such a manner that the copied tissue-sheets may be folded under the board, while a blank sheet for copying on is folded over on the top of the impression-pad preparatory to being wetted and copied on.

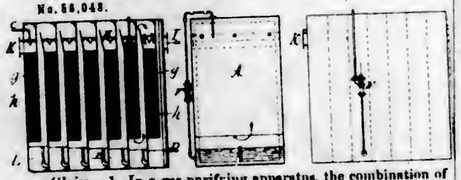
259,976. APPARATUS FOR HEATING RAILWAY-TRAINS. BLANCHARD CHAMBERLAIN, Bellefontaine, Ohio. Filed Apr. 7, 1882. (No model.)

Claim.—1. The combination of the fire-chamber 1, casings 2 4, and a coil, 11, passing through the annular fire-chamber between the fire-chamber 1 and casing 2, for the purpose of heating air, substantially as herein described.



2. The combination of the fire-chamber 1, inner and outer casings, 2 and 4, forming a hot-air chamber between them, and the hood 13, forming the entrance to the discharge-pipe 12 and placed over the top 3 of the casing 2, so as to compel the discharged air to pass in contact with the said top 3, substantially as described.

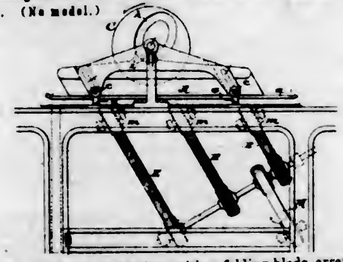
3. In a railway-car heater, the safety-shutter 22 beneath the grate, adapted to close automatically in event of the upsetting of the car.



4. The combination, with a stove or furnace, of the weighted pivoted door 22 and automatic catches 23 to lock the same in closed position in event of upsetting, substantially as described.

5. The combination of the air-tight heater 1 2 3 4, outlet 12, check-valve 14, and safety-valve 16, substantially as and for the purposes set forth.

259,976.



259,977. GAS-PURIFYING APPARATUS. SAMUEL CHANDLER and JOSIAH CHANDLER, London, England. Filed Nov. 2, 1881. (No model.) Patented in England Feb. 18, 1880, No. 728; in France Aug. 29, 1881, No. 144,616, and in Belgium Oct. 24, 1881, No. 56,048.

Claim.—1. In a gas-purifying apparatus, the combination of the series of partitions *g* and *h*, constructed and arranged, as described, with the series of vertical stationary scrubbing-plates A, substantially as and for the purpose set forth.

2. In a gas-purifying apparatus, the combination of the partitions *g* and *h*, clusters of scrubbing-plates A, distributers E, tank L, and overflow-pipes B, substantially as shown and described.

259,978. FOLDING-MACHINE. LUTHER C. CROWELL, Brooklyn, assignor to R. Hoe & Co., New York, N. Y. Filed Nov. 28, 1881. (No model.)

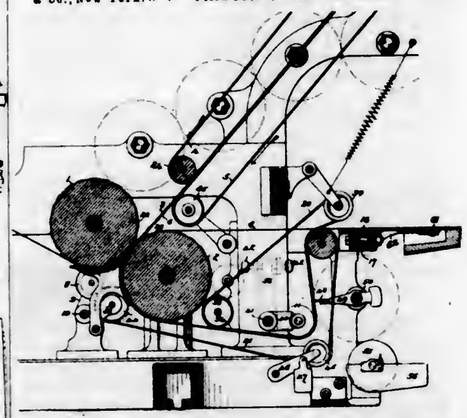
Claim.—1. The combination, with a folding-blade arranged to move longitudinally with the sheet, of means for continuing the forward or longitudinal movement of the sheet during the folding, all substantially as described.

2. A folding-blade, as A, having an oblique reciprocation in the direction of its length, substantially as described.

3. The folding-rolls, as m n, set obliquely with respect to the folding-blade, substantially as described.

4. The combination of the series of folding-rolls, as m n, with a folding-blade arranged to enter the bite of said rolls at an angle to their axes, substantially as described.

5. The combination, with folding-rolls arranged to fold a sheet longitudinally—i. e., in the direction of its travel through the machine—and to carry it forward while being folded, of means for forcing the fold-line of said sheet into the bite of the rolls, all substantially as described.



6. The series of foldjng-rolls, as m n, set obliquely to the path of the entering sheet, in combination with the oblique tapes, substantially as described.

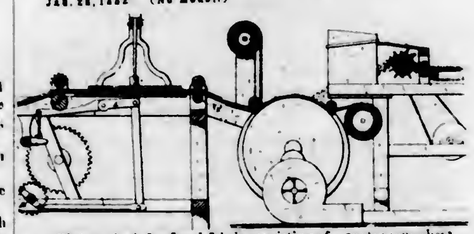
7. The series of folding-rolls, as m n, set obliquely to the path of the entering sheet, in combination with the oblique tapes E F, and the single driving-shaft o, substantially as described.

8. The series of folding-rolls, as m n, set obliquely to the path of the entering sheet, in combination with the oblique tapes, as E F, and the supplemental tapes, as M, substantially as described.

9. The combination of the obliquely-arranged folding-rolls, as m n, and the vertically and longitudinally moving folding-blade, substantially as described

259,979. DELIVERY APPARATUS FOR WEB-PRINTING MACHINES. LUTHER C. CROWELL, Brooklyn, assignor to R. Hoe & Co., New York, N. Y. Filed Feb. 1, 1882. (No model.)

Claim.—1. The combination, with a web-turner adapted to transfer a web laterally and place it either over or under another web, of means for varying the distance traveled by the web, so that said webs shall register together properly, all substantially as described.



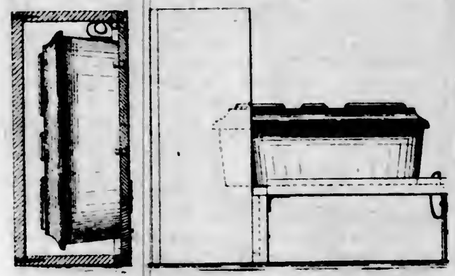
2. The combination, with a web-turner, as 7, of the adjustable roll, as 37, for varying the travel of one of the webs, substantially as described.

3. The combination, with the web-turner, as 7, of the leading-roll, as 37, rock-shaft, as 41, arm, as 58, and adjusting-screws, as 42, substantially as described.

4. The combination, with the web-turner, as 7, of the adjustable roll, as 37, and the series of tapes, as 20 21, provided with automatic devices, as 39 45, for keeping them taut, substantially as described.

5. The combination, with a web-turner adapted to transfer a web laterally, of web-severing mechanism and mechanism for varying the distance traveled by the web to bring it into proper register with said severing mechanism, all substantially as described.

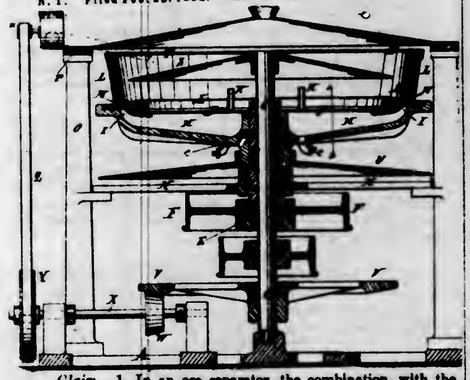
259,980. FUR-FACED FABRIC. WILLIAM E. DOUBLEDAY, New York, N. Y., assignor to Ellen M. Doubleday, same place. Filed Jan. 28, 1882. (No model.)



Claim.—1. A fur-faced fabric consisting of a continuous sheet of woven or felted fabric, consisting in whole or in part of felta-

ble fibers, and provided upon both sides with a loose flowing nap of fur, substantially as set forth.

2. A fur-faced fabric having upon opposite sides a loose flowing nap of different-colored fur, substantially as set forth.



259,981. SHIPPING-BOX FOR BURIAL-CASES. GARDNER W. DOW, Marseilles, Ill., assignor of one-half to James Montgomery, same place. Filed Aug. 28, 1880. (No model.)

Claim.—1. A shipping-box for burial-cases, provided with the bottom A, consisting of the hinged sections *a* and *a'*, in combination with means for detachably affixing the burial-case to the section *a*, substantially as and for the purposes described.

2. A shipping-box provided with a bottom in two sections, one hinged upon the other, in combination with a burial-case arranged therein so that about one-fourth of its length shall be opposite the fixed section and detachably fastened to the swinging section, for the purpose of using the weight of the burial-case to facilitate the closing of the box and to keep it closed when the box is set on end, substantially as described

259,982. ORE-SEPARATOR. HORACE E. HUNWOOD, New York, N. Y. Filed Feb. 25, 1882. (No model.)

Claim.—1. In an ore-separator, the combination, with the shaft C, rotating sleeve E, and the amalgamating-pan L, having slots M in its bottom, of the hollow arms H, having slots I, substantially as herein shown and described, whereby quicksilver is projected from the interior of the said arms over the inner surface of the rim of the said pan, as set forth.

2. In an ore-separator, the combination, with the shaft C, carrying the amalgamating-pan, and the fan-blower *b*, of the friction-wheels V W, the horizontal shaft X, and the pulleys and belt Y a Z, substantially as herein shown and described, whereby the fan-blower will be driven from the shaft carrying the amalgamating-pan, as set forth.

259,983. ORE-CONCENTRATOR. BENJAMIN HERSHEY, Erie, Pa., assignor of three-fourths to Charles Hitchcock, Joseph A. Ege, and Benjamin Thornton, all of Bradford, Pa. Filed Feb. 25, 1882. (No model.)

Claim.—1. An apparatus for concentrating ores, combining in its structure a series of vibrating or oscillating troughs or tables arranged one above the other, and each provided at or near one end with a screen or sieve and at the other end with a separating-chamber having its discharge mouth or throat controlled by an automatically-operated gate or valve.

2. In an ore-concentrator, a vibrating or oscillating trough or

259,983.

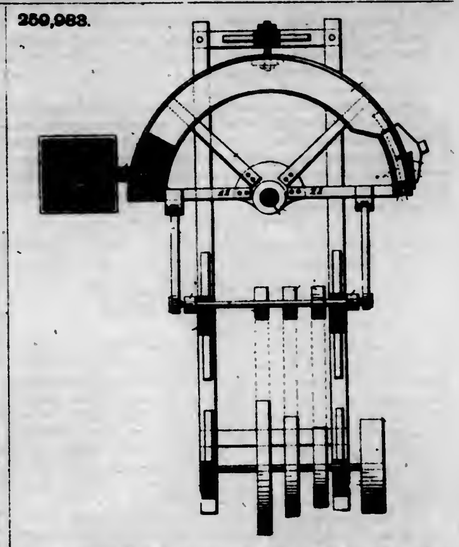


table having at or near its receiving end a screen or sieve and at its discharging end a separating-chamber, combined with a valve or gate adapted to open and close the delivery mouth or throat of the separating-chamber.

3. In an ore-concentrator, the combination of a trough or table having at or near its receiving end a screen or sieve and at its discharge end a separating-chamber, an automatically-operated valve or gate controlling the delivery mouth or throat of the separating-chamber, and mechanism for vibrating or oscillating the trough or table.

4. In an ore-concentrator, the combination of a trough or table having at one end a separating-chamber, a valve or gate for controlling the delivery mouth or throat of the separating-chamber, and devices operated by the accumulation of material in the separating-chamber to automatically open the valve or gate and permit the escape of the separated particles of material.

5. In an ore-concentrator, the combination of a series of troughs or tables having screens or sieves at or near one end and separating-chambers at the other end, and valves or gates automatically operated by the accumulation of material in the separating-chambers to open the delivery mouths or throats of the latter and permit the escape of the separated particles.

6. In an ore-concentrator, the combination of a series of troughs or tables having screens or sieves at or near one end and separating-chambers at the other end, valves or gates automatically operated by the accumulation of material in the separating-chambers to open the delivery mouths or throats of the latter, and mechanism for vibrating or oscillating the troughs or tables.

7. In an ore-concentrator, the combination of a series of inclined troughs or tables arranged one above the other, and provided with screens and separating-chambers, automatically-operated valves or gates controlling the delivery mouths or throats of the separating-chambers, and mechanism, substantially such as described, for imparting differential vibratory movements to the respective troughs or tables.

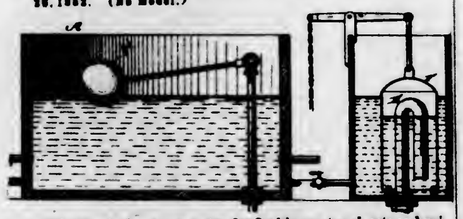
8. The combination, with the trough or table having a separating-chamber at one end, of a valve or gate in the delivery mouth or throat of the same, a float within the separating-chamber, and connecting devices between the float and the valve or gate.

9. The combination, with the series of troughs or tables having screens or sieves at one end and separating-chambers at the other end, valves or gates controlling the delivery mouths or throats of the separating-chambers, floats arranged in the latter, and connecting devices between the floats and the valves or gates.

10. In an ore-concentrator, a trough or table having one end contracted and depressed, combined with a float, valve or gate, and connecting devices between the float and valve or gate for controlling the delivery mouth or throat of the separating-chamber.

11. The combination of the driving-shaft, the crank-shaft, the oscillating trough, the vertical shaft, the hubs thereon, the arms connecting the trough with the hubs, and the pitmen connecting the arms with the crank-shaft.

259,984. PROCESS OF AND APPARATUS FOR MOLDING PLASTIC MATERIAL. JOHN W. HYATT, Newark, N. J., and CHARLES S. LOCKWOOD, Albany, N. Y., assignors to the Boneset Company, (Limited,) Albany, N. Y. Filed May 11, 1882. (No model.)



Brief.—The object of the invention is to provide a means of applying an exterior section or coating of expensive material to a core or interior part of inexpensive material, whereby an article is produced having substantially the same characteristics as one made entirely of the more desirable material, particularly in the production of billiard-balls, in the manufacture of which it will be found to be of especial value.

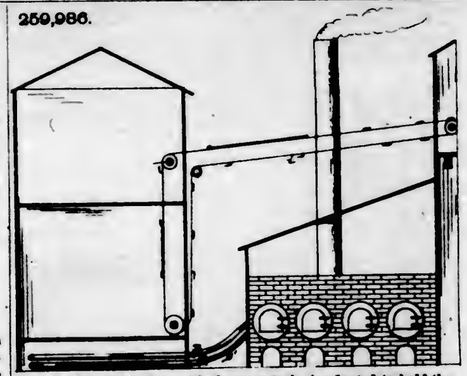
Claim.—1. The process herein described of forming articles of different materials or compounds, which consists in first introducing the core in a core-set and applying a shell or wall to confine the material out of which the outer section is to be made; second, introducing a proper quantity of material to form half of the exterior section and compressing it upon the core; third, removing the core-set and introducing a suitable quantity of material to cover the side of the core which has not been coated; fourth, effecting a compression of the material last introduced by means of a second plunger; fifth, finishing the article.

2. The apparatus for molding hereinbefore described, consisting of the core-set, shell or wall, and plungers, the whole operating substantially as described.

259,985. APPARATUS FOR FLUSHING WATER-CLOSETS AND URINALS. JAMES P. HYDE, New York, N. Y. Filed May 26, 1882. (No model.)

Claim.—1. In an apparatus for flushing water-closets and urinals, the combination, with a siphon located within the flushing-tank, of a bell inclosing the two legs of the siphon and provided with an open bottom and a closed top, and devices for raising the bell, whereby as the bell is lifted the atmospheric pressure upon the water in the tank around the bell will cause the water within the latter to rise above the bend in the siphon, substantially as described.

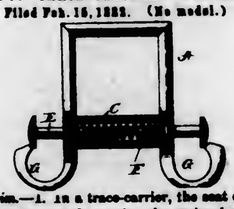
2. The combination, with the supply-cistern having a float-valve, of the flushing-tank connected with the cistern, the siphon located within the flushing-tank, a bell having an open bottom and inclosing the two legs of the siphon, and devices for raising the bell, whereby the water-level in the flushing-tank shall normally be above the water-level in the bell, in which latter the water-level is normally below the bend in the siphon, so that when the bell is raised the water within the same will rise over the siphon-bend, substantially as described.



259,986. PROCESS OF AND APPARATUS FOR DRYING LUMBER. JOHN LYNCH, Portland, Me. Filed Nov. 17, 1881. (No model.)

Claim.—1. The herein-described process of drying lumber, namely: first, stacking it endwise in a suitable chamber or holder, and then treating it with live steam, or with live steam and finally with hot air, applied or admitted at the lower end of the lumber, all substantially in the manner set forth.

2. The herein-described process of treating lumber for purposes of drying, &c., namely: first, stacking or packing it endwise in a suitable receptacle, and then admitting therein to the lower end of the lumber live steam which has been duly saturated with some sap or pitch solvent, and afterward drying by hot air, all substantially as set forth.

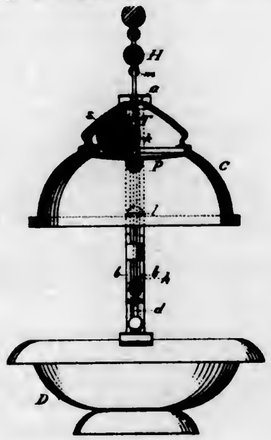


3. In combination with a steaming and drying structure, A, operated as set forth, a separating and holding piece, F, substantially as set forth.

259,986.

4. In combination with the receptacle A, adapted to hold the lumber when stacked, as described, the endless belt or carrier I, having catches *i*, whereby in a forward movement the lumber can be carried into the drier and in the reverse movement taken out, all substantially as and for the purposes set forth.

259,987. TRACK-CARRIER. WILLIAM H. HAIS, Bonesboil, Wis. Filed Feb. 15, 1882. (No model.)

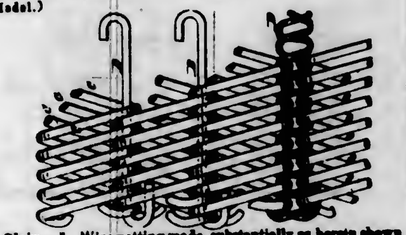


Claim.—1. As a trace-carrier, the seat or socket C, extending across the frame and carrying the spring-bolt E, constructed substantially as described, and adapted to be actuated alternately or simultaneously in relation with the side hooks, G, as and for the purposes set forth.

2. In combination with a trace-carrier frame having a socket, C, and side hooks, G, the spring-bolt E, made in two parts, so that said parts can slide on each other, substantially as set forth.

3. A trace-carrier consisting of the frame A, provided with two side bars, which are extended to form the hooks G, and having bolt E, surrounded by spring F, the ends of the bolt adapted to engage with the said hooks, substantially in the manner and for the purpose set forth.

259,988. BUTTER-DISH. WATSON J. HILLES and THOMAS L. I. BELLOSE, Birmingham, and HENRY HENRY, Huntington, assignors to the Derby Silver Company, Birmingham, Conn. Filed Apr. 17, 1882. (No model.)

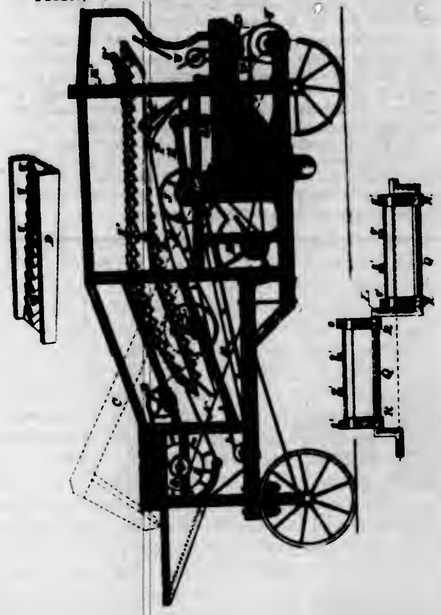


Claim.—1. In a butter or other dish, the combination, with a cover having a central aperture, *a*, of the detachable interior plate, P, carrying the operating-spring *c* and strap T, substantially as specified.

2. A dish or receptacle having the raised handle or frame H and its slide-guides, the automatic angle-dogs, and the gravitating handle or bow A, connected to arms of said dogs, substantially as specified.

3. As an improved article of manufacture, a dish or receiver having a raised handle or arm and automatic holding-dogs, a cover suspended from said handle or arm by a tape or connection passing through its central aperture, and connected to an interior spring-winding device, substantially as specified.

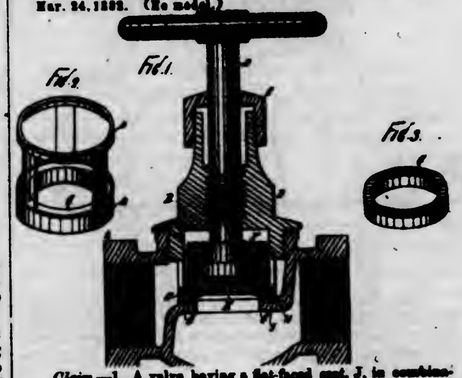
259,989. WIRE-NETTING. GUSTAV PICKHARDT, Hagen, assignor to Carl Kulp, Darmstadt, Germany. Filed Apr. 21, 1882. (Model.)



Claim.—1. Wire-netting made, substantially as herein shown and described, of a series of spirals screwed into each other and having connecting-wires passed through the loops formed by the overlapping parts of the spirals, as set forth.

2. Wire-netting made of spirals screwed into each other and united by wires passed through the loops formed by the overlapping parts of the spirals, the ends of the wires of the spirals and the ends of the connecting-wires being bent over against the ends of the link-sections formed of the spiral wires, substantially as herein shown and described, and for the purpose set forth.

3. The combination, with a wire-netting formed of sections made of spirals screwed into each other, of one or more spirals screwed into the meeting ends of two sections for the purpose of uniting them, substantially as herein shown and described, and for the purpose set forth.

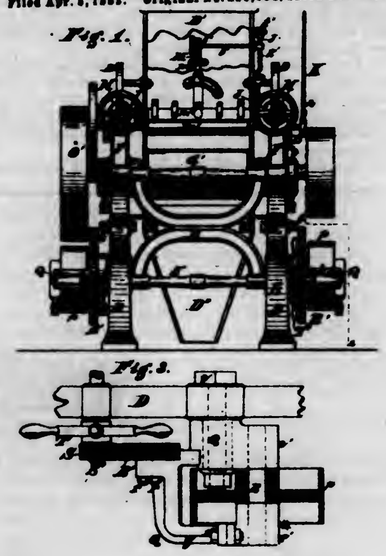


259,990. THRASHING-MACHINE. MICHAEL SULLIVAN, Milwaukee, Wis. Filed Oct. 9, 1881. (No model.)

Claim.—1. In thrashing-machines, the combination of the longitudinally-moving shoe and the transverse trough mounted thereon, the bottom of said trough being provided with angular or V-shaped steps or grooves, substantially as set forth.

2. The combination of saddles K K, double-crank shaft I, and springs P P, the lower ends of said saddles being respectively secured to the respective cranks on opposite sides of said shaft, and their upper ends pivoted at a distance from their rear ends to the upper ends of said springs, whereby the upper ends of the saddles are caused to rise and fall in a reverse order to that of their front ends, substantially as and for the purpose specified.

259,991. VALVE. EDWIN R. TORLINSON, Stratford, assignor to himself and Edward G. Burnham, Bridgeport, Conn. Filed Mar. 24, 1882. (No model.)



Claim.—1. A valve having a flat-faced seat, J, in combination with a flat disk, E, and a loose ring or removable seat, G, as and for the purpose set forth.

2. In globe or other valves having a flat seat, J, a flat-faced disk, E, in combination with a loose ring or removable soft-metal seat, G, and a guide, H, as and for the purpose described.

3. A valve having a flat seat, J, and provided with a cap, B, in combination with a stem, D, carrying a flat-faced disk, E, a loose ring or removable soft-metal seat, G, and a guide, H, as set forth.

REISSUES

10,189. ROLLER-MILL. ADOLPHE H. GOBLL, Dayton, Ohio. Filed Apr. 3, 1882. Original No. 250,954, dated Dec. 13, 1881.

10,139.

Fig. 2.

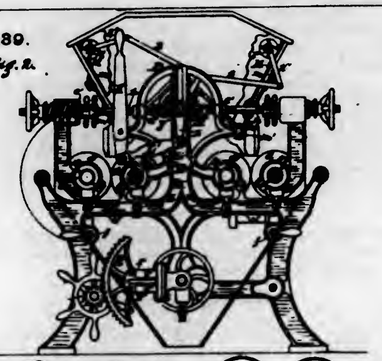


Fig. 1.

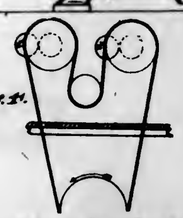

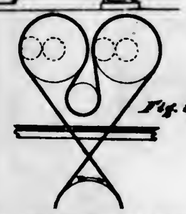

Fig. 3.

Claim.—1. In a roller-mill, the combination of the hopper-gate mechanism on both sides of the machine with a through-shaft, lever mechanism connecting the parts to operate the gates simultaneously, and a single hand-lever, substantially as and for the purpose described.

2. In a roller-mill, the combination, with the adjustable rolls and journals, of transverse shafts A, a through-shaft, J, link mechanism connecting the said shafts, and a single hand-lever, K, connected with the through-shaft, for simultaneously adjusting both sets of rolls by a single lever movement, substantially as described.

3. In a roller-mill, the combination of two sets of crushing or grinding rolls, belt and pulley driving devices, the tightener-pulleys, adjustable frames therefor, and mechanism for simultaneously raising and lowering the frames and tightener-pulleys to stop and start the machine, substantially as described.

4. In a roller-mill, the combination, with the adjustable crushing-rolls and the gates or slides which control the passage of grain from the hopper, of a single through-shaft, J, a single hand-lever, K, and mechanism connecting the crushing-rolls and the gates or slides with the through-shaft and hand-lever, substantially as described, whereby a single movement of the lever simultaneously adjusts the rolls and the gates or slides, as set forth.

5. In a roller-mill, the shaft J, provided with the rigidly-attached links I, having segmental slots *i*, combined with the shafts h, engaging the slots in said links, the pivoted arms F, carrying crushing or grinding rolls, the crank L, attached to the shaft J, the link L', and the swinging lever K, all substantially as and for the purpose described.

6. The combination, with the swinging lever K and mechanism, substantially as described, for adjusting the outer crushing-rolls, *d d'*, of the crank K', the links *h*, the crank-rods *h'*, the shafts *l*, pinions *r'*, the racks, and bars *m*, provided with the gates or slides *m'*, the construction and arrangement being such that a movement of the swinging lever simultaneously adjusts the crushing or grinding rolls and raises or lowers the gates or slides, for the purposes set forth.

10,140. FEED AND GIG WORKS FOR SAW-MILLS. JAMES H. WATSON, Tawas City, Mich. Filed July 12, 1880. Original No. 224,749, dated Feb. 17, 1880.

Brief.—The friction-gears are operated simultaneously by the mechanism described.

Fig. 1

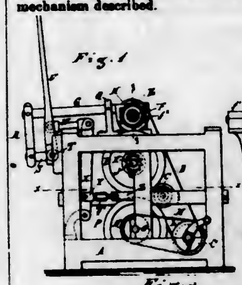

Fig. 2

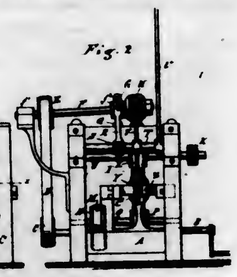

Fig. 3.

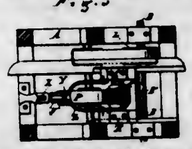

Fig. 4

Claim.—1. In a feed and gig mechanism for saw-mills, the combination, with the shafts J O and the friction-pulleys I P thereon, of the vertically-moving friction-wheel H, the horizontally-moving friction-wheel O', the rock-shaft T, having arms S V, and connections, substantially as described, between the arms S V and the friction-wheels H O', as and for the purpose specified.

2. In a feed and gig mechanism for saw-mills, the combination, with the shafts J O and the friction-pulleys I P thereon, of the friction-wheel C, journaled in sliding bearings A', the friction-wheel H, journaled in a bearing, *f*', the lever G, carrying the bearing *f*', the rock-shaft T, having arms S V and connections, substantially as described, between the arms S V and the lever G, and sliding bearings A', as and for the purpose specified.

3. In a feed and gig mechanism for saw-mills, the combination, with the shafts J and O and the friction-pulleys I P thereon, of the horizontally-sliding bearings A', the vertically-moving bearing *f*', the friction-wheels H O', and mechanism, substantially as described, for moving the bearings A' *f*' alternately to and from the friction-pulleys I P, as and for the purpose specified.

4. The combination of the two levers U X, the two arms S V, the three connecting-rods R W Y, and the U-bar Z with the sliding bearings of the lower friction-wheel, C', and with the lever G, that carries the feed friction-shaft F and the upper friction-wheel, H, substantially as herein shown and described.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

BRIDGE, BEACH & CO. *v.* THE EXCELSIOR MANUFACTURING COMPANY *et al.*

Decided May 8, 1882.

LETTERS PATENT NO. 180,001 CONSTRUED—STATE OF THE ART—CLAIM RESTRICTED.

Letters Patent No. 180,001, for an improvement in cooking-stoves, claiming, "in combination with a stove-oven, a hinged shelf fitted to fall outward and down automatically when the oven-door is opened and to be raised up by closing the oven-door, adapted to operate upon it for that purpose," construed, in light of the state of the art, to cover only the specific devices for raising and lowering the hinged shelf, and that as the defendant used a different device for that purpose there was no infringement.

APPEAL from the Circuit Court of the United States for the Eastern District of Missouri.

Mr. R. H. Parkinson for the appellants.

Mr. S. S. Boyd for the appellees.

Mr. Justice BRADLEY delivered the opinion of the Court.

This case arises upon a bill in equity founded upon certain letters patent dated July 18, 1876, and numbered 180,001, granted to one Eseck Bussey for an improvement in cooking-stoves. The appellants, as assignees of the patentee, sue the defendants for alleged infringement, and pray an injunction, an account of profits, and an assessment of damages. The defendants filed an answer, denying infringement and alleging the patent to be invalid by reason of certain prior patents and public use of the alleged invention prior to the invention of Bussey. The patent relates to an oven-shelf placed on a level with the bottom of the oven when the door is open, and outside of the oven, to serve as a shelf for pans and other vessels to rest on when drawn out of or shoved into the oven. The claim of the patent is not for the shelf, as that is admitted to be old, but for an automatic device for raising the shelf upright and inclosing it within the door when the latter is closed and letting it down to a horizontal position when the door is opened. The device is a cam attached to the door, which passes under the edge of the shelf and gradually raises it to a nearly perpendicular position as the door shuts. The shelf falls back of its own weight when the door opens, resting on the cam.

The claim of the patent is as follows:

What I claim, and desire to secure by Letters Patent, is—

In combination with a stove-oven, a hinged shelf fitted to fall outward and down automatically when the oven-door is opened, and to be raised up by closing the oven-door, adapted to operate upon it for that purpose, substantially in the manner and for the purposes herein set forth.

The defendants made and sold stoves containing oven-shelves constructed and operated as described in letters patent granted to E. C. Little and D. H. Nation, dated July 9, 1878, and numbered 205,754. This shelf also has an automatic movement, being raised when the door shuts and lowered when it opens; but the device by which this is accomplished is different from that of Bussey. A cam or arm is used on the door, it is true, but it does not operate under the shelf, but upon a projection attached to the upper side of it, so arranged in relation to the arm on the door as to raise and lower the shelf. Both devices operate upon the same principle precisely as that which has been used for a long time in raising and lowering a carriage-step by shutting and opening the door and in other contrivances by which the same general effect is produced. Cam movements and others of like character prodncing simultaneous operations according to the needs of the case—such as opening valves in a steam-engine as the piston ascends and descends, and a thousand other things—are in such common use that it requires but very little invention to adapt them to a particular case, like the one under consideration.

We think with the court below that the patentee, if entitled to anything, is only entitled to the precise device which he has described and claimed in his patent; and as the defendants use a different device they are not guilty of infringement.

The decree of the circuit court is affirmed.

U. S. Circuit Court—Eastern District of Michigan.

SEARLS *v.* WORDEN *et al.*

Decided February 6, 1882.

1. REVIEW BY CIRCUIT COURTS OF FORMER DECISIONS.

In patent causes the circuit court will not review the findings of another court of co-ordinate jurisdiction except in a case of clear mistake of law or fact, of newly-discovered testimony, or upon some question not considered by such court.

2. INFRINGEMENT—WHIP-SOCKETS.

Letters Patent No. 5,400, reissued to Erastus W. Scott, for an improvement in whip-sockets, are valid, and are infringed by the device described in Letters Patent No. 8,381, reissued to Henry M. Curtis and Alva Worden, for an improvement in whip-holders.

3. REISSUES—IDENTITY OF INVENTION IN ORIGINAL AND REISSUE PATENTS—HOW DETERMINED.

A reissued patent is valid if for the same invention as the original. The identity of the inventions is determined by the drawings and specifications construed together and not separately.

Mr. J. P. Fitch for the complainant.

Messrs. Sprague & Hunt for the defendants.

STATEMENT OF THE CASE.

This was a bill in equity to establish the validity of

Reissued Letters Patent No. 5,400, dated May 6, 1873, to Erastus W. Scott, for an improvement in whip-sockets, and to recover damages for the infringement of the same by the defendants. Complainant was the assignee of the inventors. The alleged improvement consisted in the combination, with the whip-socket, of a lever swinging upon a fulcrum midway between the two ends of the lever, the office of which was to hold the whip upright and prevent its wabbling in the socket.

The three claims alleged to have been infringed were as follows:

1. The combination of the stationary part of a whip-socket and a lever, the lever being hinged or pivoted so that the lever bears against the whip at or near the ends of the lever, to hold the whip in position, for the purpose set forth.
2. The lever B, curved or inclined inward from its point of pivot, and used in connection with the stationary part A, substantially as and for the purpose specified.
3. The lever B, pivoted at a point inside of its center of gravity, so that when left free the upper part of the lever will fall outward, substantially as and for the purpose set forth.

The defendants insisted in their answer, first, that the reissued patent was not for the same invention as the original; second, that Scott was not the first and original inventor of the improved claim, but that he was anticipated by a large number of patents, which were offered in evidence to substantiate this defense; third, that the whip-sockets made and sold by the defendants do not infringe complainant's patent.

It appeared upon the hearing that in a suit brought by the complainant against certain persons in the city of New York who were selling the whip-sockets manufactured by the defendants these several defenses were set up and overruled; that complainant recovered a decree, and that the case was then in the hands of a master upon a reference to assess the complainant's damages.

BROWN, *J.:*

It would be quite sufficient authority for a decree in favor of the complainant in this cause to simply refer to the opinion of Judge Wheeler, sitting in the southern district of New York, declaring the validity of complainant's patent and the reissue, and pronouncing the device of the defendants in that case, who were vendees of the defendants in this case, an infringement. Except in some minor particulars the two cases are identical. While it is conceded that the decree in that case would not operate as an estoppel here, the opinion of the court is entitled to something more than respectful consideration. Upon general questions of law we listen to the opinions of our brother judges with deference and with a desire to conform to them if we can conscientiously do so; but we do not treat them as conclusive. In patent causes, however, where the same issue has been passed upon by the circuit court sitting in another district, it is only in case of a clear mistake of law or fact, of newly-discovered testimony, or upon some question not considered by such court that we feel at liberty to review its findings.

A division of opinion upon the same issue might give rise to litigation in a dozen different districts, to conflicting decrees, and to interminable contests between rival patentees. In case the defeated party is dissatisfied with the first decision it is his right to resort to the appellate court, where a final decision can be obtained, which all inferior courts are bound to respect. This subject was so elaborately discussed by the late Judge Emmons and the authorities so fully collated in the *Goodyear Dental Vulcanite Company* v. *Willis* (1 Flippin, 388) that it is unnecessary to consider it further. We are content simply to announce our adherence to his views; but the recent decision of this court upon a question of reissue (*Kells* v. *McKenzie*, 9 Fed. Reps., 284) would, perhaps, demand of us an interpretation of the reissue in this case which should seem consistent with the opinion in that.

In *Kells* v. *McKenzie* we held (following the later and, as we believed, the sounder judgments of the Supreme Court) that a reissued patent is not valid for everything which might have been claimed in the original, and that its validity does not depend wholly upon the fact that the new features attempted to be secured thereby were suggested in the models, drawings, or specifications of the original patent. Hence, as the patentee in that case claimed as his invention a particular part of a machine, and his claims were all limited to that part, we held that a reissue embracing other and distinct portions of the machine was not for the same invention, and was *pro tanto* void, although the designs accompanying the original patent showed all the features contained in the reissue. No such question arises in this case. The distinction between the two is substantial and clear. The validity of the reissue depends upon the fact whether the patents are for the same invention, and the identity of the invention must be determined by the drawings and specifications construed together.

In his original patent, No. 70,627, Scott claimed that his invention related to a new and improved fastening applied to a whip-socket in such a manner as to hold the whip firmly therein and prevent it from moving or shaking laterally, and at the same time not interfere in the least with its ready insertion in the socket and its withdrawal therefrom.

His claim was—

A whip-socket provided with a fastening composed of a lever arranged or applied, substantially as shown and described, to hold the whip steady or firm in its socket, as set forth.

In his reissue he describes his improvements as consisting in the use of a lever with the stationary or upright portion of the socket, abandoning the single claim of his original patent and setting forth in three new claims somewhat more in detail the lever and its combination with the whip-socket. A glance at the drawings and specifications will show that the patents are for the same invention, viz: a whip-socket arranged with a lever swung upon a central pivot and operating so as to admit the whip without difficulty and hold it firmly in position, and at the same time not preventing its easy withdrawal. So far from there being any attempt in the reissue to expand the claim of the original patent and embrace devices which might have come into use since the original patent was granted, its purpose was evidently only to make that definite which had before been obscure and to set forth in more precise and accurate terms the details of the invention. I regard the reissue in this case as a perfectly legitimate use of the privileges conferred by the act upon that subject.

Second. In support of the defense that Scott was not the original inventor of this whip-socket a large number of patents were introduced in evidence and claimed as anticipations, some of which were before Judge Wheeler and others not. A single observation will dispose of them all. Had complainant's patent been simply for a lever working upon a central pivot, with a function to be performed by each end of the lever, his invention would have been anticipated by most or all of these devices; but complainant's patent is for a combination of the stationary part of a whip-socket and a lever, and as none of these devices have any connection whatever with whip-sockets, and none of them

could be applied to a whip-socket without invention, it seems to me that they cannot be claimed as anticipations. (*Crandall* v. *Wallace*, 9 Fed. Reps., 650.) Certainly none of them would be infringements of complainant's patent.

Third. Upon the question of infringement I concur in the opinion expressed by Judge Wheeler. Defendants' device is undoubtedly an improvement upon complainant's, and I think so far an improvement as to show an exercise of the inventive faculty; but in the material points—viz., the use of the lever pivoted upon a central fulcrum and operating to receive the whip when inserted in the socket, to hold it firmly while remaining there, and to permit of its easy withdrawal by the alternate swinging backward and forward of the two arms of the lever—it seems to me they are essentially the same. In the complainant's device the lever is comparatively small and working in a narrow slot. In defendants' device it composes half the circumference of the whip-socket; but in both is found the essential feature of complainant's patent. There may be some doubt as to whether complainant's device is so far practicable as to fall within the definition of a "useful invention;" but as this point was not insisted upon I assume that it is. That defendants' socket is a great improvement over the one exhibited in the patent there seems to be little question.

A decree must be entered in favor of the complainant, with the usual reference to a master to assess damages.

—

WORDEN *et al.* v. FISHER *et al.*

1. JOINT INVENTION NECESSARY TO JOINT PATENT.

If the facts show that a patent is the result of the mutual contributions of two persons, they should be treated as joint inventors and a joint patent should be taken out. Such patent stands for and must be supported by a joint invention; but the court would not be justified in annulling such patent without clear proof that the patentees are not joint inventors.

2. JOINT INVENTION DEFINED.

A mere suggestion, not acted upon by the person making it, but carried out and perfected by another, will not entitle the former to be considered a joint inventor. Nor is it necessary that exactly the same idea should have occurred to two persons at the same time, and that they should work out together the embodiment of this idea in a perfected machine to constitute them joint inventors. If an idea is suggested to one, and he even goes so far as to construct a machine embodying this idea, but it is not a completed and working machine, and another person takes hold of it, and by their joint labors, one suggesting one thing and the other another, a perfect machine is made, a joint patent may properly issue to them. If, upon the other hand, one person invents a distinct part of a machine and another person invents another distinct and independent part of the same machine, then each should obtain a patent for his own invention.

3. WHIP-HOLDERS—FOURTH CLAIM OF REISSUE NO. 8,581 VALID.

Letters Patent No. 8,581, reissued to Henry M. Curtis and Alva Worden, for an improvement in whip-holders, is valid except as to the fourth claim.

Messrs. Sprague & Hunt for the complainants.
Mr. J. P. Fitch for the defendants.

STATEMENT OF THE CASE.

This was a suit to recover for the infringement of Letters Patent No. 8,581, reissued to Henry M. Curtis and Alva Worden, for an improvement in whip-holders. The improvement consisted substantially of a whip-holder divided throughout its length into two parts, of a double conical shape, hinged together in the center by a pivotal joint, so that the holder will disclose a large opening for the reception of the whip, and will be closed at its top around the whip when the same is inserted into the holder.

The defenses were, first, that Curtis and Worden were not the first and joint inventors, but that Curtis alone, or in conjunction with one Nellis, was the inventor of said whip-holder; second, that the device was known and used long prior to complainant's patent by Erastus W. Scott, of Wauregan, Connecticut; third, that this patent is an infringement of Reissued Patent No. 5,400, issued to said Scott, and that the additions to or alterations in Scott's patent exhibit no exercise of the inventive faculty.

BROWN, *J.:*

This suit is prosecuted by the defendants in the case of *Searls* v. *Worden*, just decided, to recover damages of the defendants, who are selling whip-sockets made by Searls, and purporting to be constructed under the patent issued to Scott, but which were in almost exact imitation of the whip-sockets made by the complainants, and which are confessedly an infringement of their patent if the same be valid. In *Searls* v. *Worden* we held that the Scott patent was valid and that complainants were infringers, but it seems now that Searls has abandoned, to some extent at least, the manufacture of whip-sockets of the particular form shown in the specification and drawings of the Scott patent and is making them after the Worden patent, claiming the latter to be illegal and void. Now, although, as was held in *Searls* v. *Worden*, the Worden patent contains the underlying principle of the Scott patent, and is to that extent an infringement, still there are improvements in the Worden patent in splitting the entire socket into two parts and using one as a lever which I think are patentable, and would justify the charge of infringement against the defendants, provided the patent in other respects be valid.

The main ground upon which this case is contested is that Curtis and Worden were not the joint inventors of this device, but that the invention was made by Curtis alone, or by Curtis and one Nellis. There can be no doubt that if the circumstances are such as to show that two persons both contributed to an improvement, and such improvement is the result of mutual contributions of the two, they are to be treated as joint inventors, and a joint patent should be taken out. In such cases the joint patent stands for and must be supported by a joint invention, and as an error in this particular is fatal to the validity of the patent, I think it should be made clearly to appear that the patentees were not joint inventors before the court would be justified in annulling the patent upon that ground.

So far as the participation of Nellis in this invention is concerned the facts are substantially as follows: That in August, 1867, Curtis and Nellis, who were employed in the same shop in Ypsilanti as workmen in the manufacture of carriages, had a conversation together in relation to making an improvement upon whip-sockets; that in the course of that conversation Nellis, holding in his hand a whip-socket of the ordinary kind, (a short metal cylinder or tube closed at the bottom and provided with fastening devices for attaching it to the vehicle,) suggested that a lever might be connected with it to hold the whip upright, and he put into it a stick to show how the lever could be made to act by throwing it out at the bottom and in at the top. Curtis does not state it quite so strongly, but testifies that Nellis made the suggestion of getting up something

so "that when the whip struck the bottom it would be clamped at the top."

I did not speak but I acted, but the hint which he gave me was nothing to show how to make it until after I had experimented.

Curtis seems to have acted upon this hint and went on and made a model of iron in two parts hinged together with a wedge at the bottom. Upon the Sunday following this conversation they were together again in their shop in company with the hands, when Curtis exhibited the model, which Nellis says he recognized as embodying substantially the idea he had suggested to Curtis, but he evidently treated it as of little or no value, for whatever interest he had in the invention he gave up to Curtis on condition that he would furnish beer for the company.

Now there is nothing further in this testimony than a suggestion upon the part of Nellis that the whip might be held firmly by means of a lever in the socket, the very device for which Scott obtained his patent, and which is no part of the complainant's patent on this case. It was at best a mere suggestion, upon which Nellis never acted himself. It was as if some one had suggested to the inventor of the telephone the possibility of transmitting the human voice over a wire with the aid of electricity. It was rather a suggestion of a result to be accomplished than of the means of accomplishing it, and therefore not patentable. He had nothing to do with making either of the models in which the invention was afterward embodied. He made no suggestion of splitting the socket in two and using the outer half as the lever, and did not seem to regard himself as having anything to do with the invention of the whip-socket produced by Curtis. On the contrary, he saw the model which Curtis and Worden were preparing to send to Washington, stood by and allowed them to go on, make their application, and obtain their patent without objection. Under these circumstances it seems to me that he cannot be treated as a joint inventor of this device. His suggestion was rather of the lever which Scott was then working upon in Connecticut, and for which he shortly afterward obtained his patent.

Was Mr. Curtis the sole inventor of this device or did Worden participate with him? Upon this subject Curtis testifies that upon the Monday following the Sunday already spoken of he went into his shop to work, and threw the iron model he had constructed under the bench; but the more he thought of it the better he was satisfied that it could be made useful. He then went to work and made a copper model much like the one he had already constructed; but instead of inserting wedges to throw the bottom out as the whip was inserted he made it to bulge in the middle by hammering the copper, thus making it considerably larger in the middle than at either end. The effect of this was to bring the two halves together at the top as the whip was inserted. This model, however, showed that the sides were straight, that the ears were cut on one side and riveted to the other to form the joint by one side lapped over the other when the ends were brought together, and that no means were provided for fastening the socket to the dash-rail of the carriage. In fact it was far from being a complete or useful machine. In this condition he took it to Alva Worden, who was acquainted with the patent business and was considered a good judge of such matters. He looked it over and replied that if it could be perfected there might be something in it, and expressed a willingness to assist in completing it and getting it patented. Worden and he then began constructing wooden patterns together. At Worden's suggestion the sides were cut away, the hinges or ears were put upon both parts, and these parts were so constructed that they shut square against each other, instead of slipping by, and a bottom was inserted so that a whip could not pass through. Several of these models were made by them jointly, and after a satisfactory pattern had been worked out in wood Worden took it to Detroit to get a casting made for the Patent Office at Washington. Mr. Worden also suggested several methods of fastening it to the dashboard, although in the view I take of the loop this is not material. An arrangement was made between them that if Worden got it patented he was to pay the expense of the patent for a half interest in it. Under this state of facts the question arises whether Worden contributed anything which could be called inventive skill to this machine.

To constitute two persons joint inventors it is not necessary that exactly the same idea should have occurred to each at the same time and that they should work out together the embodiment of this idea in a perfected machine. Such a coincidence of ideas would scarcely ever occur to two persons at the same time. If an idea is suggested to one, and he even goes so far as to construct a machine embodying this idea, but it is not a completed and working machine, and another person takes hold of it and by their joint labors, one suggesting one thing and the other another, a perfect machine is made, a joint patent may properly issue to them. If, upon the other hand, one person invents a distinct part of a machine and another person invents another distinct and independent part of the same machine, then each should obtain a patent for his own invention. I am inclined to think that this last suggestion applies to the loop in this case. It appears to have been the sole invention of Worden. But when Mr. Curtis placed his two models in Worden's hands they were absolutely useless for the work for which they were designed, and the work subsequently done in completion of the device was, as it seems to me, with the exception of the loop, so far the joint product of their inventive skill that it would be difficult to say that each part was patentable in itself. Curtis could not have obtained a patent for the machine as it was when he first consulted Worden, nor could Worden have obtained a patent for anything he did irrespective of the labor previously bestowed by Curtis. Upon the whole, it seems to me, as it did to the Commissioner, that it was a proper case for a joint patent. The consequence of a different ruling would be the utter destruction of the patent upon a technicality. I should be unwilling to take this position without evidence of clear error on the part of the Commissioner.

The fourth claim of the reissued patent is for a whip-holder composed of two parts, of double conical shape, hinged together as described, and wherein one is provided with loops or fastenings, by means of which the holder is attached to the carriage or dash-board, substantially as specified. I feel constrained to hold that this claim is void for the following reasons: First, because there was no invention in attaching loops to the socket. These loops were old devices and had been in common use as fasteners upon whip-sockets long before 1867. Second, because the loops were added by Worden alone, without any agency of Curtis, and if there was any inventive skill in attaching them to the socket it was that of Worden alone. Third, there was no claim made for the loops in the original patent, and I am inclined to think the reissue to that extent is void. In other respects I think the reissue was valid. For the single claim in the original patent are substituted three claims in the reissued patent which are much more definite and particular. But it seems to me entirely clear that there is no such expansion of the original claim as should invalidate these.

There is no evidence that complainants' patent is anticipated except by the wooden devices of Scott, from which no definite results were obtained, and which was an abandoned experiment. He afterward constructed an entirely different model upon which he obtained the patent which we have already adjudged to be valid in the case just decided.

As there is no denial of the infringement in this case, it results that the complainants are entitled to an injunction and decree, with the usual reference to a master to assess damages.

DESIGNS.

13,003.—BADGE.—*Wescott Bailey* and *Charles E. Dubin*, Philadelphia, Pa., assignors to *The Sons of Veterans of Pennsylvania*. Application filed May 8, 1882. Term of patent 7 years.

13,004.—CASSIMERES.—*Frederick S. Bosworth*, Providence, R. I., assignor to *The Weybosset Mills*, same place. Application filed March 30, 1882. Term of patent 7 years.

13,005.—DINNER OR TEA SET.—*Elijah Chetwynd*, Trenton, N. J., assignor to *John Moses*, same place. Application filed May 3, 1882. Term of patent 7 years.

13,006.—FRINGE.—*Bernhard Dreyfus*, New York, N. Y. Application filed May 5, 1882. Term of patent 7 years.

13,007.—ORNAMENTING PAPER FOR COFFEE-PACKAGES.—*Owen A. Gill*, Baltimore, Md., assignor to *E. Levering & Co.*, same place. Application filed February 12, 1881. Term of patent 14 years.

13,008.—LANTERN.—*Charles A. Kinney*, Meriden, Conn., assignor to *Edw. Miller & Co.*, same place. Application filed May 1, 1882. Term of patent 14 years.

13,009.—WALL-PAPER.—*Edward Loissner*, New York, N. Y. Application filed April 21, 1882. Term of patent 3½ years.

13,010.—FIRE-BACK AND JAMB.—*William D. Hewitt*, Burlington, N. J., assignor to *William H. Harrison & Brother*, Philadelphia, Pa. Application filed March 20, 1882. Term of patent 7 years.

13,011.—DISPENSING-COLUMN.—*John Matthews*, New York, N. Y. Application filed December 12, 1881. Term of patent 14 years.

13,012.—TABLE-BELL.—*Edward L. Morris*, Boston, Mass. Application filed March 27, 1882. Term of patent 7 years.

13,013 and 13,014.—SETTER-FRAME.—*Ausborn F. Old*, Philadelphia, Pa., designor to *Baker, Pratt & Co.*, New York, N. Y. Applications filed March 28, 1882. Term of patents 7 years.

13,015.—DESK-FRAME.—*Charles Page*, Philadelphia, Pa. Application filed March 28, 1882. Term of patent 7 years.

13,016.—TOY MONEY-BANK.—*John H. Parmelee*, Bridgeport, Conn. Application filed April 8, 1882. Term of patent 3½ years.

13,017.—COFFIN-PEDESTAL.—*Nicholas Rappleyea* and *Leo Stein*, Rochester, N. Y. Application filed May 8, 1882. Term of patent 7 years.

13,018.—FLORAL PEDESTAL.—*Nicholas Rappleyea* and *Leo Stein*, Rochester, N. Y. Application filed May 8, 1882. Term of patent 7 years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

9,472.—TABLE-SIRUP.—*George Boyd & Son*, Philadelphia, Pa. Application filed March 27, 1882.

"The designation 'QUEEN.'"

9,473.—GOLD, SILVER, AND PLATED WARE.—*William N. Boynton*, Manchester, Iowa. Application filed May 31, 1882.

"The letters and word 'U. S. J. GUILD' in engraved lines, so wrought in monogrammic device as to make the design or ornamentation as in fac-simile or copy shown."

9,474.—HOSIERY.—*Lewis S. Cox & Co.*, Philadelphia, Pa. Application filed January 30, 1882.

"The monogram composed of the letters 'L S C.'"

9,475.—BAKER'S CHOCOLATE.—*Henry L. Pierce*, Boston, Mass. Application filed April 19, 1882.

"A thick border of wreaths and leaves entwined with the shield, eagle, and flags surrounding the same, inclosing the word 'BAKER'S' before 'CHOCOLATE.'"

9,476.—EAGLE CHOCOLATE.—*Henry L. Pierce*, Boston, Mass. Application filed April 19, 1882.

"A medallion surmounting an irregular scroll, on which the word 'EAGLE' is printed, and underneath the words 'W. BAKER & Co.'"

9,477.—GERMAN SWEET CHOCOLATE.—*Henry L. Pierce*, Boston, Mass. Application filed April 19, 1882.

"The pictorial representation of a star with the word 'GERMAN' surrounded with arabesque figures."

9,478.—BAKER'S COCOA.—*Henry L. Pierce*, Boston, Mass. Application filed April 19, 1882.

"An ornamented border, inclosing in an oblong figure the word 'BAKER'S' before 'COCOA,' and 'W. BAKER'S' before 'PURE PREMIUM COCOA,' with the figure of an eagle."

9,479.—COCOA PASTE.—*Henry L. Pierce*, Boston, Mass. Application filed April 19, 1882.

"The word 'BAKER'S' before 'COCOA PASTE,' surmounting the eagle described, and the words 'W. BAKER & Co.'"

9,480.—CHAMPAGNE-WINE.—*Werlé & Co.*, Rheims, France. Application filed May 27, 1882.

"The words and letters 'V. CLICQUOT PONSARDIN À REIMS' inclosed within elaborate scroll-work."

9,481.—CHAMPAGNE-WINE.—*Werlé & Co.*, Rheims, France. Application filed May 27, 1882.

"The representation of a comet having above it the legend 'V. CLICQUOT P.'"

9,482.—CHAMPAGNE-WINE.—*Werlé & Co.*, Rheims, France. Application filed May 27, 1882.

"A representation of an anchor with the letters 'V C P' in the background."

9,483.—CHAMPAGNE-WINE.—*Werlé & Co.*, Rheims, France. Application filed May 27, 1882.

"The title or designation 'VEUVE CLICQUOT PONSARDIN.'"

9,484.—CIGARETTE-PAPER.—*Gaston D'Argy & Co.*, Paris, France. Application filed December 27, 1881.

"The shield bearing the lion rampant."

9,485.—MANUFACTURED CHEWING AND SMOKING TOBACCO.—*John J. Bagley & Company*, Detroit, Mich. Application April 3, 1882.

"The words 'LIME KILN CLUB.'"

9,486.—PLOWS.—*Francis A. Barrows*, Castleton, Vt. Application filed May 26, 1882.

"The numerals '76.'"

9,487.—CRUSHED OR PREPARED CEREALS.—*The Cereals Manufacturing Company*, New York, N. Y. Application filed May 22, 1882.

"The arbitrary words 'CEREAL CREAM.'"

9,488.—FRENCH SWEET CHOCOLATE.—*Henry L. Pierce*, Boston, Mass. Application filed April 19, 1882.

"The words 'W. BAKER & Co.'s' on a scroll and the obverse and reverse views of the medals of the French and Vienna Expositions, with a bar running between the two, on a ground of bright vermilion color, as shown and described."

9,489.—BAKER'S BROMA.—*Henry L. Pierce*, Boston, Mass. Application filed April 27, 1882.

"The words 'BAKER'S' and 'WALTER BAKER & Co.,' contained within the fine border described, together with the arrangement of oblong figures of three several designs set forth, the whole being upon a dark shade of purple with a reddish tint."

9,490.—WHISKY.—*Sperry, Wade & Co.*, Nashville, Tenn. Application filed May 18, 1882.

"The combination of the geometrical figures."

9,491.—MEDICINE.—*C. M. Briggs & Bro.*, Buffalo, N. Y. Application filed April 20, 1882.

"The representation of a furled strip having a plain portion exposed for the reception of printed matter."

9,492.—DISTILLED SPIRITS.—*Corning & Co.*, Peoria, Ill. Application filed May 2, 1882.

"The word 'SILENT.'"

9,493.—MUCILAGE AND WRITING INKS AND FLUIDS.—*William A. Davis*, Boston, Mass. Application filed May 1, 1882.

"The word 'TREASURY.'"

9,494.—NEEDLES FOR HAND AND MACHINE SEWING.—*David Evans*, Studley, county of Warwick, England. Application filed May 19, 1882.

"The word 'PARAGON.'"

9,495.—INDELIBLE INK.—*Adolf Kuttroff*, New York, N. Y. Application filed May 22, 1882.

"A star upon a globe or ball with rays emanating therefrom."

9,496.—ROASTED COFFEE.—*Franklin MacVeagh & Co.*, Chicago, Ill. Application filed June 9, 1882.

"The arbitrarily-selected word 'PANAMA,' in connection with the pictorial matter shown and described."

9,497.—INDELIBLE INK.—*Frederic A. Whiting*, Wellesley Hills, Mass. Application filed May 17, 1882.

"The fac-simile of the registrant's signature and the pictorial representation of a little child sitting on a box and extending a pen, and a stork standing on the box near the child, the stork's right leg held above a jar of ink."

9,498.—ROLLER-SKATES.—*Samuel Winslow*, Worcester, Mass. Application filed May 25, 1882.

"The word-symbol 'VINEYARD.'"

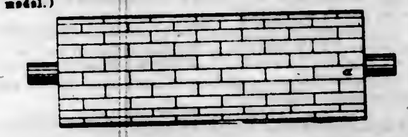
9,499.—MEDICINES.—*Roswell Van Buskirk*, Newark, N. J. Application filed May 11, 1882.

"The words 'POOR MAN'S ANTIDOTE.'"

LABELS.

2,704.—Title: "DYSPEPSIA CAKE MANUFACTURING COMPANY."—*Harold A. C. Dahl*, Brooklyn, N. Y. Application filed May 29, 1882.

2,705.—Title: "RING TRAVELLERS."—*Nathan P. Hicks*, Pawtucket, R. I. Application filed May 1, 1882.

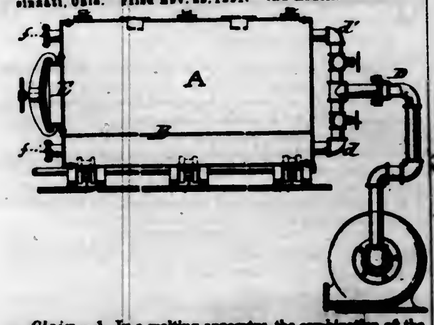


2,706.—Title: "ROBINSON'S PHOSPHORIZED EMULSION OF COD LIVER OIL WITH LACTO-PHOSPHATE OF LIME."—*James H. Robinson*, Cleveland, Ohio. Application filed May 18, 1882.

2,707.—Title: "HEART AND FEVER-DROPS."—*Henri Ulzinger*, New York, N. Y. Application filed September 24, 1881.

PATENTS

GRANTED JUNE 27, 1882.



259,992. WOOD-GRINDER FOR MAKING PAPER-PULP. STEPHEN H. ALLEN, Duxbury, Mass. Filed May 15, 1882. (No model.)

Claim.—1. A wood-grinder for making paper-pulp having the grinding-surface composed of blocks with their edges in close contact and with the joints broken, substantially as described.

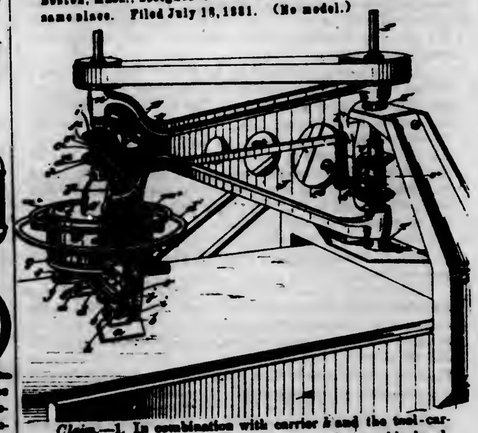
2. A wood-grinder having a grinding-surface of emery or artificial-stone blocks separately compacted and laid so as to break joints and cemented, substantially as described.

259,993. MALTING APPARATUS. WILLIAM ANDREW, Cincinnati, Ohio. Filed Nov. 25, 1881. (No model.)

Claim.—1. In a malting apparatus, the combination of the cylindrical malting-tank adapted to rotate upon its axis, a perforated partition or false bottom arranged in a fixed horizontal position within the tank, below its axis, and devices connected with one end of the tank for charging or exhausting air both above and below the said perforated partition or false bottom, substantially in the manner and for the purpose described.

2. In a malting apparatus, the combination of the malting-tank A, provided at one end with air-openings *f f'*, the perforated partition B, secured in a fixed horizontal position within the tank, the air-pipes *d* and *d'*, connected with one end of the tank, above and below the perforated partition, as described, the main D, connected with the extended axis of the tank and with the said air-pipes by a revolving air-tight joint, and means for charging and exhausting air through said main and pipes at both sides of the perforated partition, substantially in the manner and for the purpose described.

259,994. FILE-HOLDER. CHARLES H. BABBITT, Council Bluffs, Iowa. Filed Jan. 18, 1882. (No model.)



Brief.—The tightening-rod D is longitudinally movable in the bed-plate, and is squared near its handle. When the bands C have been drawn down sufficiently tight upon the papers, by turning said rod it is pushed inward to engage a corresponding square socket in the bed-plate, and thus firmly secured against rotation.

Claim.—1. In a file-holder, the combination of the slotted bed A, the longitudinally-tightening shaft or rod D, having near its outer end a polygonal or square section, a polygonal or square socket for the reception of the square portion of said rod, and bands C C', they being arranged for joint operation, substantially as described.

2. The combination of the longitudinally-adjustable shaft or rod D, the socket A' in the end of the plate or bed A, bands C C', and the binding-plate which rests upon the upper surface of the paper, all substantially as and for the purpose set forth.

259,995. LEATHER-DRESSING MACHINE. LORING J. BAKER, Boston, Mass., assignor of one-fourth to Frederick Curtis, same place. Filed July 18, 1881. (No model.)

Claim.—1. In combination with carrier *h* and the tool-carriage, the shaft *m*, on which said carrier is axially movable, hand-rail *d'*, movable ring *e*, provided with spur *g'*, and spring-pressed pivoted latches *f' f'*, connected to head *l'* of the tool-carriage and arranged to grip the periphery of a disk on said shaft *m*, substantially as set forth.

2. In a leather-dressing machine, the combination of fixed disk or head *x* with the tool-carriage capable of rotary adjustment, and the latches *f' f'*, connected to said tool-carriage and engaging the periphery of said head, substantially as set forth.

3. In a machine for treating hides or leather, the combination of a vertically-adjustable crane with a tool-carriage which is vertically adjustable as a whole by the mechanism, substantially as described, independently of the adjustment of said crane, substantially as set forth.

4. The combination of crane J and screw-threaded disk *t*, suspended therefrom, with the screw-threaded sleeve *w* and the tool-carriage suspended from said sleeve, the rotation of said sleeve on said disk serving to adjust said tool vertically, substantially as set forth.

5. In a leather-dressing machine, the combination of guide-beam *i* with tool-supporting beam *c* and slider or head *l'*, which is attached to beam *c*, and has motion on beam *i* longitudinally of the latter, substantially as set forth.

6. In combination with guide-beam *i*, tool-supporting beam *e*, and tubular head *f'*, provided with slotted plate *a'*, the disk or head *q*, attached to shaft *m* and provided with wrist-pin *r*, which enters the slot of said plate and causes the tool-carrying beam *e* to move backward and forward under beam *i* as the head *q* rotates.

7. The combination of beam *i*, adapted to rock in its bearings, with eccentrics *o' o'*, surrounding said beam and having spline-and-groove connections therewith, carriage *f*, provided with pockets for said eccentrics, horizontal rods *q' q'*, and beam *i*, substantially as set forth.

8. The combination of beam *i*, eccentrics *o' o'*, which surround the same, carriage *f*, provided with attachments which embrace said eccentrics, and head *d*, from which the tool-carrying beam is suspended by links, said head *d* being supported by said eccentrics, substantially as set forth.

9. The combination of the disk or crank-wheel *q* with its wrist-pin *r*, the tool-carriage *f*, mounted and sliding upon the beam *i*, which is supported by the yoke frame or carrier *h*, the head *d* constituting a suspensory to the dressing-tools, and upheld by the carriage *f* and the hub or slider *f'*, with its slotted plate or extension *a'*, in which the wrist-pin operates.

10. As a means of controlling the lateral adjustment of the swinging crane, a shaft swiveled at one end to the crane, and having at its opposite end or any convenient point a peripheral screw-thread adapted to be screwed through a nut swiveled to the machine-frame, the shaft being rotated in either direction by means under the control of the attendant, substantially as explained.

11. The combination of the suspended hand-lever *b'*, the shipper-rod *a'*, actuating the clutch mechanism which controls the traverse of the table, and the oscillating lever *c'*, which controls the clutch mechanism that effects the lateral adjustment of the crane, the hand-lever operating when swung in one or the other direction longitudinally of the crane to govern the movements of the table, and when swung in one or the other direction laterally of the crane operating to govern the swinging movements of the crane upon its support, and when moved both longitudinally and laterally operating to both swing the crane and move the table, substantially as stated.

12. The ring-plate *c'*, with its hand-rail *d'*, and containing a friction clutch or device to grasp the tool-carrier when the hand-rail is rotated and to seize hold of a disk or other stationary part of the crane when the hand-rail is at rest, substantially as herein-before described.

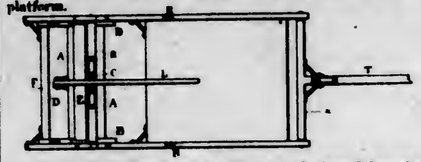
13. The hand-rail *d'* and a clutch operated thereby, in combination with the tool-carriage and a disk attached to the crane, said clutch being arranged to grasp the tool-carrier when the hand-rail is rotated and to seize hold of said disk when the hand-rail is at rest, substantially as set forth.

14. The conical bushings T T, in combination with the crane, the shaft P, and the standard D, substantially as and for the purpose set forth.

15. In combination with the crane and its shaft *m*, the rod or shaft *B'*, screwing at its rear end through a nut swiveled to a stationary bracket or post of the machine-frame, and at its front end mounted in bearings in the free end or head of the crane, and having affixed to it a bevel-pinion, the twin gears *i' i'*, clutch-sleeve *f'*, splined upon the said shaft *m*, and oscillating shipper-lever *c'*, operating such clutch, substantially as explained.

259,996. FEEDING MECHANISM FOR BUTTON-SEWING MACHINES. WALTER S. BARRETT, New Britain, Conn. Filed Feb. 16, 1882. (No model.)

Brief.—The metallic shanks of the buttons are attracted to magnets on a revolving disk within the button-receiving hopper, and the buttons are thus carried into the feeding-trough, which conducts them to the sewing mechanism.

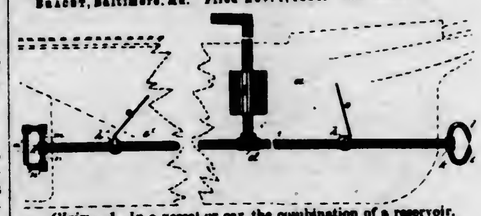


Claim.—1. The combination of the feeding-trough, the hopper, the magnet, and mechanism for moving the magnet within the hopper and presenting it to the trough, substantially as described, and for the purpose specified.

2. The combination of the feeding-trough, the wheel with magnets mounted thereon, and the hopper placed at one side of said wheel, substantially as described, and for the purpose specified.

3. The combination of the feeding-trough, the hopper, the magnet-carrier, and the wiper, substantially as described, and for the purpose specified.

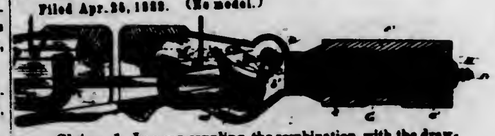
259,997. ICE-SCRAPER. THOS. W. BOTTS, Peoria, Ill. Filed Apr. 10, 1882. (No model.)



Brief.—The scraper is raised and lowered in inclined guides on solid runners by means of a lever pivoted to angle-irons on a cross-bar. The runners are joined by cross-beams and have a platform.

Claim.—1. The two solid runners B B, joined by suitable cross-beams, and having guide-bars B B, in combination with the scraper A, movable in said guides B B by means of the lever L, for the purpose set forth.

2. The solid runners B B, joined by cross-beams F, and having platform P, in combination with the scraper A, movable in guides B B, attached to said runners B B, and the lever L, pivoted to angle-irons C on the shaft S, substantially as and for the purpose specified.



259,998. MEANS OF PROPELLING VESSELS. AUGUST BRACHT, Baltimore, Md. Filed Nov. 1, 1881. (No model.)

Claim.—1. In a vessel or car, the combination of a reservoir, as *b*, with pipes leading fore and aft therefrom, and provided at their ends with branch pipes diverging and then approaching each other, so that currents of steam or water escaping from said branch pipes will impinge upon each other, substantially as described.

2. The combination, with the vessel *a*, provided with the reservoir *b*, into which water is forced, of the tube *c*, pipe-coupling *d*, pipes *e e'*, having cocks *h h'*, curved branch pipes *l l'*, and pipes *m n m' n'*, having their open ends intersecting each other, substantially as described, and for the purpose set forth.

259,999. CAR-COUPLING. THOMAS BARRY, Knowlton, Pa. Filed Apr. 25, 1882. (No model.)

Claim.—1. In a car-coupling, the combination, with the draw-head apertured in its bottom, of the hook capable of movement, and having a shoulder and cam at its inner or pivoted end, the link-form lever, and its axis, having the short arm bearing on the cam of the link, substantially as and for the purpose specified.

2. The combination of the rod or draw-bar D, cushion-box F, nozzle E, spring G, cross-heads or washers *c* and *c'*, and nut H, substantially as shown, and for the purpose described.

260,000. GLOBE-VALVE. ALBERT P. BROCKELL, York, Pa., assignor to Frey & Brockell, same place. Filed Feb. 25, 1882. (No model.)

Claim.—1. The combination, in a globe-valve, of a casing, A, having a partition, *a*, seat *x*, and valve B, adapted to said seat and formed in one piece with the threaded and slotted stem C, and yoke D', receiving the nut I, adapted to the valve-stem, and the finger K, extending into the slot of the stem, substantially as set forth.

2. The combination of the valve-casing, threaded and slotted valve-stem, valve B, having faces *x h*, elevating-nut I, finger K, packing-box surrounding the valve stem, and seat *y* below the packing-box, substantially as specified.

3. The combination of the casing, valve-stem, packing-box, and follower having arms *e*, adapted to notches *i* in the yoke above the casing, as specified.

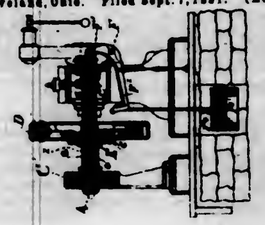
4. The combination of the case, its valve and elevating-nut having a fixed support, and valve-stem of a length to be flush with the face of the nut when the valve is on its seat, substantially as specified.

260,001. FIRE-ESCAPE. WILLIAM H. BURDUS and FREDERICK C. BURDUS, Cleveland, Ohio. Filed Mar. 25, 1882. (No model.)

Brief.—The lower ball for the guide-rope is secured to the bucket at right angles to the upper ball.

Claim.—In a fire-escape, the combination, with the car or basket having a ball at its top and a ball at its bottom, arranged at right angles to the one at its top, of the continuous elevating chain or rope secured to the top ball and passing up over a suitable hanger and down, and secured to the lower ball, so that the car can be conveniently guided and held from contact with the fire, as set forth.

260,002. HARROW ATTACHMENT. MORTIMER CAHILL, Jacksonville, Ill. Filed Mar. 7, 1882. (Model.)



Claim.—1. The combination, with a plow, of the harrow formed of a series of metallic bars of unequal length, and bent as shown, their central portions secured together by bolts or otherwise, and having their ends arranged so as to flare laterally in an outward direction, and formed with knife-edges, substantially and for the purpose set forth.

2. The combination, with a plow, of the harrow, arranged and attached substantially as shown and described, said harrow being constructed of metallic bars bent as shown, and secured together centrally, and having their ends flaring laterally in an outward direction, substantially as and for the purpose set forth.

260,003. INCRUSTATION-PREVENTIVE. FRIEDRICH H. COLLET, Dubuque, Iowa. Filed Jan. 27, 1882. (No specimens.)

Claim.—The method of preventing incrustation in steam-boilers herein set forth, which consists in mixing with the steam-producing water within the boiler malted barley-sprouts, substantially as and for the purpose set forth.

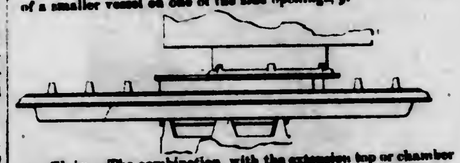
260,004. GOVERNOR FOR STEAM-ENGINES. FRANKLIN D. CUMMER, Detroit, Mich., assignor to the Cummer Engine Company, Cleveland, Ohio. Filed Sept. 7, 1881. (No model.)

Claim.—1. In a governor, the combination, with a shaft arranged to operate a main steam-supply valve, of a sleeve and eccentric arranged to rotate upon said shaft, a pair of flying weights pivoted to a support projecting from said shaft, means for communicating a rocking motion to said sleeve from said weights, a thrust-rod arranged loosely and centrally within said shaft, means for imparting a longitudinal motion to the thrust-rod from the weights, and a variable resistance arranged to oppose the thrust of the thrust-rod, substantially as described.

2. The combination, with the centrally-bored shaft A, carrying the eccentric for operating the main valve, of the sleeve C, surrounding said shaft and provided with means for receiving rotary motion, the casing D, fixed upon said shaft, the flying weights pivoted in said casing, the thrust-rod E, arranged centrally within said shaft, means for communicating a rocking motion from said weights to said shaft and a longitudinal movement from said weights to the thrust-rod, the lever F, having its end provided with a stop in which said thrust-rod turns, and means for opposing a variable resistance to the movement of said lever, substantially as described.

3. The combination, with the lever F, having the stop on one arm and a weight attached to the other arm, the thrust-rod having one end in said stop, the flying weights, and means, substantially as described, for transmitting motion from said weights to the eccentric on the shaft and to said thrust-rod, of adjustable means for automatically varying the resistance of the said lever to the thrust of said thrust-rod.

260,005. LATHE-CHUCK. LOUISE R. DAVIS, Adrian, Mich., assignor of one-half to Sylvester P. Babcock, same place. Filed Sept. 26, 1880. (Model.)



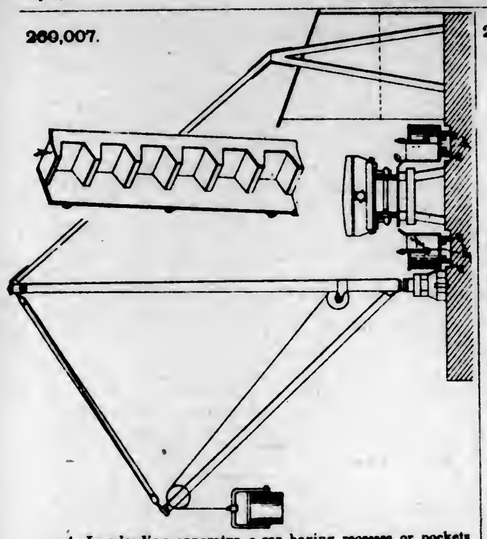
Claim.—1. In a lathe, the head A, inclosing a spring and provided with a back plate, B, fitting below the edge of rim *a*, in combination with a clamping-plate, F, located between the spring and back plate, and connected to a rod passed through a hollow spindle and operated on by a nut, substantially as set forth.

2. In a lathe, the head A, spring D, back plate, B, and face-plate H, in combination with threaded rod G, provided with plate F and feather *d*, spindle I, having groove *e*, and left-hand nut J, the several parts being arranged to operate as set forth.

260,006. OIL-STOVE. ALPHEUS S. DINSMORE, Boston, Mass. Filed May 1, 1882. (No model.)

Brief.—The hole *f* in the top of the head *d* is eccentric to the central opening of the stove-top. A large vessel may thus be supported far enough to one side to not interfere with the placing of a smaller vessel on one of the side openings, *g*.

Claim.—The combination, with the extension top or chamber for an oil or gas stove, it having central and lateral holes, of the detachable hood for the said central hole, having an opening in its upper side eccentric to the said central hole, substantially as and for the purpose described.



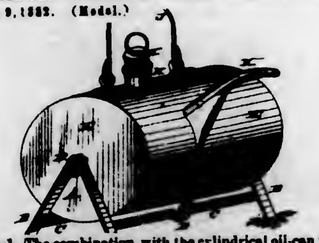
260,007. MACHINERY FOR LOADING VESSELS WITH COAL AND IRON. WILLIAM DUNN, Zanesville, and ANDREW BECKNER, Sandusky, Ohio. Filed Apr. 21, 1882. (No model.)

Claim.—1. In a loading apparatus, the combination, with a trestle provided with a track for a dump-car, of a car provided with dumping-buckets and placed on tracks parallel to but below the level and to one side of the trestle, substantially as set forth.

2. In a loading apparatus, the combination, with a trestle having a track for a dump-car, of a car provided with dumping-buckets and placed on tracks parallel to but below the level of the trestle, and of derrick provided with mechanism for lifting the buckets and transferring them to another point, substantially as described.

3. In a loading apparatus, a car having recesses or pockets adapted to receive buckets, for the purpose set forth.

260,007.



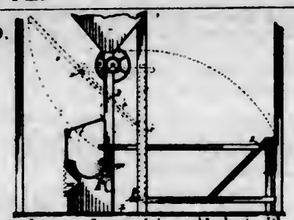
4. In a loading apparatus, a car having recesses or pockets adapted to receive buckets, and a lip, *e*, at the top of the recesses to serve as guides for the matter dumped in the buckets, for the purpose set forth.

5. In a loading apparatus, the combination, with a platform-car, of a cable working on four sheaves placed at the four corners of a square or rectangle and attached by its ends to the ends of the car, of a spool placed on the line of the cable, which is wrapped one or more times around said spool, and of mechanism for revolving the spool, for the purpose set forth.

6. In a loading apparatus, the combination, with a trestle having a track therein, of a bucket-carrying car on tracks below the trestle and to one side thereof, of a cable attached to each end of the car and having a spool provided with mechanism for reversing the motion and stopping the car, and of a derrick adapted to lift the buckets from the car, carry them to a place to be dumped, and return them to said car, for the purpose set forth.

260,008. OIL-CAN. WILLIAM G. DURHAM, Greensborough, Ga. Filed May 9, 1882. (Model.)

Claim.—1. The combination, with the cylindrical oil-can turning in bearings in the end standards of the frame, having connecting cross-strips, of the flat spring adapted to engage one of the cross-strips and retain the can in an upright position, as set forth.



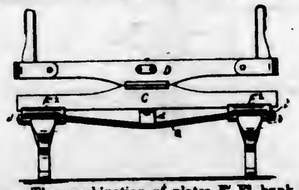
2. The combination, with the frame A, having end standards, B B, connected by longitudinal cross-strips C C, of the cylindrical oil-can E, having bearings G G in said standards, and provided with bail J and outlet spout or tube K, and on its under rear side with a flat spring, L, adapted to engage one of the cross-strips, as and for the purpose specified.

260,009. STOCK-CAR. JOHN EDWARDS, Kalamazoo, Mich. Filed Nov. 25, 1881. (No model.)

Claim.—1. A stock-car having an aisle or passage-way in front of the stalls, in combination with the manger and trough and the detachable guard-rack, for the purposes set forth, substantially as specified.

2. The manger, constituting th grain-chest and trough-support, and provided with the inclined door, substantially as described.

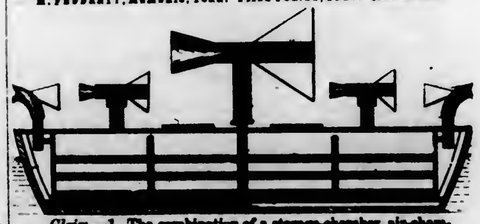
3. The combination, in a stock-car, of the manger, grain-chest, and hopper and spouts for supplying said chest with grain, substantially as set forth.



4. The manger and trough, in combination with the division-doors hinged to vertical rods, and the shaft and chains for operating them.

5. The trough and the doors adapted to fit therein, provided with the orifices, and hinged to the vertical rods and jointedly connected with their coupling-rod, all in combination substantially as shown and described.

6. The manger and trough, with its division-doors adapted to be raised, and its guard-rack adapted to be temporarily removed in supplying hay or in cleaning out the trough, all in combination substantially as specified and shown.

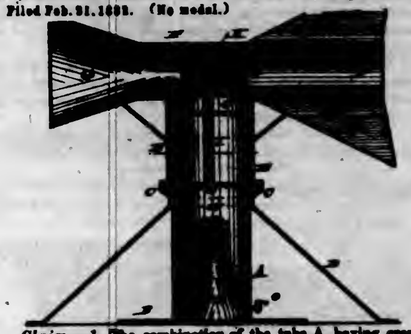


7. In a stock-car constructed with stalls, the adjustable gates composed of the horizontal bars, the end upright bar, and the oblique slotted brace, the inner end of the upper bar pivoted in said slot, and the opposite end of the lower bar pivoted to the car-post, all substantially as set forth.

260,010. SLED-KNEE. JOHN ERNSTER and WILLIAM GARDT, Lakeville, Minn. Filed Oct. 29, 1881. (No model.)

Claim.—The combination of plates F F', bunk C, rod G, and supporting-block *d*, interposed between the bunk and rod and bearing against the latter, whereby the rod is caused to act as a truss-brace, as and for the purpose specified.

260,011. MEANS FOR VENTILATING GRAIN IN BULK. JOHN H. PENDARVIS, Memphis, Tenn. Filed Feb. 25, 1882. (No model.)

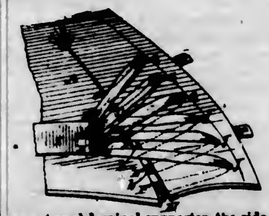


Claim.—1. The combination of a storage-chamber, air-chambers located at the ends of the same, perforated tubes passing longitudinally through the storage-chamber and connecting the air-chambers, and a suitably-constructed ventilating device connected centrally to the said longitudinal perforated tubes, and adapted to create a suction or draft therein tending to exhaust the air from said tubes, substantially as set forth.

2. The combination of a storage-chamber, air-chambers located at the end of the same, perforated tubes passing longitudinally through the storage-chamber and connecting the air-chambers, ventilators for admitting air into said air-chambers, and a suitable ventilating device connected centrally to the said longitudinal perforated tubes, and adapted to create a suction or draft therein tending to exhaust the air from said tubes, substantially as set forth.

3. The combination of a storage-chamber, air-chambers located at the ends of the same, perforated tubes passing longitudinally through the storage-chamber and connecting the air-chambers, ventilators for admitting air into said air-chambers, a suitable ventilating device connected centrally to said longitudinal perforated tubes, and adapted to create a suction or draft therein tending to exhaust the air from said tubes, and auxiliary ventilators connected direct to the storage-chamber and adapted to exhaust the air from the same, substantially as set forth.

260,012. VENTILATOR. JOHN H. PENDARVIS, Memphis, Tenn. Filed Feb. 21, 1882. (No model.)

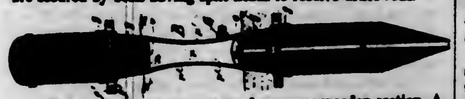


Claim.—1. The combination of the tube A, having cross-piece J, revolving tube E, horizontal tube F, having vanes H and funnel G, and the spindle I, having ring K, controling the inner end of funnel G, as herein described, for the purpose set forth.

2. In a ventilator, the tube A, having inverted funnel M, provided with valve N, substantially as and for the purpose set forth.

3. In a ventilator constructed substantially as described, the tube A, having inverted funnel M, provided with valve N, and the cock or faucet O, as and for the purpose set forth.

260,013. CORSET. CHARLES W. FOSTER, New Haven, Conn. Filed Apr. 18, 1882. (No model.)



Claim.—In a corset or abdominal supporter, the side section, A, having slit E and eyelets G J in front of said slit, in combination with the strap I, having eyelets H, the cords or laces F, secured to the inner side of the side section back of the slit, and passing, as described, through the eyelets G H J, and the clasp K, connecting the strap I adjustably to the side of the corset, all substantially as and for the purpose set forth.

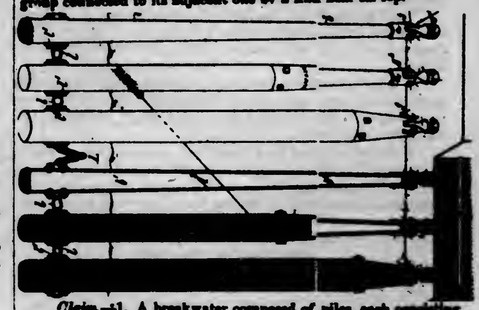
260,014. WELDING COMPOUND. EDWARD S. FRALEY, Forest Hill, Ind. Filed Oct. 1, 1881. (No specimens.)

Claim.—A compound consisting of refined borax and iron and steel filings, in combination with sal-ammoniac, copperas, cyanide of potash, sulphate of manganese, alcohol, and water, substantially as and for the purposes specified.

260,015. PILE FOR USE IN THE CONSTRUCTION OF WHARVES AND OTHER STRUCTURES. ROBERT H. FRANKLIN, Galveston, Tex. Filed Oct. 31, 1881. (No model.)

Brief.—A pile consisting of a hollow central metal and wood end sections, the lower one of the latter having an orifice connecting with the chamber in the metal section. Ferrules on the ends of the metal section receive the ends of the wooden sections, which are secured by bolts having split heads to receive brace-rods.

Claim.—1. A pile consisting of an upper wooden section, A, a lower wooden section, A', and a central metal section, B, having socket-ferrules *g* at each end, substantially as and for the purpose specified.



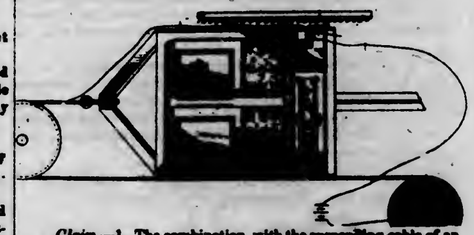
2. The lower wooden section, A, provided with a channel, *c*, in combination with the metal section B, having a chamber, *r*, provided with a communicating coupling, G, substantially as and for the purpose described.

3. The bolts F, provided with double lugs *f'* or their equivalent, in combination with the ferrules *g* of sections B, and the wooden section held therein by said bolts, substantially as and for the purpose described.

4. The middle section, B, cast in a single piece, with a ferrule, *g*, at each end, and with bolt-holes *f* re-enforced, and with a chamber, *r*, in combination with the wooden sections A A', substantially as and for the purpose described.

260,016. YIELDING AND BUOYANT PILE BREAKWATER. ROBT. H. FRANKLIN, Galveston, Tex. Filed Oct. 31, 1881. (No model.)

Brief.—A breakwater constructed from single piles hinged to a water-bed anchorage and grouped together in sections, each section being connected to the next by chains and each pile of a group connected to its adjacent one by a link near its top.



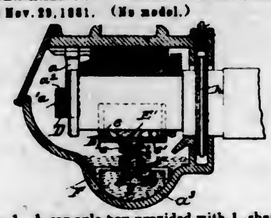
Claim.—1. A breakwater composed of piles, each consisting of a single column, as shown, connected together at or near their top by a link, I, and with their lower ends hinged to a water-bed anchor, substantially as and for the purpose described.

2. A breakwater having single-column piles erected upon hinging-connections which are anchored to a water-bed and grouped and connected together in sections of three or more piles, said sections being connected by a chain, L, so as to permit the several sections to sway in lateral opposite directions, as well as move in the direction of the line of the breakwater, without affecting the whole series of sections composing the line of the breakwater, substantially as described.

3. The piles of a breakwater, in combination with a concrete block, B, having rods for the attachment of the piles set in the concrete block during the act of casting the block, substantially as described.

260,017. AUTOMATIC SAFETY-STOP FOR ELEVATORS. JAS. F. FREEMAN, Chicago, Ill., assignor of one-fourth to Charles F. Pierce, same place. Filed Dec. 23, 1881. (No model.)

Claim.—1. The combination, with the suspending-cable of an elevator and with an electro-magnet, of a safety-stop held by direct contact with said magnet, substantially as described.



2. The combination, with the suspending-cable of an elevator and an electro-magnet, of a pivoted locking link or stop held against said magnet, substantially as described.

3. The combination, with the suspending-cable of an elevator, an electro-magnet, and a pivoted locking link or stop having contact with the magnet, of a detenting-spring, substantially as described.

4. In an elevator, the anchor-bars and locking-link pivoted thereto, in combination with the electro-magnet and the suspending-cable, substantially as described.

5. The anchor-bars, the safety-stop, the vertical rack-bar, and the suspending-cable, in combination with the electro-magnet and a battery connected direct with the magnet and with the sailing-drum or suspending-cable, substantially as described.

260,018. CAR-AXLE BOX. GEORGE F. GOBLET, Philadelphia, Pa. Filed Nov. 29, 1881. (No model.)

Claim.—1. A car-axle box provided with L-shaped slots or grooves *a a'*, parallel with the axle-journal, in combination with bar D, substantially as and for the purpose set forth.

2. In a car-axle box, the spider F, having arms *f f' f' f'*, and an attached pump or oiling device designed and adapted to lift oil from well *a²* to the axle-journal, substantially as shown and described.

3. In a car-axle box, the combination of trough or vessel E, provided with lug *e²* and spring *e³*, the spider or support F, formed with hollow nipple or bearing *f* and arms *f'*, *f'*, *f'*, and *f'*, substantially as set forth.

4. In combination with a car-axle box, the oval or oblong dust-shield I, made U shape in cross-section, and having a central circular aperture, through which the axle passes, said shield being arranged within the opening in the rear wall of said axle-box, so as to embrace the edge or edges of said opening, substantially as shown and described.

260,019. GAGE FOR SAWING ELLIPSES. WILLIAM H. GORDON and PHILIP J. BOOSY, Detroit, Mich. Filed Jan. 3, 1882. (No model.)

Claim.—1. In a machine for sawing ellipses, the combination, with a table having a gage and suitable guides, of duplicate sliding plates, each having a pivot and a bearing-plate superposed upon the plates, and having transverse and conjugate slots or grooves in which operate the pivots to determine the center of motion, substantially as and for the purpose specified.

2. The combination of the table A, having edge gage and central longitudinal guides, as shown, with the slides A', each bearing a pivot, C', and the plate D, having cross-grooves D' D² and spurs *d*, as specified, for the purposes set forth.

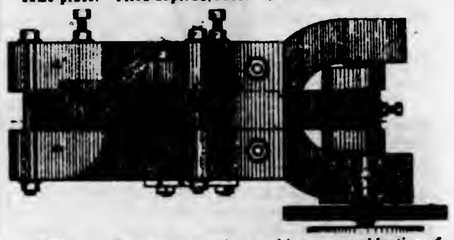
260,020. ART OF ATTACHING RUBBER TO METALS. STANLEY GRAGER, Rye, N. Y. Filed Dec. 6, 1881. (No specimens.)

Claim.—1. The process of first cleaning the surfaces of the articles of iron, steel, or other suitable metals, forming the proper deposit upon the articles so cleaned, and then driving this deposit into the surface of such articles before covering the same with rubber.

2. Articles of metal to which rubber is attached, when the same have been produced or made by first covering the surface of the metal with a coating of another alloy or metal, then driving such coating into and under the surface of such metal, and then covering said articles with rubber and vulcanizing the same, substantially as described.

260,021. SELF-EXTINGUISHING LAMP. JAMES HARRIS, Janesville, Wis. Filed Sept. 6, 1880. (No model.)

Claim.—1. In combination with the handle mechanism having the ring *c'*, adapted to actuate the extinguishing mechanism and the ring *c²*, the cap *c³*, the construction being such that by means of the handle the flame may be extinguished and the ring *c²* be removed from the horizontal plane of the filling-cap by the same movement, as described.



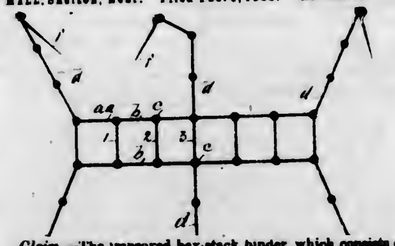
2. In combination with extinguishing mechanism, substantially as described, the main ring *c'*, for actuating the extinguishing mechanism, and the auxiliary ring *c²*, inclosing the filling-cap, the construction being as described, so that the cap cannot be elevated above the ring without actuating the extinguishing mechanism.

3. In a self-extinguishing lamp, a bowl having a recess in the bottom and a slot extending from the recess to the outside of the bowl, in combination with a handle constructed in the described manner, that its lower portion may move in said recess and slot for the purpose of actuating the extinguisher.

4. In combination with a lamp having extinguishing mechanism, substantially as described, an independent bracket-basket provided with means, substantially as described, adapted to actuate the extinguishing mechanism.

5. The lamp-supporting basket having the false bottom, spring, and actuating-ring, as and for the purpose described.

260,022. MACHINE FOR SHEARING METALS. URI HASKIN, Pittsburg, Pa., assignor of one-half to Wharton McKnight, same place. Filed Sept. 23, 1881. (No model.)



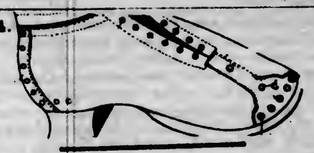
Claim.—1. In a metal-shearing machine, the combination of recessed side frames, one of which is provided with a stationary cutter, with a recessed sliding central frame provided with a cutter and arranged between the side frames, the recess of the sliding frame being shorter than those of the side frames, substantially as and for the purpose specified.

2. In a metal-shearing machine, the combination of recessed side frames, one of which is provided with a cutter, with a recessed sliding central frame provided with a cutter and with two adjustable bearing-plates, one in front and one in rear of the stationary cutter, substantially as and for the purpose specified.

3. In a metal-shearing machine, the combination, with a sliding cutter-frame having a recess to receive the article to be severed, of a fixed cutter on one side frame and a recess and guide-plate on the opposite side frame to retain the article in position while being operated on by the cutters, substantially as specified.

4. In a metal-shearing machine, the combination of side frames, one of which is provided with a cutter, a central sliding frame provided with a cutter, the cutters being relatively arranged to operate upon the inward stroke of the movable cutter, a shaft for actuating the sliding frame, and a breaker arranged on the sliding frame, substantially as and for the purpose specified.

260,023. HAY-STACK BINDER. JOHN A. HOOD and WILLIAM HALL, Shelton, Nebr. Filed Feb. 6, 1882. (No model.)

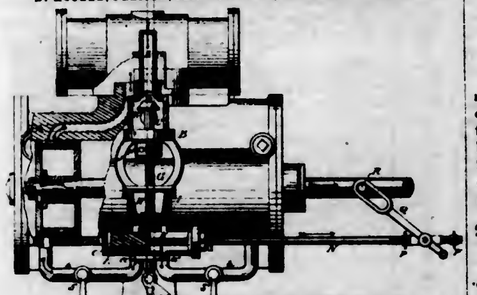


Claim.—The improved hay-stack binder, which consists of a flexible frame, *a b c*, composed of links and rings, and having a series of flexible transverse parts, 1 2 3, to produce a net, and a series of flexible branches, *d*, having pickets *f* at their ends, substantially as shown and described, to operate in the manner set forth when in use and adapted to be folded compactly when not in use, for the purposes specified.

260,024. BOOT OR SHOE. HENRY C. HOLBROOK, San Francisco, Cal. Filed Nov. 8, 1881. (No model.)

Claim.—A boot or shoe having a horizontal row of rivets around the point of the toe where abrasion mostly occurs, as a means of protecting the same and giving it increased durability, substantially as described.

260,024.



260,025. FISH-PLATE JOINT. FERRIS HOLTON, New Castle Pa. Filed May 1, 1882. (No model.)

Claim.—In a fish-plate joint, the combination of the bars, screw-bolt, recessed nut and key, the upper edge of the key resting in a recess of said nut and its lower edge in a groove in one of said bars, substantially as and for the purpose described.

260,026. ADJUSTABLE STEAM CUT-OFF VALVE. WILLIAM D. HOOKER, Oakland, Cal. Filed Sept. 16, 1881. (No model.)

Claim.—1. The cut-off valve I and its cylinder C, the piston H, and cylinder I, connected together by the yoke J, with the openings to connect the instrument with the boiler and steam-engine, substantially as described, and for the purpose specified.

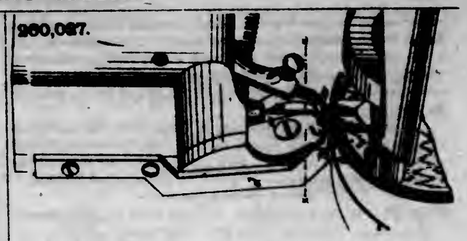
2. The cut-off valve D and its cylinder C, the piston H and cylinder I, connecting-yoke J, and openings to connect the instrument with the boiler and steam-engine, combined with a controlling-valve, L, substantially as described, and for the purpose herein set forth.

3. In combination with a steam cut-off, B, the piston H, and controlling-valve L, the adjustable stops P P', substantially as described, and for the purpose specified.

4. In combination with the controlling-valve L and cylinder K, having the ports *a a'*, connecting it with the said valve, the small port *c*, passing through the controlling-valve, all substantially as and for the purpose specified.

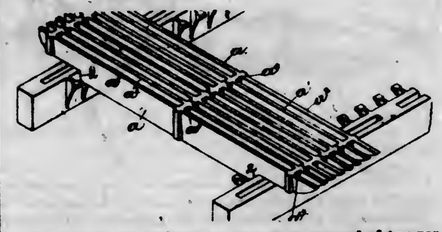
5. In combination with a steam cut-off, B, having a valve, D, piston H, and controlling-valve L, the valves *e e'*, substantially as and for the purpose specified.

6. An adjustable steam cut-off as a separate instrument, adapted to be connected by pipes to a steam-engine and boiler, and having a valve, L, controlling the piston of the cut-off valve, said controlling-valve being operated by the main piston by suitable mechanism, substantially as described, and for the purpose set forth.



7. The cut-off instrument B and pipes A and E, in combination with the pipe T, constructed substantially as shown, for the purpose specified.

260,027. SEWING-MACHINE. JAMES S. REGNER, Gloversville, N. Y. Filed Mar. 9, 1881. (No model.)



Claim.—1. In an over-edge-stitch sewing-machine, the combination, with the stitch-making mechanism, of the foot D, having the toe *d'*, constructed, arranged, and placed in relation to the devices composing such stitch-making mechanism as described, and for the purpose specified.

2. In an over-edge-stitch sewing-machine, the combination, with the stitch-making mechanism, of the foot D, having the toe *d'*, and provided with the channels *d²* and *d³*, all constructed, arranged, and placed in relation to the devices composing such stitch-making mechanism, as described, and for the purpose specified.

260,027.

260,028. FURNACE-GRATE. KINGSBURY H. JARVIS, Holden, assignor of one-half to Albert F. Upton, Newtonville, Mass. Filed Apr. 8, 1882. (No model.)

Claim.—The double-webbed grate-bar composed of two parallel webs, *a' a²*, shouldered at 2, and connected at intervals by cross-pieces *a³*, thus leaving free open spaces between the said webs for the passage of air and ashes, combined with the fixed bearing-bars on which rest the ends of the grate-bars beyond the shoulders 2, the said bearing-bars having laterally-projecting portions which enter the open spaces between the webs of each bar at the said shoulders, substantially as and for the purpose described.

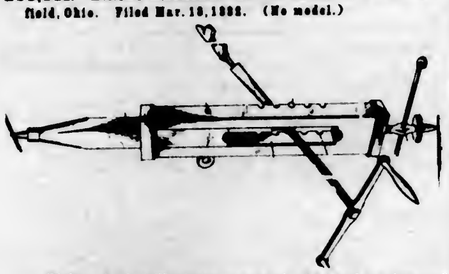
260,029. ELECTRIC LIGHT. PHILIP O. JENKINS, Washington, D. C. Filed Sept. 30, 1881. (No model.)

Brief.—The object of the invention is to localize the source of heat within the shell of non-conducting refractory material.

Claim.—1. The combination of the inclosed carbon or other electrodes of like refractory and conducting capacity, their surrounding body of refractory non-conducting substance, the intermediate connecting-piece, which connects the two carbon points or electrodes, and the closely-fitting caps of conducting material placed in close contact with the carbons and carbon-investing body, whereby the ingress of air is prevented and electrical contact with the carbon ends is maintained.

2. The combination of the carbons and their inclosing-body, the former fitted air-tight within the latter and the latter provided with a small conical orifice, and the conical or wedge-shaped plug adapted to fit said orifice so as to exclude the air from contact with the carbons, substantially as and for the purposes set forth.

260,030. FAUCET. JOHN H. JOHNSON, Chicago, Ill. Filed Sept. 1, 1881. (No model.)



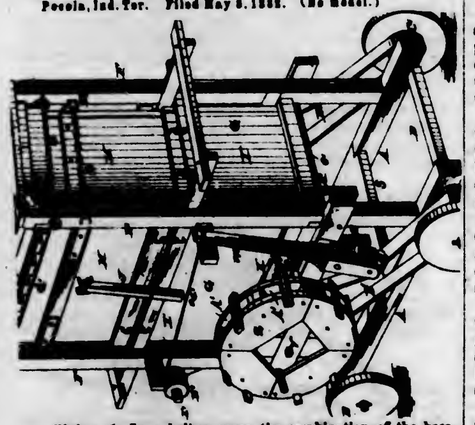
Claim.—1. In a faucet, the combination of the adjustable tubular plunger or valve-support and a ball-valve adapted to a seat in the end of said plunger or support, substantially as described, whereby the ball-valve will be held away from the walls of the casing when liquid is flowing through the faucet, as and for the purposes set forth.

2. In a faucet, the combination of a sliding tubular plunger

or valve-support provided with lateral apertures for the passage of liquid, and a valve-seat in advance of said lateral apertures, with a ball-valve adapted to said valve-seat, substantially as described, whereby the valve will be held from the walls of the valve-chamber when liquid is flowing through the faucet, as and for the purposes set forth.

2. In a faucet, a movable rest or holder for a ball-valve, provided with a continuous ring, *m*, forming a seat to receive the ball when the faucet is open and with openings *f* in the sides for the passage of water, substantially as and for the purposes specified.

260,031. MINING-MACHINE. XAVIER KERR, Jr., West Brookfield, Ohio. Filed Mar. 18, 1882. (No model.)

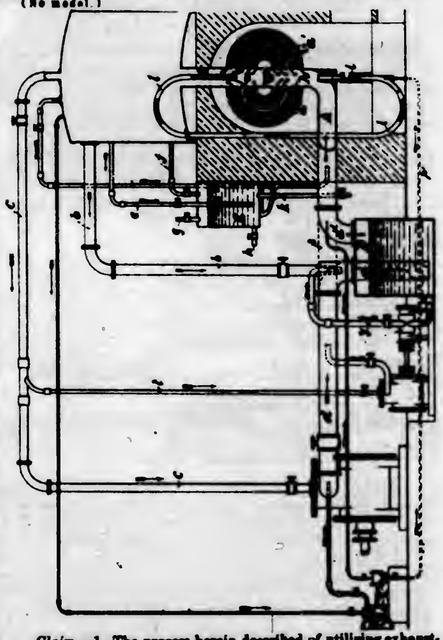


Claim.—1. A drill-clamp composed of hinged sections and provided with a screw-threaded passage-way for the passage of the drill-shank, one of the said sections being provided with screws or lugs adapted to be lengthened or shortened for the purpose of accurately adjusting the drill-shank therein.

2. In a drill-clamp, the combination, with the body portion provided with laterally-extending arms, a semicircular screw-threaded groove, and a tongue provided with an elongated slot, of a hinged portion pivotally secured to the said body portion and provided with a semicircular screw-threaded groove adapted to register with a similar groove in the body portion and arms adapted to rest, respectively, above and below the said tongue in the body portion, and a wedge for locking the two parts together.

3. In a drill-clamp, the combination, with the body portion provided with laterally-extending arms, a semicircular screw-threaded groove, a tongue provided with elongated slots, and lugs or screws for accurately adjusting the drill-shank in the clamp, of a hinged portion pivotally secured to the said body portion and provided with a semicircular screw-threaded groove adapted to register with a similar groove in the body portion and arms adapted to rest, respectively, above and below the said tongue, and a wedge adapted to pass through the elongated slot in the said tongue and hold the parts in locked position.

260,032. PORTABLE BALING-PRESS. JOHN W. KITCHEN, Peoria, Ind. Ter. Filed May 8, 1882. (No model.)



Claim.—1. In a baling-press, the combination of the base-frame A, the uprights F, connected by rod S, the press-box having hinged sides or half doors H, the chains Q, studs R, hinged top doors N, and hinged clamps P, substantially as set forth.

2. In a baling-press, the combination of the truck A, the frame F, the press-box, the follower, and mechanism for operating the latter by power taken from the revolving hind axle of the truck while the machine is being propelled over the ground, as set forth.

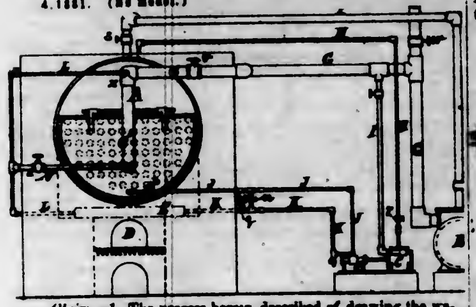
3. The combination of the truck A, the frame F, the follower, the press-box, the shaft V, having band-wheels X Y, axle D, having band-wheels C', shaft I', having drums J' L', shaft O', having lever N', and arm R', carrying-rollers Q' S', belts B' K', and the rope M', all arranged and operating substantially as set forth.

4. The combination of truck A, having sill S and uprights T, the frame F, the press-box, the follower F', having double-toothed racks E', the shafts U V, having pinions H', mechanism for conveying motion through belts B' to said shafts from the hind axle of the truck, and belt-tighteners N' R', adapted to bear upon the belts B' with increasing pressure as the pressure in the press-box increases, as set forth.

260,033. UTILIZING EXHAUST. HARVEY T. LITCHFIELD, Hull, and DAVID RENSHAW, Cohasset, Mass. Filed Nov. 8, 1881. (No model.)

Claim.—1. The process herein described of utilizing exhaust-steam by forcing the exhaust of an engine into water of the temperature and pressure equal to that of the working-steam by a jet of live steam, then conveying said exhaust and live steam into and through a superheater to be revivified, when it is again in condition to be conveyed to the engine, substantially as set forth.

2. The process herein described of utilizing exhaust-steam by forcing the exhaust of an engine into a tank of water of high temperature by a jet of live steam, then forcing the steam into a superheater from said tank to be revivified, and there mixed with a jet of air from a pump, then passing it into the steam-receiver, when it is in condition to be conveyed to the engine.



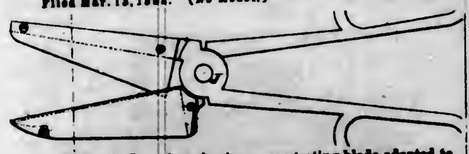
3. The process of utilizing exhaust, consisting in passing the exhaust-steam or steam and air through a superheater to a receiver, a portion of said exhaust being passed through the superheater two or more times, whereby it is more highly heated, substantially as and for the purpose set forth.

4. In an apparatus for utilizing exhaust-steam, the combination of the superheater or regenerator with the cylinder of an engine, tank D, and exhaust-pipe *d* of the live-steam jets *b* and *w*, arranged in such manner that the combined live steam and exhaust-steam is forced into the revivifying-vessel, substantially as set forth.

5. The combination, in an apparatus for utilizing exhaust-steam, of the superheater with the feeding-tank E, steam-pipes *e*, *f*, and *h*, and pipe *a*, for the supply of the superheater, and air-valve *g*, all arranged for joint operation for the starting of the apparatus and to supply any loss from leakage during operation, in the manner shown and described.

6. The process herein described of utilizing exhaust, the same consisting in forcing the exhaust into water of the temperature and pressure due to the working-steam by means of a jet of water of extraordinary velocity taken from the tank D, the said exhaust and water-jet being forced into tank D, and the resultant steam being carried into and through the superheater and revivified, when it is again in condition to be conveyed to the engine.

260,034. UTILIZING EXHAUST-STEAM. HARVEY T. LITCHFIELD, Hull, and DAVID RENSHAW, Cohasset, Mass. Filed Aug. 4, 1881. (No model.)

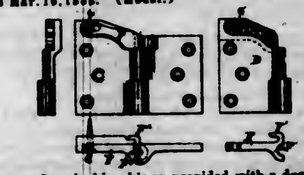


Claim.—1. The process herein described of drawing the water from a boiler under pressure by mechanical means, forcing it through an add-heater, then forcing it through a nozzle, when it comes in contact with the exhaust of an engine and forces it into the boiler.

2. The combination, in an apparatus for utilizing exhaust-steam, of the pump, the add-heater, the water-pipes and nozzle, and the exhaust-pipe of the engine with the boiler, whereby the water from the same boiler is made to force the exhaust of the engine into said boiler, substantially as set forth and described.

3. The combination, in an apparatus for utilizing the exhaust-steam of the boiler A, engine B, pump C, add-heater E, and water-pipes J, K, M, and L with the exhaust-pipe G, substantially in the manner shown and described.

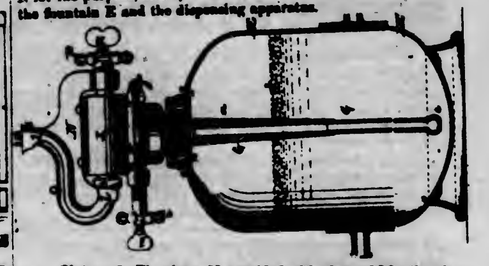
260,035. SHEARS. ANDREW J. LYTLE, Hillsborough, Ohio. Filed Mar. 13, 1882. (No model.)



Claim.—1. In a shear having a penetrating-blade adapted to work into and cut against one side of a slot, the combination, with such blade, of an opposite jaw to form one side of the slot and a detachable bed-blade fixed alongside said jaw and set with its cutting-edge above the level of said jaw to form an opposite and higher side for said slot, substantially as and for the purpose set forth.

2. A shear-blade formed of sheet metal longitudinally bent into angle-section, and adapted to shear across the thin edge of the metal, as set forth.

3. In a shear having a detachable blade formed of sheet metal bent longitudinally into angle-section, the combination, with such blade, of an attaching-surface arranged to bear against the inner surface of such blade, and also against the under surface of the horizontal part of such blade, whereby the horizontal support of the blade, by means of the angle, tends to relieve the screws or rivets from downward strain, as set forth.



260,036. LOCK-HINGE FOR SHUTTERS. JOHN P. HAUBS, Reading, Pa., assignor of one-half to I. Ellis Kurtz, same place. Filed Mar. 10, 1882. (Model.)

Claim.—In a locking-hinge provided with a dog or pawl, F, abutting against an offset, F', on the pintle-cap of the shutter-leaf, and lying within a recess sunk in the jamb-leaf, the oblong slot G', whereby the contact of the shutter with the wall may be adjusted by the shifting of the fulcrum-screw G, substantially as shown, and for the purpose described.

260,037. SODA-WATER FOUNTAIN. JOHN MATTHEWS, New York, N. Y. Filed Feb. 14, 1881. (Model.)

Brief.—The valve-spindles are concealed, and are therefore not likely to be opened, except by the retailer, who has the clamp N for the purpose, and by which connection can be made between the fountain E and the dispensing apparatus.

Claim.—1. The clamp N, provided with channel *l* for the pipe Q, and with the fastening-screw P, substantially as described.

2. The clamp N, provided with means for attaching it to the pipe Q, and with clamping-screw P and valve-screw R, substantially as described.

3. The combination of the pipe Q with the clamp N, fountain-cock I, and fountain, the clamp carrying the means for opening the fountain-cock substantially as described.

4. The combination of the fountain E and fountain-cock I with the valves M and J, having spindles concealed within the shell of the cock, said shell having passages *h* and *g*, which are respectively closed by said valves and communicate with said fountain, substantially as described.

5. In combination with the fountain E, the fountain-cock I, having valve-spindle J and passage *g*, which leads into the upper part of the fountain, the stem of the valve-spindle J being concealed, substantially as described.

6. The combination of the clamps N with the fountain-cock having two concealed valve-spindles, substantially as specified.

7. A soda-water fountain combined with the gas-cock and the concealed spring-valve J thereof, and with the fountain-cock, substantially as herein shown and described.

8. A soda-water fountain combined with the valve M, and with the valve J, and with the springs *a* and *j* for operating said valves, all concealed in the shell I of the cock, substantially as herein shown and described.

9. In combination with a fountain having a gas-cock and a fountain-cock, the tube carrying clamps L and N, and their screws R and R for opening the valves in said cocks, substantially as herein shown and described.

10. The clamp N, having one or more guide-pieces, 7 and 9, and provided with a screw, P, at one end and tube-holding nozzle 3 at the other end, substantially as described.

11. The valve M, combined in the shell I, with its actuating-spring *a* at one end, and with the packing-piece 5 and follower 4 at the other end, substantially as described.

12. The tube G, suspended from the stop-cock, and constructed with the bulbous enlargement *c* at the lower end, as a means of protection for the said tube and said fountain, substantially as specified.

13. The tube G, suspended from the stop-cock and made with the enlarged and conical upper portion, *c*, and with the reduced lower portion, *b*, having bulb *c*, substantially as specified.

260,038. GAS-REGULATOR. LEWIS H. MCCULLOUGH, Richmond, Ind. Filed Dec. 31, 1881. (No model.)

Brief.—The valve is on an extension of the armature, and is opened by gravity when the current ceases. It allows, when closed, sufficient gas to flow to maintain a taper flame.

Claim.—1. An armature pivoted at one side of its center of gravity, but remote from either end, its heaviest end carrying a valve for controlling the flow of gas to the burner, whereby the gravitating valve automatically opens the outlet of the gas-induction pipe when the current of electricity ceases to flow through the magnet, the parts being constructed substantially as described.

2. In a gas-burner, the combination of a case or vessel having in it a gas-receiving chamber for receiving gas from an induction-pipe, an electro-magnet, and an insulating material for preventing injurious effects upon the magnet, substantially as described.

3. The combination, in a gas-burner, of the armature C, pivoted at one side of its center of gravity, its heaviest end carrying a valve for controlling the flow of gas to the burner, and a gas-induction pipe the outlet of which is controlled by the valve carried upon one end of the pivoted armature, substantially in the manner and for the purpose set forth.

4. In a gas-burner, the combination of the case or vessel A, having a gas-chamber in its upper end, the magnet B, the armature C, the gas-induction pipe A^1, and the insulating material, all substantially as described, and for the purpose set forth.

5. The combination of the case, magnet, armature and valve, and burner with a gas-supply tube provided with an opening to feed a taper flame when the valve is closed.

6. The combination of the case provided with a cover, a burner-tube, an armature and valve thereon, and a gas-supply tube extending into the upper part of the case and arranged to be closed by the valve, all substantially as set forth.

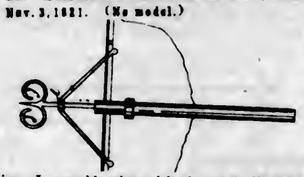
7. The combination of a case, an electro-magnet, a bracket to which is pivotally connected an armature bearing a valve, a gas-supply pipe extending above the bracket, and means for opening the valve when the current ceases.

260,039. GAS-REGULATOR. LEWIS H. MCCULLOUGH, Richmond, Ind. Filed May 1, 1882. (No model.)

Claim.—1. A gas-chamber constituting a portion of a gas-regulator, the upper wall or plate of which consists of a thin sheet of brass or other non-magnetizable metal, through which the magnetism passes from the magnet or magnets and operates to raise or attract an armature placed in said chamber, substantially as set forth.

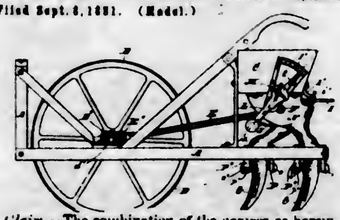
2. In a gas-regulator the valve of which is operated partially by electro-magnetism and partially by gravity, the combination of a gas-chamber the upper wall or plate of which is of thin brass or other non-magnetizable metal, an armature which, when the circuit is closed, rests upon the under surface of said thin plate, and a magnet or magnets the core of which rests upon its upper surface, substantially as and for the purpose set forth.

3. The combination of the gas-chamber B, one of the walls of which is of thin brass or other non-magnetizable metal, the armature D, valve D', secured upon and moved by said armature, the gas-conducting pipe passing up between the magnets and through the heel-piece, and the burner I, the parts being arranged substantially as shown.



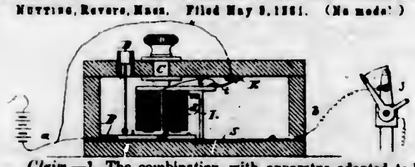
260,040. ELASTIC CUSHION FOR CUTTER-BARS. SIMEON C. MILL, Chicago, Ill. Filed Oct. 7, 1881. (No model.)

Claim.—1. In a mowing-machine, the elastic cushion A, in combination with the cutter-bar *f*, rod e, flanged collars *d d*, and bracket e, constructed and arranged to operate substantially as and for the purpose set forth.



2. The coupling-arm, finger-bar, cutter-bar, pitman, and crank, in combination with the rod e, flanged collars *d d*, bracket *e*, and elastic cushion A, substantially as and for the purpose described.

260,041. REIN-HOLDER. JESSE MURPHY, Kendaskeag, Me. Filed Nov. 3, 1881. (No model.)



Claim.—In combination with the vertically-adjustable rein-support, the rein holder or clamp attached to said support and adjustable therewith, constructed substantially as herein described and shown.

260,042. GRAIN-DRILL. ALBERT M. MORRIS, Rushville, Ind. Filed Sept. 8, 1881. (Model.)

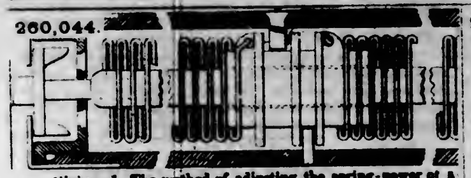
Claim.—The combination of the devices as herein described, consisting of the hopper C, seed-cups N, curved seed-slides J, moving in a corresponding groove, *j*, shaft or bar K, seed-wheels G, sliding bearing H, lever I, shafts E and F, and thumb-screw M, all constructed and arranged as specified.

260,043. TESTING AND BREAKING CIRCUITS. WILLIAM R. MOTTING, Revere, Mass. Filed May 9, 1881. (No model.)

Claim.—1. The combination, with apparatus adapted to be operated in connection with a series of temporary circuits from an open-circuit battery, of a circuit-seeker comprising an electro-magnet and a series of plates, A, and connections whereby the magnet is put in circuit when the main circuit is established, and, by the attraction of an armature to the magnet, breaks the main circuit, substantially as set forth.

2. The combination of a series of circuit-breakers, each in a circuit including an apparatus to operate in connection with temporary currents from an open-circuit battery, of a movable electro-magnet, connections whereby the same is put in circuit when in proximity to any one of the said circuit-breakers which is also in a completed circuit, and appliances whereby the movement of the armature is made the means of breaking such main circuit, substantially as set forth.

3. The combination, in a series of circuit-breakers, of an electro-magnet movable past the same, and constructed to open any circuit-breaker included in a circuit improperly closed, and a retainer whereby a circuit-breaker when so opened is prevented from closing on the removal of the magnet, substantially as set forth.



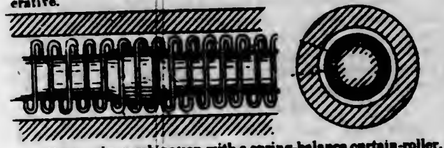
4. The combination of the movable electro-magnet and its connections and the bar B, armature-plate A, and spring-blades S, substantially as set forth.

5. The combination of the bar B, series of plates A, and blades S, retainers for said plates, bar E, and carrier supporting an electro-magnet, and arm L, and electric connections, substantially as set forth.

260,044. SPRING CURTAIN-ROLLER. JAMES H. OSGOOD, Somerville, Mass. Filed Aug. 6, 1881. (No model.)

Brief.—When a heavy shade is used the screw is inserted into the coupling so that one-half the spring is inoperative. For a light shade the screw or catch is removed and both springs used, the screw fixing or releasing a collar secured midway of the spring to or from the roller.

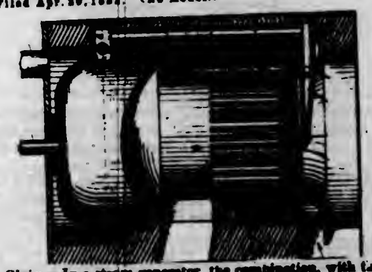
260,044.



Claim.—1. The method of adjusting the spring-power of a balance shade-roller to the weight of the shade, which consists in modifying the increase of tension of the primary spring as it is wound by the coupling therewith, at will, of one or more additional springs, as set forth.

2. In a spring-balance roller, the combination, with the springs, of a coupling or center ring with flanges and notch or projection, and a detent upon the roller, in such a manner that the inner spring upon the spindle becomes inoperative in the movement of the heavy or opaque shade, substantially as set forth and described.

3. In combination with the spindle and roller, a coupling or center ring having flanges and notch, and a pin inserted from the outside of the roller, for holding the coupling and preventing an endwise movement of the spring in the roller, substantially as described.



260,045. SPRING CURTAIN-ROLLER. JAMES H. OSGOOD, Somerville, Mass. Filed Nov. 25, 1881. (No model.)

Brief.—A ring or collar is secured to the spindle for the purpose of shortening the spring by rendering a portion of it inoperative.

Claim.—In combination with a spring-balance curtain-roller, a ring or collar firmly attached to the spindle for the purpose of shortening the spring, thereby making a portion of the spring inoperative while the roller is in motion, substantially as shown and described.

260,046. STEAM-HEATER. WILLIAM H. PAGE, Norwich, Conn. Filed Apr. 29, 1881. (No model.)

Claim.—In a steam-generator, the combination, with the annular water-chamber having heating-tubes, of the supply water-pipes leading to vertical pipe connected with a pipe arranged under the fire-grate and connected with the said water-chamber, substantially as and for the purpose set forth.

2. In a steam-generator, the combination, with the fire-pot and the surrounding water-chamber, of the steam-chamber superposed upon the water-chamber, and the water-tubes connecting the said chambers together at the rear below the fire-pot and in front at the top of said surrounding water-chamber, substantially as and for the purpose set forth.

3. The combination, with the steam-generator adapted to allow the return and upward passage of the products of combustion external to itself, of the vertical water-supply pipes having horizontal branch pipes extending beyond them, and the inclosing casing of masonry or other suitable material, having a combustion-space between itself and the generator, said space being subdivided by said branches of the supply-pipe from the rear to the front ends of said branch pipes, substantially as and for the purpose set forth.

260,047. RUNNING-GEAR FOR VEHICLES. ROBERT C. PARVIN, Vineland, N. J. Filed Oct. 4, 1881. (No model.)

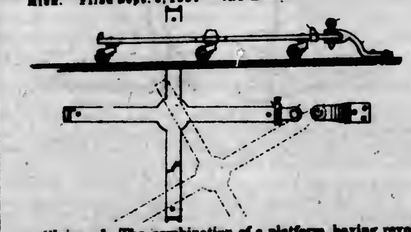
260,047.

Claim.—1. The combination of the axle A, the truss G', fastened only at its ends thereto, the fifth-wheel supported on said truss, the head-block contained on said wheel, and the spring fastened thereto, substantially as shown and described.

2. The combination, with rear axle, B, of reaches C C, secured thereto by plates D and D', crotches E E, and truss G, the ends of said crotches and truss being fastened to said axle by clips H, which pass over the former and through the latter, substantially as shown and described.

3. The bolster-bar I, having a bow-shaped plate or bar secured to its under side, substantially as shown and described.

4. The metal head-block M, having lugs *m m* on its rear side for securing the reaches thereto, substantially as shown and described.



5. The combination, with the head-block M, having lugs *m m* of the angle-bar reaches secured thereto by bolts *m' m'*, substantially as shown and described.

260,048. HORSE-COLLAR FASTENING. OREN S. PITNY, Fulton, Mo. Filed Apr. 17, 1882. (No model.)

Claim.—The combination, with the curved plate A, having its side edges turned outwardly at nearly right angles to the body, and having a suitable fastening device, of the correspondingly-curved plate B, having like flange edges which are adapted to fit and slide inside the turned edges of the other plate, the latter thus forming a guide and re-enforce against lateral strain or displacement of the plates, and to be engaged by the fastening device on plate A, substantially as set forth.

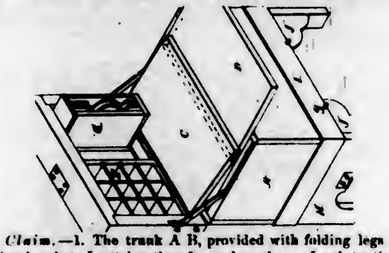
260,049. BARREL-ROVER. JAS. H. QUACKENBUSH, Kalkaska, Mich. Filed Sept. 6, 1881. (No model.)

Claim.—1. The combination of a platform having revolving casters with a stationary bracket, to which the platform is pivotally attached, as and for the purpose set forth.

2. In a barrel-mover consisting of a platform composed of crossed bars which are supported on revolving casters, the combination therewith of an attachment consisting of a hand fitted loosely on one of said bars and having an upwardly-projecting shoulder, and provided with a set-screw, as shown and described, and for the purpose set forth.

260,050. GLOVE-FASTENING, &c. WILLIAM S. RICHARDSON, Newton, assignor to Clarence John Blake, Trustee, Boston, Mass. Filed Feb. 23, 1882. (Model.)

Claim.—1. The improved fastening for gloves and other articles, consisting of two members, one of which is provided with a socket, B, having the spring yielding sides *d* about the circular opening to the socket and adapted to be fastened to the material, and the other of which consists of a ball and tongue, also adapted to be fastened to the material, and the ball of which is adapted to enter the socket of the other member of the fastening device and be held therein, as described, all as set forth.

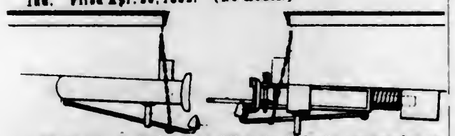


2. A member of a fastening device containing a socket, B, having an opening, C, and the yielding sides *d*, adapted to receive a suitable ball or other device, all substantially as and for the purpose described.

3. A member of a fastening device having the ball E, the straight tongue *e*, adapted to be used in connection with the other member of the fastening device described, and means for fastening the same to the material, substantially as specified, all struck up or formed from a sheet-metal blank, substantially as set forth.

4. As a means of fastening a member of a fastening device in place, a prong or projection, f^3, integral with the device and at or near the end of one arm thereof, and a hole, f^2, at or near the end of the other arm thereof, and a recess in the under surface of said arm adjacent thereto, the prong or projection being adapted to be passed through the hole and upset or clinched in the recess, all substantially as described.

5. In a member of a fastening device having two arms by which it is fastened to the material, the combination of the arm F, having the hole or aperture f^2, and the arm F', having the projection f^3, all substantially as described, and for the purposes set forth.

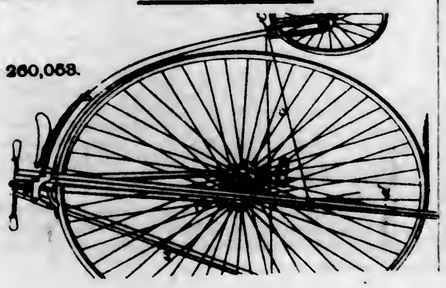


260,051. COMBINED TRUNK, DESK, TABLE, &c. JAMES A. RIGBY, Allegan, Mich. Filed Oct. 24, 1881. (Model.)

Claim.—1. The trunk A B, provided with folding legs H, folding brackets J, catches therefor, and a valance, I, substantially as described.

2. The trunk A B, provided with folding legs, a nest of pigeon-holes, a book-case, a cover, C, and an extension-lid, D, substantially as described.

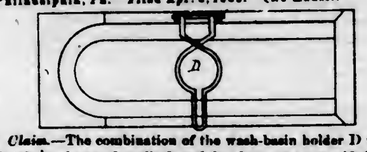
260,052. CAR-COUPLING. SAMUEL J. ROSSMAN, Terre Haute, Ind. Filed Apr. 29, 1882. (No model.)



Claim.—1. A device for holding the link of a car-coupler on a horizontal line preparatory to coupling cars, consisting of a truncated cone or egg-shaped head affixed to the upright end of a lever adapted to automatically release said link when the draw-heads of two contiguous cars collide, in the manner hereinbefore described.

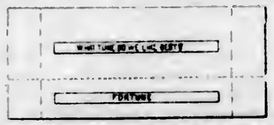
2. In a car-coupling, the combination, with a coupling-link, of a truncated cone or egg-shaped head affixed to the vertical end of a lever which is pivoted to a lug a distance back on the under side of the draw-head, substantially as and for the purpose hereinbefore described.

3. The combination, with a car-coupling in which a link is used, of a truncated cone affixed to the vertical end of a lever which pursues a short downward course, then horizontally and longitudinally to a point on the under side of the draw-head, a guide to direct the oscillations of said lever extending downward from said draw-head, and a chain to raise or lower said lever and cone, which passes through an eye or staple on the under surface of said lever, substantially as and for the purpose hereinbefore described.



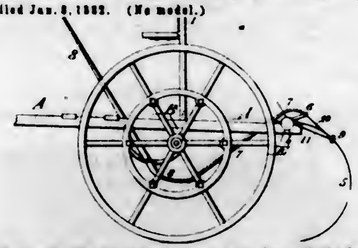
260,053.

260,053. BICYCLE-SUSPENDER. SYLVESTER SAWYER, Gardner, Mass. Filed Oct. 31, 1881. (No model.)



Claim.—As an improved article of manufacture, a bicycle-suspender consisting of the legs or supports *a a'*, united together at or near their upper ends, and having means for supporting the bicycle, substantially as specified, with a stay, rope, or brace, *c*, all substantially as and for the purposes set forth.

260,054. BATH-TUB ATTACHMENT. FREDERICK SCHUTTE, Philadelphia, Pa. Filed Apr. 3, 1882. (No model.)



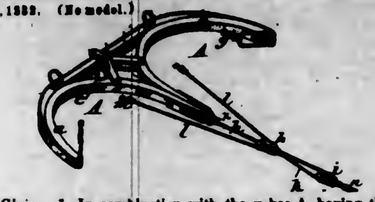
Claim.—The combination of the wash-basin holder D with a bath-tub, as shown, described, and for the purpose specified.

260,055. WRAPPER FOR CONFECTIONERY. AUGUST SCHWARZSCHILD, New York, N. Y. Filed Mar. 30, 1882. (No model.)

Claim.—An improved wrapper for candies and other articles sold in small packages, having printed or placed thereon a conundrum, enigma, or riddle, and the answer thereto, in such relative positions that when the wrapper is placed in position around the article or articles the conundrum, enigma, or riddle is exposed to view and the answer concealed.

260,056. HAY-RAKE. HAMILTON L. SHIELDS, Troy, N. Y. Filed Jan. 3, 1882. (No model.)

Claim.—1. The combination, in a hay-rake, with the bars A, which form the thills for the team, of the rake 4 5, extending laterally beyond the ground-wheels and removably secured to the thills, bar 9, extending parallel with the rake-head and through which the teeth pass, bars 11, connecting the ends of the rake-head and bar 9, and diagonal rods 10, by which the teeth through said bar 9 are lifted, as hereinbefore described, fo the purposes specified.

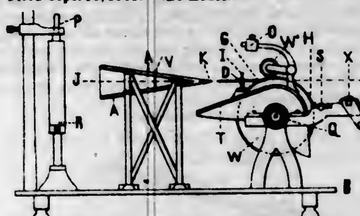


2. The combination, in a hay-rake, with the rake-head 4 and parallel-placed bar 9, of short lever-arm 6, attached to the rake-head, diagonal rods 10, connecting the bar 9 with the arm 6, and by which the raising of the rake-teeth is effected, pivoted hand-lever 8, and connecting-bar 7, as hereinbefore described, for the purposes specified.

260,057. HORSESHOE. GEORGE W. H. STOKES, Madison Court-House, Va. Filed July 8, 1881. (No model.)

Claim.—The combination of a horseshoe having upwardly and obliquely inclined heel-pieces G G, and conical studs *e e*, projecting therefrom, the band B, receiving through its ends the studs *e e*, and constructed with an ear, *e*, the toe-strap A', and the nut *f*, applied thereon, substantially as described.

260,058. DRAFT APPARATUS FOR HORSES. THEODORE J. SLATER, Freehold, N. Y. Filed Oct. 25, 1881. Renewed May 16, 1882. (No model.)

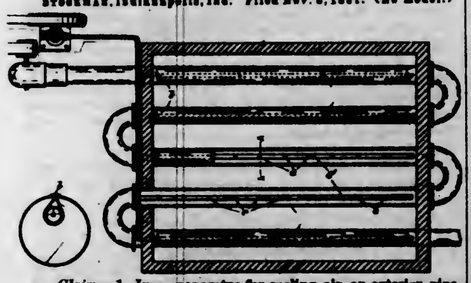


Claim.—1. In combination with the yoke A, having their ends provided with means for connection to the hames, the chain *a*, pulley *i*, chain A, pulley *k*, and chain *l*, having its ends provided with fastening devices.

2. As an improvement in the construction of harness-yokes, the combination of the continuous outer bow and the two inner bows, cobured to each other and to the outer bow, as described and shown.

3. A breast-yoke having two semicircular rigid ends, in combination with devices at the outer ends for attachment to the hames, and a central chain provided with attaching devices at its ends and connected by equalizing pulleys and chains with the middle of the yoke, substantially as described and shown.

260,059. MEASURING, RIGGING, TENTERING, AND FINISHING MACHINE. EDWARD STUBBS, West New Brighton, N. Y. Filed Sept. 30, 1881. (No model.)



Claim.—1. The combination, with the spindle P, bridge A A, and guide D G H, of the wheel W, dampener E, drier F, roll S, and roll or board X, all constructed and operating substantially as shown and described.

2. The combination, with the spindle P, bridge A A, and guide provided with an edge, G, of the wheel W, roll S, and roll or board X, all constructed and operating substantially as shown and described.

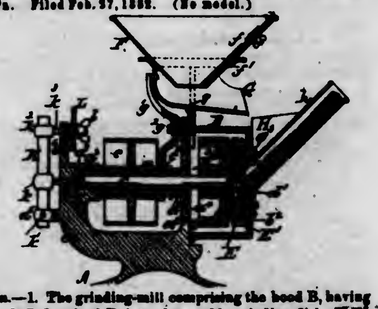
3. The spindle P and means for supporting it perpendicularly to the plane of the goods when folded, and bridge A A, combined with a guide which is provided with an edge, G, and means for drawing the material from said spindle and over the bridge and guide, substantially as shown and described.

260,060. APPARATUS FOR COOLING AIR. GEORGE W. STOCKMAN, Indianapolis, Ind. Filed Nov. 5, 1881. (No model.)

Claim.—1. In an apparatus for cooling air, an exterior pipe for conducting a refrigerating-liquid, in combination with an air-pipe through which the air to be cooled is forced, and so arranged that the liquid shall enter the air-pipe through perforations in the latter.

2. In an apparatus for cooling air, an incasing-pipe through which air to be cooled is forced, in combination with an interior pipe having perforations and conveying refrigerating-liquid, for the purposes above set forth.

3. In an air-cooling apparatus, a pipe through which air is forced, in combination with a vat for submerging the air-pipe, and means for conducting a refrigerating-liquid into the air-pipe to prevent the moisture from congealing therein.



260,061. SEWING-MACHINE PRESSER-FOOT. HENRY C. STORR, Natick, Mass. Filed Mar. 27, 1882. (No model.)

Claim.—1. The presser-foot B, provided with the two vertical extensions *c c*, in combination with the body A, having in it the two vertical sockets to receive such extensions, and also having clamping-screws to confine the extensions in the sockets.

2. The presser-foot B, provided with the two vertical extensions *c c*, in combination with the body A, having in it the two vertical sockets to receive such extensions, and also having to open out of each socket at its lower end a notch, *g*, to receive the foot, each of such sockets being provided with a clamp-screw, and all being substantially as set forth.

260,062. GRINDING-MILL. ANDREW W. STRAUB, Philadelphia, Pa. Filed Feb. 27, 1882. (No model.)

Claim.—1. The grinding-mill comprising the hood B, having seat b^2, shaft C, fly-wheel D, interchangeable grinding-disks E E', base A, having spindle-bearings and vertical disk a^2, bridge-tree K, bracket a^3, rings b b^2, button I, stem or step *i*, rod b^3, bracket a^4, wheel L, and nut *l*, substantially as shown and described.

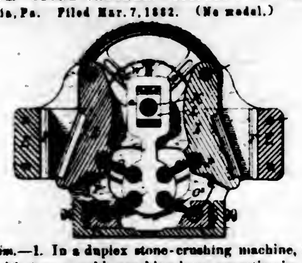
2. In a grinding-mill, the combination, with a spindle and grinding-disks E E', of a breakable bridge-tree, K, substantially as shown and described.

3. In a grinding-mill, the combination of base A, having brackets a^3 a^4, rings b b^2, bridge-tree K, rod b^3, wheel L, nut *l*, stem or step *i*, button I, shaft C, and grinding-disks E E', substantially as shown and described.

4. The combination, with spindle C, disks E E', plate or fly-wheel D, and cutters d' d^2, of hood B and hopper H, having inclined feed-trough *h* and semicircular opening b^4, substantially as and for the purpose set forth.

5. A cast-metal grinding-disk provided with a series of saw-teeth, a series of conveyer-flights, and two series of furrows, one of which has its sharp or cutting angles front and the other its inclined or crushing sides front, substantially as shown and described.

6. A breakable bridge-tree, K, in combination with a step, *i*, button I, spindle C, and grinding-disks, substantially as shown and described.



260,063. WATER-PROOF FABRIC. GEORGE STRAT, New York, N. Y. Filed Mar. 31, 1882. (Specimens.)

Claim.—1. As a new article of manufacture, a water-proof material composed of two cloths united by water-proof cement filling the depressions or hollows between them and having the projecting portions of their contiguous faces in contact, whereby the compound material is rendered water-proof without essentially increasing the thickness, substantially as described.

2. As a new article of manufacture, a sewed garment composed of water-proof material formed of two cloths having the projecting parts of their contiguous faces substantially in contact and the depressions filled with water-proof cement, substantially as described.

3. As a new article of manufacture, the sewed garment composed of a material formed of an outside cloth of cotton duck and the inside cloth of cotton flannel, cemented together, substantially as described.

260,064. STONE-CRUSHER. STEPHEN P. H. TASKER, Philadelphia, Pa. Filed Mar. 7, 1882. (No model.)

Claim.—1. In a duplex stone-crushing machine, the combination, with two movable crushing-jaws, operative in connection with fixed crushing-jaws, of a pitman and a double set of toggles, the arrangement being such that upon the vibration of the pitman in either direction one set of toggles is straightened and one movable jaw thrown into action and the other set of toggles crooked and the other movable jaw thrown out of action.

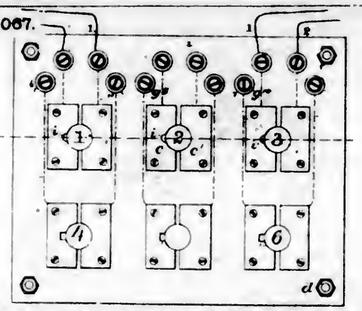
2. In a duplex stone-crushing machine, the combination, with two sets of toggles, adjustable toggle-seats, and movable crushing-jaws, of a toggle-lever or pitman common to and operative of both sets of toggles and the movable crushing-jaws and means for actuating said toggle-lever.

3. In a stone-crushing machine, in combination with the driving-shaft, a fly-wheel free to revolve upon said shaft, a band-wheel fixedly connected with the fly-wheel, and a friction-clutch device for connecting said band-wheel to the shaft.

260,065. PROCESS OF PRODUCING INDELIBLE PHOTOGRAPHS ON PORCELAIN. AUGUSTE TOURNEUX and FRANÇOIS SCHMALS, New York, N.Y.: said Schmals assignor of one-half his right to Jesse Dean, Trenton, N.J. Filed Feb. 1, 1881. (No specimens.)

Claim.—The process of producing an indelible photographic picture upon a porcelain tile, plaque, or other object in glass, china, or other kindred material hereinbefore described, which consists, first, in preparing a metal or other plate with a chemically-soluble solution consisting of bichromate of ammonia, borate of soda, sugar and glycerine, and water; second, in printing or transferring an image from a photographic positive by means of light upon said prepared plate; third, in covering or coating the imprinted image upon the prepared plate with vitrifiable color; fourth, in covering or coating said colored image upon the prepared plate with a film, tissue, or layer of collodion or other coagulable material; fifth, in first dissolving by saturation in water, and second by treatment with a solution of carbonate of potash, the chemical solution upon the plate and beneath the collodion; sixth, in lifting said coagulated film and the colored image adhering to the under side thereof from said plate and laying it upon a tile, plaque, or other object desired to be decorated; seventh, in subjecting such decorated object to heat sufficient to vitrify and render indelible the colored image on the object, substantially as set forth.

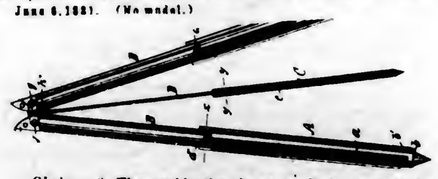
260,066. MOTOR FOR SEWING-MACHINES. WILLIAM TRAHUN, Louisville, Ky. Filed Apr. 24, 1882. (No model.)



Claim.—The frame A, curved or bent over at the top and provided near the opposite end with an arm, D, in combination with the drum C, head G, pinion E, pulley F, brake N O, cord P, belt H, and weight and cord, substantially as and for the purpose described.

260,067. ELECTRICAL SWITCH-BOARD. FREDERICK M. VAIL, Boston, Mass. Filed Apr. 26, 1882. (No model.)

Claim.—1. A switch-board consisting, substantially as hereinbefore described, of a number of conducting connection-plates interleaved in a pile with non-conducting plates, a number of line-plates, each split in half, for the reception of both terminals of a metallic circuit or loop line, and provided with plug-holes in and through each line-plate, and extending also through all the connection and insulating plates, and a plug-connector having two conducting-plates attached thereon, for connecting simultaneously each half of the line-plates to a separate connection-plate, for the purpose specified.

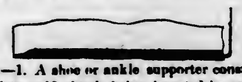


260,067.

2. In an electrical switch-board of the class indicated, the combination of the line plates or commutators, each divided into two contact-plates, to which the terminals of a metallic circuit are permanently attached, with the connection-plates, arranged in pairs and interleaved with non-conducting plates, and means, as indicated, whereby each division of the line-plate may be connected with one of a pair of connection-plates, for the purpose specified.

3. In a switch-board for metallic circuits, a double-contact plug-connector consisting of two strips extending on the sides of the plug and insulated from one another by a base or shank of non-conducting material, both of the said strips being provided at or near each end with a metal projection or flange, the flange at the upper or outer end being in both strips coincident in distance from the end of the plug, and the flanges or projections at the lower or inner end being unequal in distance from the end of the plug, whereby the plug is adapted to make contact at its outer end with the two line contact-plates which are on the same plane and at its inner extremity with any predetermined two connection-plates on different planes, as described.

260,068. EASEL. AGNES E. VAN KIRK, New York, N.Y. Filed June 6, 1881. (No model.)



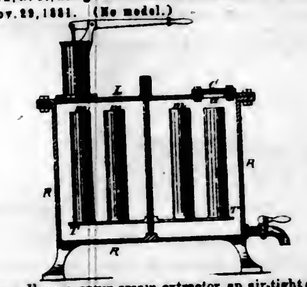
Claim.—1. The combination, in an easel, of several parts jointed at their upper ends, and carrying and sliding in semi-tubular parts adapted, when brought together, to conceal and inclose the other portions, and cap and end pieces, forming, with the folded parts, a walking-stick, substantially as set forth.

2. The combination of the parts A B, forming the front standards of an easel when connected together by means of the spring slide and catch d' in the groove a, substantially as set forth.

3. The combination, in an easel, of the semi-cylindrical parts A B, connected to slide one within the other, and the parts D C, forming the back standards of an easel, consisting of tubes sliding one within the other and adapted to be inclosed by the parts A B when the latter are together, substantially as described.

4. The clamp F, having the thumb-nut i, whereby it may be adjusted and secured at any desired height on the standards of an easel and serve the purpose of the ordinary pegs, and also be used for attaching a board or case for holding the paints and brushes, substantially as described.

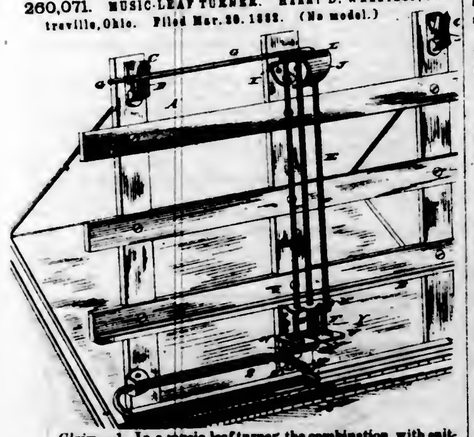
260,069. ANKLE-SUPPORTER FOR SHOES. STEPHEN O. WALLACE, Camden, N.J. Filed Jan. 5, 1882. (Model.)



Claim.—1. A shoe or ankle supporter consisting of a shank and base-plate, said shank being inserted in and combined with an upper at a point parallel to the ankle and pivoted to a base-plate attached to the shoe, in the manner substantially as described, so that in walking the pivoted shank will move in unison with the foot, for the purpose set forth.

2. A shoe and ankle supporter consisting of a shank and base-plate, said shank being pivoted to the base-plate and inserted in the upper, and having rounded corners at its base, for the purpose set forth.

3. A shoe and ankle supporter consisting of a shank pivoted to a base-plate, said shank being curved to follow the contour of the foot, substantially as described, and for the purpose set forth.



4. A shoe or ankle supporter consisting of a shank and base-plate, said shank being covered with a sheath, the whole inserted in a sleeve located in the shoe, and the shank pivoted to the base-plate, in the manner described, so that said shank will move in unison with the foot in walking.

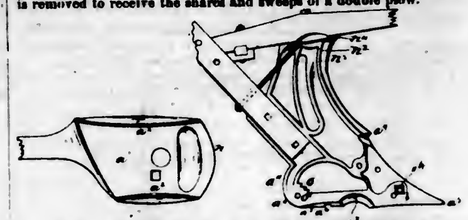
260,070. VACUUM-CREAMER. ADDISON G. WATSHOUSE, New York, N.Y., assignor to Charles E. Gallatt, Portage, Wis. Filed Nov. 29, 1881. (No model.)

Claim.—For a vacuum cream-extractor, an air-tight chamber, R, provided with an air-tight cap, C, made to fit the opening d, said chamber R being provided with a turning floor, T, secured to an upright shaft made to revolve in bearings within the chamber R, said chamber being adapted to receive the milk-cans m, together with suitable refrigerating material, all arranged substantially as and for the purposes set forth.

260,071. MUSIC-LEAF TURNER. HARRY D. WHEATLEY, Centreville, Ohio. Filed Mar. 20, 1882. (No model.)

Claim.—1. In a music-leaf turner, the combination, with suitable leaf-turning mechanism, of the rack A, having ledge B, and provided at its upper corners with clamps C, having cushions D, as set forth.

2. The combination of the central leaf-turner, having its ends journaled in permanent bearings, with the outer leaf-turners, having their lower ends journaled permanently beside the central one and their upper ends in the side wings or flanges of a plate journaled upon the upper end of the central leaf-turner, as set forth.



3. The trigger consisting of the rod M, mounted in flanges N O and having crank Y, in combination with the spring Q, secured to one of said flanges at one end, and having its other end intertwisted with an arm, P, formed by twisting a portion of rod M, as set forth.

4. The rod M, having twisted arm P, formed with the loop S, to receive the curved outer end of said rod, thus forming a handle, T, as set forth.

5. The combination, with the leaf-turners, constructed and arranged as described, of the trigger M P Y Q and the flange U, having slot V, provided with studs W and tongues X, as set forth.

260,072. PLOW. LEWIS B. WHITE, Norfolk, Va. Filed Mar. 22, 1880. (No model.)

Brief.—A removable block or foot fits and locks upon a cast standard, and is provided with recesses to receive projections upon mold-board and share and to form secure seats. These under projections have bolt-slots, so that no bolt-heads are in the wearing-surface of the plow. The standard is also adapted when the foot is removed to receive the shares and sweeps of a double plow.

Claim.—1. In a plow, the improved standard or stem a, having its lower end, a^2, reduced on its outer side to provide a shoulder, a^4, and having the rear extended base, a^1, the rear arch-brace, a^{11}, and suitable bolt-holes, all arranged and adapted to be used either for a single or a double turn-plow, substantially as set forth.

2. The combination, with the foot b, having the socket b^2 in its wing b^1, of the share c, having the projection c^2, T-slot c^3, and the rib or flange c^4, substantially as set forth.

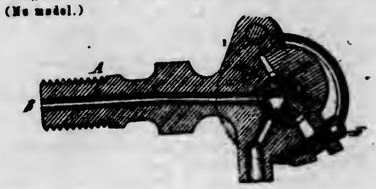
3. The combination, with the foot b, constructed with the recesses b^4 b^5 and projection b^6, of the share c, having the projection c^4 and T-slot c^5, and provided with the flange c^7, having hooked end c^8, substantially as set forth.

4. The combination, with the foot b, constructed with the recess b^7, of the mold-board d, abutted against the share c, and having the projection d^4 and T-slot d^5, substantially as set forth.

5. The double-winged casting or foot b, composed of the landside-wing b', having mortise b^3 on its outer side to receive the landside c, and the mold-board wing b^8, furnished with recesses or sockets b^4 b^5, substantially as and for the purposes as set forth.

6. In a standard for plows, the improved foot b, formed of the landside-wing b', having the inner under flange, b^4, and the outer side mortise, b^3, to receive the landside C and the mold-board wing b^8, and cross-brace b^9, substantially as set forth.

7. In a plow, the herein-described means for securing the mold-board, consisting in a socket, b^5, on the standard-foot and the mold-board d, having on its under side a slotted projection, d^6, to receive the bolt-head, and adapted to fit in the socket b^5, and there be bolted to the foot, covering the socket and the bolt-head, substantially as and for the purposes set forth.

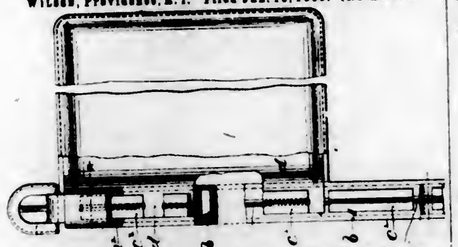


8. In a plow, the herein-described means for securing the share, consisting of the foot b, having the socket b^6, and the share c, having a projection, c^4, to fit in the socket b^6 in the standard-foot, and having the slot c^3, the share covering the bolt-head, as set forth.

9. In a plow-standard, a removable foot constructed with a longitudinal side recess or seat, b^3, to receive the landside C, and a wearing-surface between the said seat and the upper edge of said foot, substantially as shown.

10. In a plow, the standard a, provided with an abutting shoulder, a^4, on its landside, and shaped to fit in the removable foot b, and provided with a base or support, a^3, extended to the rear and adapted for either a single mold-board plow or for the sweeps and double mold-board of a cultivating-plow, substantially as set forth.

11. The combination of the removable foot b, having wings b' b^8, brace b^9, having one end made fast to the wing b', near the lower edge of the latter, and its other end inclined upward and extended to and made fast to wing b^8, and the stem a, having its lower end formed to slide into the angle between the wings b' b^8, the said brace b^9 being arranged to permit the easy insertion or removal of the stem a, as shown in Figs. 14 and 15, substantially as set forth.

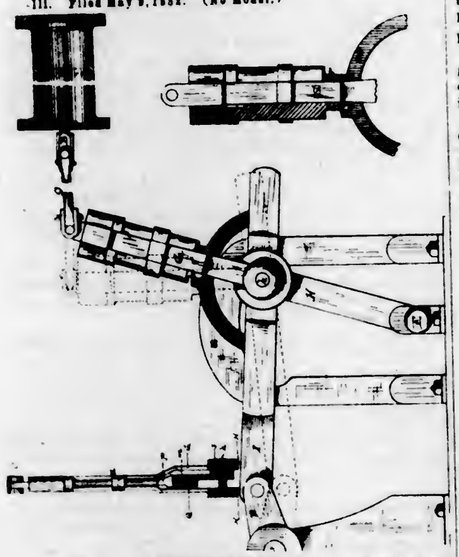


260,073. COCK AND FAUCET. SILAS S. WILLIAMS, Erie, Pa., assignor to John H. Ruth, same place. Filed Dec. 29, 1881. (No model.)

Claim.—1. A straight plug held in position at the end of the barrel by a hinged jaw, substantially as hereinbefore set forth, and arranged and operating so that the wear may be taken up by the hinged jaw, as described.

2. In combination, the barrel A, hinged jaws C and E, straight plug G, provided with a deflecting-passage, P Q, and a screw, F, substantially as shown and described.

260,074. BOX-LOOP AND BLIND FOR HARNESS. BAYCE A. WILSON, Providence, R. I. Filed Jan. 13, 1882. (No model.)

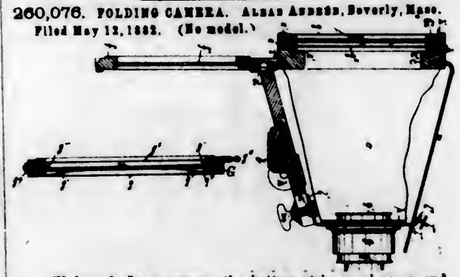


Claim.—1. The tube-frame a^2, with its slots c'', in combination with the notched and punctured metallic T-shaped piece c of the box-loop b, all substantially as described, and for the purpose specified.

2. The blinder-iron d, having slots c''' therein, in combination with the notched T-shaped piece c and slotted tube-frame a^2, substantially as described, and for the purpose set forth.

3. The frame a^2, together with its shank and flanges c, formed in one piece, in combination with the blinder-iron d, having slots c''' therein, the shank and flanges of the former passing through the slots of the latter, substantially as shown and described.

260,075. MECHANICAL MOVEMENT. NELSON ADAMS, Quincy, Ill. Filed May 9, 1882. (No model.)



Claim.—1. A reciprocating motor, a connecting-rod, and a crank driven thereby, combined with means whereby at the beginning of each reciprocation and by the action of the motor said connecting-rod shall have imparted to its crank end a movement transverse to its line of reciprocation to force the crank over its dead-point.

2. A reciprocating motor, a connecting-rod capable of reciprocation and partial rotation on an axis parallel with the crank-shaft, and a crank driven thereby, combined with means whereby at the beginning of each reciprocation said connecting-rod may have imparted to it by the action of the motor a partial rotation on said transverse axis to force the crank over the dead-point.

3. A reciprocating motor, connecting-rods C and I, attached to the piston-rod and crank, respectively, and an interposed two-part jointed lever, G H, pivoted at one end to the frame and at the other end to the connecting-rod C, and at its center joint, *k*, pivoted to the connecting-rod I, combined with an arm, *m*, on said connecting-rod I and a latch or latches on the part G, whereby at the beginning of each reciprocation the connecting-rod I has imparted to it a partial rotation on the joint *k* to force the crank past the dead-point.

4. The connecting-rod I, jointed at one end to the crank and at the other end to the jointed lever G H, combined with an arm, *m*, latches *p*, and the cam Q, substantially as set forth.

260,076. FOLDING CAMERA. ALBAN ADDEN, Beverly, Mass. Filed May 12, 1882. (No model.)

Claim.—1. In a camera, the bottom strip or piece, *a*, and frame *c*, hinged together at *d d*, in combination with the lens-carrying bracket *l*, tube or bellows *e*, and the brace *n*, as and for the purpose set forth.

2. In a camera, the combination of bottom strip or piece, *a*, and frame *c*, hinged together, the adjustable and detachable lens-carrying bracket *l l'*, tube or envelope *e*, the adjustable brace or stay *n*, and set-screw *l'''*, the support *e d'*, and locking device *h' h*, as and for the purpose set forth.

3. In a camera, the bottom strip or piece, *a*, and frame *c*, hinged together, in combination with the lens-carrying bracket *l l'*, tube or envelope *e*, hinged focusing-frame *f f'*, support *e e*, and locking device *h h'*, and adjustable stay or brace *n*, as and for the purpose set forth.

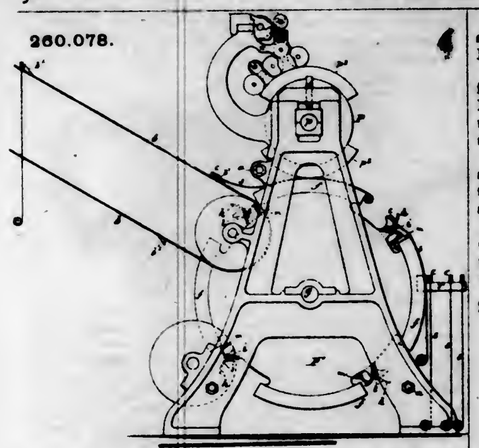
4. In a camera, the bottom piece, *a*, and frame *c*, hinged together, in combination with the lens-carrying bracket *l l'*, tube or envelope *e*, adjustable brace or stay *n*, set-screw *m*, and slotted opening *a'* in the piece *a*, as set forth.

5. The herein-described dry-plate holder, consisting of frame G, with its back *g* and springs *g' g' g'*, in combination with the rabbet *g''*, projection *g'''*, locking device *g'''' g''*, and slide *g²*, as and for the purpose set forth.

260,077. CAN FOR COOKING PREPARED MEATS, &c. WILLIAM ARCHENBACH, Indianapolis, Ind. Filed Jan. 17, 1881. (No model.)

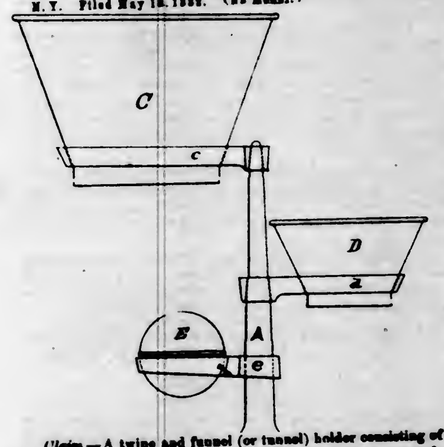
Claim.—1. A can for cooking canned or prepared meats, having a removable cover in which is an orifice for the insertion of the meat, adapted to be closed by a plug or stopper after the can is filled, and a closable vent for use during the process of cooking or preparing the meats, substantially as set forth.

2. The combination of the can A, cover B, plug D, and vent E, constructed, arranged, and operating as and for the purposes herein set forth.



260,078. MACHINE FOR PRINTING WINDOW-SHADES. WILLIAM BAILEY, Brooklyn, N. Y. Filed Nov. 10, 1881. (No model.)

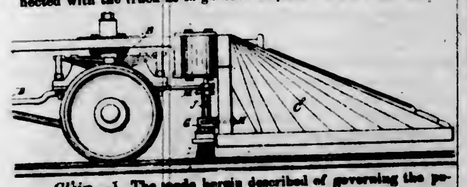
Claim.—1. In a machine for printing window-shades, the combination of the impression-roll F with the hooks h and the clamps c, as and for the purpose herein shown and set forth.



2. The combination of the design-roll P, impression-roll F, having hooks *h*, rack *r*, clamps *c*, and delivery-belts *b*, having projections b^2, substantially as shown and described.

3. In a machine for printing window-shades, the combination of the belts *b*, projections b^2, and impression-roll F, having hooks *h* and clamps *c*, constructed and operated substantially as herein shown and described.

260,078.



260,079. FUNNEL-HOLDER. CHARLES A. BARNES, Lockport, N. Y. Filed May 18, 1882. (No model.)

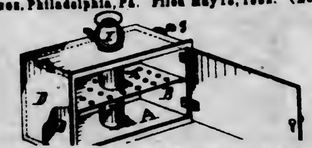
Claim.—A twine and funnel (or tunnel) holder consisting of a tapered standard, A, supports *c* and *d*, provided with correspondingly-tapered holes to fit standard A and free to swing around it, funnels (or tunnels) C D, and twine-holder E, all substantially as shown and described.

260,080. ATTACHING BROOMS TO LOCOMOTIVES. WILLIAM S. BARRIS and JAMES E. SHAVER, Denver, Colo. Filed Feb. 1, 1882. (No model.)

Brief.—Brooms or scrapers are arranged to receive lateral motion in a suitable supporting-frame by an operating-bar so connected with the track as to govern the position of the brooms.

Claim.—1. The mode herein described of governing the position of the brooms or scrapers on a locomotive by supporting them independently of the truck and giving them a lateral motion by means of a connection with said truck, substantially as described.

2. The combination, with a broom or scraper holder arranged to receive a lateral motion in a suitable supporting-frame, of an operating-bar connected with the truck, whereby the movement of the latter governs the position of the brooms, substantially as described.



3. The combination, with the brooms or scrapers J L and the sliding bar F, moving in suitable guides, of the trunk B and arm E, substantially as described.

4. The guides G, bolted to the pilot, the sliding bar F, carrying the brooms or scrapers, and the arm E, attached to the trunk B and moving therewith, in combination with said trunk and the radius-bar D, all constructed and arranged substantially as shown and described.

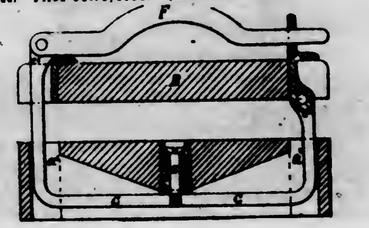
5. The combination, with the bar F, moving in suitable guides and carrying the brooms or scrapers, of the arm E, connected with the trunk-frame and loosely fitted to the bar F, substantially as and for the purpose specified.

6. The combination, with the bar F, of the brackets I, saddles K, set-screws *k*, and broom or scraper handles J, all constructed and arranged substantially as described, and for the purpose specified.

260,081. COMBINED BAKER AND BOILER. WILLIAM B. BILLINGS, Philadelphia, Pa. Filed May 18, 1882. (No model.)

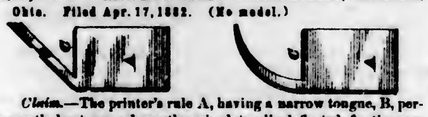
Claim.—1. As an article of manufacture, a combined baker and boiler comprising a jacketed oven having a central vertical flue, the lower end of which is adapted to be connected with a stove, as described, and the upper end of which terminates at the upper side of the oven and communicates thereat with a continuous flue extending about the oven, and a damper located over the said upper end of the flue, whereby the heat in said flue may be used directly at its upper end or radiated therefrom within and from the center of the baker, all substantially as shown and described.

2. The combination of the oven A B C, jacket D, central vertical flue, F, and damper G *g*, the lower end of said flue being adapted for connection to a stove, and communicating with the surrounding flue *e* when the opening *f* is closed by the damper, substantially as shown and described.



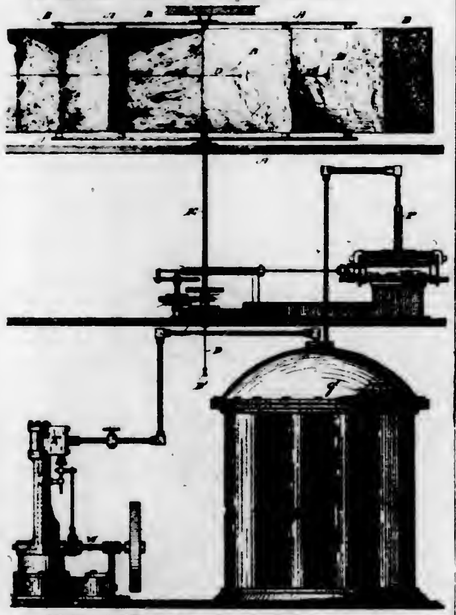
260,082. CORSET. LEWIS S. BENTARD, Toledo, Ohio. Filed Dec. 28, 1881. (No model.)

Claim.—1. In a corset provided with the usual busk adjustment and front fastening, and having at each side an arched hip-opening, the combination of non-yielding straps permanently secured at both ends to opposite sides of said openings, and independent means of adjustment on either side of said hip-openings, whereby independent side adjustments are secured without affecting the size of the hip-openings, substantially as and for the purpose specified.



2. In a corset provided with an arched hip-opening, the combination of a non-yielding strap secured permanently at both ends to opposite sides of said hip-opening, an elastic gore, *b*, in the rear of said hip-opening, an adjusting-lacing, *a*, between the hip-opening and the front of the corset, and stiffening-bones between the hip-opening and the elastic gore, substantially as and for the purpose specified.

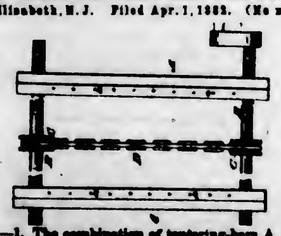
260,083. COPYING-PRESS. WILLIAM BOWERS, Somerville, Mass. Filed Oct. 6, 1881. (No model.)



Claim.—The improved copying-press composed of the base A, the top B, the regulating-screw D, the screw E for securing the spring C, the spring C, the lever F, and the bracket G, in combination.

260,084. PRINTER'S RULE. JOSEPH B. BOYD, Cincinnati, Ohio. Filed Apr. 17, 1882. (No model.)

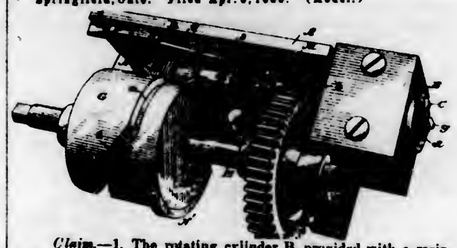
Claim.—The printer's rule A, having a narrow tongue, B, permanently bent, curved, or otherwise laterally deflected, for the purpose stated, sufficient space C being allowed beneath said tongue to clear the quads, as herein described.



260,085. WIND-POWER MACHINE. HYRON COLONBY, New Haven, Conn. Filed Apr. 18, 1881. (No model.)

Claim.—1. The horizontal wind-wheel constructed, as herein shown and described, with connected wheels A A, gusseted pockets B, and stays D.

2. The horizontal wind-wheel constructed, as described, with connected wheels A A, gusseted pockets B, and stays D, in combination with shaft E and cord D', substantially as and for the purpose set forth.



260,086. FRAME FOR STRETCHING FABRICS. EUGENE GERSON, Elizabeth, N. J. Filed Apr. 1, 1882. (No model.)

Claim.—1. The combination of tentering-bars A A, tentering-pins *a a* thereon, transverse screws B B, sprocket-wheels C C, fixed thereto, non-slipping flexible connection D, and crank E, substantially as and for the purpose set forth.

2. The combination of bars A A, each with two rows of tentering-pins, *a a*, on its opposite sides, with right and left screws B B, sprocket-wheels C C, each fixed on the center of one of said screws, non-slipping flexible connection D, arranged midway of said bars, and crank F, substantially as and for the purpose set forth.

260,087. CORD-KNOTTER FOR GRAIN-BINDERS. J. HENRY DEAN, Kalamazoo Mich., assignor to Whiteley, Pessler & Kelly, Springfield, Ohio. Filed Apr. 5, 1880. (Model.)

Claim.—1. The rotating cylinder B, provided with a reciprocating gripper and holder, C, and a non-revolving reciprocating knotter, D, and gripping looper-hook *g*, said knotter and looper being inclosed within said cylinder, combined with a rotating wheel, F, and cam-wheel G, mounted upon a shaft parallel with said cylinder, and suitable connecting devices, substantially as set forth.

2. The cylinder G, provided with the cam-groove *a* and cam N, combined with the slide H and rock-shaft O, provided with arms *o'* and *q'*, whereby the knotter and holder are actuated.

3. The rock-shaft O, provided with the annular arm *o'* and cam *p*, combined with the shaft *m*, having the block *n* and the rotating cam N.

4. The knotter-shaft D, perforated axially to receive the shaft of the hook *g*, combined with the slide I, spring J, and bell-crank K, all mounted on the slide H, whereby the hook *g* reciprocates with said shaft D, but is independently opened and closed.

5. The knotter-shaft D, mounted upon the slide H, which is actuated by the cam *a*, the slide I, and the bell-crank lever K, combined with the guideway L, provided with the switch *l*, as and for the purpose set forth.

6. The hollow cylinder B, provided at its inner end with the pinion *b* and with a longitudinal guideway for the holder C, combined with the reciprocating shaft D, slide H, actuating-wheel F, cam G, slide I, bell-crank K, guide L, and switch *l*, substantially as set forth.

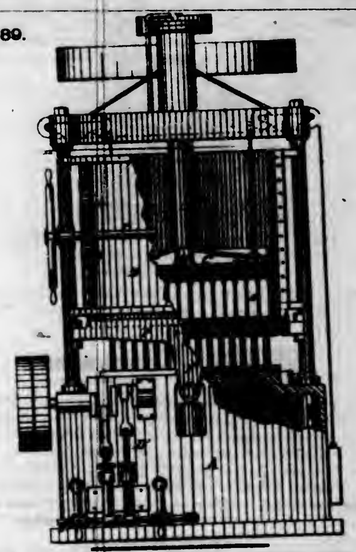
7. The holders C and *g*, each provided with a retracting-spring, and having a rod protruding from the rear end of the cylinder B, combined with suitable devices whereby said holders may be operated independently of the rotation of said cylinder.

260,088. CHARM FOR WATCH-CHAINS. WELLINGTON P. DOLLOFF, Providence, R. I. Filed Apr. 25, 1882. (No model.)

Claim.—In a charm for watch-chains, the combination of the stones B B with the intervening material, C, adapted to hold the stones against the setting-rims, and the setting-rims A A', made to fit one within the other, and having the outer rim, *a'*, turned down over the inner rim, *a*, substantially as described.

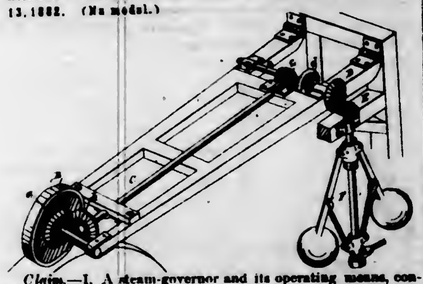
260,089. MECHANISM FOR FORMING TYPE-CASES FROM PAPER-PULP OR OTHER PLASTIC MATERIAL. JULIUS T. ROSEN, Cleveland, Ohio. Filed Nov. 9, 1881. (No model.)

Claim.—1. In a machine for the manufacture of type-cases from paper-pulp, the combination, with the frame, of a movable reservoir, an upper and a lower platen, each adapted to be moved independently of the other, and means, substantially as described, for increasing or diminishing the pressure of the platen, substantially as set forth.



2. In a machine for the manufacture of type-cases from plastic material, the combination, with the frame, of an upper and a lower platen, each adapted to move independently of the other, and a reservoir for containing the plastic material, and within which the upper platen moves, substantially as set forth.

3. In a machine for the manufacture of type-cases from paper-pulp, the combination, with the platens and frame, of a movable reservoir adapted to contain the pulp before molding, and to be raised out of the way to permit the withdrawal of the type-case after it is molded, substantially as set forth.



4. In a machine for the manufacture of type-cases from plastic material, the combination, with the forming-dies, of movable grooved casings, substantially as set forth.

5. In a machine for the manufacture of type-cases from paper-pulp, the combination, with the upper and lower casing, adapted to move independently of each other, of a series of forming-dies and grooved casings surrounding the latter, substantially as set forth.

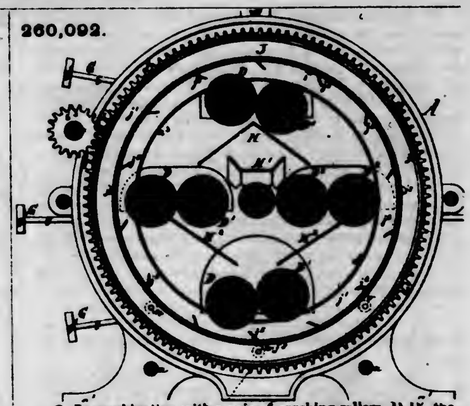
260,089.

260,090. DEVICE FOR OPERATING STEAM-ENGINE GOVERNORS. WILLIAM M. FERRY, Park City, Utah. Filed Apr. 13, 1882. (No model.)

Claim.—1. A steam-governor and its operating means, consisting of a hinged frame having journaled therein a transverse shaft carrying two beveled gears, which mesh with and connect similar gears upon the governor-standard and upon a longitudinal shaft having a beveled gear, which meshes with and connects a friction-wheel journaled in the hinged frame, the gravity of said frame and carried mechanisms serving to hold the said friction-wheel in contact with a fly-wheel or the like, substantially as set forth.

2. The hinged frame D, carrying transverse shaft *e* and longitudinal shaft C, the beveled gears, and the friction-wheel B, combined with the governor F, fly-wheel A, and friction-wheel B, the latter being journaled in the hinged frame and held in contact with the said fly-wheel by the gravity of the frame D, as and for the purposes specified.

260,091. CARPET-LINING. EDWARD A. GALBRAITH, Boston, Mass. Filed Apr. 6, 1880. Renewed May 13, 1882. (Model.)



Claim.—1. A sewed carpet-lining composed of an elastic filling and covering thereto, both sides of the covering being connected together by a lock-stitch, substantially as set forth.

2. A sewed carpet-lining composed of a fibrous filling and covering thereto, held together by a lock-stitch, and having creases on both sides at intervals apart, as set forth.

260,092. PULVERIZING MACHINE. REUBEN D. GATES, Chicago, Ill. Filed Mar. 1, 1882. (No model.)

Claim.—1. In a grinding or pulverizing machine, the combination, with a surrounding inclosing-case provided with supply and discharge passages, of a revolving screen, *f*, having its periphery formed of suitable screening material, and a pair of crushing-rollers arranged within the revolving screen and out of contact with the screening-surface, substantially as and for the purpose described.

260,092.

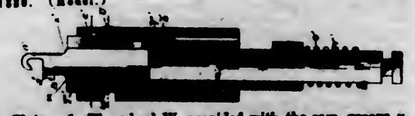
2. In combination with a pair of crushing-rollers, D D', the frame A A', the bearing E', and means for adjusting the same on said frame of the bearing E, means for adjustably securing the same upon the bearing E', the frame F, inclosing the two bearings, the spring *f'*, nut *g'*, and adjusting-screw G, substantially as and for the purpose described.

3. The revolving cylindrical screen *f*, provided with elevating-partitions *f'*, and the escape-passages *f''*, in combination with a pair of crushing-rollers arranged within the screen *f*, and acting to crush the substances independent of any crushing action by any portion of the cylindrical screen, substantially as described.

4. The combination of the revolving screen *f*, two pairs of crushing-rollers, D D' D D', with a guide-sieve for conducting ground substances from the one pair of rollers to the other, substantially as described.

5. The combination of the revolving screen *f* and three pairs of crushing-rollers, D D' D D' D D', with a guide-sieve which conducts substances from the first to the second pair of rollers and a guide-sieve which conducts substances from the second to the third pair of rollers, the finished substances being screened by the joint action of the sieves and revolving screen *f*, substantially as described.

6. The combination of the revolving screen *f*, crushing-rollers D D', and guide-sieves H H', substantially as and for the purpose described.



7. The combination of the distributing-chute H' with the upper sieve, H, and the upper pair of rollers, D D', substantially as and for the purpose described.

8. A revolving screen, *f*, having flanges *f'*, and friction-rollers *m*, in combination with an outer inclosing-case, A A', provided with guard-flanges *a'*, a supply-passage or hopper, K, and a discharge-passage, *a'*, substantially as described.

9. The combination of the revolving screen *f*, four pairs of crushing-rollers, D D' D² D³, guide-sieves H H', a central shaft, and gearing for revolving the rollers of the respective pairs in the proper directions, substantially as described.

10. The combination of an outer case, four pairs of crushing-rollers, D D' D² D³, the driving-gear C, and adjustable bearings outside the case with a revolving elevating-screen *f* within the case and surrounding the crushing-rollers, and suitable gearing for imparting motion to the respective pairs of rollers and to the screen, substantially as described.

260,093. AUTOMATIC GRAIN-BINDER. GEORGE F. GREEN, Kalamazoo, Mich., assignor to William H. Whiteley, Jerome Pessler, and Oliver S. Kelly, Springfield, Ohio. Filed Mar. 17, 1880. (Model.)

Claim.—1. The wheel W, provided with the cam-groove *y*, one part whereof is concentric to the axis and the remainder a long ellipse, and provided with the stud *d*, combined with the vibrating rack F', provided with stud *p*, to engage with said cam, the rotating barrel E', and the arm X, provided with the slot *e*, curved as described, and in engagement with the stud *d*, whereby the knotter and cord-carrier are operated with reference to the movements of each other.

2. The vibrating arm X, constructed with the longitudinal slot *e* in one end, said slot being curved with a radius equal to the radius of motion of its driving crank-pin *d*, whereby the cord-carrier is actuated, combined with the cam-wheel W, which carries said crank-pin *d*, the vibrating rack F', operated by the engagement of its stud with the cam on said wheel, whereby the cord-knotter is actuated in proper time, the stud *d'*, also carried by said wheel W, and the levers E' and M, whereby at the completion of the binding and delivery of a bundle the pinion D is uncoupled from the clutch *b* and the binding mechanism brought to rest.

3. In an automatic binder provided with a rotating knotting apparatus to fasten together the ends of the band, a train consisting of a driving-pinion, D, upon the driving-shaft, and a clutch, *b*, whereby said pinion is placed in or out of engagement with the shaft, an intermediate wheel, V, to diminish speed, a wheel, W, provided with a cam whereby to operate a vibrating rack, F', and actuate the pinion H', whereby the knotter is driven, a stud, *d*, in engagement with a slotted arm, X, on the shaft Y, whereby the band-carrier is driven, and a stud, *d'*, whereby the levers E' and M are actuated to move said pinion D out of engagement, as set forth.

4. In a cord-knotter for an automatic binder, the core W', bearing the looper-hook O', and provided with the pin *a'*, which projects in line with the gripper-hook N', whereby both of said hooks may be actuated by a single pusher-rod, I', as set forth.

5. The barrel T', to which is imparted a movement equal to one and one-half revolution, or thereabout, provided with a reciprocating holder-hook, N', to seize and hold the ends of the band, a neck, S', caused to reciprocate and rotate by the action of a stud traversing the concentric but dissimilar grooves *r w*, around which neck the turns of the band are made, the band being held at one side, and a looping-hook in the center of said neck and reciprocating in the center thereof.

6. A rotating knotting device for a cord-binder, combined with a reciprocating holder-hook, N', spring *b'*, and piston W', provided with a stud, *a'*, whereby said piston is made common to both the holder and looping hook, and the ends of the band are seized and carried with the said rotating device independent of the cutter and holder, which severs the cord and holds the end of the new band, as set forth.

7. The rotating barrel E', combined with the cylinder S', which has a rotation with said barrel during a part of the rotation of the same, and a reciprocation and pause during the remainder of the rotation of said barrel, and the looper-hook O', which rotates with said cylinder, but reciprocates independently thereof, as and for the purpose set forth.

8. The cylinder S', constructed with a neck and lip or flange, *s'*, and provided with a stud, U', combined with the sleeve T', which carries a clamp-hook, N', and is provided with a slot, *v*, as described, the stationary case V', provided with a groove, *w*, whereby the cylinder S' has imparted to it a rotation followed by a rectilinear movement, and the hook O', which rotates with said cylinder, but reciprocates independently.

9. The holder-hooks N' and O', each provided with a retracting-spring and terminating within the sleeve T', combined with a piston extending through said sleeve and protruding from its outer end, whereby said holder-hooks may be pushed forward or retracted at the proper times independent of the rotation of the sleeve, as set forth.

10. A device for knotting the cord of an automatic binder, constructed as a single structure and composed of an outer inclosing case, V', provided with the slot *w*, and adapted to be held in a proper seat in the frame of the machine, an inner rotary sleeve, T', provided with the slot *v* and bearing the hook N', and a central neck, S', provided with a stud, U', which engages with slots *v* and *w*, and is thereby intermittingly and alternately rotated, retracted, and left at rest, and the core W', bearing at its end the hook O', and provided with the pin *a'*, to engage the end of hook N', whereby both of said hooks may be simultaneously projected, the whole being bodily removable from the machine.

260,094. HOOD FOR STOVES. WILLIAM J. MAGUIRE, Connersville, Ind. Filed Apr. 28, 1882. (No model.)

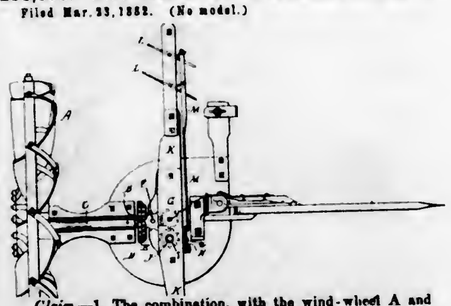
Claim.—1. The combination, substantially as set forth, of the stove A, pipe D, with a hood resting upon the stove-top and communicating with the stove-pipe, and a sliding apron, F, adapted to slide in the side pieces of said hood and to completely or partially close the front of said hood.

2. The combination, substantially as specified, of stove A and pipe D with the hood composed of shelf and back piece, B, wings E, and apron F, and the pipe C, connecting said hood and stove-pipe.

3. The combination, as hereinbefore set forth, of back piece, B, hinged wings E, having inwardly-projecting grooved flanges,

260,094.

with the flexibly-jointed apron F, adapted to slide in said grooves, and the roller G, supported in the sides of piece B.



260,095. JEWELRY-STOCK. CARL F. HECKMANN, Plainville, Mass., assignor to Joseph T. Bacon & Co., same place. Filed Mar. 10, 1882. (No model.)

Claim.—1. As a new manufacture for the ornamentation of jewelry, sheet-metal stock embossed to represent the interlaced strands of a braid composed of parallel threads or wires and provided with quadrangular perforations at alternate spaces between the represented strands, whereby when applied to an article of jewelry a contrasting surface may be shown at the quadrangular perforations, thus serving to imitate an article of jewelry covered with openly-braided strands of parallel threads or wires, substantially as described.

2. As a new article of manufacture, a bar-pin covered with the above-described embossed and perforated imitation-braid stock, substantially as described.

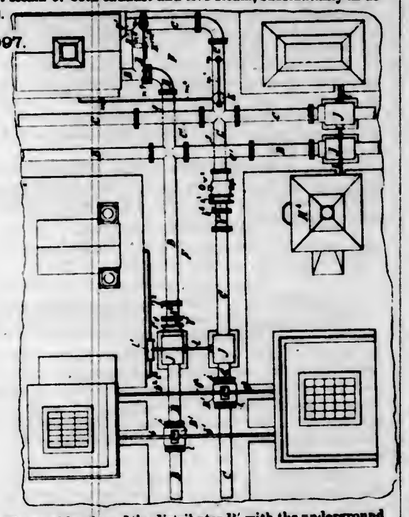
260,096. WIND-ENGINE. HARVEY N. HILL, Pontiac, Mich. Filed Mar. 23, 1882. (No model.)

Claim.—1. The combination, with the wind-wheel A and turn-table D, of the arm K, the wind-wings L, and connections, substantially as described, between said wings, and a governor deriving its motion from the rotation of the wind-wheel, substantially as and for the purpose specified.

2. The combination, with the wind-wheel A, the shaft B, a governor for controlling the movement of the wheel and the gear-wheel E, of the pinions F G I, all meshing in the order given for the purpose of operating the governor and conveying power from the wheel, substantially as described.

3. The combination, with the wind-wheel A, of the turn-table D, arm K, pivoted wings L, rod M, bell-crank N, rod O, slide P, and a governor deriving its motion from the rotation of the wind-wheel.

4. The combination, with the wind-wheel A, the turn-table D, arm K, wings L, rods M O, bell-crank N, slide P, and a governor, of the guide-plate R, and the pin *c* on the slide P, moving in said guide-plate, substantially as described.



260,097. APPARATUS FOR SUPPLYING STEAM IN CITIES. RUSSELL HOLLY, Lockport, N. Y. Filed Apr. 18, 1881. (No model.)

Claim.—1. In a street steam-heating system, the combination of a steam-generator with a high and a lower pressure steam-main, and with a pipe conveying steam from the high-pressure main to an engine, a pipe to convey exhaust-steam from the engine to the lower-pressure main, and a pipe to convey exhaust steam from the exhaust-main to the place of use, substantially as described.

2. The combination of the regulator E' with the two lines of underground steam street-mains B C, and a general steam-generator which supplies high-pressure steam to the one line, B, of the

mains, while the other line, C, of the mains is supplied with either exhaust-steam or both exhaust and live steam, substantially as described.

260,097.

3. The combination of the distributer B' with the underground street-receiving steam-mains B, pipes *b b'*, and a general steam-generator which supplies high-pressure steam to said receiving-mains, substantially as described.

4. The steam-distributors B', in combination with the receiving steam-mains B, exhaust-steam mains C, pipes *b b²*, and a general steam-generator which supplies high-pressure steam to said receiving-mains B, while the exhaust-mains C are supplied with steam by the exhaust from engines worked by the steam supplied from the mains B, substantially as described.

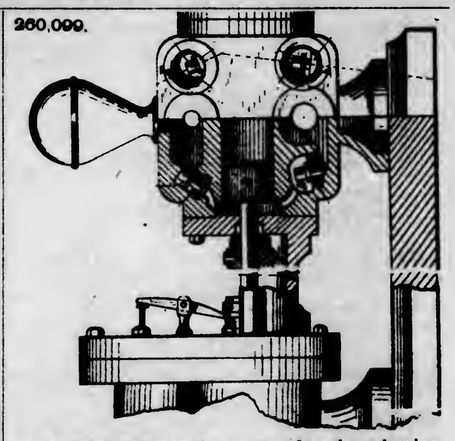
5. The combination of the pipe *l* with main C, pipe *b²*, pipe *b*, and main B, substantially as and for the purpose described.

6. In combination with the underground street-main C and the feed-water works of the high-pressure-steam-supplying apparatus, the automatic regulator, as at E, substantially as and for the purpose described.

7. In a street steam-heating system, the combination of a steam-engine, a street-main receiving steam from the engine, and a heater receiving low-pressure steam from the main, substantially as and for the purpose described.

8. In a street steam-heating system, the combination of a steam-main, an engine, means for conveying exhausted steam from the engine to the main, and means for conveying steam from the main to apparatus adapted for the use of said steam, substantially as and for the purpose described.

260,098. ROLLS FOR LONGITUDINALLY SLITTING RAIL-ROAD-RAILS. JAY HOLDS, Nora, Wis. Filed Mar. 30, 1882. (No model.)



Claim.—The combination of rolls A and B, spaced, as at *s*, and provided with the grooves *c*, *d*, and *f* and cutters *a b* and *h i*, as specified, whereby at one heating and by two passes four bars can be produced from a T-rail, as set forth.

260,099. STEAM-PUMP. CHARLES H. HUDSON, Hinsdale, Ill., and EDWIN SHEDLEY, Dubuque, Iowa. Filed Feb. 10, 1882. (No model.)

Claim.—1. The removable valve-seat adapted to be slid to place in its bed and to be slid out from its bed through a side opening, substantially as shown and described.

2. In combination with the side openings for inserting and removing sliding valve-seats, the screw-caps for such openings having glasses or windows therein, all substantially as described, and for the purposes set forth.

260,099.

3. In combination with dovetailed valve-seats adapted to be slid into and removed from beds having corresponding dovetailed grooves, removable caps serving to confine such seats to their position in the pump and to permit the removal therefrom of the seats and the valves, as shown and described.

4. In combination with the removable valve-seat and the valve carried thereon, a removable screw-cap, which, besides permitting the insertion and removal of the seat and its valve, serves also to hold the seat to place, as shown and described.

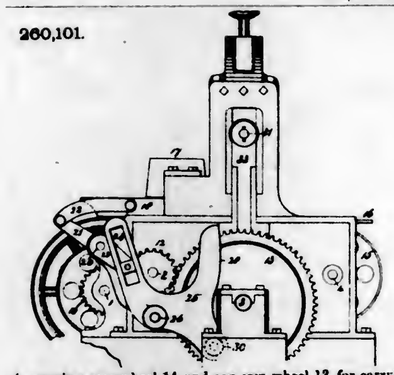
260,100. DEVICE FOR LIGHTING THE STEPS OF CARS OR CARRIAGES. GEORGE W. HUNT, Philadelphia, Pa. Filed May 11, 1882. (No model.)

Claim.—1. The combination, in a device for illuminating the steps of railway or other cars, of the light A and holes and glasses B, substantially as and for the purposes set forth.

2. The combination, in a device for illuminating the steps of railway or other cars, of the light A and holes and glasses C, substantially as and for the purposes set forth.

3. The combination, in a device for illuminating the steps of railway or other cars, of the light A, holes and glasses B, and holes and glasses C, substantially as and for the purposes described.

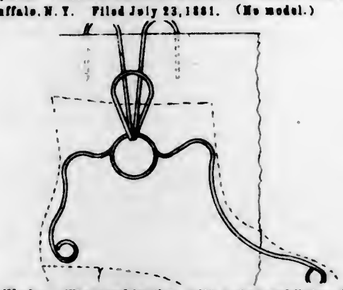
260,101. BRICK-MACHINE. WILLIAM H. JUDSON, Brockville, Ontario, Canada, assignor of one-half to Joseph Martin West, same place. Filed Sept. 1, 1881. (No model.)



Claim.—1. In a brick-machine, the combination of the sliding frame 18, having arms 23, rocking shaft 20, having arms 21, crank-arm 23, cam 25, having slot 24, stud 26, wheel 13, having friction-rollers 27 and 30, and cam 29, substantially as and for the purpose set forth.

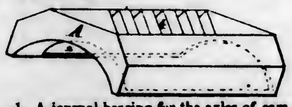
2. The cross-head 34, connected by a pipe, 46, with a steam-generator, and having steam-passages 41 jointly with the plungers 35, having steam-passages 42 at bottom to conduct steam to the molds, and steam-exits 44 on the sides for the purpose of lubricating the molds and giving plasticity to the clay while in said molds, substantially as set forth.

3. The combination of shaft 3, movable mold-bottoms 32, horizontal bar 36, sliding at each end in vertical grooves at the sides of the machine, movable mold-bottoms 32, mounted connectedly by said bar 36, friction-rollers 40, the cam-levers 37, carried by shaft 3, and having curved portion 45, cam-wheels 13, having cam-grooves 46 on their inner faces, and slides 33, having friction-roller at the lower end, and a journal-bearing, 31, jointly with cross-head 34, carrying plungers 35, and molds 17, substantially as and for the purpose set forth.



4. The combination of the belt-pulleys 15, mounted on shaft

260,101.

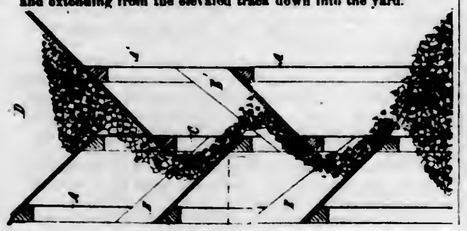


4, carrying gear-wheel 14, and cog cam-wheel 13, for carrying the bricks off table 16, as set forth.

260,102. SAMPLE-SHOE EXHIBITOR. OTTO F. LANGENBACH, Buffalo, N. Y. Filed July 23, 1881. (No model.)

Claim.—The combination, with a shoe-exhibitor, A, of the hook B, formed by bending a wire upon itself in the middle and then turning the bent end to form the front hook-loop, *d*, to receive the holder, the rear parallel prongs of the wire at the other end being bent backward and to the right and left to form the hooks *e e*, which are adapted to clamp the box on which they are suspended, substantially as set forth.

260,103. JOURNAL-BEARING. TUNIS V. LA ROY, Utica, N. Y. Filed Apr. 28, 1882. (Model.)

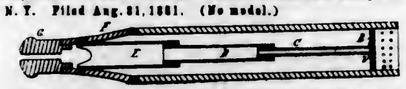


Claim.—1. A journal-bearing for the axles of cars or other vehicles, consisting of a shell, A, provided with the cavity *a* on its under side, and a series of openings, in combination with lead or other soft-metal filling.

2. A journal-bearing for car-axles, consisting of a shell, A, having a cavity, *a*, and a series of diagonal openings, *b*, in combination with soft-metal filling, the cavity, and diagonal openings, as and for the purpose set forth and described.

260,104. COAL-CHUTE. THOMAS H. LIPPARD, Brooklyn, N. Y. Filed Nov. 1, 1881. (No model.)

Brief.—The coal-chute is composed of inclined troughs alternately arranged one above another, supported on upright posts, and extending from the elevated track down into the yard.

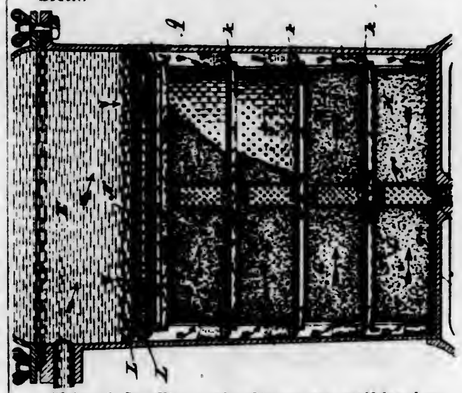


Claim.—1. The combination, with an elevated track for the coal-cars, of a coal-chute composed of a series of inclined troughs arranged in alternate order one above another, as shown, said chute extending from the track down into the yard, substantially as and for the purposes set forth.

2. The combination, with an elevated track, B, for the coal-cars, of the dumping-hopper D and the coal-chute composed of the supporting-posts and the inclined troughs E E', arranged in alternate order one above another and arranged to receive and deliver the coal from one into the other, substantially as and for the purposes set forth.

3. The combination, to form a chute, of the supporting-posts A, A', and C and the troughs E and E', said troughs being made tapering toward their discharging ends, and all arranged in the manner substantially as set forth.

260,105. TOBACCO-PIPE. GUSTAV LOCKHART, Tarrytown, N. Y. Filed Aug. 31, 1881. (No model.)

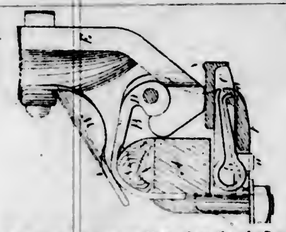


Claim.—1. In a pipe of the character herein set forth, the main exterior shell, the revolving end piece connected with said shell, the movable piston fitted to the interior bore, said piston being perforated, as explained, and carrying a screw-threaded section attached to and turning with the revolving end piece, and the washer *b*, all combined and arranged to operate substantially as shown and described.

2. The herein-described tobacco-pipe, composed of the main shell, the revolving end piece mounted thereon, the short screw-sections C D E, located in the tobacco-chamber, and the piston B, connected with the end piece and prevented from turning, substantially as shown and described.

3. In a tobacco-pipe of the character herein set forth, the main shell A, having perforations at the outer end, the section F, and mouth-piece G, perforated piston B, fitting the interior bore, screw-threaded sections C D E, and washer *b*, all combined and arranged to operate substantially as shown and described.

260,106. FILTER. OLIVER LODGE, Brooklyn, N. Y., assignor to Michael H. Hagerty, same place. Filed Nov. 8, 1881. (No model.)



Claim.—1. In a filter, a series of two or more purifying-chambers having foraminated walls and central eduction-tubes, the spaces between such walls and tubes being filled with charcoal or equivalent medium, said chambers being placed one above another in a vessel, leaving intervening liquid-spaces between them and annular or surrounding liquid-spaces, separated by packing, whereby liquid passing through said vessel has to travel from the periphery to the center of each chamber, substantially as set forth.

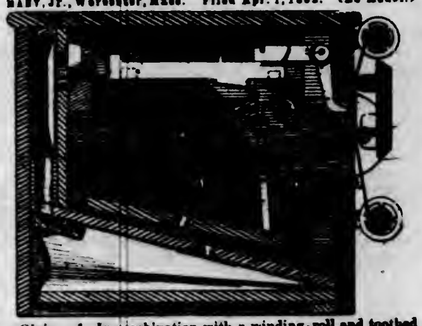
2. In combination with vessel A and purifying-chambers I G, the felt disks L L, for clarifying the liquid before admitting it to the purifying-chamber, said disks being elevated above the top purifying-chamber, leaving a space, I, between them and said chamber, and fitting tightly in the vessel A, substantially as set forth.

260,107. THILL-COUPLING. HENRY A LOTTMANN, Paterson, N. J. Filed Dec. 9, 1881. (No model.)

Claim.—1. The pointed projection V at the end of spring-cover C, in combination with the thill-iron E, to keep the thill-iron from sliding out of the coupling when the shafts are raised or supported in a raised position.

260,107.

2. Spring S, when placed so as to induce a rocking motion of cover C, in combination with cover C and thill-iron E.



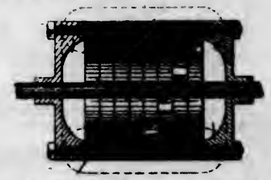
3. Cover C, formed with projections *a a*, in combination with coupling-box B.

260,108. EMERY-HOLDER. ABRAM N. MATTHEWS, Norwood, Mass. Filed May 20, 1882. (No model.)

Claim.—As an improved article of manufacture, the herein-described emery-holder, composed of the body *a*, having at one end a sieve and at its other end a head provided with an outlet, and of a cover to close the end of the body containing the sieve, and with a movable cap having a spout or discharge-passage applied to that end of the body, the head of which is provided with the outlet *c*, all as shown and described.

260,109. AUTOMATIC MUSICAL INSTRUMENT. JOHN MCTAMANY, Jr., Worcester, Mass. Filed Apr. 1, 1882. (No model.)

Claim.—1. In combination with a winding-roll and toothed wheel carried thereby, a reciprocating bar or bars arranged to operate said wheel, and forced against the same by spring-pressure, and means for retracting the said bar after its forward movement, substantially as and for the purpose set forth.



2. In combination with the winding and rewinding rolls of a music-sheet and a ratchet-wheel carried by the shaft or gudgeon of the former, a pair of reciprocating bars acting alternately on said ratchet, a pair of springs acting to force said bars against said ratchet, and a rotating block or wheel carrying teeth which alternately force said bars back against the resistance of their springs.

3. A pair of slotted toothed bars acting on the ratchet-wheel of the winding-roll, as stated, in combination with a fixed stud which enters the longitudinal slots of said bars, a pair of springs which force said bars forward, and a rotating block or toothed wheel which forces back said bars against the resistance of said springs, substantially as and for the purpose set forth.

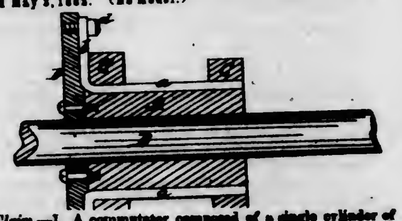
4. The combination of a set of point-carrying levers or castings weighted at their rear ends, with sliding vertically-movable valve-operating bars on which said weighted ends rest, springs for raising the forward ends of said bars, and a fluted roll adapted to operate said bars when lowered by the weighted ends of said levers, substantially as set forth.

260,110. ARMATURE FOR DYNAMO-ELECTRIC MACHINES. JAMES J. MCTIGHE and THOMAS J. MCTIGHE, Pittsburg, Pa. Filed Mar. 28, 1882. (No model.)

Brief.—The armature-core is formed of a number of rings, each provided with a slit of sufficient width to permit a coil to pass therethrough. To place the coils on the core the slits are all brought into line, and after the coils have been placed thereon the rings are turned so as to bring the slits to different circumferential points. The coils are then locked into place, and by a proper adjustment of the rings the armature may be balanced. The whole is securely held by end plates and bolts.

Claim.—1. In an annular armature, a core composed of a number of slitted rings, each capable of independent adjustment around its axis, substantially as described.

2. In an annular armature, a core composed of a number of slitted rings of soft iron, each capable of independent adjustment around its axis, substantially as described.



3. In an annular armature, a core composed of a number of incomplete rings, each having a single dividing-excision and being capable of independent adjustment around its axis, in combination with longitudinally-arranged rods or bars capable of locking said rings against movement around their axes, substantially as described.

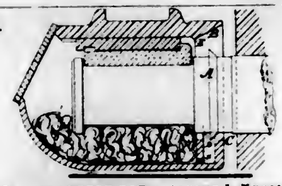
4. An annular armature composed of a number of slitted rings circumferentially adjustable, a series of coils placed on said rings, and two or more longitudinal bars or rods binding said rings together, substantially as described, whereby the slits may be brought in line, the coils inserted, the rings adjusted circumferentially to throw the slits out of line, and then the rings locked in such position by the said bars or rods.

5. In an annular armature, a core composed of a number of incomplete rings, each having a single slit and circumferentially adjustable on its axis, in combination with diamagnetic heads and longitudinal rods or bars connecting said heads and rings together, substantially as described.

6. In an annular armature, a core composed of a number of incomplete rings, each having a single slit and circumferentially adjustable on its axis, in combination with longitudinal rods or bolts and heads having inward projections abutting against the rings and constituting spacing-blocks for the coils, substantially as described.

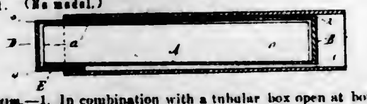
260,111. COMMUTATOR FOR DYNAMO-ELECTRIC MACHINES. JAMES J. MCTIGHE and THOMAS J. MCTIGHE, Pittsburg, Pa. Filed May 3, 1882. (No model.)

Claim.—1. A commutator composed of a single cylinder of insulating material, having one or more integral collars perforated longitudinally with a circular series of holes, in combination with a series of metal rods or bars placed in said perforations and retained by the collar or collars, substantially as specified.



2. A commutator composed of a single cylinder of insulating material, A, having one or more integral collars, C, perforated longitudinally with a circular series of holes, in combination with a series of metal rods or bars, *a*, placed in said perforations, and having the extensions *b*, a head, D, of insulating material, clamping the extensions *b* against the cylinder A or collar C, and screws *d*, substantially as described.

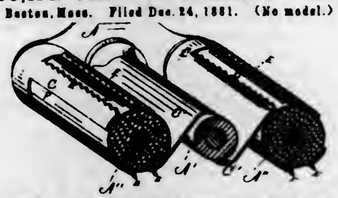
260,112. CAR-AXLE BOX. HENRY HILDEBRAND, Cumberland, Md. Filed Apr. 10, 1882. (No model.)



Claim.—1. The combination, with the journal-box having the upper inwardly-inclined surface, B, terminating in point B, of the axle provided with the collar A, whereby the lubricant thrown upon the surface B is conducted down upon the journal, as specified.

2. The combination, with the journal-box having the inwardly-inclined surfaces B C, cavity D, and hole *c*, of the axle provided with collar A, whereby the lubricant is returned to the journal and box, as specified.

260,112.



260,113. CIGARETTE-BOX. ALBERT L. MUNSON, New York, N. Y., assignor to Louis H. Todd, same place. Filed Dec. 7, 1881. (No model.)

Claim.—1. In combination with a tubular box open at both ends, an interior sliding box arranged to be folded from a flat blank, and provided with an overlapping cover extending from one end thereof over its entire length, around the other end, closing it, and secured underneath it by means of a short flap turned inwardly between its bottom and the bottom of the tubular box, all substantially as and for the purposes as herein shown and set forth.

2. In combination with the tubular cover C, open at both ends, the interior sliding box (formed from a flat blank,) having bottom A and sides *a b*, overlapping cover C C', extending from the closed end B, and provided with end piece, D, and securing-flap E, all substantially as and for the purposes as herein shown and set forth.

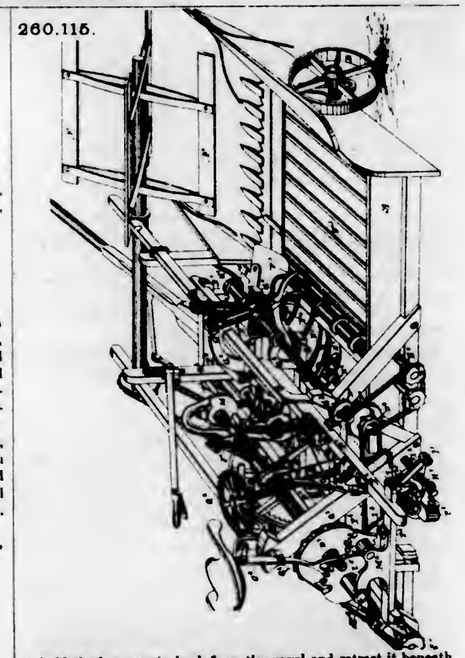
260,114. PEDAL FOR VELOCIPEDES. JOSEPH S. MURRAY, Boston, Mass. Filed Dec. 24, 1881. (No model.)

Claim.—The herein-described improved rat-trap pedal-slipper for bicycles, tricycles, and other velocipedes, consisting of the part C, adapted to embrace one of the rubber cushions A'', and provided with one or more openings D and sets of teeth E, and the part C', adapted to bear against the central bar, A', constructed substantially as and for the purpose set forth.

260,115. GRAIN-BINDER. JOHN D. NIX, Mount Vernon, Ill. Filed June 29, 1881. (Model.)

Claim.—1. In a grain-binder, the combination of a reciprocating divider and a reciprocating binder-arm moving together and located under the machine, a horizontally-traveling apron, a slightly upwardly inclined table having an opening for the passage of both the divider and the binder-arm, and a hatchway at the upper end of the table for the depositing of the sheaf under the machine, substantially as and for the purpose specified.

2. In a grain-binder, the combination of a horizontal traveling apron, a slightly-inclined table at the end of the apron, provided with an opening for the passage of a reciprocating divider and binder-arm, a ribbed roller between the apron and table, and fingers for carrying cut grain from the apron over the roller onto the table, substantially as set forth.



3. In a grain-binder, an elastic laterally-expansible finger for feeding the grain to the binder-arm, substantially as set forth.

4. In a grain-binder, the combination of a grain-feeding finger having a slot between its ends at an angle to its length, a boxing fitting within said slot and having connected thereto the shaft which operates the finger, and a spring acting on the finger to retract the same after it has been laterally expanded, substantially as set forth.

5. In a grain-binder, the combination of a series of grain-feeding fingers, each having a longitudinal slot near its upper end and a transverse slot, a boxing fitting within the transverse slot of the finger, and having connected thereto a shaft for operating the fingers so that they alternately will feed forward the grain, a spring acting on the finger to retract the same after it has been laterally expanded, and a rod passing through the upper ends of the fingers to serve as guides for the same, substantially as set forth.

6. In a grain-binder, a reciprocating divider for separating a gavel from the loose grain, located under the binding-table and operated by means which project it up above the face of the table

260,116.

to hold the loose grain back from the gavel and retract it beneath the table when another gavel has been formed, in combination with fingers for packing the grain against the divider, and when a gavel has been formed and the divider retracted moving the gavel forward, substantially as set forth.

7. The crank-shaft H' and slotted divider H, in combination with binder-arm H³ and shaft H', the divider H having a loose connection with shaft H', whereby the divider and binder-arm are adapted to operate as set forth.

8. The shafts H' H⁴, binder-arm H³, and divider H, in combination with gears I⁴ I³ and connecting-rods, whereby the binder-arm and divider are intermittently held stationary and reciprocated, substantially as set forth.

9. In a grain-binder, the combination of a table for receiving the grain, a guard for holding the grain down upon the table, a divider adapted at one time to check the progress of the grain and at another time to permit its progress, and fingers for packing the grain against the divider and afterward, when the divider is retracted, moving the grain forward, substantially as set forth.

10. In a grain-binder, the combination of a table for receiving the grain, a guard for holding the grain down upon the table, a divider adapted at one time to check the progress of the grain and at another time to permit its progress, fingers for packing the grain against the divider and afterward, when the divider is retracted, moving the grain forward, and a binder-arm for lifting and carrying the grain onward under the guards to the binder-head, substantially as set forth.

11. In a grain-binder, a series of fingers or dividers adapted to be projected between the gavel and sheaf and moved in opposite directions, so as to draw the gavel and sheaf apart from each other, substantially as set forth.

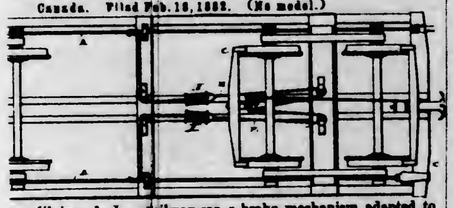
12. The shaft E², provided with a cam, O, and shaft N, carrying the compressor-finger N', in combination with dividers N² N³ and pitman N⁴, whereby as the compressor-finger is retracted the dividers will move away from each other, substantially as and for the purposes set forth.

13. The dividers N² N³ and compressor-finger N', operated as described, in combination with the sector-rack, twister, and cutter, binder-arm, and gears L³, M, I⁴, and I³, whereby as the binding-strand is twisted and cut the compressor-finger is retracted to let the sheaf pass from the machine and the dividers effect a division in the grain, and as the binder-arm recedes the compressor-finger and dividers return as they were, substantially set forth.

14. In a grain-binder, the combination of a reciprocating divider adapted to alternately hold back the grain and permit it to be moved forward, a binder-arm to carry the gavel from the divider to the binder-head while the divider remains at rest, a device to bind the strand about the gavel, a knife to sever the sheaf from the reel of binding-strand, and a divider for drawing the gavel and sheaf apart from each other, substantially as set forth.

15. In a grain-binder, the combination of an apron for receiving the cut grain, a table onto which the grain is passed from the apron, reciprocating fingers for feeding the grain over the table, a divider for holding back the grain packed against it by the fingers, and at times permitting the grain to move past it, a binder-arm for carrying the grain to the binder-head, a device for securing the binding-strand about the gavel, a knife for cutting the binding-strand, and a divider for drawing the gavel and sheaf apart from each other, substantially as set forth.

16. The hollow cylindrical twister K, provided with the tooth K', formed, as shown, with the pendent portion K*, on the opposite sides of which, in the top face of the twister, are the slots 1 and 2, substantially as and for the purposes set forth.



17. In a grain-binder, the combination of a slotted binder-head, a slotted twister housed therein, a knife adapted to slide across the twister and cut the strand, a rack for moving the twister and provided with an arm for moving the knife, and means for actuating the rack so that it will move one of the slots in the twister away from the slot in the binder-head and bring the other slot opposite thereto, and then revolve the twister so as to twist the strand and slide the knife so as to cut it, substantially as set forth.

18. In a grain-binder, the combination, with a slotted binder-head, of a slotted twister and means for turning the twister so as to move one of its slots away from the slot in the binder-head and bring the other slot opposite thereto, and then reverse the movement of the twister and revolve it so as to twist the binding-strand, substantially as set forth.

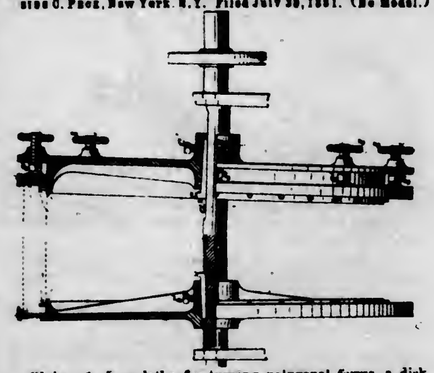
19. The combination of slotted twister K and knife K⁵, housed in the binder-head J⁴, sector-rack L, provided with pivoted and spring-actuated arms M² and studs M³, gear M, and gear I,³ and crank connecting it with the sector-rack, whereby the twister is operated and the wire cut, substantially as set forth.

20. The combination of gears L², M, I⁴, and I³, sector-rack L, twister K and knife K⁵, binder-arm H⁴, divider H, and their shafts, and the lever-rods which connect the sector-rack, divider, and binder-arm with the gears, whereby the respective parts will divide, carry forward, and bind the grain and sever the sheaf from the reel of binding-strand, substantially as set forth.

260,116. CAR-BRAKE. WILLIAM MURSH, Toronto, Ontario, Canada. Filed Feb. 18, 1882. (No model.)

Claim.—1. In a railway-car, a brake mechanism adapted to operate simultaneously all the brakes of the series of a train of cars, the horizontal rod A, chain E, and brake-levers, combined with the cushioning device I, composed of the spring *d*, set within the cage *a*, having a fixed base-plate, *b*, and a movable plate, *c*, and with the spindle *f*, all operating as and for the purposes specified.

2. In railway-car brakes, substantially as described, the rod A, chain E, and cushioning device I, combined with the bar *g*, connected by joint *h* to the rod A of one car, the sleeve *i*, having flaring interior and socket *i'*, the said socket adapted to receive the end of the rod A of the adjacent car, and the securing means *j*, all operating as and for the purpose set forth.

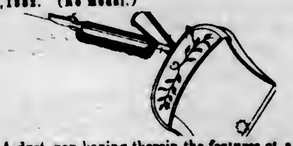


260,117. CIGAR-TIP CUTTER. RICHARD N. OAKMAN, Jr., Turner's Falls, Mass. Filed May 16, 1882. (No model.)

Claim.—1. The combination, with the angular telescoped tubes, of the expansive spring, the knife provided with one or more abutting shoulders, and an internal plate serving as an abutment for the spring and as a stop for preventing the separation of the tubes, substantially as described.

2. The combination, in a cigar-tip cutter, of the angular telescoped tubes, the spring, an interior sliding stop, and a concealed stop-plate, which serves as an abutment for the spring and internally connects said tubes against longitudinal separation, substantially as described.

260,118. LATHE FOR TURNING POLYGONAL FORMS. CARLOS C. PECK, New York, N.Y. Filed July 30, 1881. (No model.)



Claim.—1. In a lathe for turning polygonal forms, a disk adapted to receive the ends of a series of blanks, when provided with an elastic gasket for the purpose, and substantially in the manner designated, in combination with an opposing disk or abutment for receiving and supporting the opposite ends of the series of blanks, substantially as herein set forth.

2. In a lathe for turning polygonal forms, an adjustable securing ring or flange mounted upon a cylindrical shoulder formed upon a suitable disk, and adapted to receive the ends of a series of blanks, when provided with an elastic gasket for the purpose, and substantially in the manner described, in combination with an opposing disk or abutment for receiving and supporting the opposite ends of the series of blanks, substantially as herein set forth.

3. In a lathe for turning polygonal forms, provided with an adjustable securing-ring, mounted upon a cylindrical shoulder formed upon a suitable disk adapted to receive the ends of a series of blanks, a series of set-screws provided with bearings on said disk, with their longitudinal axes parallel with that of the lathe-center, for the purpose of forcibly adjusting and sustaining the securing-ring, substantially in the manner described, in combination with an opposing disk or abutment for receiving and supporting the opposite ends of the series of blanks, substantially as herein set forth.

4. The temporary sustaining device adapted to support the blanks during the operations of filling or removing the blanks from the apparatus, or while turning the blanks upon their longitudinal axes, substantially in the manner and for the purposes set forth, consisting essentially of an endless belt suspended upon a pulley attached to a weighted lever that automatically adapts itself to and renders the said belt taut when in use, and whereby the operations of filling, adjusting, and removing may be performed without reversing the motion of the apparatus, substantially in the manner and for the purposes described.

260,119. DUST-PAN. SAMUEL M. PERRY, Plainfield, N.J. Filed Mar. 17, 1882. (No model.)

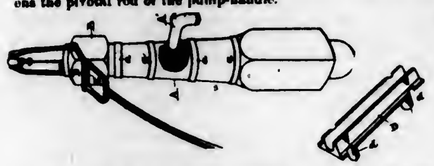
Claim.—1. A dust-pan having therein the features of a bottom, sides, open front, and a short undetachable handle, in combination with an open socket, or socket recessed in such manner that when the pan rests upon the floor a straight detachable handle can be inserted in said recess, the said handle being entirely supported thereby in a nearly upright position, for purposes herein before set forth.

2. The combination of a spring or other gripping-fingers with the long detachable handle of a dust-pan, whereby a brush may be supported by the same in a convenient position, for purposes herein set forth.

3. A hood or cover for the back of a dust-pan, as formed and finished separate or detachable from the pan, consisting of the japanned or ornamented surface, with a portion of its side and back edge turned down and a portion of said edge turned under, substantially as hereinbefore set forth.

4. The combination of a movable suspension ring or hook with the front edge of a dust-pan, for purposes herein set forth.

260,120. DETACHABLE HANDLE AND LEG FOR DUST-PANS. SAMUEL M. PERRY, Plainfield, N. J. Filed Dec. 8, 1879.



Claim.—1. A detachable handle for common household dust-pans, formed with a leg or legs to extend below the bottom of the back wall of pan when said handle is so arranged as to be clamped or buttoned to the outside of back wall of pan, substantially as hereinbefore set forth.

2. In combination with the rear part of an ordinary dust-pan, a detachable support or legs to raise the back portion of said pan, substantially as hereinbefore set forth.

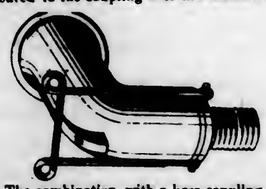
3. The combination, with a detachable handle for dust-pans, of the legs or feet and handle, for purposes specified.

260,121. PUMP. CHARLES POWELL, Toronto, Ontario, Canada. Filed Jan. 28, 1882. (No model.)

Brief.—The tightening of the holdfast-bolts not only retains the bearing-box in its position, but simultaneously grasps and tightens the pivotal rod of the pump-handle.

Claim.—1. The tapering wooden stock A, provided with bands *a*, and with a detachable spout, A', in combination with the enlarged head B, adapted to carry the pivotal box of the pump-lever, and provided with a neck to fit into a recess in the top of the pump-stock, substantially as described.

2. The combination, with the wooden stock A, having a recess in its upper end, of the enlarged head B, provided with a neck to fit into the recess in the stock, and adapted to support the pump-handle, substantially as described.



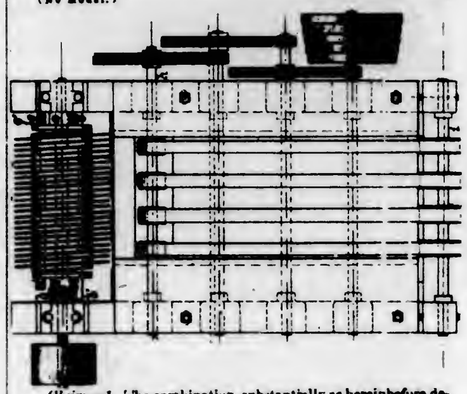
3. The combination, with a wooden pump and the bearing-box D, having a horizontal groove, of the hook-bolts F, handle-rod E, and means, substantially as described, to prevent the lateral movement of the bearing-box, as and for the purpose specified.

4. In a wooden pump provided with a swinging handle for operating the plunger-rod, a metal bearing-box having a horizontal groove formed in its front surface to receive the pivotal rod of the pump-handle, and projecting studs on its opposite side to fit into the wood-work of the pump, in combination with a fastening arranged to simultaneously hold the pivotal rod and bearing-box in their respective positions.

5. In a wooden pump provided with a swinging handle for operating the plunger-rod, a metal bearing-box having a horizontal groove formed in its front surface to receive the pivotal rod which supports the pump-handle, in combination with a fastening arranged to simultaneously hold the pivotal rod and bearing-box in their respective positions.

260,122. ATTACHMENT FOR CONNECTING HOSE TO PUMP-SPOUTS. CHARLES POWELL, Toronto, Ontario, Canada. Filed Jan. 26, 1882. (No model.)

Brief.—The hose-coupling is held to the spout by drawing the bail which is secured to the coupling over the inclined surface of the spout.



Claim.—1. The combination, with a hose-coupling, of a bail pivoted thereto, and a discharge-spout having a curved or inclined surface adapted to tightly draw the bail upward when said bail is pressed over the spout, substantially as and for the purpose specified.

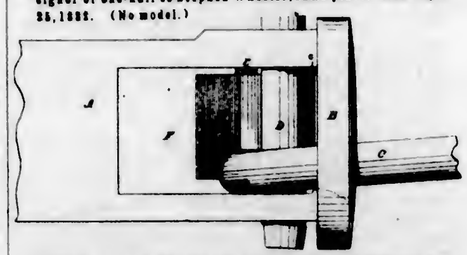
2. In combination with a discharge-spout having an outwardly-inclined top surface, a bail pivoted to a coupling arranged to fit the mouth of the spout, the corner of the said bail being twisted or curled to permit the bail to spring while being pressed upon the spout, as and for the purpose herein specified.

3. In combination with a discharge-spout having an outwardly-inclined top surface, a bail with twisted or curled corners, and a roller placed on the bail between them, the ends of the bail being pivoted to a coupling arranged to fit the mouth of the spout.

260,123. GRANULATING-MACHINE. JACOB READ, Yonkers, N. Y., and SAMUEL C. BURDICK, Orange, N. J. Filed Dec. 30, 1881. (No model.)

Claim.—1. The combination, substantially as hereinbefore described, of a gang of granulating-saws having splitting or ripping teeth and a bed for supporting the material to be granulated while presenting it to the saws.

2. The combination, substantially as hereinbefore described, of a gang of wabbling circular ripping-saws and a bed for supporting the material to be granulated while presenting it to the saws.



3. The combination, substantially as hereinbefore described, of a gang of wabbling ripping-saws and a bed provided with feeding mechanism for progressively presenting to the saws the material to be granulated.

4. The combination, substantially as hereinbefore described, of a gang of wabbling ripping-saws and a bed provided with variably-operated feeding mechanism, whereby the solid mass of material to be granulated may be fed to the saws with practical uniformity, regardless of its progressively-diminished weight.

5. The combination, substantially as hereinbefore described, of a gang of wabbling ripping-saws and a bed provided with side plates for laterally confining the mass of material to be granulated in presenting the same to the saws.

6. The combination of the arbor and the gang of wabbling circular ripping-saws simultaneously adjustable to any desired inclination on said arbor, substantially as described.

260,124. CAR-COUPLING. ALVAH RICH, Rochester, N. Y., assignor of one-half to Stephen Wheeler, same place. Filed Apr. 25, 1882. (No model.)

Claim.—1. The bumper-head A of a car-coupling device, provided with a bumper-ring, B, projecting laterally from the side of the bumper-head, and a gate, *b*, hung to said bumper-ring outside of the head and in such a manner that it may be swung into the opening F of the bumper-head, said gate being provided with the downward projection A, substantially as and for the purpose set forth.

2. In combination with the bumper-head A of a car-coupling device, having an opening, F, a link, C, and pin D, a gate, A, hung at one side of the head and so as to be swung into or out of the opening F, said gate being provided with a friction-piece, *r*, to bear against the head, substantially as shown, and for the purpose set forth.

3. The open bumper-head A of a car-coupling device, provided with a projecting bumper-ring, B, and a gate, A, hung to said bumper-ring at the rear side thereof and in such a manner that it may be swung into the opening F of the bumper-head, said gate being provided with the curtain or downward-projecting part A and friction-piece *r*, to bear against the head for the purpose of forming a tension for the gate, substantially as shown, and for the purpose set forth.

260,125. CURTAIN-HOLDER. WILLIAM B. BUNICK, Chicago, Ill. Filed Jan. 27, 1882. (No model.)

Brief.—A crescent-shaped piece of fabric suspended from loops attached at the ends to its inner margin.

Claim.—1. A curtain-holder consisting of a crescent-shaped piece of fabric provided with means for suspending the same from a suspending-hook, and applied thereto in such manner that the draft shall be along the inner margin of said crescent-shaped piece, substantially as described.

2. A curtain-holder consisting of a crescent-shaped piece of ornamental fabric suspended from loops connected to its inner coils or margin, substantially as described.

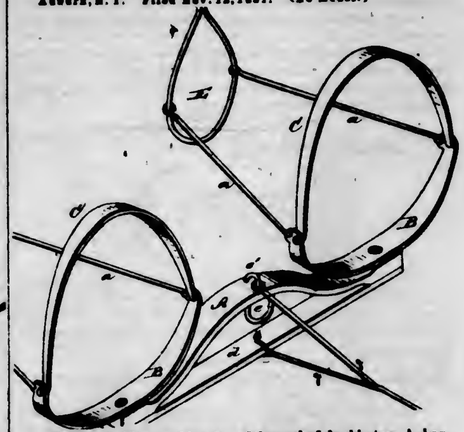
260,126. HINGED-SHOE BUTTON. MERRITT B. SCOTT and WILBER F. HILL, Manchester, Conn. Filed Apr. 26, 1882. (No model.)

Claim.—1. In a hinged-shoe button, a button, A, and shank B, permanently fastened to said button, and shoe C, pivoted at its center to a fixed pivotal bearing, combined with a locking-block having a movement to and from the shoe independent of the shank to lock and hold said shoe positively, substantially as set forth.

2. In a hinged-shoe button, a button-plate, A, a hollow shank, B, fixed permanently to said button, a pivotal stud, D, also fixed permanently to the button, and a shoe, C, pivoted at its middle to said stud, combined with a positive locking-block, E, with a notch, *f*, moving on said stud and in said shank as a bearing and guide, and an impelling-spring, whereby said shoe is locked in transverse position, as set forth.

3. The combination to constitute a hinged shoe-button—to wit, a button, A, a hollow shank, B, fixed permanently to said button, a stud, D, also fixed permanently to said button, central as to said shank, a shoe, C, pivoted to said stud, a block, E, with locking-notch *f*, and springs G G beneath said block, within said shank, substantially as set forth.

260,127. PROPORTIONAL BALANCE. CHARLES SETHOUS, Defiance, Ohio, assignor to Defiance Machine Works, same place. Filed Feb. 28, 1880.



Brief.—The scale-pan is rigid with the beam and is adapted to hold knives for rotary cutter-heads in different positions, so that they may be not only made equal in weight but that the weight of their corresponding parts may be equalized also.

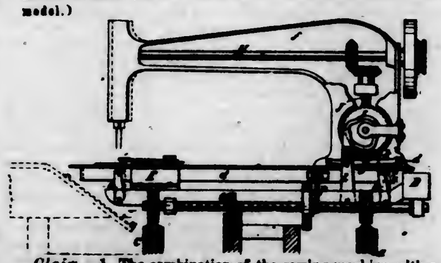
Claim.—1. The combination, with the scale-beam A and the frame *b c*, in which it is pivotally hung by a knife-edge, *a*, of the right-angle platform *d*, having a vertical wall above the beam, at one end of the beam, and the weights *e* at the opposite end of the same, substantially as and for the purpose specified.

2. The combination, with the scale-beam A, the supporting-frame *b c*, and the right-angle platform *d*, of the oblong weights *e e*, having holes near one end and adapted to be changed in their positions on the beam, whereby they may be secured above or below the beam, according to the weight of the articles being weighed, substantially as and for the purpose specified.

260,128. PLOW AND WORK HARNESS. ALLEN SHERWOOD, Auburn, N. Y. Filed Nov. 12, 1881. (No model.)

Claim.—1. The combination of the arched double-tree A, having auxiliary brace *d*, with single-trees B B, pivoted on top of the double-tree and adapted to oscillate on a plane parallel therewith, substantially as and for the purpose set forth.

2. The arched double-tree A, provided with the auxiliary brace *d* and staple *e*, in combination with double-trees B B, rods *a a*, connections *g g'*, and hames E E, all constructed and arranged to operate substantially as and for the purpose set forth.



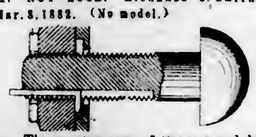
260,129. PRESSURE-REGULATOR. NATHANIEL SLEEMAN, Birmingham, Conn. Filed Mar. 18, 1882. (No model.)

Claim.—1. In a gas-pressure regulator, the combination of the shell A and the float B, having at its lower rim the inwardly-turned bottom plate, *b*, with the perforations *b²* and upwardly-extending annular flange *b'*, together with the tube D, the stem or rod C, the annular double valve G, and the diaphragm E' of the globe E, all substantially as described, and for the purpose specified.

2. In a gas-pressure regulator, the combination of the shell A, float B, tube D, stem or rod C, annular double valve G, and the globe E, having inlet *c'*, outlet *c²*, and diaphragm E', with the central orifice, *c*, and the surface *c³*, inclined as described, all as and for the purpose specified.

260,130. MACHINE FOR SEWING HEAVY MATERIALS. EARLE H. SMITH, New York, N. Y. Filed July 5, 1881. (No model.)

Claim.—1. The combination of the sewing-machine with a support, B, by means of links *a*, substantially as specified.

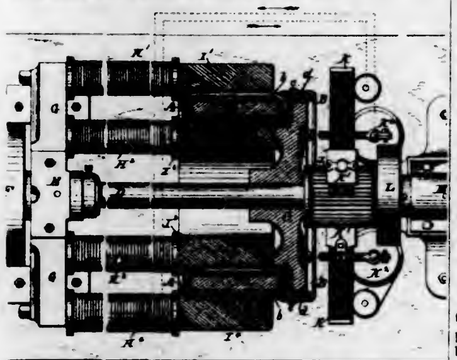


2. The combination, with a sewing-mechanism adapted to reciprocate laterally and a support, B, of a bridge, E, to sustain the seam-guides, substantially as and for the purpose specified.

3. The combination, with the sewing mechanism and a support, B, of a cam, I, and a lever, L, for imparting a lateral reciprocating movement, as set forth, whereby to carry the sewing de-

vices from side to side as the sewing progresses, for the purpose specified.

4. In combination, a sewing-machine carriage supporting a movable sewing mechanism, a cam and lever for reciprocating the sewing mechanism laterally as to the feed, seam-guides for presenting the work to the vibrating needle or needles, and means of supporting and holding the guides fixedly with respect to the lateral movement of the sewing mechanism.



260,131. NUT-LOCK. RICHARDS C. SMITH, Baltimore, Md. Filed Mar. 3, 1882. (No model.)

Claim.—The combination of the grooved bolt, the locking-pin, the nut provided with recesses for engagement by the pin, and the washer having the recess around the bolt-hole to receive the shoulder at the inner end of the locking-pin, substantially as hereinbefore set forth.

260,132. DYNAMO-ELECTRIC MACHINE. ELMER A. SPERRY, Cortland, N. Y. Filed Dec. 22, 1880. (No model.)

Brief.—The field-magnets project from a common base, and are provided with polar extensions so arranged as to leave an annular space, within which a cylindrical armature of the Gramme type rotates. The field-magnets have like poles opposed to each other. The armature is attached by its edge to a disk fixed on the shaft of the machine, a ring of insulating material being interposed between the armature and disk. The position of the brushes is regulated by a centrifugal governor on the shaft.

Claim.—1. In a dynamo-electric machine, the combination, with the stationary helices H' H' H' H', having cores all projecting in the same direction from a common base or yoke, and provided with the separate curved pole-pieces, said pole-pieces being arranged in pairs of similar polarity, and one pole-piece of each pair partially embraced by but separated by an intervening space from its fellow, of the annular armature A, having its surface of greatest width parallel with its axis and wound with transverse coils, said armature being suitably supported and arranged to rotate between the pole-pieces of each pair, and a commutator connected with the coils of said armature, substantially as described.

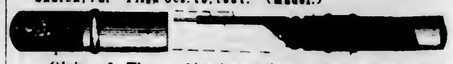
2. In a dynamo-electric machine, the separate pole-pieces, arranged in pairs of similar polarity, the inner opposite margins of the pole-pieces of each pair projecting toward each other, in combination with the annular armature supported at one edge and projecting into the spaces between the pole-pieces of each pair, the arrangement being such that both sides and the greater portion of the free edge of the armature are presented to the pole-pieces, substantially as described.

3. In a dynamo-electric machine, the combination, with a transversely-wound annular armature, having an iron core, *a*, the disk C, and radial commutator-conductor B, of an insulating-ring, *d*, and binding-screw *e*, substantially as described.

4. In a dynamo-electric machine, the combination of the governor L, located on the shaft of the machine and provided with a system of weights and levers, as described, the rod *l* and spring *l'*, and the commutator-brushes and connecting mechanism, whereby the movement of the brushes is controlled, substantially as described.

5. In a dynamo-electric machine, the combination of the governor L, mounted on the shaft of the machine, the rod *l*, spring *l'*, lever *m*, rod m^4, bell-crank lever m^3, and rod m^5, with the commutator-brushes K and their clamps, all arranged substantially as set forth, for the purpose specified.

6. In a dynamo-electric machine, the combination of the transversely-wound annular armature, the insulating-ring, and the supporting-disk with the connecting-bolts, substantially as described



260,133. APPARATUS FOR BRAZING METALS. JOHN C. STEVENS, Natick, Mass. Filed May 12, 1881. (No model.)

Claim.—1. In an apparatus for brazing saw-blades and similar articles, the combination, with the bed-plate and clamps thereon, of a receptacle and support therein for the meeting ends of the blade, whereby the said ends are maintained in line with one another while acted upon by a flame to melt the soldering material, substantially as described.

2. The combination of the bed-plate and its guiding-ridge and the clamps thereon with a charcoal-receptacle and adjustable blade-support therein, substantially as and for the purpose set forth.

260,134. FOUNTAIN PEN-HOLDER. MARVIN C. STONE, Falls Church, Va. Filed Oct. 15, 1881. (Model.)

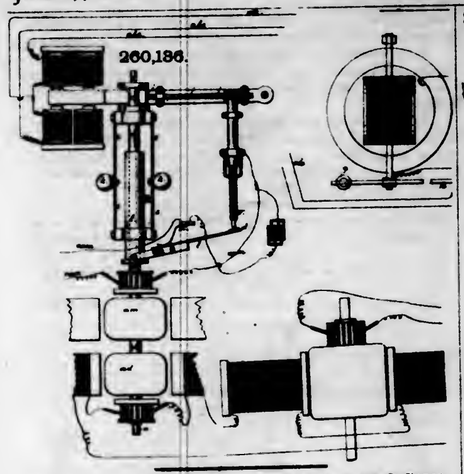
Claim.—1. The combination of the rigid or non-collapsible ink-reservoir closed at the top, the porous material in its lower end, the pen, and the feeding-plate lying close to the surface of the pen and extending from the ink-supply downward to a suitable point to deliver ink to the point of the pen, as set forth.

2. In a fountain-pen, the combination of the body wherein a column of ink is sustained mainly by atmospheric pressure, a writing-pen of ordinary form at the lower end of said body, one or more feeders with surfaces lying adjacent to the pen and extending from the ink-supply downward to the point of the pen, and an air-admission to the lower end of the reservoir, substantially as shown, whereby an automatic and constant feeding of the ink from the reservoir to the point of the pen is secured by capillary action.

3. The non-collapsible ink-reservoir, open at the lower end only, in combination with the detachable holder provided with the porous material, the writing-pen, and the capillary feed plate or plates, substantially as described and shown.

4. In a fountain-pen, the combination of a reservoir wherein the ink is sustained mainly by atmospheric pressure, a writing-pen, a feed-plate lying adjacent to said pen, with a thin passage between the two for the feed of the ink from the reservoir, and an air-admission at the foot of the reservoir distinct from the passage through which the ink descends to the pen.

260,135. SCREW-DRIVER. JAMES SWAN, Seymour, Conn. Filed Apr. 3, 1882. (No model.)



Claim.—As an improved article of manufacture, a screw-driver composed of the shank *a*, the handle, and the exteriorly screw-threaded socketed receiver inserted through it and intersecting the longitudinal central passage in the handle, the socket of the receiver being placed in the line of the axial center of the handle to receive the end a^3 of the shank *a*, inserted therein, to operate all as described.

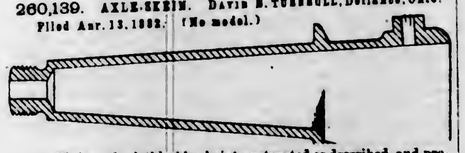
260,136. REGULATOR FOR DYNAMO-ELECTRIC MACHINES. RENÉ THURY, Geneva, Switzerland. Filed July 5, 1881. (No model.)

Claim.—The combination, with a motor and the governor and generator rotated by the motor, of a circuit-opener, a screw, mechanism for moving the screw, an electro-magnet to bring into action the devices that rotate the screw, and a galvanometer and circuit-connections, substantially as set forth, whereby the speed of the motor is varied to render the current upon the line uniform substantially as specified.

260,136.

260,137. WAGON-BOLSTER. DAVID B. TURNBULL, Defiance, Ohio. Filed Mar. 29, 1882. (No model.)

Claim.—1. In a wagon-bolster, a thimble having longitudinal ribs with beveled surfaces and oval aperture to receive the king-bolt and allow the bolster to rock to a limited extent, said thimble extending only a portion of the distance through the bolster and being flush with the upper surface thereof when in position, combined with said bolster and a bottom plate, as and for the purpose set forth.

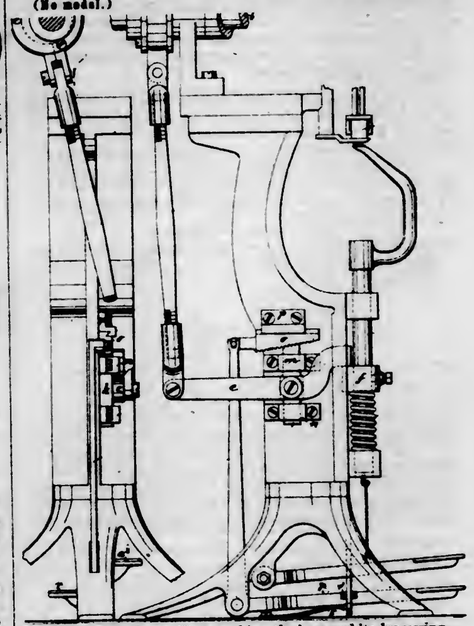


2. The combination of the bolster A *a*, as shown, and the bottom plate secured upon the lower surface thereof, with the thimble B, having ribs *b* with beveled portion *b'* and oval aperture b^2, as and for the purposes specified.

260,138. RUB-IRON FOR WAGONS. DAVID B. TURNBULL, Defiance, Ohio. Filed Mar. 29, 1882. (No model.)

Claim.—The rub-iron herein described, consisting of the vertical and horizontal securing-plates A B, the former having an oval or inclined outwardly-projecting wearing portion of chilled metal from *a* to *b*, an inclined portion from *c* to *d*, adapted to be sunk in the body of the vehicle, and a vertical bearing from *d* to *e*, the whole being constructed and adapted to serve as and for the purposes specified.

260,139. AXLE-SKEIN. DAVID B. TURNBULL, Defiance, Ohio. Filed Apr. 13, 1882. (No model.)

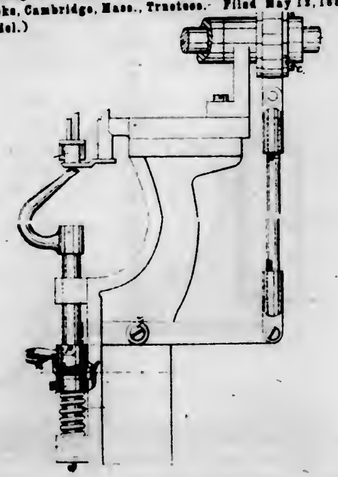


Claim.—1. A thimble-skein constructed as described, and provided with the boss for the purposes set forth.

2. A thimble-skein constructed as described, and provided with a boss for the purposes set forth, and with a screw-hole through said boss, substantially as and for the purposes set forth.

260,140. REMEDY FOR COUGHS, &c. H. JOSLIN TURNER, New York, N. Y. Filed Apr. 21, 1882. (No specimens.)

Claim.—The herein-described compound of medicine, consisting of blood-root, hyoscyamus, squills, lobelia, capsicum, sassafras, *ars ursi*, and sirup, to be used for coughs and all diseases of the throat, lungs, kidneys, and urinary organs, in the proportions specified.



260,141. NAILING-MACHINE. ALBERT VAN WAGENEN, Boston, Mass., assignor to Gordon McKay, Newport, R. I., and James W. Brooks, Cambridge, Mass., Trustees. Filed May 5, 1882. (No model.)

Claim.—1. In a nailing-machine, the horn and its depressing-lever having a movable fulcrum and operated by the nailing mechanism, combined with the fulcrum-controlling device and means in connection therewith under control of the operator, whereby the said controlling device may be actuated by the operator independently of the regular mechanism of the machine while the machine is in motion, substantially as described.

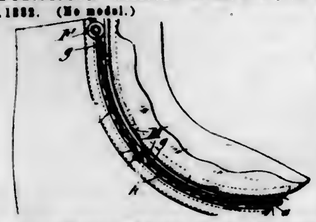
2. The horn and its depressing-lever operated by the nailing mechanism, and the movable fulcrum-carriage for the said lever, and its controlling device, combined with an independent lever or treadle under the control of the operator, whereby he may at will vary the position of the controlling device to regulate the amount of depression of the horn, substantially as described.

260,142. NAILING-MACHINE. ALBERT VAN WAGENEN, Boston, Mass., assignor to Gordon McKay, Newport, R. I., and James W. Brooks, Cambridge, Mass., Trustees. Filed May 13, 1882. (No model.)

Claim.—1. In a nailing-machine, the combination, with the horn and horn-depressing mechanism, of a rotary cam interposed between the said horn and its depressing mechanism, and adapted by its change of position to regulate the extent to which the horn is depressed below the nail-tube, substantially as described.

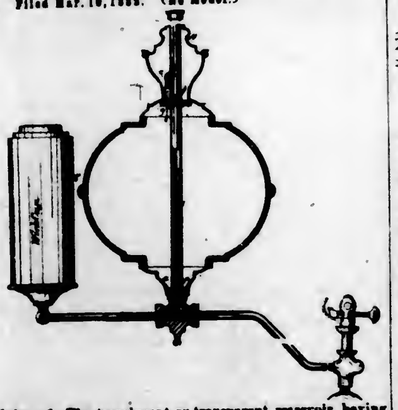
2. The horn and annular cam-seat thereon, combined with the annular rotary cam co-operating with the said seat, substantially as and for the purpose described.

3. The horn, guides to direct it in its vertical movement, the cam-seat and movable cam adapted to rise and fall with the said horn, and a locking device to hold the cam and cam-seat in adjusted position, substantially as and for the purpose set forth.



4. The horn having vertical motions, and the annular cam-seat, and the annular cam *p*, mounted thereon, combined with projection *o*, to prevent the rotation of the cam-seat with the horn, substantially as described.

260,143. GARMENT. FRANK WALLACH, New York, N. Y., assignor to E. Wallach's Sons, same place. Filed May 11, 1882. (No model.)

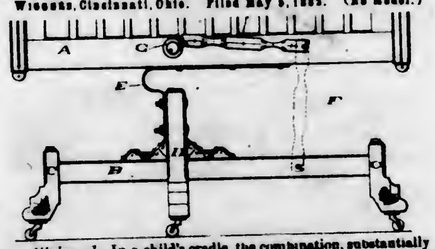


Claim.—In combination with the united and the unattached edges or portions of a garment, a strengthening device, D, composed of a double strip, the end portions thereof being secured in the side seam of the sleeve or other part of a garment, and the balance of the said device being doubled or folded on itself and secured to the unattached portions of the slit or opening of the sleeve or other part of the garment, substantially as and for the purpose set forth.

260,144. SHOE-FASTENING. WILLIAM WARNER, Chicago, Ill. Filed Mar. 27, 1882. (No model.)

Claim.—The shoe-fastening consisting of two independent laces, one of which is secured at the bottom of the lace-opening and the other near the center thereof, and adapted to be passed through the eyes *h g* on the quarters of the shoe and secured at their free ends by the screw-clamp F, substantially as described.

260,145. CHANDELIER. HENRY WELLINGTON, Green Point, N. Y. Filed Mar. 10, 1882. (No model.)

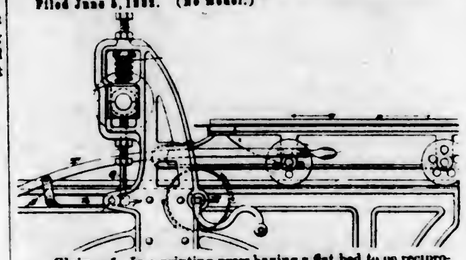


Claim.—1. The translucent or transparent reservoir, having a metallic base-piece and a central coupling-pipe carrying a feeding-funnel, said pipe being perforated at or near the base of the funnel and at or near the base of the reservoir for the purpose of conducting oil from the funnel down to and into the lower part of the reservoir, substantially as shown and described.

2. In combination with the reservoir, the central pipe carrying the feeding-funnel, and the packing-gasket interposed between the funnel and reservoir-top, substantially as and for the purposes explained.

3. The central pipe, perforated, as explained, for the reception and delivery of oil, and provided with a conduit which establishes communication between the interior of the reservoir and the upper part of the pipe for the escape of air and gases, substantially as shown and described.

260,146. CRADLE AND CRIB FOR CHILDREN. HENRY H. WIGGINS, Cincinnati, Ohio. Filed May 5, 1882. (No model.)



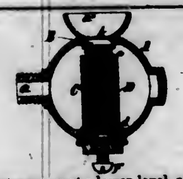
Claim.—1. In a child's cradle, the combination, substantially as set forth, of the stand or platform and springs, as E, secured to said stand, with cradle-body A, mounted at a point intermediate between its ends upon said springs, so as to rock or vibrate lengthwise thereon.

2. In a child's cradle, the combination of stand B C D, springs E, and cradle-body A, constructed and arranged to operate substantially as specified.

3. The combination, substantially as specified, of the rocking member A, stationary member B, and springs E, connecting said rocking and stationary members with swinging arm F, and button G to lock the parts to form a crib or hold the arm up to permit the cradle to be rocked.

4. In a child's cradle, the combination, substantially as specified, of the cradle-body A with the swinging arm H, said arm being hinged at one end to the upper rail of the body, and having a bolt or catch at the free end to hold the arm either against the top rail or across the cradle, as desired.

260,147. PRINTING-PRESS. GEORGE L. ADAMS, Fowlerville, Mich., assignor of one-half to John C. Hilsworth, same place. Filed June 5, 1882. (No model.)



Claim.—1. In a printing-press having a flat bed to be reciprocated by hand-power under an impression-cylinder, the combination of said cylinder, journaled in movable bearings, with the pivoted hand-lever, connected, substantially as described, with said bearings, and having its handle in proximity to the handle for reciprocating the bed, whereby the impression-cylinder can be raised and lowered and the bed reciprocated by the operator, all without change in the latter's position.

2. The combination, with the impression-cylinder, journaled in movable bearings having springs above them, of the vertical lifting-rods, the rock-shaft, the cams P, the lever R, connecting-link S, and the hand-lever T, having its handle projecting in proximity to the handle by which the bed is reciprocated, the whole arranged for operation substantially as described.

260,148. AUTOMATIC AIR-VALVE FOR STEAM-RADIATORS. GEORGE L. ALLEN, Worcester, Mass. Filed Apr. 17, 1882. (No model.)

Claim.—1. An automatic air-valve mechanism for radiators and other steam apparatus, consisting of a hollow body or shell provided with an outlet-opening and valve-seat in the upper part

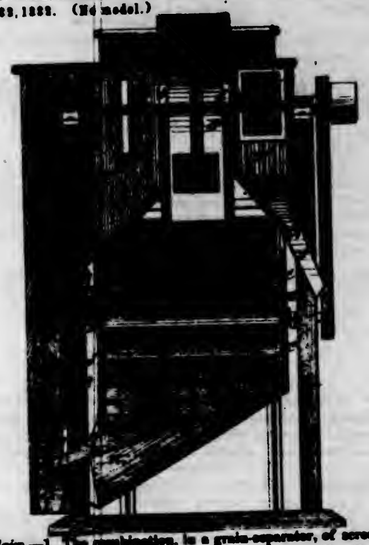
260,148.

thereof, and an inlet-passage at a lower level, a guard-tube extending upward within the shell to a position above the level of said inlet-passage, an expansion-rod coiled or arranged within said tube and supporting a valve adapted for stopping said outlet from the inner side, and a screw or means for adjusting said rod and valve in relation to the valve-seat, substantially as set forth.

2. The combination, with the globe or shell A, provided with the connecting-nipple *a* and valve-seat opening *b*, of the tube C, the expansion-rod D, and the valve B, arranged for operation substantially as hereinbefore set forth.

3. The combination, in an automatic valve mechanism, of the valve B, the valve-seat *b*, the coiled expansion-rod D, the disk E, and the screw F, substantially as and for the purposes set forth.

260,149. CAR-COUPLING. GEORGE T. ARNOLD, Lancaster, Ky. Filed Apr. 22, 1882. (Model.)



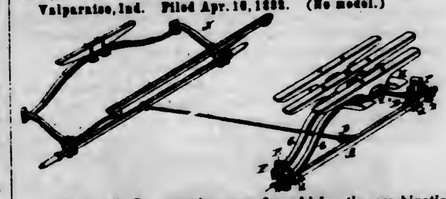
Claim.—1. The combination of a coupling-bar, A, having T-bars B, pivoted in the ends, as described, with the draw-bar having shoulder J and pin K, substantially as specified.

2. The combination of a spring-plate, H, with coupler A, having T-bars B, substantially as described.

3. A draw-head having the shoulders X J, the pivoted spring-plate H, the pin K, and the slot M, whereby it may be used in connection with bars B, as described.

4. The combination, with the draw-head, of the side-rod G, bent at right angles in reverse directions, and forming the part O to support the pin, part R to be struck by the link, and the part P extended out to one side of the draw-head, as and for the purpose specified.

260,150. GRAIN-SEPARATOR. HIRAM A. BARNARD and JOHN B. CORNWALL, Moline, and J. SILAS LOAR, Rock Island, Ill. Filed Mar. 29, 1882. (No model.)



Claim.—1. The combination, in a grain-separator, of screening-shakers and means for vibrating them in opposite directions, with two independent air-chambers, each of said chambers being provided with a cut-off or valve, all substantially as and for the purpose set forth.

2. The combination, in a grain-separator, of a fan, a suitably-constructed fan-case, and wind separating-chambers provided with independent valves, with a set of screening-shakers and means for vibrating them in opposite directions, all substantially as and for the purpose described.

3. The combination, in a grain-separator, of sieves and means for vibrating them in opposite directions, with two separating-chambers, each provided with a screenings-box to collect and discharge the screenings automatically, and also a valve to regulate the force of the air-current, all constructed and arranged to operate substantially as and for the purpose set forth.

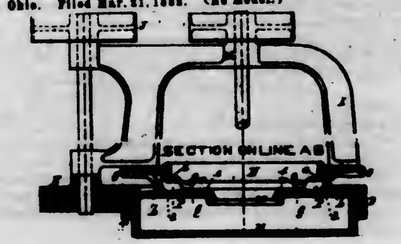
260,151. RUNNING-GEAR FOR VEHICLES. MICHAEL BARRY, Valparaiso, Ind. Filed Apr. 10, 1882. (No model.)

Claim.—1. In a running-gear for vehicles, the combination of the swinging hangers F, provided with large central opening, *f*, and smaller side openings, *g*, and constructed of one piece of metal, with the axle A, the brackets E, the springs G, and the transverse bolts or pins for connecting the brackets and springs with the hangers, as and for the purpose set forth.

2. The combination of the front supporting-frames, H, consisting of intersecting transverse and longitudinal bars, with the fifth-wheel plates I, king-bolt M, the clips *i*, and springs G, all constructed and relatively arranged as herein set forth, for the purpose set forth.

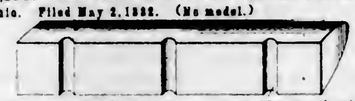
260,152. MATERIAL FOR THE DECORATION OF THE INTERIOR WALLS AND CEILINGS OF BUILDINGS. FREDERICK ESER, New York, N. Y. Filed Jan. 18, 1882. (No specimens.)

Claim.—As a new article of manufacture, a fabric consisting of a sheet of tin-foil and a backing or lining of paper or its equivalent material, the two united by an adhesive substance or substances and embossed, substantially as described.



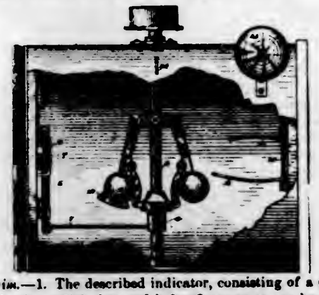
260,153. CARTRIDGE-PACKAGE. THOMAS G. BENNETT, New Haven, Conn., assignor to the Winchester Repeating Arms Company, same place. Filed May 19, 1882. (No model.)

Claim.—1. The method herein described for arranging cartridges for packing, consisting in the employment of a pair of plates of substantially the size of the package to be made, each perforated with series of holes corresponding in diameter to the body of the cartridges, the holes in one alternating with those of the other, the cartridges introduced through the holes in the said plates, and the two filled plates of cartridges set together, substantially as described.



2. A cartridge-package consisting of a pair of plates, each perforated with series of holes corresponding in diameter to the body of the cartridge, the holes in one plate alternating with those of the other, the cartridges arranged through the perforations of the respective plates, and then the two plates of cartridges set together and inclosed to form the package, substantially as described.

260,154. HORSE-POWER. GOTTLEAB F. BETZ, Cleveland, Ohio. Filed Mar. 31, 1882. (No model.)



Claim.—In horse-power machines, the rotatory frame I and plate O, having the rollers I' rotating in the annular track Q, and provided with a central opening, N, through the plate O, gear D, and base C, for the passage of the driving-shaft, in combination with the stationary gear D and pinion E, substantially as described, and for the purpose specified.

260,155. FIRE-BRICK. WILLIAM G. BUTSELY, Portsmouth, Ohio. Filed May 2, 1882. (No model.)

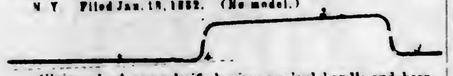
Claim.—A fire-brick having curved sides terminating in a rounded upper edge, and provided on its flat under surface with transverse notches or grooves, substantially as described.

260,156. SPEED-INDICATOR. NELSON P. BOWSHER, South Bend, Ind. Filed Jan. 18, 1882. (No model.)

Claim.—1. The described indicator, consisting of a cylindrical case having a dial-plate and index-finger upon one head, a vertical shaft set centrally in bearings in said shell, the ball-governor and sleeve of said shaft, and intermediate connections, as described, between the sleeve and the index-finger, and the bell-sounding mechanism, adapted to be operated by the revolution of the balls to the side of the governor, the said balls being arranged upon the shaft so as to move when spread in the widest part of the case, all substantially as described.

2. In combination with the sleeve 4 of the governor, the rack-bar and the arm connecting said rack-bar to the sleeve, the spring for holding down said arm and bar, and the pinion upon the shaft of the index-finger, all substantially as described.

3. The combination of an indicator or dial-finger connected by suitable intermediate mechanism with a revolving shaft and adapted to show upon the dial-face the speed of said shaft, with a sounder adapted to be operated by centrifugally-moving arms adapted to come in contact with the sounding mechanism when exceeding certain limits of motion, substantially as described.

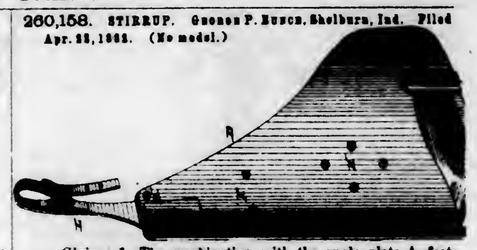


4. In combination with the shaft, the arms and balls, the arms 16 17, connected, as described, to the hammer which strikes the bell, whereby any variation from a given rate is made to give an alarm, substantially as described.

5. The combination of the shaft 15, the arms 16 and 17, and the wing upon the ball, said arms being arranged to permit the ball to pass between them, whereby any variation of speed, either of increase or diminution, will cause the alarm to be sounded, substantially as described.

6. In a dial speed-indicator, the combination of a dial-plate, an index-hand, a governor connected to such index-hand by mechanism substantially as described, and a sounder or alarm operated by such governor when its speed is increased or diminished to a certain extent.

7. In combination with a dial speed-indicator, the rack-bar 6, the pinion 7, the spring 10, and the adjustable pressure-roller, and the spring or arm 12, substantially as described.

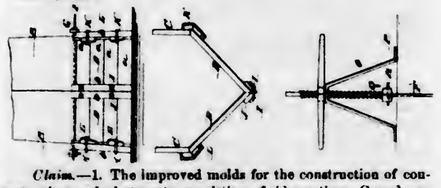


260,157. PAPER KNIFE. BLOOMFIELD BROWER, New York, N. Y. Filed Jan. 18, 1882. (No model.)

Claim.—1. A paper-knife having a raised handle and bearing-points, as 3 4, substantially as described.

2. A paper-knife having bearing-points, as 3 4, and a raised handle, as 2, between said points, and made of elastic material, so that pressure on the handle will elevate the point of the blade, substantially as described.

260,158. STIRRUP. GEORGE P. BUSCH, Shelburn, Ind. Filed Apr. 28, 1882. (No model.)



Claim.—1. The combination, with the angle-plate A, foot-rest C, and shield D, of the spring F, arranged substantially as described, to support the shield.

2. The combination, with the foot-rest C, of the shield D, attached, as described, to its inner and outer edges, an opening, E, being left between the shield and the toe of the foot-rest.

3. In a stirrup, the combination of the angle-plate A, foot-rest C, shield D, spring F, flexible strips I, covering-strip J, and the strap L, all arranged substantially as set forth.

260,159. METHOD OF AND APPARATUS FOR THE CONSTRUCTION OF CONCRETE ABUTMENTS, BRIDGE-PIERS, &c. JAMES BURNS, San Antonio, Tex. Filed Apr. 21, 1882. (No model.)

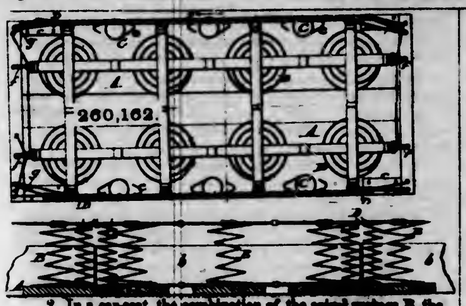
Claim.—1. The improved molds for the construction of concrete piers and abutments, consisting of side sections, C, end sections, D, and stay-rods F, said side and end sections being secured together by the battens *b*, clamps K, and keys L, substantially as specified.

2. The end sections, D, constructed in two parts, permanently connected by bolts I and clips J, and being detachably connected to the side sections by cleats *b*, clamps K, and keys L, substantially as specified.

3. The combination of stay-bolts F, nuts G, and key-clips H with battens *b* of the mold, having notches *d*, substantially as specified.

260,160. HAT-HOLDER. JOHN H. BUSSE, Springfield, Ill. Filed Apr. 14, 1882. (No model.)

Claim.—The combination, with the fastening-plate G, of the plates A, provided with the perforated lugs *a* at opposite edges, the pin *b*, the spring *d*, and the bar E, hinged to the upper edge of one of the plates A, and pivoted to the plate G by a pivot at right angles to the hinge-pivot, substantially as and for the purpose set forth.



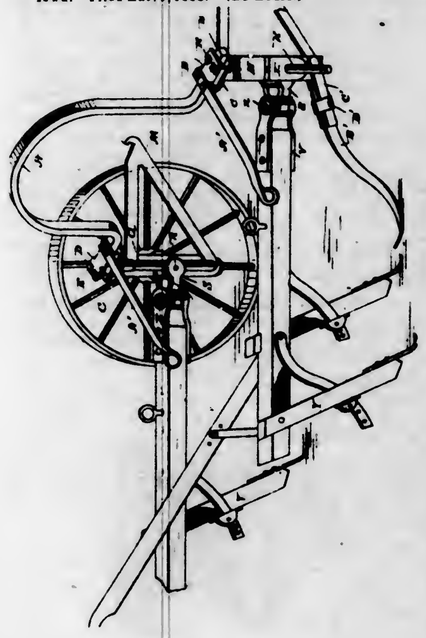
260,161. SASH-CORD FASTENER. CHARLES BUSH, New York, N. Y., assignor to himself and Lotan K. Hunt, same place. Filed Nov. 1, 1881. (No model.)

Claim.—As an improved article of manufacture, the herein-described knot-holder, consisting of the face-plate J and the curved eye-plate K, secured to the said face-plate, and having its eye elongated transversely, substantially as and for the purpose set forth.

260,162. CAR-SEAT. EDWIN L. BUSHNELL, Poughkeepsie, N. Y. Filed Feb. 18, 1882. (Model.)

Claim.—1. The combination of the base-frame A, elevated only at the ends *b*, the main springs B, having ears thereon, the secondary springs C, having the angular ends, the elastic wires or rods D, and the connections uniting the springs and wires with each other and with the end rails, substantially as described and shown.

2. In a car-seat, the combination of the spiral springs B, the longitudinal wires or rods D, secured to the upper outer edge of said springs, and the smaller secondary springs having angular ends secured to the wire, as shown.



3. The improved bed or couch for railway-cars, consisting of two or more independent sections arranged side by side, each section composed of a base-frame elevated at the ends only in the manner described, the series of large and small spiral springs mounted on said frame, the flexible connections between the upper ends of the larger springs and the longitudinal wires attached to the edges of the springs, said wires and flexible connections being both attached to the raised ends of the frame, as described and shown.

260,163. MEASURING-TAPE. WILLIAM CHRISTMAN, Sheffield, County of York, England. Filed Aug. 16, 1880. (Specimens.) Patented in England Feb. 11, 1880, No. 611.

Claim.—As an improved article of manufacture, the measuring-tape herein described, consisting of a fabric wherein the warp-threads lie two or more together and the weft lies single alternately over and under the warp-threads, and the fabric graduated, as and for the purpose set forth.

260,164. SULKY-CULTIVATOR. JOHN B. CHRISTIAN, Hamburg, Iowa. Filed Mar. 6, 1882. (No model.)

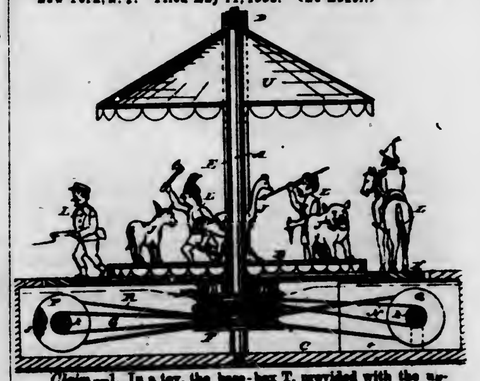
Claim.—1. The combination, with the arch A, having horizontal extensions B and adjustable plates C, provided with vertical shafts F, of the frames H, the tubular bearings G, plates D, and bolts E, substantially as specified.

2. In combination with the connecting-arch A and the tubular bearings G, the bifurcated connections constructed in two parts and secured together by a bolt, Z, substantially as and for the purpose specified.

3. In combination with the connecting-arch A, the frames H, the tubular bearings G and their adjustable connections, the angular draft-frames M, provided with hooks at their ends, and the bifurcated connections S, to which the plow-beams are attached, substantially as and for the purpose specified.

260,165. TREATMENT OF EXCRETA FOR THE PRODUCTION OF FERTILIZING SUBSTANCES. HENRI COLLET, Paris, France. Filed Sept. 27, 1881. (No specimens.) Patented in France Apr. 8 and Sept. 1, 1880; in England May 9, 1881, No. 2,064, and in Belgium Aug. 3, 1881.

Claim.—The herein-described method of separating the solid and liquid constituents of excreta, and collecting the solid ingredients in a town by the application of nitrielle powder, prepared substantially as herein set forth.



260,166. CAKE-PAN. JOHN R. CORSON, South Oil City, Pa. Filed Dec. 3, 1881. (No model.)

Claim.—1. A separable cake-pan consisting of an expansible rim, combined with an elastic bottom and two overlapping catches, which are adapted to be pressed into engagement with each other by means of a lever pivoted to one of the catches, substantially as shown and described.

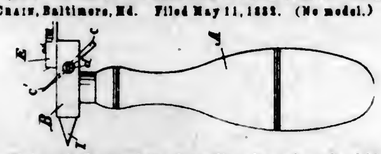
2. The combination of the rim A, the expansible bottom C, the bevel-catches *a a*, having obtuse-angled notches, the strips of asbestus *b*, and the pivoted lever D, substantially as shown and described.

260,167. TOY MERRY-GO-ROUND. CHARLES F. CORNELIUS, New York, N. Y. Filed May 11, 1882. (No model.)

Claim.—1. In a toy, the base-box T, provided with the upright E, having arm D, in combination with the post A, platform B, having the images J J, and the platform K, having images L, the platforms B and K being adapted to be revolved in opposite directions, as set forth.

2. In a toy, the image-bearing platform K, having the pulley-sleeve M secured to its under side, in combination with the post A, having the platform B and pulley F secured to it, the platform K and post A being adapted to be revolved in opposite directions by the shafts H and O and bands G, H, and R, the latter passing over the pulleys P and Q, substantially as described.

3. The base-box T, having the shafts H and O journaled therein, and the post A journaled at its lower end in the box C of the box and at its upper end in the arm D, supported by the post E, and having the pulley F and platform B secured to it, in combination with the platform K, provided with the pulley-sleeve M, the platform K and post A being adapted to be revolved in opposite directions, substantially as described.

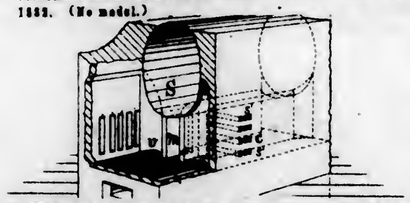


4. The platform B and canopy U, secured upon the post A, in combination with the platform K, the latter being adapted to be revolved in the opposite direction from that of the canopy and platform B, as set forth.

5. In a toy, the vertical post A, having secured to it the image-bearing platform B and canopy U, in combination with the image-bearing platform K, suitable mechanism being provided for revolving the post and platform K in opposite directions, substantially as described.

260,168. PROCESS OF CLEANING CLOTHS AND OTHER FABRICS. ELIZABETH I. COUCH, San Francisco, Cal. Filed Dec. 13, 1881. (No specimens.)

Claim.—The method herein described for cleaning woven and other fabrics, consisting in first applying to the goods an aqueous solution of lime, borax, borax-soap, soda, and beef-gall, and rubbing the same with a brush or scraper, then applying with a soft sponge or cloth a second solution, consisting of alum and fuller's earth, substantially as herein described.



260,169. TOOL FOR CHANNELING SHOE-SOLES. WILLIAM CRAIN, Baltimore, Md. Filed May 11, 1882. (No model.)

Claim.—1. In a tool for channeling shoe-soles, a head-block, B, mounted on a suitable handle, a cutting-blade adjustable thereon, and provided with a circular guiding-disk, E, eccentrically pivoted upon said head-block, and having an operating-handle, *g*, for regulating the width of cut from the edge of the sole, all substantially as described, and for the purpose set forth.

2. A hand-tool for channeling shoe-soles, consisting of the handle A, head-block B, adjustable blade *c*, channel-opener I, and eccentrically-pivoted guiding-disk E, having an operating-handle, *g*, all substantially as set forth.

260,170. SMOKE-CONSUMING FURNACE. JAMES C. CULBERTSON and WILLIAM A. RUDALY, Cincinnati, Ohio. Filed May 24, 1882. (No model.)

Claim.—1. In a smoke-furnace, long narrow vertical influent air-ducts *s s*, situated in the side walls of the fire-box, the air passing through said ducts, regulated by a series of dampers, D D′, substantially as and for the purposes specified.

2. In a smoke-consuming furnace, long narrow vertical influent air-ducts *s s*, situated in the sides of the fire-box, in combination with a series of dampers, D D′, by means of which the inflow of air is regulated at different heights with relation to the fire-bed, substantially as and for the purposes specified.

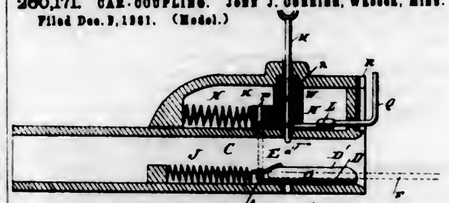
3. In a smoke-consuming furnace, long narrow vertical influent air-ducts *s s*, situated in the sides of the fire-box, and the series of dampers D D′, in combination with the rear end walls of the fire-box, substantially as and for the purposes specified.

4. In a smoke-consuming furnace, long narrow vertical influent air-ducts *s s*, situated in the sides of the fire-box, and the series of dampers D D′, in combination with the concave side walls, *p p*′, of the fire-box, substantially as and for the purposes specified.

5. In a smoke-consuming furnace, long narrow vertical influent air-ducts *s s*, situated in the sides of the fire-box, the series of dampers D D′, and the concave rear end walls, *v v*, of the fire-box, in combination with the laterally-contracted flue, substantially as and for the purposes specified.

6. In a smoke-consuming furnace, long narrow vertical inflowing air-ducts *s s*, situated in the sides of the fire-box, the series of dampers D D′, and the concave side walls of the fire-box, in combination with the laterally-contracted flue, substantially as and for the purposes specified.

7. The combination, in a smoke-consuming furnace, of the long narrow vertical influent air-ducts *s s*, situated in the side walls of the fire-box, the series of dampers D D′, and the concave rear end and side walls of the fire-box, with the laterally-contracted flue extending to and within the expanded flue C, substantially as and for the purposes specified.



8. The combination, in a smoke-consuming furnace, of the long narrow vertical influent air-ducts *s s*, situated in the side walls of the fire-box, the series of dampers D D′, and the concave side walls of the fire-box, with the laterally-contracted flue and the winged walls, substantially as and for the purposes specified.

9. In a smoke-consuming furnace, the long narrow vertical influent air-ducts *s s*, the series of dampers D D′, the concaved rear end walls, *v v*, and the concave side walls, *p p*, of the fire-box, and the laterally-contracted flue M, in combination with the expanded flue or chamber C, together with vertical influent air-ducts *s′ s′*, substantially as and for the purposes set forth.

10. In a smoke-consuming furnace having a primary combustion-chamber, a rear combustion chamber or flue, and a dividing wall provided with a vertical elongated flue centrally contracted, in combination with winged walls arranged substantially as and for the purposes set forth.

11. In a smoke-consuming furnace having a front and rear combustion chamber or flue, a dividing-wall provided with a vertical elongated flue centrally contracted and flaring at both ends, the winged curved walls, and the rear air-ducts communicating with said rear flue, operating together substantially as and for the purposes mentioned.

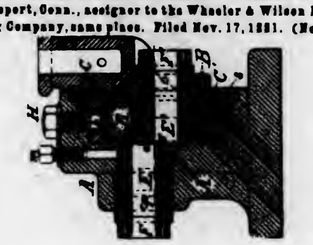
260,171. CAR-COUPLING. JOHN J. CURRIER, Wacoca, Miss. Filed Dec. 9, 1881. (Model.)

Claim.—1. The combination, with the slotted draw-head C, of the crank-shaft A B and the horizontally-sliding and flanged plate D, rigidly secured to the said crank-shaft, substantially as and for the purpose set forth.

2. The combination, with the draw-head C, of the plate D, the crank-shaft A B, and the spring J, substantially as shown and described.

3. The combination, with the draw-head C, of the slotted sliding plate L, the spring N, the angularly-bent rod Q, and a guide for the coupling-pin, substantially as herein shown and described.

4. The combination, with the draw-head C, of the box K, the slotted sliding plate L, provided with a rear flange, P, the spring N, the guide-block W, and the angularly-bent rod Q, attached to the front end of the plate L, substantially as shown and described.

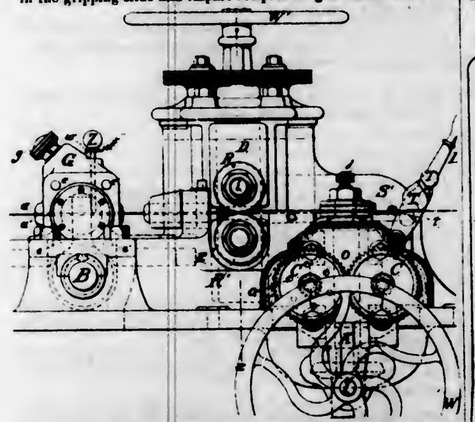


260,172. FOURDRINIER PAPER-MACHINE. FRANCIS CURTIS, Hyde Park, Mass. Filed Apr. 22, 1882. (No model.)

Claim.—1. In a Fourdrinier paper-machine, the combination of the woven-wire apron, the guide-roll E, and the suction box F with the stuff-vat A.

2. In a Fourdrinier paper-machine, the combination of the woven-wire apron, the guide-roll E, the stuff-vat A, a suction box or boxes properly located to drain the web formed upon the apron and the breast-roll C, adapted to drive the said apron.

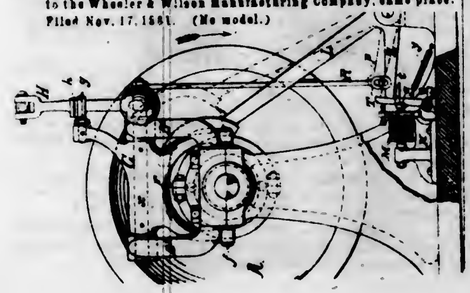
260,173. METAL-CUTTING MACHINE. WILLIAM P. DURFEE, Bridgeport, Conn., assignor to the Wheeler & Wilson Manufacturing Company, same place. Filed Nov. 17, 1881. (No model.)



Claim.—1. In a metal-cutting machine, the combination, with the frame A, block B, and the hollow cutting-cylinders E E′, of the adjustable sleeves F F′, for receiving the thrust of the cylinders, and whereby the same may be adjusted longitudinally to compensate for wear of their cutting-edges, substantially as shown and described.

2. In a metal-cutting machine, the combination of the frame A, having opening K, movable block B, having slot or recess *h*, and lever L, half-rings C C′, for holding said block in position, stop-bolt H, adapted to engage with the recess *h* and limit the movement of the block, the hollow cutting-cylinders E E′, supported in said frame and block, respectively, and the sleeves F F′, for imparting a longitudinal adjustment to the cylinders, substantially as shown and described.

260,174. MECHANISM FOR REDUCING METAL STRIPS OR RODS. WILLIAM P. DURFEE, Bridgeport, Conn., assignor to the Wheeler & Wilson Manufacturing Company, same place. Filed Nov. 17, 1881. (No model.)

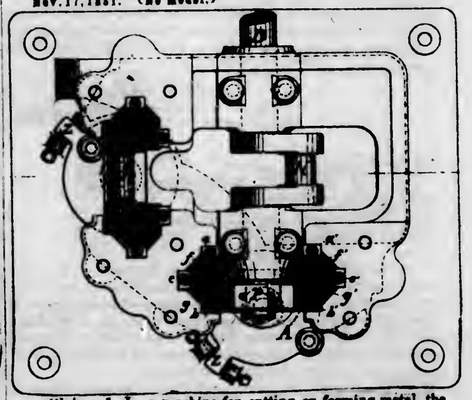


Brief.—Two pairs of reducing-rolls (mounted on vertical and horizontal axes, as shown) are revolved by hand-wheels and intermediate connecting-gears, and advance the cold rod until its end is entered between the gripping-jaws. Clutches are provided between the roll and hand-wheel shafts, and when the end of the rod is seized by the gripping-jaws the connection between said shafts is broken, and the gripping device pulls the rod through the rolls. On an oscillating shaft are arms, which enter recesses in the gripping-slide and impart reciprocating motion thereto.

Claim.—1. The combination of the lever L, having eccentric button T and curved projection *t*, the grooved rollers R R′ S S′, hand-wheels W W′, intermediate gearing connecting said rollers and hand-wheels, and the gripping mechanism consisting of the sliding block G and the gripping-jaws *a a*′, links *c d c d*′, spring *f*, hand-screw *g*, and pins *h h*, supported in said block, substantially as and for the purpose described.

2. The combination of the block G, the gripping mechanism, the blocks V V′, inclosed in recesses formed in the block G, the shaft R, and the levers F F′, connecting the blocks V V′ with said shaft, whereby a reciprocating movement is imparted to the gripping mechanism, substantially as described.

260,175. APPARATUS FOR STARTING AND STOPPING MACHINERY. WILLIAM P. DURFEE, Bridgeport, Conn., assignor to the Wheeler & Wilson Manufacturing Company, same place. Filed Nov. 17, 1881. (No model.)

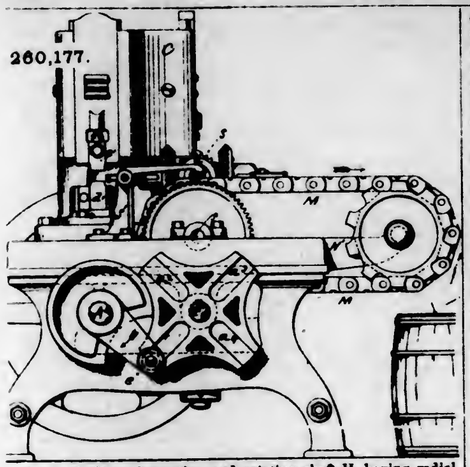


Claim.—1. In a machine for cutting or forming metal, the combination, with the gates A B, of the shaft D, having cranks N P and the vibrating lever M, provided with cam-slot *a*, substantially as shown and described.

2. In a machine for cutting or forming metal, the combination, with a gate, of a series of gibs, *f f*′ *g g*′, and wedges *a a*′, *b b*′, *c c*′, and means for operating the same, whereby the gate is adjusted, substantially as described.

3. In a machine for cutting or forming metal, the combination, with a gate, of the block B, die E, break-cup S, and the adjusting-screws T and *c*, substantially as shown and described.

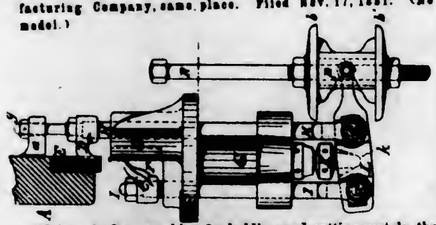
260,176. MACHINE FOR CUTTING, PUNCHING, AND SWAGING. WILLIAM P. DURFEE, Bridgeport, Conn., assignor to the Wheeler & Wilson Manufacturing Company, same place. Filed Nov. 17, 1881. (No model.)



260,177. MACHINE FOR CUTTING AND FORMING HORSE-SHOE-NAIL BLANKS. WILLIAM P. DURFEE, Bridgeport, Conn., assignor to the Wheeler & Wilson Manufacturing Company, same place. Filed Nov. 17, 1881. (No model.)

Claim.—1. The combination, with the vertically-reciprocating and intermittingly-revolving conveyer, having radial arms provided with spring-jaws and a retaining-spring, of a carrying-chain having notches for the reception of the finished blanks, and means for forcing the blanks from the jaws of the conveyer into said notches, substantially as described.

2. The combination of a conveyer having radial arms provided with spring-jaws, a notched carrying-chain, M, for the reception of the blanks, a bell-crank lever, S, the horizontal arm of which is provided with downward-projecting lips adapted to bestride the chain, its pendent arm having a pin, *t*, and a cam, T, which intermittingly actuates said lever and causes the lips thereof to detach the blanks from the conveyer-arms and deposit them in the notched chain, substantially as described.

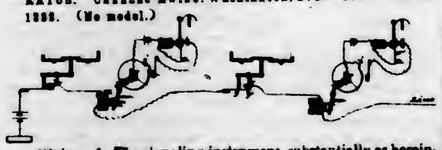


3. The combination of the cutting-dies *c d*, forming-dies *c′ d′*,

260,177.

the vertically reciprocating and rotating shaft H, having radial arms provided with spring-jaws *j*, the notched carrying-chain M, and lever S substantially as described.

260,178. DEVICE FOR CLAMPING AND HOLDING PLATES IN METAL-SHEARING MACHINES. WILLIAM F. DURFEE, Bridgeport, Conn., assignor to the Wheeler & Wilson Manufacturing Company, same place. Filed Nov. 17, 1881. (No model.)



Claim.—1. In a machine for holding and cutting metals, the combination, with the vertically-reciprocating cutter-holder A and lower die-holder, G, of the rods H I, having clamping-fingers D C, arranged to bear upon the opposite sides of the metal to be cut, and the lever L, connected to the lower ends of the said rods and adapted to operate the same for the purpose of clamping and unclamping the metal, substantially as described.

2. In a machine for holding metal while being cut, the combination of the die-holders A G, the rods H I, having clamping-fingers C D, the bifurcated lever L, connected to the lower ends of said rods and provided with sliding blocks *p p'* and *e e'*, the latter having pins *o o'*, the rod R, having circular plates *b b'*, and the springs S, all arranged to operate substantially as and for the purpose described.

260,179. OLEAGINOUS COMPOUND USED IN MANUFACTURING CORDAGE. HENRY F. EVANS, New York, N. Y. Filed May 19, 1882. (No specimens.)

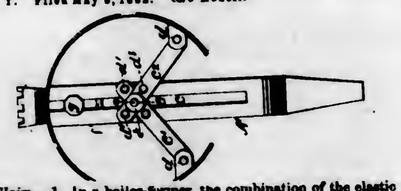
Claim.—An oleaginous compound to be used in the manufacture of cordage, consisting essentially of an amber-oil and fish or whale oil, combined as specified.

260,180. TELEPHONE SIGNALING AND RECEIVING APPARATUS. CHARLES EWING, Washington, D. C. Filed Mar. 24, 1882. (No model.)

Claim.—1. The signaling-instrument, substantially as hereinbefore set forth, consisting in the combination of the shaft, the movable collar, the circuit-breaking lever pivoted thereto, the pivoted levers for actuating the collar when snubbed, and mechanism for snubbing them.

2. The station-signaling apparatus, substantially as hereinbefore described, consisting in the combination of a disk having a contact-point or projection for closing the local circuit, a pawl rotating said disk, an electro-magnet operating the pawl, a circuit breaker and closer, a rotating arm by which it is operated, a local circuit, and a series of independent stops arranged within the circle of rotation of said arm, adapted to arrest its movement after the required number of makes and breaks for closing the local circuit.

3. The combination, substantially as herein set forth, of the shaft, the movable collar mounted thereon, the circuit-breaking lever pivoted thereto, the levers actuating the collar, means for snubbing said levers, the ratchet-wheel mounted on the shaft, and an electro-magnet and armature for causing the shaft to revolve.

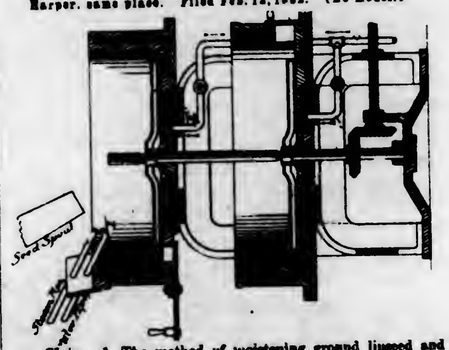


4. The combination, as hereinbefore set forth, of the main shaft, a device for giving one complete revolution to the same, a circuit-breaker operated thereby to make and break a local circuit, a device for arresting temporarily the revolution of the shaft at any point of its movement, a lever mounted on the shaft and turning with it in sight of the operator, and mechanism operated by said lever to make and break the main line a given number of times at each revolution of the shaft.

5. In a signaling-instrument, the combination, with the operating-gear, of the weighted rod carrying the pawls which engage with said gear.

6. The combination, substantially as hereinbefore set forth, of the shaft, the adjustable weight and mechanism operated thereby to revolve the shaft, the hand carried by the shaft, the circuit-breaking mechanism mounted on the shaft, and the push-button for arresting the hand and thereby leaving the completed local circuit unbroken until the station-call is operated.

7. The combination of the shaft, the weight and mechanism to revolve it, the circuit-breaking mechanism, the hand for operating it, the push-buttons, and the dial.



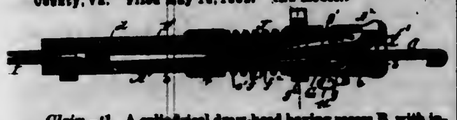
260,181. BOILER-FORMER. FREDERICK FELLOWES, Dunkirk, N. Y. Filed May 8, 1882. (No model.)

Claim.—1. In a boiler-former, the combination of the elastic former A, slotted bar A', bolt and nut *e e'*, and arms *d'*, substantially as and for the purposes set forth.

2. The slotted bar A' and former A, in combination with the bolt *e*, nut *e'*, and arms *d'*, provided with the holes *d' d'' d'''*, for the purposes specified.

260,182. MOISTENING OLEAGINOUS SEEDS AND MEAL FOR EXTRACTING THE OIL THEREFROM. JOSEPH B. FIELD, Ottumwa, Iowa, assignor to William Daggett and William T. Harper, same place. Filed Feb. 13, 1882. (No model.)

Claim.—1. The method of moistening ground linseed and other seed preparatory to expressing the oil by fine spray of water, substantially as described.



2. The method of moistening ground linseed and other seed preparatory to expressing the oil by spraying water on a stream of the seed flowing from a spout, substantially as described.

3. An apparatus, substantially as described, comprising, in combination, means for producing a fine spray of water and means for exposing to said spray the seed to be moistened.

4. The combination of the feed-spout and devices for spraying water, substantially as described.

5. The combination of the tempering vessels or bottles, the seed-spout, and devices for spraying water, substantially as described.

260,183. CAR-COUPLING. LEWIS H. PERDEW, Powhatan County, Va. Filed May 15, 1882. (No model.)

Claim.—1. A cylindrical draw-head having recess B, with inclined shoulder *b*, combined with a spring-tongue, a hooked coupling-link, C *c*, and with means for turning said draw-head one-fourth of a revolution to uncouple, as set forth.

2. The draw-head A, having shank A', enlarged portion A'', inclined or flaring mouth *a*, and recess B *b*, combined with the tongue F, springs *e e'*, and coupling-link C *c*, as and for the purpose set forth.

3. In a car-coupling, substantially as described, the tongue F, having dovetailed recesses *f f''* and inclined surface *f'''*, combined with the springs *e e'* and the draw-head A, the said tongue F being adapted to be readily removed for repairs, as set forth.

4. The shield G, composed of the vertical parts *g g'* and the horizontal portion *g''*, combined with the spring-tongue F, draw-head A, link C, and set-screw H, as and for the purposes specified.

5. The cylindrical draw-head A, having dovetailed lugs *a'*, combined with the sleeve M, having recesses *m* and shank *m'*, combined with the levers N O, bracket P, and link C *c*, as set forth.

6. In a car-coupling, a coupling-link having upon each end a coupling hook or shoulder, one of which is rounded at the corners and the other presenting a face upon a direct transverse plane, combined with the draw-head A, having recesses B *b*, spring-tongue F, and means for rotating the draw-head, substantially as set forth.

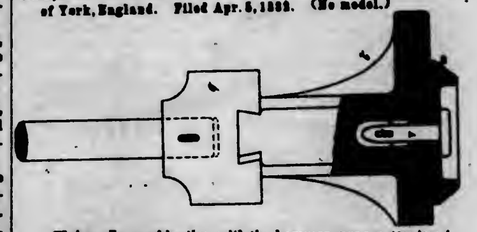
7. The set-screw H and draw-head A, combined with the tongue F and springs *e e'*, the said set-screw being adapted to take up lost power.

260,184. DRY-KILN. EDWARD H. FLANNERY, New Baltimore, Mich. Filed Feb. 20, 1882. (No model.)

Claim.—1. The combination, with a dry-kiln, of the perforated pipes G, the metal sections H, arranged above the pipes and in close proximity thereto, and the outlet J, the pipes and metal sections being located below the bents E of the kiln and the outlet above the same, all substantially as described, and for the purpose specified.

2. A drying-kiln provided with one or more trucks adapted to allow cars containing material to be dried to run into and out of said kiln, in combination with the door C, the hinged doors K at the top of the kiln, the outlets J at the bottom of the kiln, the perforated steam-pipes G under the truck or trucks, the metal sections H, arranged in close proximity to the pipes G and also under the truck or trucks, and means for opening and closing the hinged doors K, substantially as and for the purpose specified.

260,185. CAP OR HAT. DAVID FOX, New York, N. Y. Filed Apr. 3, 1882. (No model.)



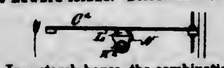
Claim.—1. In a reversible hat, the combination of the hat-body A and its brim with intermediate connecting-pieces E F, arranged substantially as shown and described.

2. The hat-body B, composed of sections A, each made up of double thicknesses or two folds of material united together and section to section by seams *a*, substantially as shown and described.

3. In a double or reversible cap, the body and band united to strips of tape or cloth, with an intervening space, *f*, between the edges of the united parts, substantially as and for the purpose described.

4. In a double or reversible cap, the combination of the reversible band C and body B with tapes or material E F, connecting the two at a distance from each other, substantially as and for the purpose described.

260,186. FLANGING-MACHINE. SAMUEL FOX, Leeds, County of York, England. Filed Apr. 5, 1882. (No model.)



Claim.—In combination with the hammer-anvil *g*, the tap *f*, punch *n*, divided ring *a'*, and ring-die *m*, all constructed, combined, and arranged to operate in flanging flue-holes in boiler-plates, substantially as described.

260,187. MATCH-SAFE. GEORGE FRAHER, Baltimore, Md. Filed May 10, 1882. (Model.)

Claim.—The combination of a match box or safe having an opening through its top and the wooden plug B inserted in its bottom, with a pivoted figure provided with suitable sharp points for picking up the matches, substantially as shown and described.

260,188. STARCH-DRYING HOUSE. GEO. E. FELL, Charlottetown, Prince Edward Island. Filed June 3, 1881. (Model.)

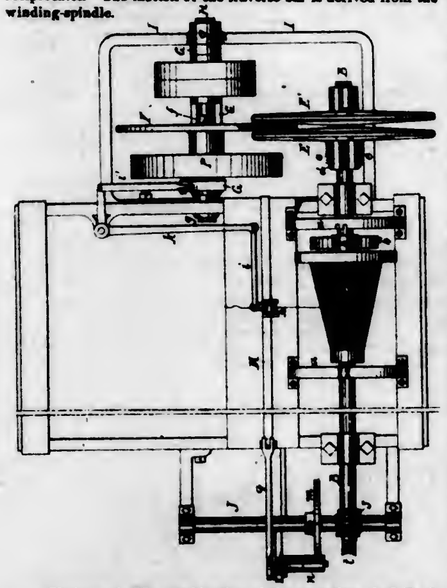
Claim.—1. In a starch-house, the combination of the steam-heating pipes K, the standards E at each side of the steam-pipes, and a number of pivoted frames provided with pipes, substantially as shown and described.

2. In a starch-drying house, the combination, with the steam-heating pipes K', of the drying-frames O', pivoted thereon, substantially as herein shown and described, and for the purpose set forth.

3. In a starch-drying house, the combination, with the steam-heating pipes K', of blocks M, mounted thereon, and of the drying-frames O', resting on these blocks, substantially as herein shown and described, and for the purpose set forth.

4. In a starch-drying house, the combination, with the steam-heating pipes K', of the blocks M, mounted thereon, the drying-frames O', resting on these blocks, and the rail L', substantially as herein shown and described, and for the purpose set forth.

260,189. FLUE-CLEANER. RUDOLPH P. GERLACH, Cleveland, Ohio. Filed Feb. 25, 1882. (No model.)

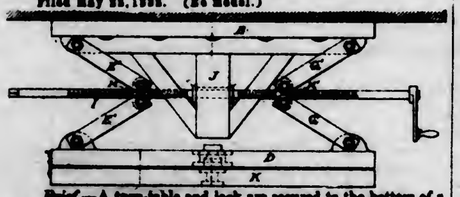


Claim.—An flue-cleaner, the ferrule G, with interior longitudinal ribs, H, forming an integral part thereof, a triangular-

shaped block, F, having a recess in the sides thereof to receive the edges of the spring-arms, and a stud, a, extending therefrom and through said arms, in combination with the nut I and stem, arranged substantially as and for the purpose set forth.

260,190. MACHINE FOR WINDING COPS OR BOBBINS. JAS. H. GUMBBALL, Philadelphia, Pa. Filed Nov. 28, 1881. (No model.)

Brief.—To wind conical cops or bobbins the speed of the winding-spindle is varied from fast to slow and slow to fast again as the yarn-guide moves from one end of the bobbin to the other and back again. For this purpose the movable disk of the frictional speed-changing device is mounted upon a swinging frame which is linked to the yarn-guide traverse-bar, so as to vibrate as the bar reciprocates. The motion of the traverse-bar is derived from the winding-spindle.



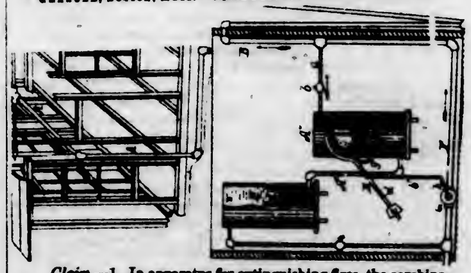
Claim.—1. The combination of the operating-shaft B of a winding-frame, a frictional speed-changing device, as described, a traverse-bar, and mechanism, substantially as described, connecting said traverse-bar and the movable disk of the speed-changing device, whereby a to-and-fro movement is imparted to the latter on each to-and-fro movement of the traverse-bar, as set forth.

2. The combination of the operating-shaft B of a winding-frame, a frictional speed-changing device, whereby a differential movement is imparted to said shaft, a traverse-bar, M, driven from the shaft B, and mechanism, substantially as described, connecting the traverse-bar and the movable disk of the speed-changing device, whereby a to-and-fro movement is imparted to the latter on each to-and-fro movement of the traverse-bar, as set forth.

3. The combination of the shaft B, having disks B E', the disk F, the driving-shaft H, and a lever, G, pivoted concentrically with the driving-shaft and carrying the journal of the disk F, as set forth.

260,191. COMBINED TURN-TABLE AND JACK FOR STREET-CARS. JOHN H. GOULD and JAMES G. GOULD, Philadelphia, Pa. Filed May 25, 1881. (No model.)

Brief.—A turn-table and jack are secured to the bottom of a car, and consist of two sets of links, forming knee-joints, pivoted to an upper strip and to a platform, below which the latter, in turn, is pivoted centrally to a base-plate. The links are operated by a screw-shaft having right and left handed threads adapted to corresponding threads in cross-bars secured to the strips.



Claim.—1. The combination, with a street-car, of a combined turn-table and jack carried by said car, as set forth.

2. The within-described turn-table and jack for street-cars, the same comprising the two sets of links, the operating screw-shaft, a strip, B, a platform, D, and a base to which the platform is pivoted, as set forth.

3. A street-car in which the following elements are combined, namely: a base, K, a platform pivoted to the base, and mechanism whereby the said platform and base are suspended from the under side of the car, and whereby they can be raised and lowered, substantially as set forth.

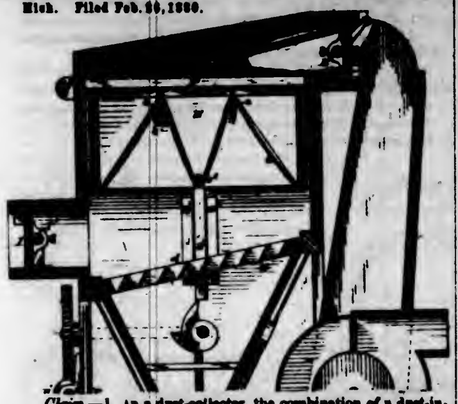
4. The combination of the strip B, secured to the under side of the car, a platform, D, pivoted to a base, the system of links forming the knee-joints herein described, the cross-pieces H H', and a screw-shaft, I, having right and left handed threads adapted to corresponding threads in the said cross-bar, all substantially as specified.

260,192. FIRE-EXTINGUISHING APPARATUS. ALMON H. GRAGGUE, Boston, Mass. Filed Feb. 1, 1882. (No model.)

Claim.—1. In apparatus for extinguishing fires, the combination of a pipe with a valve located therein, a lever weighted at one end, which normally closes said valve, and devices whereby the other end of said lever is caused to preponderate, substantially as described, when the carbonic-acid gas on one side of said valve is set free, in order that the valve may open and allow a flow of water through said pipe, substantially as set forth.

2. A lever having a weight at one end and a bulb at the other end, in combination with pipes for distributing fire-extinguishing material, a valve governed by said lever for controlling such distribution, and tubes for conducting water into said bulb when the counteracting pressure is released, substantially as and for the purpose set forth.

3. In apparatus for extinguishing fires, the combination of a receiver and a series of pipes for containing carbonic-acid gas under pressure, with a water-supply pipe connected therewith, a valve interposed between the gas and the water, a weighted lever and connections for holding said valve closed, and a hollow bulb attached to said lever and acting in opposition to said weight, said bulb being provided with pipes, whereby it is supplied with gas so long as the superior pressure of the gas excludes the water from said receiver, but is supplied with water when said pressure is relieved by the escape of the gas, the said bulb then overcoming the weight on the other end of the lever and opening the valve for the flow of water, substantially as set forth.



4. In apparatus for extinguishing fires, the combination of a water-tank with a gas-receiver, a main water-supply pipe, branch distributing-pipes, an offset pipe connecting the distributing-pipes with the receiver, and a valve in said offset pipe closing toward the receiver to exclude the main water-supply from the latter.

5. The combination of bulb D with lever E, from one end of which it is hung, weight *e*, operating on the other end of the lever, gas-receiver A'', pipes or tubes *f* and *g*, respectively, connecting said bulb to the upper and the lower parts of said receiver, valve G and connections with said lever, and a tank, C, communicating with said receiver, whereby the influx of water into said receiver will fill said bulb and cause its connections to open said valve, substantially as and for the purpose set forth.

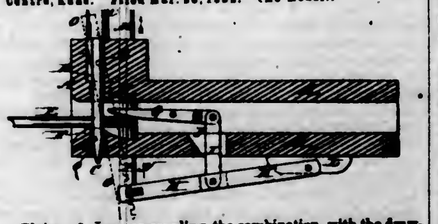
260,193. GLASS MOLD FOR CASTING ORNAMENTAL PICTURE-FRAMES, &c. JONATHAN HALBY, Pittsburg, Pa. Filed Apr. 25, 1881. (No model.)

Claim.—Molds of glass for casting ornamental decorations for picture-frames, and for other ornamental and decorative purposes, substantially as and for the purpose set forth.

260,194. DUST-COLLECTOR. HILFORD HARMON, Jackson, Mich. Filed Feb. 16, 1880.

Claim.—1. In a dust-collector, the combination of a dust-intercepting cloth, a frame which holds one edge or part of the cloth or of the chamber formed thereby stationary relatively to a movable part of the cloth, a frame connected to said movable part of the cloth, mechanism which intermittently moves said frame toward the stationary part of the cloth to produce a slackening or loosening, and springs constructed independently of the movable frame to return the cloth to the tense condition, substantially as set forth.

2. In a dust-collector, the combination, with a dust-intercepting cloth having one part attached to a stationary frame or support and another part attached to a frame which moves toward and from the fixed part of the cloth, of metallic springs constructed independently of the cloth-moving frame and arranged to tighten the fibers of the cloth, and devices which lift the cloth-moving frame to slacken the cloth, substantially as set forth.



3. In a dust-collector, the combination, with a dust-intercepting cloth having one part attached to a stationary frame or support and another part which moves toward and from the fixed part of the cloth, of metallic springs constructed independently of the cloth-moving frame and arranged to carry the movable part of the cloth away from the stationary part to tighten it, a rod or bar moving longitudinally toward and from the stationary part of the cloth, and a cam engaging with said bar or rod to slacken the cloth on its support, substantially as set forth.

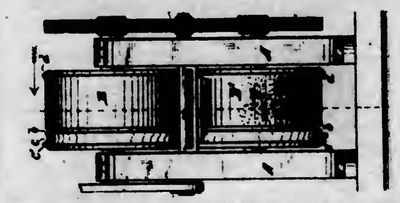
4. In a dust-collector, the combination of a dust-intercepting cloth having a stationary part and a part vertically movable to dislodge the dust with a bar which supports the upper part of the cloth, and springs engaging with said bar and operating to return the cloth to a tense condition, substantially as set forth.

5. In a dust-collector, the combination of a dust-intercepting cloth with a yielding rod from which said cloth is suspended, and the means which alternately slacken and tighten the cloth to dislodge the dust therefrom, substantially as set forth.

6. In a dust-catcher, a filter-frame, E, fitting closely within the vertical inclosing-walls of the dust-catcher and rising and falling freely therein, in combination with the cams and lugs which actuate said filter-frame, and the brackets below the frame for supporting it, arranged to permit said frame to be readily removed from the dust-intercepting chamber, substantially as set forth.

260,195. CAR-COUPLING. SAMUEL A. V. HARTWELL, Valley Centre, Kans. Filed Mar. 26, 1881. (No model.)

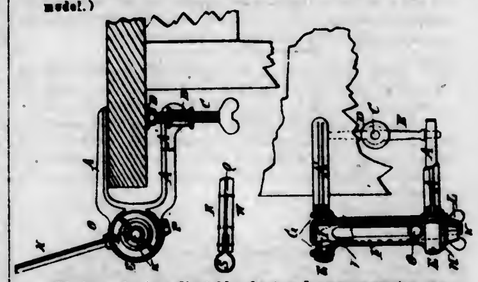
Claim.—1. In a car-coupling, the combination, with the draw-head A, provided with the rounded projection F upon the upper side of lower part, and the link E, of the hinged bar G, and means, substantially as herein shown and described, for operating said bar, as and for the purpose set forth.



2. In a car-coupling, the combination, with the draw-head A, of the hinged bar G, the connecting-bar I, and the lever K, having a cross-bar, M, attached to its forward end, substantially as herein shown and described, whereby the coupling-link can be guided from the side of the track, as set forth.

3. In a car-coupling, the combination, with the draw-head A, the hinged bar G, the connecting-bar I, and the lever K, having a cross-bar, M, attached to its forward end, of the rod or chain N, substantially as herein shown and described, whereby the coupling-link can be guided from the top of the car, as set forth.

4. In a car-coupling, the combination, with the draw-head A, the hinged bar G, the connecting-bar I, and the hinged lever K, having cross-bar M, of the swinging notched bar O, substantially as herein shown and described, whereby the coupling-link can be supported with its forward end at any desired elevation, as set forth.



5. In a car-coupling, the combination, with the draw-head A, provided with the recess H in the lower side of its upper part, of the hinged bar G, having its forward end beveled upon the lower side, and means for operating said bar, substantially as and for the purpose set forth.

260,196. ROLLING-MILL. JAMES T. HASTINGS, Chicago, Ill. Filed Aug. 18, 1881. (No model.)

Claim.—The combination of the eccentric rolls B and B', having therein the grooves *b* and *c*, and the depression B'', and provided with the eccentric cutters *c' c'*, and the flanges *d d*, the rollers I I, grooved to correspond to the rolls B and B', the frame A, and rotating gearing, all adapted and arranged for operation together, substantially as and for the purpose specified.

260,197. ADJUSTABLE MAP AND CHART SUPPORTER. HENRY H. HAYNS, Brooklyn, N. Y. Filed Apr. 6, 1882. (No model.)

Claim.—1. An adjustable chart and map supporter, constructed substantially as herein shown and described, and consisting of the clamps A A', having cross-bar B, hand-screw C, and eyes E, the hollow cylinder F, having interior grooves, J, and holes and sockets O P, the slotted bar I, having screw K, the washers G H, and the hand-nut L, as set forth.

2. In an adjustable map and chart supporter, the combination, with the clamps A A, having eyes E and the rods N, of the cylinder F, having interior grooves, J, and holes and sockets O P, the slotted bar I, having screw K, the washers G H, and the hand-nut L, substantially as herein shown and described, whereby the said rods can be readily adjusted and securely held, as set forth.

3. In a map and chart supporter, the hollow cylinder F, constructed, substantially as herein shown and described, with interior grooves to receive the edges of the locking-bar and holes and sockets to receive the ends of the map-carrying rods, as set forth.

4. In a map and chart supporter, the combination, with the maps or charts Q, of the clamping-bars R, having eyes S at their ends, substantially as herein shown and described, whereby the said maps or charts can be readily suspended from the supporting-rods, as set forth.

260,198. SHOE-LACE FASTENING. EWEN C. C. HENDERSON, Pictou, and THOMAS A. MCDONALD, Durham, Nova Scotia, Canada. Filed Feb. 23, 1882. (No model.) Patented in Canada Jan. 30, 1882, No. 14,994.

Claim.—A single-lace shoe whose flaps or quarters are provided with holes and hooks D E or their equivalents, and above the hooks with three holes, *a b c*, arranged substantially as described, whereby the free end of the lace may be secured in the manner set forth.

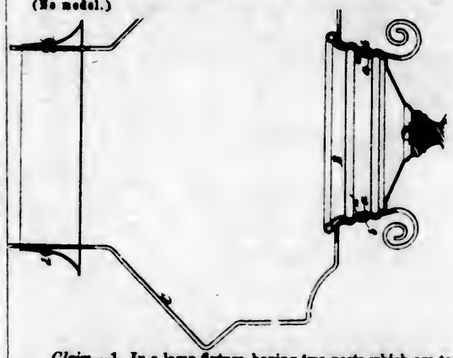
260,199. VENTILATING ATTACHMENT TO HEARTHS. J. E. HOWARD, Grape Vine, Tex. Filed Dec. 30, 1881. (No model.)

Claim.—1. A ventilating attachment to the hearths of open fire places or grates, composed of a hollow box, *a*, set into the hearth and communicating with the room below, and provided with an ash-pan having an imperforate bottom at its lower end and an air-opening in its front face communicating with the room below, and lying above the ash-pan, and a top flange provided with an adjustable lid, substantially as described, and for the purpose set forth.

2. The combination, with the ventilating-box *a*, provided with the inclined flange *d*, having the area of a hearth-brick, lever *h*, and slot *m* in its front face above its lower end, of the hinged lid *c*, ash-pan *h*, arranged below the slot *m*, and rectangular box *n*, substantially as described, and for the purpose set forth.

260,200. APPARATUS FOR REMOVING SAND-BARS IN RIVERS, CUTTING CHANNELS IN HARBORS, &c. JOHN H. HUFFER, Jacksonville, Oreg. Filed Feb. 13, 1882. (No model.)

Brief.—A sectional vertically and horizontally adjustable hydraulic tube having a horizontal discharge-end is secured at one end of a scow, which is provided at its other end with propelling mechanism, whereby to hold the scow against the reaction of the ejected stream.

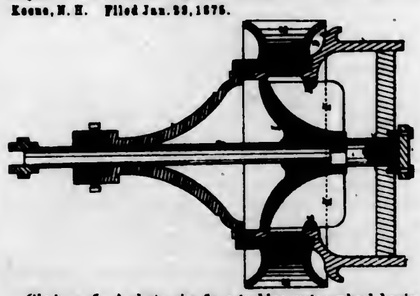


Claim.—1. The combination, with a boat, of a hydraulic tube arranged at one end thereof and adjustable into different angular positions, and with its delivery end bent, as described, means carried by said boat for forcibly ejecting the water through said tube for the purpose of operating upon a river or other water bottom, and a propeller at the opposite end of the boat for moving the boat from place to place and for staying it against the reactionary effect of the water discharged from the tube, substantially as specified.

2. The combination, with the boat and hydraulic tube arranged at the one end thereof and made capable of being raised and lowered and adjustable into different angular positions, as described, of a sheave or support to said tube, hinged or pivoted to the sides of the boat, and means on or in the boat for raising and lowering said support, essentially as herein set forth.

3. The hydraulic tube constructed with a removable lower section, I, having its outer discharging end bent at an obtuse angle, substantially as described, whereby the water will be ejected horizontally, as set forth.

4. The combination of the boat A, having a stern propeller, B, one or more engines, C, for driving said propeller, one or more boilers, D, the steam force-pump E, the swiveled hydraulic tube H I at the bow end of the boat, and means for raising and lowering the same, essentially as herein described.

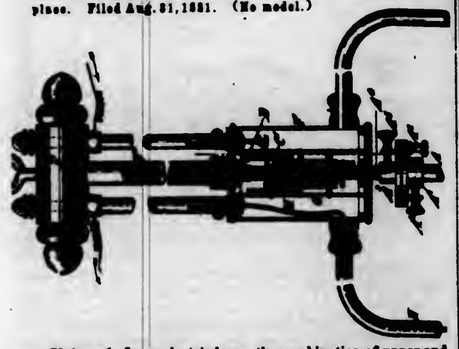


260,201. LAMP-FIXTURE. JOHN A. HULL, Ansonia, Conn., assignor to Wolcott A. Hull, New York, N. Y., and the Ansonia Brass and Copper Company, Ansonia, Conn. Filed Apr. 18, 1882. (No model.)

Claim.—1. In a lamp-fixture having two parts which are to be detachably connected, an eyelet inserted through the inner part, a smooth hole in the outer part adapted to be readily slipped on and off the protruding part of the eyelet, and a screw inserted from outside the outer part into the eyelet and bearing against said outer part, all being combined and organized so that the screw will secure said outer part on the eyelet and the eyelet will prevent the outer part from movement in a direction transverse to the axis of the eyelet, and so that on the removal of the screw the outer part may be detached by simply moving it or the eyelet in a direction lengthwise of the axis of the eyelet, substantially as herein described.

2. In a lamp-fixture, the combination, with the lamp-reservoir holder B, of the eyelet *a*, inserted through the same from the inside, the arm C, having a smooth hole slipped upon the protruding end of said eyelet, and the screw *b*, entering the eyelet and bearing against the outer side of said arm, substantially as herein described.

260,202. TURBINE WATER-WHEEL. JOHN HUMPHREY, Keene, N. H. Filed Jan. 28, 1875.

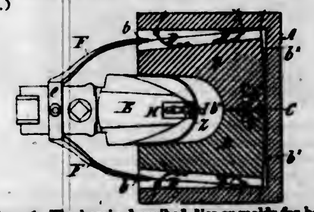


Claim.—1. A chute-rim for a turbine water-wheel having annular paraboliform crown, and a series of guide-vanes with inner surfaces nearly tangential to the periphery of the wheel, in combination with an inner casing having a corresponding series of apertures opened and closed by movable gates operated by rotating the chute-rim, substantially as shown and described.

2. In combination with a curved disk or crown-plate in an "inward-flow" turbine, a series of floats or pressure-vanes with surfaces for the action of the water, which in their extension inwardly from the line of impact at the periphery of the wheel have an inclination from the radii toward the impinging stream, and in their course from the surfaces of impact, near the upper and outer portions of the crown-plate, they trend at first slightly from a perpendicular to the plane of said crown-plate, and then with accelerating deflection and curvature until the discharge-line is reached, where the transverse curvature is such as to extend the discharge-orifices from the hub or lower central portion of the curved crown-plate to and upon a portion of the periphery of the wheel, thereby uniting a circumferential with the diametral discharge to increase the effective area for the escape of the inert water, substantially as specified.

260,203. COMPOUND FOR MAKING BRICK, TILE, &c. HENRY N. HUNT, San Antonio, Tex. Filed Apr. 18, 1882. (No specimens.)

Claim.—A compound for making brick, tile, &c., composed of hydraulic cement and the pulverized stone described, combined in the manner and about the proportions set forth.

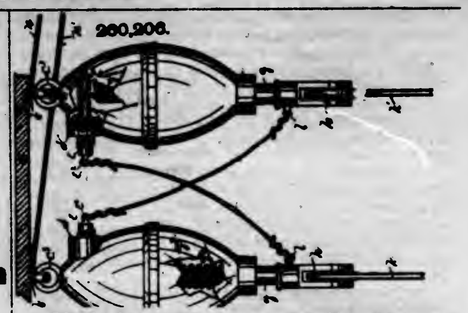


260,204. ELECTRIC-ARC LAMP. CHARLES A. HUSSEY, New York, N. Y., assignor to the Hussey Electric Company, same place. Filed Aug. 31, 1881. (No model.)

Claim.—1. In an electric lamp, the combination of upper and lower carbons, A B, the magnet G or a solenoid, the armature G' or a core directly supporting the lower carbon, B, the train of wheels C and brake-wheel C', for controlling the upper carbon, A, the solenoid E or an electro-magnet, the core E' or an armature, the brake D, attached to and entirely supported by said core or armature, a spring acting upon said core E' or armature to retract said brake, and means for varying the resilience of said spring, all arranged and operating substantially as herein described.

2. In an electric lamp, the combination, with one of the carbons and a rod for sustaining it, of a holder, A', a socket, A^2, a set-screw, A^3, and a screw, A^4, substantially as specified.

260,205. DIE FOR SHAPING HEEL-COUNTERS. MICHAEL HYNES, Montreal, Quebec, Canada. Filed Mar. 18, 1882. (No model.)



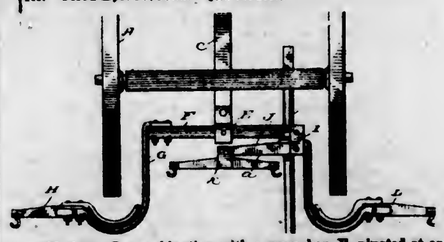
Claim.—1. The herein-described dies or molds for heel-counters, consisting essentially of the two sections B B, the sides and backs of which form obtuse angles, and with meeting edges b' b' beveled, so that their angle-point b' will form the pivot-point for said sections, in combination with a male die or former, substantially as described.

2. In combination with the female dies or molds B B, provided with beveled edges, as described, the former E, having attached thereto arms F F, substantially as and for the purpose described.

3. In combination with the former E, provided with tongue or cast-off G, the lever I, connected to and operating simultaneously with said tongue or cast-off, said lever having lip L, arranged substantially as and for the purpose set forth.

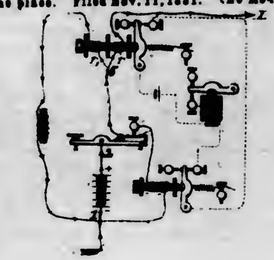
260,206. APPARATUS FOR SUSPENDING ELECTRIC LAMPS. CHARLES C. JESPERSON, Buffalo, N. Y. Filed May 11, 1882. (No model.)

Claim.—1. An apparatus for suspending electric lamps, consisting substantially of a pair of frames or shell-like casings having adjustable spring-pressed rods adapted to be connected with the lamp-suspending cables or wires, each frame or casing having



a rod insulated from such casing, one end of which rod being connected with the opposite side of the circuit and the other end thereof being adapted to receive contact with the spring-pressed rod when the tension on the spring-pressed rod is removed, the frames or casings being suitably connected to the ceiling or mast and to the line-wires of the circuit, all combined and operating as and for the purpose stated.

2. An apparatus for suspending electric lamps, consisting of the two hollow shell-like casings, each having the separable portion *c c'*, the rods *g g*, screw-threaded at g^2, and having the adjustable buttons g^3 g^3, for compressing or relaxing the springs g^4 g^4, encircling the rods *g g*, which rods are further provided with the pulleys h h, over which the lamp-suspending wires or cables pass, the removable rods *c c*, insulated from the portion *c* of the casing, and having their inner ends provided with the tapering sockets *a'*, adapted to receive the ends of the rods *g g*, and the conducting-wires *m m'*, adapted to carry the current of electricity from the outer ends of the rods *c* to the opposite sides of the circuit, all combined and operating substantially as shown and described, and for the purpose stated.



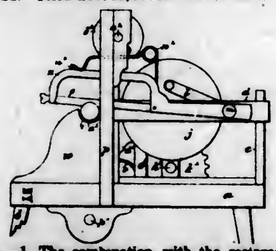
3. In an apparatus for suspending electric lamps, the combination of the hollow casing having the two separable portions *c c'*, and the insulated rod *c* in the portion *c*, with the rod *g*, provided with the pulley h, the spring g^4, and the button g^3, by means of which the broken current of electricity is restored and diverted in the proper direction, substantially as shown and described.

260,207. DRAFT-EQUALIZER. JAMES P. JOHNSON, Virden, Ill. Filed Apr. 18, 1882. (No model.)

Claim.—In combination with a cross-bar, F, pivoted at or near the axle of a wheel-plow, a rigidly-attached bent arm, G, extending to a point in front of and outside one of the driving-wheels, and an arm, J, pivoted to said cross-bar F, and having the whiffletrees K L, as described.

260,208. DUPLEX TELEGRAPH. FRANCIS W. JONES, New York, N. Y., assignor to the Union Electric Manufacturing Company, same place. Filed Nov. 11, 1881. (No model.)

Claim.—1. The combination, substantially as herein before set forth, of a key or transmitter, a battery included in the circuit between the resting-contact of said key and the earth, an electro-magnet for actuating a relay included in a circuit between the working-contact of said key and the earth, a second electro-magnet for actuating a relay between said key and the line, and a receiving-instrument included in a local circuit which traverses the armature-levers and resting-contacts of both of said relays at one and the same time.



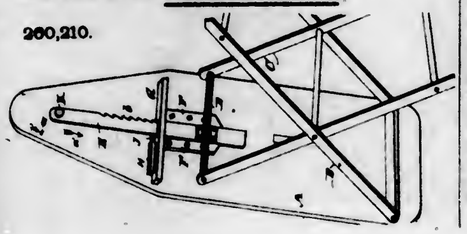
2. The combination, substantially as herein before set forth, of a main line extending to the distant station, a branch line returning directly to the earth at the home station, a battery, a key connecting said battery simultaneously to both the main and branch lines, and a receiving-magnet wound with two resisting-coils, one of which is included in the main and the other in the said branch circuit.

3. The combination, substantially as herein before set forth, of a main line extending to the distant station, a branch line returning directly to the earth at the home station, a battery, a key connecting said battery simultaneously to both the main and branch lines, a receiving-magnet wound with resisting-coils, one of which is included in the main and the other in the branch line, and an inductive core of soft iron surrounded by a coil, which is included in said branch line.

4. The combination, substantially as herein before set forth, of an electric conductor, a receiving-instrument included in the circuit of said conductor, two branch conductors, an inductive core enveloped in an electro-magnetic helix and included in one of said branches, an artificial resistance approximately equal to said helix included in the other branch, and a circuit-changer whereby the first-named conductor may be connected at will with either of the branches.

5. The combination, substantially as herein before set forth, of a series of independent electro-magnetic cores, each surrounded by a coil, a series of rheostats whose resistances are equal to those of the said coils, respectively, and circuit-changers for throwing either one of said coils or its equivalent resistance into an electric circuit at will.

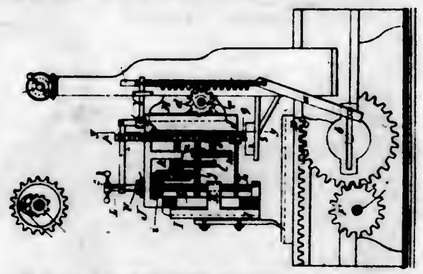
260,209. SAWING-MACHINE. SAMUEL C. KENNEDY, Worthington, Ind. Filed Nov. 22, 1881. (No model.)



Claim.—1. The combination, with the reciprocating saw-frame *a*, supported by a guide and provided with a groove, *a'*, in its upper face, of the rectangular frame *c* and spring *a²*, secured at one end to the stationary frame, and having its opposite free end pressing in the groove of the saw-frame, substantially as described, and for the purpose set forth.

2. The combination, with the pivoted curved dog *d'*, provided with a cord, *m'*, of the shaft *p'*, having grooved pulley *o'* and ratchet-wheel *q'*, spring-pawl *r'*, lever *t'*, having pin *u'*, and spring *v'*, substantially as described, and for the purpose set forth.

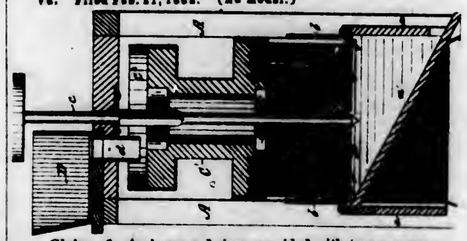
3. The combination of the guide *s*, having the pin *p²*, and adapted to slide in grooves in the posts *p*, and carrying the saw-frame *a*, shaft *a²*, carrying the wheel *b²*, pulley *d²*, strap *h²*, eccentric wheel *f²*, rod *w²*, and double-crank rod *e²*, substantially as described, and for the purpose set forth.



260,210.

260,210. IRONING-BOARD. JAMES T. KING, Fowler, Ind., assignor of one-half to Joseph H. and George B. Hartley and Isaac H. Phares, all of same place. Filed Apr. 24, 1882. (No model.)

Claim.—The combination, with the ironing-board A, of the crossed pivoted legs B and C, the ratchet-bar E, to which one pair of legs is pivoted, the guides F, the cross-bar G, forming a tooth, N, the longitudinal box or tube H, the spring I, and the pintle J, substantially as herein shown and described, and for the purpose set forth.



260,211. METAL-PLANER. CHARLES T. LANMAN, Brookline, Mass. Filed Feb. 18, 1882. (No model.)

Claim.—1. In a metal-planer, the combination, with the tool-holder I and the laterally-moving frame J, of the swiveled screw L, the rack-bar *p*, having wheel *g*, and the connecting gear-wheels, substantially as herein shown and described, whereby the tool will be raised and lowered automatically to give the required form to the work, as set forth.

2. In a metal-planer, the combination, with the rack-bar *p* and the frame J, of the rollers *t* and the pairs of rollers *r* and their bands *u*, substantially as herein shown and described, whereby the said rack is kept in position and made to move with the least possible friction, as set forth.

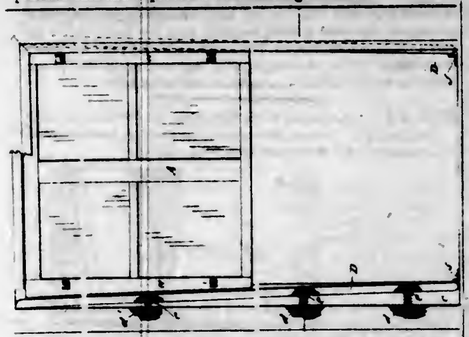
260,212. COCKLE-MACHINE. ABRAHAM LIPP, New Hampden, Va. Filed Feb. 21, 1882. (No model.)

Claim.—1. An improved sieve provided with two or more series of openings, connected together by ribs, and having grain-discharge openings near the outer edge thereof, substantially as herein shown and described.

2. The combination, with a revolving brush, of a sieve provided with two or more series of openings and ribs between the said series, substantially as and for the purpose set forth.

3. The combination, with a revolving brush, of a sieve having openings the diameters of which exceed the short diameters of the average kernels of wheat, but do not equal the long diameters of the same, substantially as herein shown and described, whereby the kernels of wheat are swept over the sieve with their long diameters in a horizontal plane and prevented from passing through the same, as set forth.

4. In combination with a sieve having openings, substantially as described, and ribs arranged at a tangent, as described, a brush, substantially as described, adapted to sweep over the sieve.



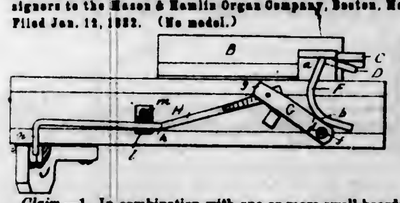
5. In combination with the sieve B, having the openings *b'* and ribs *b²*, the brush C, having a stem with central opening, as described.

6. The combination, with the revolving brush C, of the sieve B, provided with the openings *b'*, the ribs *b²*, and the discharge-openings *b³* near the edge, substantially as and for the purpose set forth.

7. The cockle-machine described, having the sieve B, brush C, hollow stem casing C', and hopper D, combined and arranged as and for the purpose set forth.

260,213. SASH HOLDER AND FRAME. CASPER LOEWENSTEIN, Columbus, Ohio. Filed Oct. 27, 1881. (No model.)

Brief.—A keystone-shaped sash slides between yielding pressure-bars and is provided with lateral guide-stops.



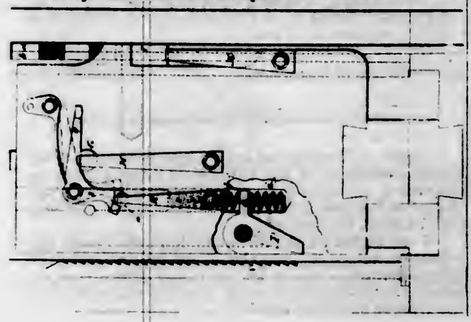
Claim.—1. The keystone-shaped sash A, in combination with the spring-supported side bars, D D, substantially as and for the purposes set forth.

2. In combination with a keystone-shaped sash, the spring-bars D D, arranged to exert the greater pressure below their longitudinal centers, substantially as and for the purposes set forth.

3. The bars D D and the springs *c*, in combination with the keystone-shaped sash, substantially as and for the purposes set forth.

4. The keystone-shaped sash A, provided with the stops *i i*, adapted to run against the edge of the jambs of the window-frame, in combination with the spring-supported bars D D, substantially as and for the purposes set forth.

260,214. SWELL-ACTION FOR REED-ORGANS. LOWELL MASON, Orange, N. J., and GEORGE B. KELLY, Boston, Mass., assignors to the Mason & Hamlin Organ Company, Boston, Mass. Filed Jan. 12, 1882. (No model.)



Claim.—1. In combination with one or more swell-boards of a reed-organ, a crank-rod, D, having a convex lever-arm, F, and a lever, G, connected by a rod, H, to an operating-lever or other device for opening the swell board or boards, substantially as described.

2. In combination with one or more swell-boards of a reed-organ, a crank-rod, D, having convex lever-arm F, and a lever, G, connected by a rod, H, to a knee-lever, J, for opening the swell board or boards, substantially as described.

260,215. DROP-HAMMER. WILLIAM MASON, Hartford, Conn., assignor to the Colts Patent Fire-Arms Manufacturing Company, same place. Filed Mar. 25, 1882. (No model.)

Brief.—At the instant of impact the momentum of a loose weight in the hammer throws a pawl into engagement with a stationary rack, by which means the hammer is caught in its rebound and a secondary blow prevented.

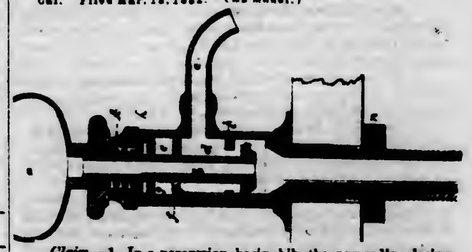
Claim.—1. In a drop-hammer, the pawl P, hung in the hammer, a weight arranged in the hammer so as to act upon said pawl by the momentum imparted to the weight by the descent of the hammer, and a stationary toothed rack into engagement with which the said weight forces the said pawl P, substantially as and for the purpose described.

2. In a drop-hammer, the pawl P, hung in the hammer, a weight arranged in the hammer so as to act upon said pawl by the momentum imparted to the weight by the descent of the hammer, and a stationary toothed rack into engagement with which the said weight forces the said pawl P, and the catch-bolt *n*, substantially as described.

3. In a drop-hammer, the pawl P, hung in the hammer, a weight arranged in the hammer so as to act upon said pawl by the momentum imparted to the weight by the descent of the hammer, and a stationary toothed rack into engagement with which the said weight forces the said pawl P, and the catch-bolt *n*, with the wedge-shaped lever S, substantially as described.

4. The combination of the hammer, the pawl P, hung in the hammer, with an arm, A, extending therefrom, a spring below and another above said arm, a loose weight resting upon the upper spring, and the stationary toothed rack, substantially as and for the purpose described.

260,216. OVEN-WAITER. JOSEPH T. MCFARLIN, Middleborough, Mass. Filed Apr. 20, 1882. (No model.)

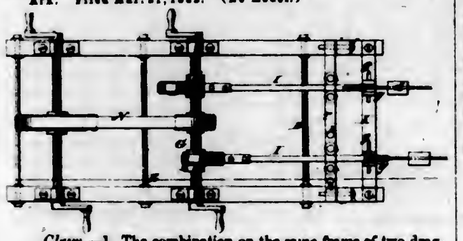


Claim.—1. In an oven-waiter, the combination, with the standard A, provided with bracket-projections B and with slots above them, of a series of bracket-frames, rings, or plates, D, provided with tongues E, fitting within the slots in the standard, substantially as herein shown and described, and for the purpose set forth.

2. In an oven-waiter, the combination, with the standard A, provided with bracket-projections B, having studs C on the upper surfaces, and with slots above the bracket-projections B, of the bracket plates, rings, or frames D, provided with apertures F for the studs C, and with tongues E, fitting into the slots in the standard, substantially as herein shown and described, and for the purpose set forth.

3. A cricket for pies, dishes, pans, and like articles, made substantially as herein shown and described, and consisting of a ring, G', fastened edgewise on a flat ring, G², the ring G' being provided with a series of slots, *a*, and the flat ring being provided with a corresponding number of studs, *b*, as set forth.

260,217. BASIN-BIB. EUGENE O. MCGLAUFLIN, San Jose, Cal. Filed Mar. 18, 1882. (No model.)

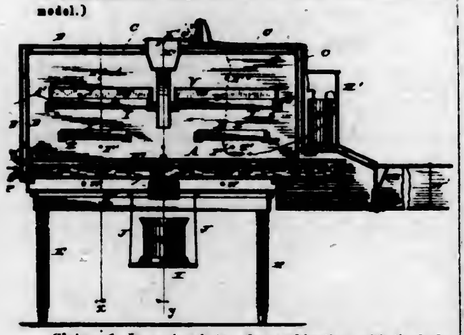


Claim.—1. In a percussion basin-bib, the upwardly-closing perforated valve *e*, having the hollow operating-stem *b* perforated at *g*, with its collar or piston *f* fitting the exterior cylinder, so as to form a chamber, *c*, above the piston, and having the passage *i*, substantially as and for the purpose herein described.

2. In a percussion basin-bib, the upwardly-closing perforated valve *e*, the hollow operating-stem *b*, perforated at *g*, and the perforated piston or collar *f* upon the stem and fitting the exterior cylinder, in combination with the air-chamber *a* upon the stem and opening into it, substantially as herein described.

3. In a percussion basin-bib, the air-chamber *a*, the hollow stem *b*, connecting the air-chamber with the perforated valve *e*, and having the collar *f*, forming the chamber *c*, the stem *b* and collar *f* being perforated at *g* and *i*, respectively, together with the exterior barrel, *d*, stuffing-box *h*, and spring *k*, substantially as herein described.

260,218. DRAG-SAW. GEORGE A. HOFFAT, Mineral Springs, Ark. Filed Mar. 21, 1882. (No model.)



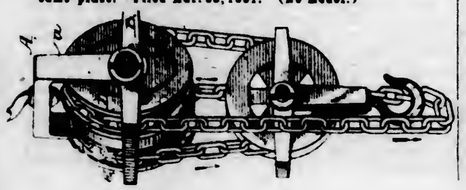
Claim.—1. The combination on the same frame of two drag-saws, connected by rods I, with two eccentrics adjustable on the same rotary shaft G, as and for the purpose specified.

2. The combination, with the saws connected with the driving-shaft G by eccentrics adjustable thereon, of an adjustable rest and adjustable roller-guides, substantially as shown and described.

3. The combination, in a sawing-machine, of the horizontally-reciprocating cross-cutting saws geared upon one shaft by eccentric devices, one or both saws being adjustable along the shaft for setting the saws toward and from each other, substantially as specified.

260,219. INCUBATOR. PAUL G. HUSCHINSON and GUSTAVE A. HUSCHINSON, Newport, R. I. Filed Mar. 17, 1882. (No model.)

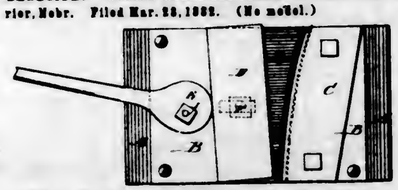
Claim.—1. In an incubator, the combination, with the body or box A, having extension or chamber D, the bottom of which is lower than the bottom of said box, of the tank F, fitted closely between the sides and ends of said box a short distance above the bottom and extending into the chamber D, as set forth.



2. In an incubator, the combination, with the box A, having extension D, forming a separate chamber or compartment, of the run composed of the hinged and folding parts X' Y' Z' A', substantially as set forth.

3. The combination, with the incubator having the herein-described folding run and staples C^2, of the detachable rods or brackets B^2 and chains D^2, as set forth.

4. The incubator having compartment D, with openings F^2, folding door J^2, and curtains G^2, in combination with the herein-described folding and extensible run, as and for the purpose herein set forth.

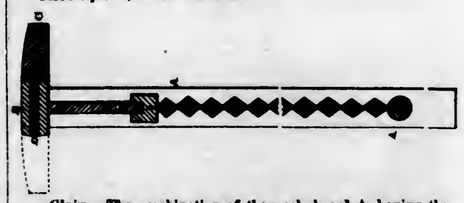


5. The combination, with the incubator having chamber or compartment D, provided with openings F^2, curtains G^2, and door J^2, and heating-tank F, extending from the incubator into said chamber D, of the folding and extensible run, as herein shown and specified.

260,220. DIFFERENTIAL PULLEY-BLOCK. PETER MURRAY, Jr., Newark, N. J., assignor of one-half to Thomas J. Doale, same place. Filed Mar. 30, 1881. (No model.)

Claim.—In a differential pulley-block, the frame A, in which is mounted the axle C, one end of which is smaller and formed eccentrically to the other, as shown, in combination with the wheels D E, having toothed rims upon their inner faces, by which they are connected together and have a simultaneous differential movement, the wheel E being mounted upon the larger end of the axle and the wheel D upon the smaller, whereby the two wheels are retained in gear at a single point and revolve together in one direction upon fixed centers, substantially as set forth.

260,221. MACHINE FOR WELDING PLOWSHARES AND LANDSIDES. JOSEPH HYDES and THOMAS B. SIMONTON, Superior, Nebr. Filed Mar. 28, 1882. (No model.)



Claim.—1. The combination of stationary jaw C, having convex longitudinal and beveled transverse face with overhanging upper edge, and the movable jaw D, having straight and vertical face, and also with a locking-lever, E, substantially as specified.

2. A pair of welding-jaws, C and D, constructed and arranged for welding plowshares and landsides, as described, one of which jaws is permanently attached to a bed-plate and the other movable thereon, and being secured to the base by a sliding pivotal bolt, F, substantially as specified.

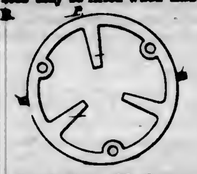
3. The convex and bevel-faced stationary jaw C, straight and square-faced movable jaw D, and working-lever E, in combination, said jaws being located and arranged relatively on the bed-plate B to clamp the tapered landside and mold-board, having one straight side and one longitudinally-concave and transversely-beveled side, substantially as specified.

260,222. WASH-BOARD. JACOB H. MELLIS, Canajoharie, N. Y. Filed Apr. 11, 1882. (Model.)

Claim.—The combination of the wash-board A, having the holes D made through the top piece, B, with the protector G, provided with the pins I, whereby it is adapted to be applied to either side of the board, substantially as shown.

260,223. UMBRELLA. GUSTAV NEU, London, England, assignor to Septimus Edmundus Carlisle and Alfred Portway, both of same place. Filed June 17, 1881. (Model.) Patented in England Mar. 19, 1881, No. 1,309; in France June 7, 1881, No. 143,347, and in Germany June 4, 1881, No. 17,494.

Brief.—The middle "gate" is formed of spring-steel, and on the inner side of said gate is formed a projection at right angles to the axis of the gate. The end of the stretcher, through which the joint passes, is formed on each side with a groove corresponding with the projection in the gate.

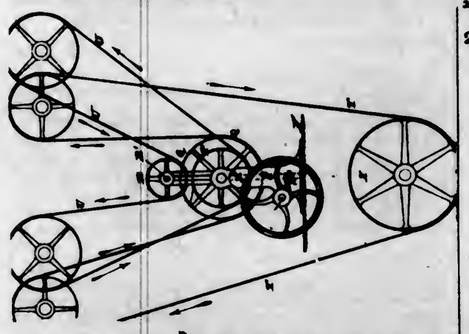


Claim.—1. The improved locking-joint for umbrella or like frames, consisting of the gate or middle-bit *a*, having transverse indentations or projections *b*, and of the stretcher *c*, having corresponding transverse grooves, and of joint-pin or rivet *e*, substantially as shown and described.

2. An umbrella or like article constituted with a frame provided with self-locking joints for the ribs and stretchers, such joints being constituted of a joint pin or rivet, *e*, of projections on the gate or middle-bit of the ribs, and of corresponding grooves on the inner ends of the pivoted stretchers.

260,224. GASOLINE-FURNACE. DENNIS NORTON, Chicago, Ill. Filed Jan. 30, 1882. (No model.)

Brief.—The pipe D extends to near the bottom of the reservoir. To the lugs *i* on the plate F is to be attached a bail, by means of which the apparatus may be lifted when said plate is substituted for the vessel B.



Claim.—1. The combination, with the reservoir, the standards, and the burner, of a cup supported by and between the standards, substantially as and for the purpose described.

2. The combination, with the reservoir, the standards, the burner, and the cup, of a supplemental plate, F, the converging arms of which are disconnected at the center of the plate, said plate having lugs, substantially as described.

3. The combination, with the reservoir, the burner, and the standards, of a cone-shaped heating-chamber having an open bottom and supported upon said standards, and provided with the horizontal converging grate-bars projecting over said bottom, substantially as described.

260,225. ROLLER-MILL. UDOLPHO H. ODELL, Dayton, Ohio. Filed Feb. 8, 1882. (No model.)

Claim.—1. In a roller-mill, the belt-driving mechanism consisting in the combination of the belts T and U, the driving and roller pulleys, and tightener-pulleys Q and R, arranged upon one side of the frame of the machine, substantially as described.

2. In a double roller mill, the combination of driving belts and pulleys, the tightener-pulleys Q and R, and an adjustable frame adapted to be raised and lowered for regulating the strain of the belts, substantially as described.

3. The combination, in a double roller mill, of the driving belts and pulleys, frame K, adjustable pulley-frame M, and mechanism for adjusting the latter, substantially as described.

260,226. CRUSHING-ROLL. UDOLPHO H. ODELL, Dayton, Ohio. Filed Mar. 18, 1882. (No model.)

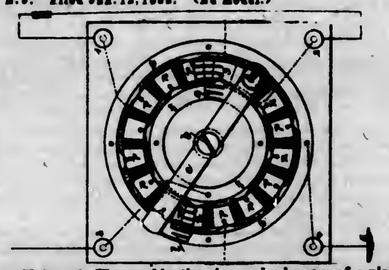
Claim.—1. In a machine for grinding grain, the combination of two co-operating rolls having the series of granulating-ribs, each rib being formed with a plain outer face, and on one side with the plane bevel 1, arranged at an angle to the radius of the roll, and on the opposite side with the concave 2, substantially as and for the purpose shown and described.

2. In a machine for grinding grain, the combination of two co-operating rolls having a series of granulating-ribs, one side of each rib being inclined or beveled and the opposite side concaved, and having a wide curved outer face, substantially as herein set forth.

3. In a grinding-mill, the combination of two co-operating grinding-rolls having ribs formed with the bevels, concaves, and plain outer faces, with belt-pulleys arranged on the ends of the roll-shafts, and adapted to be interchanged for shifting the relative speeds of the two co-operating rolls, substantially as herein set forth.

260,227. UMBRELLA AND PARASOL TIE. DAVID W. OSBORN, Elizabeth, N. J. Filed Dec. 27, 1881. (No model.)

Brief.—The parts, after passing through the ring, are folded back upon the body, secured by interlocked stitches, sewed through the fabric of the tie, and passed around the ring.



Claim.—1. The tie for umbrellas or parasols having a strip or tape passed through a ring and secured by threads passing through the material and within the ring similar to a button-hole stitch, substantially as set forth.

2. In an umbrella or parasol tie, the combination, with the strip of material and the ring through which it is passed, of a second strip in the form of a loop passed through the ring, and interlocked stitching through both strips and around the band of the fabric within the ring similar to button-hole stitching, substantially as set forth.

3. In an umbrella or parasol tie, a ring and a strip of material passing through the same, in combination with interlocked stitching similar to a button-hole passing through the material, and also forming a covering for the ring, as set forth.

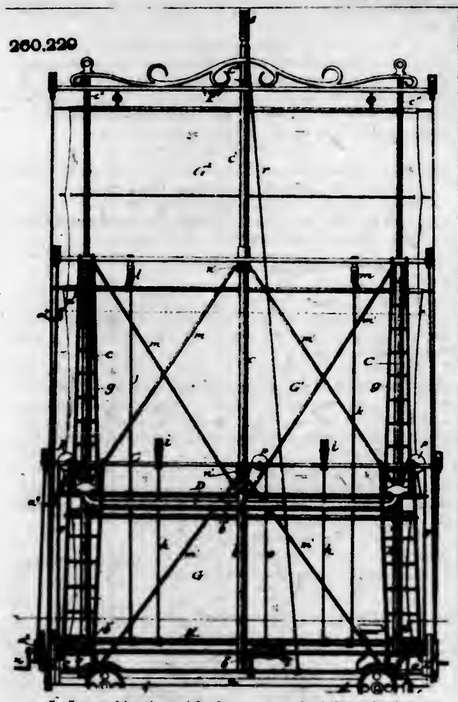
260,228. POLE-CHANGER. DAVID W. OSBORN, Elizabeth, N. J. Filed Jan. 13, 1882. (No model.)

Claim.—1. The combination, in a pole-changer, of a plate of insulating material, the pivoted arm *c*, capable of being reversed, the contact-springs *l m o s* upon each arm, the rings *e f* and alternating contact-blocks *p n* upon each plate, and the circuit-connections, substantially as set forth.

2. In a pole-changer, a plate of insulating material with a circular range of contact-blocks upon one surface and two rings upon the other surface, and alternating connections from the contact-blocks to the respective rings, and the electric circuit connected to such rings, substantially as set forth.

260,229. FIRE GUARD AND ESCAPE. JOHN O'NEIL, Pakenham, Ontario, Canada. Filed Mar. 16, 1882. (No model.)

Brief.—Mounted upon the trunk are the tubular extensible masts, suitably braced, which support the independent shields or screens, which are rolled up by crank-shafts on their lower edges, and rest, when rolled up, in notches in the frame. Flexible ladders attached to the girders are held taut by hinged weighted attachments at the bottom. A single-masted trunk may be used in connection with the main one to elevate a screen.



Claim.—1. In combination with the sustaining-frame provided with notches or shaft-bearings, the adjustable screens having their edges provided with crank-shafts, as described, whereby the screens may be wound into rolls for transportation on the frame.

2. In combination with the base-frame and the girder C, the ladders *d'*, secured at their upper ends to the girder, and attached at their lower ends to the frame by means of the hinged weighted connections, substantially as shown.

3. The base-frame, mast-sections *b*, and screen G, in combination with the ropes *h* and the winding-shaft H, provided with an operating-crank.

4. In a fire-guard, tubular extensible masts provided with appliances, substantially as shown, to sustain a curtain, and with openings at the top and bottom to permit the passage of water through them.

260,229

5. In combination with the masts and girders, the intermediate braces, *s'*, and spring *s'*, as and for the purpose set forth.

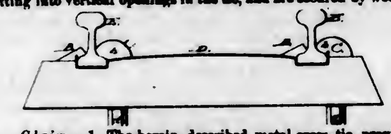
6. In combination with the truck, its masts, and girders, pulleys mounted thereon and provided with endless ropes or chains *f'*, bearing appliances, as shown, for elevating and supporting the supplemental curtain.

7. The combination of the main wheeled truck, the three extensible masts mounted thereon, appliances for extending the masts, and the three flexible curtains and appliances, substantially as shown, for elevating said curtains independently of each other.

8. In combination with the base-frame, the extensible masts and the screens, the ropes or chains for elevating the masts and screens, winding-shaft H, winding-drums *g* and their shafts, the gear-wheels connecting the two shafts, and the hand-cranks, as shown.

9. In combination with the main wheeled truck, its masts, curtains, and belts *f''*, the supplemental single-masted truck provided with the elevating-ropes *f'*, as described, whereby it is adapted to co-operate with the main apparatus to elevate a curtain suspended between the two.

260,230. HAMMOCK AND TENT FRAME. GEO. A. PARENT, Marlborough, N. H. Filed Apr. 27, 1882. (No model.)

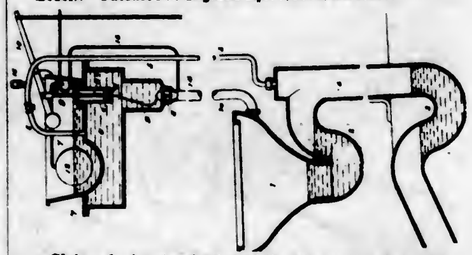


Brief.—The device forms a braced support for a hammock, and is convertible into a tent-frame.

Claim.—In a hammock and tent frame, the combination, with the posts A, having the perforated foot attachment B, bearings *d*, and buttons *e*, of the braces F, hinged to the posts A near their upper ends, substantially as specified.

260,231. METAL CROSS-TIE. JOHN PARR, Humboldt, assignor of two-fifths to Eugene A. Tucker, Richardson County, Nebr. Filed Mar. 25, 1882. (No model.)

Brief.—A metallic tie is provided with metallic bands projecting into recesses adapted to receive the base of the rails. The rails are secured by means of stationary clamps and removable clamps fitting into vertical openings in the tie, and are secured by wedges.



Claim.—1. The herein-described metal cross-tie, provided with the metallic bands or rods D, projecting into the recesses *a a*, and with the stationary clamps B and removable clamps C, substantially as and for the purpose specified.

2. In a metal cross-tie, the combination of the rails E with the ties having recesses *a a*, metallic bands or rods D, and clamps B and C, substantially as and for the purpose specified.

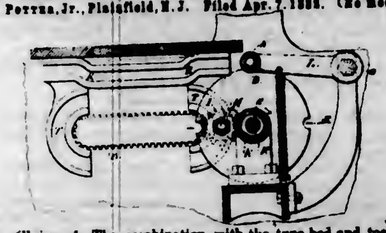
3. The herein-described cross-tie, provided with stationary clamps B, recesses *a*, and vertical openings *c*, in combination with the rails E, metallic bands D, and removable clamps C, having an enlarged head, *b*, and slots *c*, adapted to receive the wedges *d*, all substantially as and for the purpose specified.

260,232. WATER-CLOSET. STEWART PETERS and WILLIAM DONALD, Glasgow, Scotland, assignors, by mesne assignments, to Henry Huber, New York, N. Y. Filed Nov. 29, 1881. (No model.) Patented in England Apr. 7, 1874, No. 1,097.

Claim.—1. A water-closet consisting of a bowl, a fixed trap-bend in the passage leading therefrom, whereby a portion of water is retained in the bowl, a second trap in the discharge-passage leading from the first, whereby an air-space is formed between the two traps, and an orifice communicating with said air-space and adapted for the attachment of an air-pipe, all combined and arranged in substance as described.

2. A water-closet consisting of a bowl, a fixed trap-bend in the soil-passage leading therefrom, whereby a portion of water is retained in the bowl, and a second trap in said soil-passage below the first, whereby an air-space is formed between the two traps, in combination with means for rarefying the air in said space upon the flushing of the closet, substantially as set forth, and for the purposes described.

3. A water-closet consisting of a bowl, a trap leading therefrom, a second trap in the discharge-passage leading from the first, and an air-space between the two traps, in combination with a flushing-valve and means for operating the same to flush the closet, and means for drawing air from the space between the two traps, constructed to be set in operation by the act of opening said flushing-valve, substantially as set forth.



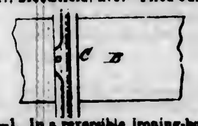
4. A water-closet having a trap leading from its bowl, a second trap in the discharge-passage leading from the first, and an air-space between the two traps, in combination with a flushing-pipe opening into said bowl, a flushing-chamber adapted to supply said pipe, a flushing-valve controlling the admission of water to said pipe, and an air-pipe leading from the air-space between the traps and terminating within the flushing-chamber at the top thereof, substantially as set forth.

5. A water-closet consisting of a bowl, a trap leading therefrom, a second trap in the discharge-passage leading from the first, and an air-space between the two traps, in combination with a pipe leading from said air-space to a flushing-chamber and terminating at the top thereof, the said chamber, an open-air pipe communicating with said pipe and chamber and containing a check-valve opening outwardly therefrom, a flushing-pipe leading from said chamber to the bowl, and a valve controlling the entrance of water to said pipe, substantially as set forth.

6. A water-closet consisting of a bowl, a trap leading therefrom, a second trap in the discharge-passage leading from the first, and an air-space between the two traps, in combination with an air-pipe leading from said space and terminating at the top of a flushing-chamber, the said chamber, a supply-tank, a supply-valve controlling the admission of water from said tank to said chamber, a flushing-valve controlling the escape of water from said chamber and arranged to open after and to close before the supply-valve, and a flushing-pipe leading from said flushing-valve to the bowl, substantially as set forth.

7. A water-closet consisting of a bowl, a trap leading therefrom, a second trap in the discharge-passage leading from the first, and an air-space between the two traps, in combination with an air-pipe leading from said space and terminating in the upper part of a flushing-chamber, the said chamber, a flushing-pipe leading from said chamber to the bowl, a flushing-valve controlling the admission of water to said pipe, a tank to supply said chamber, a float-valve to govern the admission of water from the service-pipe to said tank, and an after-flow pipe leading from said float-valve to the flushing-pipe below the flushing-valve, substantially as set forth.

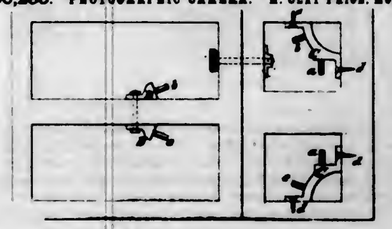
260,233. RACK-MOTION FOR PRINTING-PRESSES. CHARLES POTTER, Jr., Plainfield, N. J. Filed Apr. 7, 1882. (No model.)



Claim.—1. The combination, with the type-bed and toothed rack, of the shaft C, disk or arm D, and the pinions I and K and automatic locking mechanism, substantially as set forth.

2. The combination, with the type-bed and toothed rack, of the driving-shaft C, disk D, crank-pin or gudgeon H, pinion I upon such gudgeon, the pinion K on the shaft C, the locking device, and the cams upon the bed A, for the purposes and as set forth.

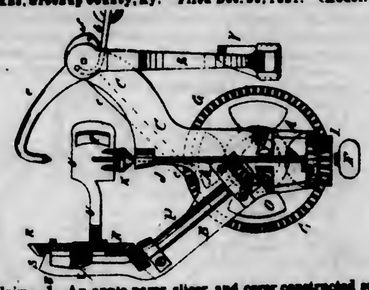
3. The combination, with the toothed rack having semicircular ends, of the pinions I and K, actuating-shaft C, crank-pin or gudgeon H for the pinion I, and the semicircular grooves T and roller *u*, substantially as set forth.



260,234. REVERSIBLE IRONING BOARD OR TABLE. C. W. POWERS, Jr., Bloomfield, N. J. Filed July 16, 1881. (Model.)

Claim.—1. In a reversible ironing-board, the combination, with the board A, of the press-board B, having supporting and connecting devices, and a bar, C, of a length greater than the width of the board and pivoted to one side, as shown and described, and for the purpose set forth.

2. The combination, with the detachable and reversible board A, constructed as shown and described, of the press-board B, having connected thereto bar C, and the hinged round *e*, with legs *d* and suitable brace, *c*, whereby either board, when in position for use, will be retained without the use of supports at its rear end, substantially as and for the purpose described.

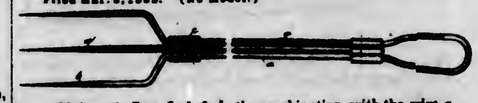


260,235. PHOTOGRAPHIC CAMERA. H. CLAY PRIOR, Montclair, N. J., assignor to the Scovill Manufacturing Company, Waterbury, Conn. Filed Jan. 11, 1882. (No model.)

Claim.—1. The combination, with a camera and detachable legs therefor, of the devices C, secured within and directly to the base-frame, and provided with the pivots *a*, substantially as specified.

2. The combination, with a camera and detachable legs therefor, of the devices C and D, secured within and directly to the base-frame, and provided with pivots *a* and *b* or *c*, substantially as specified.

260,236. APPLE PARER, CORER, AND SLICER. JOHN F. RAND, Greenup County, Ky. Filed Dec. 30, 1881. (Model.)

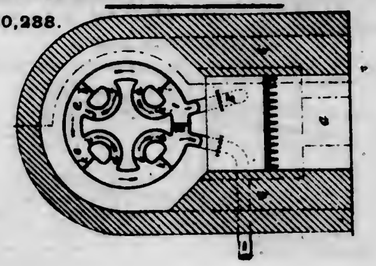


Claim.—1. An apple parer, slicer, and corer constructed substantially as herein shown and described, consisting of the frame A B C, the fork K and its shaft J, the paring-knife T and its holder U, the slicing and coring knife Y and its holder Z, the holding-bar *c* and the pawl *c*, and the driving mechanism, as set forth.

2. In an apple parer, slicer, and corer, the combination, with the frame A B C, the gear-wheels G I, the shaft J, and the fork K, of the gear-wheels L O Q R, the shaft P, the paring-knife T and its holder U, pivot V, spring X, and cam W, substantially as herein shown and described, whereby the apple is pared and rotated upon the fork, as set forth.

3. In an apple parer, slicer, and corer, the combination, with the frame A B C, the gear-wheels G I, the shaft J, and the fork K, of the slicing and coring knife Y, the holder Z, the crank *b* and crank-wheel *a*, and the pawl *c*, substantially as herein shown and described, whereby the apple is sliced and cored, as set forth.

4. In an apple parer, slicer, and corer, the combination, with the frame A B C and the fork K, shaft J, and gear-wheels G I, of the bent holding-bar *c*, substantially as herein shown and described, whereby the core is held while the apple is being sliced and cored, as set forth.

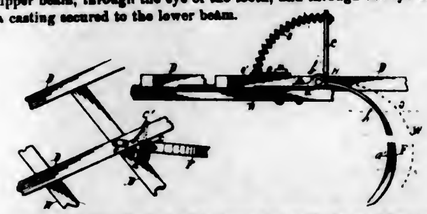


260,237. FLESH-FORK. WILLIAM A. RUDDICK, Niles, Mich. Filed Mar. 6, 1882. (No model.)

Claim.—1. In a flesh-fork, the combination, with the wire *a*, doubled upon itself to form a handle and two tines, of the wire *a'*, arranged between the parallel parts of the wire *a* to form an intermediate tine and a part of the handle, said parts being tinned together and bound by ferrules, substantially as shown and described.

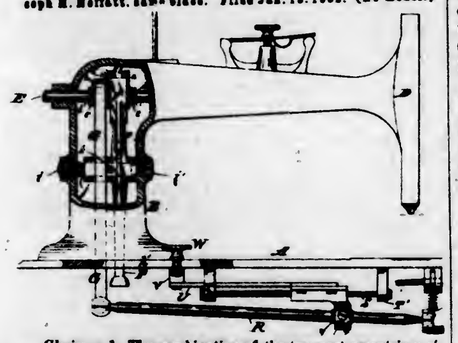
2. In a flesh-fork, the combination, with the wires *a a'*, arranged to form the handle and tines of the fork, of the ferrules *c*, made of wire wrapped around said parts in such manner as to be self-binding, substantially as shown and described.

260,238.



260,238. SUPERHEATER. DAVID RUSSHAW, Cohasset, assignor of one-half to Harvey T. Litchfield, Hull, Mass. Filed Sept. 15, 1881. (No model.)

Claim.—A superheater composed of one or more sections, D, each section being composed of a hollow ring having plates and flanges *k k'*, dividing such ring into compartments, the latter being connected together by semicircular pipes *b*, *d*, *f*, and *h*, and the several sections being connected together by pipes E E', &c., as shown.



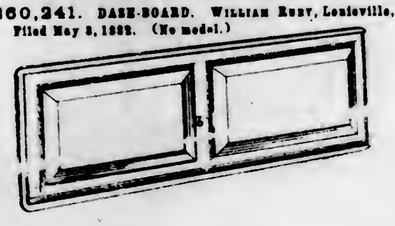
260,239. HARROW AND CULTIVATOR. BENJAMIN F. RIX, Kalamazoo, Mich. Filed Sept. 8, 1881. (No model.)

Brief.—The teeth are each formed with an eye at the junction of their vertical and curved portions, and are hinged in the angles formed at the intersections of the frame-beams, the hinged connection being effected by a bolt passing diagonally through the upper beam, through the eye of the tooth, and through the eye of a casting secured to the lower beam.

Claim.—In a harrow of the form described, the combination of the beam and casting B *a*, the perforated beam D, bolt *c'*, and hinged tooth, all constructed and adapted to operate as described.

260,240. SEWING-MACHINE. THOMAS B. ROBERTS, Pittsburg, Pa., assignor of two-thirds to David Hutchison and Joseph M. Moffatt, same place. Filed Jan. 13, 1882. (No model.)

Claim.—1. The combination of the two-part eccentric *a a'*, having bevels *b b'*, adjustable with relation to each other, with the forked lever F, having the inner faces of forks *f f* beveled, as described.



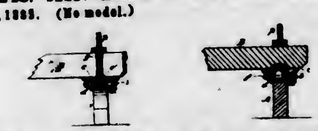
2. The combination of the eccentric *a*, having bevel *b*, sleeve *c*, and a suitable opening or socket, with eccentric *a'*, having bevel *b'*, sleeve *c'*, and stud *e*, bolt *g*, shaft E, and set-screws *d d'*, substantially as described.

3. The combination of lever F, pointed pin *j*, set-screw *k*, capped screws *i i'*, and post B, substantially as described.

4. The combination of bed A, having boss I, arm *p*, having stud *o* and capped top, screw *n*, and set-screw *r'*, with lever H, having pin *q*, and set-screw *r*, substantially as described.

5. The combination of lever R, sleeve *y*, bracket *z*, pivot-screw *y'*, rod S, lugs T T', bar U, head V, screw W, and slot *h'* in bed A, substantially as described.

260,241. DASH-BOARD. WILLIAM RUBY, Louisville, Ky. Filed May 8, 1882. (No model.)



Claim.—A dash-board or fender provided with a stiff inner lining for the cover, composed of wood or other equivalent material, substantially as described.

260,242. MANUFACTURE OF COLORING-MATTER FROM NAPHTHYLAMINE. CARL RUMPFF, Aprath, near Elberfeld, Prussia, Germany. Filed Apr. 21, 1882. (Specimens.)

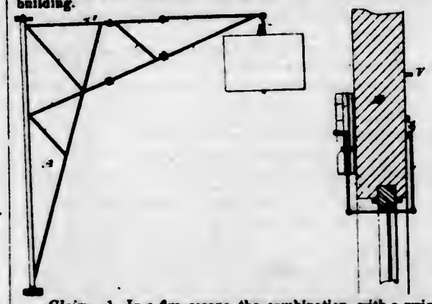
Claim.—The new brown dye-stuff or coloring-matter which is produced by the action of diazoazobenzolsulfonate of soda upon naphthylamine in an acid solution.

260,243. SLED. ALBERT SANFORD, Oshkosh, Wis. Filed Apr. 14, 1882. (No model.)

Claim.—1. The combination, with the runner, of the plate *b*, made broader than the runner and having the central projection, the plate *c* on the under side of the beam having the cavity corresponding to the projection on the plate *b*, and the cut-away portions *c'*, for the accommodation of the pins *p p*, the beam having the grooves *g g* in its sides, and the pins *p p*, for holding the parts together, substantially as described.

2. The bail *f*, in combination with the plate *b* and the runner, substantially as described, for the purpose specified.

260,244. METHOD OF SEPARATING SUGAR FROM MOLASSES, &c. CARL SCHEIBLER, Berlin, Germany. Filed May 27, 1882. (No specimens.)



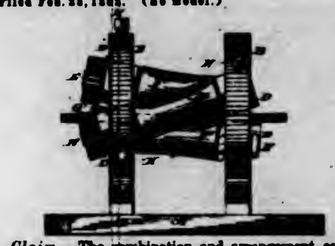
Claim.—1. The method of producing monosaccharate of strontia in molasses and sirup by introducing into the same, while at a temperature below the boiling-point, hydrate of strontia, by cooling the liquor, and by stirring it, in order to effect the formation of the saccharate of strontia at a low temperature and the separation thereof from the liquor, substantially as and for the purpose specified.

2. In combination with the method of producing monosaccharate of strontia in molasses and sirup by introducing into the same, while at a temperature below the boiling-point, hydrate of strontia, by cooling the liquor, and by stirring it, the addition to the liquor of saccharate of strontia previously obtained, in order to promote the separation of the saccharate of strontia formed in the liquor, as hereinbefore specified.

3. In combination with the process of producing monosaccharate of strontia in molasses and sirup, as hereinbefore described, the treatment of the mother-lye, resulting from such process, by adding thereto an additional quantity of hydrate of strontia and boiling in order to produce bibasic saccharate of strontia, as and for the purpose described.

260,245. FIRE-ESCAPE. DIEDRICH SCHMIDT, New York, N. Y. Filed Feb. 23, 1882. (No model.)

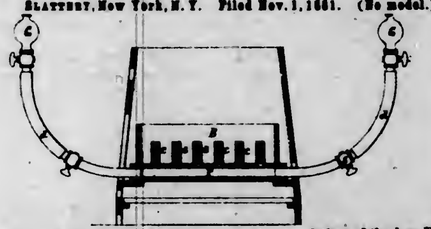
Brief.—A jointed derrick-frame to the end of which a box containing a flexible ladder is secured is pivoted to the inner wall, and when used is swung around out of the window and held in place by a spring upon a bracket secured to the outer wall of the building.



Claim.—1. In a fire-escape, the combination, with a swinging folding derrick-frame pivoted to the inner side of the wall, of a box suspended from the end of the arm of the frame, and of a folding ladder in this box, substantially as herein shown and described, and for the purpose set forth.

2. In a fire-escape, the combination, with a swinging folding derrick-frame pivoted to the inner side of the wall, of a bracket or hook projecting from the outer surface of the wall for supporting the end of the arm of the derrick-frame when the same is swung outward against the outer surface of the wall, substantially as herein shown and described, and for the purpose set forth.

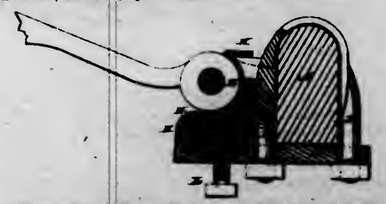
3. In a fire-escape, the combination, with the swinging folding derrick-frame A, of the bracket T, projecting from the outer surface of the wall, and the spring catch or hook U above the bracket T, substantially as herein shown and described, and for the purpose set forth.



4. In a fire-escape, a derrick-frame made substantially as herein shown and described, and consisting of a pivoted standard provided with a fixed arm, to which one or more arms or sections are pivoted, whereby the end of the frame can be swung out through a window-opening against the outer surface of the wall, as set forth.

260,246. ROLLING-MILL. CYRUS B. SELL, Youngstown, Ohio. Filed Feb. 28, 1882. (No model.)

Claim.—The combination and arrangement, as herein described, of the housings B B, having seats C and set-screws H, the radially-adjustable boxes D, the concave-sided rolls F, having shafts E mounted in said boxes, all said boxes being independently adjustable, and the gear-wheels G, secured upon the ends of the shafts which project beyond the housings, as and for the purpose herein set forth.



260,247. APPARATUS FOR MANUFACTURING CARBON FILAMENTS FOR INCANDESCENT LAMPS. HERMANUS N. H. SLATTERY, New York, N. Y. Filed Nov. 1, 1881. (No model.)

Claim.—1. A carbonizing apparatus consisting of the box B, having the passage P, in combination with the perforated nipples *c c*, substantially as described.

2. The combination of the bulb G with the box B, it being connected therewith by the pipe *d*, one end of which is secured in the passage P, substantially as described.

260,248. THILL-COUPLING. CHARLES H. SMITH and TIM MURPHY, Danville, Ky. Filed Nov. 8, 1881. (Model.)

Claim.—In a thill-coupling, the combination, with the bow B, the yoke C, provided with the upwardly-projecting flanges H, and the set-screw I, of the wedge-block I, having a concave inner surface, and provided with two upwardly-projecting and tapering flanges of unequal length, the rubber block J, and the fishing-plate K, having its upper edge bent to the rearward and its lower edge bent down between the flanges of the said yoke and wedge-block, substantially as and for the purpose set forth.

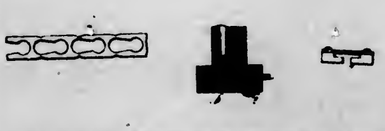
260,249. NUT-LOCK. RICHARDS C. SMITH, Baltimore, Md. Filed Mar. 8, 1882. (No model.)

Claim.—1. The nut constructed with the described alternate recesses *d* and shoulders D offset from its face, and extending neither to the top nor to the periphery, for engagement by the bent outer end of the locking-pin, as set forth.

2. A nut provided on its outer face with recesses for the locking-pin, and having in its inner face an annular recess surrounding and terminating in the top for the bend of the locking-pin, substantially as set forth.

3. The combination of the bolt having the longitudinal side groove, the locking-pin fitted lengthwise in said groove, and the nut provided with the alternate recesses *d* and shoulders D offset from its face, and extending neither to the top nor to the periphery, as and for the purpose set forth.

4. The combination of the grooved bolt, the locking-pin, and the nut having the annular recess on its inner face, and provided with a series of recesses on its outer face for engagement by the locking-pin, substantially as set forth.



5. The nut having the annular recess and locking-notches *d* on its inner face, substantially as and for the purpose hereinbefore set forth.

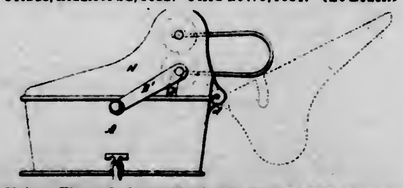
6. The nut provided with locking-pin notches on its outer face, and having the annular recess provided with locking-notches on its opposite face, substantially as and for the purpose set forth.

7. The combination, substantially as hereinbefore set forth, of the grooved bolt, the locking-pin, and the nut provided with the annular recess and locking-pin notches on its inner face.

8. The combination of the grooved bolt, the locking-pin, and the nut having the locking-notches on its outer face and the annular recess and locking-notches on its inner face, substantially as and for the purpose set forth.

260,250. MACHINE FOR MANUFACTURING LACING-HOOKS. STEPHEN N. SMITH, Providence, R. I. Filed Aug. 11, 1881. (No model.)

Claim.—1. In a machine for making eyelets or lacing-hooks, the combination of a slotted guide for the necked stock, the punch arranged to descend upon the stock above the guide, and the reciprocating feed-dog arranged to operate against the projecting necks of the prepared stock beneath the guide.

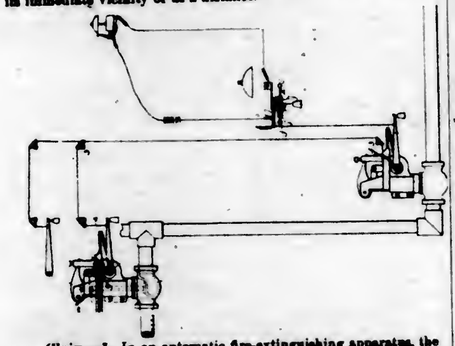


2. In combination with the guide slotted to receive the depending necks of the stock, the feeding-finger located thereunder to engage with said necks.

3. The combination of the slotted guide, lever F, dog E, and spring G, substantially as shown.

4. The cutting-punch provided with the removable protuberance, substantially as described.

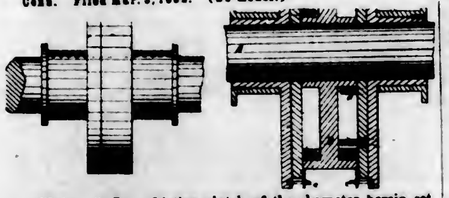
5. The cutting-punch *f*, in combination with the protuberance *i*, having its neck or spindle secured by means of a binding-screw.



260,251. DAMPENING-BATH FOR PRESS-COPYING. NORMAN C. STILES, Middletown, Conn. Filed Nov. 8, 1881. (No model.)

Claim.—The tank A, combined with the rolls B B, arranged upon one edge of the tank, and the crank B', for imparting rotary movement thereto, with the cover H, arranged in rear of the rolls, and so as to serve both as a cover to the box and receiver for the cloths, substantially as described.

260,252. AUTOMATIC FIRE ALARM AND EXTINGUISHER. DANIEL C. STILLSON, Somerville, Mass. Filed Dec. 7, 1881. (No model.)



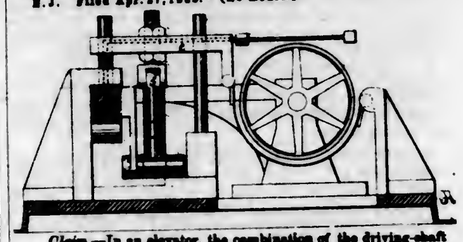
Brief.—Heat from a fire expanding the thermal bar T will open the valve at A and also by connection 2 will open the main valve M, which allows the flow of water throughout the entire system. In opening the valve M operates an alarm located either in its immediate vicinity or at a distance.

Claim.—1. In an automatic fire-extinguishing apparatus, the combination of a valve and operating mechanism therefor automatically controlled by a rise in temperature, with a main valve and operating mechanism, and releasing device therefor mechanically connected with and controlled by the operating mechanism of the valve that is controlled directly by rise in temperature, whereby operation of the main valve is directly dependent on that of the other valve, substantially as and for the purpose described.

2. The valve and its operating mechanism, the alarm and its motor, and detent therefor, connected with the said valve-operating mechanism, combined with an electric circuit and alarm therein, including the said detent as a circuit-closer, whereby the said electric alarm is set in operation simultaneously with the release of the mechanical alarm-motor, substantially as described.

260,253. FRICTION-CLUTCH. WILLIAM B. YATES, Hartford, Conn. Filed Mar. 3, 1882. (No model.)

Claim.—1. In a friction-clutch of the character herein set forth, the operating-lever held in place by a dovetailed or beveled head located between the ends of the divided ring, and arranged to spread the ring against the wall of the clutch, substantially as and for the purposes set forth.



2. In combination with the operating-lever provided with a beveled or dovetailed head, arranged to spread the divided ring against the wall of the clutch, the two pins or projections for bearing against the free end and opposite sides of said lever, substantially as and for the purposes set forth.

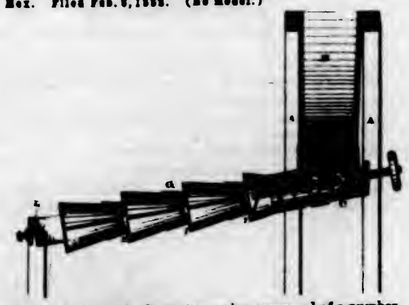
3. In a friction-clutch of the character herein set forth, the combination, with the operating-lever arranged to spread the divided ring against the wall of the clutch, of adjustable pins or studs for bearing against either side of the free end of said lever, substantially as and for the purposes set forth.

4. In combination with the wall of the clutch, the movable plate bearing the two pins or studs which act upon either side of the free end of the operating-lever, the head of which is held between the ends of the divided ring, a spring-catch arranged to hold said plate in proper position upon the side of the clutch, substantially as and for the purposes set forth.

5. The herein-described double clutch having the two divided rings provided with spreading-levers, the heads of which are held between the ends of said rings, the pins or projections for bearing against the free ends of said levers, the movable or adjustable plates carrying said pins and serving to transfer the bearings from one side to the other of the free ends of the levers, the same being constructed and arranged to operate substantially as herein shown and described.

260,254. ELEVATOR. GEORGE S. TWEEDDALE, West Orange, N. J. Filed Apr. 27, 1882. (No model.)

Claim.—In an elevator, the combination of the driving-shaft brake and driving-pulleys mounted thereon, the shipper-rod connected to a sliding cross-head, and a brake-shoe connected to said cross-head, whereby the brake is operated by the movement of the shipper-rod in shifting the belt.

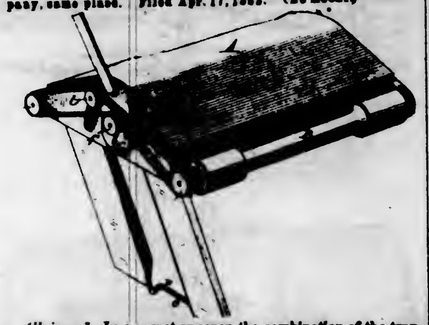


260,255. HEDGE-TRIMMER. WILLIAM F. TREGONNOTER, Adair, Ill. Filed Dec. 3, 1881. (No model.)

Claim.—1. The adjustable upright standard C, carrying at its upper end the yoke, which is provided with shoulder-pads *s s*, and at the lower end carrying the hip-brace J, in combination with the bar A, having the rigidly-attached projecting stirrups O and V, provided with perforations and adjusting-pins, for the purpose set forth, and substantially as described.

2. The frame-bar A, provided with handle *g* and adjustable yoke-standard C, in combination with the driving shaft or bar *y*, supported upon the frame-bar A and parallel therewith, carrying the fly-wheel at one end and operating the cutter-bar at the other, as set forth.

260,256. AMALGAMATOR. CHARLES H. TOPPING, Socorro, N. Mex. Filed Feb. 6, 1882. (No model.)



Claim.—1. In an amalgamator, a pipe composed of a number of interchangeable conical sections, each one of which has an enlargement or shoulder formed in it to hold mercury, and having one of its ends formed so as to catch over the end of the next adjoining section, in combination with a supporting-frame in which the pipe is made to revolve while the ore or earth is passing through it, a hopper, and a screw-conveyer, substantially as shown.

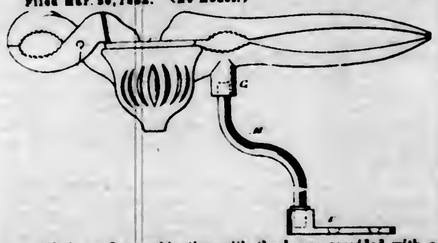
2. In an amalgamator, the combination of the frame A, hopper B, screw-conveyer, pipe G, and extensible frame, substantially as specified.

3. The combination of the frame A and its hopper with the adjustable frame L, and a pipe which is made in sections, as described, the outer end of the pipe being supported by the adjustable frame, substantially as shown and described.

260,257. CARPET-SWEEPER. CHARLES L. TRAVIS, Minneapolis, Minn., assignor to the Minneapolis Grain Binder Company, same place. Filed Apr. 17, 1882. (No model.)

Claim.—1. In a carpet-sweeper, the combination of the traveling body, a rotary brush therein, and dust-collecting pans hinged to the body at one end and arranged to swing downward endwise therefrom, substantially as described and shown.

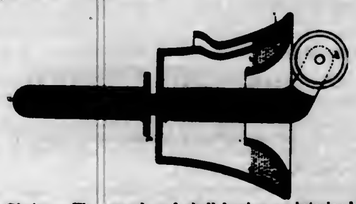
2. In a carpet-sweeper, the combination of the traveling body, the rotary brush, and the dust-collecting pans, hinged at one end to the body and provided with a fastening device adapted to be disengaged by the foot, substantially as described and shown.



3. In combination with the traveling body A, the brush C therein, the dust-collecting pans sustained by means of the wire frame, hinged at one end to the body and provided at the opposite end with the extension *p*, substantially as shown.

4. In combination with the sweeper-body, the wire frame e, hinged thereto, and the two metal pans secured at their inner edges to said frame, and provided with the upturned edges adapted and arranged to bear, under the action of the frame, with a spring-pressure against the under edges of the body, as set forth.

5. The combination of the body, the non-rotating journals, and the rotary brush, supported as shown, with an annular space, *c*, around the journals.

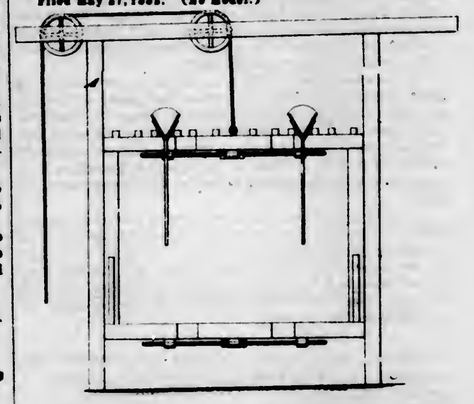


6. In combination with the body and the rotary brush, the tubular journals *b*, surrounded by the annular space *c*, and the driving-shaft extended through one of said journals and seated rigidly in the roll.

260,258. LEMON-SQUEEZER. JOSEPH TRICKEL, Reading, Pa. Filed Mar. 20, 1882. (No model.)

Claim.—In combination with the levers provided with a conoidal shell and perforated cup, respectively, and the removable perforated cup, the arm H, adapted to fit in a recessed lug, G, and the foot I, adapted to be secured to a table or other support, substantially as specified.

260,259. CASTER. CHARLES H. TUMEY, Austin, Tex. Filed Apr. 3, 1882. (No model.)

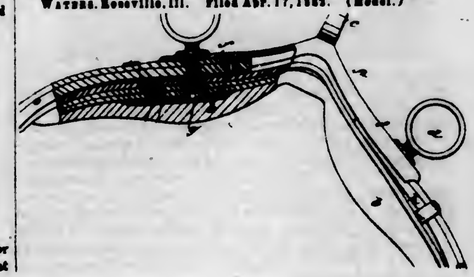


Claim.—The cup-shaped shell having an interior bowl or liquid-receptacle at its lower edge, an interior tube or socket at its top, and a passage extending through the shell in a downward direction and terminating at or near the bottom of the interior bowl, in combination with a caster and its shank or stem provided with a shoulder or stop, as and for the purpose herein set forth.

260,260. HORSESHOE. WILHELM VONDERSAAR, Indianapolis, Ind. Filed Mar. 16, 1882. (No model.)

Claim.—A horseshoe, B, provided with outs or spurs C D, all constructed integrally therewith, and arranged as shown, said spurs C being adapted to enter the bottom of the hoof a short distance, and said spurs D being adapted to be clinched down upon the outside of the hoof, and thus grip a portion of the substance of the hoof directly between the two spurs, in the manner shown and specified.

260,261. ELEVATOR. PETER H. WALSH, New York, N. Y. Filed May 27, 1882. (No model.)



Claim.—1. The combination, with an elevator-car frame made in sections, of means whereby when they are adjusted in different relations to each other they may be secured together, substantially as specified.

2. The combination, with an elevator-car frame made in sections, of means whereby they may be adjusted and secured in different relations to each other, substantially as specified.

3. The combination, with a frame for the floor of an elevator-car made of sections adapted to be adjusted into different relations to each other, of beards having their ends fitted into grooves in opposite sides of the frame, so that one or more may be removed or inserted by sliding them along the grooves, substantially as specified.

260,262. HARNESS-SADDLE TREE AND PAD. EDWARD P. WATERS, Roseville, Ill. Filed Apr. 17, 1882. (Model.)

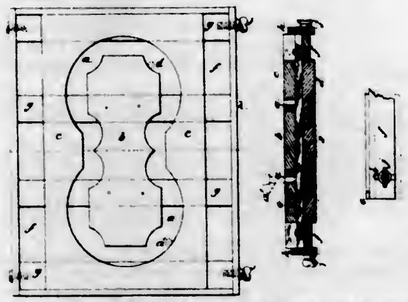
Claim.—1. The harness tree and pad consisting of the iron A, formed at its end with pockets *f*, the pads *b b*, and the adjustable skirts *c c*, combined together substantially as shown and described.

2. The combination of the skirts *c c*, having apertured ends, the tree A, formed with pockets *f*, the terrets *d*, and the nut *g*, substantially as described.

3. The combination of the nuts *g* and terrets *d* with the pockets *f* and skirts *c*, substantially in the manner shown and described.

260,263. COMPOUND RAILWAY-RAIL. DAVID D. WEIBELL, Fort Wayne, Ind. Filed July 26, 1881. (No model.)

Brief.—Bipartite rails have their webs arranged in contact with each other, one part having flanges and bottom bearing-surfaces extending laterally and the other provided with a horizontal grooved tread and foot the bearing-face of which extends laterally.

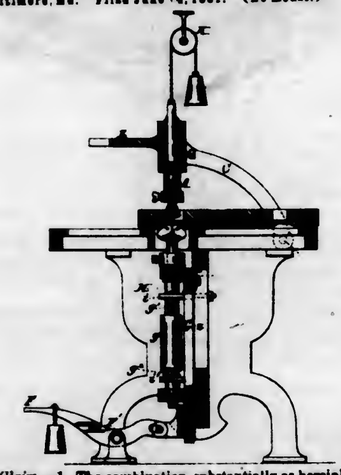


Claim.—1. In a compound or bipartite rail having webs arranged in contact with each other, the part A, provided with the flanges D D and bottom bearing, C, the surfaces of which are extended laterally in horizontal planes, and the part B, provided with the longitudinal groove, tread E, and foot H, the bearing-faces of which are also extended laterally in horizontal planes, substantially as and for the purposes described.

2. In a compound or bipartite rail having webs united together in contact by connecting devices which permit their expansion and contraction, the part A, having the flanges D D and bearing C extended laterally in horizontal planes, and the part B, provided with the longitudinal groove F, the tread E, and the foot H, the bearing-surfaces of which are also extended laterally in horizontal planes, all substantially as and for the purpose herein set forth.

3. A compound or bipartite railway-rail composed substantially of the part A, provided with the lateral flanges D D at its top and the lateral bearing C at the inner side of its bottom, and the part B, provided with the longitudinal groove F, lateral tread E, and lateral foot H, the bearing-faces of said flanges, tread, and foot being formed on horizontal planes, in the manner and for the purposes described.

260,264. TEMPLET FOR MOLDING AND PANELING MACHINES. LAURENCE WENCHEL, Baltimore, Md. Filed June 16, 1881. (No model.)



Claim.—1. The edge-patterns *b* and *c*, separated by an opening, *a*, having a width greater than the diameter of an insertible guide-pin, in combination with the frame *e f*, having the open-edge pattern *b* on one side and a holding-cent on its other side for the work, and means for supporting and bracing the edge-pattern *c* within the open-edge pattern, whereby the separate edge-patterns are secured in proper relation to each other for separate manipulation against the side of the pin, for the purpose described.

2. The templet herein described, consisting of the open-edge pattern *b* and the inner-edge pattern *c*, separated by an opening, *a*, having a width greater than the diameter of the guide-pin, a frame, *e f*, supporting the open-edge pattern on one side, having a recessed back for holding the work, and the cross supporting-braces *g g*, for the inner-edge pattern *c*, substantially as described, for the purpose specified.

3. In combination, the pattern or patterns, a holding-frame therefor and for the work, and adjusting leveling strips or bars attached to said frame, so as to ride upon the table in manipulating said holding-frame, substantially as described, for the purpose specified.

260,265. WOOD-MOLDING MACHINE. LAURENCE WENCHEL, Baltimore, Md. Filed June 14, 1881. (No model.)

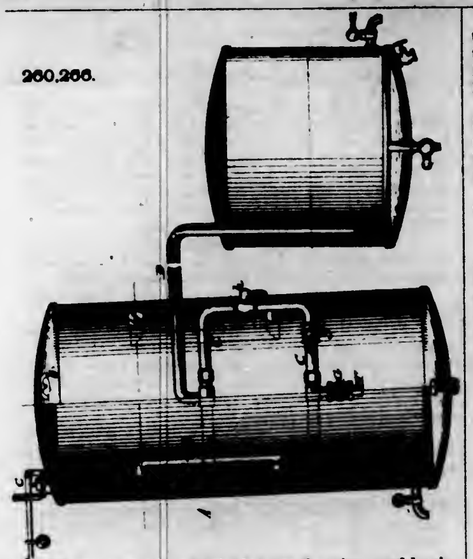
Claim.—1. The combination, substantially as herein before set forth, in a machine for ornamentally working wood, of a cutter arranged to operate beneath the table, with a guide-pin holder, A, arranged to be raised and lowered independent of its carrying-frame, a counter-balance for said guide-pin, and a slotted pattern carrying the work over the cutter, as specified.

2. The combination, in a machine for ornamentally working wood, of a cutter arranged to operate beneath the table, with a guide-pin holder, A, arranged to be raised and lowered to be freed from and inserted within a slotted pattern independent of its carrying-frame C, and a counter-balance for said pin-holder, substantially as described.

3. In combination, the cutter, the fixed table, the slotted pattern carrying the work over the cutter, the guide-pin, its holder or support, the cord J', pulley K, and weight J, the said cord being connected to the upper end of the guide-pin stem, substantially as described, for the purpose specified.

4. In combination, the suspended treadle F, the treadle suspending rod D, the cutter-carrying slide G, connected with the suspended treadle, the spring *g*, and the work-holding device, the said suspending treadle-rod having a non-yielding connection with the said work-holding device, substantially as described, for the purpose specified.

5. The combination, in a rosette-cutting machine, of a treadle suspended by and having an unyielding connection with the work-holding device, and connected with the cutter-carrying slide G, substantially as herein set forth, with the spring *g*, and means whereby it is made adjustable to regulate its force according to the power required to hold the work under the action of the cutter, substantially as described.



6. In a machine adapted for rosette and for panel work, the stem A, adapted to carry a guide-pin or a work-holder, the pivoted frame C, the treadle F, adapted for use with a fixed fulcrum, F', or with a suspending-rod, D, the cutter-carrying slide G, the spring *g* and its adjusting-screw *g'*, and nut *g²*, the said rod D being connected to the pivoted frame by nuts *D' D'*, and having the spring B arranged to elevate said rod, all constructed, arranged, and combined for use substantially as herein set forth.

260,266. RENDERING APPARATUS. ROBERT WHELAN, Chicago, Ill., assignor of one-half to John Arthur Atkinson, same place. Filed May 5, 1882. (Model.)

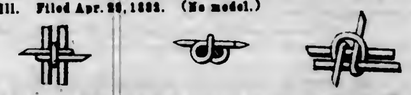
Brief.—The invention is designed to carry off the fat as quickly as rendered and to provide for an expeditious means of cleaning out the draining-pipes.

Claim.—1. In a rendering apparatus, the combination of a steam-pipe communicating with the kettle which receives the product of the rendering-vessel, provided with valves *g* and *h*, and a perforated pipe or body within the rendering-vessel, communicating with the steam-pipe at a point between the valves *g* and *h*, substantially as and for the purpose explained.

260,266.

2. In a rendering apparatus, a rendering-vessel provided with an internal perforated pipe or body, one or more, provided with a detachable cap or a cock at one end, and communicating at the opposite end with a steam-pipe, as and for the purpose set forth.

3. In a rendering apparatus, the combination of a tank or vessel, A, perforated pipes B, steam-pipes C D F, and valves or cocks *g h*, all arranged and operating as explained.



4. The herein-described rendering apparatus, consisting of vessels A and E, perforated steam-pipes B, provided with caps or cocks *f*, and communicating with pipe C, pipe C, provided with valves *g h*, discharge-pipe D, and steam-pipe F, all combined and arranged as shown and described.

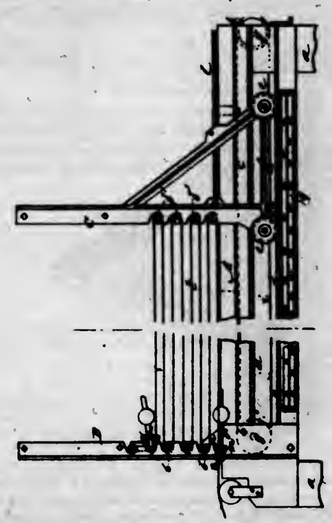
260,267. BUTTON AND MEANS FOR ATTACHMENT. JOHN WILDE, North Attleborough, Mass. Filed Jan. 13, 1882. (No model.)

Claim.—A metallic button concaved on the upper side, convexed on the lower side, and having prongs cut within the outer margin of its body and connected therewith by the inner uncut ends, as described.

260,268. WIRE-FENCE BARB. ROBERT H. WILBE, Freeport, Ill. Filed Apr. 26, 1882. (No model.)

Claim.—The combination, with a two-strand cable, of a two-point barb consisting of a staple whose loop lies between the strands of said cable, while its two legs are wrapped about different strands and passed in opposite directions through said loop, substantially as shown and described.

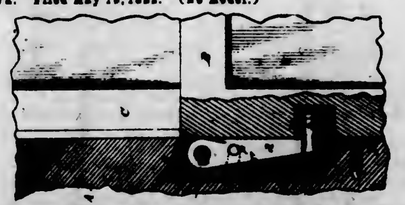
260,269. DUMPING-WAGON. LORENZO WITHLOW, Rochester, N. Y. Filed Mar. 1, 1882. (No model.)



Claim.—1. In a dumping wagon or car, the combination of the jointed slats or wings B B', arranged in pairs, the links *d d*, the vertically-moving bar C, the links *h h*, the pivoted bell-cranks F E, and the longitudinally-moving bar D, operated by the hand-lever G, as shown and described, and for the purpose specified.

2. The combination, with the bar D, of the brace H and the lever I, the lever I having a projecting end, *e*, which reaches over and rests upon the end of the bar, forming a fulcrum by which the brace is lifted from behind the bar when the lever is raised, as herein shown and described.

260,270. CLOTH-FOLDING MACHINE. ALBERT WINTER, Plainfield, N. J. Filed Oct. 12, 1881. (No model.)

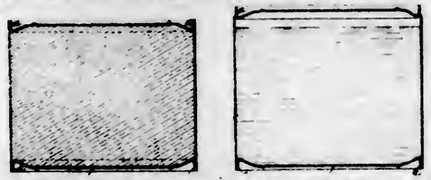


Brief.—The cloth is placed in layers over rollers carried by suitable standards. Two of said standards are stationary, while the other two are secured to a movable carriage. The carriage is moved outward until the folds are of sufficient length. The rollers are then removed from the standards and the cloth is laid in folds upon the table.

Claim.—1. The combination, with table A and fixed standards B, carrying rollers *b*, of the movable standards C, carrying rollers *b'*, substantially as shown and described, for operation as set forth.

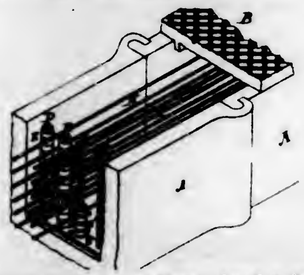
2. The wheeled carriages *f* and slotted standards C, combined with table A, having side tracks, *d*, and the fixed standards B, substantially as shown and described.

260,271. SASH-FASTENER. NEWELL B. ATTWELL, Leesburg, Va. Filed May 19, 1882. (No model.)



Claim.—1. The combination, as herein set forth, of a pair of individual sash-fasteners, F F, and a removable key, K, each of said individual sash-fasteners comprising a spring-projected fastener-dog, *d*, having an orifice, *o*, to receive and coact with the shaft of said key, and supplemental pivots *p*, working in slots *w* in a metallic bearing to support the individual fastener-dogs independently of said key, substantially as specified.

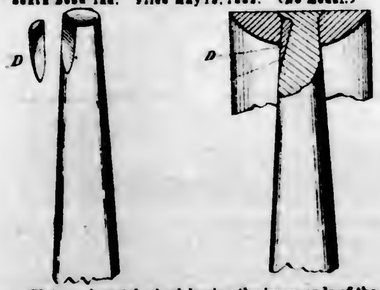
2. In a sash-fastener of the class herein set forth, the combination, with a pair of spring-projected fastener-dogs having flanged heads, of recessed tubular bushings *u*, within the socket-holes in the edges of the respective sashes, to prevent accidentally unfastening either sash, as herein specified.



260,272. METHOD OF PUTTING UP CAUSTIC ALKALI. BENJAMIN T. BABBITT, New York, N. Y. Filed Mar. 4, 1882. (No model.)

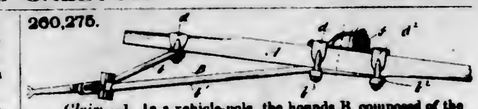
Brief.—Cans composed of cylindrical body and both heads with outwardly-turned flanges fitting within the body.

Claim.—The method of putting up caustic alkali in cans of the kind above described, each composed of a cylindric body and heads having outwardly-turned flanges and inserted into the body, said method consisting in filling the cans with the molten alkali before the second heads are inserted, then inserting said heads into the bodies of the cans while the alkali is in a molten state and before it has set or solidified, and pressing the heads down upon the alkali, and finally, and after the alkali has set or hardened, soldering said heads in the cans, substantially as herein described.



260,273. DEVICE FOR INSULATING AND PROTECTING TELEGRAPH-WIRES AND OTHER ELECTRICAL CONDUCTORS. WILLIAM H. BASTA, Springfield, Ohio, assignor of two-fifths to John M. Dodd and Abner M. Crothers, both of same place. Filed Nov. 9, 1881. (No model.)

Claim.—1. A street-pavement curb adapted to form a supporting and insulating case or inclosure for telegraph-wires and other electrical conductors, which consists of a series of troughs, A A, hermetically connected and hermetically closable by a coping, B, the said trough being provided interiorly with posts D and spools E, for support and insulation of the wires or conductors, substantially as set forth.



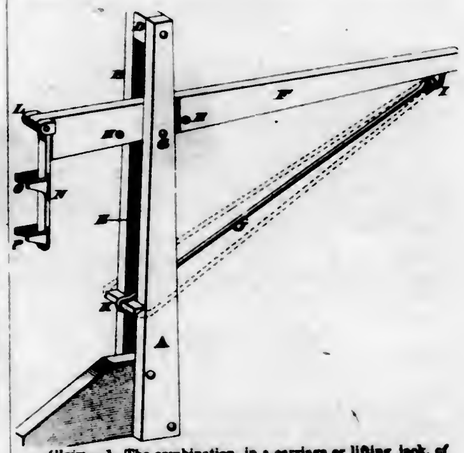
2. The combination, with suitable troughs, of the posts D, spools E, washers F, and wires G, adapted to support the electrical conductors, as set forth.

260,274. WHEEL FOR SULKY-PLOWS. THELUS H. BISSELL, South Bend Ind. Filed May 19, 1882. (No model.)

Claim.—A metal wheel having the inner ends of the spokes cast in the hub, and the outer ends secured to the rim by means of keys or wedges D, and the upset portions *e* of the spokes covering the ends of said keys or wedges, substantially as described.

260,275. VEHICLE-POLE. WILLIAM BUSHNELL, Caledonia, Ohio. Filed Apr. 27, 1882. (Model.)

Claim.—1. In a vehicle-pole, the hounds B, composed of the rods *b'*, extended forward and inclined inward and upward, and having their inner ends secured under the pole, and rods *b*, made shorter than rods *b'*, and connected at their outer ends to the latter, and extended upward and inward at a greater angle than the rods *b'*, and secured at their inner ends to the pole in a line directly in rear of and in the same plane with the point of connection of rods *b'* and the pole, substantially as described.



2. The combination, substantially as described, of the pole A, the hounds B, and the clips *d d' d''*, the hounds being secured to the pole by the clips alone, as and for the purposes set forth.

3. The combination, substantially as described, of the pole A, bar *c*, double-tree *f*, bolt *g'*, clevis *g*, and clips *d d''*, as set forth.

4. The combination of the rods *b'*, having their forward portions flattened, and constructed with the hook b^3 and shoulder b^4, the bar *c*, made equal length with the flattened portion of rods *b'*, and having its ends turned up, as shown, and adapted to support the clevis *g* and double-tree *f*, the clips *d d''*, and pole A, substantially as and for the purposes set forth.

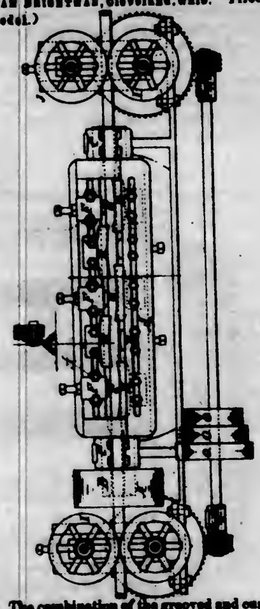
5. The combination, substantially as set forth, of the hounds B, constructed with the slot b^5, the thill-iron A, provided with eye A^4, the clamping-bolt h', and clip h^5, as set forth.

260,276. CARRIAGE-JACK. GEORGE C. BOVEY, Chillicothe, assignor to Edward S. Bovey, Columbus, Ohio. Filed Dec. 14, 1881. (No model.)

Claim.—1. The combination, in a carriage or lifting jack, of slotted standard A B E, pivoted lever F G, swinging rod J, and dog K, which dog is adapted to engage with that side of said standard nearest the lever-heel, thereby dispensing with a special rack, substantially as herein described.

2. In combination with the operating-lever of a lifting-jack, the pivoted hanger L N, having projecting lugs, as and for the purpose stated.

3. An improved lifting-jack, consisting of the standard A B E, pivoted lever F G, swinging rod J, dog K, and hanger L N O, as and for the purpose herein described.



260,277. AXLE-LUBRICATOR. GEORGE BRENNAN, Franklin, Pa. Filed May 19, 1882. (No model.)

Claim.—1. An axle-box provided with the space or chamber F, having openings H and tapering plugs I, as set forth.

2. The combination and arrangement, as described, of the outer box, C, having openings G, the inner box, D, having flanges E, openings G, and the tapering plugs I, arranged in said openings and projecting slightly into the inner box, as set forth.

260,278. MACHINE FOR STRAIGHTENING ROUND BAR-IRON. LATHAM BRIGHTMAN, Cleveland, Ohio. Filed Aug. 20, 1881. (No model.)

Claim.—1. The combination of the grooved and curved guides H with the revolving frame A, having the adjustable dies G, as and for the purpose set forth.

2. The combination, with the revolving frame provided with adjustable dies, of independent guides for retaining the bar in position, substantially as set forth.

3. The combination, with the revolving frame provided with adjustable dies, of grooved guides, substantially as set forth.

4. The combination, with the revolving frame provided with adjustable dies, of guides arranged so that the end of one guide shall extend past the end of the next adjacent guide, substantially as set forth.

5. The combination, with the revolving frame provided with adjustable dies, of independent grooved guides, substantially as set forth.

6. The combination, with the revolving frame provided with adjustable dies, of independent curved guides, substantially as set forth.

260,279. METALLIC SEAL. EDWARD J. BROOKS, East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Filed Feb. 25, 1882. (No model.)

Claim.—A tin-and-lead seal composed of a strip having rivet-holes in its respective ends and a rivet-foot thereon having a stem which tightly fills one of said rivet-holes and is loosely fitted to the other, substantially as herein specified.

260,280. APPARATUS FOR GENERATING GAS AND PROMOTING COMBUSTION. WILLIAM FRANK BROWNE, New York, N. Y. Filed Feb. 4, 1882. (No model.)

Brief.—The invention consists in forcing combined oil and water together into a heated coil or coils located in a furnace, and wherein the oil and water form a gas, which is discharged into said furnace for immediate combustion, the heat from which produces a gas as generated, while the surplus heat is utilized for other purposes.

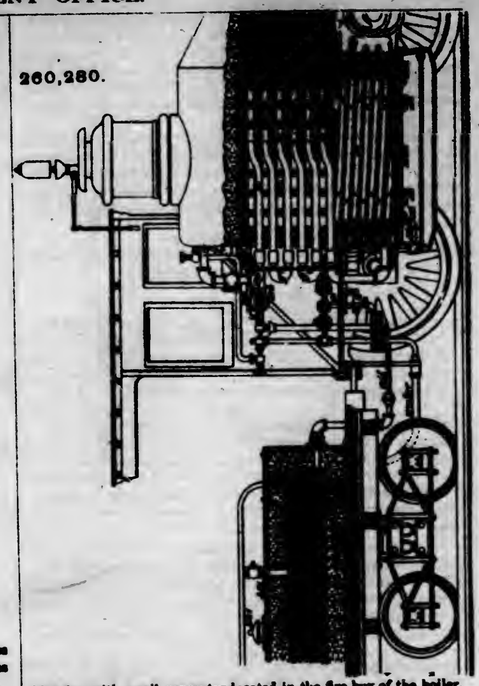
Claim.—1. The process of generating gaseous vapor and supplying heat to the steam-boiler of the locomotive, which consists in injecting oil by a jet of steam under high pressure into and through a heated coil arranged around the sides of the fire-box, and discharging the gaseous products of their decomposition directly into the fire-box, and there causing their combustion by a suitable supply of air.

2. In a device for heating steam-boilers, a steam-supply pipe, an injector, and an oil-supply pipe connecting therewith, in combination with a coil-generator located in the fire-box of the boiler, and a suitable perforated grate for burning the gaseous vapor generated in the coil-generator.

3. In a device for heating steam-boilers, a steam-supply pipe connecting with the exhaust pipe of a locomotive-engine, and with the injector, in combination with an oil-supply pipe, the injector, and the coil-generator within the fire-box.

4. In a device for heating locomotive steam-boilers, the oil-tank adapted to be carried by the tender, and the oil-supply pipe therefrom, having a spring-coil for permitting lateral movement, and the water and steam pipes, in combination with the gas generating and heating device in the fire-box of the boiler.

5. A water heating and circulating device consisting of a series of coils located in the fire-box of the boiler, and connected above and below the crown-sheet therewith, in combination with the coil gaseous-vapor generator, also located in the fire-box, and suitable connections, substantially as described.

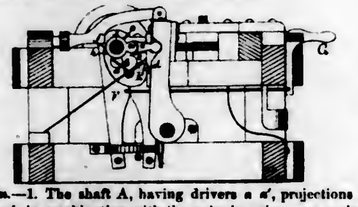


6. A water heating and circulating device consisting of a series of coils located in the fire-box of a steam-boiler, and having external circulating connections and their supporting-standards, the said coils being adapted to sustain the gas-generating coils, and connecting with the boiler below and above the water-line, substantially as described.

7. A water heating and circulating device consisting of a series of coils located in the fire-box of the steam-boiler, and having external circulating connections and their supporting-standards and cross-supporting circulating-pipes, which are adapted to sustain the gas-generating coils, and connecting with the boiler below the water-line, in combination with an injector connecting therewith for supplying water to the boiler.

8. In a device for heating steam-boilers, a burner-grate composed of tubular headers, and connecting tubular perforated grate-bars provided with open channels in their upper surfaces, in combination with an oil-supply pipe opening into the channels.

9. In a device for heating steam-boilers, a burner-grate composed of tubular headers, and connecting tubular perforated grate-bars provided with open channels in their upper surfaces, in combination with a gas-supply pipe connected to the tubular headers and bars, and an oil-supply pipe opening into the channels.



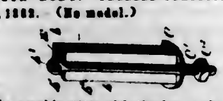
10. In a device for heating steam-boilers and heating and circulating liquids, the supporting-standards *s s*, extending vertically between the outer and inner shell of the boiler of the fire-box, and provided with suitable openings and packing-boxes for making a tight joint around the pipes which extend through the shell and standards, substantially as shown.

11. In a device for heating steam-boilers, the generating-coils extending around the four sides of the fire-box from near the bottom thereof up to the lower tubes of the boiler, and then extending backward and forward around three sides of the box to the desired height, whereby the passage between the box and tubes is left unobstructed for the passage of flame and hot products of combustion into the tubes of the boiler.

12. In an apparatus for generating gas or gaseous-vapor fuel, the process of forcing combined combustible liquid and water together into a heated coil or coils arranged in the fire-box, and discharging the gaseous products of their decomposition directly into the fire-box, whereby a complete combustion is effected in the manner set forth.

260,281. BOLT-HEADING MACHINE. JAMES B. CLARK, Plantsville, Conn. Filed Mar. 24, 1880. (Model.)

Claim.—1. The shaft A, having drivers *a a'*, projections *b*, and recess *b*, in combination with the swinging pieces *c c*, spring-table E, having arm *g*, and the trip F, substantially as described, and for the purpose specified.



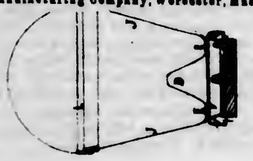
2. In a heading-machine, the combination of the gripping-dies, the header, mechanism for reciprocating the header, the shaft A, the driver *a*, for acting upon the mechanism which closes the gripping-dies, and the projection *e*, for acting upon the mechanism for opening the gripping-dies, the projection *e* being located on the shaft A relatively to the mechanism for moving the header forward to act as soon as the header reaches its most advanced position, substantially as described, and for the purpose specified.

3. In a heading-machine, the combination, substantially as shown and described, of the wedge M and the weighted lever with the mechanism which carries the header, as and for the purpose specified.

4. The combination of the weighted lever for releasing parts of the machine from undue strain, the arm S, secured against longitudinal movement, and mechanism for connecting said arm and lever with frictional contact to check a rapid movement of said lever, substantially as described, and for the purpose specified.

5. The weighted lever, made double, with spring sides for a portion of its length, and provided with set-screws *m m*, in combination with the arm S and shoes *o o*, substantially as described, and for the purpose specified.

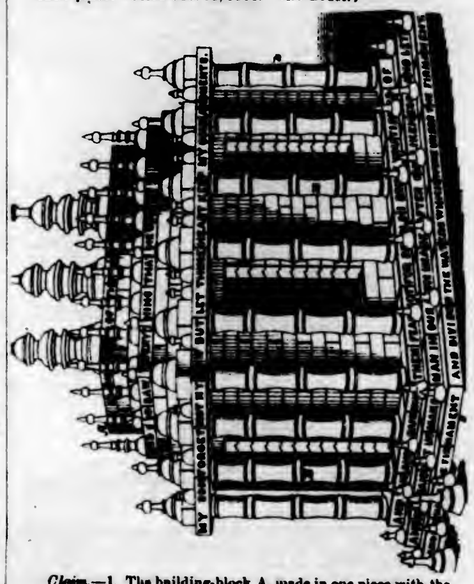
260,282. WAGON-BODY. CHARLES COMSTOCK, Racine, Wis. Filed Apr. 25, 1882. (No model.)



Claim.—1. In combination with the box or body of a wagon, having interior upper rail, *a*, the hollow metal triangular strengthening posts or standards B, the wooden blocks E, and suitable securing devices, as set forth.

2. In combination with the box and interior upper rail of a wagon, the triangular metal post B, having ring or perforated plate *b'*, bolt C', and nut C', as set forth.

3. In combination with the end-gate of a wagon and its interior upper rail, the hollow metal triangular post B, with plate C, depending hinge-arm, and wooden block E, as set forth.

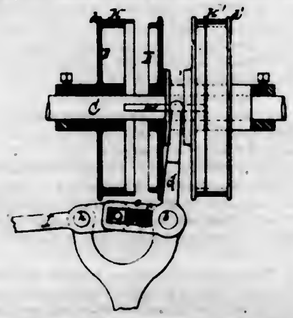


4. As a new article of manufacture, the described hollow metal triangular post B, having wooden filling E, and depending bolt or arm, as described, for securing said post to a wagon-body.

260,283. FLY-TRAP. SAMUEL H. COOK, Boston, assignor to the National Manufacturing Company, Worcester, Mass. Filed Mar. 31, 1879.

Claim.—In the construction of fly-traps, the conical outer body portion, J, having the connecting annular portion E and inner cone, D, composed of a single continuous piece of wire-cloth pressed up in the form shown, all being constructed and arranged substantially in the manner described, as and for the purpose set forth.

260,284. TOY BUILDING-BLOCKS. JESSE A. CRANDALL, Brooklyn, N. Y., assignor of one-half to Walter P. Denslow, same place. Filed Feb. 16, 1882. (No model.)



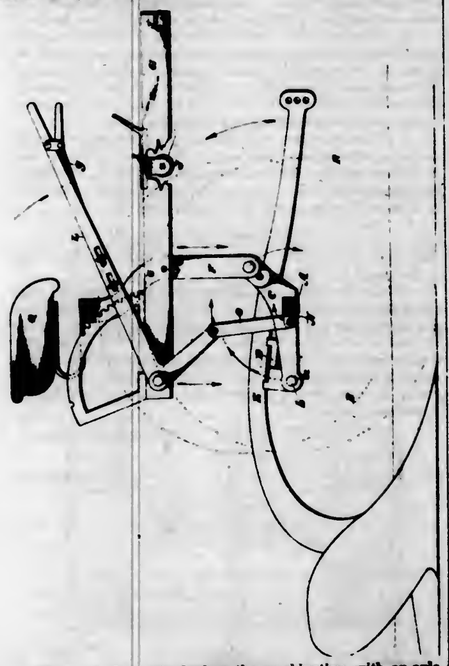
Claim.—1. The building-block A, made in one piece with the tapering rib *a*, and provided with the groove *b*, substantially as described.

2. The building-block A, made in one piece with the tapering rib *a*, and provided with the groove *b* and cross-groove *d*, substantially as described.

3. The combination of several building-blocks A A with each other, each building-block containing on its exposed face one or more words forming a portion of a sentence which will only match a portion of the same sentence that is inscribed on only one of the other blocks in the same series, substantially as specified.

4. The sectional pillar composed of detached blocks B, in combination with building-blocks A, having ribs *a* and grooves *b*, substantially as described.

260,285. MECHANISM FOR REVERSING MOTION. CHRISTIAN DANCEL, New York, N. Y. Filed Mar. 18, 1882. (No model.)



Claim.—1. The combination, substantially as hereinbefore described, of the driving-pulley, the loose pulley-sections, and the feathered pulley-sections mounted on the driven shaft, the cross-belt H and the open belt H', extending round the loose pulley-sections and projecting beyond their inner edges, and the shipping-lever acting on the feathered pulley-sections.

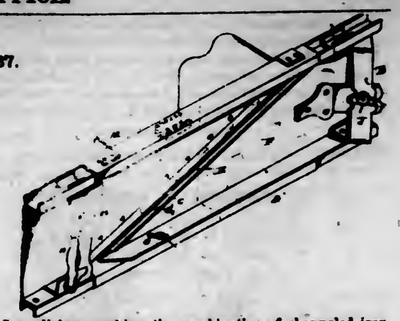
2. The combination, substantially as hereinbefore described, of the driving-pulley, the loose pulley-sections, and the feathered pulley-sections mounted on the driven shaft, the cross-belt H and the open belt H', extending round the loose pulley-sections and projecting beyond their inner edges, the shipping-lever acting on the feathered pulley-sections, and an automatic locking mechanism.

3. The combination, substantially as hereinbefore described, of the shipping-lever mounted on a pivot, *b*, the slide *c*, fitted to the arm *c* of said shipping-lever, the spring *f*, acting on the slide, the pin *a*, projecting from said slide, and the lever I, mounted on the pivot *h* and engaging with the pin *g*.

260,286. WHEEL-PLOW. FREDERICK S. DAVENPORT, Jerseyville, Ill. Filed Mar. 11, 1882. (No model.)

Brief.—Cross-bar rigid upon the axle. The plow-beam is seated upon one end and counterbalanced by the seat-frame upon the other end. The lever rocks the axle, thereby elevating the plow and lowering the wheel.

Claim.—1. In a wheel-plow, the combination, with an axle and wheels loosely mounted thereon, of levers secured rigidly to said axle and supporting at their rear ends an oscillating table upon which the plow-beam rests, and secured at their forward ends to the seat-arch, a tongue arranged on one side of said arch, and a brace arranged at the opposite side of the arch, a foot-rest secured upon said tongue and brace, and an anti-friction roller mounted in bearings on the under side of the foot-rest, substantially as set forth.



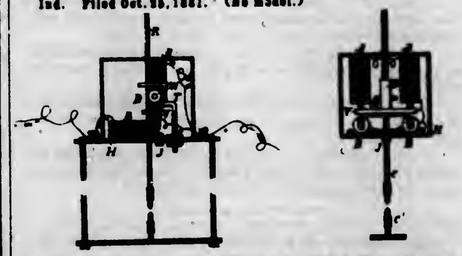
2. In a wheel-plow, the combination, with the axle A, wheels B, levers C, arm E, table D, and beam R, of the arch F, seat Q, tongue G, lever L, catch *g*, rack M, and link O, all of the above parts constructed and adapted to operate substantially as and for the purpose set forth.

3. In a wheel-plow, the combination, with axle A, wheels B, levers C, arm N, table D, and beam R, of the arch F, seat Q, tongue G, lever L, foot-rest I, and roller J, all of the above parts being constructed and adapted to operate substantially as and for the purpose set forth.

260,287. BREAD AND MEAT CUTTER. SAMUEL L. DERRY, Strasburg, assignor to Israel L. Landis, Lancaster, Pa. Filed May 1, 1882. (No model.)

Claim.—1. In a slicing-machine of the character described, the combination of the parallel channeled iron slides, bearing the slicing-knife and the guard or gage plate, with the channeled iron guides and means for securing them together, substantially as described.

260,287.



2. In a slicing-machine, the combination of channeled iron slides working in metal guides of a corresponding shape, the knife-bearing plate riveted to the slides, the end ties and supports, B B', also riveted to said slides, the adjustable metal guard or gage, and a clamping device for adjusting and holding this gage, substantially as described.

3. The knife-bearing plate having a knife secured into a depression formed in the diagonal edge of this plate by bending the sheet metal, substantially in the manner and for the purpose described.

4. The guard or gage plate F, having flanges formed on its upper and lower edges, in combination with a flange formed on its diagonal edge, and in combination with a slicing-machine constructed substantially as described.

5. The combination of the channeled iron slides, the channeled iron guides fitted therein, the flanged pieces M M', riveted to said guides, and a metal table, N, flanged and riveted to the bottom guide and to the two wings formed on said pieces M M', substantially as described.

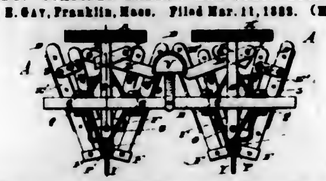
260,288. ELECTRIC LAMP. JAMES DU SHANE, South Bend, Ind. Filed Oct. 25, 1881. (No model.)

Claim.—1. The combination, in an electric lamp, of the hollow helices and longitudinally-moving core, the clutch with an inclined bearing, the wheel and its shaft, and the trip adapted to rotate the wheel to permit the rod carrying the upper electrode to be operated by gravity and the shunt-magnet, substantially as specified.

2. In an electric lamp, the combination of the rod R, helices A A, core V, wheel W, clutch D, and trip T, constructed and arranged for joint operation as described.

3. In an electric lamp, the shunt-magnet B, hinged at one end, and the adjusting-screw J, in combination with rod R, core V, and helices A A, operating together substantially as described.

260,289. TOY FIRE-ARM. SPENCER W. KOPP, New Britain, Conn., assignor, by direct and mesne assignments, to Stephen S. Tallman, East Orange, and George D. Tallman, Long Branch, N. J. Filed Mar. 10, 1882. (No model.)



Claim.—1. The herein-described toy fire-arm, in which the barrel is provided at its rear end with the barrel-section containing a bore for the reception of the cartridge, and directly in front of said bore an obstruction to receive the charge, and one or more

discharge-passages which are out of alignment with said bore, substantially as described, and for the purpose specified.

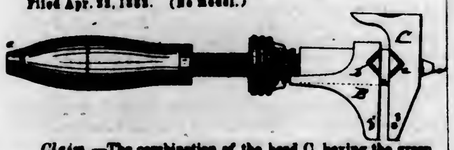
2. The herein-described toy fire-arm, in which the barrel consists of the section containing the bore, the cylindrical case containing the perforated disk, and false barrel with its surrounding flange, substantially as described, and for the purpose specified.

260,290. COMBINED HARROW AND CULTIVATOR. TIMOTHY E. GAY, Franklin, Mass. Filed Mar. 11, 1882. (Model.)

Claim.—1. The combination of the frame-beam B, bails O, hinged harrow-sections A, having adjustable wings D, adjustable shields S, and reversible handles K, as set forth.

2. The combination of the harrow-sections A, having shields S and eyebolts N, the V-shaped bails O, having eyes P, to which said sections A are hinged, and eyes Q, and the frame-beam B, having perforations W, to which said bails are adjustably connected, as set forth.

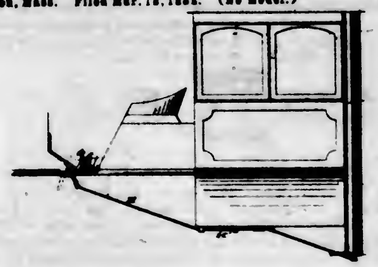
260,291. TRIMMING ATTACHMENT FOR SEWING-MACHINES. BENJAMIN F. GILBERT, Philadelphia, Pa., assignor of one-half to Charles E. Spencer, same place. Filed Feb. 1, 1882. (No model.)



Claim.—1. The combination of a cutter and a slotted work-plate with face-pieces which project upwardly into the slot, substantially in the manner and for the purpose set forth.

2. The upwardly-projecting face-pieces arranged, substantially as described, in a slot of the work-plate and adjustable vertically therein.

3. The upwardly-projecting face-pieces arranged, substantially as described, in a slot of the work-plate and adjustable horizontally therein.



4. The combination, with a cutter, of elastic face-pieces arranged in substantially vertical planes and bearing against the adjacent sides of the cutter, for the purposes specified.

260,292. MONKEY-WRENCH. JESSE S. GREENLEAF, Fargo, Dak., assignor of one-half to Frank Scott Berry, Mercer, Me. Filed Apr. 22, 1882. (No model.)

Claim.—The combination of the head C, having the grasping-faces c' and c, with the sliding jaw B, having the grasping faces b' and b, substantially as and for the purposes described.

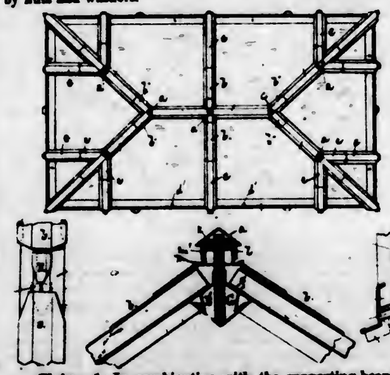
260,293. PASSENGER-VEHICLE. J. THEODORE GERDEY, Boston, Mass. Filed Mar. 18, 1882. (No model.)

Brief.—Levers on the bottom of self-closing doors are connected by cords with a rod operated by a crank and pedal on the foot-board of the driver's seat. The mechanism is beneath the vehicle. The cords are connected with the rod by an adjusting device.

Claim.—1. The combination, with the automatically-closing swinging doors, of means controllable by the driver for opening the door, and a pedal or device with which the driver can engage his foot, substantially as set forth.

2. The combination, with the automatically-closing swinging door, of the levers at the lower ends, and the devices for opening the door, connected with said levers and controllable by the foot of the driver, substantially as set forth.

3. The combination, with the automatically-closing doors, of the means for opening the same, situated beneath the vehicle, substantially as set forth.



4. The combination, with the doors and the devices for opening the same, extending to the driver's platform, of the adjusting devices attached together by a screw-thread, for regulating the tension of the door-opening devices, substantially as set forth.

5. The combination, with the door and the devices for opening the same, extending to the driver's platform, and having between the door and the platform a threaded rod, of the threaded nut to engage with said rod, and connected with the devices which pull the doors, whereby the tension of the door-opening devices may be regulated, substantially as set forth.

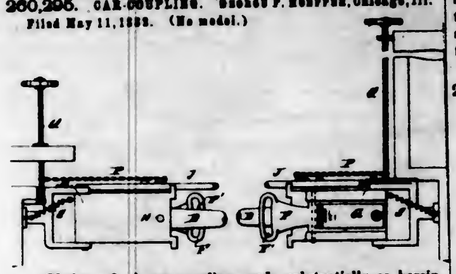
6. The combination, with the doors and devices for opening the same, extending to the driver's platform, and having the part H′ between the door and the platform, of the part O, attached to the door-pulling devices, and arranged, substantially as set forth, to be secured to the part H′ at different points.

260,294. SKYLIGHT. CONRAD HEPFEL, Baltimore, Md. Filed Feb. 24, 1882. (No model.)

Brief.—The lower edges of the panes rest against the bent end of the cover-plates. Rods on the end of the ridge-beams project through the said bent ends and carry a clamping-nut. Clips are bent over the upper flanges of the bars and over one end of a cover-plate, which is beveled to engage the corresponding flanged end of the abutting adjacent cover-plate. Rods on the bars project up through tubes at the joints and caps are secured thereon by nuts and washers.

Claim.—1. In combination with the supporting-beams and panes, the cover-plates secured over the meeting edges of the panes and having downwardly-turned ends securing the panes at the eaves, as and for the purpose set forth.

2. In combination with the supporting-beams having screw-rods at the eaves, the cover-plates *c*, secured by nuts upon said rods, and having downwardly-turned ends serving to hold the panes in place, as set forth.



3. In combination with the supporting-beams having flanges *g*, the lips H, folded thereunder and adapted to hold the cover-plates down upon the panes, as set forth.

4. In combination with the supporting-beams having flanges *g*, the cover-plates *c* and *b*, having beveled edges *f* and flanges *j*, as set forth.

5. In combination with the supporting beams and rods G, the cover-plates having tubes *m* and the caps *a*, as set forth.

6. In combination with the supporting beams and rods G, the perforated cover-plates having tubes *m*, and the caps *a*, having nuts *b*, washers *l*, and tubes *m′*, as set forth.

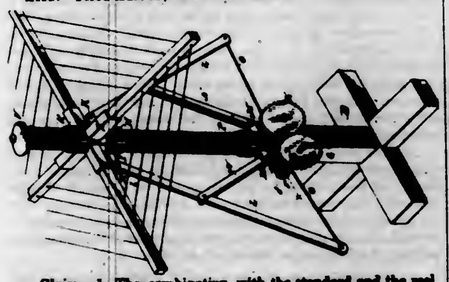
260,295. CAR-COUPLING. GEORGE P. HOPPER, Chicago, Ill. Filed May 11, 1882. (No model.)

Claim.—1 A car-coupling made substantially as herein shown and described, and consisting of a draw-head divided into two longitudinal compartments, and provided with a plunger and a pivoted latch-wing adapted to catch on the opposite draw-head, as set forth.

2. In a car-coupling, the combination, with the draw-head A, of the plunger D, the swinging latch-wing F, and the spring G, acting on the same, substantially as herein shown and described, and for the purpose set forth.

3. In a car-coupling, the combination, with the draw-head A, of the plunger D, the spring E, the swinging latch-wing F, and the spring G, acting on the same, substantially as herein shown and described, and for the purpose set forth.

4. In a car-coupling, the combination, with the draw-head A, of the plunger D, the swinging latch-wing F, provided with a slot, F′, at the outer end, and the spring G, acting on the latch-wing F, substantially as herein shown and described, and for the purpose set forth.



5. In a car-coupling, the combination, with the draw-head A, of the plunger D, the swinging latch-wing F, and the lever J, pivoted on the top of the draw-head and connected with the plunger D, substantially as herein shown and described, and for the purpose set forth.

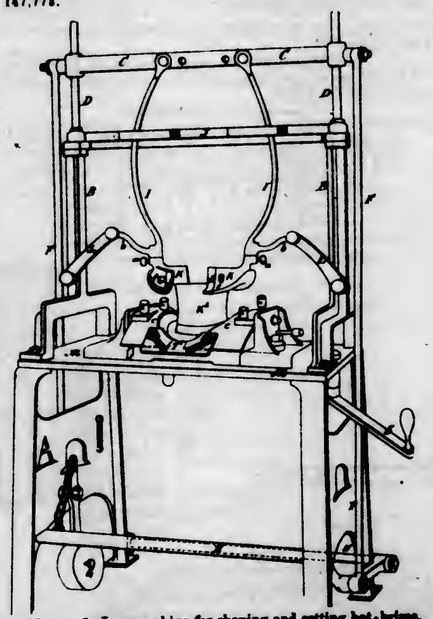
6. In a car-coupling, the combination with the draw-head A, of the plunger D, the swinging latch-wing F, the lever J, pivoted on the draw-head and provided with a slot, K, and the screw or stud L, substantially as herein shown and described, and for the purpose set forth.

7. In a car-coupling, the combination, with the draw-head A, provided with slots M and O in its top, of the plunger D, the swinging latch-wing F, the lever J, pivoted on the draw-head, the stud or screw L, passed through the lever J into the plunger D, and the stud or rod N, passed through the lever J into the draw-head, substantially as herein shown and described, and for the purpose set forth.

8. In a car-coupling, the combination, with the draw-head A, of the plunger D, the swinging latch-wing F, the lever J, for withdrawing the plungers, the chain P, and the vertical shaft on the car, substantially as herein shown and described, and for the purpose set forth.

260,296. CLOTHES-REEL. GEORGE W. HOUGHTON, Saginaw, Mich. Filed Mar. 31, 1882. (No model.)

Claim.—1. The combination, with the standard and the reel adapted to receive the clothes, of a sliding sleeve arranged below said reel and provided with levers pivoted in lugs of said sleeve, and fulcrumed on brackets of the standard, the outer ends of said levers being connected by cords to winding-reels, substantially as set forth.



2. The combination, with the standard having the collar P and shoulder *a*, of the frame C, secured upon said shoulder and supporting the cord-reels D and D′, the gear-wheels E and E′, toothed pinion F, pawl *f*, and crank G, the clothes-reel Q, sliding sleeve H, levers L, braces N, and cords O, substantially as set forth.

260,297. CLOTHES-PIN. SAMUEL D. JOHNSTON, Paris, Ill. Filed Feb. 26, 1882. (No model.)

Claim.—The described clothes-pin, having the spiral spring B and the spring-loops C, each composed of the vertical bars *a* and *b*, the bars *b* being bent at their upper extremities into the horizontal loops *l*, to inclose the vertical bars *a*, adapted to grasp and hold the clothes line or wire at the upper end and resist its removal downward from between the said loops C at the lower end, substantially as described.

260,298. HAT-SHAPING MACHINE. JOHN R. KELSEY, Bristol, England. Filed May 10, 1882. (No model.) Patented in England July 7, 1881, No. 3,291, and in France Mar. 8, 1882, No. 147,778.

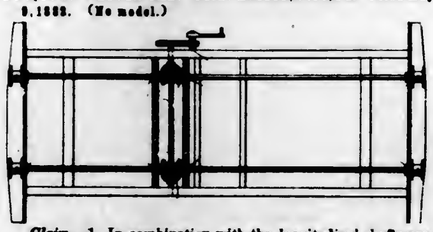
Claim.—1. In a machine for shaping and setting hat-brims, two suspended pressers, when brought into action mechanically by being depressed, and during each depression being acted upon by levers swinging on a stationary center, substantially as shown and described.

2. In a machine for shaping and setting hat-brims, the combination of the presser K, rod I, lever L, post B, cross-head C, guide D, rod F, and treadle E, or their equivalent, substantially as shown and described.

3. In an organized machine for shaping and setting hat-brims, the combination of the pressers K K with a disk or mold, M, substantially as shown and described.

4. A former or presser consisting of a divided ring, *d d*, having the shaper *g g* attached thereto, substantially as described.

5. The semicircular former K K, having its shaped parts *g g* divided in two or more parts for convenience of removal, substantially as described.

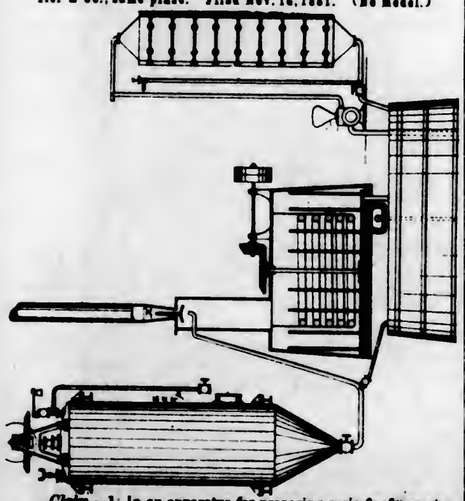


6. In an organized machine, the combination of back and front clamps, acting in conjunction with side flanges, a divided former, and a mold for producing mechanically a curling over at the sides

and a curling up at the back and front of the brim of a hat instantaneously and simultaneously, substantially as described.

7. In an organized machine, a disk or mold, a vertically-acting dividing presser or former, and horizontally-acting front and back and side curlers, when combined and operated for shaping and setting the brims of hats, substantially as described.

8. The process of curling and setting the brim of a hat by first heating and then by independent organized mechanism shaping and molding the same, substantially as described.

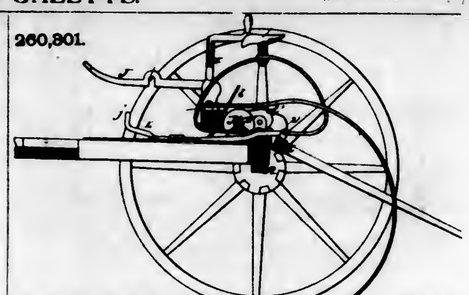


260,299. CATTLE-CAR. ELIAS KOHLER, York, Pa. Filed May 9, 1882. (No model.)

Claim.—1. In combination with the longitudinal shafts provided with barrels at their outer ends, connecting with the cords or chains for operating the movable floor, and with beveled-gear wheels at their inner ends, the transverse shaft and its operating-gear, and the beveled-gear wheels intergearing with the beveled-gear wheels on the longitudinal shafts, substantially as and for the purposes specified.

2. In combination with the water-conduits and their valves, the beveled gearing and longitudinal shaft for operating the same, substantially as set forth.

260,300. APPARATUS FOR PREPARING GRAIN FOR FERMENTATION. FREDERICK O. KUHN, Omaha, Nebr., assignor to Iler & Co., same place. Filed Nov. 14, 1881. (No model.)



Claim.—1. In an apparatus for preparing grain for fermentation, the combination of a steam reducer or digester, a cooling-column, as described, a pipe or tube connecting the bottom of the reducer with the top of said cooling-column, a mash-tub below the cooling-column, and means, substantially as described, for creating an upward current of air in the cooling-column, substantially as herein set forth.

2. The combination of the reducer or digester with a cooling-column, as described, provided with a draft-stack, a mash-tub located below the cooling-column, and a pipe connecting the bottom of the reducer and the top of the cooling-column, as and for the purpose set forth.

260,301. COMBINED HAY RAKE AND TEDDER. ISRAEL L. LANDIS, Lancaster, Pa. Filed Jan. 3, 1882. (No model.)

Claim.—1. The combination of the rake-head, the standard secured thereto, and the reversible cranked handle, substantially as and for the purposes described.

260,301.

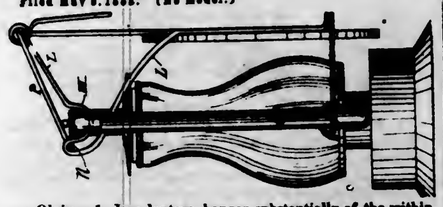
2. In a combined convertible rake and tedder, the rake-head adjustable forward and back of the axle, the rotary shaft N, provided with tappets, the standard I, fixed to the rake-head, and the reversible handle *e*, applied to this standard, substantially in the manner described.

3. In a convertible rake and tedder, the combination of the vibrating clearer, the endwise-movable rod L pivoted thereto, provided with a toe-loop or stirrup and perforations, the strap *h'*, provided with a pin, 2, and the spring, all substantially in the manner and for the purpose described.

4. The combination, with the rake-head, which is hung and supported as described, of the notched spring-actuated arm J, the wheel P, provided with pins *r*, the tappet-shaft N, bearing wheel P, the standard I on the rake-head, and a reversible handle, *e*, all arranged and operating substantially as described.

260,302. COMBINED COTTON-PLANTER, CULTIVATOR, AND DOUBLE-SHOVEL, SINGLE-SHOVEL, AND TURNING PLOW. CHARLES J. LE ROY and JOHN W. HENDEN, Dallas, Tex., assignors of four-fifths to Samuel J. Adams, Jack Leonard, J. T. Odell, Sidney Smith, and H. W. Godbold, same place. Filed Feb. 25, 1882. (No model.)

Claim.—1. The combination of two single-shovel stocks or plow-beams, each provided at its forward end with an independent clevis or means for attaching to it a single-tree or double-tree, a shackle for detachably connecting said two beams at their forward end, and a cross-bar detachably connecting the rear ends of said beams in a divergent position, substantially as described and shown, for the purpose specified.



2. The within-described convertible cotton-planter, cultivator, and double-shovel, single-shovel, and turning plow, consisting in the combination of the two beams A A, each provided with a clevis, *c*, and with a standard, *f*, the shackle *g*, adjustable spread-rod *d*, detachable handle H, the journal-boxes K, detachably connected to the beams A A, the shaft *l*, wheels W, and gear *l*, fixed to said shaft, the crank-shaft *m*, detachably connected to the beams A A and provided with the pinion *n*, the pitman *o*, hopper B, provided with the slide *p* and with the spout A, and the forward standard *f'*, detachably secured between the beams A A, all as shown and described.

3. The combination, with the beams A A, of the curved standards *f*, provided with the eye *t* and with the head *t'*, having a series of bolt-holes, the bolt *s*, and the spread-rod *d*, passing through the beams and through the eye *t* of the standard, and provided with the adjustable clamp-nut *e*, whereby said spread-rod is made to serve the double purpose of tying the rear ends of the beams and securing the standard, as shown and set forth.

4. In combination with the beams A A, wheels W, gear *l*, pinion *n*, crank-shaft *m*, and pitman *o*, the hopper B, provided with the spout A, the sliding plate *p*, provided with transverse slots *u u*, and a plate, *v*, extended across the aforesaid slots and adjustably secured in vertical grooves in opposite ends of the hopper, substantially as and for the purpose set forth.

5. In combination with the hopper B and with the pitman *o* and its actuating mechanism, the reciprocating plate *p*, having upward-turned side edges provided with slots *u u* and spurs *w*, and the gage *v*, having the horizontal V-shaped projection *x* alternately at opposite sides, and extended across the slots *u u* and adjustably secured in vertical grooves in opposite ends of the hopper, all constructed and combined in the manner specified and shown.

260,303. LANTERN-HOLDER. EDWIN LUPKIN, Monroe, Mo. Filed May 9, 1882. (No model.)

Claim.—1. In a lantern-hanger substantially of the within-described construction, the wire L, having loops M M embracing the tube or bail from the bottom, and loops N N projecting slightly above said tube or bail, the lower ends of said wire being secured to the reflector K, substantially as and for the purposes set forth.

2. In a lantern-hanger provided with the wire L, having the loops M M N N therein, substantially as described, the spring-arms P P, having hooks Q Q at their ends adapted to be sprung into said loops N N, retaining said tube or bail between said arms and loops M M, substantially as set forth.

260,304. BOOT OR SHOE. HELEN MARIA MACDONALD, Boston, Mass. Filed Apr. 5, 1880. (No model.)

Claim.—1. A boot or shoe furnished with a series of protectors, located at the points substantially as shown and described, for the purpose stated.

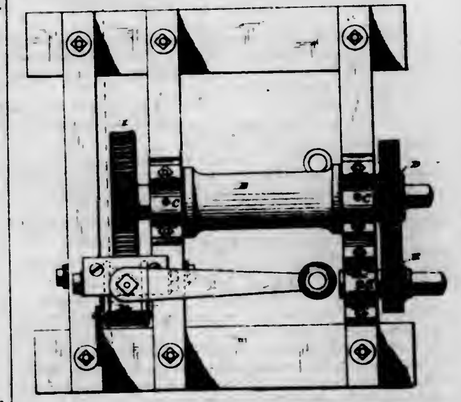
2. A boot or shoe with the protectors B arranged on the back of the same, substantially at the points shown and described, for the purpose stated.

3. A boot or shoe furnished with a series of protectors of practically hard or inflexible material, located at the point or points substantially as shown, for the purpose set forth.

260,305. BOTTLE-STOPPER. PHILIPP MADLENER, Milwaukee, Wis. Filed Jan. 30, 1882. (No model.)

Claim.—As an improvement in bottle-stoppers, the bail composed of a single wire, recurved at D', crossed at *d*, and having its ends bent in from the points *d'* and both secured in the base B, as and for the purpose set forth.

260,306. TELEGRAPHIC RECEIVING-INSTRUMENT. WILLIAM H. MARKLAND, Brooklyn, assignor to James H. Chandler and Albert S. Wheeler, New York, N. Y. Filed Feb. 24, 1882. (No model.)

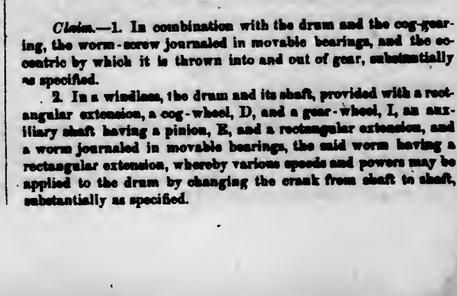


Claim.—1. In a telegraphic receiving-instrument, the combination, substantially as hereinbefore set forth, of an electro-magnet provided with a soft-iron core constructed in two sections, one stationary and the other pivoted and free to vibrate, and a non-magnetic plate uniting the free ends of said movable section.

2. In a telegraphic receiving-instrument, the combination, substantially as hereinbefore set forth, of an electro-magnet provided with a U-shaped soft-iron core constructed in two sections, one stationary and the other pivoted and free to vibrate, and a non-magnetic plate uniting the free ends of said movable section and provided with a projecting lip, and a stop for arresting the motion of said pivoted section.

4. In a telegraphic receiving-instrument, the combination, substantially as hereinbefore set forth, of an electro-magnet provided with a soft-iron core constructed in two sections, one stationary and one pivoted and free to vibrate, an independent stationary soft-iron plate within the magnetic field of said pivoted section, but out of magnetic contact therewith, and a stop for limiting the motion of said pivoted section.

5. In a telegraphic receiving-instrument, the combination, substantially as hereinbefore set forth, of an electro-magnet having a soft-iron core constructed in two sections, one stationary and the other pivoted and free to vibrate, an independent stationary soft-iron plate within the magnetic field of said pivoted section, but out of magnetic contact therewith, and means, substantially such as described, for controlling the angular position of said electro-magnet.



260,307. WINDLASS. THOS. MAHON, Dayton, Ohio, assignor of one-half to James W. Carpenter, same place. Filed Apr. 19, 1882. (No model.)

Claim.—1. In combination with the drum and the cog-gearing, the worm-screw journaled in movable bearings, and the eccentric by which it is thrown into and out of gear, substantially as specified.

2. In a windlass, the drum and its shaft, provided with a rectangular extension, a cog-wheel, D, and a gear-wheel, I, an auxiliary shaft having a pinion, E, and a rectangular extension, and a worm journaled in movable bearings, the said worm having a rectangular extension, whereby various speeds and powers may be applied to the drum by changing the crank from shaft to shaft, substantially as specified.

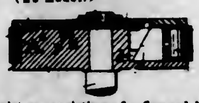
260,308. STOVE-PIPE SHELF. JOHN MAHONEY, Boston, Mass. Filed Feb. 24, 1882. (No model.)

Claim.—1. In a stove-pipe shelf, the combination of the shelf, the flanged plate, and the screw-bolt, substantially as described.

2. In a stove-pipe shelf, the combination of the shelf, the flanged plate, the screw-bolt, and the nut, substantially as described.

3. In a stove-pipe shelf, the combination of the shelf, the flanged plate, the screw-bolt, the nut, and the washer, substantially as described.

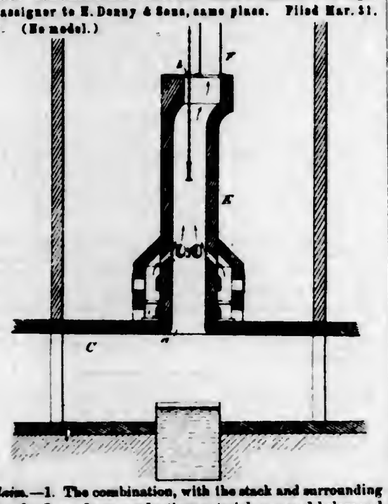
4. In a stove-pipe shelf, the combination of the shelf, the flanged plate, the screw-bolt, the nut, the washer, and the set-screw, substantially as described.



5. In a stove-pipe shelf, the combination of the shelf, the flanged plate, the screw-bolt, the nut, the washer, the set-screw, and the cap, substantially as described.

6. In a stove-pipe shelf, the combination of the shelf, the flanged plate, the screw-bolt, the nut, the washer, the set-screw, the cap, and the ornamental plate, substantially as described.

7. In a stove-pipe shelf, the combination of the shelf, the flanged plate, the screw-bolt, the nut, the washer, the set-screw, the cap, the ornamental plate, and the ornamental nut, substantially as described.



8. In a stove-pipe shelf, the combination of the shelf, the flanged plate, the screw-bolt, the nut, the washer, the set-screw, the cap, the ornamental plate, the ornamental nut, and the ornamental washer, substantially as described.

260,308. PISTON. PERSEUS MCFARREN, Baltimore, Md., assignor of one-half to Robert Eyrehart, same place. Filed Apr. 20, 1882. (No model.)

Claim.—A piston consisting of a flanged head provided with an annular groove concentric with its axis, and with radial grooves extending outward from the annular groove, a follower, a series of expansible packing-rings between the head and follower, laterally-sliding bars within the radial grooves, springs interposed between the sliding bars and packing-rings, a circular plate between the head and follower, provided with a central boss adapted to receive a wrench or key, and with a series of circularly-arranged downwardly-projecting inclined lugs or teeth, a series of wedges interposed between the circular plate and the laterally-sliding bars, and a ratchet mechanism for retaining the circular plate, substantially as described.

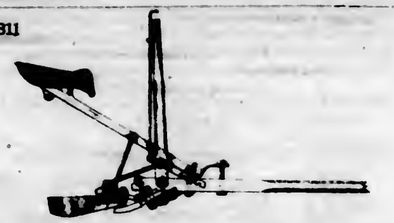
260,309. SMOKING APPARATUS. NEIL MCMILLAN, Chicago, Ill., assignor to H. Denny & Sons, same place. Filed Mar. 31, 1882. (No model.)

Claim.—1. The combination, with the stack and surrounding furnace, of a floor of non-conducting material arranged below and supporting the furnace, and having an opening, *a*, and a singeing-room below the furnace, all as specified.

2. The combination of the shaft communicating with the chamber C of the surrounding furnace and tank arranged in the chamber C below the shaft, as set forth.

3. The combination of the shaft E and the chimney F, communicating with the shaft at one side of the center and central opening, *b*, in the cap of the shaft, substantially as described.

260,310. BUTTER AND LARD CUTTER. PATRICK F. MORONEY, Rondout, N. Y. Filed Mar. 8, 1882. (No model.)



Claim.—A new article of manufacture consisting of a knife for cutting and handling lard, butter, tallow, and like substances, the blade of which is of uniform thickness having parallel edges beveled equally upon both sides its entire length, whereby the cutting-edges are formed centrally between the upper and lower parallel sides of the blade, and further provided with a bent shank adapted to permit the blade to pass close to the sides of the substance or its receptacle, and to secure additional leverage in detaching the substance cut, substantially as shown and described.

260,311. HARROW. FREDERICK MISHWITZ, Millington, N. J. Filed Jan. 23, 1882. (No model.)

Claim.—1. The combination, substantially as set forth, of the tongue or frame, the upwardly-inclined leveler or crusher-bar rigidly secured thereto, the transverse gang-bar in rear of the leveler and hinged thereto, harrow-teeth on the gang-bar, and the driver's seat supported directly on the gang-bar.

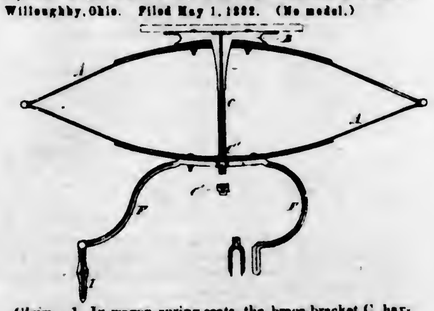
260,311

2. The combination, substantially as set forth, of the tongue or frame, the leveler or crusher rigidly secured thereto, the gang-bar or harrow-frame carrying harrowing devices in rear of the leveler, and hinged thereto, and a driver's seat pivoted on the tongue or frame and supported upon the gang-bar.

3. The combination, substantially as set forth, of the tongue or frame, the leveler or crusher rigidly secured thereto, the gang-bar or harrow-frame carrying harrowing devices in rear of the leveler, a driver's seat pivoted on the tongue or frame and supported on the gang-bar, mechanism for adjusting the gang-bar and leveler relatively to each other, and a detent for holding them in their adjusted position.

4. The combination, substantially as set forth, of the tongue or frame, the leveler or clod-crusher rigidly secured thereto, the gang-bar carrying harrowing devices and hinged to the rear of the leveler, the seat-standard pivoted on the frame or tongue and supported on the gang-bar, a lever on the frame or tongue, a link-connection between the lever and gang-bar, and a detent for holding the lever in any desired position, whereby the relation of the gang-bar and leveler to each other and to the ground may be varied.

5. The combination, substantially as set forth, of the frame or tongue, the leveler or crusher rigidly secured thereto, the gang-bar hinged in rear of the crusher, and a pivoted coupling, which also serves as a seat-support between the gang-bar and frame, and which permits the frame and crusher, gang-bar, and coupling to flex vertically to vary their relation to each other.

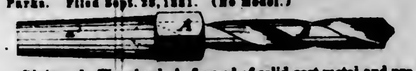


260,312. FOOT-MAT. ANTHONY W. O'BLENIS, New York, N. Y., assignor of one-half to Robert Dunlap, same place. Filed Mar. 21, 1882. (No model.)

Claim.—1. The combination, in a foot-mat, of a tray or box, A, a foot-scraper, C, composed of wire-netting or similar material, and the grate D, supporting the foot-scraper, substantially as shown and described.

2. The combination of a tray or box, A, a foot-scraper, C, the grate D, and the foot-wiper F, attached to the foot-scraper so as to deposit its dirt into the tray or box A, substantially as hereinbefore set forth.

260,313. SPRING-SEAT FOR WAGONS. SOLOMON E. OVIATT, Willoughby, Ohio. Filed May 1, 1882. (No model.)



Claim.—1. In wagon spring-seats, the brace-bracket C, having a depending stem loosely fitted in an eye in the plate K of the riser, in combination with the spring A, substantially as and for the purpose set forth.

2. The clip-plates H I, provided with lugs or dowels, whereby the plates are secured to the wagon-sides by means of a screw-bolt and the riser and springs hinged thereto, substantially as and in the manner set forth.

3. The brace-bracket C and block B, forming an integral part thereof, in combination with the spring and riser, substantially in the manner as described, and for the purpose specified.

4. The riser F, having clip-plates provided with lugs hinged thereto, in combination with the brace-bracket C, as arranged in relation to said riser and spring A, substantially as described, and for the purpose set forth.

260,314. DRILL-CHUCK. JOHN A. PARKS and GARDNER V. SHEFFIELD, New York, N. Y.; said Sheffield assignor to said Parks. Filed Sept. 28, 1881. (No model.)

Claim.—1. The chuck A, formed of solid cast metal and provided with a socket, *a*, for the drill-tool and a shank, *a'*, for attaching it to the lathe or drill, substantially as described.

2. As a new article of manufacture, a socketed drill-chuck, A, in combination with a double-ended twist-drill, B, substantially as described and set forth.

260,315. FORCE-FEED GRAIN-DRILL. DAVID H. FARRY, Rushville, Ind. Filed Sept. 21, 1881. (Model.)

Claim.—The combination of the feed-cup A, feed-wheel B, horizontal shaft B' for said wheel, the several fingers C, and the horizontal rod or pivot C', on which said fingers are mounted, all substantially as shown and described, and for the purposes specified.

260,316. SHIRT. ALBERT E. PERKINS, Newton, assignor to Simons, Hatch & Whitton, Boston, Mass. Filed Feb. 27, 1882. (No model.)

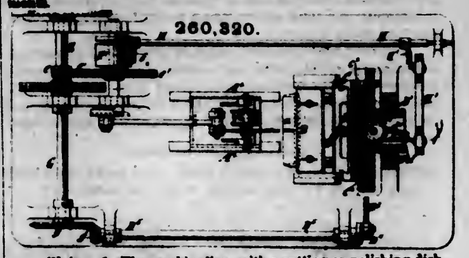
Claim.—A shirt having its front an integral part of or in one piece with the body, and having a slit in the body from one or each shoulder downward, and also having along the slit or each of the slits a facing, C, fastened to the body and collar or neckband and extending under the front, all being substantially as set forth.

260,317. ACID TANNATE OF CHINOLINE. WILHELM PICKHARDT, New York, and HERMANN ERDMANN, Brooklyn, N. Y., assignors to said Pickhardt and Adolf Kuttroff, New York, N. Y. Filed May 3, 1882. (Specimens.)

Claim.—As a new article of manufacture, the acid tannate of chinoline having the properties above stated.

260,318. NEUTRAL TANNATE OF CHINOLINE. WILHELM PICKHARDT, New York, and HERMANN ERDMANN, Brooklyn, N. Y., assignors to said Pickhardt and Adolf Kuttroff, New York, N. Y. Filed May 3, 1882. (Specimens.)

Claim.—As a new article of manufacture, the neutral tannate of chinoline having the properties above stated.



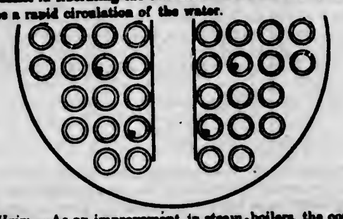
260,319. BASIC TANNATE OF CHINOLINE. WILHELM PICKHARDT, New York, and HERMANN ERDMANN, Brooklyn, N. Y., assignors to said Pickhardt and Adolf Kuttroff, New York, N. Y. Filed May 3, 1882. (Specimens.)

Claim.—As a new article of manufacture, the basic tannate of chinoline having the properties above stated.

260,320. MACHINE FOR CUTTING AND FINISHING THE TEETH OF COMBS. CONRAD PFEFFERBERG, Hamburg, Germany. Filed Dec. 10, 1881. (No model.) Patented in Germany Dec. 2, 1880; in England Mar. 18, 1881, No. 1,190; in Belgium Mar. 26, 1881; in France Mar. 30, 1881, and in Austria-Hungary June 11, 1881.

Brief.—The comb-blank is fed laterally, adjusted vertically, and oscillated transversely to the line of cut by the mechanism shown. The saw has only the rotary and direct reciprocating movements.

260,320.



Claim.—1. The combination, with a cutting or polishing disk or tool and carriages providing for the adjustment of the comb or other article, of the support or holder D for said carriages, provided with the rearwardly-extending trunnion or journal D', the bearing A', receiving said journal or trunnion, and mechanism for oscillating said support or holder in a plane transverse to that in which said disk or tool operates, substantially as and for the purpose specified.

2. The combination, with the cutting or finishing disk or tool, of the carriages B' C, the holder or support D for said carriages, with its trunnion or journal D' and arm D^2, and the rod D^3 and crank D^4, connected with said arm, for swinging or oscillating said holder or support in a vertical plane transverse to that in which said disk or tool operates, substantially as and for the purpose specified.

3. The combination of the carriage B', the carriage C, on which the carriage B' may be adjusted vertically, the holder or support D, the spindle *e*, pinion *e'*, and rack e^2, for adjusting the carriage C horizontally in said holder or support; the hollow trunnion D' on the holder or support D, the pawl-lever *d*, passing through said trunnion and engaging with said pinion, and the shaft H, arm H', and connecting-rod H^2, for operating said pawl-lever, substantially as specified.

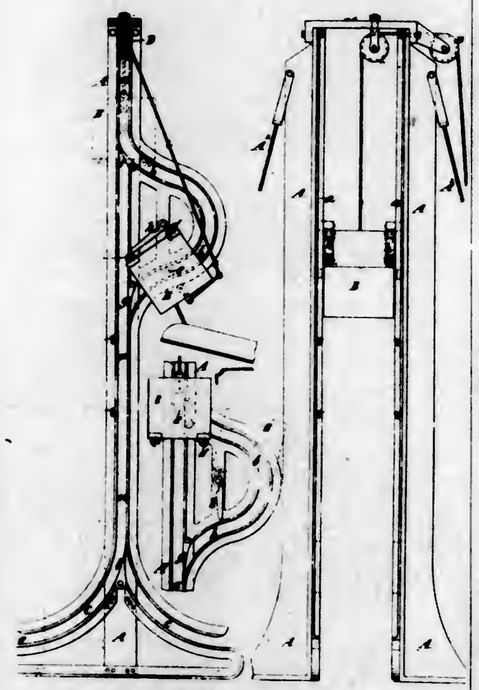
260,321. STEAM-GENERATOR. DAVID REDSHAW, Cohasset, Mass. Filed Apr. 22, 1881. (No model.)

Brief.—The thimbles retard the heat, by means of which a more rapid generation of steam takes place. The circulating-plates assist in liberating the said steam from the tubes, and thus produce a rapid circulation of the water.

Claim.—As an improvement in steam-boilers, the combination, with the circulating-plates forming the central water-space, of the plugs or thimbles having tapering openings for retarding and retaining the heat within the tubes, said circulating-plates serving to relieve the accumulated steam from said tubes by a constant circulation of water, in the manner set forth and shown.

260,322. PROCESS OF PREPARING A SOLUTION FOR TANNING HIDES AND SKINS. CHAS. RICHTER, St. Paul, Minn., assignor to Peter R. L. Hardenbergh, Ferdinand Willius, Gustav Willius, and A. O. Bailey, same place. Filed Jan. 9, 1882. (No specimens.)

Claim.—The process of preparing the solution aforesaid by mixing water, common salt, clay, sulphuric acid, brewers' yeast, and alum, substantially as set forth.



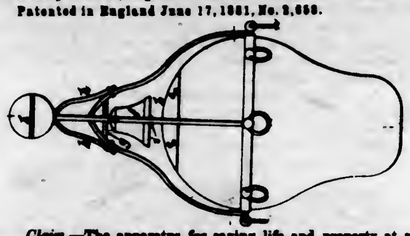
260,323. BOTTLE STOPPER AND FASTENER. JAMES D. ROBERTS, Boston, Mass. Filed May 5, 1882. (No model.)

Claim.—1. A bottle-stopper composed of the open cap A, having a collar to enter the neck of the bottle, and a cork driven into the said cap, combined with links and lever to operate the stopper, substantially as described.

2. The fastening-lever *d*, provided with pivots *d'*, and connected at its ends with the wire *c* about the neck of the bottle, combined with the fastening-links having eyes mounted on the said pivot *d'*, and the hollow open cap A, its ears, the collar *f*, and the small cork *e*, driven into the said cap, all substantially as shown and described.

260,324. HOISTING APPARATUS. WALTER S. ROCKWELL, New York, N. Y. Filed May 23, 1882. (No model.)

Claim.—1. In a hoisting apparatus, the combination, with a bucket provided with trunnions on opposite sides, and uprights provided with main channels or guides and turn-out channels or guides, of switches for directing the bucket through the main channels or guides in its ascent and through the turn-out channels or guides in its descent, and a stop or stops for tipping the bucket while in said turn-out channels or guides, substantially as herein described.



2. The combination of the uprights A, provided with the main channels or guides *a* and the turn-out channels or guides *b*, of the buckets B, provided with trunnions *c*, and the switches *f g*, all arranged substantially as and for the purpose herein described.

3. In a hoisting apparatus, the combination of uprights provided with main channels or guides and turn-out channels, switches at the junction of the turn-out channels or guides with the main channels or guides, a bucket provided with trunnions fitting said channels or guides, and the pivoted tipping-switches for tipping said bucket and for retaining it tipped during its return to the main channels or guides, substantially as herein described.

4. In a hoisting apparatus, the combination of the uprights provided with main and turn-out channels or guides, the bucket working therein, the tipping-switches, and the checking-rollers or devices for retarding the descent of the bucket, substantially as herein described.

5. In a hoisting apparatus, the combination, with the uprights provided with the main channels or guides *a* and laterally-extending branch channels or guides *c*, of the bucket provided with trunnions or rollers *e*, and the switches *l*, for compelling the return of the descending bucket to that side of the apparatus whence it ascended, substantially as described.

260,325. MARINE SAFE. AUGUSTUS D. ROTH, Blackheath, County of Kent, England. Filed Nov. 15, 1881. (No model.) Patented in England June 17, 1881, No. 2,668.

Claim.—The apparatus for saving life and property at sea, consisting of the receptacle *a*, having the removable section *b*, the compartments *c*, formed by the horizontal partitions *d*, provided with doors, combined with the standards A, secured to the receptacle *a*, crossing each other at their upper ends and having a rocking bar, *g*, and the bell *f*, hung upon said bar and provided with a clapper, *i*, suspended therein by a ball-and-socket joint, *j*, substantially as described.

260,326. METHOD OF CLOSING BLANK CARTRIDGES. GEO. P. SALISBURY, New Haven, Conn., assignor to the Winchester Repeating Arms Company, same place. Filed Mar. 13, 1882. (Model.)

Claim.—The method herein described of closing the mouth of cartridge-shells, consisting in first turning the shell inward at different points of its circumference, and later turning in the parts intermediate between said points, substantially as described.

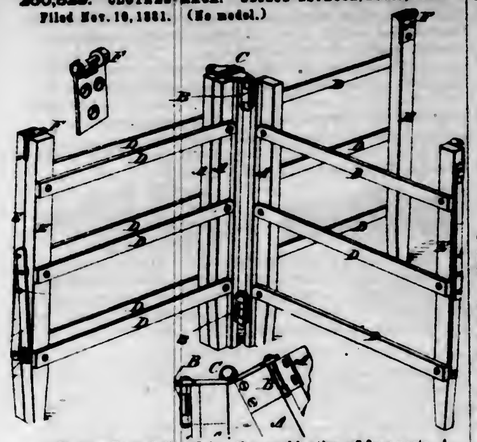
260,327. PROCESS OF OBTAINING SUGAR FROM PLANT-JUICES. CARL SCHEIBLER, Berlin, Germany. Filed Mar. 1, 1882. (No specimens.) Patented in Belgium Jan. 26, 1882, No. 56,999; in France Jan. 26, 1882, No. 147,970; in Great Britain Jan. 26, 1882, No. 398; in Austria-Hungary, Mar. 7, 1882, Nos. 3,315 and 3,997, and in Luxemburg Mar. 13, 1882, No. 190.

Claim.—1. The application of caustic strontium for the separation or purification of the juices of beet-root and other sugar-containing plants.

2. The application of the saccharates of strontium, either the solid saccharate obtained at boiling-heat or the soluble saccharate obtained at the cooling after the removal of the crystallized hydroxide of strontium, for the separation or purification of the juices of beet-root and other sugar-containing plants.

3. The mode of transforming the strontian contained in the obtained slime of separation and saturation into caustic strontian—viz., by forming this slime, with or without admixture of reducing and binding materials, into compact pieces or bricks, which are dried and fired.

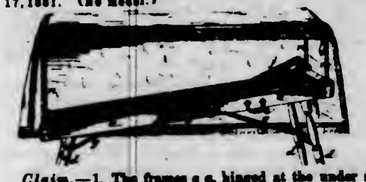
4. The mode of treating the parts which remain over in the water after the slaking or solution of the pieces named in the preceding or third claim—viz., with fixed alkali carbonates, with ammoniacal liquors, or with non-sugary dry ashes of beet-root—for the purpose of transforming the phosphate of strontium contained in the said remainders into carbonate of strontium.



5. The dry distillation of the strontian-containing slimes of separation and saturation before their transformation into caustic strontium described in claim 3, for the purpose of obtaining ammonia-tar, combustible gases, and other products.

260,328. PROCESS OF OBTAINING SUGAR FROM THE JUICES OF PLANTS. CARL SCHEIBLER, Berlin, Germany. Filed Mar. 23, 1882. (No specimens.) Patented in England Jan. 26, 1882, No. 398; in France Feb. 24, 1882, and in Belgium Mar. 4, 1882, No. 57,236.

Claim.—1. The process of decomposing the hot precipitate of strontium saccharate after cooling which consists in the systematic lixiviation with water or cold saturated strontium solution by allowing the latter to become gradually concentrated in its passage from the most lixiviated saccharate to the least lixiviated saccharate in a battery of vessels containing such saccharate, as set forth.



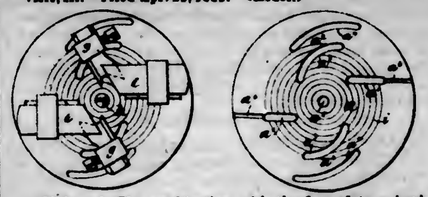
2. In the method of decomposing the strontium saccharates, forming the same into bricks or blocks while yet warm and plastic, allowing the bricks or blocks as formed to cool before lixiviating the same, as described.

260,329. CLOTHES-RACK. GEORGE SETHUSS, Boone, Iowa. Filed Nov. 10, 1881. (No model.)

Claim.—In a clothes-drier, the combination of four posts, A, connected in pairs by the hinges B, and having a top hinge, C, through which pass the pintles of hinges B, the posts E, connected in pairs by separable hinges F at their upper ends, and the bars D, pivoted to said posts A E, as and for the purpose specified.

260,330. EMBALMING AND COOLING BOARD FOR CORPSES. NOAH T. SHAW, Columbus, Ohio, assignor of two-thirds to William S. Carlile and John C. Sherwood, same place. Filed Aug. 17, 1881. (No model.)

Claim.—1. The frames *a a*, hinged at the under side, the braces *g g*, hinged on opposite sides of the frame-connecting hinges, and having at their free ends a grooved or recessed pin, *i i'*, and the round of the legs *d*, having a lipped socket, *f f'*, the said braces being adapted to be sprung into said socket over its locking-lip *f'*, and to exert thereby a firm upward bracing and supporting action upon the hinged ends of the frames and an outward force upon the legs and their abutments *c*, all constructed and combined for use substantially as described, for the purpose specified.



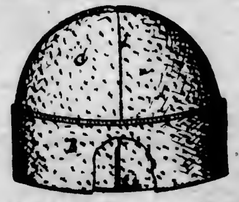
2. In combination, the hinged folding sections or frames, the hinged legs of unequal length, the hinged braces, and the safety-locking device, consisting of a grooved or recessed pin carried by the braces, and a lipped socket in the cross-bar of the legs, adapted to receive said grooved pin and form thereby an automatic lock for the legs and for the braces when the embalming and cooling board is in use, substantially as described.

3. The hinged folding frames *a a*, provided with the corner-abutments *c*, the legs of unequal length hinged to said frames and supported by said abutments, the braces *g*, hinged at the joining of said frames, the rounds of said legs provided with lipped sockets *i*, and the ends of said braces provided with recessed or notched pins *i*, constructed and combined for use in a folding embalming and cooling board, substantially as described.

4. The hinged folding frames *a a*, provided with the corner-irons *l*, formed with vertical tapering sockets *m*, adapted to receive removable button-posts *n*, having tapering ends and of unequal length, forming a canopy-support, substantially as described, in combination with hinged legs of unequal length and the braces for said legs, whereby the canopy is supported in horizontal and symmetrical relation with an inclined board.

5. A cooling-board consisting of the hinged sections *a a*, provided with hinged legs of unequal length braced from the middle of said board by automatic locking-braces *g g*, the tapering socket corner-irons *l m*, the corner-abutments *c*, the adjustable head-rest, and posts *n*, of unequal length, adapted to form a removable canopy-support, the legs having the greatest length supporting the head of the board and the posts having the least length supporting the head of the canopy.

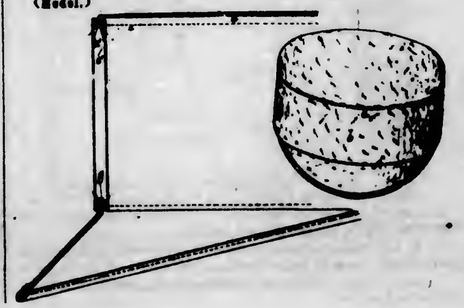
260,331. TENONING-MACHINE. JEREMIAH SHEPLER, Taylorville, Ill. Filed Apr. 22, 1882. (Model.)



Claim.—1. The combination, with the face-plate *a*, having concentric lines *i* and slots a^2 a^3 a^4 a^5, of the bracket tool-posts *b c*, provided with bolts b^4 c^4 and pins b^5 c^5, and adapted to carry the tools *e f*, substantially as set forth.

2. In a tenoning-machine, the tool-post *b*, secured to the face-plate by bolt b^4 and pin b^5, and having its top bar b^2 provided with rib or flange b^3, projected upwardly therefrom, and its forward portion, b^1, cut away, as shown, and adapted to carry the shoulder-forming tool *e*, substantially as described.

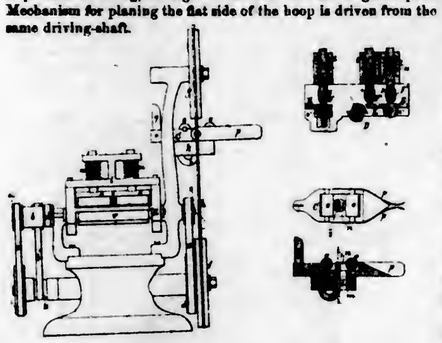
3. The bracket tool-post *c*, secured to the face-plate by bolt c^4 and pin c^5, and having the forward side of its top bar c^2 and edge of bar c^3 cut away to form the shoulder c^1, against which rests the side planing tool *f*, clamped to bar c^2, substantially as described.



260,332. BAND-CAP. SALI SIMONSON, New York, N. Y., assignor to himself, William Finster, Brooklyn, and William B. Willis, New York, N. Y. Filed May 31, 1882. (Model.)

Claim.—1. The combination, substantially as hereinbefore described, of the folding annular band made of a textile covering and a water-proof lining, the main crown secured to said band and composed of two sections—one of textile material and the other of water-proof material—and the semi-crown made of textile covering and water-proof lining separate from the main crown and united therewith by the median seam which connects the adjacent edges of the two sections of said main crown.

2. The combination of the folding band made of a textile covering and a water-proof lining, the main crown secured to said band and composed of two sections united by a seam at their adjacent edges, one section composed of textile material and the other of water-proof material, the semi-crown made of textile covering and water-proof lining separate from the main crown and united therewith at the median seam which unites the two sections of the main crown, the lower portions of the semi-crown being detached, and the straps connecting the detached portions of the semi-crown with the main crown, substantially as and for the purpose described.

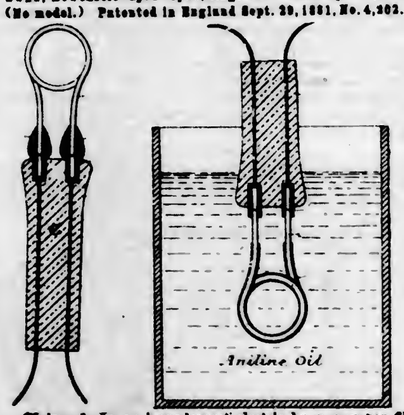


260,333. REVERSIBLE HAT OR CAP. SALI SIMONSON, New York, N. Y., assignor to himself, William Finster, Brooklyn, and William B. Willis, New York, N. Y. Filed May 27, 1882. (Model.)

Claim.—As a new article of manufacture, the hat or cap herein described, composed of a covering of textile fabric and a lining of water-proof material connected together with the raw edges of the united parts concealed between the textile fabric and water-proof lining, whereby the hat or cap can be turned inside out to expose the water-proof lining and present a finished appearance without the necessity of unfolding parts of the hat or cap, substantially as set forth.

260,334. MACHINERY FOR MANUFACTURING BARREL-HOLD HOOPS. NATHAN P. STEVENS, Concord, N. H., assignor to himself and Lorenzo D. Brown, same place. Filed Apr. 17, 1882. (No model.)

Brief.—The hoop-pole is fed to a band-saw over a table, which is pivoted on a ring, through which the saw and its guide pass. Mechanism for planing the flat side of the hoop is driven from the same driving-shaft.

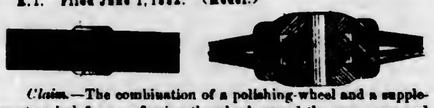


Claim.—1. The combination of the vibratory hoop-pole supporter C and its sustaining arm or bracket *h*, provided with the tubular journal *m*, with the stationary slitted post *i*, and with the endless band-saw arranged to extend into and down through such post and the supporter and its journal, as set forth.

2. The vibratory hoop-pole supporter C, provided with the springs *p p* and hoop-guide *q*, arranged with and adapted to it, substantially as set forth.

3. The combination of the stand and its driving-shaft, and mechanism for operating the endless saw, with the dressing mechanism applied to the said driving-shaft and stand, and having its cutter-cylinder supported by such shaft, all being substantially as set forth.

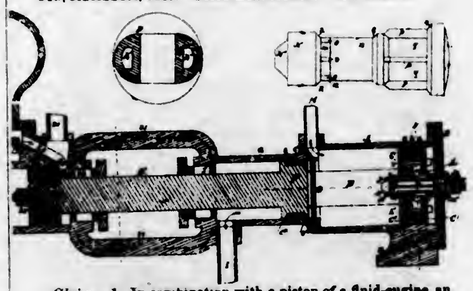
260,335. INCANDESCENT ELECTRIC LAMP. JOSEPH W. SWAN, Newcastle-upon-Tyne, England. Filed Apr. 17, 1882. (No model.) Patented in England Sept. 29, 1881, No. 4,202.



Claim.—1. In an incandescent electric lamp, a carbon filament united by a carbon deposit of the character described to the metallic conbuts, substantially as set forth.

2. The method of uniting the ends of the carbon filaments to the metallic conbuts by producing a local electrical heating, and thereby forming a coating or deposit over the junction, substantially as described.

3. In the production of a carbon deposit through electrical heating, the improvement consisting in immersing the article to be covered in aniline-oil and electrically heating it while so immersed, substantially as described.



4. In producing the local carbon deposit above mentioned, the improvement consisting in applying a metallic deposit by electrical action to the part of the filament required to be kept cool, and on which the carbon deposit is not to take place.

260,336. POLISHING-WHEEL. ELLIS THAYER, Pawtucket, R. I. Filed June 1, 1882. (Model.)

Claim.—The combination of a polishing-wheel and a supplementary hub for re-enforcing the wheel around the core, composed of clamps indented in the sides of the wheel and united by a spindle formed of the shanks of the clamps, which slide one into the other, substantially as described and illustrated.

260,337. STEAM PUMPING-ENGINE. BENJAMIN C. VARDUZEN, Cincinnati, Ohio. Filed Aug. 6, 1881. (No model.)

Claim.—1. In combination with a piston of a fluid-engine, an automatic reciprocating valve located and operated entirely within the cylinder, the ports being arranged substantially as shown, by means of which the steam is admitted to the cylinder in front of the piston, and after the engine has made its first stroke the steam is admitted through the piston to the cylinder-space behind the rear face of the piston, (the cylinder-space in front of the piston at the same time continuing full of steam,) and after the engine has completed its return-stroke is exhausted through the piston-port, substantially as and for the purposes specified.

2. In combination with the main piston, the automatic reciprocating valve located and operating entirely within the cylinder, and exhaust-ports extending to supplemental piston, and final exhaust-ports in supplemental piston, substantially as and for the purposes specified.

3. The combination of steam-cylinder, piston provided with reciprocating valve located and automatically operated entirely within the cylinder, devices for softening the force of the impact of the meeting between valve and the part actuating said valve, exhaust-port combined with said piston and connected to exhaust-ports extending to supplemental piston, and final exhaust-port in supplemental cylinder, substantially as and for the purposes specified.

4. The combination of the cylinders A and G and supplemental piston F, and piston C, provided with reciprocating valve J and valve-shell L, and devices for softening the impact of either end of said valve, substantially as and for the purposes specified.

5. The combination of cylinders A and G and supplemental piston F, and bumper O, and piston C, provided with reciprocating valve J, having spring N', and cylinder end B, having spring M', substantially as and for the purposes specified.

6. The combination of reciprocating piston C, provided with reciprocating valve J, having spring N', and cylinder end B, screw-shell M, and spring M', and set-screw M', substantially as and for the purposes specified.

7. The reciprocating piston C, provided with reciprocating valve J, having spring N', and cylinder end B, screw-shell M, spring M', and set-screw M', substantially as and for the purposes specified.

8. The piston C, composed of the disk C', having projection A, and disk C', having projection *h'*, and devices for securing same together, in combination with valve-shell L, containing the reciprocating valve J, substantially as and for the purposes specified.

9. The piston C, composed of the disk C', having projection A, and disk C', having projection *h'*, secured together, and port K, in combination with valve-shell L, valve J, having ports *n n*, and exhaust-ports K' K', substantially as and for the purposes set forth.

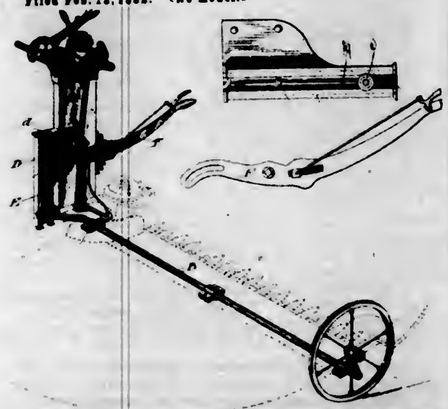
10. The valve J, having seats 2 4 6 and ports *n* and *n*, wings *p*, and exhaust-ports *q*, substantially as and for the purposes specified.

11. The valve J, having seats 2 4 6 and ports *n* and *n*, wings *p*, exhaust-ports *q*, and end S, having spring N', substantially as and for the purposes specified.

12. The valve J, having seats 2 4 6, ports *n* and *n*, constructed in two sections, one section composed of end 10, wings *p*, and having spaces *q* and cylinder 11, and the other section composed of the end S, provided with spring N', and the pieces 9, substantially as and for the purposes specified.

13. The piston provided with reciprocating valve, located and automatically operated entirely within the cylinder, in combination with the exhaust-port K and exhaust-port K', extending longitudinally within the cylinder and connected to the supplemental piston having port K', substantially as and for the purposes specified.

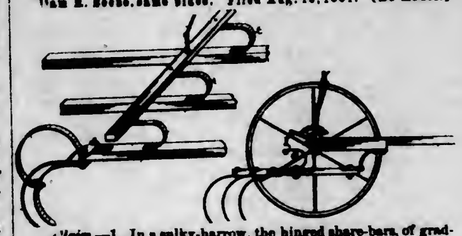
14. The combination of the piston C, provided with reciprocating valve, provided with spring N', bumper O, and exhaust-port K, and the connection containing the exhaust-ports K' and slot D', supplemental piston containing port K', and supplemental cylinder containing port I, substantially as and for the purposes specified.



15. The combination of cylinder A, having inlet-port H, piston C, having reciprocating valve J, provided with seats 2 4 6, ports *n n*, and exhaust-ports *q*, spring N', sliding in shell L, having seats 3 5 7 and exhaust-ports *g* and the port K, and the connection D, containing ports K' and the slot D', supplemental piston F, having exhaust-port K', supplemental cylinder having exhaust-port I, bumper O, and cylinder end B, having spring M', substantially as and for the purposes specified.

16. The combination of cylinder A, supplemental cylinder G, pump-cylinder 20, and pistons C, F, and 21, arches 31, and reciprocating valve J, located and automatically operated entirely within the cylinder, substantially as and for the purposes specified.

17. The combination of cylinder A, supplemental cylinder G, and the piston C, provided with reciprocating valve J, connection D, and the supplemental piston F, and piston-rod E, the front disk of the piston C and connection D and supplemental piston F and piston-rod E being cast in one piece, substantially as and for the purposes specified.

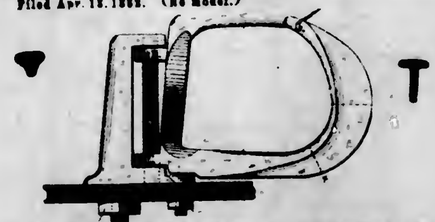


18. The combination of cylinder A, supplemental cylinder G, and the piston C, provided with reciprocating valve J, connection D, and the supplemental piston F, the front disk of the piston C and connection D and supplemental piston F being cast in one piece, substantially as and for the purposes specified.

260,338. HARVESTER. MARSH VAN MATTESON, Chicago, Ill. Filed Feb. 13, 1882. (No model.)

Claim.—The combination, in a grain-harvester, of the grain-wheel G, rock-shaft B, perpendicular guide D, having the slot *d*, adjustable slide E, arranged to move up and down in the guide D, and arm or lever F, for operating the adjustable slide, the whole being arranged and operating in such a way that the driver from his seat may raise or lower the outer end of the platform, substantially as described, and for the purposes set forth.

260,339. SULKY-HARROW. JAMES H. WELLER, Kalamazoo, Mich., assignor of one-half to Samuel H. Walbridge and William R. Roche, same place. Filed Aug. 18, 1881. (No model.)



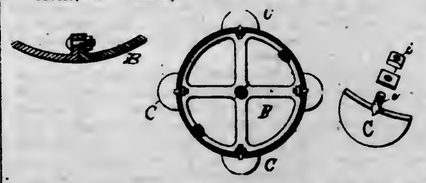
Claim.—1. In a sulky-harrow, the hinged share-bars, of graduated lengths, provided with the graduated springs, and the transverse bar connecting said springs with the lifting-lever, all in combination, substantially as set forth, to effect the purpose specified.

2. The combination, with the harrow-beam, of the curved tooth *a'*, attached to the rear end thereof, and at one side of said rear end, the auxiliary tooth having its shank laterally and rearwardly bent, for the purpose specified, substantially as shown.

260,340. METHOD OF EXTRACTING CRYSTALLIZABLE SUGAR FROM MOLASSES, &c. AUGUST WERNICKE, Halle-on-the-Saale, and WILHELM PFEIFFERER, Stasch, Prussia, Germany. Filed May 22, 1882. (No specimens.)

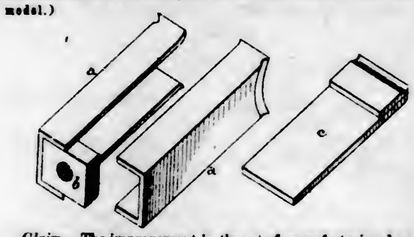
Claim.—The method of obtaining crystallizable or crystallized sugar from raw sugar, saccharine juices, strup, and molasses by adding concentrated acetic acid to the raw sugar or the saccharine liquor, allowing the sugar to separate or crystallize out, liberating the sugar from the mother-lye by mechanical means, and finally evaporating the residue of acetic acid or water or of acid and water, substantially as hereinbefore described.

260,341. OAR-LOCK. RICHARD D. WILLIAMS, Baltimore, Md. Filed Apr. 18, 1882. (No model.)



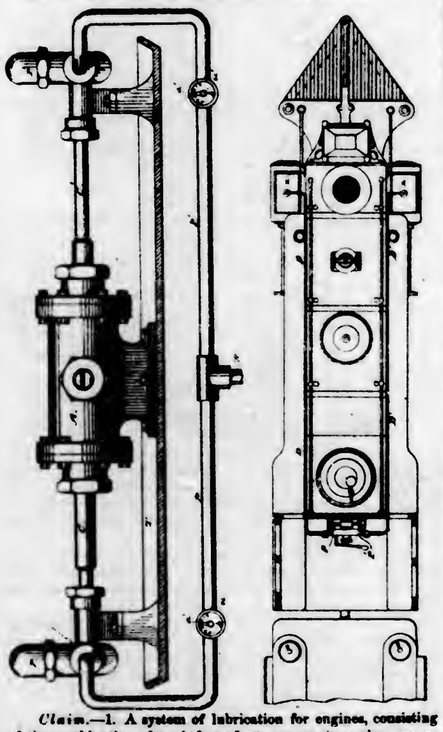
Claim.—1. A swiveled rowlock having a substantially-straight rowing-face inclined to the rear and a base substantially at right angles therewith, whereby a lifting-pull is secured during the stroke, and the blade of the oar is inclined to the surface of the water pending the recover, as set forth.

2. A swiveled rowlock having a forward extension of its rear face above the oar, and an arm or bar rigidly secured to or integral with its rowing-face, and extending diagonally outward from the plane of the lock and over the oar, as set forth.



3. A swiveled rowlock having its rear portion curved substantially in the arc of a circle and overlapping the oar at the top, and provided with a rigid arm projecting outward over the oar, and secured to or integral with its forward portion or rowing-face, as set forth.

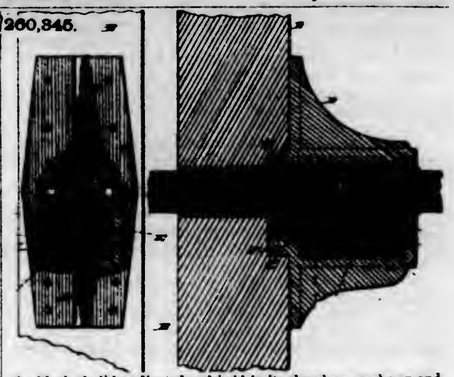
260,342. REVOLVING HARROW. CASPER WILLIAMSON, Fincastle, Va. Filed Apr. 5, 1882. (No model.)



Claim.—In a revolving harrow, in combination with the cylinders B, the teeth C, having their cutting-edges made in the form of a half-circle, their bases curved to conform to the sides of said cylinders, and secured thereto by the studs *c* and nuts *d* substantially as shown and described.

260,843. MANUFACTURE OF DRAW-HEADS. LEVI YARDLEY and SAMUEL K. DUFF, Allegheny, Pa. Filed Feb. 11, 1882. (No model.)

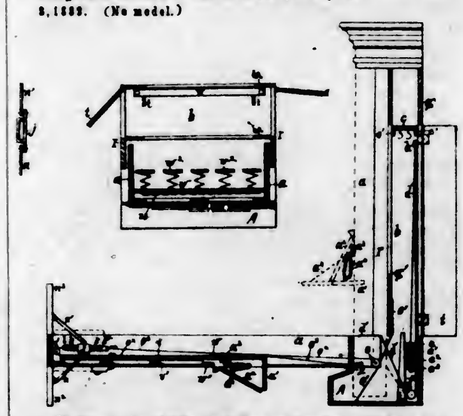
Claim.—The improvement in the art of manufacturing draw-heads herein described, namely: forging and preparing the side pieces, *a*, end piece, *b*, re-enforcing-pieces *c*, and loop *d*, then welding these pieces together, and then compressing the article so made in a die and on a mandrel to impart to it proper form, substantially as set forth.



260,844. AUTOMATIC LUBRICATOR. CHARLES O. YALE, New York, N.Y. Filed Mar. 11, 1882. (No model.)

Claim.—1. A system of lubrication for engines, consisting of the combination of an independent or separate engine, one or more pumps, pipes leading thereto from a reservoir or source of supply of a lubricating material, and a pipe or pipes leading from the pumps to the points to be lubricated, arranged substantially as and for the purpose set forth.

2. The combination, in a system of lubrication, of an independent or separate engine, one or more pumps, a pipe or pipes leading thereto from a reservoir or source of supply of a lubricating material, and provided with graduated leak-cocks, and pipes leading from the pump or pumps to the points to be lubricated, arranged substantially as and for the purposes set forth.



260,845. BEARING FOR PROPELLER-SHAFTS. GEORGE W. SASTROW, Baltimore, Md. Filed Mar. 16, 1882. (No model.)

Claim.—1. In a bearing for screw-propellers, the combination, with a housing, of a bearing-block having transverse grooves in its bottom, and a plate having ribs to fit into the grooves, whereby the block shall be adjusted and held in its chambers, as shown and described.

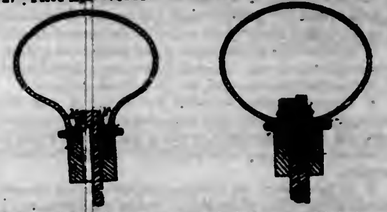
2. In a bearing for screw-propellers, the combination, with the stern-post, of the housing provided with an opening at one side, the bearing-block having its base made broader than the diameter of the shaft, and provided with transverse grooves in its under surface, the plate having ribs to fit in the grooves of the bearing-block, and means for closing the opening in the side of the housing, substantially as shown and described, and for the purpose set forth.

260,846. FOLDING BED. WILLIAM ZIMMERMAN, Chicago, Ill., assignor of one-half to Martin C. Burt, same place. Filed Jan. 3, 1882. (No model.)

Claim.—1. In a folding bed, the combination, with the rails *a*, hinged at *x*, of the cords a', pulleys *d*, weights $e\ e'\ e^2\ e^3$, and cords $f\ m\ m'\ m^1$, substantially as specified.

2. In a folding bed, the combination, with the rails *a*, hinged at *x*, of the cords a', pulleys *d*, weights $e\ e'\ e^2\ e^3$, cords $f\ m\ m'\ m^1$, and springs *i*, substantially as specified.

3. In a folding bed having side rails operating pivotally around a fixed point located between their ends, and provided with roller *o*, constructed to turn by mechanism operated by the motion of the side rails, the block *j* and mechanism constructed to operate the parts $n^2\ n^3$, substantially as specified.



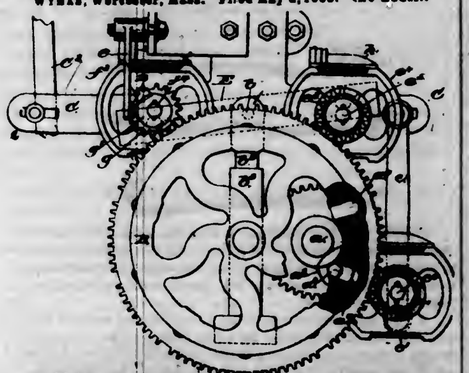
4. In a folding bed, the combination, with the block *j*, provided with hinged rods $n\ n'$, operating the hinged parts $n^2\ n^3$, pulleys l', and cords $o^2\ o^3$, of mechanism arranged to operate said parts by the motion of the rails *a*, substantially as specified.

5. In a folding bed, the rails *a*, provided with writing-desk and adjustable lid a^3, in combination with the chain a^4, provided with adjustable stud and socket-piece a^5, all constructed substantially as and for the purpose specified.

6. In a folding bed, the hinged rails *a* and ventilated frame g', in combination with the frame *g* and board *c*, forming closet *b*, and sides *r*, provided with doors *t*, substantially as specified.

7. In a folding bed, the hinged rails *a*, in combination with the frames $g\ g'$, forming a closet, *b*, extending the entire length of the rails *a*, and movable board *c*, substantially as specified.

260,847. DOOR-KNOB. JOHN SELLERS, Newark, N.J., assignor to the Hopkins & Dickinson Manufacturing Company, of New York. Filed Apr. 7, 1882. (No model.)



Claim.—A door-knob composed of a hollow metallic bulb perforated to receive a shank the end of which is slit longitudinally, and thereby formed into tongues, which, after the insertion of the shank into the opening in the bulb, are bent outwardly against the interior surface of the bulb, the shank being provided near its end with a shoulder which forms a bearing for the exterior of the bulb, and between which and the bent-over tongues portions of the shell of the bulb are securely confined, substantially as shown and described.

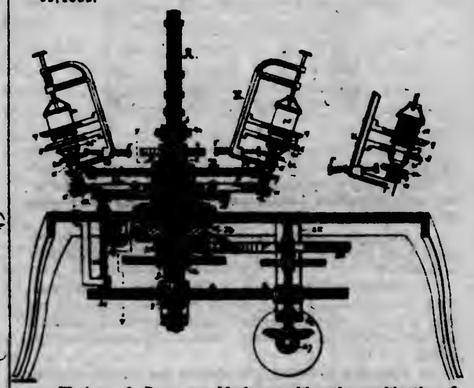
260,848. MOLE-TRAP. JAMES REID, Paterson, N.J. Filed Apr. 8, 1882. (No model.)

Claim.—The combination, in a mole-trap, of a frame terminating at the lower end as prongs to enter the earth, a weight sliding in that frame, a single range of spikes upon the weight, a tripper, and toggle-link at each side of the frame and weight, substantially as set forth, whereby the trap is discharged when the second tripper is moved, substantially as specified.

260,849. MECHANISM FOR CONVERTING MOTION. HORACE WYMAN, Worcester, Mass. Filed May 4, 1882. (No model.)

Claim.—1. A horizontally-sliding duplex gear, *d*, having two series of teeth, and teeth 6 7, removed one or more spaces therefrom to constitute toothless or blank spaces, as described, and shaft d^2, upon which the said gear is splined to be reciprocated, combined with the rotating master-gear to operate the said duplex gear and shaft d^2 half a revolution at a time, substantially as described.

2. The master-gear combined with the crank-shaft and a gear thereon having isolated teeth, or teeth removed one or more spaces from the main series of teeth of the latter gear, either of which isolated teeth may be placed in position to be engaged by the teeth of the master-gear to partially rotate the said crank-shaft, substantially as described.



3. The shaft f^2 and the gear *g* thereon, combined with separate and independent teeth 12 14, adapted to be placed alternately in line with the teeth of gear *g* at suitable intervals, substantially as described.

4. The two pivoted levers C E, combined with the slide-rod b^2 and guide for it, to prevent the levers from tipping over, substantially as described.

5. The master-gear and two or more shafts having gears provided with two series of teeth, and with spaces next them from which the teeth have been removed, to permit the teeth of the master-gear to run out from mesh with and to subsequently engage the teeth of the said gear, substantially as described, and crank-pins carried by the said shafts, combined with levers connected with and actuated intermittingly by the said crank, substantially as described.

REISSUES.

10,141. CAN-SOLDERING MACHINE. WILLIAM D. BROOKS, Baltimore, Md., assignor to himself and D. D. Mallory, same place. Filed May 8, 1882. Original No. 234,948, dated Nov. 30, 1880.

Claim.—1. In a can-soldering machine, the combination of can-carrying devices, mechanism for supporting and revolving them intermittingly about a common axis, and mechanism for imparting to each of the can-carrying devices a positive rotary motion, continuing after the cans leave the point of heating, substantially as described.

2. In a can-soldering machine, a wheel supporting can-carrying devices, mechanisms for imparting to the wheel and said can-carrying devices an intermittent revolving motion about the axis of the wheel, and mechanism for imparting to the can-carrying devices a positive rotary motion after leaving the heating-point, substantially as described.

3. In a can-soldering machine, a wheel supporting rotary can-carrying devices in brackets fixed to said wheel, mechanism for imparting intermittent motion to the wheel, a pinion, 11, connected with the can-carrying devices, a gear-wheel, C, and mechanism for imparting constant movement thereto, whereby the cans are revolved independently of the motion of the wheel, substantially as described.

4. In a can-soldering machine, the combination, with a series of can-carrying devices, of mechanism for imparting to said devices intermittent revolution about a common axis, and a positive continuing rotation of each of the series about its own axis after the solder is applied, and a brake mechanism for arresting the revolution of one of the cans.

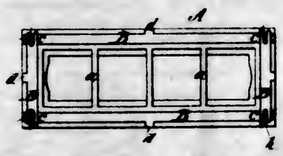
5. In a can-soldering machine, the combination of the supporting-post A, the lever sleeve 12, having the ratchet-wheel 15, means for imparting an intermittent rotary motion to such wheel 15, and the wheel B, supporting revolving can-holders, and means for imparting to the same a positive rotary movement after the solder is applied.

6. In combination, the sleeve 12, the shaft A, the ratchet-wheel 15, the lever 26, having spring-pawl 32 and loop 30, and the crank-arm 31.

7. In combination, the sleeve carrying wheel B, the pawl 32, wheel 15, and lever 26, with a ratchet, pawl, and cam for holding said wheel stationary.

8. The combination of the wheel 12 on sleeve 12, having teeth with V-shaped notches, with the pawl 32, having a correspondingly V-shaped tooth, the spring 37, and the cam 36 on shaft 35.

9. The combination of the sleeve 12, carrying wheel B, the pawl-and-ratchet mechanism for moving the same, and the brake 17, substantially as described.



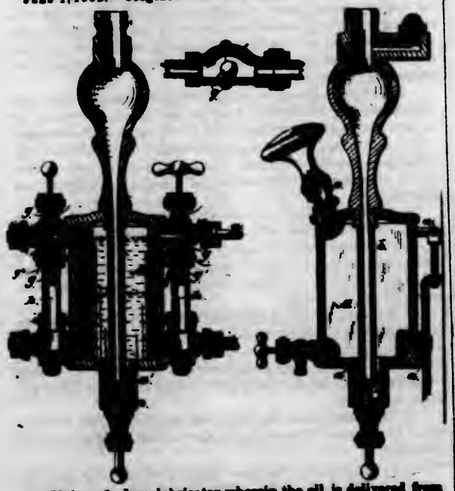
10. The combination of the wheel E, carrying can-holders, the cog-wheels C and D, and the shaft and pinions connecting said wheels with the wheel 1, whereby continuous-rotary motion is given the can-holders, substantially as described.

11. The combination, with the wheel E, of the fixed inclined bracket H, the shaft 14, rotating in hollow shank of said bracket, the pinion 11, and the spiders, substantially as described.

12. The combination of the cam 4, suspended block 30, brake-rod 5, spring 41, and wheel 42 with the can-supporting devices, substantially as described.

13. The can-supporting rim 7, in combination with removable bottom 46, substantially as described.

10,142. BALANCED SLIDE-VALVE. JOHN J. DE LANCEY, Binghamton, N. Y. Filed May 3, 1882. Original No. 179,603, dated June 26, 1876.



Claim.—1. The slide-valve A, formed with plane or flat sides combined together in a steam-chest, with the face or balance plate D fitting closely in the steam-chest, the lugs *a*, and bars *f*, the latter having projections *j*, which enter notches *k* in the balance-plate D, substantially as shown and described.

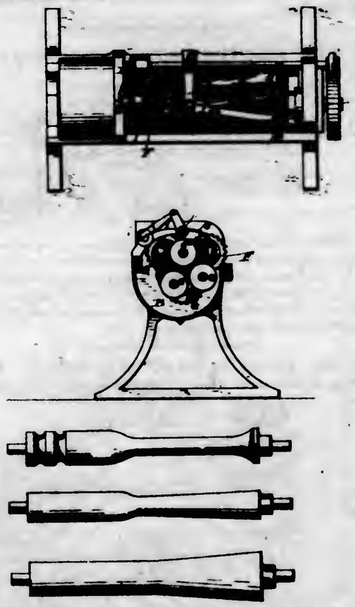
2. The square packing-bars B, connected at their ends by lap-joints *c*, and provided with lugs *d*, working in slots, substantially as described.

3. The face or balance plate D, fitting closely in the steam-chest, with openings *i* in the corners, lugs *e*, for supporting the plate in position, the adjusting-bars *f*, and set-screws *l m*, combined together and with the steam-chest, substantially as shown and described.

4. The valve A, formed with plane or flat sides, in combination with the square packing-bars B, connected at their ends by lap-joints, the lugs *d*, working in slots, substantially as described, and the face or balance plate D, substantially as shown and described.

10,143. LUBRICATOR. TIMOTHY HOLLAND, Troy, N. Y. Filed June 1, 1882. Original No. 243,900, dated July 5, 1881.

Claim.—1. In a lubricator wherein the oil is delivered from an oil-reservoir to a transparent feed-indicating vessel or tube in the form of drops, the combination, with said indicating vessel or tube, of a steam-pipe for delivering steam upon the oil and impelling or driving it through the vessel or tube in visible drops.



2. The combination, with the transparent feed-indicating tube of a lubricator through which the oil passes in its transit to the part to be lubricated, of a steam-pipe for delivering steam upon the oil as it enters or passes through said transparent feed-indicating vessel or tube, substantially as and for the purpose described.

3. In a lubricator, the nipple *g'*, extended down a short distance within tube *h* and cut out to form a steam-deflecting chamber, substantially as described, for the purpose set forth.

4. The combination, with two devices, one at each side, for conveying the oil separately to each chest, of an oil-reservoir, A, having the bottom chamber, *a'*, and a partition extending down into but not quite to the lower end of said chamber, as shown and described.

5. In lubricators, the combination, with an oil chamber or reservoir fitted with a steam-supply pipe, of two oil-conduit pipes and outflow-pipes for delivery of the oil to the separate chests of a locomotive, and a steam-pipe connecting the outflow-pipes directly to the boiler, substantially as shown and described.

10,144. MACHINE FOR FELTING HAT-BODIES. JAMES S. TAYLOR, Danbury, Conn. Filed May 6, 1882. Original No. 194,566, dated Aug. 28, 1877.

Claim.—1. The combination of rollers arranged to form a chamber unobstructed above for the convenient reception of goods to be felted, substantially as set forth, and whereby the same may be readily inserted without effecting change in the position of any part of the machine.

2. The combination, with a vat for holding hot water, of rollers suspended partially below the upper surface of the vat and arranged to form a receiving-chamber unobstructed above for the convenient reception of goods to be felted, substantially as set forth, and whereby the same may be readily inserted without effecting change in the position of any part of the machine.

3. The combination of the three rollers, *c d d'*, constructed as shown and described, and arranged with their axes diagonally crossing each other, for the purpose specified.

4. The combination of the felters F F with the rollers *c d d'*, arranged with their axes diagonally crossing each other, in the manner and for the purpose as described.

5. The rocking felter or felters F, in combination with the rollers *c d d'*, for the purpose of imparting to the material to be felted a positive, rotary, and felting motion in the process of felting, substantially as shown and described.

6. The combination of the springs *e e*, felters F F, and rollers *c d d'*, in the manner and for the purpose as described.

THE HELIOTYPE PRINTING CO 211 TREMONT ST BOSTON.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

THE WEBSTER LOOM COMPANY *v.* HIGGINS *et al.*

Decided May 8, 1882.

1. SPECIFICATION—DESCRIPTION OF INVENTION.
   A specification in letters patent is sufficiently clear and descriptive when expressed in terms intelligible to a person skilled in the art to which the invention belongs.
2. SAME—EVIDENCE MAY BE ADMITTED IN COURT TO EXPLAIN TERMS.
   Evidence is admissible to show the meaning of terms used in a patent, as well as the state of the art, for the purpose of enabling the court or jury to understand it.
3. SAME—PARTS OF THE INVENTION—HOW TO BE READ.
   If an improvement of a well-known appendage to a machine is fully described in a specification, it is not necessary to show the ordinary modes of attaching the appendage to the machine. The patent is to be read as if the machine and its appendage were present or in the mind of the reader, and he a person skilled in the art.
4. SAME—DEFENSE OF INSUFFICIENT DESCRIPTION.
   Query, whether the defense of insufficient description can be set up without alleging an intent to deceive the public?
5. INVENTION—NEW COMBINATIONS OF OLD DEVICES.
   A new combination of known devices producing a new and useful result (as that of greatly increasing the effectiveness of a machine) is evidence of invention, and may be the subject of a patent.
6. SAME—SAME—WEBSTER'S PATENT, NO. 130,961, GRANTED AUGUST 27, 1872, SUSTAINED.
   Webster's improvement in looms for weaving pile fabrics, which consisted in such a new combination of known devices as to give to a loom the capacity of weaving fifty yards of carpet a day, when before it could only weave forty, *Held* to be patentable, and his patent for the same, dated August 27, 1872, sustained.
7. PRIORITY OF INVENTION—PUBLIC USE.
   Of two original inventors the first will be entitled to a patent unless the other puts the invention into public use more than two years before the application for a patent.
8. SAME—DRAWINGS MAY ESTABLISH.
   An invention relating to machinery may be exhibited as well in a drawing as in a model, so as to lay the foundation of a claim to priority, if sufficiently plain to enable those skilled in the art to understand it.
9. PRIORITY OF INVENTION AS DEFENSE—PRACTICE IN THE COURTS.
   Though the defense of prior invention ought to be set out in the answer, yet if the omission to set it out is not objected to at the proper time in the court below it cannot be objected to in this Court.

APPEAL from the Circuit Court of the United States for the Southern District of New York.

Mr. E. N. Dickerson for the appellant.

Mr. Geo. Gifford and *Mr. Wm. M. Evarts* for the appellees.

Mr. Justice BRADLEY delivered the opinion of the Court.

The bill in this case was filed by the appellants to obtain relief for an alleged infringement by the defendants of certain letters patent for improvements in looms for weaving pile fabrics, &c., granted to one William Webster on the 27th day of August, 1872, and numbered 130,961, to which the plaintiff deraigns title. The defenses set up in the answer are, first, a denial of infringement; second, a denial that Webster was the first inventor of what was patented to him, under which denial various prior letters patent are specified as containing the invention or material parts thereof, including a patent granted to Erastus B. Bigelow in March, 1849, reissued in 1857, a patent granted to E. S. Higgins as assignee of William Weild in August, 1868, and a patent granted to E. K. Davis in February, 1869; third, that the invention was used by and known to E. K. Davis in the city of New York, and Thomas Crossley in New York and Bridgeport, Conn.; fourth, that the description in Webster's patent is obscure, and not sufficient to enable one acquainted with the art to which it belongs to construct or use the loom therein attempted to be described; fifth, that there is no description in the patent of the combination principally claimed and relied on. The answer also sets up an agreement between Webster and the defendants whereby they claim a right to use the alleged invention of Webster. Proofs being taken and the cause heard, the bill was dismissed by the circuit court, and the decree of dismissal is now here on appeal.

The patent, as before stated, is for improvements in looms for weaving pile fabrics, &c., and the nature and object of the invention are set forth in the specification as follows:

The first part of my invention relates to the combination and arrangement of the reciprocating or driving slide, sliding bar, withdrawing and inserting devices, and trough in such a manner that the trough shall be capable of oscillating between the points of withdrawal and insertion of the wire, the sliding bar receiving a horizontal motion at the same time that the pushing-slide is being reciprocated on the trough by the driving-slide. The advantage of this part of my invention is that a shuttle-box rigidly connected with the lay may be used.

The second part of my invention relates to the means for preventing the wire from bounding back from its position in the wire-box, and consists in a spring attached to the inner end of the wire-box, and fitting indentations or openings in the heads of the wires.

The third part of my invention relates to the combination of the vibrating trough directly with the lay.

The fourth part of my invention relates to a modification of the mechanism, and consists in having the oscillating-trough and reciprocating-slide pathway combined or made in one piece, and having the withdrawing and pushing devices combined or connected and reciprocated thereon by power applied directly thereto, the object of this part of my invention being to dispense with the driving-slide and stationary-slide pathway and sliding-bar.

The fifth part of my invention consists in the combination, with a lay having a rigid shuttle-box, of a pivoted vibrating wire-trough, a reciprocating driving-slide, and latch, the latter being operated by the wire-box to release the wire, and the slide and latch moving on the trough, all as set forth.

The specification then proceeds to describe the mechanism of the invention by a description and reference

to drawings, which exhibit a front view of the improvement, a top view, a wire-head, a sectional part, and end view of the wire-box, the oscillating trough connected to the shuttle-box or lay of a loom, the same connected to the breast-beam of a loom, &c., all which would be incomprehensible to a person unacquainted with looms for weaving pile fabrics, but very plain to one who understood their construction and operation at the date of the patent. A person skilled in the art of constructing or using such looms in their most advanced and improved form, such as those known as the "Bigelow loom" and the "Weild loom," and having one actually before him or in his mind, would readily appreciate the meaning of the terms and the character of the improvement described.

In weaving piled fabrics—such, for example, as Brussels carpet—the pile or loop is formed by inserting a wire alternately with the filling between the threads of the warp, immediately under the woolen or worsted threads, and afterward withdrawing it from the web of cloth. At first these wires were inserted and withdrawn by hand by the aid of an assistant, which made the process a very slow one, so that only a few yards could be woven in a day on a single loom.

The first great improvement was introduced about 1849–'50 by Erastus B. Bigelow, of Massachusetts, who invented a mechanical apparatus attached to the side of the loom, which automatically inserted the wires in the shed or opening between the warps and withdrew them from the web. About a dozen wires were used, and after they had all been inserted the device invented by Bigelow would vibrate forward and seize the head of the first wire, withdraw it from the web, and then vibrate back to the shed, and at the proper moment insert it; and so it would go on to operate as long as the loom was kept in motion. Its various motions were given and timed by means of cams of proper size and shape placed in connection with the principal movements of the loom itself. This attachment to pile-fabric looms became generally known as the "wire movement," and by its aid twenty-five yards a day could be woven on a single loom without the aid of any assistant. It is seldom that such a complete revolution in one of the useful arts is made at a single jump. Improvements, however, have been made on Bigelow's invention. Among others, one William Weild, of Manchester, England, in or about the year 1855, effected a decided improvement, which, after being perfected by succeeding improvements, enabled him to weave thirty or forty yards a day on a single loom. The means by which this was accomplished was the placing of a horizontal trough or grooved bar, called a "wire-trough" or "wire-bar," for the wire to rest on when drawn out of the web and thrust into the shed. In Bigelow's loom the wire simply rested on a fork placed close to the loom, and when it was fully drawn out by the clamp or dog's head, which seised it for that purpose, being slender and flexible, it would sag in the middle, and if driven rapidly into the shed the forward end would spring upward and get entangled in the upper warp-threads. This rendered a slow movement necessary, which impeded the rapidity of the work. By giving it a trough or grooved bar to lie in and keeping it straight, as was done by Weild, a quicker motion could be given to it and a much larger amount of work could be done in the same time. The only difficulty in the way of operating with the trough as arranged by Weild was that a certain part of the apparatus, called a "pusher," which was a cross-bar or yoke extending across and connecting the breast-beam and the wire-bar, and which was employed to push the wire into the shed, extended so far back toward the lathe or lay, which carries the reed and shuttle-box, as to come in contact with it and interfere with its motion. Weild obviated this difficulty by sawing off (so to speak) the outer end of the lay containing the shuttle-box, which being thus detached from the rest of the lay could be separately kept back while the reed was driving up the filling, and was thus prevented from striking the wire-trough and pusher. But, of course, this detached portion of the lay required additional cam work and complicated the machinery. There was also another matter that interfered with the perfect efficiency of Weild's loom. The pusher, after the wire was drawn out by a hook attached, did not seize the head of the wire, but simply pushed it forward into the shed. If this was done with too rapid a motion, the impetus given to the wire would throw it forward too far in case the loom had to be suddenly stopped on account of a broken thread or other cause. This made it necessary to work the loom more slowly than the other operations required.

This seems to have been about the state of the art when Webster began to devote his attention to the improvements which he claims to have invented, and which it is clearly shown, whether invented by him or some one else, resulted in giving to a loom the capacity of weaving fifty yards a day. The Bigelow looms were well known and in extensive use. The Weild looms were also well known. Some improvements, not necessary to notice, had also been made on both. Webster's first conception of his invention occurred and his original drawing was made in the winter of 1865–'66, but he did not apply for his patent until June 21, 1870, and it was not issued until August 27, 1872. Prior to that time the defendants, who had a large establishment in the city of New York, and were using Bigelow's loom under a license, had procured the control of Weild's patents in this country, and had applied Weild's improvements, with some modifications made by E. K. Davis, to a large number of their Bigelow looms. Davis was their head machinist, and in 1868 he obtained a patent for an improvement on Weild's loom, by which, instead of detaching the whole outer end of the lay, he only detached the shuttle-box and caused it to slide back on the lay so as to make room for the wire-trough. He also adopted, instead of the wire-trough, a pair of parallel bars between which to move the wire, the latter resting on a pin between the bars near to the loom. The loom itself was old. Every part of it was familiar to every loom-manufacturer and to every weaver. Its lathe, its treadles, its breast-beam, its shuttle-boxes, and shuttle-slide were as well known to all those concerned in the weaving of pile fabrics as the plow or the cultivator is to the farmer. The wire motion had also become well known. Its mode of attachment to the loom, the means of giving motion to its different parts, the parts themselves, the vibrating wire-support, whether a fork or a trough, and whether pivoted to the breast-beam or to a post or to the frame or floor, the reciprocating driving-slide, the dog's head for holding and the pusher for driving the wires, the wire-box that kept the wires in place, the rigid

lathe, the lathe whose outer end was detached, and the lathe with a detached shuttle-box—all these things were as well known as the alphabet to all those skilled in the art of pile weaving as it then stood. With this mass of previous knowledge and nomenclature in their minds, (as we must suppose it to have been,) the language, the explanations, the drawings, and the claims of Webster's patent must have been perfectly intelligible to them. When an astronomer reports that a comet is to be seen with the telescope in the constellation of Auriga, in so many degrees of declination, and so many hours and minutes of right ascension, it is all Greek to the unskilled in science, but other astronomers will instantly direct their telescopes to the very point in the heavens where the stranger has made his entrance into our system. They understand the language of their brother scientist. If a mechanical engineer invents an improvement on any of the appendages of a steam-engine, such as the valve-gear, the condenser, the steam-chest, the walking-beam, the parallel motion, or what not, he is not obliged, in order to make himself understood, to describe the engine, nor the particular appendage to which the improvement refers, nor its mode of connection with the principal machine. These are already familiar to others skilled in that kind of machinery. He may begin at the point where his invention begins, and describe what he has made that is new, and what it replaces of the old. That which is common and well known is as if it were written out in the patent and delineated in the drawings. Applying these remarks to the specification before us, and recurring to the extract already made, setting forth the nature and object of the invention, it is easy to conceive that its meaning may be plain to those for whose use it is intended. They know at once what is meant by the terms "reciprocating or driving slide," "sliding bar," "withdrawing and inserting devices," "trough," "wire," "wire-box," "lay," &c. They also understand the movements referred to and the objects to be attained by each device. In like manner, if we follow the specification in its description of the invention in detail, with the references to the drawings and the closing summary of the patentee's claims, the same method of interpretation will be applicable. And as it cannot be expected that the Court will possess the requisite knowledge for this purpose, it becomes necessary that it should avail itself of the light furnished by the evidence to enable it to understand the terms used in the patent and the devices and operations described or alluded to therein. This evidence, of which the record in this case furnishes an abundance, being resorted to, we have no difficulty in comprehending the patent or the nature of the invention therein described.

A great deal of testimony was introduced by the defendants to show that the patentee had failed to describe his invention in such full, clear, and exact terms as to enable persons skilled in the art to construct and use it. It seems to us that the attempt has failed. When the question is whether a thing can be done or not it is always easy to find persons ready to show how not to do it. But it stands confessed that the thing has been done—that is to say, the contrivance which Webster claims in his patent has been applied—and very successfully so, to pile-fabric looms, and, as the appellant's counsel well remarks, no one except Webster has ever appeared to claim a patent for doing it. If the thing could not be understood without the exercise of inventive power, it is a little strange that it should have been so easily adapted to the looms on which it has been used and produced such striking results.

It is worthy of remark in this connection that the defendants in their answer state it as a fact that prior to the alleged invention of Webster looms containing lays having shuttle-boxes rigidly attached were publicly known and described in certain English patents, which they specify, and that all the other parts and elements mentioned in the fifth claim of Webster's patent (being the claim relied on) were described in another English patent of one Birkbeck; and they aver and insist, as will be more fully noticed hereafter, that the application and use of the two things together—that is, the parts described in Birkbeck's patent with the rigid lay and shuttle-box described in the other patents—were obvious and required no invention; and that therefore the alleged invention of Webster was well known and constituted a part of the known state of the art. This averment in the answer, which, of course, is sworn to, does not seem to tally very well with the allegation that Webster has failed to point out in his patent how to use and apply his invention, and that it requires further invention to use and apply it.

The appellants, indeed, have raised the question whether evidence to show that the invention is not described in the patent in such full, clear, and exact terms as to enable a person skilled in the art to construct and use it is admissible, unless the defense is specially set up in connection with a charge that the description in the patent was made defective for the purpose of deceiving the public.

The twenty-sixth section of the act of 1870, under which the patent in question was issued, declares—

> That before any inventor or discoverer shall receive a patent for his invention or discovery he shall make application therefor in writing to the Commissioner, and shall file in the Patent Office a written description of the same, and of the manner and process of making, constructing, compounding, and using it in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which it appertains or with which it is most nearly connected to make, construct, compound, and use the same; and in case of a machine, he shall explain the principle thereof and the best mode in which he has contemplated applying that principle so as to distinguish it from other inventions; and he shall particularly point out and distinctly claim the part, improvement, or combination which he claims as his invention or discovery.

Such a specification must be filed before the inventor shall receive a patent, the law says; and the appellants' counsel argues that if it is the duty of the Commissioner to see that such a specification as the law requires is filed before granting a patent, not only is the patent when issued proof that he has done so, but his decision on the point cannot be questioned, except in the manner allowed by the law; else, instead of one tribunal for deciding a matter on which conflicting testimony can always be found, we shall have as many tribunals as there are courts and juries called upon to try patent causes.

On turning to the section which provides for certain defenses that may be made to an action for infringement we find it declared—

> That in an action for infringement the defendant may plead the general issue, and, having given notice in writing to the plaintiff or his attorney thirty days before, may prove on trial any one or more of the following special matters: First, that for the purpose of deceiving the public the description and specification filed by the patentee in the Patent Office was made to contain less than the whole truth relative to his invention or discovery or more than is necessary to produce the desired effect.

Then follows a statement of other special matters. In view of this specific defense allowed by the statute in reference to a defective specification, it is argued that no other is admissible under that head; and reference is made to some decisions under the former statutes bearing on that subject, namely: *Whittemore* v. *Cutter*, (1 Gallison, 434;) *Lewis* v. *Lewis*, (1 Mason;) *Gray* v. *James*, (Peters' Circuit Ct. Repa., 394;) *Grant* v. *Raymond*, (6 Peters, 218,) this Court in the last case holding, contrary to the decisions of Judges Story and Livingston in the other cases, that it was not necessary to aver a fraudulent intent, unless the defendants desired to avoid the patent—a result which was provided for in the law of 1793. The Court held that the plea of insufficient description was good as a defense without alleging a fraudulent intent, but not good as a ground for avoiding the patent. The laws of 1836 and 1870 omitted the clause for annulling the patent, but still retained in the definition of the defense allowed to be set up the qualification of a fraudulent intent. Counsel argues that as the law now stands the plea of insufficient description cannot be made unless made with that qualification, because the only purpose it has under the present law is that of a defense to the action, and it still requires the allegation of fraudulent intent to deceive the public. There is plausibility in this argument, and if it were necessary to the decision of this case, it might give us some embarrassment. But as we are satisfied that the terms of the patent are sufficiently clear and full in the description of the invention, we make no decision on the point.

Turning now to the invention claimed by Webster, and described in the patent under consideration, we find that, although it produced a great improvement in the art of weaving pile fabrics, yet as actually exhibited in conception and accomplishment it seems simple. The thing to be done was to combine the advantages of Bigelow's rigid lathe, divested of some of its defects, and his constant command of the wire with Weild's trough or wire-bar for supporting the wire. This Webster, or, if not Webster, some other person, effected by the devices and mechanism described in the patent. Stated in brief, as therein set forth, aided by the explanatory testimony before referred to, the problem was solved by substituting for Weild's pusher a latch which rides on the wire bar or trough without projecting beyond it, and which receives a reciprocating motion backward and forward on the bar either by being connected with a driving-slide moving on the breast-beam or by being directly connected with an upright reciprocating lever. The latch, when the end of the wire-bar next to the loom oscillates or vibrates to the front of the wire-box, drops upon a wire-head into a nick or notch made therein and withdraws the wire into the trough, and then, when the latter oscillates back to the shed without releasing its hold of the wire-head, drives the wire into the shed, and is then lifted out of the notch by striking the edge of the wire-box, sloped up for that purpose, and releases the wire, and then oscillates forward again to seize another wire, and so on. The lathe in the meantime works backward and forward without meeting any obstruction and without any detachment or separation of its parts. Very little modification had to be made in the cams, and the whole apparatus or "wire movement," as it is called, seems more simple than it was before either in Bigelow's or Weild's loom. This contrivance when actually applied to the looms worked to perfection and enabled the weaver to drive his loom to its utmost capacity.

The patent points out and the drawings illustrate various ways of arranging the wire-bar and the reciprocating slide which carries the latch. Thus, the outer end of the wire-bar having to be pivoted to some center for its oscillating motion, it is shown that it may be pivoted to the outer end of the lay or shuttle-box, or to the outer end of the breast-beam, or to a vertical shaft or post—all these devices except the first being in common use in the Bigelow or Weild looms and being mechanical equivalents of each other. So it is shown that the pushing-slide, which carries the latch and rides on the wire-bar like a saddle, may be operated either by being connected with a driving-slide on the extension of the breast-beam by means of a cross-bar passing through a mortise in the driving-slide or by being directly connected with the arm or lever producing the reciprocating movement.

The patent has five claims, only the fifth of which is relied on in this case, which is as follows:

> In combination, the lay and its rigid shuttle-box, the pivoted vibrating wire-trough, the reciprocating driving-slide, and the latch moving thereon, the latter being operated by the wire-box, the combination being and operating substantially as described.

With the explanation of the invention already given the meaning of this claim is quite obvious. If any explanation of it is needed, it can be readily derived from the body of the specification. The combination contains five elements: one, the rigid lay and shuttle-box; two, the pivoted oscillating or vibrating trough; three, the reciprocating slide riding on the trough; four, the latch for taking and holding the wire; five, the operation or lifting of the latch by striking the wire-box. Nothing further is necessary to be said in order to dispose of the defense, which was strenuously urged, and to which the court below attached much importance, that the specification was insufficient in its description of the invention sought to be patented and failed to show any means of applying it to existing looms, and that independent invention would have to be exercised to make it a practical working apparatus as an attachment of such looms. We shall therefore dismiss that branch of the argument. It is further argued, however, that, supposing the devices to be sufficiently described, they do not show any invention, and that the combination set forth in the fifth claim is a mere aggregation of old devices already well known, and therefore it is not patentable. This argument would be sound if the combination claimed by Webster was an obvious one for attaining the advantages proposed—one which would occur to any mechanic skilled in the art. But it is plain from the evidence and from the very fact that it was not sooner adopted and used that it did not for years occur in this light to even the most skillful persons. It may have been under their very eyes, they may almost be said to have stumbled over it, but they certainly failed to see it, to estimate its value, and to bring it into notice. Who was the first to see it, to understand its value, to give it shape and form, to bring it into notice and urge its adoption is a question to which we shall shortly give our attention. At this point we are constrained to say that we cannot yield our assent to the argument that the combination of the different parts or elements for attaining the object in view was so obvious as to merit no title to invention.

Now that it has succeeded, it may seem very plain to any one that he could have done it as well. This is often the case with inventions of the greatest merit. It may be laid down as a general rule, though perhaps not an invariable one, that if a new combination and arrangement of known elements produce a new and beneficial result never attained before, it is evidence of invention. It was certainly a new and useful result to make a loom produce fifty yards a day when it never before had produced more than forty, and we think that the combination of elements by which this was effected, even if those elements were separately known before, was invention sufficient to form the basis of a patent.

The next contention of the defendants which we shall consider is their allegation that Webster was not the first and original inventor of the thing patented, but that he was anticipated therein by E. K. Davis. On this point we think it very clearly made out, though we shall not go into much detail in commenting upon the evidence, that the whole substance of the invention was conceived by Webster, and exhibited by him in a drawing as early as the winter of 1865-'66, long before Davis entertained any idea of it. The original of this drawing is in existence and was produced in evidence, and is well authenticated. It exhibits the rigid lay, the wire-trough pivoted in two different positions on a post near the extremity of the breast-beam and to an arm projecting from the extremity of the lay, the driving or pushing slide, riding on the trough, with a projection indicating the latch, or other device, for operating the wire, and even the cams to give the requisite movements. It also shows the wire-box and the position of the end of the trough in relation thereto, the same as exhibited in the patent. In March, 1868, Webster exhibited this drawing to Davis and others and explained it to them as representing a lay having a rigid shuttle-box, a driving-slide, and latch moving upon a vibrating trough, the latch being operated by the wire-box. Davis was about that time engaged in making an improvement on the Weild loom, before referred to, with a sliding shuttle-box, and parallel bars instead of a trough for the wire to slide between, and a pin for it to rest on. In July, 1868, he applied for a patent for this improvement, and obtained a patent in February, 1869. In that year Webster sent drawings to Weild in England to get out a patent for his invention in that country; but Weild declined to undertake it. These drawings show the entire invention in detail. In November, 1869, Webster, having heard that the defendants were going to alter their Bigelow looms to Weild looms, sought an interview with them in order to induce them to adopt his improvement. He met one of the defendants and showed his original drawing, but without result. In April, 1870, he had another interview with them, and also with Davis, at their carpet-works in New York. He exhibited his original drawing and the drawings which he had prepared for England. Davis advised the defendants that Webster's plan was no improvement on the Weild loom. He was evidently anxious that they should adopt his improvement, for which he had already got a patent. Further interviews took place; but the defendants declined to adopt Webster's improvement, and adopted Davis's in part, so much of it, at least, as the sliding shuttle-box. It is clear from the facts that up to this time Davis did not pretend to be the inventor of Webster's arrangement. But in the spring of 1870 Davis commenced to make a new loom, which he did not get into complete operation until the latter part of 1871. This is called the "Sterling loom," and was made for the defendants. When completed it had in it the improvement claimed by Webster and shown in his patent. At what time this particular form was adopted is not shown.

It is contended by the defendants that Davis had conceived the idea of using a rigid lathe with his wire-bar in the early part of 1868, and that in the model which he prepared at that time for obtaining his patent he exhibited the same latch devised by Webster, and operated in the same way by contact with the wire-box, and that he showed to the witness Crossley, by pinning his sliding shuttle-box fast to the lay, how it could be used with a rigid lay and shuttle-box. Then, why did he not claim the whole device when Webster exhibited it to him? Why did he advise the defendants that Webster's arrangement was no improvement on Weild's? But if it were true that he did show these things in his model, and had he shown a trough instead of parallel bars, and if it were true that he regarded the idea as anything more than a possibility, and that he did in fact contemplate it as a perfected and practicable arrangement so as to amount to invention, the question would still remain whether he or Webster was the first inventor. Both may have been original inventors, but only one of them could be the first. If Davis had put the invention into practical form and operation more than two years before Webster applied for his patent, then the patent would be void by reason of prior use. But the evidence is conclusive that he never undertook to put it into practical form until he made the Sterling loom, which was only commenced in 1870. Webster's application for his patent was made in June, 1870. Though this was proved without objection, and substantially conceded, the defendants say that it does not appear what the application was nor how much it was altered before the patent was issued. This argument cannot avail, for the application is a public record, the contents of which the defendants and all others are presumed to know; and since they had it in their power to produce it and did not, it must be presumed that it would not have served their purpose, but corresponded with the patent. The defense of prior use for two years, therefore, is not sustained, and the question comes back to simple priority of invention. Conceding that Davis was an original inventor, the earliest point of time that he can be regarded as such was in the spring of 1868. But Webster had invented it before that time, and had made a drawing of it, which, in March, 1868, he exhibited and explained to Davis. An invention relating to machinery may be exhibited either in a drawing or in a model, so as to lay the foundation of a claim to priority, if it be sufficiently plain to enable those skilled in the art to understand it. There is no doubt that Davis understood Webster's drawing, and he did not then claim that the invention belonged to himself. The evidence relating to loom No. 50 leads in the same direction. This was a loom of the defendants which they commenced to alter in the latter part of 1870. Davis was not employed to make the alterations on this loom. According to Webster's testimony, which must, of course, from his relation to the case be received with caution, but which

seems to be corroborated by subsequent circumstances, Davis informed Webster, at the latter's house, on Christmas day, 1870, that loom No. 50 had been taken down to be changed to what they had seen and explained to them in the office, referring to Webster's previous explanation of his drawings, and that he, Davis, had told Higgins that if he took that loom down and changed it to what they had seen Webster have and explained in the office, it would be a Webster wire motion. In April Webster called, as he says, at the defendants' store and saw N. D. Higgins, and they talked about this loom, and Webster claimed it as his invention, and told Higgins that he (Higgins) had seen the drawing of it at his house and mill. It is not seriously denied that this loom was made substantially on Webster's plan.

Another circumstance seems to us as having much weight in this connection. It was found that the loom No. 50 and the Sterling loom, when completed in 1871, worked with wonderful success, sometimes as many as sixty yards being woven on one loom in ten hours. If Davis was the inventor of the wire motion applied to these looms, why did he never apply for a patent for it? He was already a patentee of a different and inferior apparatus. He knew all about the method of going about to get a patent. He belonged to a profession which is generally alive to the advantages of a patent-right. On the hypothesis of his being the real inventor his conduct is inexplicable.

There is a great deal of evidence *pro* and *con* to which we have not adverted. It must suffice to say that we are satisfied from the examination we have given to it that Webster is entitled to the claim of being the first inventor.

The appellants' counsel has raised the question whether the defense of prior invention can be set up under the answer, which does not state it in the manner required by the statute. It denies, generally, it is true, that Webster was the original and first inventor of the improvement claimed in the patent, and specifies certain letters patent issued in this country and in England, in which it is alleged that the said invention or material and substantial parts thereof, was described before any invention made by Webster, which is sufficient foundation for adducing such patents in evidence; but it does not give the name and residence of any person alleged to have invented the thing patented prior to Webster. It only states that it was used by and known to Davis. It is possible that this objection to the evidence would have been available if it had been taken in season. But we are not referred to anything to show that it was taken in the court below or before the examiner when the witnesses were examined. In *Reemer* v. *Simon* (95 U. S., 220) we held that the failure to interpose such objection before the final hearing is a waiver of the required notice in an equity suit.

It remains to consider the question of infringement. The defendants deny that they infringe the fifth claim of the patent, which is relied on by the complainants. At the commencement of the cause, when a preliminary injunction was applied for, the defendants put in affidavits contesting the charge of infringement, but upon a very different ground from that on which the defense is now based. Then they relied on a non-user of the last element of the combination—the operation of the latch by contact with the wire-box—now they rely on a different construction of the third element (the reciprocating driving-slide) from that given to it by the complainants. They say that they do not use that element, construed as they construe it. The position originally taken is abandoned. Nevertheless, it will throw light on the subject to see what the defendants said on the occasion referred to. It will at least bring their present position to the test of a first judgment formed by themselves at a time when it was very much to their interest to find discrepancies between what they used and what the patent contained. Two affidavits were put in by the defendants at that time, one made by both the defendants jointly and one by their superintendent, Mr. Duckworth. A previous suit brought on Webster's patent against the New Brunswick Carpet Company, in which the defendants, or, at least, their machinist, Davis, had taken much interest, had just terminated in a decree sustaining the patent, rendered by Judge Nixon in the Circuit Court for the District of New Jersey. The defendants in their affidavit, dated June 24, 1874, say:

> That at the time defendants procured the looms referred to in the affidavits on the part of complainants in this suit, and used thereon tops of wire-boxes as cams to disengage the latches from shoulders on the heads of the wires, they did not know or suppose that Wm. Webster, or any one else, except themselves and E. K. Davis, had a patent covering any part or combination of parts contained in said looms. * * * The Sterling loom, the No. 50 loom, and the three other Bigelow looms mentioned in the affidavits on the part of the complainants were all procured and put in operation with the tops of the wire-boxes as cams to disengage the latches from the wire-heads a long time prior to the issuing of the Webster patent on which this suit is brought, and before defendants knew that said Webster had applied for said patent. The first that said defendants knew or supposed that there was anything in any of said looms covered by letters patent granted to said Webster was during the progress of this suit against the New Brunswick Carpet Co., referred to in said affidavits, and while the testimony was being taken therein, when they heard that a claim of that kind was being made, and on further inquiry were informed that said Webster would probably sustain his right to the combination mentioned in the fifth claim of his patent, on which said suit was pending, and that the use of the top of the wire-box as a cam to disengage the latch from the shoulders of the wire-heads was one of the elements or parts of that combination. After consulting counsel on the subject, they concluded that to avoid any question of doubt on that subject they would have all their looms which contained such tops to the wire-boxes altered by having such tops entirely removed and having other provision made for operating the wires. They accordingly had such alterations made, which were all completed by the middle of May, 1874, since which time they have not had any looms or used any looms employing the top of the wire-box as a cam to disengage a latch from a wire-head, or for opening a latch to disengage from a wire-head, or to support a latch away from or out of contact with the wire-heads in its journey from one end of the box to the other, or to permit a latch to descend and catch a wire-head in any way, or for any other purpose. That they have not since the time of said alterations used in any loom or looms the top of a wire-box to lift or support, or to in any way operate or participate in the operation of a latch, and that they do not expect to use any such top of a wire-box hereafter, but intend not to do so.

The fact that this mode of resisting the charge of infringement is now abandoned furnishes very fair presumptive evidence of two things: first, that the substituted device for operating the latch was a mere equivalent of the wire-box in that regard, and, secondly, that the construction of the fifth claim, on which they now take their stand, could not have been a very obvious one. That construction is that the third element in the combination of the fifth claim of Webster's patent, and which is there called the "reciprocating driving-slide," refers not to the slide which rides upon the trough or wire-bar and carries the latch, (which they do use,) but to the slide which rides upon the breast-beam and communicates the reciprocating motion to the other, (which they do not use.) It is undoubtedly true that in the body of the specification, where the patentee is describing the joint use of these slides, he does designate the slide on the breast-beam

as the "reciprocating or driving slide" and that on the trough as the "withdrawing and pushing slide." But it is apparent that both of these slides are in fact, reciprocating and driving slides. The one on the trough has a reciprocating motion and drives the wire into the lay. And when, as the patent points out, the other slide is not used—that is to say, when the slide on the trough is directly connected with the motive power or device which gives the reciprocating motion—it takes the place of both. The specification states this in so many words. It says:

> Fig. 4 represents a modification of the invention. The withdrawing and pushing slide B^1 in this case becomes the driving-slide.

Again:

> Fig. 7 represents a side view of the driving-slide B^1, its pin B^2, to which power is applied, and the withdrawing and transfer latch C and pusher C^1, attached to the slide.

These figures relate to that form of the invention in which the slide on the breast-beam is not used. Now, if we examine the language of the claim, it seems to us that all doubt as to its meaning is removed. It reads thus:

> In combination, the lay and its rigid shuttle-box, the pivoted wire-trough, the reciprocating driving-slide, and the latch moving thereon, the latter being operated by the wire-box, &c.

Obviously the reciprocating driving-slide here referred to is that slide on which the latch moves, and that is the slide which rides on the trough, and which is the only slide used in one modification of the invention. It can hardly be supposed that the patentee intended to make the other slide, which he showed could at any time be dispensed with, an indispensable element in his claim. It would have rendered the claim a practical nullity. The important thing was the slide which rides on the trough. The argument of the defendants' counsel on this subject is very ingenious and plausible; but we are forced to the conviction that the slide intended in the combination is that which is indispensable to the operation of the apparatus. And this must have been the conviction of the defendants themselves, as well as of their counsel, when they made the affidavit before referred to.

In conclusion, our judgment is that Webster invented the combination described in the fifth claim of the patent; that the invention is sufficiently described in the specification to meet the requirements of the law; that it was not anticipated by any prior patent or invention; that it was never in public use or on sale for more than two years before the patent was applied for, and that the defendants have infringed it.

The decree of the circuit court must be reversed and the cause remanded, with instructions to enter a decree in favor of the complainants, and to take such further proceedings as law and justice may require.

Supreme Court of the United States.

BANTZ *v.* FRANTZ *et al.*

Decided March 20, 1882.

REISSUE—NEW MATTER—DELAY—ABANDONMENT.

If the specification of the original patent was defective or insufficient in claiming a combination of several devices instead of making distinct claim for every device which entered into the combination, the fact was instantly discernible, even by an unpracticed eye, as soon as the patent was read. The correction, if any was to be made under such circumstances, should have been applied for immediately. The right to the correction was lost by unreasonable delay of thirteen and a half years. (*Miller* v. *The Bridgeport Brass Company.*)

APPEAL from the Circuit Court of the United States for the District of Kentucky.

Mr. Arthur Stern for the appellant.

Mr. Wm. A. Maury and *Mr. L. N. Dembitz* for the appellees.

STATEMENT OF THE CASE.

On June 22, 1858, there was issued to Gideon Bantz, the appellant, who was complainant in the court below, an original patent of that date for an improvement in furnaces for heating steam-boilers. On February 6, 1872, Bantz obtained a reissue, and on June 22, 1872, an extension for seven years of his reissued patent. The bill in this case was filed by him on May 4, 1876, to restrain infringement by the defendant, David Frantz, of the extended reissue. The answer denied the novelty and utility of the invention; denied infringement, and asserted the invalidity of the reissue. The circuit court dismissed the bill, and the case is brought here by the appeal of the complainant.

The specification of the original patent declared—

> The object of this invention is the more perfect combustion of tan, sawdust, bagasse, and all other kinds of refuse fuel in a wet or dry state, as well as of wood or coal. It is, however, with particular advantage to the burning of wet fuels.
>
> My invention consists in the arrangement embracing, for united use in the manner and for the purposes hereinafter specified, the following features, to wit: First, two or more arched fire-chambers with throats of less area than their capacity; second, an auxiliary combustion reservoir or chamber with *cima-reverso*-shaped bottoms and side draft-door; third, a series of reverberatory chambers with side draft doors and passages at top for communication with each other; and, fourth, a diving or direct flue leading into the chimney or smoke-stack.
>
> To enable others skilled in the art to make and use my invention, I will proceed to describe its construction and operation.
>
> A A are two arched fire-chambers, arranged side by side, furnished with grates *a a*, having ash-pit B B provided below the said grates. These fire-chambers are not placed below the boiler H, but directly in front thereof and longitudinally parallel therewith. They may, however, be placed at one side of the boiler or at any angle to it. Each is provided with the usual door, *b*, but these are only used for lighting the fires; and the ash-pits are provided with doors *c* to regulate the supply of air through the grates and permit the cleaning out of ashes. On the top of each chamber there are feeders *d d*, for supplying the fuel; but as these feeders are the same as used in other furnaces no particular description of them is necessary. The fire-chambers are covered with a flat floor built over the arches that the fuel may be wheeled to the feeders in barrows or brought in any other convenient manner. At the rear end of each fire-chamber there is a throat-like aperture, *e*, communicating with what I term the "reservoir" C, which is built of brick, lined with fire-brick, under the front portion of the boiler, and which has a concave bottom, *m*, and convex back *n*, which are formed by a *cima-reverso*-shaped plate. By having the bottom and back of the reservoir formed by a *cima-reverso*-shaped plate the throat *e* is not partially closed up, as it would be if the plate were straight and set inclined; and, besides this, the heated products of combustion are made to hug the bottom of the boiler, and as the draft is at this point, the perfect combustion of partially-ignited gases is insured. The convex back of the reservoir terminates in and serves as a bridge-wall, and has a concave top, so formed as to leave a space, *o*, of but three or four inches between it and the boiler.
>
> The purpose of the reservoir will be presently explained. In rear of the bridge-wall *f* there is a series of reverberatory chambers, D D D, two, three, or more, one behind the other, the series extending nearly as far as the rear end of the boiler, and the said chambers being severally separated by bridge-walls *g g*, and each chamber being provided with one or more doors *h* in either or both sides, for the purpose of admitting air in sufficient quantities either to complete the combustion of the gases from the fire-chambers or to check the draft. The reservoir is furnished with a door, h^1, for a similar purpose as those *h h* in the reverberatory chamber. At the rear of the hindmost reverberatory chamber there is a wall, g^1, like *g g*, behind which there is a diving or drop flue, E, leading to the chimney.
>
> The operation of the furnace is as follows: The gaseous products of the combustion in the fire-chamber A A escape by the throats *e e* into the reservoir C, where they mingle together, and the combustible portion thereof becomes ignited, and where their heat acts upon the boiler, and from whence they pass into one after another of the reverberatory chambers, in each of which a portion of their heat is abstracted by contact with a portion of the boiler, and finally they descend the flue E to the chimney. The effect of the principal portion of my improvement, which consists in the employment of the reservoir C, connected with the fire-chambers by the throats *e e*, of much smaller transverse area than the fire-chamber, is that the products of combustion and heat are prevented leaving the fire-chamber too rapidly, and the said chambers are consequently caused to be heated to an intense degree, and a very nearly perfect combustion of the fuel is obtained therein,

and when the gaseous products of combustion leave the fire-chambers by the said throats and arrive in the reservoir C, the side walls and curved bottom and back of which are kept at a white heat, the still combustible portion of the gaseous products is ignited under the boiler.

The claim was thus stated:

What I claim as my invention, and desire to secure by letters patent, is—

The arrangement of fire-chambers A A, contracted throats *e e*, auxiliary combustion-reservoir C, with the *cima-reversa* bridge-plate *m n*, and the door A^1, reverberatory chambers D D, with doors A A, and the diving or direct flue E, substantially as and for the purposes set forth.

The description of the invention in the specification of the reissued patent is substantially the same as that in the specification of the original patent. The drawings are identical. In the reissue the invention is called "a new and useful improvement in furnaces for burning wet fuel."

The claim is thus set forth:

I do not claim a furnace for burning wet fuel broadly, nor the use of a series of fire-chambers connecting with the common flue arranged between the furnace and the boiler, as I am well aware that this has been done before.

Having described my invention, I claim—

1. In a furnace for burning wet fuels, having two or more single fire-chambers not arranged under the boiler, the combustion chamber or reservoir C, arranged above the top of said fire-chambers, and located directly under the front end of the boiler, essentially as described.

2. The *cima-reversa* bottom *m n* of the combustion chamber or reservoir C, in combination with the narrow throats *e* of the separate fire-chambers, and the narrow exit-flue *e* of the bridge-walls *f*, for the purpose essentially as described.

3. In combination with the combustion-chamber or reservoir C, arranged and located as described, I claim the side door or doors A^1, for the admission of atmospheric air, for the purpose described.

4. In combination with a series of fire-chambers A, and the combustion chamber or reservoir C, located and arranged directly beneath the front end of the boiler, and above the crown of said fire-chamber, I claim a series of reverberatory chambers, D, provided with side doors, A, and a diving-flue, E, at the rear end of the boiler to hold the heat beneath the same throughout its entire length and to arrest and deaden the sparks, as described.

5. In a furnace for burning wet fuels in which the fire-chambers are not arranged under the boiler, I claim the arrangement of the boiler upon the rear wall of the furnace and the rear wall of the diving-flue E, for the purpose of obtaining the full advantage of the heat of the walls of the furnace and of the diving-flue, as described.

6. In a furnace for burning wet fuels, having a flat top, and supplied through openings therein, I claim the dead-chambers, arranged between the floor and the arches of the fire-chambers, for the purpose of maintaining the top of the furnace cool for the workingmen, as described.

Mr. Justice WOODS delivered the opinion of the Court.

We are clearly of opinion that the reissued patent is void. It is evident, on a cursory reading of the specification and claim of the original patent, that it was meant to cover a combination of the several contrivances therein described, and not to cover the several parts of the former as distinct inventions. No claim is made for the several parts of which the former is constructed, but for the "arrangement embracing, for united use in the manner and for the purposes specified, the following features," &c. If the claim of the original patent had been for the several distinct contrivances of which the furnace is composed, as claimed in the reissued patent, it would not have been granted, because the evidence in the record shows that at least the sixth claim in the reissued patent, for dead-chambers over the arches of the fire-chambers, was distinctly covered by the patent of Moses Thompson, dated April 10, 1855, for an improvement in burning tan-bark, bagasse, sawdust, or other kinds of fuel in a wet state, for the purpose of creating heat to generate steam, &c. This the drawings accompanying the specifications of Thompson's patent clearly show. It is evident, therefore, that if the appellant had in his application for the original patent claimed as his own invention all the distinct devices described in the specification, he could not have obtained his patent in its present form. It could have been only on the ground that his claim was for a combination that it was allowed and the patent issued.

If the reissued patent is valid, the appellant could maintain an action against any person who infringed any one of the separate claims covered by it. Under the original patent suit could be maintained only against those who employed the combination embracing all the distinct contrivances described in the reissued patent. The reissue is, therefore, broader than the original patent, and is, under the circumstances of this case, void. The act of July 8, 1870, (16 Stats., 205,) was in force when the reissue was granted. That act (section 53, Rev. Stats., section 4916) declared that—

> Whenever any patent is inoperative or invalid by reason of a defective or insufficient specification or by reason of the patentee claiming as his own invention or discovery more than he had a right to claim as new, if the error has arisen by inadvertence, accident, or mistake, and without any fraudulent or deceptive intention, the Commissioner shall, on the surrender of such patent and the payment of the duty required by law, cause a new patent for the same invention, and in accordance with the corrected specification, to be issued to the patentee.

In this case the original patent bore date June 22, 1858. The reissue bore date February 6, 1872, more than thirteen years and six months after the date of the original patent and less than five months before its expiration. If the specification in the original patent was defective or insufficient in claiming a combination of several devices instead of making a distinct claim for every device which entered into the combination, the fact was instantly discernible, even to an unpracticed eye, as soon as the patent was read. Therefore, as said by Mr. Justice Bradley in delivering the opinion of this Court in a similar case, *Miller* v. *The Bridgeport Brass Company*, decided at the present term, if any correction was desired, it should have been applied for immediately. The right to have the correction made was abandoned and lost by unreasonable delay. The case referred to is apposite and is conclusive of this.

Judgment affirmed.

1. CONTINUOUS APPLICATION—PUBLIC USE.

Where a second application is filed for a certain part of an invention disclosed in a prior application the two applications will be regarded as a continuous proceeding, and public use of the invention, to defeat a patent granted upon such second application, must be shown to have occurred more than two years prior to the first application.

[*Graham v. McCormick *et. al.*, 1533.

2. AMENDMENT OF APPLICATION—NEW MATTER—SUPPLEMENTAL OATH.

Under Rule 47 an applicant may introduce into his application by amendment a part of the invention originally made which was not incorporated into the application either as a part of the specification or claim, if he swears that the matter which he desires to introduce into his application and make a part thereof was a part of his original invention.

[*Ex parte* McDougall, 1783.

3. SAME—SAME—DATE OF COMPLETION OF APPLICATION CHANGED.

Under this practice, however, the Examiner will enter the date of the new oath on the face of the file-wrapper and change the date of the completion of the filing of the application to agree therewith.

[Ibid.

ASSIGNMENTS.

(See Contracts, 1, 2; Date of Application, 1; Employés, 2, 3; Public Use, 5; Sale of Patent by Order of Court, 2, 3.)

1. EQUITY.

Between equal equities the law will prevail.

[*Wright, Jr., v. Randel *et al.*, 493.

2. Assignees—Superior Title.
Bona fide purchasers, for value, without notice, under an instrument of assignment which was duly recorded, whereby interests are assigned in an unpatented invention, and wherein the Commissioner is requested to issue the patent to such assignees, as was duly done, can convey a good title to such patent as against prior assignees of a prior patent which was issued to the same inventor, to whom such inventor at the same time assigned interests in new inventions which he had made, of which the invention above referred to was one, the prior instrument of assignment having been executed and recorded first, and the invention the nature of which was definitely referred to in such prior instrument having been made before any of such assignments.
[*Ibid.

3. Revised Statutes, Section 4898, Construed—Records.
Section 4898 of the Revised Statutes does not provide for the recording of assignments, grants, and conveyances of interests in patents not yet issued.
[*Ibid.

4. Revised Statutes, Section 4895, Construed—Constructive Notice—Records.
Section 4895 of the Revised Statutes makes no provision for the recording of an assignment of an unpatented invention on which the patent is not to be issued to the assignee; therefore its record is not constructive notice of its contents to one who subsequently deals with a party to it in respect to its subject-matter.
[*Ibid.

5. Assignments of Patents—Not Under Seal.
Assignments of patents are not required to be under seal. The statute simply provides that "every patent or any interest therein shall be assignable in law by an instrument in writing."
[*Gottfried v. Miller, 711.

6. Same—Same—Particular Contract.
An assignment therefor, purporting on its face to be the contract of the corporation therein named, declaring that the consideration has been received by the company, that it is executed in pursuance of a resolution passed by the company and purporting to be signed by Smith, president of the company, who declares that he signs it as the act of the company, is transfer of said company and not the personal deed of Smith.
[*Ibid.

ASSIGNMENT OF UNPATENTED INVENTIONS.

(See Assignments, 2, 3, 4.)

ATTACHMENT.

(See Motion for Attachment, 1; Title to Patent, 1.)

BAR TO A PATENT.

(See Priority of Invention, 4.)

BENEFITS.

(See Patents, 1.)

BILL IN EQUITY.

(See Injunction, 6; Practice in the Courts, 1; Sale of Patent by Order of Court, 1, 2.)

1. Bill in Equity for Naked Account of Profits Dismissed.
A bill in equity brought under law of 1870 after the expiration of the patent, and not asking therefore for an injunction or other equitable relief, but for a naked account of profits, and it not appearing from the allegations of the bill that there were any circumstances that would render an action at law for the recovery of damages an inadequate remedy for the wrongs complained of, was dismissed.
[*Root v. Lake Shore and Michigan Southern Railway Company, 1112.)

2. Bill in Equity Under Law of 1870.
A bill in equity therefore brought under the provisions of the law of 1870 must find support in the general doctrines of equity.
[*Ibid.

3. Account of Profits not a Ground of Equitable Relief Unless Remedy at Law Insufficient.
Bill in equity seeking only an account of profits cannot, therefore, generally speaking, be maintained, "nor can the Court retain the bill under an impression that a court of chancery is better adapted for the adjustment of the account for rents, profits, and improvements. The rule of the Court is that when a suit for the recovery of the possession can be properly brought in a court of equity and a decree is given that court will direct an account as an incident in the cause; but when a party has a right to a possession which he can enforce at law, his right to the rents and profits is also a legal right, and must be enforced in the same jurisdiction." (*Hipp* v. *Babin*, 91 Howard, 271.)
[*Ibid.

4. Application of Foregoing Rule to Infringement of Patent—Infringer not a Trustee *de son tort*.
A bill for the infringement of a patent is not saved from the application of this principle by the fact that the courts have adopted the rule in ascertaining the profits of the infringer that the infringer is to be treated as though he were a trustee for the patentee in respect to profits. The case is not within the principle according to which in certain circumstances a court of equity decrees a wrong-doer to be a trustee *de son tort*, and exerts its jurisdiction over him in that character. The principle only applies where the defendant has wrongfully intermeddled with property already impressed with a trust, and he will then be required as a trustee to account, for the reason that trust property may be followed wherever it can be traced, into whosesoever possession it comes, except that of a *bona fide* purchaser, without notice.
[*Ibid.

BURDEN OF PROOF.

(See Licenses, 2.)

CASES COMMENTED UPON.

(See Damages, 6; Designs, 4; Particular Patents: 7 Demartini and Chertizza, 8 Graham, 12 Green, 27 Spring; Reissues, 8, 11.)

CHANGE OF FORM.

(See Change of Structure; Change of Process; Construction of Specifications and Patents, 4, 6; Infringement, 3, 5.)

CHANGE OF MATERIAL.

(See Particular Patents, 20; Nimmo.)

CHANGE OF PROCESS.

(See Construction of Specifications and Patents, 1, 4, 5, 6.)

CHANGE OF STRUCTURE.

(See Combinations, 6; Infringement, 2; Injunction, 2; Invention, 1; Particular Patents: 2 Bussey, 15 Guidet, 16 Hart, 18 Lindsay, 27 Spring; Reissues 1, 13, 14.)

1. Buckle-Fasteners—Infringement—Colorable Changes—Mechanical Skill.
Attaching the buckle to a separate plate which is itself attached to the bottom plate of the case, instead of attaching the buckle directly to the bottom plate, does not change the nature of the invention. The plate which carries the buckle, being an additional separate plate, must be fastened in some way to the bottom plate of the case. The severance makes the reunion necessary and promotes no useful result. It is a mere mechanical change within the scope of the invention.
[*Loercher *et al.* v. Crandal, 863.

2. Same—Same.
The fact that the fastening-pins are integral with a longitudinal piece of metal on the other side of the fabric, instead of with the bottom plate of the case, does not alter the invention, the operation being substantially the same.
[*Ibid.

CIRCUIT COURTS.

(See Review of Former Decisions, 1.)

CLAIMS.

(See Construction of Claims; Construction of Specifications and Patents, 1, 2, 4, 5; Invention Described but not Claimed.)

COMBINATIONS.

(See Construction of Claims, 1, 2; Construction of Specifications and Patents, 1; Infringement, 3, 4, 5; Injunction, 2; Non-Patentability, 1; Particular Patents: 32 Webster; Reissues, 3, 13, 14, 23.)

1. Patentable Combination—Mechanical Juxtaposition.
In a patentable combination of old elements all the constituents must so enter into it as that each qualifies every other, and together form either a new machine of a distinct character and function or produce a result due to the joint and co-operating action of all the elements, and which is not the mere adding together of separate contributions. Otherwise it is only a mechanical juxtaposition and not a vital union.
[*Pickering *et al.* v. McCullough, Dalsell & Co., 73.

2. Combination—Aggregation.
There is a combination between two or more elements if there is a concert of action between them for a definite time to accomplish a result due to their conjoint action, even though the device may then be separated and perform other functions.
[*McKesson *et al.* v. Carndick, 137.

3. Combinations—Parts Disconnected and Inoperative do not Constitute Valid.
Parts wholly disconnected from each other and from the machine, and which are inoperative for any purpose as enumerated in the combination claimed, do not constitute a valid combination.
[*Edgarton *et al.* v. Furst & Bradley Manufacturing Company *et al.*, 261.

4. Combination—Aggregation.
It appearing that some of the elements of the combination claim formed a new combination of parts to secure a useful result, it became immaterial to inquire whether all the elements of the claim are strictly in combination and not merely aggregated.
[*Strobridge v. Landers *et al.*, 1027.

5. Letters Patent No. 197,528—Dropping an Element—Infringement.
When the defendant dispensed with one element of the combination claimed in the patent and substituted another whereby the same result is accomplished in a manner different from that described in the patent, *Held* that there was no infringement.
[*Schmidt v. Freese, 1876.

6. Invention—New Combinations of Old Devices.
A new combination of known devices producing a new and useful result (as that of greatly increasing the effectiveness of a machine) is evidence of invention, and may be the subject of a patent.
[*Webster Loom Company v. Higgins *et al.*, 2031.

COMMISSIONER OF PATENTS.

(See Reissues, 10, 11.)

COMMON USE.

(See Designs, 1, 2; Disclaimers, 1; Public Use.)

COMPARISON OF PATENTS.

(See Reissues, 5, 21.)

CONFLICTING APPLICATIONS.

(See Interferences, 2.)

CONSENT OF INVENTOR TO USE OF INVENTION.

(See Void Patents, 1.)

CONSTRUCTION OF CLAIMS.

(See Construction of Specifications and Patents, 1, 2, 4, 5, 7.)

1. Statement of Invention Distinguished from Claims.
Where in the specification an invention was stated to consist of four (4) elements in combination, and in the claims there are two combinations of less number of elements and no claim for the combination of all four elements, *Held* that the claims, if clear and distinct, must control.
[*McKesson *et al.* v. Caradick, 137.

2. Certain Combinations Void for Uncertainty.
A combination claim naming two independent sets of devices used for producing different operations or results, and containing the words "or either, in relation to each other" and to another part not affected by either of them, is void for uncertainty.
[*Edgarton *et al.* v. Furst & Bradley Manufacturing Company *et al.*, 261.

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

(See Change of Structure, 1, 2; Combinations, 1, 2, 4; Construction of Claims; Infringement, 1, 4, 5; Invention, 1; Joint Invention Necessary to Joint Patents; Non-Invention, 1; Particular Patents: 2 Bussey, 4 Curtis & Worden, 6 Demartini & Chertizza, 10 Gray, 14 Guidet, 18 Lindsay, 24 Schnessler, 30 Vinton, 31 Wallick, 32 Webster, 34–36 Wilson, 38 Worley & McCabe; Patents, 1; Priority of Invention, 4, 5, 6; Reissues, 3, 5, 7, 13, 14, 22; Specifications, 1.)

1. Improvement in Pill-Machines—Construction of Patent.
An improvement described as consisting in the employment, either in a combination with a molding device for shaping pills or other holder for them, of a comb-bar with pins or needles adapted for inserting a pin in each mold-cavity for taking the pills and dipping them in a coating solution, and a clamp and stripper for taking them from the needles and redipping them for filling and covering the cavities formed by the pins, claimed as "the combination of the molds A with the comb-bar B, substantially as and for the purpose specified," *Held* to cover any suitable holder of pills co-operating with a comb-bar, whether the pills are formed in it or in another mold.
[*McKesson *et al.* v. Carndick, 137.

2. Claims for Things Claimed or Described in Prior Patents.
A patentee cannot claim in a patent the same thing claimed by him in a prior patent, nor what he omitted to claim in a prior patent in which the invention was described, he not having reserved the right to claim it in a separate patent and not having seasonably applied therefor.
[*James v. Campbell *et al.*, 337.

3. Sales of Product of Patented Process—Evidence of Validity.
In all doubtful cases involving the validity of a patent the fact that the article made by the use of the process described in the patent has been extensively sold is a consideration of great weight with the court, but it is not enough *per se* to sustain the patent.
[*Wilson Packing Company *et al.* v. Chicago Packing and Provision Company, 411.

4. Process Claim—Change of Machinery—Omission of Steps.
The position that the process claim of the patent in question covers all methods of making waxed paper by machinery, whether by complainant's method or by a new mode devised by themselves, and which dispenses with some of the steps used by the plaintiff in his particular mode, cannot be adopted.
[*Hammerschlag v. Garrett *et al.*, 1199.

5. Same—Infringement.
Construing the claim in question as for a process, every successive step enumerated must be regarded as an essential part, and must be employed by defendants to render them liable for infringement.
[*Ibid.

6. Mere Change—Aggregation.
All the other parts of a process of preserving meats remaining unchanged, a mere change in the mode of cooking the meat from broiling, roasting, or steaming to boiling cannot be called invention and entitle the party who suggests the change to a patent for the process. It is a mere aggregation of old elements, bringing out no new product nor any old product in a cheaper or otherwise more advantageous way.
[*The Wilson Packing Company *et al.* v. Hunter *et al.*, 1689.

7. Evidence May be Admitted in Court to Explain Terms.
Evidence is admissible to show the meaning of terms used in a patent, as well as the state of the art, for the purpose of enabling the court or jury to understand it.
[*Webster Loom Company v. Higgins *et al.*, 2031.

8. Parts of the Invention—How to be Read.
If an improvement of a well-known appendage to a machine is fully described in a specification, it is not necessary to show the ordinary modes of attaching the appendage to the machine. The patent is to be read as if the machine and its appendage were present or in the mind of the reader, and he a person skilled in the art.
[*Ibid.

CONSTRUCTION OF STATUTES.

(See Abandoned Applications, 1; Assignment, 3, 4; Bill in Equity, 2; Damages, 2; Designs, 1; Oath with Regard to Foreign Patents, 1; Public Use, 6; Reissues, 4, 9, 21.)

1. Law of 1870 (Sections 55, 59, and 61) does not Abolish Distinction Between Law and Equity in Patent Cases.
The language of the act of July 8, 1870, (sections 55, 59, and 61,) similar in that respect to the provisions of the acts of 1819 and 1836, conferring jurisdiction in patent cases in equity as well as in law, was not meant to obliterate the distinction between these two jurisdictions or even to confuse the boundaries between them. Indeed, it is the well-settled doctrine of this Court that this distinction of jurisdiction between law and equity is constitutional to the extent to which the seventh amendment forbids any infringement of the trial by jury as fixed by the common law, and the doctrine applies in patent cases as well as others.
[*Root v. Lake Shore and Michigan Southern Railway Company, 1112.

2. Section 61 Provides Appropriate Modes in Equity Pleadings for Trial of Questions Arising Out of the Right Conferred by Section 55 to Recover Damages.
The plain and obvious purpose of the provision of the sixty-first section of the said statute that "the like defenses may be pleaded in any suit in equity for relief against any alleged infringement, and proofs of the same may be given upon like notice in the answer of the defendant and with the like effect," is to furnish appropriate modes in equity pleading for the trial of all issues both of fact and law relating both to the alleged infringement and the validity of the patent without the necessity of framing special issues out of chancery for trial by jury or sending the parties to a court of law for the trial of an action in that forum in order to determine their legal right.
[*Ibid.

CONSTRUCTION OF RULES.

(See Applications, 2; Interferences, 1, 2, 3; Oath with Regard to Foreign Patents, 1, 2.)

CONTEMPT OF COURT.

(See Motion for Attachment, 1.)

CONTINUOUS APPLICATION.

(See Applications, 1.)

CONTRACTS.

(See Employés, 2, 3.)

1. Contracts of Corporations—Corporate Seal.
A corporation may bind itself by a contract not under its corporate seal when the law does not require the contract to be evidenced by a sealed instrument.
[*Gottfried v. Miller, 711.

2. Same—Agents.
Such contracts may be executed by an agent, and the rule is that the agent should in the body of the contract name the corporation as the contracting body, and sign as its agent or officer.
[*Ibid.

3. Release in præsenti—Subsequent Infringement.
When an infringer, by agreement with the owners of a patent, agrees not to make any articles infringing a certain reissued patent, and that engagement, in conjunction with his contract to pay royalty for certain infringing articles before made, formed the consideration for his release from liability for the making and selling of those articles, it appearing that the release was an absolute release *in præsenti*, *Held* that such release, until set aside, relieves from all accountability for subsequent infringement by the making and selling of articles like those specified in the release.
[*Loercher *et al.* v. Crandal, 863.

CONVEYANCE.

(See Assignments; Employés; Extended Term of Patent, 1; License.)

CORPORATIONS.

(See Assignments, 6; Contracts, 1, 2; Title to Patent, 1.)

COSTS OF SUIT.

Settling Costs.
The decree will not be reviewed on appeal for the mere purpose of settling the costs.
[*The Union Paper Bag Machine Company *et al.* v. Nixon *et al.*, 1275.

COURT OF CLAIMS.

(See Suit Against Government Officers.)

DAMAGES.

(See Bill in Equity, 1, 3, 4; Construction of Statutes, 1; Injunction, 6; Jurisdiction in Equity, 1; Suit Against Government Officers, 1; Use by the Government of the United States.)

1. Amount of Recovery.
When a part owner of a patent sues a co-owner for using an infringing device, the recovery, if any, will be in proportion to their respective interests.
[*Herring v. Gas Consumer's Association, 209.

2. Section 55 Gives Damages in Equity in Addition to Account where Court has Jurisdiction.
The whole force of the change in the law contained in the fifty-fifth section of the said statute, whereby the complainant is entitled to recover, in addition to the profits to be accounted for by the defendant, the damages the complainant has sustained thereby, consists in conferring upon courts of equity, in the exercise of their jurisdiction in administering relief which they are accustomed and authorized to give, the power, not merely to give that compensation for the past which consists in the profits of the infringer, but to supplement it when necessary with the full amount of damage suffered by the complainant. In other words, the power to award damages and to multiply them is added as an incident to the right to an account.
[*Root v. Lake Shore and Michigan Southern Railway Company, 1112.

3. Ascertainment of Damages.
In cases of wilful infringement respondents ought to be held to the most rigid accountability, and no intendment ought to be made in their favor founded upon the alleged inconclusiveness of the complainant's proof of loss. Such proof ought to be interpreted most liberally in favor of complainants within the limit of an approximately accurate ascertainment of their damages.
[*The Bigelow Carpet Company v. Dobson. Same v. Same. The Hartford Carpet Company v. Same, 1200.

4. Same.
Where in a suit for infringement of a patent for a carpet design the evidence showed the quantity of complainants' carpet sold during the season of its first introduction, its cost, the profit upon it, the quantity of the infringing carpet sold by respondents during the following season, and that there was a decline in complainants' sales, the measure of damages is the profits which would have accrued to complainants upon the quantity of carpets sold by respondents. This latter quantity must under the circumstances be presumed to have displaced an equal quantity of complainants' carpets.
[*Ibid.

5. Measure of Damages.
Where there is a limited and local demand for a patented device which is the only one salable for a particular purpose, and the patentees consequently have control of the market, the measure of damages for infringement is all the profits made by the infringers upon their entire sales.
[*The Goulds Manufacturing Company v. Cowing *et al.*, 1277.

6. Estimating Profits.
In estimating profits the use of tools, machinery, power, and other facilities employed in the manufacture should be taken into account, as well as material, labor, wastage, and expenses of marketing. *Mowry* v. *Whitney* (14 Wall., 620) commented on and approved.
[*Ibid.

DAMAGES AND PROFITS.

(See Damages.)

DATE OF APPLICATION.

Date of Application, in Absence of Proof, Date of Patent.
In the absence of all other proof the date of the patent will be taken as the date of application and the date of assignment.
[*Worley *et al.* v. The Loker Tobacco Company *et al.*, 559.

DATE OF ASSIGNMENT.

(See Date of Application, 1.)

DATE OF FILING APPLICATION.

(See Application, 3; Renewed Applications, 3.)

DEBTS OF PATENTEES.

(See Sale of Patent by Order of Court, 2.)

DECLARATION TO THE PUBLIC.

(See Reissues, 12.)

DECISION OF THE COMMISSIONER CONCLUSIVE.

(See Reissues, 10.)

DECREE.

DEFECTIVE CLAIMS.

(See Construction of Claims, 2.)

DEFECTIVE SPECIFICATIONS.

(See Defenses; Reissues, 3, 6, 10, 16, 17, 18, 19.)

DEFENSES.

(See Injunction, 3; License, 2; Priority of Invention, 6; Public Use, 7; Renewed Applications, 1.)

1. Legal Title—Equitable Interest not Examined Collaterally.
The legal title to the patent being in the plaintiff, it constitutes no defense to the action to make a showing of equitable interests in other parties.
[*Graham v. McCormick *et al.*, 1533.

2. Want of Allegation in Answer—Affirmative Defenses.
When the answer alleges knowledge by certain persons of a certain place, but not knowledge at that or any other place, proof cannot be received that such knowledge was at that place. Affirmative defenses, and especially this defense as provided and regulated by the statute, must be alleged as well as proved.
[*Sears v. Bouton *et al.*, 1784.

3. Defense of Insufficient Description.
Query, whether the defense of insufficient description can be set up without alleging an intent to deceive the public?
[*Webster Loom Company v. Higgins *et al.*, 2031.

DELAY.

(See Laches.)

DEMURRER.

1. Pleadings—Cannot Demur and Answer to Whole Bill.
By Rule 32 in equity a defendant may demur to the whole bill, and may demur to a part of the bill and answer as to the residue; but there is nothing that allows him to demur to the whole bill and at the same time to answer the whole bill, especially where the answer sets up everything that is in the demurrer. Putting in such an answer is a waiver of such demurrer.
[*Adams *et al.* v. Howard *et al.*, 264.

2. Circumstances Excuse Failure to Go Ahead.
Failure on part of complainant to set down demurrer for argument or to take testimony within three months after filing replication not ground for dismissing bill if sufficiently explained.
[*Ibid.

DESCRIPTION.

(See Construction of Specifications and Patents, 8; Defenses, 3; Reissues, 10, 16, 17, 18, 19; Specifications, 1.)

DESIGNS.

(See Infringement, 6.)

1. Design Patent No. 7,914—Pearl Buttons Arranged by Dozens, on Cards, in Three Rows of Four—Revised Statutes, Section 4929.
A design for a card of buttons divided into spaces covered with foil by narrow bands, with a dozen of pearl buttons in rows of three by four to each space, is not a "new, useful, and original shape or configuration of an article of manufacture" within the meaning of section 4929 of the Revised Statutes, relating to the granting of patents.
[*Pratt *et al.* v. Rosenfeld *et al.*, 886.

2. Same—Same—Invention.
Cards for buttons, faced with foil and divided into spaces by bands, were well known and in common use prior to such design, and there was therefore nothing in this arrangement rising to the level of inventive skill.
[*Ibid.

3. Designs—Previous Mechanical Patents Showing.
A previous mechanical patent is of itself no bar to the grant of a patent to the patentee therein for a design shown in such patent.
[*Ex parte* Palmer, 1111.

4. Same—Same.
Former decisions commented on and disapproved.
[Ibid.

5. Same—Novelty—Comparative Superiority.
It is immaterial to the patentability of a design whether it is more graceful or more beautiful than older designs. It is sufficient if it is new and useful. The patent is *prima facie* evidence of both novelty and utility, and neither of these presumptions has been rebutted by the evidence.
[*Lehnbeuter *et al.* v. Holthaus *et al.*, 1783.

DIFFERENT INVENTIONS.

(See Reissues, 8, 16, 19, 20.)

DILIGENCE.

(See Reissues 2, 3, 15, 23.)

DISCLAIMERS.

(See Construction of Specifications and Patents, 2.)

Disclaimer—Admission of Common Use Amounts to.
The statement in an original specification that certain described parts or combinations of parts "are in quite common use" amounts to a disclaimer, and is a statement of fact which prevents the reclaiming of such parts by a reissue.
[*Edgarton *et al.* v. Furst & Bradley Manufacturing Company *et al.*, 261.

DOUBLE USE.

(See Non-Invention, 1.)

DRAWINGS.

(See Priority of Invention, 5; Reissues, 9, 17, 22.)

DURATION OF A PATENT.

(See Oath with Regard to Foreign Patents.)

EMPLOYÉS.

(See Void Patents, 2.)

1. Invention by Employé—Rights of.
Persons are not deprived of the right to their inventions while in the service of others, unless they have been hired and paid to exercise their inventive faculties for their employers.
[*Hapgood *et al.* v. Hewitt, 1786.

2. Same—Employer no Right to Patent.
A contract by which one person agrees to pay a sum of money for the time, labor, and skill of another for a given period gives the employer no right to an assignment of a patent that is issued to his employé for an invention made during the period of his employment.
[*Ibid.

3. Same—License.
If under such a contract of employment the employer has any right to the invention, it is a mere naked license to make and sell the patented improvement as a part of its business. This right, being a mere personal one, is not transferable, and is extinguished with the dissolution of the corporation which exercised it.
[*Ibid.

ENLARGEMENT OF CLAIMS.

(See Reissues, 2, 3, 4, 6, 13, 14, 15, 16, 17, 19, 20.)

ENTRIES ON FILE-WRAPPER.

(See Applications, 3.)

EQUITY.

(See Assignments, 1; Bill in Equity; Construction of Statutes, 12; Damages, 2; Jurisdiction in Equity, 1.)

EQUIVALENTS.

(See Infringements, 2, 3, 5.)

ERROR OF JUDGMENT.

(See Reissues, 4.)

ESCROW.

(See Licenses, 2.)

ESTOPPEL.

(See Reissues, 9, 12.)

ESTOPPEL.

A wife cognizant of the fact that the husband has applied for and obtained a patent, and a party to the sale thereof, so far concedes or admits him to be the original inventor as to be estopped from obtaining a patent to herself for the same invention.

[*National Feather Duster Company v. Hibbard, 635.

EVIDENCE.

(See Witnesses.)

INFRINGEMENT—SINGLE WITNESS NOT REBUTTED SUFFICIENT.

The testimony of a single witness that defendant used machines substantially like complainants' not rebutted. *Held* to be sufficient proof of infringement upon authority. (*Bennett* v. *Fowler*, 8 Wall., 445.)

[*Spring *et al.* v. The Domestic Sewing Machine Company, 633.

EVIDENCE OF VALIDITY OF A PATENT.

(See Construction of Specifications and Patents, 3.)

EXAMINERS.

(See Application, 3.)

EX PARTE QUESTIONS.

(See Priority of Invention, 1.)

EXPERIMENTAL USE.

(See Public Use, 6.)

EXTENDED TERM OF PATENT.

1. OWNER OF PATENTED MACHINE—EXTENDED TERM.

The right of an owner of a patented machine, without any conditions attached to his ownership, to continue the use of his machine during an extended term of the patent is well settled, and power to sell the machine and transfer the accompanying right of use is an incident of this unrestricted ownership.

[*The Union Paper Bag Machine Company *et al.* v. Nixon *et al.*, 1275.

2. SAME—SAME—LICENSE.

Whatever may be the effect of an exclusive license within a district upon the right of an owner of a patented machine before the end of the original term of the patent, as that license ceases when the term expires, it follows that during the extended term no question can arise under the license.

[*Ibid.

3. OWNERS' EXTENDED TERM—LICENSES.

The owners of an extended term of a patent take their title subject to rights of the unrestricted owners of patented machines, and their licensees take their interests, subject to the same rights.

[*Ibid.

(See Construction of Specifications and Patents, 1; Infringment, 2.)

INFRINGEMENT.

(See Bill in Equity, 1, 3, 4; Change of Structure, 1, 2; Construction of Specifications and Patents, 4, 5; Construction of Statutes, 2; Contracts, 3; Damages, 3, 4, 5, 6; Defenses, 1; Evidence, 1; Injunction, 6; Particular Patents: 2 Bussey, 16 Hart, 17 Hubbard, 26 Searl.)

1. INFRINGEMENT OF PATENT BY JOINT OWNER.

A part owner of a patent has no right to use an infringing device. If he does, he is liable to his co-owner for the wrong done.

[*Herring v. Gas Consumers' Association, 203.

2. LIABILITY OF MERE IMPROVERS.

Features of construction may well be and are often equivalents of prior patented features because involving their construction and mode of operation, though going further and containing their own patentable features; and for that very reason, when the question of the novelty and patentability of such further features comes up, the prior existence of such prior patented features does not make them the equivalents of the further features so subsequently patented in such sense as to anticipate the latter, but such subsequent patentee will be held liable for infringement so far as he uses the prior invention.

[*Loercher *et al.* v. Crandal, 863.

3. COMBINATION—SUBSTITUTING NEW ELEMENT.

Defendant having dispensed with one of the essential elements of the combination, and having substituted therefor a new mode of accomplishing the same object, not a mechanical equivalent, and not similar in principle of operation, there is no infringement.

[*The American Ballast Log Company of New York v. Barnes *et al.*, 1029.

4. STATE OF THE ART.

When, in view of the state of the art, the patentee's claim must be construed to be for the specific arrangement of devices invented by him, the defendants do not infringe unless their devices are in the same specific form.

[*Matthews *et al.* v. The Boston Machine Company *et al.*, 1349.

5. EQUIVALENTS.

The various parts of the defendant's machine exhibit mechanical parts equivalent to those in complainant's machine and produce the same result, and therefore infringe, notwithstanding the two machines in various particulars are unlike in form.

[*Graham v. The Geneva Lake Crawford Manufacturing Company, 1536.

(See Combinations, 6.)

6. DESIGN PATENT.

An immaterial variation of the design—such as a slight inclination backward, hardly perceptible to the eye, of the glass constituting the front of the elevated parts of a show-case—does not relieve from the charge of infringement.

[*Leinbeuter *et al.* v. Holthaus *et al.*, 1783.

INJUNCTION.

(See Jurisdiction, 1; Motion for Attachment, 1.)

1. MOTION FOR PRELIMINARY INJUNCTION—REASONABLE DOUBT.

Whenever upon a motion for preliminary injunction a fair and reasonable doubt exists upon the facts presented as to whether defendant has actually been guilty of an infringement, or when it does not satisfactorily appear that the complainant is the first and sole inventor of the improvements claimed, a preliminary injunction will be refused.

[*Crose v. Livermore, 139.

2. SAME—CHANGES IN THE COMBINATION.

Motion for preliminary injunction will also be refused if it appears that the alleged infringer uses less than all the elements of the combination and substitutes something for the part which he omits, unless the substitute is a mere mechanical equivalent.

[*Ibid.

3. SAME—PATENT—LONG POSSESSION—INFRINGEMENT.

While it is unquestionably true that, three things being proved—namely, a patent, long possession, and infringement—the party is entitled *prima facie* to an injunction, yet even where this is shown the question will be, in cases of opposing evidence, whether this right has been displaced by the respondent.

[*Ibid.

4. SUSPENSION OF INJUNCTION—AFFIDAVIT.

Motion for a further suspension of the issuance of an injunction denied for the insufficiency of the affidavit.

[*Macaulay v. The White Sewing Machine Company *et al.*, 204.

5. VIOLATION OF INJUNCTION.

It was a violation of the injunction granted against defendant in this case to sell machines at Cleveland, whether or not they were sent within the territorial jurisdiction of the court.

[*Macaulay v. The White Sewing Machine Company *et al.*, 496.

6. GROUNDS OF RELIEF OTHER THAN INJUNCTION—INADEQUACY OF REMEDY AT LAW—SPECIAL GROUNDS MUST BE ALLEGED AND PROVED.

Grounds of equitable relief may arise other than by way of injunction, as where the title of the complainant is equitable merely, or equitable interposition is necessary on account of the impediments which prevent a resort to remedies purely legal, and such an equity may arise out of and inhere in the nature of the account itself, springing from special and peculiar circumstances which disable the patentee from a recovery at law altogether, or render his remedy in a legal tribunal difficult, inadequate, and incomplete, and as such cases cannot be defined more exactly each must rest upon its own particular circumstances as furnishing a clear and satisfactory ground of exception from the general rule.

[*Root *v.* Lake Shore and Michigan Southern Railway Company, 1112.

INOPERATIVENESS OF AN INVENTION.

(See Reissues, 6, 10, 17.)

INSUFFICIENT DESCRIPTION.

(See Defenses, 3; Reissues, 10, 16, 17, 18, 19.)

INTERFERENCES.

1. INTERFERENCE NUNC PRO TUNC—RULE 93.

Where one of two conflicting applicants has inadvertently obtained a patent without notice to the other an interference may then be declared *nunc pro tunc* between the application and the patent, under authority of the first clause of Rule 93.

[*Ex parte* Marston, 633.

2. CONFLICTING APPLICATIONS—PATENT PREMATURELY ISSUED.

Conflicting applications under the law and the rules sustain a hostile relation each to the other, irrespective of their relative dates of filing, and the premature issue of a patent to one applicant is not conclusive either for or against the right of the other.

[Ibid.

3. MEANING OF "PATENT" IN RULE 93.

The second clause of Rule 93 has no application to such a case, the patent there referred to being one which was granted before the pending application was filed.

[Ibid.

INVALIDITY OF PATENTS.

(See Void Patents, 1.)

INVALID PATENTS.

(See Void Patents.)

INVENTION.

(See Combination, 7; Designs, 1, 2; Employés, 1; Inventor; Non-Invention; Particular Patents, 18 Lindsay.)

LETTERS PATENT NO. 134,404—WANT OF INFRINGEMENT.

When every other part of the invention described in Letters Patent No. 134,404 was shown to be old, doubted whether it can be called invention to have the ground in the spaces between the blocks more compactly rammed, so as to drive it below the under surface of the pavement into the earth foundation; but the evidence failing to show that the defendant used this feature of the invention the bill is dismissed.

[*Stow v. The City of Chicago, 790.

INVENTION BY EMPLOYÉS.

(See Employés, 1.)

INVENTION DESCRIBED BUT NOT CLAIMED.

(See Construction of Claims, 1; Construction of Specifications and Patents, 3; Reissues, 3.)

TWO PATENTS FOR PARTS OF SAME INVENTION.

Where a person has within the meaning of the patent law made an invention which he has described in specifications, including other matter of invention, for which last a patent has been issued, he should not be precluded for that reason alone from applying for and obtaining a patent for that which was not claimed in the first patent.

[*Graham v. McCormick *et al.*, 1533.

INVENTOR.

(See Employés, 1; Estoppel, 1; Joint Invention, 1.)

INVENTOR.

One who made a valuable suggestion to the conceiver of the idea of substituting in a feather duster feathers of the common domestic fowls in place of ostrich-feathers while he was engaged in a series of experiments with a view to discover some means whereby such feathers might be made pliable, did not thereby become the inventor of the duster.

[*National Feather Duster Company v. Hibbard, 635.

JOINDER OF INVENTIONS.

(See Joint Invention.)

JOINT INVENTION.

1. JOINT INVENTION DEFINED.

A mere suggestion, not acted upon by the person making it, but carried out and perfected by another, will not entitle the former to be considered a joint inventor. Nor is it necessary that exactly the same idea should have occurred to two persons at the same time, and that they should work out together the embodiment of this idea in a perfected machine to constitute them joint inventors. If an idea is suggested to one, and he even goes so far as to construct a machine embodying this idea, but it is not a completed and working machine, and another person takes hold of it, and by their joint labors, one suggesting one thing and the other another, a perfect machine is made, a joint patent may properly issue to them. If, upon the other hand, one person in-

vents a distinct part of a machine and another person invents another distinct and independent part of the same machine, then each should obtain a patent for his own invention.
[*Worden *et al. v.* Fisher *et al.*, 1957.

2. JOINT INVENTION NECESSARY TO JOINT PATENT.
If the facts show that a patent is the result of the mutual contributions of two persons, they should be treated as joint inventors and a joint patent should be taken out. Such patent stands for and must be supported by a joint invention; but the court would not be justified in annulling such patent without clear proof that the patentees are not joint inventors.
[*Ibid.

JOINT OWNERS.

(See Damages, 1; Infringement, 1.)

JOINT PATENT.

(See Joint Invention, 2.)

JUDGMENT.

(See Sale of Patent by Order of the Court, 1, 2.)

JURISDICTION.

(See Bill in Equity, 3, 4; Construction of Statutes, 1; Damages, 2; Injunction, 5, 6; Reissues, 5, 10, 11; Suit Against Government Officers.)

WANT OF JURISDICTION CURED BY APPEARANCE.
A party becomes amenable to the jurisdiction of the court by appearing in the suit.
[*Macaulay *v.* The White Sewing Machine Company *et al.*, 496.

JURISDICTION IN EQUITY.

(See Construction of Statutes, 1.)

JURISDICTION IN EQUITY—REMEDY AT LAW EXCLUSIVE.
It is the fundamental characteristic and limit of the jurisdiction in equity that it cannot give relief when there is a plain and adequate and complete remedy at law, and hence it has no original, independent, and inherent power to afford redress for breaches of contract or torts by awarding damages, for to do that was the very office of proceedings at law.
[*Root *v.* Lake Shore and Michigan Southern Railway Company, 1112.

LACHES.

(See Demurrer, 2; Priority of Invention, 1, 2, 3; Reissues, 2, 5, 12, 15, 23.)

LAW AND EQUITY.

(See Construction of Statutes, 1.)

LIABILITY.

(See Assignments, 6; Contracts, 1, 2, 3; Sale of Patent by Order of the Court.)

LICENSEES.

(See Extended Term of Patent, 3.)

LICENSES.

(See Employés, 3; Extended Term of Patent, 2, 3.)

1. SALE OF MACHINE—IMPLIED LICENSE.
Where Stromberg sold to Miller a machine and the right to use the same and Stromberg subsequently acquired an interest in the patent covering the machine, *Held* that such sale was a license to Miller to use the machine so far as Stromberg could grant a license.
[*Gottfried *v.* Miller, 711.

2. LICENSE ALLEGED TO HAVE BEEN DELIVERED AS AN ESCROW—BURDEN OF PROOF.
Where a license executed by the complainant is in the possession of the defendant and is produced by it on the trial, and on its face is absolute and without any limitation or condition, the burden of proof is upon the complainant to show that it was delivered as an escrow.
[Mellon *et al. v.* The Delaware, Lackawanna, and Western Railroad Company, 1616.

3. PERSONAL LICENSE NOT TRANSFERABLE.
A license "to manufacture" at a certain place is a personal license not transferable.
[*Searls *v.* Bouton *et al.*, 1784

LIMITATION OF UNITED STATES PATENTS BY A FOREIGN PATENT PREVIOUSLY OBTAINED.

MOTION FOR ATTACHMENT.

MOTION FOR ATTACHMENT—PROCESS—OMISSION OF STEP.
Motion for attachment for contempt dismissed, it appearing that defendants omitted in their method the first step in the plaintiff's process.
[*Hammerschlag *v.* Garrett *et al.*, 1190.

MOTIONS.

(See Injunction, 1.)

NEW CLAIMS.

(See Reissues, 9, 13.)

NEWLY-DISCOVERED EVIDENCE.

(See Review of Former Decisions, 1.)

NEW MATTER.

(See Applications, 2; Reissues, 1, 16, 17, 19, 21, 23.)

NON-INVENTION.

(See Construction of Specifications and Patents, 6; Invention, 1; Particular Patents: 14 Guidet, 34 Wilson.)

NON-INVENTION—DOUBLE USE.
In a process of reducing slag, the application for the first time to a cupola-furnace of the cinder-notch previously used in the blast-furnace to accomplish the same end is devoid of invention. When applied to a cupola-furnace, the cinder-notch performed the same function in the same way.
[*Vinton *et al. v.* Hamilton *et al.*, 557.

NON-PATENTABILITY.

(See Combinations, 3; Construction of Specifications and Patents, 2; Designs, 2; Particular Patents, 24 Wilson.)

IMPROVEMENT IN MOLDING CRUCIBLES—AGGREGATION OF OLD DEVICES—PATENTABLE NOVELTY.
The alleged invention covered by the Nimmo patent of an improvement in molding crucibles, which consists of combining an old mode of presenting the "ball" to and supporting it under the action of the forming tool and an old mode of shaping the inside of the crucible, *Held* to be a mere aggregation of old agencies and devoid of patentable novelty.
[*Pickering *et al. v.* McCullough, Dalzell & Co., 73.

NOVELTY.

(See Designs, 5; Non-Patentability, 1; Particular Patents, 24 Wilson.)

OATH.

(See Applications, 2; Oath with Regard to Foreign Patents, 1.)

OATH WITH REGARD TO FOREIGN PATENTS.

1. SECTION 4887 OF THE REVISED STATUTES CONSTRUED.
Under section 4887 of the Revised Statutes the Commissioner of Patents should limit the duration of patents issued by him to the term of foreign patents previously issued for same invention.
[Opinion of Secretary of the Interior, 1179.

2. RULE 39 OF PRACTICE IN THE UNITED STATES PATENT OFFICE.
To this end he may require of the applicant, under oath, all his knowledge upon the subject.
[Ibid.

OBJECTIONS.

ORIGINAL INVENTOR.

(See Estoppel, 1; Injunction, 1; Priority of Invention, 2, 3.)

OWNERSHIP.

(See Assignments; Employés; Extended Term of Patent, 1, 3; Infringement, 1; Parties to Suit; Title to Patent.)

PARTICULAR PATENTS.

(See Infringement, 5; Invention, 1.)

1. AMBROSE—LAMPS.
Letters Patent No. 3,036 granted to Joshua E. Ambrose, October 16, 1860, for an improvement in lamps, declared void by reason of enlargement of the scope of the original.
[*Edward Miller & Company *v.* The Bridgeport Brass Company, 201.

2. BUSSEY—COOKING-STOVES.
Letters Patent No. 189,001, granted to Essek Bussey, July 18, 1876, for an improvement in cooking-stoves, claiming, "in combination with a stove-oven, a hinged shelf fitted to fall outward and down automatically when the oven-door is opened and to be raised up by closing the oven-door, adapted to operate upon it for that purpose," construed, in light of the state of the art, to cover only the specific devices for raising and lowering the hinged shelf, and that as the defendant used a different device for that purpose there was no infringement.
[*Bridge, Beach & Co. *v.* The Excelsior Manufacturing Company *et al.*, 1955.

3. CAUHAPE—PILL-MACHINE.
Letters Patent No. 110,630, granted to Pierre Cauhape, January 3, 1871, for an improvement in pill-machines, construed and sustained.
[*McKesson *et al. v.* Carndick, 137.

4. CURTIS AND WORDEN—WHIP-HOLDER.
Reissue Letters Patent No. 8,581, granted to H. M. Curtis and A. Worden, February 18, 1878, for an improvement in whip-holders, is valid except as to the fourth claim.
[*Worden *et al. v.* Fisher *et al.*, 1957.

5. DAVIS—BOX-LOOPS.
The validity of Reissue Letters Patent No. 6,974, granted to Charles H. Davis, March 7, 1876, for an improvement in box-loops for carriage-tops, sustained, it appearing that it required ingenuity and invention to pass from the prior devices to the box-loop of the patentee.
[*Crandal *v.* Walters *et al.*, 945.

6. DEMARTINI AND CHERTIZZA—BALLAST-LOGS.
Letters Patent No. 126,938, granted May 21, 1872, to Demartini and Chertizza, for improvement in methods of ballasting vessels in port, is essentially a combination of two counterbalance-weights, and cannot be construed to cover all methods by which vessels may be kept in an upright position while in port, by means of contrivances fastened on the outside and floating in the water, but only such as are substantially identical with the device described in a patent in construction, form, and principle of operation.
[*The American Ballast Log Company of New York *v.* Barnes *et al.*, 1039.

7. SAME.
The conclusions of the Circuit Court for the Eastern District of New York and the Circuit Court for the District of Maryland, with respect to the patentability of the invention, adopted, and the validity of the patent sustained, notwithstanding certain testimony offered to show the prior use of the invention.
[*The American Ballast Log Company *v.* Cotter, 1030.

8. GRAHAM—HARVESTERS.
The rulings in *Graham* v. *McCormick* upon the validity of Letters Patent No. 74,342, granted to A. B. Graham, February 11, 1868, for an improvement in harvester, and title of plaintiff approved and adopted.
[*Graham *v.* The Geneva Lake Crawford Manufacturing Company, 1536.

9. SAME.
The Ball patent and the Zug machine examined and held not to anticipate the combination in controversy.
[*Graham *v.* McCormick *et al.*, 1533.

10. GRAY—HEAD-COVERING.
Letters Patent No. 219,462, granted to Robert Gray, September 9, 1879, for an improvement in head-covering, is held to cover (1) a layer of flock on a support of buckram or the like; (2) a support of buckram or the like next the flock, with a coating of adhesive substance on the buckram, on which the flock is strewn; (3) a canton-flannel or other similar lining on the face of the buckram, to which the flock is not applied, with the napped face of the canton-flannel exposed and not next to the buckram; and held not to be anticipated by prior hats lacking any one of these elements.
[*Bernard *et al. v.* Heimann *et al.*, 140.

11. GREEN—WELLS.
Reissue Letters Patent No. 4,372, granted to Nelson W. Green, May 9, 1871, for an improvement in Artesian well, sustained.
[*Green *v.* French, 1351.

12. PRIOR DECISIONS FOLLOWED.
In view of numerous decrees in other circuit courts sustaining the validity of the Green patent for driven wells, in only one of which appeal has been taken to the Supreme Court, the court declined to hear argument except as to new features of the particular case.
[*Ibid.

13. PRIOR INVENTION.
Evidence offered to show the existence of a driven well at Warsaw in the year 1859 discredited.
[*Ibid.

14. GUIDET—PAVEMENT.
Letters Patent No. 85,814, granted to Charles Guidet, January 12, 1869, for an improvement in stone pavements, declared invalid.
[*Guidet *v.* The City of Brooklyn, 1692.

15. SAME.
Where a firm bed and an open joint for foothold had been before obtained by using parallelopipeds with rough side surfaces in conjunction with a filling of sand it required no invention to secure the entire result by selecting stones with rougher side surfaces and dispensing with artificial means for keeping the stones apart. The change was only of degree and not patentable.
[*Ibid.

16. HART—NECKTIES.
The improvement in neckties set forth in Reissued Letters Patent No. 7,909, granted to Wm. H. Hart, October 9, 1877, which consists in securing a straight pin to the shield by means of metallic fastenings—i. e., metallic rivets either separate from or struck out from the body of the pin, which pass through the shield and are clinched or headed on the opposite side—is not infringed by a mode of securing pins to the shield, which dispenses with separate fastenings, and which consists in forming two bends in the length of the pin, so that by passing through suitable holes in the shield the pin may fasten itself.
[*Hart *v.* Thayer, 791.

17. HIBBARD—FEATHER DUSTERS.
Letters Patent No. 177,933, dated May 30, 1876, and issued to Susan M. Hibbard, for an improvement in feather dusters, *Held* to interfere with Letters Patent No. 154,985 and set aside.
[*National Feather Duster Company *v.* Hibbard, 635.

18. LINDSAY—SLEEVE-SUPPORTER.
The invention described in Letters Patent No. 202,735, granted to J. P. Lindsay, April 23, 1878 for an improvement in sleeve-supporters, which consists of two of the clasps described in No. 156,429, one being at each end of a connecting web or strap, is not merely a duplication of the clasp or a new application thereof. As a structure the two clasps with the uniting-strap will do what one clasp, or one clasp with an attached webbing, cannot do, and involved invention beyond what the clasp alone indicated.
[*Lindsay *v.* Stein, 1613.

19. MILLER AND WORLEY—TOBACCO.
Reissue Letters Patent No. 8,060, granted to Anton Miller and Christian Worley, January 29, 1878, for a process of marking plug-tobacco with an ineffaceable identifying-impression by one and the same pressure by means of compress-plates with draws in relief, *Held* to be anticipated by the invention of Ed. F. Smith.
[*Miller *et al. v.* Force *et al.*, 947.

20. NIMMO—MOLDING CRUCIBLES.
Reissue Letters Patent No. 6,166, granted to George Nimmo, December 8, 1874, for an improvement in molding-crucibles, declared invalid for want of novelty.
[*Pickering *et al. v.* McCullough, Dalzell & Co., 73.

21. SAME—ANTICIPATED BY PATENTS OF WISE AND SMITH—CHANGE OF MATERIAL—MECHANICAL SKILL.
The alleged invention of Nimmo is also anticipated by prior patents to Wise and to Smith, embodying the principle of a former used in combination with a mold connected so that the former can be withdrawn in cases of vessels having a bilge without injury, although the machines described in said patents are mere paper-machines, it appearing that the machines could be made practically successful by mere mechanical skill without the exercise of the faculty of invention.
[*Ibid.

22. NORTON—STAMP-CANCELING DEVICE.
Marcus P. Norton's Reissue Letters Patent, dated October 4, 1870, No. 4,143, for an improved post-office stamp for printing the postmark and canceling the postage-stamp at one blow, *Held* to be void by reason of not being for the same invention specified in the original.
[*James *v.* Campbell *et al.*, 337.

23. RICE—STEAM-BOILERS.
The invention in Reissue Letters Patent No. 6,422, granted to Harvey W. Rice, May 4, 1875, for an improvement in steam-boilers, is anticipated in Morey's patent, which, in covering the combination of the feeding-tube with any kind of thrashing engine or boiler, necessarily includes the combination of the feeding-tube with the return-flue boiler. This particular application of the feeding-tube to the return flue boiler is within the scope and provision of Morey's invention, whether it had been tested by his experience or was anticipated by his foresight or not.
[*Heald *v.* Rice, 1443.

24. SCHUESSLER—BUCKLE-FASTENINGS.
Reissue Letters No. 7,129, granted to Charles Schuessler, May 23, 1876, for an improvement in buckle-fastenings, held not to be open to objection as to their validity so far as any question affecting the defendant's structures is concerned.
[*Loercher *et al. v.* Crandal, 863.

25. SCOTT—WHIP-SOCKETS.
Reissue Letters Patent No. 5,400, granted to Erastus W. Scott, May 6, 1873, for an improvement in whip-sockets, are valid, and are infringed by the device described in Letters Patent No. 8,581, reissued to Henry M. Curtis and Alva Worden, for an improvement in whip-holders.
[*Searls *v.* Worden *et al.*, 1955.

26. SEARLS—WHIP-SOCKETS.
Reissued Letters Patent No. 9,297, granted to Anson Searls, July 13, 1880, for an improvement in whip-sockets, construed and sustained.
[*Searls *v.* Bonton *et al.*, 1784.

27. SPRING-LATHES FOR TURNING IRREGULAR FORMS.
The validity of Letters Patent No. 23,957, granted to Charles and Andrew Spring May 10, 1859, for an improvement in lathes for turning irregular forms not anticipated by the Pernot machine, the evidence showing that the devices for modifying the movement of the cutting-tool were added to the machine after the invention of the Springs, or that these devices, if originally present in the machine, accomplished their work so imperfectly that the inventor laid no stress upon them, and their existence was so fitful and uncertain that they must be put in the category of abandoned experiments. (*Spring* v. *Packard*, 7 O. G., 341.)
[*Spring *et al. v.* The Domestic Sewing Machine Company, 633.

28. STOW—PAVEMENT.
Reissue Letters Patent No. 3,274, granted to Henry M. Stow January 19, 1869, for an improvement in pavement: *Held* to be anticipated by the patent of Stead, which does not in terms say that the purpose of driving the wedge-shaped block or pile through the space left by the octagonal blocks is to pack the earth or sand foundation, it appearing that such a result must follow from the construction described.
[*Stow *v.* The City of Chicago, 790.

29. STROBRIDGE—COFFEE-MILL.
Reissue Letters Patent No. 7,583, granted to T. Strobridge, March 27, 1877, for an improvement in coffee-mills, sustained.
[*Strobridge *v.* Landers *et al.*, 1027.

30. VINTON—MANUFACTURE OF IRON FROM FURNACE-SLAG.
Letters Patent No. 143,600, granted October 14, 1873, to John J. Vinton, for an improvement in the manufacture of iron from furnace-slag, *Held* to be invalid in view of facts developed by the testimony as to knowledge and use of the invention therein claimed by others prior to the invention or discovery of the patentee.
[*Vinton *et al. v.* Hamilton *et al.*, 557.

31. WALLICK—APPARATUS FOR ENAMELING MOLDINGS.
Letters Patent No. 163,825, granted to W. Wallick, May 25, 1875, for an improvement in apparatus for enameling moldings, sustained.
[*Wallick *v.* Cantrell *et al.*, 1878.

32. WEBSTER—LOOM.
Letters Patent No. 130,961, granted to William Webster, August 27, 1872, for an improvement in looms for weaving pile fabrics, which consisted in such a new combination of known devices as to give to a loom the capacity of weaving fifty yards of carpet a day, when before it could only weave forty, *Held* to be patentable, and his patent for the same, dated August 27, 1872, sustained.
[*The Webster Loom Company *v.* Higgins *et al.*, 2031.

33. WHITCOMB—HAY-RAKE.
Reissue Letters Patent No. 2,994, granted to George Whitcomb, October 5, 1872, for an improvement in hay-rakes, declared void, because the improvement claimed had been in public use for more than two years prior to the original application for a patent.
[*Edgarton *et al. v.* The Furst & Bradley Manufacturing Company *et al.*, 261.

34. WILSON—PACKING COOKED MEATS.
Reissued Letters Patent No. 6,370, granted to William J. Wilson, April 6, 1875, for improvements in processes of preserving and packing cooked meats as limited by the two disclaimers filed October 26, 1880, construed and held to be void for want of novelty and invention.
[*Wilson Packing Company *et al. v.* Chicago Packing and Provision Company *et al.*, 1669.

35. SAME.
Reissued Letters Patent No. 6,370, dated April 6, 1875, and issued to William J. Wilson, for a new and useful improvement in the process for preserving and packing cooked meats for transportation, consisting in thoroughly cooking the meat by boiling it in water, removing the bone and gristle, then placing it while yet warm with cooking into a box or case, and pressing it by some suitable apparatus with sufficient force to remove the air and all superfluous moisture and make the meat form a solid cake, and finally closing the box or case air-tight upon the meat, are void for want of novelty.
[*Wilson Packing Company *et al. v.* Chicago Packing and Provision Company, 411.

36. WILSON—SHEET-METAL CASES.
Reissued Letters Patent No. 7,923, granted to William J. Wilson, October 23, 1877, for an improvement in sheet-metal cases, held to be void for want of novelty.
[*The Wilson Packing Company *et al. v.* The Chicago Packing and Provision Company *et al.*, 1669.

37. SAME.
Claim 1 of Reissue No. 7,923, dated October 23, 1877, and issued to John A. Wilson, for an improvement in metallic cases for containing cooked meats, which is for a can for packing food hermetically sealed, and constructed of pyramidal form, with rounded corners and offset ends to support the heads, and claim 3, which is a claim, as an improved article of manufacture, of solid meat compressed and secured within a pyramidal case or can, so that said can forms a mold for the meat and permits its discharge as a solid cake, are also void for want of novelty.
[*Wilson Packing Company *et al. v.* Chicago Packing and Provision Company, 411.

38. WORLEY AND MCCABE—TOBACCO.
Letters patent No. 185,119, granted to Christian Worley and Henry McCabe, August 22, 1876, for an improvement in the mode of finishing plug-tobacco, applied for on same date, *Held* to be invalid the evidence showing that the invention had been in open and public use for more than two years prior to the filing of the application.
[*Worley *et al. v.* The Loker Tobacco Company *et al.*, 559.

PARTIES TO SUIT.

(See Defenses, 1; Jurisdiction, 1.)

TITLE TO SUE.
The granting of the reissue to the plaintiff is sufficient proof of his title to sue.
[*Wooster *v.* Clark *et al.*, 964.

PARTS OF INVENTION.

(See Construction of Specifications and Patents, 8.)

PATENTABILITY.

(See Combinations, 1, 2; Designs, 5; Particular Patents: 18 Lindsay, 39 Webster.)

PATENTEES.

(See Patents.)

PATENT RIGHTS LIABLE FOR DEBTS OF PATENTEES.

(See Sale of Patent by Order of Court, 1, 2.)

PATENTS.

(See Construction of Claims, 1; Designs, 3, 4, 5; Employés, 1; Extended Term of Patent, 1, 2, 3; Invention Described but not Claimed, 1; Public Use, 1; Reissues, 5; Sale of Patent by Order of Court, 1, 2; Void Patents, 1.)

PATENTEE ENTITLED TO ALL USES OF INVENTION.
A patentee who is the first to make an invention is entitled to his claim for all the uses and advantages which belong to it, and it is immaterial whether he perceived and stated such advantages in his patent.
[*Stow *v.* The City of Chicago, 790.

PERSONAL DEBTS.

(See Title to Patent.)

PLEADINGS.

(See Demurrer, 1; Practice in the Courts.)

PLEADINGS IN EQUITY.

(See Construction of Statutes, 1; Practice in the Courts.)

PRACTICE IN THE COURTS.

(See Assignment, 1; Bill in Equity, 2, 3, 4; Construction of Specifications and Patents, 3, 7; Construction of Statutes, 1, 2; Costs of Suit, 1; Damages, 3, 4; Defenses, 2; Demurrer, 1, 2; Injunction, 6; Jurisdiction in Equity, 1; License, 2; Public Use, 7; Reissues, 19, 21; Review of Former Decisions; Testimony, 1.)

1. PLEADINGS—NEW BILL.
Where parties acquiesce in going on in a circuit court under complaint and answer filed in the State court, it will not be necessary to file a new bill in equity in the circuit court.
[*Gardner *v.* Crossman *et al.*, 204.

2. RULE OF COMITY.
When the record is substantially the same as that in a prior case the rule of comity prevails and the findings of the court will be followed; but when the defenses and proofs are not the same the rule does not apply.
[*Edgarton *et al. v.* Furst & Bradley Manufacturing Company *et al.*, 261.

PRACTICE IN THE PATENT OFFICE.

(See Applications, 2, 3; Designs, 3, 4; Interference, 1, 2, 3; Priority of Invention, 1.)

PRESUMPTIONS.

(See Reissues, 21.)

PRIMA FACIE EVIDENCE.

(See Designs, 5.)

PRIOR DECISIONS.

(See Particular Patents, 11 Green; Practice in the Courts, 2.)

PRIORITY OF INVENTION.

(See Applications, 1; Estoppel, 1; Injunction, 1; Interference, 2; Invention, 1; Joint Invention, 1; Particular Patents, 27 Spring; Public Use, 7; Renewed Application, 1.)

1. PRIORITY OF INVENTION—ABANDONMENT AFTER REDUCTION TO PRACTICE—EX PARTE QUESTION.
When it appears that one of the parties to an interference has put the invention into actual operation before the appearance of the other inventors in the field, the question as to whether he has in any manner by his long delay lost his right to a patent therefor goes to the merits of his application, and is strictly *ex parte*.
[Harmet *v.* Reese *et al.*, 1875.

2. SAME—LACHES—SUBSEQUENT INVENTOR.
An inventor who has perfected his invention cannot by neglect and laches forfeit his right to obtain a patent therefor in favor of a subsequent inventor.
[Ibid.

3. SAME—LACHES AS AFFECTING FIRST AND SECOND INVENTOR.
No proof of laches on the part of the first and original inventor occurring subsequently to the perfection of the invention can avail a subsequent inventor, and no laches short of abandonment of the invention can defeat the right of the first inventor to the patent.
[Ibid.

4. PRIORITY OF INVENTION—PUBLIC USE.
Of two original inventors the first will be entitled to a patent unless the other puts the invention into public use more than two years before the application for a patent.
[*Webster Loom Company *v.* Higgins *et al.*, 2031.

5. SAME—DRAWINGS MAY ESTABLISH.
An invention relating to machinery may be exhibited as well in a drawing as in a model, so as to lay the foundation of a claim to priority, if sufficiently plain to enable those skilled in the art to understand it.
[*Ibid.

6. PRIORITY OF INVENTION AS DEFENSE—PRACTICE IN THE COURTS.
Though the defense of prior invention ought to be set out in the answer, yet if the omission to set it out is not objected to at the proper time in the court below it cannot be objected to in this Court.
[*Ibid.

PRIOR USE.

PROFITS.

(See Damages, 5, 6.)

PROOF OF INFRINGEMENT.

(See Evidence, 1.)

PROPERTY RIGHTS.

(See Employés, 3; Title to Patent, 1.)

PUBLIC USE.

(See Applications, 1; Common Use, 1; Particular Patents: 33 Whitcomb, 38 Worley and McCabe; Priority of Invention, 4; Void Patents, 1, 2.)

1. A SINGLE USE SUFFICIENT.
To constitute the public use of a patent it is not necessary that more than one of the patented articles should be publicly used. The use of a great number may tend to strengthen the proof of public use, but one well-defined case of public use is just as effectual to annul the patent as many.
[*Egbert v. Lippmann *et al.*, 75.

2. SAME.
Whether the use of an invention is public or private does not necessarily depend upon the number of persons to whom its use is known.
[*Ibid.

3. USE WITHOUT RESTRICTION.
If an inventor, having made his device, gives or sells it to another, to be used by the donee or vendee without limitation or restriction or injunction of secrecy, and it is so used, such use is public within the meaning of the statute, even though the use and knowledge of the use may be confined to one person.
[*Ibid.

4. CHARACTER OF THE INVENTION.
A use of an invention is a public use within the meaning of the law if the inventor sells a machine of which his invention forms a part and allows it to be used without restriction of any kind, although, owing to the character of the invention, it can only be used when it cannot be seen or observed by the public eye.
[*Ibid.

5. USE BY ASSIGNEE.
The inventor cannot relieve himself of the consequences of the prior public use of his patented invention by assigning an interest in his invention or patent to the person by whom the invention was thus used.
[*Worley *et al.* v. The Loker Tobacco Company *et al.*, 559.

6. EXPERIMENTAL USE AND SALE.
The law permits an inventor to make practical tests of his invention, and when an invention is used in public in the way of experiment or trial, or when a machine is sold on trial and warranted, it is not such a public use or sale as is contemplated by the statute.
[*Graham v. McCormick *et al.*, 1533.

7. SECTIONS 4886 AND 4920 REVISED STATUTES—PRIOR KNOWLEDGE AND USE.
Section 4886 Revised Statutes, providing that a patent may be granted if the invention was not known or used by others, and section 4920 Revised Statutes, providing that in his notice of defenses the defendant shall state not only the names and residences of the persons alleged to have had prior knowledge of the invention, but "where and by whom it had been used," are to be construed together; and prior knowledge of an invention not accessible to the public did not defeat a patent. (*Gayler* v. *Wilder*, 10 How., 477.)
[*Searls v. Bouton *et al.*, 1784.

PUBLIC USE AND SALE.

(See Construction of Specifications and Patents, 3.)

REDUCTION TO PRACTICE.

(See Priority of Invention, 1, 2, 3.)

REHEARING.

(See Particular Patents, 11 Green.)

REISSUES.

(See Disclaimers, 1; Parties to Suit, 1; Particular Patents, 34-36 Wilson.)

1. AMBROSE'S REISSUE—LAMPS—NEW MATTER.
The invention specified in the second claim of the reissued patent (which is the one in question here) is not the same invention which was described and claimed in the original patent. The latter was for a double dome without a chimney, the peculiarity of the supposed invention being the use of the double dome as a means of dispensing with the chimney. It is not only obviously a different thing, but it is the very thing which the patentee professed to avoid and dispense with.
[*Edward Miller & Co. v. Bridgeport Brass Company, 201.

2. BROADENING THE CLAIM—ACTUAL MISTAKE—LACHES.
Dictum, also, that where the only mistake suggested is that the claim of the original patent is not so broad as it might have been, the mistake, if it was a mistake, was apparent upon the first inspection of the patent, and if any correction was desired it should have been applied for immediately, and the right to have it corrected was abandoned and lost by unreasonable delay.
[*Ibid.

3. SAME—SAME—MAY ENLARGE CLAIM—DEDICATION TO PUBLIC.
Dictum, also, that if a patentee who has no corrections to suggest in his specification, except to make his claim broader and more comprehensive, uses due diligence in returning to the Patent Office and shows how such mistake occurred, his application may be entertained; but it must be remembered that the claim of a specific device or combination and an omission to claim other devices and combinations apparent upon the face of the patent are in law a dedication to the public of that which is not claimed, and the legal effect of the patent cannot be revoked unless the patentee surrenders it and proves that the specification was so framed by real inadvertence, accident, or mistake, without any fraudulent or deceptive intention, and this should be done with all due diligence and speed.
[*Ibid.

4. PURPOSE OF REISSUE LAW—NOT FOR ENLARGING CLAIMS SPECIALLY.
Dictum, also, that it was not the special purpose of the legislation upon reissues to authorize the surrender of patents for the purpose of reissuing them with broader and more comprehensive claims, although under the general terms of the law such a reissue may be made when it clearly appears that an actual mistake has inadvertently been made, not from a mere error of judgment, but a real *bona fide* mistake, such as a court of chancery in cases within its ordinary jurisdiction would correct.
[*Ibid.

5. COMPARISON OF THE INSTRUMENTS—COURTS HAVE JURISDICTION OF QUESTION OF MISTAKE.
Dictum, also, that when the matter is apparent on the face of the instrument upon a mere comparison of the original patent with the reissue, it is competent for the courts to decide whether the delay was unreasonable and whether the reissue was therefore contrary to law and void.
[*Ibid.

6. EXPANDING CLAIMS.
If a patent fully and clearly describes and claims a specific invention, complete in itself, so as not to be inoperative or invalid by reason of a defective or insufficient specification, a reissue cannot be had for the purpose of expanding and generalizing the claim so as to embrace an invention not specified in the original. *Burr* v. *Duryee* (1 Wall., 531) reaffirmed.
[*James v. Campbell *et al.*, 337.

7. EXPLORATION OF HISTORY OF ART BY COURT—HOW PATENTEE IS BOUND.
In such case the court ought not to be required to explore the history of the art to ascertain what the patentee might have claimed. He is bound by his statement of what his invention was.
[*Ibid.

8. REISSUE OF MACHINE PATENTS TO COVER PROCESSES.
A patent for a machine cannot be reissued for the purpose of claiming the process of operating that class of machines, because, if the claim for the process is anything more than for the use of the particular machine patented, it is for a different invention. *Powder Company* v. *Powder Works* (98 U. S., 130) reaffirmed.
[*Ibid.

9. LAW OF 1870—NEW CLAIMS—ESTOPPEL.
The statute of 1870, relating to reissues, authorizes the insertion of new claims, founded upon the original invention as exhibited by the specifications or drawings, in reissues when the omission results from "inadvertence, accident, or mistake," and where the claimant has not by some act or omission estopped himself from exercising the right to amend.
[*Combined Patents Can Company v. Lloyd, 713.

10. MISTAKE—DECISION OF COMMISSIONER CONCLUSIVE.
The question whether a patent is "inoperative or invalid by reason of defective or insufficient description or specification," and whether such defect has arisen by "inadvertence, accident, or mistake, and without any fraudulent or deceptive intention," appears from the decisions of the Court to be submitted finally to the judgment of the Commissioner wherever the circumstances bring it within the jurisdiction conferred upon him by the statute.
[*Ibid.

11. ADDITIONAL CLAIMS—QUESTION OF ERROR.
Where additional matter is claimed, however, which does not appear by reference to the patent or contemporary records to be embraced in the invention, or where it appears by such reference that the alleged omission "could not have occurred through inadvertence or mistake," as said by the Court in *James* v. *Campbell et al.*, the case is not within the jurisdiction of the Commissioner, and a reissue for additional claims may be declared void.
[*Ibid.

12. DELAY THIRTEEN YEARS—ESTOPPEL.
Where the only mistake suggested is an omission of a claim, and the patentee neglects for thirteen years to file his application for reissue, *Held* that he must be regarded, in view of his conduct, as intending to dedicate such invention to the public, and he is estopped from asserting his claim to such invention in a reissue.
[*Ibid.

13. NEW MATTER—CLAIM—ADJUNCT.
When the real invention was a box-loop for carriage-tops of a particular construction and the claim of the original patent was limited to the use of the box-loop in connection with an adjunct—a new strengthening or stiffening plate—*Held* that the patent might be reissued for the purpose of inserting a claim for the loop itself, without reference to the strengthening-plate.
[*Crandal v. Walters *et al.*, 945.

14. EXPANSION OF CLAIM.
The patentee having described and claimed a box-loop with an open frame or bottom, from the edges of which lugs project through the material to be clinched on the other side, it is an immaterial variation to employ a closed bottom and make the lugs project from it, and it is not a departure from the original patent to claim upon reissue a box-loop with lugs projecting from it.
[*Ibid.

15. EXPANDED CLAIM—LACHES.
Where the original patent shows upon its face that certain broad claims were not made, the patentees, if they are the inventors of such subject-matter, when apprised that it was not claimed in the patent, should use due diligence in surrendering the patent and having the mistake corrected. Fourteen years is too long a period of delay.
[*Matthews *et al.* v. The Boston Machine Company *et al.*, 1349.

16. DIFFERENT INVENTION.
In this instance the reissue held to be not merely for a broader claim made many years after the original was granted, but for a different invention. By suppressing the description of certain parts of the device the reissued patent is made to cover by implication an invention described and claimed in a subsequent patent.
[*Ibid.

17. PATENT WITH DRAWING—NEW MATTER.
In cases of reissues of patents, inoperative or invalid by reason of a defective or insufficient specification, or by reason of the patentee claiming as his own invention or discovery more than he had a right to claim as new, it is imperative that the new patent, when issued, shall be for the same invention, and that no new matter shall be introduced into the specification when, as in the present case, there is a drawing, with reference to which the invention is described.
[*Heald v. Rice, 1443.

18. COMPARISON OF PATENTS—QUESTION FOR COURT.
If it appears from the face of the instruments that extrinsic evidence is not needed to explain terms of art or to apply the descriptions to the subject-matter, so that the court is able from mere comparison to say what are the inventions described in each, and to affirm from such mere comparison that they are not the same but different, then the question of identity is one of pure construction and not of evidence, and consequently is matter of law for the court without any auxiliary matter of fact to be passed upon by a jury if the action be at law.
[*Ibid.

19. SAME—STEAM-BOILERS—DIFFERENT INVENTIONS.
In the present case it appears from the mere reading of the two specifications that the invention described in the first is for the return-flue boiler, while that described in the second, abandoning the claim for the boiler itself, is for a particular mode of using it with straw as a fuel by means of an attachment to the furnace-door for that purpose. These two inventions are distinct, and a patent originally issued for one cannot lawfully be surrendered as the basis for the reissue for the other.
[*Ibid.

20. SAME—EXPANSION OF CLAIM.
The rule reiterated that a patent for a machine cannot be reissued for the purpose of claiming the process of operating that machine, because if the claim for the process is anything more than for the use of the particular machine patented it is for a different invention. (*Campbell* v. *James*, 337.)
[*Ibid.

21. NEW MATTER—ORIGINAL PATENT NOT IN EVIDENCE.
Where the original patent is not put in evidence there is nothing properly before the court by which to determine whether the original and the reissue are for the same invention or not. As the reissue was granted by the proper officer, the presumption is that it was properly granted, and there is nothing in the case to overcome that presumption.
[*Searls v. Bouton *et al.*, 1784.

22. IDENTITY OF INVENTION IN ORIGINAL AND REISSUE PATENTS—HOW DETERMINED.
A reissued patent is valid if for the same invention as the original. The identity of the inventions is determined by the drawings and specifications construed together and not separately.
[*Searls v. Worden *et al.*, 1955.

23. NEW MATTER—DELAY—ABANDONMENT.
If the specification of the original patent was defective or insufficient in claiming a combination of several devices instead of making distinct claim for every device which entered into the combination, the fact was instantly discernible, even by an unpractised eye, as soon as the patent was read. The correction, if any was to be made under such circumstances, should have been applied for immediately. The right to the correction was lost by unreasonable delay of thirteen and a half years. (*Miller* v. *The Bridgeport Brass Company*, 201.)
[*Bantz v. Frantz *et al.*, 2037.

RELEASE.

(See Contracts, 3.)

REMEDY AT LAW.

(See Bill in Equity, 3, 4; Injunction, 6; Jurisdiction, 1.)

RENEWED APPLICATION.

SECOND APPLICATION INDEPENDENT.
Such second application when made can derive no aid as to time from the prior abandoned application, and the applicant must stand as to defenses in suits on the patent as if the new application were the first application.
[*Lindsay v. Stein, 1613.

RES ADJUDICATA.

(See Review of Former Decisions, 1.)

RESULTS.

(See Combinations, 1, 2, 6, 7.)

REVIEW OF FORMER DECISIONS.

REVIEW BY CIRCUIT COURTS OF FORMER DECISIONS.
In patent causes the circuit court will not review the findings of another court of co-ordinate jurisdiction except in a case of clear mistake of law or fact, of newly-discovered testimony, or upon some question not considered by such court.
[*Searls v. Worden *et al.*, 1955.

RIGHT TO USE.

Andrew, William, Cincinnati, Ohio. Malting apparatus	259,903	June 27	1420	383	21	1961
Andrews, Adolphus Y., and H. Burk, assignors to Burk Manufacturing Company, (limited,) Philadelphia, Pa. Blank for pocket-books	256,094	Apr. 4	414	112	21	1090
Andrews, Benjamin, Philadelphia, Pa., assignor to J. H. Sessions, Bristol, Conn. Trunk-fastener. (Reissue)	10,089	Apr. 25	1703	478	21	1271
Andrews & Co., A. H. (See Costello, Thomas H., assignor.)						
Andrews, Cyrus N., San Francisco, Cal. Electro-magnetic action for musical instruments	258,671	June 6	2	1	21	1695
Andrews, Edward W., assignor of one-third to J. H. Eakins, Detroit, Mich. Fare-collector for street-cars	258,271	May 23	1402	397	21	1555
Andrews, Edwin F., St. Louis, Mo. Hammer brick-machine	257,126	Apr. 25	1675	469, 470	21	1986
Andrews, Emanuel, Williamsport, Pa. Saw-handle. (Reissue)	10,135	June 13	978	261	21	1872
Andrews, Fitzhugh S., *et al.* (See Stone, Frank W., assignor.)						
Andrews, Frederick S., *et al.* (See Stone, Frank W., assignor.)						
Andrews, George P., Staffordville, Conn. Fishing-rod	252,008	Jan. 10	415	113	21	79
Andrews, James C., and J. F. Sunderland, Philadelphia, Pa. Steam-radiator	255,071	Mar. 14	194	213	21	782
Andrews, Lee W., Live Oak, Cal. Steam-engine governor	256,946	Apr. 25	1475	413	21	1229
Andrews, Richard J. (See Prescott, Joseph R., assignor.)						
Andrews, Thomas A., Scagoville, Tex. Coffee and spice mill	255,539	Mar. 28	1405	379	21	900
Andrews, William, Buffalo Grove, Iowa. Horse hay-fork	253,657	Feb. 14	567	160	21	453
Andrews, William, Madden, assignor of one-half to Z. H. Williams, Beach Springs, Miss. Ax	255,711	Mar. 28	1392	429	21	934
Andrus, Marshall D., assignor to Victor Sewing Machine Company, Middletown, Conn. Sewing-machine shuttle	258,346	May 23	1484	423	21	1570
Andrus, Thomas O., and N. B. Prior, North Wolcott, Vt. Cow-tail holder	253,263	Mar. 21	1000	267	21	824
Angell, Ida E., Delphos, Ohio. Flat-iron heater	258,689	May 30	1911	539	21	1652
Angström, Carl A., Stockholm, Sweden. Apparatus for self-massage or flesh-kneading	258,456	June 13	723	192	21	1828
Angus, James W., Macon City, Mo. Miter-box	252,987	Jan. 31	1583	442	21	295
Angus, James W., assignor of one-half to J. Shepherd, Macon, Mo. Hay and grain cap	252,168	Jan. 10	598	168	21	109
Angus, William T., Sydney, New South Wales, Australia. Adjustable buggy	258,411	Jan. 17	895	248	21	161
Annable, Edward, *et al* (See Decker, William, assignor.)						
Annas, Edward, Brooklyn, N. Y. Grain-bin	257,997	May 16	1050	292	21	1484
Annin, Joseph. (See Moore, John R., assignor.)						
Ansonia Brass and Copper Company *et al.* (See Hull, John A., assignor.)						
Ansonia Brass and Copper Company. (See Hull, Wolcott A., assignor.)						
Antholne, Joseph H. (See Tucker and Antholne.)						
Anthony & Co., E. & H. T. (See Barker, Erastus B., assignor.)						
Anthony & Co., E. & H. T. (See Hufeland, Philip, assignor.)						
Anthony, E. & H. T. (See Laighton, William S., assignor.)						
Anthony, Edwyn, Hereford, county of Hereford, England, assignor to R. Hoe & Co., New York, N. Y. Tension device for unwinding rolls of paper	259,789	June 20	1158	308	21	1909
Anthony, John B. (See Brown, Daniel W., assignor.)						
Anunsen, Kittil, Winchester, Wis. Auxiliary power-wheel for ships	255,560	Mar. 28	1406	380	21	900
Anunsen, Kittil, Winchester, Wis. Washing-machine	257,267	May 2	144	40	21	1306
Appel, Daniel, assignor to N. W. Taylor, Cleveland, Ohio. Folding mechanism for paper-bag machines	252,412	Jan. 17	896	248, 249	21	164
Appel, Daniel, Cleveland, Ohio, assignor to Eastern Paper Bag Company, Hartford, Conn. Manufacturing paper bags	258,972	May 23	1403	397	21	1556
Appleby, John F., Beloit, Wis. Tension device for grain-binders	252,988	Jan. 31	1594	442	21	295
Appleby, John F., Beloit, Wis. Grain-binder	257,837	May 16	990	241	21	1451
Appleby, John F., Beloit, Wis., assignor to Minneapolis Harvester Works, of Minnesota. Grain-binder	255,712	Mar. 28	1593	429	21	935
Appleby, John F., Minneapolis, Minn., assignor to Minneapolis Harvester Works, of Minnesota. Grain-binder	256,188	Apr. 11	558	152, 153	21	1050
Appleby, John F., Minneapolis, Minn., assignor to Minneapolis Harvester Works, of Minnesota. Harvester	257,268	May 2	145	40, 41	21	1306
Applegate, Samuel S., Camden, N. J. Device for waking persons from sleep	256,265	Apr. 11	606	180	21	1068
Appleton, Robert M., Lake Village, N. H. Drawers or tights	256,539	Apr. 18	989	278	21	1138
Appleton, Robert M., Lake Village, N. H. Stop-motion for circular-knitting machines	256,533	Apr. 18	989	279	21	1138
Arapian, Edward, assignor to himself and B. K. Moscopulos, New York, N. Y. Sponge-fishing net	255,561	Mar. 28	1407	380	21	900
Arbuckle, John, Brooklyn, N. Y. Fire-proof building	253,658	Feb. 14	568	160	21	453
Archdeacon, William, Indianapolis, Ind. Can for cooking prepared meats, &c	260,077	June 27	1523	409	21	1976
Archer, George W., Rochester, N. Y. Gynecological chair	252,160	Jan. 10	599	168, 169	21	109
Archer and Pancoast Manufacturing Company. (See Brown, James E., assignor.)						
Arey, Albert L., Cleveland, Ohio. Electric lamp	253,811	Feb. 14	763	217, 218	21	488
Arey, Albert L., Cleveland, Ohio. Electric light	253,826	Feb. 14	781	222	21	491
Arkell, James, Canajoharie, N. Y. Apparatus for ventilating cars, &c	253,149	Jan. 31	1708	460	21	328
Armington, Hezekiah, Atlanta, Ill. Grain-elevator	259,457	June 13	723	192	21	1828
Armor, Alfred H., Chicago, Ill. Air-pump	258,347	May 23	1485	423	21	1570
Armstrong, Andrew N., Blue Mound, Ill. Car-coupling	251,811	Jan. 3	157	43	21	99
Armstrong, Edward. (See Gibson and Armstrong.)						
Armstrong, Edwin A., Detroit, Mich. Rock-drill	258,683	May 30	1881	514, 515	21	1636
Armstrong, Frank, Bridgeport, Conn. Pipe-cutting machine	258,973	June 6	126	33, 34	21	1716
Armstrong, William, Chicago, Ill. Folding invalid-chair	253,333	Feb. 7	199	51	21	377
Arndt, William J., Detroit, Mich. Adjustable shaft for grindstones and the like	256,110	Apr. 11	455	123	21	1033
Arnim, Charles A., *et al.* (See Nitschmann, Franz, assignor.)						
Arnold, George T., Lancaster, Ky. Car-coupling	260,149	June 27	1612	435	21	1991
Arnold, Henry W., Utica, N. Y. Heel-plate for boots and shoes	255,234	Mar. 21	1000	267	21	824
Arnold, James G., Worcester, Mass. Magneto-electric generator for signaling purposes	256,188	Apr. 11	560	153	21	1050
Arnold, James G., Worcester, Mass. Annunciator	253,199	Apr. 11	562	153	21	1050
Arnold, John D., Holley, N. Y. Oil-tank	253,334	Feb. 7	161	53	21	377

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Arnold, Thomas H., *et al.* (See Morton, George B., assignor.)						
Arnold, William D. (See Showalter, Abraham, assignor.)						
Arnold, William E., assignor to W. Castle, Rochester, N. Y. Boiler for cooking grain	257,819	May 9	688	231	21	1436
Arras, John D. (See Beaver, Oliver F., assignor.)						
Arrowsmith, George, St. Louis, Mo. Fence-wire stretcher	254,567	Mar. 7	174	43	21	608
Arter, Francis G., assignor of one-half to G. Hall, Lima, Ohio. Flue-stopper	255,735	Apr. 4	5	2	21	961
Arthur, James, Jersey City, assignor of one-half to W. S. Carr, Paterson, N. J. Straight-way valve	257,634	May 9	681	173	21	1397
Arthurs, Josiah W., and J. C. Fick, Bull's City, Kans. Wind-engine	252,989	Jan. 31	1436	401	21	297
Ash, William H., Jordan township, Monona county, Iowa. Horizontal windmill	255,128	Mar. 21	821	221	21	821
Ashcroft, Edward H., Lynn, Mass. Automatic fire-extinguisher	254,253	Feb. 28	1382	382	21	822
Ashcroft, Edward H., Lynn, Mass. Cleaner for steam-boilers	254,446	Mar. 7	1	1	21	608
Ashcroft, Edward H., Lynn, Mass. Mercury pressure-gage	258,614	Apr. 25	1316	371	21	1263
Ashcroft, Edward H., Lynn, Mass. Water and steam separator	258,672	June 6	3	1	21	1695
Ashe, Robert, Somerville, assignor to G. W. Copeland, Malden, Mass. Edge setting and burnishing machine	254,530	Mar. 14	396	135	21	731
Ashe, Robert, Somerville, assignor to G. W. Copeland, Malden, Mass. Edge-burnishing machine	254,609	Mar. 14	396	136	21	731
Asher, Dadiel E., Gosport, Ind. Harrow	257,998	May 16	1033	293	21	1494
Asher, George, Birmingham, county of Warwick, England. Carriage-top joint	254,447	Mar. 7	2	1	21	639
Asher, James, Fort Erie, Ontario, Canada. Compensating-pendulum	255,909	Apr. 4	192	50	21	969
Ashworth, Elijah. (See Ashworth, George and E.)						
Ashworth, George and E., Manchester, county of Lancaster, England. Apparatus for hardening and tempering wire for cards	258,413	Jan. 17	898	249	21	165
Ashworth, John, Wedgewoodville, Md. Heddle-frame	253,385	Feb. 7	189	58	21	377
Ashworth, John, and C. S. Petrie, Chicago, Ill. Extension-pipe for fire apparatus	257,635	May 9	688	174	21	1397
Askew, Benjamin, Edinburgh, county of Mid-Lothian, Scotland. Car-coupling tool	256,611	Apr. 18	1076	308	21	1139
Askin, John H., Ohktomo, Mich. Treating fruit-trees	254,247	Apr. 25	1476	.....	21	1289
Askins, Joseph, Westfield, Mass. Burial-case	258,170	Jan. 10	600	169	21	109
Asterita, Guiseppe A., New York, N. Y. Railway danger-signal apparatus	251,818	Jan. 3	156	43	21	99
Atcheson, Theophilus, Philadelphia, Pa., assignor to himself and J. Saunders, Wilmington, Del. Paper-pulp-digester sliding valve	259,658	June 20	985	283	21	1961
Athearn, William E., New York, N. Y. Pole-changing key	258,346	Jan. 17	899	285	21	180
Athey, Franklin P., assignor to himself and B. C. Roberts, Middleway, W. Va. Horse-poke	253,336	Feb. 7	188	58	21	377
Atkins, Elijah, Birmingham, county of Warwick, England. Fastening for bracelets and scarf-rings	257,636	May 9	684	174	21	1397
Atkinson, Anthony, New York, N. Y. Apparatus for the manufacture of starch	253,357	Feb. 7	183	53	21	377
Atkinson, John A. (See Whelan, Robert, assignor.)						
Atkinson, William B., assignor of one-half to W. R. Jackson, Franklin, Ky. Jeweling-tool	256,699	May 30	1913	540	21	1652
Atkins, James, Brooklyn, N. Y. Machine for slotting soap	258,711	Jan. 24	1233	346	21	989
Atlantic and Pacific Electric Manufacturing Company. (See Hunter, Rudolph M., assignor.)						
Atlas Works. (See Haskin, Uri, assignor.)						
Atterbury, Thomas B., Pittsburg, Pa. Roofing-tile	253,174	Feb. 7	3	1	21	347
Atterbury, Thomas B., Pittsburg, Pa. Support for underground telegraph-lines	258,210	May 23	1397	374, 375	21	1548
Attrill, Henry Y., and W. Farmer, New York, N. Y.; said Farmer assignor to said Attrill. Process of and apparatus for manufacturing gas for heating and illuminating purposes. (Reissue)	10,056	Mar. 7	413	110	21	709
Attwell, Ewell B., Leesburg, Va. Sash-fastener	260,271	June 27	1759	476	21	2013
Atwater, H. William, Boston, Mass. Water-closet	251,513	Jan. 3	160	44	21	99
Atwater, John B., Chicago, Ill. Weighing-scales	253,650	Feb. 14	560	151	21	453
Atwater, John B., Chicago, Ill. Wash bowl and stand	259,074	June 6	254	67	21	1737
Atwater, John B., assignor to P. J. Singer, Chicago, Ill. Elevator	256,111	Apr. 11	455	123	21	1033
Atwater, John B., assignor to P. J. Singer, Chicago, Ill. Safety-elevator for hatchways	258,211	May 23	1398	375, 376	21	1548
Atwater, John H., Medford, Minn. Washing-machine	255,568	Mar. 28	1406	380	21	901
Atwood, Benjamin S., South Abington Station, Mass. Shipping-case for jars and bottles	254,899	Mar. 14	370	153	21	743
Atwood, Benjamin S., South Abington Station, Mass. Box-fastener	254,900	Mar. 14	371	154	21	743
Atwood, Eugene. (See Atwood, John E. and E.)						
Atwood, James B. (See Tyler and Atwood.)						
Atwood, John E., Stonington, Conn. Machine for doubling and winding silk and other fibrous materials	256,946	Apr. 25	1476	414	21	1230
Atwood, John E., Stonington, Conn. Machine for winding silk	256,949	Apr. 25	1476	414	21	1230
Atwood, John E., Stonington, Conn., assignor to G. Draper, Hopedale, Mass., and S. A. Jenks, Lincoln, R. I. Support for spindles for spinning-machines	253,372	Feb. 14	469	133	21	457
Atwood, John E. and E., Stonington, Conn. Machine for winding silk and other fibrous materials	257,269	May 2	147	41, 42	21	1307
Atwood, Montraville W., Clayton, N. Y. Center-board for boats. (Reissue)	10,105	May 9	650	237	21	1449
Auble, Conrad G. (See Riddle, John H., assignor.)						
Anchey, David G., assignor to B. C. Taylor, Dayton, Ohio. Horse hay-rake	254,787	Mar. 14	421	113	21	717
Auchincloss, William S., Philadelphia, Pa. Averaging-machine	257,430	May 2	145	97	21	1243
Audemars, Charles H., Brassus, Switzerland. Stop-watch	253,336	Feb. 7	184	53	21	377
Aurora Manufacturing Company. (See Stolp, Myron G., assignor.)						
Austin, Adrian H., assignor to himself, J. F. Tobin, and J. G. Griffith, New York, N. Y. Check-register	256,534	Apr. 18	990	279	21	1139
Austin, Albert W. (See Spencer, Daniel, assignor.)						
Austin, Armamons B., Fort Wayne, Ind. Locomotive ballast-crushing machine	253,486	Feb. 14	564	165, 166	21	483
Austin, Charles, Lowell, Mass. Reed-organ	253,466	Feb. 7	201	109	21	497
Austin, Edwin, Winters, assignor of one-half to W. Cantelow, Vacaville, Cal. Box-cover press	258,414	Jan. 17	899	249	21	165
Austin, Harry, and L. J. Kimball, San Francisco, Cal. Photograph-coloring	257,811	May 9	687	.....	21	1435
Austin, Joseph, assignor of one-half to Nonantum Worsted Company, Newton, Mass. Wool-combing machine	259,789	June 20	1159	309	21	1910
Austin, Josiah. (See Chamberlain and Austin.)						
Austin, William, Philadelphia, Pa. Sheet-metal pipe	253,493	Feb. 14	567	166	21	494
Autenrieth, William. (See Jones, George E., assignor.)						
Autenrieth, William, Cincinnati, Ohio, and J. M. Thurston, Hagerstown, Ind. Speculum	255,756	Apr. 4	6	2	21	969
Automatic Carpet Sweeper Company. (See Soper, Robert, assignor.)						
Autophone Company. (See Morris and Brett, assignors.)						
Averhoff, Jacinto, Havana, Cuba. Medical compound	254,448	Mar. 7	2	.....	21	639
Averill, Benjamin F., assignor of one-half to T. Pike, Dunkirk, N. Y. Device for treating the walls and tubing of oil-wells	257,127	Apr. 25	1678	479	21	1286

Bray, James B., Waverly, N. Y. Velocipede-sleigh	256,634	Apr. 18	1103	310	21	1157
Bray, James B., Waverly, N. Y. Car-brake	256,635	Apr. 18	1104	310	21	1157
Bray, Mellen, Newton, Mass. Reed for musical instruments	253,392	Feb. 7	97	30	21	383
Bray, Mellen, Newton, Mass. Making lacing-studs	256,116	Apr. 11	461	125	21	1034
Bray, Mellen N., Boston, Mass. Manufacture of tabular rivets	256,117	Apr. 11	462	125	21	1034
Bray, Morris P., Worcester, Mass. Corset-stay	259,664	June 6	965	70	21	1740
Bray, Morris P., New Haven, assignor to I. W. Birdseye, Bridgeport, Conn. Corset	255,924	Apr. 4	215	56	21	988
Bray, Sanford, Boston, Mass. Car-coupling	253,761	Apr. 4	11	4	21	953
Bray, Sanford, Boston, Mass. Car-coupling	256,704	May 30	1930	545	21	1655
Bray, Thomas J., assignor to Oliver Bros. & Phillips, Pittsburg, Pa. Shearing attachment for heading-machines	258,705	May 30	1932	546	21	1655
Brayer, John F., Rochester, N. Y. Tinner's shears	257,495	May 9	306	111	21	1358
Brayton, A. P., *et al.* (See Duncan, Joseph S., assignor.)						
Brazelle, Benjamin, St. Louis, Mo. Cut-off valve	255,138	Mar. 21	870	233 234	21	869
Brear, Abel, Saugatuck, Conn. Evaporating-pan	259,357	June 13	595	157 158	21	1804
Brearley, William H., Detroit, Mich. Organ-case	256,983	June 6	136	36, 37	21	1718
Breaker, Philip, Louisville, Ky. Heater	253,989	Feb. 21	988	270	21	597
Breckenridge, Henry W., Providence, R. I. Switch for telephone-exchanges	259,421	Jan. 17	912	258	21	167
Breckenridge, Henry W., Providence, R. I. Switch for telephone-exchanges	259,176	Jan. 10	686	170	21	110
Bread, Richard E., Pittsburg, Pa. Mechanical movement	259,469	June 13	742	196	21	1838
Breen, John, and E. Baker, Cleveland, Ohio. Nut-lock	252,177	Feb. 7	7	2, 3	21	347
Breen, Thomas, Knowlton, Pa. Railway-frog	253,672	Feb. 14	564	165	21	455
Breen, Thomas, Knowlton, Pa. Seat-cord pulley						
Breen, Thomas, Knowlton, Pa. Car-coupling	259,980	June 27	1429	365 366	21	1908

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Breer, Caroline H. (See Breer, Henry, assignor.)						
Breer, Henry, De Witt Centre, assignor to C. H. Breer, Syracuse, N. Y. Apparatus for desiccating animal matter for fertilizers	255,985	Apr. 4	215	56	21	986
Breisler, Levi, Mount Vernon, Iowa. Wire fence	259,693	June 20	1174	313	21	1912
Brennan, George, Franklin, Pa. Axle-lubricator	259,277	June 27	1785	477	21	2014
Brenot, Rémi T., Paris, France. Cauterizing apparatus	255,569	Mar. 28	1441	387	21	907
Brett, Julius W., *et al.* (See Myrick, Israel R., assignor.)						
Breul, Richard, assignor to Smith & Egge Manufacturing Company, Bridgeport, Conn. Drawer-pull	258,668	June 6	15	4	21	1697
Brewer, Benjamin B., and A. G. Waterhouse, assignors of one-fourth to W. S. Johnston, Sacramento, and R. W. Tully, Stockton, Cal. Electric-lamp regulator	254,702	Mar. 7	362	101	21	702
Brewer, Horatio J., New York, N. Y. Battery-cell	256,213	May 23	1332	377	21	1543
Brewer, Horatio J., New York, N. Y. Zinc for batteries	256,361	May 23	1504	427	21	1573
Brewer, Jester R. (See Burdine and Brewer.)						
Brewer, Thomas A., Oliver, Ga. Horse-power	255,583	Mar. 28	1443	387	21	907
Brewer, Wesley S., Richmond, Ind. Balanced slide-valve	259,698	June 20	998	264	21	1894
Brewin, William P., Camden, N. J. Hot-air furnace	258,016	Jan. 10	492	115 116	21	80
Brewster, Francis W., Westminster, England. Life-preserver	254,590	Mar. 7	187	46	21	670
Brewster, Samuel W., and L. Sherwood, Southeast, N. Y.; said Sherwood assignor to S. E. Sherwood. Dog-cutter	255,376	Mar. 21	1179	316	21	855
Bride, William J. (See Morrison, Angus, assignor.)						
Bridenthal, Harry H., Latrobe, Pa. Road-engine	258,720	Jan. 24	1048	348 349	21	230
Bridewell, Richard F., San Francisco, Cal. Gripe for propelling cars	253,673	Feb. 14	565	165	21	455
Bridewell, Richard F., San Francisco, Cal. Fire-escape ladder	255,564	Mar. 28	1444	388	21	907
Bridewell, Richard F., San Francisco, Cal. Advertising device for street-cars	258,494	Apr. 11	647	235	21	1101
Bridges, Appleton S. (See Price, Jorum, assignor.)						
Bridgman, Elisha B., Boston, Mass. Reversible seat	253,637	Feb. 21	980	267	21	581
Bridgman, Robert S., Charleston, Ark. Churn-dasher	259,995	Jan. 31	1068	444	21	294
Briggs, Alfred O., Columbia City, Ind. Stove-pipe retainer	255,536	Apr. 4	108	27	21	988
Briggs, Arthur E., Bond Hill, assignor to Post & Co., Cincinnati, Ohio. Elastic pulley-band	254,089	Feb. 21	1112	311	21	552
Briggs, George D. (See Phillips, Thomas S., assignor.)						
Briggs, George H., Amesbury, Mass. Portable folding clothes-drier	253,503	Feb. 14	396	109	21	485
Briggs, Orlando P., Chicago, Ill. Warning-strip for barbed fences	258,071	Jan. 10	484	134	21	91
Briggs, Thomas, Manchester, county of Lancaster, England. Machinery or apparatus for spinning and doubling yarn or thread	257,264	May 2	163	46	21	1310
Briggs, Van Rensselaer T., De Witt township, Clinton county, Mich. Stone-sled	256,423	Jan. 17	914	258	21	167
Briggs, Warren W., assignor to S. & H. Lederer, Providence, R. I. Ornamental chain	257,496	May 9	306	111	21	1358
Brigham, Dan, Chatsworth, Ill. Apparatus for watering stock	254,699	Mar. 7	188	47	21	670
Brigham, Erastus F., St. Paul, Minn. Bed and foot warmer	259,861	Jan. 31	1437	408	21	308
Brigham, Levi, Osseo, Minn. Rail for railway-curves	254,793	Mar. 14	487	115	21	718
Brightman, Latham, Cleveland, Ohio. Machine for straightening round bar-iron	260,378	June 27	1766	477	21	2015
Brill, Augustus H., Oxford, N. Y. Milk-cooler	253,178	Feb. 7	8	3	21	346
Brinckmann, Alexander, Astoria, assignor to himself and G. H. Wooster, New York, N. Y. Apparatus for electroplating	256,214	May 23	1332	377	21	1543
Bringier, Louis A., Donaldsonville, La. Tail-board for wagons	259,906	Jan. 31	1403	444	21	296
Brinkerhoff, Alexander W., Upper Sandusky, Ohio. Hand corn-husker	253,970	Feb. 21	971	270	21	596
Brinkerhoff, Clara M. (See Cumming and Brinkerhoff.)						
Brinkerhoff, Jacob, Auburn, N. Y. Lubricating mechanism for journals, hangers, axles, &c.	259,695	June 6	966	70	21	1740
Brinkerhoff, Jacob and W. M., Auburn, N. Y. Barbed fence	256,014	May 16	1071	298	21	1488
Brinkerhoff, Jacob and W. M., Auburn, N. Y. Barbed fence	256,706	May 30	1933	546	21	1656
Brinkerhoff, Warren M. (See Brinkerhoff, Jacob and W. M.)						
Brinkerhoff, Warren M., Auburn, N. Y. Lubricating mechanism	259,470	June 13	743	196	21	1838
Brintnal, Dwight, and W. Harrison, Dysart, Iowa. Animal-poke	257,147	May 2	4	2	21	1261
Broadbent, James. (See Fleming and Broadbent.)						
Brock, Matthias. (See Copeland and Brock.)						
Brock, Robert G., Cedar Rapids, Iowa. Wood-splitting machine	256,495	Apr. 11	640	235	21	1101
Brock, William E., New York, N. Y., assignor to Washburn & Moen Manufacturing Company, Worcester, Mass., and I. L. Ellwood, De Kalb, Ill. Barbed metal fencing-strip	255,762	Apr. 4	12	4	21	953
Brock, William E., New York, N. Y., assignor to Washburn & Moen Manufacturing Company, Worcester, Mass., and I. L. Ellwood, De Kalb, Ill. Barbed metal fencing-strip	255,763	Apr. 4	13	4	21	953
Brock, William H., Corsna, assignor of one-fourth to J. W. Alexander, New York, N. Y. Chain-wrench	254,592	Mar. 14	508	136	21	730
Brock, Willis J. (See Padgett and Brock.)						
Brockelsper, Fredrick W., assignor to Sargent & Co., New Haven, Conn. Gong-bell	252,177	Jan. 10	606	170	21	110
Brookway, James W. (See Jackson and Brookway.)						
Brokaw, Joseph M., Grand Rapids, Mich. Fence-post	254,194	Feb. 28	1223	343	21	969
Bromberg, Samuel, *et al.* (See Mansfield and Moore, assignors.)						
Bromley, James M., assignor to W. E. Smith, Plattsburg, N. Y. Vehicle-spring	259,663	June 20	999	264	21	1893
Bromley, James M., assignor to W. E. Smith, Plattsburg, N. Y. Vehicle-spring	259,664	June 20	999	264	21	1893
Bronson, Frank H., *et al.* (See Bronson, James E., assignor.)						
Bronson, James E., assignor to himself, T. H. Rowland, and F. H. Bronson, Elyria, Ohio. Car-coupling	259,358	June 13	567	156	21	1805
Brooke, Homer, New York, N. Y. Attaching caps to bottles	253,487	Mar. 28	1394	357	21	865
Brooke, William E., assignor to American Saw Company, Trenton, N. J. Detachable saw-tooth	258,368	May 23	1505	428	21	1573
Brooke, William E., assignor to American Saw Company, Trenton, N. J. Saw-tooth	259,471	June 13	744	196 197	21	1838
Brooks, Alva O., and P. A. Bowen, Milwaukee, Wis. Oiler for locomotives	253,579	Feb. 14	478	135	21	430
Brooks & Co., E. J. (See Brooks, Edward J., assignor.)						
Brooks, David, Philadelphia, Pa. Underground-telegraph line	254,988	Feb. 28	1223	345	21	294
Brooks, David, Philadelphia, Pa. Underground-telegraph line. (Reissue)	10,123	May 30	2166	395	21	1687
Brooks, David W., Frederick, Md. Step-ladder	257,207	May 2	60	21	21	1263
Brooks, Edward J., East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Metallic seal	253,674	Feb. 14	567	166	21	456
Brooks, Edward J., East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Sealing-press	254,601	Mar. 7	189	47	21	670
Brooks, Edward J., East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Seal-lock	256,791	Apr. 18	1262	361 362	21	1189
Brooks, Edward J., East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Seal and tag	256,278	May 23	1498	398 399	21	1557
Brooks, Edward J., East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Label-rack for freight-cars	259,472	June 13	745	197	21	1838

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Brooks, Edward J., assignor to E. J. Brooks & Co., East Orange, N. J. Metallic seal	260,279	June 27	1767	478	21	2015
Brooks, Edwin A. (See Shankland and Brooks.)						
Brooks, Frederick W., Sandusky, Ohio. Pocket-guard	258,907	Jan. 31	1604	445	21	296
Brooks, James M. (See Brooks, Rhodom M. and J. M.)						
Brooks, James W., trustee. (See Fisher, Edwin, assignor.)						
Brooks, James W., *et al.*, trustees. (See Van Wagenen, Albert, assignor.)						
Brooks, John, Plainfield, N. J., assignor, by mesne assignments, to himself and C. Potter, Jr., & Co., New York, N. Y. Cushioning device for printing-presses	256,363	May 23	1506	426	21	1573
Brooks, Rhodom M., Jenkinsville, Ga. Cotton-gin	255,926	Apr. 4	217	56	21	986
Brooks, Rhodom M., Jenkinsville, Ga. Car-coupling	257,148	May 2	5	2	21	1398
Brooks, Rhodom M., Jenkinsville, Ga. Car-coupling	259,804	June 20	1175	314	21	1912
Brooks, Rhodom M. and J. M., Jenkinsville, Ga. Cotton-seed planter	255,585	Mar. 28	1445	388	21	908
Brooks, Rhodom M. and J. M., Jenkinsville, assignors of one-third to M. L. Bates and J. M. Williams, Griffin, Ga. Car-coupling	255,672	Mar. 14	705	213	21	782
Brooks, William B., West Dennis, Mass. Shaft-tug	257,546	May 9	492	126	21	1375
Brooks, William D., Baltimore, Md. Can-soldering machine	256,098	Apr. 4	490	{115 116	21	1091
Brooks, William D., assignor to himself and D. D. Mallory, Baltimore, Md. Can-soldering machine. (Reissue)	10,141	June 27	1856	{501 502	21	2029
Brookshier, James M. (See Penland, Wren C., assignor.)						
Broomall, Thomas W., West Chester, and E. A. Mercer, Christiana, Pa. Spring-washer	259,665	June 20	991	264	21	1882
Broomell, Albert P., assignor to Frey & Broomell, York, Pa. Globe-valve	260,000	June 27	1430	386	21	1962
Brophy, James J., New York, N. Y. Fire-alarm-box apparatus	259,086	June 6	268	71	21	1740
Brotherton, Jacob, Ames, Iowa, assignor, by mesne assignments, to Washburn & Moen Manufacturing Company, Worcester, Mass., and I. L. Elwood, De Kalb, Ill. Machine for barbing fence-wire	253,675	Feb. 14	588	166	21	456
Brott, Lucien A. (See Morris and Brott.)						
Broughton, Alba W., Jordan, N. Y. Saw sharpening and clamping device	259,805	June 20	1175	314	21	1912
Brower, Bloomfield. (See Adams, John F., assignor.) (Reissue.)						
Brower, Bloomfield, New York, N. Y. Paper-knife	260,157	June 27	1691	438	21	1998
Brower, Bloomfield, New York, and J. F. Adams, Irvington, N. Y.; said Adams assignor to said Brower. Temporary binder. (Reissue)	10,073	Apr. 4	445	{120 121	21	1095
Brower, Henry J. (See Wood and Brower.)						
Brower, Henry J., Brooklyn, and F. B. Wood, New York, assignors of one-fourth to B. E. Valentine, Brooklyn, N. Y. Automatic electric signaling apparatus	259,353	Jan. 17	617	228	21	152
Brown, Albert, Schoharie, N. Y. Thill-coupling	255,987	Apr. 4	217	56	21	986
Brown, Alfred C., and H. A. C. Saunders, London, England. Telephonic and telegraphic signaling apparatus	259,350	June 13	598	{158 159	21	1805
Brown, Alva P., Texas, Ohio. Bedstead	258,354	Jan. 17	590	228	21	152
Brown, Alvin K., Newton, Iowa. Apparatus for heating air and water for buildings	257,650	May 9	637	178	21	1400
Brown, Benjamin F., Houghton, Mich. Sleigh-knee	257,651	May 9	638	179	21	1401
Brown, Calvin, Vallejo, Cal. Slab or block for pavements or floors	254,269	Feb. 28	1343	366	21	505
Brown, Charles, St. Louis, Mo. Middlings-detacher	258,552	May 30	1732	490	21	1691
Brown, Clarence S. (See Tucker, George W., assignor.)						
Brown, Daniel W., assignor to J. B. Anthony, Providence, R. I. Tension device for sewing-machines	254,603	Mar. 7	191	47	21	670
Brown, Edmund D., assignor to Nichols, Shepard & Company, Battle Creek, Mich. Grain-separator	257,435	May 2	350	98	21	1344
Brown, Elbridge M. (See Whitman and Brown.)						
Brown, Elmer E., Portland, Me. Adjustable horse-blanket fastener	258,215	May 23	1333	377	21	1543
Brown, F. Barton, Boston, Mass. Halter-hook	254,602	Mar. 7	190	47	21	670
Brown, Felix, New York, N. Y. Coupling	256,280	Apr. 11	679	184	21	1071
Brown, George, *et al.* (See Stamour, John B., assignor.)						
Brown, George A., and B. Holt, assignors of one-third to A. F. Holt, Concord, N. H. Machine for sandpapering wheel rims or fellies and other articles	258,553	May 30	1733	{490 491	21	1691

Gallaher, Thomas M., Belmont County, Ohio. Mining implement	252,206	Jan. 10	634	179	21	115
Gallati, Charles R. (See Waterhouse, Addison G., assignor.)						
Galligan, John. (See Frank and Galligan.)						
Gallinger, Nelson, Rapid City, Dak. Ter. Muzzle	254,302	Feb. 28	1361	375	21	601
Galloway, Charles J., Manchester, county of Lancaster, England. Steam-boiler	253,365	Feb. 7	213	61	21	362
Galloway, James M. (See Galloway, Joseph E. and J. M.)						
Galloway, Joseph E. and J. M., Concordia, Kans. Windmill	250,123	June 6	312	82, 83	21	1748
Gallup, Carroll, Norwalk, Ohio. Chair	251,708	Jan. 3	26	7, 8	21	7
Galt, Thomas A., and G. S. Tracy, Sterling, Ill. Corn-planter	250,619	June 20	1006	289	21	1685
Gamble, William, *et al.* (See Remy, Noah T., assignor.)						
Gamewell Fire Alarm Telegraph Company. (See Gardiner, James M., assignor.)						
Garber, John L., Greenville, Ohio. Revolving telegraph-table	253,366	Feb. 7	214	61	21	362
Garceau, Treffé, Boston, Mass. Lamp-stand	258,571	May 30	1755	497	21	1025
Gard, Walter E., Baltimore, Md. Brick-machine	255,385	Mar. 21	1190	320	21	856
Gard, William P., Parsons, Kans. Cane-stripper	258,047	May 16	1112	310	21	1405
Gardiner, Heman, New York, N. Y. Elliptic spring	257,589	May 9	587	147	21	1379
Gardiner, James M., Hackensack, N. J., assignor to Gamewell Fire Alarm Telegraph Company, New York, N. Y. Electro-magnetic escapement mechanism	256,994	Apr. 25	1529	430	21	1340
Gardner, Albinus M., Darien, and J. North, Middletown, Conn. Metallic valise	256,524	June 13	812	214	21	1643
Gardner, Edward C., Abington, Mass. Heel-plate for boots and shoes	256,311	Apr. 11	720	195	21	1078
Gardner, Frederic J., Cincinnati, Ohio. Sight for fire-arms	259,844	June 20	1229	327	21	1921
Gardner, Frederick A., assignor to himself and R. Dunbar & Son, Buffalo, N. Y. Hoisting and winding drum	253,585	Feb. 14	418	116	21	429
Gardner, Frederick N., assignor to himself and J. E. Woodbridge, Hartford, Conn. Cutter-holder for lathes	256,668	Apr. 18	1147	322	21	1164
Gardner, Henry W. (See Johnson, Henry J., assignor.)						
Gardner, Jesse T., assignor of one-half to R. Thompson, Vaiden, Miss. Axle-box for vehicle-wheels	255,077	Mar. 14	808	215	21	784
Gardner, John M. and S. H., New York, N. Y. Box or basket	252,027	Jan. 10	433	118	21	92
Gardner, Robert A., Providence, R. I. Automatic draft-regulator for oil and gas stoves	254,633	Mar. 7	299	59	21	677
Gardner, Samuel H. (See Gardner, John M. and S. H.)						
Gardner, Theodore A., South Vineland, N. J. Meat-roaster	252,577	Jan. 17	1067	303	21	197
Gardner, William, assignor of one-half to M. C. Jones, Troy, N. Y. Valve	252,094	Jan. 10	509	141	21	95
Gardt, William. (See Ernster and Gardt.)						
Garey, Caleb E., New York, N. Y. Window-shutter	255,848	Apr. 4	113	30	21	969
Garland, Ezra O., New Bedford, Mass. Vapor-burner	251,709	Jan. 3	27	8	21	7
Garland, James S. (See Garland, Nathan M., assignor.)						
Garland, Nathan M., assignor of one-half to J. S. Garland, St. Louis, Mo. Gas-governor	251,804	Jan. 3	222	63	21	40
Garner, Allen, Americus, Miss. Apparatus for the manufacture of turpentine and rosin	251,885	Jan. 3	223	63	21	40
Garner, Samuel R., assignor to himself, J. Bock, A. Huntemer, and O. Reinke, Casaville, Wis. Machine for dressing hoops	252,207	Jan. 10	635	179	21	115
Garretson Ruffler Company. (See Garretson, Thomas B., assignor.)						
Garretson, Thomas B., assignor to Garretson Ruffler Company, Oskaloosa, Iowa. Ruffler for sewing-machines	259,124	June 6	313	83	21	1749
Garrett, Frank. (See Garrett, Richard and F.)						
Garrett, George S. (See Wright, John J., assignor.)						
Garrett, Hugh D., Philadelphia, Pa. Piston-head	254,951	Mar. 14	633	170, 171	21	755
Garrett, Hugh D., Philadelphia, Pa. Piston-head	256,312	Apr. 11	720	195, 196	21	1078
Garrett, James H., Terre Haute, Ind. Edge-blacking powder for leather	258,404	May 23	1354	.....	21	1582
Garrett, Richard and F., Leiston Works, Leiston, county of Suffolk, England. Tubular boiler and furnace	259,845	June 20	1221	327	21	1921
Garrett, Sylvester, Philadelphia, Pa. Fringed fabric	252,573	Jan. 31	1453	408	21	271
Garrigues, Edmund, Massillon, Ohio. Universal joint	252,208	Jan. 10	636	179	21	116
Garrison, John M., Stilesville, Ind. Fence	259,525	June 13	813	215	21	1644
Garrity, William, Malden, and N. Avery, Cambridge, Mass. Coating metallic articles with vulcanized rubber	251,866	Jan. 3	224	.....	21	40
Garside, George, Kalamazoo, Mich. Wind-engine	259,660	June 20	1009	270	21	1685
Garside, Irad L., Paterson, N. J. Bracelet	255,614	Mar. 28	1475	397	21	913
Garson, William H., assignor to Hastings & Garson, Philadelphia, Pa. Hernial truss	252,209	Jan. 10	637	180	21	116
Garth, Walter W. (See Iglehart, Joseph J., assignor.)						
Garton, James P., Jersey City, N. J. Gangway for ships	259,846	June 20	1223	327	21	1921
Gartrell, John H., Penzance, county of Cornwall, England. Fluid-pressure regulating and indicating apparatus for vulcanizing heaters, &c	253,698	Feb. 14	008	172, 173	21	459
Garver, Wesley B., and E. Varian, Philadelphia, Pa. Frame for canopies, awnings, and tents	256,911	June 6	51	13	21	1703
Garvin, John, assignor to W. H. Myers, Philadelphia, Pa. Ore concentrator and separator	255,109	Mar. 21	907	243	21	809
Gary, Albert J., assignor to himself, H. S. Gulick, and E. S. Plimpton, Denison, Iowa. Windmill attachment	259,386	June 13	814	215	21	1644
Gary, Wesley W., Boston, Mass. Railway-signal	257,819	May 9	583	232	21	1436
Gary, Wesley W., Boston, Mass. Automatic railway-signal	257,933	May 16	974	272	21	1470
Gary, Wesley W., Boston, Mass. Magneto-generator for railway-signals	258,749	May 30	1971	556	21	1662
Gaskell, Holbrook, Jr. (See Carey, Gaskell, and Hurter.)						
Gassett, Oscar, Boston, Mass., assignor to Union Switch and Signal Company, Pittsburg, Pa. Electric block signaling apparatus	251,867	Jan. 3	225	63	21	41
Gassett, Oscar, Boston, Mass., assignor to Union Switch and Signal Company, Pittsburg, Pa. Switch and signal locking apparatus	256,797	Apr. 18	1292	364	21	1191
Gassmann, John, Jackson, Mo. Horse-detacher	253,367	Feb. 7	215	61	21	362
Gassmann, John, assignor of one-half to A. Hoffmann, Jackson, Mo. Die and die-stock	256,069	Apr. 18	1147	322	21	1165
Gaston, Ira, Schoolcraft, Mich. Gate-hinge	256,670	Apr. 18	1149	322	21	1165
Gatchell, Albert E., Newport, Ky. Crank for machinery	257,691	May 9	692	198	21	1410
Gates, Charles, Brooklyn, Ohio. Roller-mill	258,755	Jan. 24	1264	361, 362	21	236
Gates, John, Portland, Oreg. Rope-clamp	254,473	Mar. 7	31	8	21	643

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Gates, Lloyd W., Calhoun, Ky. Car-coupling	253,898	Feb. 21	1001	260	21	533
Gates, Philemon T., New York, assignor *pro* one-half to J. H. Nellis, Canajoharie, N. Y. Wash-board	251,710	Jan. 3	26	6	21	7
Gates, Philetus W., Chicago, Ill. Journal-bearing for stone and ore crushers	259,681	June 20	1010	270	21	1685
Gates, Ryerson D., Chicago, Ill. Pulverizing-machine	260,092	June 27	1537	414, 415	21	1979
Gates, William, assignor of one-half to A. L. Babcock, New Haven, Conn. Latch for carriage-doors	258,201	May 23	1429	403	21	1359
Gathmann, Louis, Chicago, Ill. Machine for splitting grain	254,812	Mar. 14	445	120	21	731
Gathmann, Louis, Chicago, Ill. Grinding mill	254,813	Mar. 14	446	120	21	731
Gathmann, Louis, Chicago, Ill. Mill-disk	254,814	Mar. 14	448	121	21	731
Gathright, Albert P., and A. W. Potts, Cooper, Ga. Tire-tightener	256,137	Apr. 11	698	133	21	1036
Gathright, Albert P., and A. W. Potts, Cooper, Ga. Machine for sharpening gin-saws	259,125	June 6	314	83	21	1740
Gathright, Josiah B., Louisville, Ky. Faucet	251,775	Jan. 3	110	31	21	31
Gathright, Josiah B., Louisville, Ky. Fastener for straps	251,776	Jan. 3	111	31	21	31
Gault, Samuel C., Cincinnati, Ohio. Skate	255,161	Mar. 21	910	243	21	800
Gause, William, Kokomo, Ind. Mowing-machine	257,858	May 16	883	247	21	1455
Gause, William, Kokomo, Ind., and J. F. Seiberling, Akron, Ohio, assignors to said Seiberling. Grain-binder	257,934	May 16	975	272, 273, 274	21	1470
Gautier, Fernando, Pascagoula, Miss. Plow	254,859	Mar. 14	634	171	21	755
Gay, Timothy E., Franklin, Mass. Combined harrow and cultivator	260,080	June 27	1788	484	21	2018
Gayman, Moses, assignor to himself and O. P. Gayman, Canal Winchester, Ohio. Pump	255,966	Apr. 4	272	70	21	985
Gayman, O. P. (See Gayman, Moses, assignor.)						
Gaynor, Thomas F., and W. J. Fitzgerald, New Haven, Conn. Self-feeding brush	257,319	May 2	197	55	21	1316
Gear, Alonzo S., assignor to Perpetual Tension Propelling Belt Company, New York, N. Y. Flexible gearing	258,088	Jan. 10	434	119	21	92
Geary, Michael. (See Pimpton, James W., assignor.)						
Gebert, Charles, Trenton, N. J. Drop-bottle	258,454	Jan. 17	948	262	21	173
Gebhard, Julius, assignor of five-eighths to S. Heilpern and J. S. Lockwood, New York, N. Y. Utilizing spent hops in the manufacture of malt liquors	257,935	May 16	980	.....	21	1471
Geese, David M., and J. Sants, Philadelphia, Pa. Car-coupling	254,933	Mar. 14	636	178	21	755
Geiger, John J., Chicago, Ill. Gage for book-binders and others	253,586	Feb. 14	419	117	21	430
Geisel, Adalbert W., St. Louis, Mo. Wash-board	258,405	May 23	1354	441	21	1582
Geist, William, Pittsburg, Pa. Wall-paper-hanging device	258,406	May 23	1355	441	21	1582
Gelatinized Fibre Company. (See Courtenay, William, assignor.)						
Genin, John B., Worcester, Mass. Planer-tooth for saws	257,936	May 16	981	274	21	1471
Gent, Alfred, Sherman, Tex. Grave-guard	257,859	May 16	885	248	21	1455
George, John S. (See Gross and George.)						
George, Joseph, Fayetteville, Ark. Plow	254,634	Mar. 7	299	59	21	677
Gerald, Amos F., Fairfield, Me. Table or stand for machines, &c	256,671	Apr. 18	1130	303	21	1165
Gerber, Joseph, Fremont Centre, Mich. Boiler-furnace	252,656	Jan. 24	1176	300	21	218
Gergens, Frank, Brooklyn, assignor to E. Gillet, New York, N. Y. Apparatus for making clear ice	258,226	May 23	1346	381	21	1545
Gergens, Frank, Brooklyn, assignor to E. Gillet, New York, N. Y. Ice-machine	258,227	May 23	1347	201	21	1545
Gering, Peter, Burrton, Kans. Wind-engine	254,303	Feb. 28	1262	375	21	691
Gerlach, Charles A. (See Derby, Thomas, assignor.)						
Gerlach, Rudolph P., Cleveland, Ohio. Fire-cleaner	260,189	June 27	1689	459	21	1997
Germer, John A. C. (See Troup and Germer.)						
Germoull-Bounand, Jean B., Paris, France. Producing colored photographs	253,669	Feb. 14	561	.....	21	455
Germon, Adolphus. (See Covell, Frank M., assignor.)						
Gerow, Dan, Macon City, Mo. Shelving-bracket	256,672	Apr. 18	1152	303	21	1165
Gerrard, Frank, assignor of one-half to E. B. Sherwood, Scranton, Pa. Railway-torpedo and detonating signal	251,868	Jan. 3	226	63	21	41
Gerry, James H., Newark, N. J. Watch train-plate	253,999	Feb. 21	1001	260	21	533
Gerwig, Lewis D., Terre Haute, Ind. Chair	257,937	May 16	981	274	21	1471
Gessner, Ernst, Aue, Saxony, Germany. Feeding device for carding-machines	257,313	May 2	196	56	21	1316
Gibbins, James Springfield, Mass. Clutch for shafting	257,488	May 9	497	118, 119	21	1363
Gibbon, Thomas H., Adamsville, N. Y., assignor of one-fourth to A. P. Law, trustee, Marshall, Tex. Railway alarm-signal	252,578	Jan. 17	1068	303	21	197
Gibboney, Adolphus F., Belleville, Pa. Grain and grass-seed distributer	258,407	May 23	1357	441	21	1582
Gibbons, John F., and G. A. Liebig, Baltimore, Md. Treating phosphates for fertilizers	252,029	Jan. 10	434	.....	21	92
Gibbs, George W., Salem, Ohio. Fire-escape	256,907	Apr. 11	589	161	21	1055
Gibbs, Lewis, Canton, Ohio, assignor to himself, J. R. Bacher, and H. A. Cavash. Plow	259,126	June 6	315	83	21	1740
Gibbs, William W. (See Hanlen, John, assignor.)						
Gibson, Charles J., Bergen Point, N. J. Clutch	259,527	June 13	814	215	21	1644
Gibson, Edward T., Fort Washakie, Wyo. Ter. Tracing-desk	253,368	Feb. 7	216	62	21	363
Gibson, Everett G., Providence, R. I. Shaft-hanger	258,572	May 30	1756	497	21	1025
Gibson, John N., Cincinnati, Ohio. Flue-brush	253,034	Jan. 31	1450	457	21	304
Gibson, Robert, *et al.* (See Hunter, Alpheus S., assignor.) (Reissue.)						
Gibson, Thomas, and E. Armstrong, Brooklyn, assignors to Hitchcock, Dermody & Co., New York, N. Y. Machine for cutting up palm	257,314	May 2	200	56	21	1317
Gibson, Thomas H., Fremont, Nebr. Power mechanism	259,127	June 6	316	84	21	1749
Gielow, John, Chicago, Ill. Faucet	255,109	Mar. 21	911	244	21	809
Gierlot, John. (See Stephan and Gierlot.)						
Giese, James A., assignor to Union Brass Manufacturing Company, Chicago, Ill. Knob attachment	254,099	Feb. 21	1002	260	21	533
Gieseeke, Adolph, Buffalo, N. Y. Manufacture of baking-powder	256,832	Apr. 25	1237	.....	21	1206
Gieseeke, Adolph, and H. Hamlin, Buffalo, N. Y.; said Gieseeke assignor to said Hamlin. Manufacturing corn-syrup	253,919	Feb. 21	998	253	21	517
Gieseeke, Adolph, and H. Hamlin, Buffalo, N. Y.; said Gieseeke assignor to said Hamlin. Composite corn-syrup	253,920	Feb. 21	998	253	21	517
Gifford, Charles H., Norwood, N. Y. Sewing-machine	255,560	Mar. 28	1330	361	21	988
Gifford, John, Watertown, N. Y. Churn	257,570	May 9	589	147, 148	21	1380
Gifford, John Z., New York, N. Y. Packing-head	254,635	Mar. 7	299	60	21	677
Gifford, William, Schenectady, N. Y. Sleeve-fastening	258,408	May 23	1357	441	21	1582
Gilbert, Andrus L., Albany, N. Y. Machine for sawing off and tenoning piles	254,954	Mar. 14	637	179	21	755
Gilbert, Andrus L., Albany, N. Y. Pile-driver	254,955	Mar. 14	638	179, 173	21	756
Gilbert, Benjamin F., assignor of one-half to C. H. Spencer, Philadelphia, Pa. Trimming attachment for sewing-machines	260,091	June 27	1787	484	21	2018
Gilbert, John S., New York, N. Y. Discharge-pipe plug for wash-basins	258,048	May 16	1112	310	21	1405

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gilbert, Sylvester P., *et al.* (See Horton, Jacob C., assignor.)						
Gilbert, Thomas S., assignor to M. Adler, New Haven, Conn. Corset-stay	259,128	June 6	316	84	21	1749
Gilbert, William F., assignor to A. E. Hewitt, Birmingham, Conn. Corset-clasp	252,756	Jan. 24	1285	302	21	257
Giles, Isaac W., South Abington, Mass. Tobacco-pipe	252,876	Jan. 31	1453	407	21	271
Giles, Jerome, South Bend, Ind. Burglar-alarm	252,005	Jan. 10	510	141	21	95
Giles, Jerome, South Bend, Ind. Waste-valve for pumps	255,276	Mar. 21	1049	281	21	853
Giles, William W., Washington, D. C. Velocipede	252,455	Jan. 17	948	262	21	173
Gilford, Frederick E., assignor to W. Corey, Manchester, N. H. Knitting-machine needle	253,800	Feb. 21	889	235	21	505
Gill, Jabez H., Philadelphia, Pa. Implement for capping and decapping cartridges	257,890	May 16	896	248	21	1456
Gill, William A. (See Simpson, Joseph, assignor.)						
Gillespie, James E., Warwick, N. Y. Waterproofing and preservative compound	253,369	Feb. 7	216	.....	21	383
Gillespie, James E., Warwick, N. Y. Waterproofing compound	255,615	Mar. 28	1477	.....	21	913
Gillet, Etienne. (See Gergens, Frank, assignor.)						
Gillett, Egbert W., Chicago, Ill. Lining-package	256,995	Apr. 25	1531	430	21	1240
Gillett, Harrison, assignor of one-half to J. H. Gillett, Lake City, Minn. Fire-box attachment for farm-engine boilers. (Reissue)	10,016	Jan. 24	1431	399	21	260
Gillett, James H. (See Gillett, Harrison, assignor.) (Reissue.)						
Gilliam, Andrew J. (See Smith, William F., assignor.)						
Gilligan, John E., Elko, Nev. Oil-cup	258,049	May 16	1113	310	21	1495
Gilliland Electric Manufacturing Company. (See Gilliland, James F., assignor.)						
Gilliland, James F., assignor to Gilliland Electric Manufacturing Company, Indianapolis, Ind. Telephone-signal generator	253,597	Feb. 14	405	141	21	441
Gillon, Elam H. (See Jordon and Gillon.)						
Gilpin, Joseph F., and E. V. Clemens, Ansonia, Conn. Wire-dasher	259,528	June 13	815	215	21	1844
Gilson, Walter H. (See Rankin, Abram G. W., assignor.)						
Gimingham, Charles H., Newcastle-upon-Tyne, county of Northumberland, England. Electric lamp	255,277	Mar. 21	1050	281 288	21	834
Ginn, Frederick B., Oakland, Cal. Fruit-can	253,035	Jan. 31	1651	457	21	304
Ginn, Frederick B., Oakland, Cal. Sealing cans	253,036	Jan. 31	1652	458	21	304
Gipe, Ames, Roann, Ind. Thill-coupling	259,302	June 13	532	149	21	1753
Girard, Howell H. (See McCabe, Patrick, assignor.)						
Gissinger, Samuel, Pittsburg, Pa. Nut-lock	255,780	Apr. 4	33	10	21	956
Githens, George M., Brooklyn, N. Y. Steam rock-drill	257,938	May 16	962	274	21	1471
Githens, Joseph C., New York, N. Y. Pipe-coupling	252,657	Jan. 24	1177	330	21	218
Given, John L., Cambridge, Mass. Mechanical toy	258,743	May 30	1973	557	21	1663
Glasgow, William H. (See McNally and Glasgow.)						
Glaskin, Edwin E., Lower Cape, New Brunswick, Canada. Fire-kindler	252,757	Jan. 24	1286	.....	21	237
Glass, Gilbert, White Oaks, N. Mex. Ter. Centrifugal machine for separating ores	255,967	Apr. 4	973	71	21	995
Glass Veneer Company. (See Budd, James, assignor.)						
Gleason, George R., assignor to Union Brass Manufacturing Company, Chicago, Ill. Soldering-machine	254,298	Feb. 28	1252	347	21	583
Gleason, John B., Dayton, assignor to himself and C. M. Gleason, Cleveland, Ohio. Car-coupling	259,129	June 6	317	84	21	1749
Gleason Manufacturing Company, E. P. (See Orpen, Charles N., assignor.)						
Gleason, Miner T., Brodhead, Wis., assignor of one-half to E. F. Warren. Fence-post	254,304	Feb. 28	1363	376	21	601
Gleason, Catharine M. (See Gleason, John B., assignor.)						
Glick, George W., Paris, assignor of one-third to C. A. Minor, Edgar, Ill. Washing-machine	258,409	May 23	1558	442	21	1582
Gloger, Anton F., Jr., and J. P., Columbus, Tex. Composition for staining wood	258,050	May 16	1114	.....	21	1495

Hosmer, Charles S., Jr., *et al.* (See Carter, William D., assignor.)						
Hood, Cornelius, Cleveland, Ohio. Combined step-ladder and wash-bench	257,493	May 9	434	120	21	1365
Hood, Ledner H., and G. H. Fox, Grand Haven, Mich. Spring bed-bottom	254,658	Mar. 7	253	65	21	881
Hooker, Frank A. (See Lowell and Hooker.)						
Hooker, William C., Abingdon, Ill. Gate	257,330	May 2	222	63	21	1361
Hooker, William D., Oakland, Cal. Hand-lever attachment for steam-pumps	251,715	Jan. 3	32	9	21	8
Hooker, William D., Oakland, Cal. Steam-generator	255,509	Mar. 28	1351	364	21	880
Hooker, William D., Oakland, Cal. Balanced valve	253,166	Jan. 31	1833	505	21	332
Hooker, William D., Oakland, Cal. Pump	255,900	Apr. 4	220	78	21	1000
Hooker, William D., Oakland, Cal. Condenser	256,479	Apr. 18	931	261	21	1198
Hooker, William D., Oakland, Cal. Deep-well pump	259,304	June 13	647	171	21	1814
Hooker, William D., Oakland, Cal. Adjustable steam cut-off valve	260,026	June 27	1456	303	21	1967
Hooks Smelting Company. (See Hollister, James D., assignor.)						
Hooper, Thomas. (See Hinks, Hooper, and Baker.)						
Hoopes Artificial Stone, Cement and Paint Company. (See Einaigl, Victor, assignor.)						
Hoopes, William H., Baltimore, Md. Manufacture of artificial stone	255,991	Apr. 4	302	79	21	1000
Hoopes, William H., Baltimore, Md. Manufacture of artificial stone	255,992	Apr. 4	302	79	21	1000
Hooton, Marcena M., Centralia, assignor to S. A. Hooton, Clinton County, Ill. Raking mechanism for harvesters	255,510	Mar. 28	1352	364	21	880
Hooton, Susan A. (See Hooton, Marcena M., assignor.)						
Hoover, Owens & Rentschler Company. (See Helvey, George H., assignor.)						
Hoover, Abel, *et al.* (See Remy, Noah T., assignor.)						
Hoover, Oliver F., assignor of one-half to J. D. Arras, Dayton, Ohio. Billiard-table adjuster and leveler	252,378	Jan. 17	238	236	21	157
Hoover, William L., Norway, Iowa. Strap splice or clasp	257,945	May 16	990	276	21	1478
Hopedale Machine Company. (See Fay, Rimmon C., assignor.)						
Hopf, Frank, Allegheny, Pa. Whip-holder	250,021	June 6	187	50	21	1727
Hopfen, Anton, New York, N. Y. Fastener for gloves, gaiters, &c	254,013	Feb. 21	1020	285	21	536
Hopkins, Addison S., Pascoag, R. I. Spindle and bearing therefor	259,016	June 6	181	49	21	1725
Hopkins, Albert J., *et al.* (See Woodruff, Leslie B., assignor.)						
Hopkins & Dickinson Manufacturing Company. (See Collins, John, assignor.)						
Hopkins, Ewin, *et al.* (See Le Vin, George W., assignor.)						
Hopkins, George M., New York, N. Y. Telephone central-office system	257,331	May 2	223	63	21	1391
Hopkins, George M., Brooklyn, N. Y. Galvanic battery	256,691	Apr. 18	1174	330	21	1170
Hopkins, George M., Brooklyn, N. Y. Telephone-transmitter	258,757	May 30	1987	561	21	1665
Hopkins, George M., Brooklyn, N. Y., assignor, by mesne assignments, to People's Telephone and Telegraph Company, of New York. Telephone-transmitter	257,332	May 2	225	63, 64	21	1392
Hopkins Improved Scale Company. (See Hopkins, William W., assignor.)						
Hopkins, John M., assignor to R. L. Hopkins, Edgewood, Md. Corn-silking machine	254,134	Feb. 28	1169	327	21	569
Hopkins, Rachel L. (See Hopkins, John M., assignor.)						
Hopkins, Truman P., Milwaukee, Wis. Curtain-fixture	259,136	June 6	345	91	21	1755
Hopkins, William W., assignor to Hopkins Improved Scale Company, Thorntown, Ind. Platform-scales	256,692	Apr. 18	1175	330	21	1170
Hopper, George H. (See Deering, Mark L., assignor.)						
Hopper, George H., Unionville, Ohio. Method of and apparatus for gluing barrels	255,861	Apr. 4	199	34, 35	21	972
Horack, Charles L., Brooklyn, N. Y. Car-coupling	252,767	Jan. 24	1220	364	21	339
Horack, Charles L., Brooklyn, N. Y. Car-coupling	253,059	Jan. 31	1667	492	21	397
Horan, Thomas F., Cleveland, Ohio. Grain-transporting device	256,319	Apr. 11	798	196	21	1069
Horn, G. B., *et al.* (See Bryson, Ryon P., assignor.)						
Horn, George A., Newark, N. Y. Fence	256,433	Apr. 11	888	240	21	1103
Horn, John W., Rhea's Mills, Tex. Fire-place	254,216	Feb. 28	1250	349	21	584
Horn, William C. (See Hafely, Alfred C., assignor.)						
Hornbostel, Charles, Brooklyn, N. Y. Apparatus for roasting ores	256,569	Apr. 18	1086	290	21	1144
Horne, John B., assignor of two-thirds to T. C. Lean and R. Cooper, Chicago, Ill. Combined folding bed and wardrobe	254,380	Feb. 28	1377	379	21	604
Horne, John H., Lawrence, Mass. Roll-bar for pulp-engines	253,606	Feb. 14	506	145	21	443
Horne, William C., Bexley, county of Kent, England. Crayon	257,708	May 9	714	.....	21	1414
Horne, William L., Meriden, Conn. Lamp-burner	256,736	May 30	1988	561	21	1065
Hornig, Julius, Jersey City, N. J. Mechanism for converting rotary into oscillating motion	252,766	Jan. 24	1301	365	21	340
Hornum, William H., New York, assignor to Railway Register Manufacturing Company, Buffalo, N. Y. Fare register and recorder	256,389	Apr. 11	799	{198 / 199}	{21 / 21}	1069
Hornung, August, and A. H. Face, Castroville, Tex. Tree-protector	254,135	Feb. 28	1169	367	21	589
Horowitz, Adolph, assignor of one-half to M. Simonton, Cincinnati, Ohio. Ice-creeper	259,311	June 13	545	143	21	1785
Horrall, William A., Washington, Ind. Bed-spring	259,365	June 13	649	171	21	1815
Horrigan, Jeremiah, Solomon, Iowa. Draft-equalizer	252,667	Jan. 24	1190	338	21	281
Horsman, Edward I. (See Crandall, James A., assignor.)						
Horsman, Edward I. (See Strauders, Walter, assignor.)						
Hortman, John H., Hopewell, N. J. Railway-switch	257,668	Apr. 25	1544	433	21	1942
Horton, Charles H., Wellington, Ohio. Grain-thrasher and clover-seed huller	259,157	June 6	346	91	21	1755
Horton, Jacob C., assignor of one-half to H. Weil and S. P. Gilbert, New York, N. Y. Unlocking and opening shutters	258,068	May 16	1130	317	21	1498
Horton, James A., New Castle, Pa. Cooking-stove	253,206	Feb. 7	37	12	21	353
Horton & Son Company, E. (See Kirk, Samuel J., assignor.)						
Horton, Theodore, assignor to himself, W. I. Fitch, and W. W. Widdl, Sr., Bluffton, Ind. Hand corn-planter	257,890	May 9	834	238	21	1436
Horton, Theodore, assignor to himself, W. I. Fitch, and W. W. Widdl, Sr., Bluffton, Ind. Hand corn-planter	257,891	May 9	835	238	21	1436
Hosch, Ferdinand, Brooklyn, N. Y. Machine for cleaning fur robes	257,767	May 9	714	1?8	21	1414

Kolbe, Hugo, Breslau, Prussia, Germany. Incrustation-preventive	256,235	May 23	1500	.....	21	1542
Koll, Benjamin B., Salem, Ohio. Stove-lid	251,899	Jan. 3	265	73	21	47
Kemp, Albert, New York, N. Y. Neckwear shield and fastener	258,709	May 30	1000	304	21	1667
Kemp, John F., Chicago, Ill. Lozenge-frame	252,694	Jan. 24	1117	313	21	283
Kemp, John F., Chicago, Ill. Machine for brazing band-saws	252,695	Jan. 24	1118	313	21	283
Kemp, John R., Shickshinny, Pa. Fire-escape	259,441	May 23	1500	452	21	1568
Kenbrook, Peter C., New Orleans, La. Cake-holder	252,989	Jan. 10	661	186	21	130
Kertzpeter, John F. (See Wilson and Kertzpeter.)						
Kesor, David T., Shamokin, Pa. Revolving book-stand	256,442	May 23	1499	452	21	1569
Kestal, Louis, *et al.* (See Levi, George W., assignor.)						
Kesinski, Wladyslaw T., Brooklyn, N. Y. Furniture-caster	252,954	Jan. 31	1540	431	21	997
Kesinski, Wladyslaw T., Brooklyn, N. Y. Device for converting reciprocating into rotary motion	257,874	May 16	902	252	21	1458
Kesinski, Wladyslaw T., Brooklyn, N. Y. Bed-bottom	257,953	May 16	900	276	21	1475
Kesinski, Wladyslaw T., assignor of two-tenths to H. West, Brooklyn, N. Y. Device for converting motion	257,344	May 2	240	69	21	1304
Kesler, Andrew, New Milford, Ohio. Clamp	252,779	Jan. 24	1315	368	21	342
Kesler, John A., assignor to W. F. Miller, Buffalo, N. Y. Grain-separator	255,435	Mar. 28	1258	339	21	675
Kesler, George, Evansville, Ind. Lubricating-journal	256,655	May 30	1002	305	21	1544
Kesler, George, Evansville, Ind. Reversing-gear for engines	259,468	June 13	857	{172 / 174}	21	1816
Kesner, Joseph, St. Louis, Mo. Grate	252,696	Jan. 24	1118	314	21	283
Kessee, F. H. (See Wheeler, Samuel R., assignor.)						
Kessler, Joseph, Johannisberg-on-the-Rhine, Germany. Lithographic-printing press	252,770	May 30	2000	585	21	1667
Kesselman, Charles G. (See Hardy, Dexter D., assignor.)						
Kesselstat, John, Lockport, N. Y. Inside blind	255,516	Mar. 28	1339	366	21	681
Kester, Aaron S. (See Meredith and Kester.)						
Kestner, John. (See Bodenstawahl, John, assignor.)						
Kessler, James W., New York, N. Y. Car-door lock	256,669	May 16	1146	301	21	1561
Kestl, Maurice, New York, assignor to himself and W. Lang, Brooklyn, N. Y. Stair-carpet fastener	252,699	Jan. 24	1207	338	21	284
Kesto, Henry C., Chicago, Ill. Balanced slide-valve	256,146	Apr. 11	498	136	21	1040
Keighaem, Stephen M., Golden, Colo. Harvester	252,478	Jan. 17	978	273	21	177
Keogher, Wasilius C., Allegheny, Pa. Die for manufacturing the tongues of car-couplings	256,147	Apr. 11	499	136	21	1040
Kern, Stephen R., Plainfield, N. J. Ore-crushing machine. (Reissue)	10,695	Apr. 11	502	{249 / 250}	21	1109
Kernwell, Henry. (See Flood and Kernwell.)						
Kesselmeyer, Louis, Cincinnati, Ohio. Apparatus for treating leaf-tobacco	257,724	May 9	730	204	21	1417
Kesser, August C., assignor to Chicago Rawhide Manufactoring Company, Chicago, Ill. Belt-trimming machine	256,639	Mar. 28	1305	{494 / 495}	21	910
Kesser, William G., St. Louis, Mo. Air-ship	252,955	Jan. 31	1549	432	21	998
Kuhn, Edmund, New York, N. Y., assignor to Jerome Clock Company, New Haven, Conn. Alarm-clock	259,174	June 6	369	96	21	1759
Kuhnen, Mathias. (See Von Krause and Kuhnen.)						
Kullrich, Franz P., Berlin, Germany. Pencil-sharpener	254,008	Mar. 14	660	183	21	782
Kulman, John C., Marshall, Ill. Combined tape-line and shears	259,356	June 13	859	225	21	1851
Kulp, Carl. (See Pickhardt, Gustav, assignor.)						
Kunkel, Cornelius, Oregon, Mo. Windmill	259,357	June 13	851	225	21	1851
Kuntze, Gustavus R. W., Providence, R. I. Manufacture of locket-rims	256,963	Apr. 25	1403	400	21	1221
Kunz, Frederick O., assignor to Iler & Co., Omaha, Nebr. Apparatus for preparing grain for fermentation	260,360	June 27	1797	457	21	2089
Kurtz, Charles W., assignor to Bradley, Kurtz & Co., New York, N. Y. Bag-fastener	254,449	Feb. 28	1514	414	21	632
Kurtz, I. Ellis. (See Mosher, John P., assignor.)						
Kurtz, William M., Columbus, Ohio. Strap-hinge	257,662	Apr. 25	1399	437	21	1945
Kusmaul, William H., and F. Reiger, Springfield, Ill. Corn-planter	256,467	Apr. 18	943	283	21	1130
Kustal, Guido. (See Rhetzhaly and Kustal.)						
Küstermann, Gustav, Green Bay, Wis. Lead and crayon holder	256,983	Apr. 11	600	145	21	1056
Kuttroff, Adolf. (See Pickhardt and Erdemann, assignors.)						
Kyle, Oscar N., assignor to Florence Machine Company, Florence, Mass. Extension-top for oil-stoves	259,319	June 13	838	145	21	1797
Kyser, Louis, and A. C. Rex, Chicago, Ill. Toy scales	258,666	Jan. 24	1191	314	21	280
Kyser, Louis, and A. C. Rex, Philadelphia, Pa. Toy money-box	252,697	Jan. 24	1189	314	21	280
Kyser, Louis, and A. C. Rex, Philadelphia, Pa. Toy musical wheel	256,771	May 30	2001	585	21	1667
Kyser, Louis, and A. C. Rex, Philadelphia, Pa. Toy chariot	256,772	May 30	2002	585	21	1667
Kyser, Louis, and A. C. Rex, Philadelphia, Pa. Toy money-box	259,468	June 13	856	174	21	1817
La Dew, Charles, *et al.* (See Stewart, Admiram J., assignor.) (Reissue.)						
La Dew, Charles, Albany, N. Y. Sulky-harrow	251,900	Jan. 3	266	73	21	47
La Dew, Charles, Albany, N. Y. Sulky-harrow	256,981	May 16	1147	{302 / 303}	21	1301
La Dew, Charles, assignor of one-half to Wheeler & Melick Company, Albany, N. Y. Sulky-harrow. (Reissue)	10,698	Apr. 25	1707	478	21	1271
La Dew, John, Albany, N. Y. Baling-press	252,982	Jan. 31	1456	{668 / 669}	21	971
La Grange, Robert J., Philadelphia, Pa. Finger and scarf ring	252,689	Jan. 31	1709	469	21	311
La Grange, Robert J., Philadelphia, Pa. Finger, scarf, and other jewelry rings	257,622	Apr. 25	1561	457	21	1945
Lane, Hall, Golden, N. Y. Gang-press	256,904	Apr. 25	1402	400	21	1221
Lacey, Griffin S., New York, N. Y. Gas-regulator	255,317	Mar. 28	1200	305	21	681
Lackey, Andrew M., Brownsburg, Va., assignor to J. A. Porter and J. H. Chambers, Macy, Ind. Cutter-bar for mowers and reapers	255,267	Mar. 21	1197	301	21	899
Ladd, Daniel R., Baltimore, assignor of one-half to R. J. B. Whittaker, Belair, Md. Handle for glass covers	256,268	Mar. 21	1196	301	21	899
Ladd, Herman W. (See Spencer, James L., assignor.)						
Ladergan, Alphonse, Kensington, county of Middlesex, England. Hydraulic hoisting machinery	259,175	June 6	370	98	21	1759
Lafaytte, Lawrence, Belcourt, N. H. Fish for mill and other stones	256,965	Apr. 25	1403	401	21	1221
Lafleur, Jean, New Orleans, La. Car-replacer	254,228	Mar. 14	672	187	21	736
Lagin, John M., New York, N. Y. Brushing apparatus	259,772	May 30	2000	585	21	1668
Lagin, Perley, Warren, assignor to G. Draper & Sons, Hopedale, Mass. Mechanism for operating doffer-combs of carding-engines	259,656	May 30	1999	585	21	1645

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr's.	Vol.	Page.
Mason, William, assignor to Colts Patent Fire-Arms Manufacturing Company, Hartford, Conn. Drop-hammer	260,215	June 27	1695	458	21	2003
Massee, Dreury W., Marshallsville, Ga. Cotton-chopper	255,643	Mar. 28	1512	406	21	919
Massey, Gideon B., assignor to J. Lorillard, trustee, New York, N. Y. Compound engine	252,485	Jan. 17	968	275	21	179
Massey, Gideon B., assignor to J. Lorillard, trustee, New York, N. Y. Compound beam-engine	257,355	May 2	254	72	21	1336
Massey, John, Salem, Mo. Wagon-brake	257,733	May 9	744	206	21	1419
Masten, Philo W. (See Michael and Masten.)						
Master, David D. M., Flushing, N. Y. Elastic stocking	255,180	Mar. 21	999	248	21	813
Master, Josiah R., Johnsonville, N. Y. Bed-spring	257,879	May 16	910	254	21	1439
Mastera, Josiah R., Johnsonville, N. Y. Bed-spring	256,347	Apr. 11	759	.....	21	1088
Mastin, William G., Oswego, N. Y. Composition for use in smelting iron and other ores	256,348	Apr. 11	760	208	21	1026
Matheny, Daniel R., Blackville, S. C. Cotton-plow	254,560	Mar. 7	136	.....	21	681
Mathes, Michael, assignor to himself and G. Steup, Jersey City, N. J. Fire-extinguishing compound	252,868	Jan. 31	1466	410	21	273
Mathews, Samuel R. C., Philadelphia, Pa. Hydrant	252,234	Jan. 10	670	189	21	122
Mathewson, Jeremiah E. (See Tilghman and Mathewson.)						
Mathieson, Thomas, Almaden, Cal. Harrow	257,967	May 16	1001	279	21	1475
Mathis, Gerhard, New York, N. Y. Wood-carving machine	258,117	Jan. 10	534	148 149	21	99
Mathison, Joseph, Lynn, assignor to himself, C. B. Lancaster, Boston, and W. D. Allen, Lynn, Mass. Machine for and method of sewing buttons to cloth, &c	257,356	May 2	253	72	21	1337
Matney, William D., Harvel, Ill. Burglar-alarm	260,106	June 27	1562	421	21	1969
Matthews, Abram N., Norwood, Mass. Emery-holder						
Matthews, Abram N., Norwood, Mass., assignor to Matthews Steam Spring Packing Company, Nashua, N. H., and Boston, Mass. Packing valve-stems for steam and other engines	258,957	Jan. 31	1552	432	21	286
Matthews, Charles B., Newark, N. J. Harness	259,184	June 6	380	100	21	1740
Matthews, Hugh W., Baltimore, Md. Thrashing-machine	259,185	June 6	381	100 101	21	1761
Matthews, Jane, *et al.* (See Needham, Orwell H., assignor.)						
Matthews, John, New York, N. Y. Soda-water fountain	260,037	June 27	1471	397	21	1969
Matthews Steam Spring Packing Company. (See Matthews, Abram N., assignor.)						
Matthews, Thomas F., New York, N. Y. Syringe-box	256,716	Apr. 18	1208	338	21	1176
Matthews, William N., *et al.* (See Lancaster, Morris, assignor.)						
Matthey, Jean M. L., St. Louis, Mo. Universal tongs	259,886	June 20	1965	339	21	1928
Matthiessen, Frans O., *et al.* (See Humphrey, Henry C., assignor.)						
Matthiessen, Frans O., Irvington, N. Y. Destructible shutter-fastening	256,439	Apr. 11	868	242	21	1105
Matthiessen, Frans O., Irvington, N. Y. Shutter-fastener	257,294	May 9	839	234	21	1437
Matthiessen, Frans O., Irvington, N. Y., and E. E. Quimby, Orange, N. J., assignors to Chicago Sugar Refining Company, Chicago, Ill. Washing out starch-troughs	257,958	May 16	1002	280	21	1475
Matthiessen, Frans O., Irvington, N. Y., and A. Behr, Jersey City, N. J., assignors to Chicago Sugar Refining Company, Chicago, Ill. Method of and apparatus for emptying starch-tables	257,959	May 16	1003	280 281	21	1475
Mattingly, Bennett D. (See Bouchet, Michael, assignor.)						
Mattoon, Alfred B., assignor of one-half to D. Heald, Owasco, N. Y. Scoop for grain, sugar, &c	256,150	Apr. 11	501	137	21	1041
Matzner, Johann, Mount Pleasant, D. C. Grinding-mill	255,303	Mar. 21	1080	295	21	840
Maul, Hugo, and F. Landemberger, New York, N. Y. Parasol	256,560	Apr. 18	1037	293	21	1146
Maus, Clement A., Indianapolis, Ind. Apparatus for drawing beer	256,717	Apr. 18	1209	338	21	1176
Maus, Matthias A., Indianapolis, Ind. Apparatus for fermenting malt-liquors	253,214	Feb. 7	45	14	21	354
Mauser, Paul, Oberndorf-on-the-Neckar, Würtemberg, Germany. Machine for rifling gun and pistol barrels	259,631	June 6	200	53, 54	21	1728
Maxfield, John, London, England. Mechanical game or parlor race-course	259,387	June 13	569	147	21	1798
Maxfield, Lemuel, Moline, Ill. Lubricator	253,404	Feb. 7	257	74	21	390
Maxfield, Lemuel, Moline, Ill. Steam-cylinder cock	253,483	Feb. 7	257	74	21	390
Maxheimer, John, Brooklyn, N. Y. Feed-cup for bird-cages	252,611	Jan. 24	1193	315	21	209
Maxim, Hiram S., Brooklyn, N. Y. Electric lamp	252,391	Jan. 17	869	241	21	160
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electric lamp	252,392	Jan. 17	870	242	21	160
Maxim, Hiram S., Brooklyn, assignor, by mesne assignments, to United States Electric Lighting Company, New York, N. Y. Electric lamp	252,840	Jan. 24	1407	392	21	257
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electric lamp	254,032	Feb. 21	1048	292	21	541
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Carbon for electric lamps	254,672	Mar. 7	974	73	21	685
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electric lamp	255,304	Mar. 21	1092	295	21	840
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electric lamp	255,305	Mar. 21	1092	295 296	21	841
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electrical meter	255,306	Mar. 21	1095	296	21	841
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electrical meter	255,307	Mar. 21	1097	296	21	842
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electrical meter	255,308	Mar. 21	1099	296	21	842
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Manufacture of carbon conductors	255,309	Mar. 21	1100	297	21	842
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Speed-regulator for dynamo-electric machines	255,310	Mar. 21	1101	297	21	843
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Regulator for dynamo-electric machines	255,311	Mar. 21	1104	297 298	21	843
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. Electrical engineering	255,312	Mar. 21	1106	298	21	843
Maxim, Hiram S., Brooklyn, assignor to United States Electric Lighting Company, New York, N. Y. System of electrical generation and distribution	256,910	Apr. 25	1430	402	21	1292
Maxim, Hiram S., New York, N. Y., assignor, by mesne assignments, to F. A. Lyman and H. F. Taylor, Cleveland, Ohio. Apparatus for generating gas for head-lights. (Reissue)	10,101	May 2	372	104	21	1348
Maxon, Thomas, assignor of one-half to J. W. Carpenter, Dayton, Ohio. Windlass	260,307	June 27	1808	490	21	2021
Maxstadt, Francis W., assignor of one-half to B. Nusbaum, Albany, N. Y. Siphon	257,235	May 9	841	234	21	1437
Maxwell, Allan J., Boston, Mass., assignor to J. A. Yancey, Richmond, Va. Blank-book. (Reissue)	9,907	Jan. 3	398	107	21	66
Maxwell, David, Paris, Ontario, Canada. Harvesting-machine	256,151	Apr. 11	502	137	21	1041
Maxwell, Henry C. (See Barnard, Edward, assignor.)						
Maxwell, Henry C. (See Schoonmaker, Daniel, assignor.) (Reissue.)						
May, Edward S., Detroit, Mich. Cigar-case	256,003	May 16	1162	325	21	1505

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
May, Ezra A. (See Sack, William M., assignor.)						
May, John P., Troy, Ala. Horse-detacher	259,567	June 13	963	229	21	1853
Mayall, Thomas J., Reading, Mass. Wringing-machine	254,846	Apr. 25	1357	363	21	1210
Mayer, Charles G., Nauvoo, Ill., assignor of one-half to L. Rassieur, St. Louis, Mo. Removable pipe-section for tanks	256,349	Apr. 11	761	209	21	1066
Mayer, Charles G., Nauvoo, Ill., assignor of one-half to L. Rassieur, St. Louis, Mo. Refrigerating apparatus	256,350	Apr. 11	761	209	21	1066
Mayer, John, Holly Springs, Miss. Salve	256,847	Apr. 25	1358	.....	21	1210
Mayer, Morris, Columbus, Ohio. Box-fastener	255,313	Mar. 21	1107	296	21	844
Mayer, Strouse & Co. (See Adler, Max, assignor.)						
Mayhew, Theophilus, assignor of two-thirds to R. Slee and C. P. Luckey, Poughkeepsie, N. Y. Steam churn-power	258,383	Jan. 17	786	218	21	146
Maynard, Alfred, Brooklyn, N. Y. Pneumatic propeller	253,915	Feb. 7	46	15	21	354
Maynard, George C., Washington, D. C. Electric push-button	250,188	June 6	393	100	21	1761
Mayo, Goodrich A., assignor to G. H. Noble, Erie, Pa. Sewing-machine	259,235	Jan. 10	670	189	21	122
Mayo, Goodrich A., assignor to G. H. Noble, Erie, Pa. Take-up regulator for sewing-machines	259,646	June 13	964	257	21	1870
Mayor, Thomas, Providence, R. I. Spindle for spinning and twisting machines	252,486	Jan. 17	989	275	21	169
Mayor, Thomas, Providence, R. I. Bearing for spindles of spinning and twisting machines	255,644	Mar. 28	1512	406	21	930
McAdams, George, Winchester, Ind. Stove-pipe shelf and stove-lid holder	255,441	Mar. 28	1365	341	21	876
McAdoo, Thomas, Baltimore, Md. Gas-engine	253,406	Feb. 7	256	75	21	390
McAndrew, William J. G., assignor of two-thirds to J. Eastwood and R. Kennedy, Hamilton, Ontario, Canada. Printer's galley	257,504	May 9	444	124	21	1367
McAnespey, John, Philadelphia, Pa. Coffee-pot	258,786	May 30	2020	570	21	1670
McArdell, John W., Brooklyn, N. Y. Guard for plumbers' shave-hooks	257,035	Apr. 25	1573	441	21	1247
McAvoy, Anthony, *et al.* (See Richards, Hezekiah H., assignor.)						
McBean, Alexander, and J. H. Watson, assignors of one-third to H. Clark, Tawas City, Mich. Evaporating salt brine	252,612	Jan. 24	1124	315	21	909
McBeth, Charles E. (See Long and McBeth.)						
McBrayer, Matt, *et al.* (See Bryson, Ryon P., assignor.)						
McBride, James C., *et al.* (See Huffer, Isaac, assignor.)						
McBride, John G., Sacramento, Cal. Oil-cup	257,173	May 2	33	11	21	1287
McBride, William H., *et al.* (See Wenrich, Enos S., assignor.)						
McCabe, Patrick, Ithaca, N. Y., assignor of one-half to H. H. Girard, Philadelphia, Pa. Horseshoe	252,393	Jan. 17	871	242	21	161
McCabe, Robert. (See McCabe, William and R.)						
McCabe, Thomas, St. Joseph, Mo. Car-coupling	254,354	Feb. 28	1417	390	21	611
McCabe, William, New Haven, Conn. Corset	254,992	Mar. 14	686	185	21	764
McCabe, William and R., Meadville, Pa. Base rocking-chair	256,339	May 23	1363	385	21	1549
McCabe, William O. (See Clayton, Henry, assignor.)						
McCaffrey, Thomas F., Philadelphia, Pa. Coffee and nut roaster	256,716	Apr. 18	1210	338	21	1176
McCahill, John K. (See McCahill, Margaret and J. K.)						
McCahill, Margaret and J. K., Detroit, Mich., assignors to said Margaret McCahill. Adjustable chandelier-hanger	255,449	Mar. 28	1366	341	21	876
McCall, Edwin R., Lockport, N. Y. Preparing gas for preserving food	252,787	Jan. 24	1331	379	21	244
McCall, Edwin R., Lockport, N. Y. Provision-preserving room	255,645	Mar. 28	1513	407	21	920
McCall, James R., Schoolcraft, Mich. Refrigerating butter-safe	259,090	June 20	1042	277	21	1890
McCall, William, San Francisco, Cal. Cable-railway	252,889	Jan. 31	1468	411	21	273
McCallum, William. (See Hall, Thaddeus M., assignor.)						
McCallum, William D., Truro, Nova Scotia, Canada. Flower-stand	255,314	Mar. 21	1106	299	21	844
McCammon, Edward, Albany, N. Y. Piano-forte	258,455	May 23	1615	456	21	1502
McCarroll, James, New York, N. Y. Self-acting elevator safety apparatus	255,646	Mar. 28	1514	407	21	920
McCarroll, James, New York, N. Y. Self-acting elevator safety apparatus. (Reissue)	10,127	May 30	2111	596	21	1688
McCarthy, John B., Philadelphia, Pa. Forming waved hair-fronts	258,662	May 30	1574	529	21	1646
McClain, Edward L., Greenfield, Ohio. Pad for horse-collars	259,700	June 20	1042	277	21	1890
McClave, William, and J. A. Price, Scranton; said McClave assignor to S. Price, Pittston, Pa. Furnace-grate	252,049	Jan. 10	456	125	21	86
McClelland, Thomas M. (See Grant, McClelland, and Drummond.)						
McClintock, Frank, assignor of one-half to W. McClintock, West Union, Iowa. Wind-engine	256,234	Apr. 11	622	169	21	1061
McClintock, Frank, assignor of one-half to W. McClintock, West Union, Iowa. Wind-engine	257,880	May 16	911	255	21	1460
McClintock, William. (See McClintock, Frank, assignor.)						
McClughen, Joseph L., Ozark, Mo. Rock-drill	258,094	May 16	1163	326	21	1505
McClure, Andrew D. (See Long, Alexander, assignor.)						
McClure, Ernest G., Kendall Creek, Pa. Measuring-line reel	254,881	Mar. 14	544	146	21	738
McClure, John W. K. (See Shackelford and McClure.)						
McClure, L. T., *et al.* (See Fitzwater, William M., assignor.)						
McClure, T. B., *et al.* (See Fitzwater, William M., assignor.)						
McCobb, Henry, New York, N. Y. Chocolate-package	259,667	June 20	1266	339	21	1928
McCollin, Thomas H. (See Richards, George H., assignor.)						
McComb, James. (See Snyder, Henry D., assignor.)						
McCombs, Paul, Beaumont, Tex. Velocipede	259,411	June 13	667	{176 / 177}	21	1818
McConnaughay, Thomas J., Warrensburg, Mo. Portable bathing-machine	258,568	June 13	864	229	21	1853
McConnell, Josiah N., Lawrence, Kans. Flour-bolt	255,315	Mar. 21	1109	299	21	844
McCord, Christopher C. P., Walnut Grove, Ark. Vessel for cooking	254,355	Feb. 28	1418	390	21	611
McCord, Christopher C. P., and C. D. Churchill, Walnut Grove, Ark. Toy gun	255,598	Mar. 28	1373	370	21	894
McCord, William R., East Portland, Oreg., assignor to himself, S. B. Story, C. W. Prindle, and J. M. McCoy. Fish-wheel	257,960	May 16	1005	281	21	1476
McCormack, Charles D., Batesville, Ark. Car-coupling	256,152	Apr. 11	593	137	21	1041
McCormack, William C., Stanford, Ky. Stave-dressing machine	255,647	Mar. 28	1515	407	21	930
McCormick, Edward W., assignor to C. Harrison, New York, N. Y. Waste compression-sock	257,238	May 2	105	30, 31	21	1299
McCormick, Francis J. (See Burns, Daniel R., assignor.)						
McCormick Harvesting Machine Company. (See Baker, William R., assignor.)						
McCormick Harvesting Machine Company. (See Baker, William R., assignor.) (Reissue.)						
McCormick Harvesting Machine Company. (See McPherson, Daniel, assignor.) (Reissue.)						
McCormick Harvesting Machine Company. (See Yandle, Frederick J., assignor.)						
McCormick, Hugh, San Francisco, Cal. Preparing talc and coating articles therewith	253,616	Feb. 14	515	.....	21	444
McCormick, L. Hamilton, Chicago, Ill. Wash-bowl	256,235	Apr. 11	624	{169 / 170}	21	1061
McCormick, Willis B., Weimar, Tex. Barrel	254,228	Feb. 28	1275	353	21	567
McCoy, Elijah, assignor to H. C. and C. C. Hodges, Detroit, Mich. Lubricator	256,443	Mar. 28	1366	342	21	876

Philpott, James H., assignor of one-fourth to H. Reinheimer, Rising City, Nebr. Wear-clip for harness-trees	259,913	June 20	1295	347	21	1933
Phinney, Theodore W., Newport, R. I. Construction of vessels	256,683	May 30	2035	575	21	1673
Phippa, Edward L., assignor to Milford Door Knob Company, Milford, Mich. Knob attachment. (Reissue)	10,086	Mar. 28	1651	447	21	944
Phippa, William, Newark, N. J. Basket	254,226	Feb. 28	1295	357	21	589
Picard, Alexandre, Montaign, France. Breech-loading fire-arm	253,422	Feb. 7	278	80	21	383
Picard, Charles G., Paris, France. Apparatus for molding fancy articles in glass, crystal, &c	259,903	June 6	401	107	21	1764
Pickel, Alexander M., Carpentersville, Ind. Car-coupling	259,904	June 6	402	107	21	1764
Pickering, Jeremiah, assignor of one-half to J. A. Ray, Leon, Iowa. Door-check	254,237	Feb. 28	1268	357	21	569
Pickford, Henry, and H. T. Gregory, Chelsea, Mass. Electric signaling apparatus	258,797	Jan. 24	1343	376	21	247
Pickhardt, Gustav, Hagen, assignor to C. Külp, Darmstadt, Germany. Wire-netting	259,889	June 20	1412	389	21	1953
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, N. Y. Tartrate of oxychinoline	257,898	May 9	843	.....	21	1438
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, N. Y. Hydrochlorate of oxychinoline	257,899	May 9	843	.....	21	1438
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, N. Y. Manufacture of chinoline	254,098	Feb. 21	1119	.....	21	553
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to said Pickhardt and A. Kuttroff, New York, N. Y. Preparation of chinoline	252,846	Jan. 24	1415	.....	21	258
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to said Pickhardt and A. Kuttroff, New York, N. Y. Preparation of chinoline	252,847	Jan. 24	1416	.....	21	258
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to W. Pickhardt and A. Kuttroff, New York, N. Y. Medical compound	254,096	Feb. 21	1118	.....	21	553
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to W. Pickhardt and A. Kuttroff, New York, N. Y. Medical compound	254,097	Feb. 21	1119	.....	21	553
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to said Pickhardt and A. Kuttroff, New York, N. Y. Salicylate of chinoline	256,444	Apr. 11	873	.....	21	1106
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to said Pickhardt and A. Kuttroff, New York, N. Y. Benzoate of chinoline	256,445	Apr. 11	873	.....	21	1106
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to said Pickhardt and A. Kuttroff, New York, N. Y. Acid tannate of chinoline	260,317	June 27	1817	.....	21	2023
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to said Pickhardt and A. Kuttroff, New York, N. Y. Neutral tannate of chinoline	260,318	June 27	1817	.....	21	2023
Pickhardt, Wilhelm, New York, and H. Endemann, Brooklyn, assignors to said Pickhardt and A. Kuttroff, New York, N. Y. Basic tannate of chinoline	260,319	June 27	1818	.....	21	2023
Pictet, Raoul P., Geneva, Switzerland. Construction of ships	251,793	Jan. 3	139	37	21	94
Pidgeon, Francis, assignor to M. E. Pidgeon, Saugerties, N. Y. Ditching-machine	258,596	May 30	1789	505	21	1631
Pidgeon, M. E. (See Pidgeon, Francis, assignor.)						
Pieper, Carl, Berlin, Germany. Barbed-wire fence	259,905	June 6	403	107	21	1764
Pieper, Wilhelm. (See Creager, Jonathan, assignor.)						
Pierce, Byron R. (See Ellis, Hiram R., assignor.)						
Pierce, Charles F. (See Freeman, James P., assignor.)						
Pierce, Charles F., Providence, R. I. Combined match-box and cigar-cutter	252,656	Jan. 10	465	126	21	68
Pierce, Charles F., Chicago, Ill. Refrigerator-car	257,520	May 9	844	225	21	1438
Pierce, Charles F., Chicago, Ill. Refrigerator-car	256,531	Mar. 28	1276	371	21	894
Pierce, Charles W., Oak Hill, N. Y. Stove-pipe damper	258,597	May 30	1789	505	21	1631
Pierce, Charles W., Oak Hill, N. Y. Door hanger and pulley	255,811	Apr. 4	72	19, 20	21	993
Pierce, Denison C., Chicago, Ill. Railway-crossing	255,320	Mar. 21	1126	303	21	847
Pierce, Ebenezer, New Bedford, Mass. Breech-loading fire-arm	256,041	Apr. 4	351	95	21	1009
Pierce, Ebenezer, New Bedford, Mass. Breech-loading bomb-gun						

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pierce, Ezekiel P., Cambridge, Mass. Awning-blind hinge	252,985	Jan. 31	1474	412	21	274
Pierce, Frank F., Brodhead, Wis. Pump	253,766	Feb. 14	696	199	21	476
Pierce, George L., Oakland, Cal. Hydraulic elevator	252,966	Jan. 31	1502	435	21	290
Pierce, George W. (See Temple and Pierce.)						
Pierce, James D., Milwaukee, Wis., assignor of one-half to H. C. Bradley. Covering for steam-pipes, &c.	252,400	Jan. 17	879	245	21	192
Pierpont, William, Salem, N. J. Thrasher and separator	254,238	Feb. 28	1288	357	21	580
Piers, Walter A. (See Durbon, Samuel S., assignor.)						
Pierson, James S., Plainfield, N. J., assignor to American Gas Fuel and Light Company, New York, N. Y. Apparatus for the manufacture of gas	252,967	Jan. 31	1563	435 436	21	290
Pigeon, Narcisse. (See Pavres, Julien, assignor.)						
Pike, Alonzo T., and P. A. Loy, Clarinda, Iowa. Weed and lawn mower	253,694	Feb. 14	524	150 151	21	446
Pike, Daniel, assignor of one-half to M. J. Deady, New Orleans, La. Pottery-press	258,865	May 30	2101	593	21	1686
Pike, John B., Pikeville, Ontario, Canada. Barrel-hoop-cutting machine	258,804	May 30	2036	575	21	1674
Pike, Thompson. (See Averill, Benjamin F., assignor.)						
Pindar, Henry, and G. W. Clark, New York, N. Y. Apparatus for feeding scaling compounds to steam-boilers	255,532	Mar. 28	1376	371	21	895
Pine, James K. P., *et al.* (See Norris, George E., assignor.) (Reissue.)						
Pinter, Francis T., Schulenburg, Tex. Insect-destroyer	253,625	Feb. 14	526	151	21	446
Pinter, Francis T., Schulenburg, Tex. Churn-dasher	256,367	Apr. 11	785	216	21	1090
Piper, Henry. (See Petersen, Eduard A. C., assignor.)						
Piper, Henry B. (See Hoag, Sidney W., Sr., assignor.)						
Pitkin, Alfred B., Hartford, Conn. Belt-hook	253,423	Feb. 7	280	80	21	393
Pitny, Owen S., Fulton, Mo. Horse-collar fastening	260,048	June 27	1466	400	21	1971
Pitt, Frederick, Ionia, Mich. Sounding-board for upright piano-fortes	258,670	May 30	1685	532	21	1648
Pitt, John R., Brooklyn, N. Y. Temporary binder	255,452	Mar. 28	1276	344	21	875
Pitt, William A., New York, N. Y. Filter	256,853	Apr. 25	1365	384	21	1211
Pitt, William H., Buffalo, N. Y. Friction-match	256,990	Apr. 25	1440	404	21	1294
Pitt, William R., and C. H. Dunks, New York, N. Y. Bedstead	254,600	Mar. 7	295	78	21	660
Pittet, Elie, East New York, N. Y. Wash-boiler fountain	256,731	Apr. 18	1220	342	21	1178
Pitts Agricultural Works (See Aitken and Farquhar, assignors.)						
Pitts, James L., Grand Rapids, Mich. Saw-swage	250,423	June 13	682	180	21	1821
Place, Willard A., Lincoln, Nebr. Stock alarm for locomotives	253,095	Jan. 31	1735	479	21	317
Planchamp, John D., Chicago, Ill. Ornamenting metal	256,732	Apr. 18	1221	342	21	1178
Plant, Stephen J., assignor of one-half to H. Warwood, Yorkville, Ontario, Canada. Brick-making machine	257,608	May 9	590	164	21	1301
Pletsky, Adolph, and E. Finisterer, New York, N. Y. Necktie and collar fastener	259,583	June 13	881	234	21	1856
Platt, Joseph B., Cleveland, Ohio. Carriage-bow iron	254,367	Feb. 28	1428	392	21	613
Platt, Joseph B., Cleveland, Ohio. Dash-board	259,651	June 13	908	258	21	1871
Platt, Robert S. (See Watts, Nelson, assignor.)						
Plice, Thomas V., Polk, Ohio. Sulky-plow	253,761	Feb. 14	697	199	21	476
Plimpton, Edward S., *et al.* (See Gary, Albert J., assignor.)						
Plimpton, James W., assignor to M. Geary, Oil City, Pa. Steam-engine	258,866	May 30	2102	593	21	1686
Plönzky, August, Lippehne, Prussia, Germany. Horse-detacher	252,968	Jan. 31	1566	436	21	290
Plumb, Arthur W., Chicago, Ill. Oil-can	256,654	Apr. 25	1366	385	21	1211
Plumb, Burdict & Barnard. (See Johnson, Henry J., assignor.)						
Plumb, Fawcett, Streator, Ill. Adding-machine	256,591	Apr. 18	1051	297	21	1148
Plumb, Lauren S., and G. W. Marchant; said Marchant assignor to R. L. Goddard, Palmer, Mass. Hat-flanging machine	256,042	Apr. 4	353	95, 96	21	1009
Plush, Samuel M., and W. P. Phelps, Philadelphia, Pa. Self-adjusting relay for printing-telegraphs	252,806	Jan. 31	1475	413	21	274
Plush, Samuel M., assignor of one-half to H. Bently, Philadelphia, Pa. Safety device for electric wires	254,099	Feb. 21	1130	313	21	553
Plymouth Foundry Company. (See Harlow, Ivory W., assignor.)						
Poalk, J. Lane, Philadelphia, Pa. Car-brake	259,773	June 20	1141	302	21	1006
Pohlman, Charles F., and H. Thompson, Fremont, Ohio. Toy catapult	257,379	May 2	279	80	21	1331
Poindexter, Robert E., Indianapolis, Ind. Device for dressing saw-teeth	257,831	May 9	845	236	21	1438
Poladura, Alexander P., New Orleans, La. Apparatus for darkening tobacco	252,927	Jan. 17	790	219	21	147
Poland, George E., Manasquan, N. J. Cravat-fastening	254,503	Mar. 7	69	18	21	650
Pollard, Eugene A., Newport, N. H. Trace-fastener	251,937	Jan. 3	307	83	21	53
Pollard, John K. (See Boyce, Caleb B., assignor.)						
Pollock, James E., Mansfield, Ohio. Sulky-plow	259,715	June 20	1063	282 283	21	1893
Pollock, John. (See Newcomb, Nathan L., assignor.)						
Pollock, William A. (See Longfield, Julius I., assignor.)						
Poladorfer, Henry B. (See Gould, Samuel A., assignor.)						
Pomeroy, Henry N., assignor of one-third to C. E. Ball, Madison, Wis. Roller-mill	254,043	Feb. 21	1061	295	21	543
Pomeroy, John, and J. Winslow, Jr., Bristol, Conn. Time-alarm	259,584	June 13	881	234	21	1856
Pommer, Fred. (See Altmann and Pommer.)						
Pond, Charles L., Buffalo, N. Y. Package for oysters, &c.	255,017	Mar. 14	716	193	21	769
Pond, Chester H., assignor to Pond Electric Signal Company, New York, N. Y. Electrical visual indicator	259,897	Jan. 31	1477	413 414	21	274
Pond Electric Signal Company. (See Pond, Chester H., assignor.)						
Pond, Goldsbury H., New York, N. Y. Hydraulic elevator	257,754	May 9	764	213	21	1422
Pond, Goldsbury H., New York, N. Y. Reducing wood, &c., to fiber	259,206	June 6	494	107	21	1764
Pond, Henry E., assignor to J. H. Nason, Franklin, Mass. Game apparatus	259,207	June 6	495	108	21	1765
Ponton, Charles, Omaha, Nebr. Amalgamator	256,733	Apr. 18	1221	342	21	1178
Pool, Frank V., Newark, N. J., assignor to Celluloid Manufacturing Company, New York, N. Y. Removing flocculent matter from spent acids	251,936	Jan. 3	308	.....	21	53
Poole, William H., Chicago, Ill. Hand-stamp	256,942	Apr. 11	636	172	21	1063
Poole, William H., Chicago, Ill. Hand-stamp	256,943	Apr. 11	638	172	21	1063
Pooley, William C., Louisville, Ky. Rotary engine	251,733	Jan. 3	56	15	21	12
Pope, Frank L., Elizabeth, N. J., assignor to Union Switch and Signal Company, Hartford, Conn. Railway-signaling apparatus	253,768	Feb. 14	698	199	21	476
Pope, Henry W., Elizabeth, N. J. Automatic time-recorder for telegraphic signal-boxes	252,798	Jan. 24	1345	376	21	247
Pope, John G., Bloomington, Ill. Expanding mandrel	256,598	May 30	1700	506	21	1631
Pope Manufacturing Company. (See Gray, Peter, assignor.)						
Pope Manufacturing Company. (See Hicks, Horace B., assignor.)						
Pope, Rufus, assignor of one-half to W. H. B. Stout, Nobesville, Nebr. Carpenter's square	257,515	May 9	458	127	21	1369
Poppenhusen, Conrad, Hamburg, Germany. Molding articles of india-rubber and other vulcanizable gums	256,043	Apr. 4	354	.....	21	1010
Poppenhusen, Conrad, Hamburg, Germany. Machine for cutting and finishing the teeth of combs	260,399	June 27	1818	493	21	2023

Randall, Isaac H., assignor of one-half to B. Higgins, Boston, Mass. Trace-coupling	256,594	Apr. 18	1054	298	21	1148
Randall, James, San Francisco, Cal. Process of and apparatus for drying lumber	253,556	Feb. 14	453	129	21	435
Randall, James, Norwich, Conn. Roll-suction box for paper-making machines	256,047	Apr. 4	357	97	21	1010
Randall, Silas G., Greene, N. Y. Disk harrow or cultivator	259,919	June 20	1303	349, 350	21	1934
Randall, Silas G., assignor to A. A. Randall, Greene, N. Y. Attachment to cooking-vessels	259,718	June 20	1067	284	21	1894
Randall, William H., Ypsilanti, Mich. Portable fence	254,594	Mar. 7	70	19	21	659
Randell, Andrew. (See Stone, Henry A., assignor.)						
Randolph, David S., assignor to American Brake Company, St. Louis, Mo. Tender and other brakes	253,319	Feb. 7	149	43	21	371
Rank, Amos, Salem, Ohio. Mowing and reaping machine	256,048	Apr. 4	359	97, 98	21	1011
Rankin, Abram G. W., assignor of one-half to W. H. Gilson, Jersey City, N. J. Apparatus for disinfecting waste-pipes	255,019	Mar. 14	780	195	21	770
Rankin, David, Boston, Pa. Straw-stacker	256,595	Apr. 18	1055	298	21	1149
Ransch, Emilie C. (See Graham and Ransch.)						
Ransom, Rastus S. (See Snelling, Walter C., assignor.)						
Ransome, Ernest L., San Francisco, Cal. Utilising spent lime for brick and tiles	257,939	May 2	116	.....	21	1301
Raoul, Ludovic R., Grivegnée, France. Root and vegetable washer	253,580	Feb. 14	449	130	21	449
Rappleye, Hannibal W. (See Mackenzie and Rappleye.)						
Rasmussen, Charles W., Chicago, Ill. Car-coupling	259,719	June 20	1068	284	21	1894
Rassbery, Leo. (See Mayer, Charles G., assignor.)						
Rath, John. (See Blake, Thomas J., assignor.)						
Rath, Joseph, Columbus, Ohio. Broom-hanger	254,092	Mar. 7	227	73	21	659
Rattey, Emil, New York, N. Y. Dash-board	256,370	Apr. 11	787	216	21	1090
Raup, William, Park City, Utah Ter. Guide for stems of stamp-mills	253,099	Jan. 31	1737	480, 481	21	317
Raupp, Heinrich, Heilbronn, Würtemberg, Germany. Lamp-support	258,674	May 30	1801	534	21	1649
Rawson, George W., Boston, Mass. Drying apparatus	251,734	Jan. 3	57	15, 16	21	12
Ray, Ebenezer R., Bodie, Cal. Pick	255,533	Mar. 28	1377	378	21	995
Ray, J. A. (See Pickering, Jeremiah, assignor.)						
Ray, Richard. (See Leeming, Ray, and Lysde.)						
Raymond, Albert. (See Raymond, George and A.)						
Raymond, F. F., 2d, trustee. (See Henderson, Henry A., assignor.)						
Raymond, George and A., assignors of one-half to O. H. Tobey, Chicago, Ill. Grinding-mill	258,867	May 30	2103	594	21	1686

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Raymond, William F., Sandusky, Ohio. Pad for horses' hoofs	252,251	Jan. 10	689	195	21	124
Reach, Robert, assignor of one-half to C. G. and J. Sweet, Washington, D. C. Water-closet	256,500	Apr. 18	956	267 268	21	1139
Read, Calvin D. (See Read, James A. and C. D.)						
Read, Jacob, Yonkers, N. Y., and S. C. Burdick, Orange, N. J. Granulating-machine	260,123	June 27	1583	426 427	21	1986
Read, James A. and C. D., Ayer, Mass. Paint, whitewash, and other brushes	251,947	Jan. 3	316	86	21	55
Readwin, Thomas A., Bloomsbury Square, county of Middlesex, England. Ore-grinding and amalgamating machine	259,434	June 13	683	181	21	1891
Reany, Thomas J., Rocky Mount, N. C. Feed mechanism for saw-mills	257,384	May 2	283	81	21	1532
Reckendorfer, Joseph. (See Boman, Claes W., assignor.)						
Reckendorfer, Joseph. (See Hoffman, Joseph, assignor.)						
Reckendorfer, Joseph, and C. W. Boman, New York, N. Y., assignors to said Reckendorfer. Combined pencil-point protector, twine-cutter, and whistle	256,738	Apr. 18	1226	343	21	1179
Reckenwalt, John, assignor of one-half to J. Kreitner, Buffalo, N. Y. Clamp for holding the tips of billiard-cues	256,501	Apr. 18	957	268	21	1133
Record, George J., Conneaut, Ohio. Sap-spout	252,514	Jan. 17	1017	284	21	185
Rector, Emory L., *et al.* (See Posten, John R., assignor.)						
Rector, William A., *et al.* (See Posten, John R., assignor.)						
Reddick, William A., Niles, Mich. Flesh-fork	260,277	June 27	1722	466	21	2007
Redding, Harvey. (See Redding, Jerome, assignor.)						
Redding, Jerome, Malden, assignor to himself and H. Redding, Everett, Mass. Electrical gas-burner	252,848	Jan. 24	1416	395	21	258
Redding, Jerome, Malden, assignor to himself and H. Redding, Everett, Mass. Electric gas-lighting	252,849	Jan. 24	1417	395	21	258
Reddy, Thomas E., assignor to himself and J. McKeefery, Pittsburg, Pa. Kettle for making drop-shot	253,764	Feb. 14	701	200	21	477
Redmond, John B., assignor of one-half to E. Wilson, Baltimore, Md. Apparatus for purifying the water from condensers	255,086	Mar. 14	812	217	21	785
Redmond, Owen, assignor of one-half to G. P. Goulding, Rochester, N. Y. Bottle-stopper	251,796	Jan. 3	135	38	21	95
Redshaw, Moses W., assignor to Wheeler & Wilson Manufacturing Company, Bridgeport, Conn. Metal-screw machine	252,515	Jan. 17	1018	284	21	185
Reed & Barton. (See Leach, Thomas, assignor.)						
Reed, Edwin E., assignor of one-half to L. M. Simons, Williamstown, Mich. Boot	258,316	May 23	1432	412	21	1564
Reed, Franklin M., Lawrenceburg, Ind., assignor of one-half to W. C. Smith, Washington Court-House, Ohio. Treatment of resin-oil for mixing paints	252,516	Jan. 17	1021	.....	21	186
Reed, Frederick E. (See Back, John R., assignor.)						
Reed, George P., Melrose, Mass. Alcohol-vessel for watch-makers' use	257,895	May 16	931	259	21	1463
Reed, Horatio G. H., Milwaukee, Wis. Car-coupling	258,807	May 30	1040	576	21	1674
Reed, J. Thornton, Boston, Mass. Refrigerating apparatus	252,622	Jan. 24	1137	319	21	211
Reed, Jacob R., *et al.* (See Gray and Hollenback, assignors.)						
Reed, James, Cochran, Ind. Frog or block for railway-crossings	254,693	Mar. 7	298	78	21	669
Reed, Samuel B. (See Winters, Joseph R., assignor.)						
Reed Toy Company, W. S. (See Reed, William S., assignor.) (Reissue)						
Reed, William S., assignor to W. S. Reed Toy Company, Leominster, Mass. Toy locomotive. (Reissue)	10,114	May 16	1310	371	21	1531
Rees, Jacob, assignor of one-fourth to S. Wagner, Cleveland, Ohio. Combined blacking-box holder and foot-rest	253,100	Jan. 31	1739	481	21	317
Rees, James, Pittsburg, Pa. Steering apparatus	253,296	Feb. 7	57	18	21	356
Reese, Abram L., Chase, Kans. Wheat-drill	256,049	Apr. 4	360	99	21	1011
Reese, Jacob, Pittsburg, Pa. Journal-bearing	258,317	May 23	1452	412	21	1564
Reeve, Addison A., Boston, Mass. Artificial or toy Easter egg	255,534	Mar. 28	1378	372	21	895
Reeves, Colona, Darien Centre, N. Y. Wood-stove	254,375	Feb. 28	1443	395	21	615
Reeves, Israel S., New Orleans, La. Derrick	256,371	Apr. 11	787	217	21	1090
Reeves, Marshal T., Columbus, Ind. Straw-stacking machine	252,623	Jan. 24	1138	319	21	212
Regan, John W., Boston, Mass. Hose coupling and support	256,163	Apr. 11	517	142	21	1044
Regan, John W., Boston, Mass. Snap-hook	256,164	Apr. 11	518	142	21	1044
Regnell, John A. (See Östberg, Erick, assignor.)						
Rehfuss, George, assignor to himself, J. G. and M. O. Rehfuss, Philadelphia, Pa. Dental hand-piece	255,090	Mar. 14	721	195	21	770
Rehfuss, George, assignor to himself, J. G. and M. O. Rehfuss, Philadelphia, Pa. Drill-chuck	256,739	Apr. 18	1227	344	21	1179
Rehfuss, George, assignor to American Buttonhole, Overseaming and Sewing Machine Company, Philadelphia, Pa. Shuttle for sewing-machines. (Reissue)	10,103	May 2	375	105	21	1248
Rehfuss, John G., *et al.* (See Rehfuss, George, assignor.)						
Rehfuss, Martin O., *et al.* (See Rehfuss, George, assignor.)						
Reichardt, Henry C., Pottsville, Pa. Core breaker and lifter	257,896	May 16	932	259	21	1463
Reichling, Oscar E. H. N., Marion, Ind. Portable fence	253,765	Feb. 14	703	200	21	477
Reid, John S., Muncie, Ind. Hub-block-boring machine	255,670	Mar. 28	1339	415	21	925
Reid, John W., Chicago, Ill. Mechanical movement	253,496	Feb. 7	282	81	21	394
Reid, Peter, Passaic, and J. Eastwood, Belleville, N. J., assignors to Celluloid Manufacturing Company, New York, N. Y. Ink for dyeing purposes	256,596	Apr. 18	1057	.....	21	1149
Reid, Peter, Passaic, and J. Eastwood, Belleville, N. J., assignors to Celluloid Manufacturing Company, New York, N. Y. Manufacture of pyroxyline for use in topical printing	256,597	Apr. 18	1057	.....	21	1149
Reid, William A., St. Louis, Mo. Chain-machine	255,402	Mar. 21	1215	325	21	802
Reidhard, Joseph, Celina, Ohio. Ditching-machine	254,376	Feb. 28	1444	395	21	615
Reift, William H., Philadelphia, Pa., assignor to Rogers, Peet & Co., New York, N. Y. Spelling toy and puzzle	259,920	June 20	1306	350	21	1935
Reiger, Frits. (See Kussmaul and Reiger.)						
Reiher, Frank A., Chicago, Ill. Transom and skylight lifter	259,425	June 13	685	181	21	1891
Reilly, James, Brooklyn, N. Y. Heating bath-tubs by steam	255,535	Mar. 28	1379	372	21	895
Reinhardt, Christian, New Haven, Conn. Clock-escapement	258,473	May 23	1435	402	21	1506
Reinhardt, Hermann O., Arlington, N. J. Stamping-mill	255,536	Mar. 28	1379	373	21	895
Reinhardt, Hermann O., Arlington, N. J. Apparatus for roasting ores	255,537	Mar. 28	1381	373	21	895
Reinheimer, Henry. (See Philpott, James H., assignor.)						
Reinke, Otto, *et al.* (See Garner, Samuel R., assignor.)						
Reiss, George T. (See Gordon and Reiss.)						
Reister, Lewis A., Chico, Cal. Side-saddle	255,334	Mar. 21	1133	304	21	847
Reiter Moritz, Berlin, and G. Sander, Breslau, assignors to O. and P. Dinse, Berlin, Germany. Pneumatic action for organs	254,046	Feb. 21	1065	296 297	21	544
Reits, Ferdinand, Birmingham, Ohio. Stopper for empty barrels	257,187	May 2	48	15	21	1289
Rembert, Samuel S., Woodstock, Tenn. Vehicle-wheel	258,474	May 23	1436	402	21	1506
Remington & Sons, E. (See Smoot, William S., assignor.)						
Remmers, Bernhard H., and J. Williamson, Glasgow, county of Lanark, Scotland. Refining and purifying sugar	255,021	Mar. 14	723	.....	21	771

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Remson, Isaac S. (See Johnstry, Jacob A., assignor.)						
Remy, Noah T., assignor to A. Hoover and W. Gamble, Miamisburg, Ohio. Grain-binder	256,886	Apr. 18	1363	367	21	1193
Renauld, H. L. Charles, Brooklin, and M. B. Stafford, New York, N. Y. Bottle-stopper fastening	253,497	Feb. 7	283	81	21	394
Reynolds, Lewis F. B., Claiborne Parish, La. Cotton-press	258,118	May 16	1199	337	21	1541
Renshaw, David. (See Litchfield, Harvey T., assignor.)						
Renshaw, David. (See Litchfield and Renshaw.)						
Renshaw, David, *et al.* (See Tower, George B. N., assignor.)						
Renshaw, David, Cohasset, Mass. Steam-boiler	256,446	Apr. 11	874	243	21	1106
Renshaw, David, Cohasset, Mass. Steam-generator	260,381	June 27	1680	493	21	2003
Renshaw, David, Cohasset, assignor of one-half to H. T. Litchfield, Hull, Mass. Mechanism for feeding air and steam to furnaces	251,797	Jan. 3	136	36	21	95
Renshaw, David, Cohasset, and G. B. N. Tower, Boston; said Tower assignor to said Renshaw; said Renshaw assignor of one-half to H. T. Litchfield, Hull, Mass. Injector	257,897	May 16	933	260	21	1463
Renshaw, David, Cohasset, assignor of one-half to H. T. Litchfield, Hull, Mass. Superheater	260,236	June 27	1722	466	21	2003
Renshaw, David, Cohasset, assignor of one-half to H. T. Litchfield, Hull, Mass. Fire-tube steam-boiler	256,675	May 30	1302	534	21	1649
Renshaw, Joseph, Hartford, Conn. Revivifying abrading-surfaces	257,612	May 9	595	166	21	1301
Renshaw, Lydia F., *et al.* (See Tower, George B. N., assignor.)						
Rensink, Peter, Milwaukee, Wis. Device for operating the valves of piston-meters	259,900	Jan. 31	1463	414	21	978
Renson, Jean, Duisburg, Prussia, Germany. Milk-boiling vessel	256,475	May 23	1437	403	21	1506
Rentchler, Henry, Belleville, Ill. Vehicle-top joint	253,313	Feb. 7	151	43	21	372
Reosley, Horace, Cumberland, Md. Snow-plow	259,238	Jan. 10	600	195	21	125
Reusch, Hermann. Dillingen-on-the-Saar, Prussia, Germany. Plating iron or steel	258,119	May 16	1199	.....	21	1511
Rew, Parker H., Rochester, N. Y. Meckttie-fastener	256,740	Apr. 18	1228	344	21	1179
Rex, Alfred C. (See Kyzer and Rex.)						
Rex, Alfred C., Philadelphia, Pa. Lemon-squeezer	258,372	Apr. 11	788	217	21	1090
Rex, David J., Pittsburg, Pa. Shoe-exhibitor	259,240	June 6	466	129	21	1765
Reynolds, Charles A. (See Miller, Hunker B., assignor.)						
Reynolds, Cyrus M., Mifflin, Wis. Cheek-rein hook	254,377	Feb. 28	1445	395	21	615
Reynolds, Edward B., New York, N. Y. Gas-generating apparatus	256,741	Apr. 18	1229	344	21	1179
Reynolds, Edwin, Milwaukee, Wis. Feed-water heater	254,047	Feb. 21	1068	297	21	544
Reynolds, Edwin, Milwaukee, Wis. Machine for cutting spiral grooves in grinding-rolls	259,043	June 6	213	57	21	1730
Reynolds, George H., and T. J. Rider, assignors of one-half to C. H. Delamater and G. H. Robinson, New York, N. Y. Duplex pumping-engine	258,517	Jan. 17	1081	284	21	186
Reynolds, John, *et al.* (See McCray, Hiram, assignor.)						
Reynolds, John H., Troy, N. Y. Dust-guard for railway-car windows	257,068	Apr. 25	1611	429	21	1255
Reynolds, John R., assignor to Pratt & Whitney Company, Hartford, Conn. Machine for cutting grooves in rolls	258,165	Apr. 11	518	142 143	21	1044
Reynolds, Matthew and T., Havre de Grace, Md. Gill-net	255,671	Mar. 28	1541	415	21	985
Reynolds, Orrin A., and J. A. Shepherdson, Covington, Ky. Switch for railways	256,858	Apr. 25	1370	366	21	1212
Reynolds, Thomas. (See Reynolds, Matthew and T.)						
Reynolds, William A. (See Starbuck, Henry F., assignor.)						
Reynolds, William W., assignor to Howe Scale Company, Rutland, Vt. Scale	256,508	Apr. 18	956	266	21	1133
Rezner, George, Mercer, Pa. Governor for steam-engines	257,069	Apr. 25	1613	429	21	1255
Rezner, George, Mercer, Pa. Air-carburetor	259,921	June 20	1306	350	21	1935
Rheubottom, James R., and F. M. Mack, Woodsport, N. Y. Fly-net for horses	257,760	May 9	772	215	21	1494
Rhind, Frank, Brooklyn, N. Y. Hydrogen lamp or cigar-lighter	259,518	Jan. 17	1022	284	21	186
Rhind, Frank, Brooklyn, N. Y. Ornamentation of glassware	256,908	May 30	1041	276	21	1674
Rhoades, Martin. (See Minot and Rhoades.)						
Rhodes, Thomas A. and W. H., Paynesville, Ky. Spring for bed-bottoms	259,701	Jan. 24	1294	343	21	257
Rhodes, Thomas H., *et al.* (See Thompson, Uldric, assignor.)						
Rhodes, Thomas H., Brooklyn, N. Y. Electrical gas-lighting apparatus	257,970	Apr. 25	1615	429	21	1255
Rhodes, Thomas H., Brooklyn, N. Y. Electrical gas-lighting apparatus	257,188	May 2	49	15	21	1289
Rhodes, William H. (See Rhodes, Thomas A. and W. H.)						
Rhodes, William K., Portland, Me. Lubricator	255,813	Apr. 4	74	20	21	983
Rice, Alvah, assignor of one-half to S. Wheeler, Rochester, N. Y. Car-coupling	258,650	Apr. 25	1372	326	21	1213
Rice, Alvah, assignor of one-half to S. Wheeler, Rochester, N. Y. Car-coupling	260,134	June 27	1566	427	21	1988
Rice, Bernard, Brooklyn, N. Y. Beer-chip	257,977	May 16	1026	265	21	1479
Rice, Charles B., Evanston, Ill. Gate-roller	259,253	Jan. 10	601	195	21	125
Rice, Charles E., Owensborough, assignor of one-half to J. C. Schrader, Daviess County, Ky. Hemmer for sewing-machines	253,706	Feb. 14	704	200	21	477
Rice, Clarence E., Sedgwick, Kans. Door-strip	254,694	Mar. 7	298	79	21	669
Rice, David H. and L. C., Lowell, Mass., assignors to Currier Telephone Bell Company, of Massachusetts. Signaling on electric circuits	255,814	Apr. 4	75	21	21	983
Rice, Edwin W. L., Aurora, Ill. Tile stove-platform	258,662	May 30	1706	507	21	1493
Rice, George K., Brookfield, Mo. Baling-press	258,656	Jan. 10	598	159	21	98
Rice, Henry C., Louisiana, Mo. Combined kettle and urn	257,516	May 9	459	127	21	1289
Rice, Henry C., Louisiana, Mo. Filter	258,565	June 13	683	235	21	1856
Rice, John N., New Castle, Pa. Dumping-car						
Rice, Lepine C. (See Rice, David H. and L. C.)						
Rice, Samuel A., and W. S. Ovens, assignors to C. E. Benedict and G. B. Webster, Buffalo, N. Y. Machine for cleaning fruit	256,598	Apr. 18	1058	266	21	1149
Rice, Tolliver, Enfield, Ill. Stump-puller	259,922	June 20	1307	350	21	1935
Rice, William E., Worcester, Mass. Manufacture of zinc-coated wire	253,257	Feb. 7	58	18	21	356
Rich, Abraham L., Water Cure, Pa. Magazine spring-gun	253,698	Feb. 14	532	158	21	447
Rich, Augustus E., Fall River, Mass. Bottle stopper and fastener	258,059	Jan. 10	600	130	21	98
Richard, Edmond O. and J. E., New York, N. Y. Velocipede	258,389	Jan. 17	798	220	21	147
Richard, Jean E. (See Richard, Edmond O. and J. E.)						
Richard, Jean E., New York, N. Y. Bicycle	252,694	Jan. 24	1139	319 320	21	212
Richard, Jean E., New York, N. Y. Overstitching-machine	252,799	Jan. 24	1347	376 377 378	21	347
Richards, Charles B., Philadelphia, Pa. Exhaust-valve for steam-engines	251,948	Jan. 3	318	86	21	55
Richards, Charles R. (See Hobbs, Boyden, and Richards.)						
Richards, Daniel H. (See Miles, Orrey E., assignor.)						
Richards, Dewain. (See Sendall, James, assignor.)						
Richards, Francis H., assignor to E. R. and C. L. Hyde, Springfield, Mass. Clamp for try-square blades	253,945	Feb. 21	930	261	21	592
Richards, George H., assignor to T. H. McCollin, Philadelphia, Pa. Background-frame for photographers	253,101	Jan. 31	1740	481	21	318

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Richards, Hezekiah H., assignor of one-half to H. W. Hurlbut and A. McAvoy, Racine, Wis. Vehicle-pole	253,170	Jan. 31	1841	507	21	334
Richards, James E., Cedar Keys, Fla. Electric time-detector	256,603	May 30	1797	506	21	1632
Richards, John, San Francisco, Cal. Metal-planing machine	258,199	May 16	1200	337 338	21	1511
Richards, John, San Francisco, Cal. Engine-lathe	256,121	May 16	1201	338	21	1512
Richards, Jonathan B., Wager, Ark. Work-bench attachment	259,211	June 6	409	109	21	1765
Richards, Joseph L. (See Slater, George L., assignor.)						
Richards, Thomas W., Jersey City, N. J. Chatelaine	258,945	June 6	91	94	21	1710
Richardson, Albert C., South Frankfort, assignor of one-half to C. C. Miller, Frankfort, Mich. Hame-fastener	255,022	Mar. 14	794	195	21	771
Richardson, Edwin C., assignor to M. D. Chapin, Poultney, Vt. Churn-cover	257,071	Apr. 25	1616	458	21	1255
Richardson, Eugene M. (See Long and Richardson.)						
Richardson, Francis B., Boston, Mass. Tea-pot and cover	259,049	June 6	294	60	21	1739
Richardson, Frederick, Providence, R. I. Securing metal wearing-surfaces to rubber boots and shoes	255,672	Mar. 28	1542	415	21	925
Richardson, Frederick, Providence, R. I. Machine for securing heels to boots and shoes	259,720	June 20	1069	324 365	21	1695
Richardson, Frederick, Providence, R. I. Securing rubber to metal	259,721	June 20	1072	365	21	1695
Richardson, Gamos, San José, Cal. Hay-stacking apparatus	255,667	Apr. 4	159	43	21	977
Richardson, George, Philadelphia, Pa. Underground electric conductor	259,044	June 6	216	58	21	1731
Richardson, George, Philadelphia, Pa. Underground conduit for electric conductors	259,045	June 6	217	58	21	1731
Richardson, George, Philadelphia, Pa. Underground electrical conductor	259,046	June 6	219	59	21	1731
Richardson, George, Philadelphia, Pa. Wire-stretching apparatus	259,047	June 6	221	59, 60	21	1732
Richardson, George, Philadelphia, Pa. Multiflue pipe and coupling-section	259,048	June 6	223	60	21	1732
Richardson, George F., Montague, Mass. Bureau, &c	258,604	May 30	1801	508	21	1633
Richardson, George W., Milton, Vt. Device for converting motion	259,566	June 13	824	235	21	1857
Richardson, Gus. W., Hill Grove, Ky. Agitator or egg-beater	252,800	Jan. 24	1352	378	21	749
Richardson, Ira, Lemond, (Meriden P. O.,) Minn. Harvester-dropper	254,378	Feb. 28	1445	396	21	615
Richardson, John, Lincoln, county of Lincoln, England. Speed-governor	253,102	Jan. 31	1741	481 482	21	318
Richardson, John C., assignor to J. R. Cooper, Union City, Pa. Car-axle box	252,591	Jan. 17	1100	307	21	190
Richardson, John D., assignor of one-half to F. L. Manchester, New York, N. Y. Elevator	259,923	June 20	1308	351	21	1935
Richardson, John M. (See Beamer and Richardson.)						
Richardson, Julius C., assignor to Greenwood Machine Company, Columbus, Ohio. Steam drop-hammer	255,303	Mar. 21	1203	322	21	860
Richardson, Levi, and F. J. Nettleton, San Gabriel, Cal. Pipe-mold	258,192	May 16	1202	338	21	1512
Richardson Manufacturing Company. (See Curtis, Edwin P., assignor.)						
Richardson, Nathan, Gloucester, Mass. Steering mechanism	258,809	May 30	2041	576	21	1674
Richardson, William D., Springfield, Ill. Pavement	257,613	May 9	505	106	21	1392
Richardson, William S., Nowton, Mass. Glove-fastener	253,228	Feb. 7	58	18	21	371
Richardson, William S., Nowton, assignor to C. J. Blake, trustee, Boston, Mass. Glove-fastening, &c	260,050	June 27	1487	400	21	1971
Richeimer, Michael, Massillon, Ohio. Ice-cream freezer	252,254	Jan. 10	692	195	21	195
Richey, James. (See Heyna, Henry, assignor.)						
Richey, William A., Indianola, Iowa. Coffin	255,815	Apr. 4	76	21	21	963
Richford, Edwin M. (See Worger and Richford.)						
Richman, Alfred B. (See Murphin, Joseph, assignor.)						
Richman, Gideon. (See Tice, R. Stockton, assignor.)						
Richmann, Henry, San Francisco, Cal. Lathe attachment	253,314	Feb. 7	152	44	21	372
Richmond, Cassius M., New York, N. Y. Dental drill	256,050	Apr. 4	302	99	21	1011
Richmond, Charles C., Boston, Mass. Lamp-burner	257,614	May 9	507	106	21	1392
Richmond, Francis R., Springfield, Mass. Signal-call for telephone-lines	254,155	Feb. 28	1192	333	21	573
Richmond, John T., and H. J. Cordesman, Jr., assignors to Cordesman, Egan & Co., Cincinnati, Ohio. Wheel-hub-boring machine	255,304	Mar. 21	1204	323	21	860
Richsteiner, Frank S., *et al.* See Willi, Theodore, assignor.)						
Richter, Charles, assignor to P. R. L. Hardenbergh, F. and G. Willins, and A. O. Bailey, St. Paul, Minn. Preparing a solution for tanning hides and skins	260,322	June 27	1821	.....	21	2023

Seabury, Alfred L., Norfolk, Va. Blacking-brush case	258,815	May 30	2046	576	21	1676
Seagrave, John D. (See Fuller and Seagrave.)						
Seagrave, John D., and F. W. Lewis, Worcester, Mass. Construction of wooden pipes	256,080	Apr. 4	375	102	21	1013
Seaman, Benjamin S., Corning, N. Y. Hame	253,949	Feb. 21	944	202	21	523
Seaman, John H., Brooklyn, N. Y. Gasalier. (Reissue)	10,070	Apr. 4	441	130	21	1024
Seaman, John H., Brooklyn, N. Y. Gasalier. (Reissue)	10,071	Apr. 4	443	130	21	1025
Seaton, William C., Quebec, Province of Quebec, Canada. Wick-trimmer	254,300	Feb. 28	1456	300	21	617
Seaton, William C., Quebec, Quebec, Canada. Signaling apparatus	255,683	Mar. 28	1555	419	21	928
Seaver, Chandler, Jr., Newton, Mass. Apparatus for vignetting purposes	254,845	Mar. 14	491	131	21	788
Sebastian, Jacob, New York, N. Y. Draft-equalizer	252,810	Jan. 24	1364	361	21	250
Sébillot, Amédée M. G., Denver, Colo. Galvanic battery	253,769	Feb. 14	707	201	21	478
Sébillot, Amédée M. G., Denver, Colo. Electric lamp	253,770	Feb. 14	708	201	21	478
Sébillot, Amédée M. G., Denver, Colo. Ore-concentrator	253,771	Feb. 14	709	202	21	478
Seck, Carl. (See Seck, Christian, assignor.)						
Seck, Christian, assignor of one-half to C. Seck, Dresden, Saxony, Germany. Roller-mill for grinding corn, &c.	253,113	Jan. 31	1754	486	21	390
Secor, Jerome B., Bridgeport, Conn. Sewing-machine	253,772	Feb. 14	710	202, 203	21	478
Secor, Jerome B., Bridgeport, Conn. Sewing-machine	253,773	Feb. 14	713	203	21	479
Secor, Jerome B., Bridgeport, Conn. Device for operating tool-holding turrets	253,774	Feb. 14	714	203, 204	21	479
Sedgwick, Charles, New York, N. Y., assignor to H. W. Putnam, Bennington, Vt. Bottle-stopper	255,891	Apr. 4	88	23	21	964
Sedlacek, Martin, Troy, Mo. Saddle-tree	253,114	Jan. 31	1755	487	21	390
See, Horace, assignor of one-half to W. Cramp & Sons Ship and Engine Building Company, Philadelphia, Pa. Steam-engine	252,967	Jan. 10	713	901	21	129
See, Horace, assignor of one-half to W. Cramp & Sons Ship and Engine Building Company, Philadelphia, Pa. Connecting-rod	254,707	Mar. 7	314	83	21	691
See, James W., Hamilton, Ohio, assignor to Yale Lock Manufacturing Company, Stamford, Conn. Telephone call-register	259,428	June 13	889	199	21	1882
Seebold, John G., Montreal, Quebec, Canada. Piano sounding-board attachment	252,146	Jan. 10	573	161	21	105
Seeger, Edward W., Springfield, Mass. Device for molding cast screws	257,246	May 2	121	34	21	1302
Seeger, Georg G., Hilldale, Iowa. Drag-saw machine	256,601	Apr. 18	1060	299	21	1149
Seel, Charles, Philadelphia, Pa. Tobacco-booking table	255,540	Mar. 28	1385	374	21	896
Seely, Henry W. (See Dyer and Seely.)						
Seely, Henry W., assignor of two-thirds to R. N. Dyer and S. Insull, New York, N. Y. Electric flat-iron	259,054	June 6	930	92	21	1733
Seeman, Ernst H. J., Berlin, Germany. Device for suspending persons in mid-air without visible support	256,388	Apr. 11	805	221	21	1093
Segar, Charles T., Utica, N. Y. Folding cot and bedstead	257,085	Apr. 25	1029	456	21	1257
Seiberling, John F. (See Gause and Seiberling.)						
Seits, George, deceased, (M. C. Seits, administratrix,) New York, N. Y. Method of and apparatus for mashing malt and malt substitutes	255,203	Mar. 21	958	256	21	817
Seits, Mary C., administratrix. (See Seits, George.)						
Seitzinger, B. Frank. (See Helton, Cassius, assignor.)						
Selden, Albert A., and W. G. Duckett, Baltimore, Md. Automatic fan	253,894	Feb. 21	871	246	21	512
Selden, Charles. (See Thompson and Selden.)						
Selden, John E., Matteawan, N. Y. Automatic toy	259,221	June 6	419	111	21	1767
Selleck, William E., Chicago, Ill. Scale-platform support	252,627	Jan. 24	1143	321	21	213
Sellon, John S., Hatton Garden, county of Middlesex, England. Secondary battery	259,657	June 13	975	261	21	1878
Seltzer, Louis C., Columbus, Ohio. Combined whip and cane	256,061	Apr. 4	375	103	21	1013
Selvage, Howard, Brooklyn, assignor to R. Waterhouse, New York, N. Y. Neckscarf	253,485	Feb. 7	358	100	21	406
Semper, Conrad. (See Fahlberg and Semper.)						
Semper, Conrad. (See Warfield, Charles A., assignor.)						
Semple, William F., Mount Vernon, Ohio. Inhaler	254,301	Feb. 28	1458	399	21	618
Sendall, James, assignor of one-half to D. Richards, Brockport, N. Y. Barley-bearding machine	254,646	Mar. 14	492	132	21	726
Senter, George F., New York, N. Y. Bearing for mill-spindles	255,541	Mar. 28	1386	374	21	896
Serdinko, John, New Braunfels, Tex. Portable dark room	254,302	Feb. 28	1459	399	21	618
Sessions, Henry H., Palestine, Tex. Hand-car	255,684	Mar. 28	1562	420	21	928
Sessions, J. H. (See Andrews, Benjamin, assignor.) (Reissue.)						
Sessions, John H., Jr., Bristol, Conn. Trunk-fastener	255,128	Mar. 21	856	229	21	800
Sewall, Henry. (See Chase, John F., assignor.)						
Seward, Albert B., Cincinnati, Ohio. Drainage apparatus for steam-pipes	256,816	May 30	2047	578	21	1676
Sewell, George, Newark, N. J. Steam-boiler	256,092	Apr. 18	1062	300	21	1150
Sexauer, Louis, Brooklyn, N. Y. Electric lamp	256,746	Apr. 18	1226	346	21	1181
Sexton, Isaac, Somerville, Mass. Jacketed can	259,592	June 13	891	237	21	1858
Sexton, William F., Sr., and William F., Jr., Toronto, Ontario, Canada. Hoist	254,242	Feb. 28	1294	356, 359	21	580
Seybold, Charles, Cincinnati, Ohio. Permutation-lock	255,463	Mar. 28	1393	348	21	860
Seybold, George. (See Sharp, Isaac, assignor.)						
Seyler, Andrew J., Cedarville, Ill. Middlings-purifier	253,636	Mar. 14	743	200, 201	21	774
Seymour, Charles, assignor to Defiance Machine Works, Defiance, Ohio. Proportional balance	260,127	June 27	1567	438	21	1967
Seymour, Francis, Paterson, N. J. Machine for spinning, doubling, and twisting fibrous materials	253,431	Feb. 7	269	82	21	395
Seymour, George, Boone, Iowa. Clothes-rack	260,399	June 27	1630	495	21	2025
Shackelford, Jack M., and J. W. K. McClure, Blue Mound, Ill. Grain-cleaner	254,571	Mar. 7	153	38	21	664

West, North. (See Swaney, David A., assignor.)						
West, William, Keene, Ontario, Canada. Can-filling apparatus	259,442	June 13	705	187	21	1825
West, William, Keene, Ontario, Canada. Apparatus for crimping the ends upon circular cans	259,443	June 13	707	187, 188	21	1825
Westaway, Walter C. (See Warwick and Westaway.)						
Westcott, John M., Richmond, Ind. Fertilizer-distributer	253,454	Feb. 7	390	89	21	400
Westcott, Nathaniel W., Providence, R. I. Circular weft-thread knitting-loom	254,079	Feb. 21	1101	306, 307	21	550
Western Electric Manufacturing Company. (See Firman, Leroy B., assignor.)						
Western Electric Manufacturing Company. (See Kellogg, Milo G., assignor.)						
Western Electric Manufacturing Company. (See Patterson, William R., assignor.)						
Western Electric Manufacturing Company. (See Ross, Charles W., assignor.)						
Western Electric Manufacturing Company. (See Ross and Twiss, assignors.)						
Western Electric Manufacturing Company. (See Scribner, Charles E., assignor.)						
Western Electric Manufacturing Company. (See Scribner and Clarke, assignors.)						
Western Union Telegraph Company. (See Buckingham, Charles L., assignor.)						
Western Union Telegraph Company. (See Stearns, Joseph B., assignor.) (Reissue.)						
Westfall, Peter V., assignor of one-half to W. Nelson, Kalamazoo, Mich. Cotton-gin	256,515	May 23	1681	475	21	1604
Westgate, Joseph D., Manchester, N. H. Bed-lounge	252,983	Jan. 10	734	205	21	132
Westinghouse & Co., G. (See Westinghouse and Webber, assignors.)						
Westinghouse, George, Jr., Pittsburg, Pa. Regulating-valve for railway-brakes	251,980	Jan. 3	355	96	21	61
Westinghouse, Jay, and W. Webber, assignors to G. Westinghouse & Co., Schenectady, N. Y. Thrashing-machine	259,955	June 20	1349	363, 364	21	1942
Westlake, William Brooklyn, N. Y. Cuspidor	253,455	Feb. 7	393	99	21	400
Westland, Charles S., assignor to A. H. White and H. L. Fairbrother, Providence, R. I. Extensible drop-light	255,294	Mar. 21	990	265	21	823
Westland, Charles S., deceased, L. A. Westland, Providence, R. I., administratrix. Safety-lamp	258,963	June 6	115	30	21	1714
Westland, Lavina A., administratrix. (See Westland, Charles S.)						
Weston, David M., Boston, Mass. Manufacture of strainer-plate	256,516	May 23	1668	475	21	1604
Weston, Edward. (See Curtis and Weston.)						
Weston, Edward, Newark, N. J. Dynamo-electric machine	256,778	Apr. 18	1297	357	21	1187
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Absorbent for electric lamps	255,362	Mar. 21	1161	311	21	853
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electric lamp	255,363	Mar. 21	1162	312	21	853
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Dynamo-electric machine	255,364	Mar. 21	1164	312	21	853
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electro-magnet	255,365	Mar. 21	1165	312	21	853
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Dynamo-electric machine	255,366	Mar. 21	1166	313	21	853
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electric lamp	258,964	June 6	116	30	21	1714
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electric-lamp bracket	258,965	June 6	118	31	21	1715
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Incandescent lamp	258,966	June 6	118	31	21	1715
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Safety device for electric circuits	259,614	June 13	920	246	21	1802
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Safety device for electric circuits	259,615	June 13	921	246	21	1802
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Safety device for electric circuits	259,616	June 13	922	246	21	1803
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Dynamo-electric machine	259,617	June 13	923	246	21	1803
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Dynamo-electric machine	259,618	June 13	924	247	21	1803
Weston, Edward, Newark, N. J., and L. E. Curtis, assignors to United States Electric Lighting Company, New York, N. Y. Electric lamp	255,295	Mar. 21	991	265	21	823
Westphal, Henry, Chicago, assignor to himself and A. Dillman, Joliet, Ill. Revolving show-case	256,161	Apr. 11	537	149	21	1047
Wetherbee, Albert C., administrator. (See Wetherbee, Henry S.)						
Wetherbee, Henry S., deceased, A. C. Wetherbee, Hammonton, N. J., administrator. Fruit-jar	259,065	June 6	243	65	21	1735
Wetherill, William H., Philadelphia, Pa. Corroding-house for the manufacture of white lead by the old Dutch process	252,823	Jan. 24	1385	366	21	253
Wetmore, Jerome W., Erie, Pa. Wagon bolster-spring	252,824	Jan. 24	1385	366	21	253
Wetmore, Jerome W., Erie, Pa. Vehicle-spring	252,825	Jan. 24	1386	367	21	253
Wetmore, Jerome W., Erie, Pa. Wagon-tongue support	253,502	Feb. 21	579	246	21	514

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Wetmore, Jerome W., Erie, Pa. Door-check	255,226	Mar. 21	902	265	21	823
Wetmore, Jerome W., Erie, Pa. Pen-holder	255,227	Mar. 21	903	266	21	823
Wetter Brothers. (See Wiget, John, assignor.)						
Wetton, Francis, Philadelphia, Pa. Cooler for bone-black-revivifying kilns	255,896	Apr. 4	92	25	21	995
Weyburn, Elbert D., Atlanta, Ga. Loose pulley	253,797	Feb. 14	745	213	21	494
Weymouth, Elisha T., Brooklyn, N. Y. Indirect radiator	258,967	June 6	119	31	21	1715
Weymouth, George F., Dresden, assignor to H. Holt, Farmington, Me. Hay-knife. (Reissue)	10,072	Apr. 4	444	120	21	1035
Whalen, Walter D., Howell, Mich. Electric spring-clock	259,066	June 6	945	65	21	1735
Whaley, Mary J., Lincoln, Nebr. Covering the slot of cable-roads	254,854	Mar. 14	501	134	21	730
Wham & Co., Walton. (See Beck, C. Elton, assignor.)						
Wharton, Charles A. (See Warckmeister, August L., assignor.)						
Wharton Railroad Switch Company. (See Johnston, Edward H., assignor.)						
Wheat, Franklin H., Lowell, Mass. Thread-separator for ring-spinning machines	253,140	Jan. 31	1785	495	21	385
Wheat, Franklin H., Lowell, Mass. Thread-separator for ring-spinning machines	260,071	June 27	1514	406	21	1973
Wheatley, Harry D., Centreville, Ohio. Music-leaf turner	254,746	Mar. 7	381	.....	21	699
Wheaton, Frank, Brooklyn, N. Y. Fiber disintegrated from cotton-stalks	254,747	Mar. 7	381	.....	21	699
Wheaton, Frank, Brooklyn, N. Y. Paper made from the fiber of the cotton-plant						
Wheaton, Frank, Brooklyn, N. Y. Weaving the fiber of the stalk of the cotton-plant into fabrics	254,748	Mar. 7	382	.....	21	699
Wheaton, Frank, Brooklyn, N. Y. Separation of fiber from the cotton-plant and the manufacture of articles therefrom	254,749	Mar. 7	383	.....	21	709
Wheaton, Frank, Brooklyn, N. Y. Feed-bag for horses	255,740	Mar. 28	1636	443	21	941
Wheeler, Albert G., *et al.* (See Markland, William H., assignor.)						
Wheeler, Benjamin F., Malden, Mass. Sole-trimming machine for boots and shoes	259,253	June 6	462	122	21	1774
Wheeler, Harry P. (See Woodruff, Wheeler, and Pearson.)						
Wheeler, John B. (See Wheeler and Slack.)						
Wheeler, John M. (See Carney, Martin J., assignor.)						
Wheeler, Madden & Clemson Manufacturing Company. (See Clemson, William, assignor.)						
Wheeler, Marshal, assignor to B. F. Enoch, Philadelphia, Pa. Wheel-fender for vehicles	259,619	June 13	925	247	21	1803
Wheeler & Melick Company. (See La Dow, Charles, assignor.) (Reissue.)						
Wheeler & Melick Company *et al.* (See Stewart, Admiram J., assignor.) (Reissue.)	253,141	Jan. 31	1786	496	21	386
Wheeler, Milo L. G., Oregon City, Oreg. Force-pump						
Wheeler Reflector Company. (See Wheeler, William, assignor.)						
Wheeler, Samuel R., assignor of one-half to F. H. Krause, Dexter, Mich. Dumping-car	254,188	Feb. 28	1282	340	21	578
Wheeler, Stephen. (See Rice, Alvah, assignor.)						
Wheeler, Thomas F. (See Wheeler and Slack.)						
Wheeler, Walter K., San Francisco, Cal. Temperament-adjuster for musical instruments	256,594	Apr. 18	988	276	21	1137
Wheeler, William, Concord, Mass. Dynamo-electric machine	256,188	Apr. 11	538	149	21	1047
Wheeler, William, Concord, assignor to Wheeler Reflector Company, Boston, Mass. Supporter for electric-light reflectors	254,522	Mar. 7	93	23	21	654
Wheeler, William, Concord, assignor to Wheeler Reflector Company, Boston, Mass. Electric-light reflector and its support	254,523	Mar. 7	93	23	21	654
Wheeler, William, Concord, assignor to Wheeler Reflector Company, Boston, Mass. Reflector	254,578	Mar. 7	164	40	21	666
Wheeler, William A., Indianapolis, Ind. Machine for forming circumferential crimps in sheet-metal pipes	254,890	Mar. 14	556	149	21	740
Wheeler, William A., Indianapolis, Ind. Machine for closing down the seams of sheet-metal pipes	254,891	Mar. 14	559	150	21	741
Wheeler, William H. and T. F., Cape Girardeau, J. B. Wheeler and C. M. Slack, Jackson, Mo. Sample-displaying lid	255,063	Mar. 14	765	210	21	789
Wheeler & Wilson Manufacturing Company. (See Durfee, William F., assignor.)						
Wheeler & Wilson Manufacturing Company. (See Redshaw, Moses W., assignor.)						
Wheelock, Jerome, Worcester, Mass. Metal-boring machine	257,628	May 2	234	94	21	1241
Wheelock, Jerome, Worcester, Mass. Injector-condenser	257,629	May 9	614	172	21	1295
Wheelock, Jerome, Worcester, Mass. Injector-condenser	254,892	Mar. 14	561	150, 151	21	741
Whelan, Frank, San Francisco, Cal. Well-boring apparatus						
Whelan, Robert, assignor of one-half to J. A. Atkinson, Chicago, Ill. Rendering apparatus	260,268	June 27	1755	474	21	2012
Wherrel, William H., *et al.* (See Hull, John W., assignor.)						
Whipple, C. S. (See La Bay, Joseph, assignor.)						
Whipple, William A. (See Manchester, Thomas, assignor.)						
Whitaker, Edwin V., and J. Hull, Gloversville, N. Y. Machine for extracting grease from skins	252,550	Jan. 17	1088	297	21	193
Whitaker, Elijah J. B. (See Ladd, Daniel R., assignor.)						
Whitaker, Elijah J. B. (See Montgomery, William B., assignor.)						
Whitaker, Elijah J. B., Belair, Md. Trundling toy horse	255,267	Mar. 21	1167	313	21	853
Whitaker, Elijah J. B., Belair, Md. Clothes-sprinkler	255,268	Mar. 21	1168	313	21	853
Whitaker, Elijah J. B., Belair, Md. Folding table	255,269	Mar. 21	1169	313	21	854
Whitaker, William W., Gloversville, N. Y. Glove	259,620	June 13	926	247	21	1803
Whitcomb, George D., Chicago, Ill. Coal-mining machine	259,956	June 20	1351	365	21	1942
Whitcomb, Henry H., Bridgeport, Conn. Toy pistol	252,580	Jan. 17	1070	297	21	193
Whitcomb, Kirk. (See White and Whitcomb.)						
Whitcomb, Marcians R., Holyoke, Mass. Fishing apparatus	253,456	Feb. 7	394	90	21	401
White, Addison H., *et al.* (See Westland, Charles S., assignor.)						
White, Arthur M. (See Robison, Sylvanus B., assignor.)						
White, Charles N. (See Van Wagner, Isaac M., assignor.)						
White Dental Manufacturing Company, S. S. (See Abbott, Frank, assignor.)						
White Dental Manufacturing Company, S. S. (See Kaeber, George, assignor.)						
White Dental Manufacturing Company, S. S. (See Phillips, Thomas S., assignor.) (Reissue.)						
White Dental Manufacturing Company, S. S. (See Starr, Eli T., assignor.)						
White, Frank A., assignor of one-half to W. B. Sheppard, Cortland Village, N. Y. Automatic fire-extinguisher for railway-cars	254,785	Mar. 7	405	108	21	707
White, Frederick, assignor of five-twelfths to C. R. Rogers, Westborough, Mass. Velocipede	259,444	June 13	708	188	21	1825
White, George A., Halifax, Nova Scotia, Canada, assignor of one-half to W. L. Alvord, Bridgeport, Conn. Knitting-machine	254,750	Mar. 7	383	98	21	709
White, Henry P., Paw Paw, Mich. Cylinder and concave teeth for thrashing-machines	251,961	Jan. 3	356	96	21	61
White, Hugh. (See Lamont and White.)						
White, J. Clarence, *et al.*, trustees. (See Rudd, Charles H., assignor.)						
White, James H., assignor to Manhattan Brass Company, New York, N. Y. Bracket and standard lamp	252,168	Jan. 10	391	166	21	199
White, James W., *et al.*, trustees. (See Rudd, Charles H., assignor.)						
White, Joseph, Coventry, county of Warwick, England. Seat-spring for bicycles	256,333	May 23	1471	419	21	1567
White, Lewis, and K. Whitcomb, Hoosick Falls, N. Y. Apparatus for determining the nutrition of cellular fiber	254,751	Mar. 7	386	96	21	709

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
White, Lewis B., Norfolk, Va. Plow	260,072	June 27	1515	407	21	1975
White, Lewis B., and L. Henderson, Middleburg, N. C. Car heating and ventilating apparatus	257,795	May 9	808	286 227	21	1431
White, Milton. (See Adcock, Lumpkin, and White.)						
White, Otis C., Hopkinton, Mass. Ball-and-socket joint	259,957	June 20	1359	365	21	1943
White, Rufus P., *et al.* (See Edelblute, Lucius S., assignor.)						
White Sewing Machine Company. (See Baker, George W., assignor.)						
White, William, assignor of one-half to J. Merchant, Chicago, Ill. Combined belt and key fastener	256,833	May 30	2070	584	21	1680
White, William M., Kihi, Wash. Ter. Hay-wagon	253,650	Feb. 14	534	158	21	451
White, William R., Neoga, Ill. Sliding and swinging gate	258,343	Jan. 17	895	294	21	150
White, William R., Neoga, Ill. Hanging gates	258,915	Jan. 31	1502	418	21	279
White, William R., Neoga, Ill. Sliding gate	258,517	May 23	1083	476	21	1694
Whitehall, Samuel, and W. Newlin, Attica, Ind. Vehicle-wheel	256,834	May 30	2071	584	21	1680
Whitehead & Atherton Machine Company. (See Whitehead, William E., assignor.)						
Whitehead, Henry and T. Dodd, London, England. Railway-point and manner of working the same	254,080	Feb. 21	1103	397 308	21	551
Whitehead, James. (See Candler and Whitehead.)						
Whitehead, William E., Tewksbury, assignor to Whitehead & Atherton Machine Company, Lowell, Mass. Machinery for opening or preparing cotton or other fibrous material	253,142	Jan. 31	1787	496	21	336
Whitehead, William E., assignor to Whitehead & Atherton Machine Company, Lowell, Mass. Top-flat of carding-machines	256,680	May 30	1890	514	21	1636
Whitehouse, Edward, Brooklyn, N. Y. Hat	259,254	June 6	464	123	21	1774
Whitelaw, Alexander L. (See Bush, Charles, assignor.)						
Whiteley, Edward, Antrim, N. H. Steam-jacket kettle	251,751	Jan. 3	76	21	21	16
Whiteley, Fassler & Kelly. (See Bayley, William, assignor.)						
Whiteley, Fassler & Kelly. (See Dean, J. Henry, assignor.)						
Whiteley, Fassler & Kelly. (See Whiteley, Bayley, and Hurd, assignors.)						
Whiteley, Fassler & Kelly. (See Whiteley and Bayley, assignors.)						
Whiteley, Fassler & Kelly. (See Whiteley, William N., assignor.)						
Whiteley, William N., *et al.* (See Green, George F., assignor.)						
Whiteley, William N. (See Hurd, Asa, assignor.)						
Whiteley, William N., Springfield, Ohio. Harvester	252,561	Jan. 17	1070	298	21	194
Whiteley, William N., Springfield, Ohio. Harvester	252,696	Jan. 24	1397	387	21	253
Whiteley, William N., W. Bayley, and A. Hurd, assignors to Whiteley, Fassler & Kelly, Springfield, Ohio. Cord-knotter for grain-binders	255,741	Mar. 28	1637	443	21	941
Whiteley, William N., assignor to Whiteley, Fassler & Kelly, Springfield, Ohio. Grain-gathering and binding machine	258,179	May 16	1965	357 358	21	1523
Whiteley, William N., assignor to Whiteley, Fassler & Kelly, Springfield, Ohio. Grain-packer for binding-machines	258,180	May 16	1967	358 359	21	1524
Whiteley, William N., and W. Bayley, assignors to Whiteley, Fassler & Kelly, Springfield, Ohio. Harvester and binder	258,181	May 16	1968	359 360	21	1524
Whiting, Arthur N., Boston, Mass, assignor to Hayden Company, of Massachusetts. Faucet	258,540	May 23	1716	484	21	1610
Whiting, Edmund R., *et al.* (See Myrick, Israel E., assignor.)						
Whiting, George B., Washington, D. C. Separating-diaphragm	258,835	May 30	2071	584 585	21	1680
Whiting Stronghold Belt Clasp Company. (See Whiting, William M., assignor.)						
Whiting, William H. H., Chelsea, Mass. Electric gas-lighter	257,195	May 2	55	17	21	1291
Whiting, William M., Elizabeth, N. J., assignor to Whiting Stronghold Belt Clasp Company, New York, N. Y. Method of and implement for uniting the ends of belting	256,585	Apr. 18	983	277	21	1137
Whitlow, Eliza J., Mexico, Mo. Washing-machine	255,742	Mar. 28	1638	444	21	942
Whitman, James E., and E. M. Brown, Spring Valley, Minn. Bag-holder	254,693	Mar. 14	563	151	21	742
Whitmore, Andrew E., East Boston, Mass. Lock for fire-arms	259,445	June 13	710	189	21	1826
Whitmore, Osceola A., *et al.* (See Chaunier, Jean, assignor.)						
Whitmore, Solomon S., Waverly, Md. Combined cooking-vessel and condenser	255,743	Mar. 28	1639	444	21	942
Whitmore, William H., and G. H. Pratt, Boston, Mass., assignors to said Whitmore. Apparatus for manufacturing sodium hyposulphite	253,143	Jan. 31	1788	496	21	336
Whitney, Adeline D. T., Milton, Mass. Alphabet-block	257,630	May 9	615	172	21	1395
Whitney, Baxter D., Winchendon, Mass. Bed and presser for planing-machines	259,956	June 20	1353	365 366	21	1943
Whitney, Edward H., Cambridge, assignor to Dover Stamping Company, Boston, Mass. Sheet-metal vessel	254,417	Feb. 28	1469	408	21	634
Whitney, Henry C. (See Baldwin, William H., assignor.)						
Whitney, James A. (See Hollingsworth, John, assignor.)						
Whitney, James A., Dobbs Ferry, N. Y. Process of and apparatus for making pills	256,419	Apr. 11	834	231 236	21	1099
Whitney, James A., Dobbs Ferry, N. Y. Machine for manufacturing pills, &c	256,420	Apr. 11	836	232 233	21	1099
Whitney, John R., Radnor township, Delaware county, Pa. Manufacture of chilled castings	256,182	May 16	1270	360	21	1534
Whitney, Lucy A. (See Preston and Whitney.)						
Whitney, Orleon C. Cleveland, Ohio. Cabinet-organ case	251,752	Jan. 3	77	21	21	16
Whitney, Ruel W., New York, N. Y., assignor of one-half to P. S. Baylor, Jersey City, N. J. Mechanical movement	253,798	Feb. 14	746	213	21	484
Whitney, William S. (See Parkinson, William, assignor.)						
Whitnum, Samuel, Brooklyn, N. Y. Air cooling and purifying apparatus	254,081	Feb. 21	1104	308	21	551
Whitson, George W., Asheville, N. C. Self-loading excavating-cart	256,380	May 23	1400	396	21	1555
Whittaker, Charles, Chicago, Ill. Faucet	257,538	May 9	483	134	21	1373
Whittemore, David. (See Eppler, Andrew, Jr., assignor.)						
Whittemore, David, and A. Eppler, Jr., Quincy, Mass.; said Eppler assignor to said Whittemore. Pegging-machine	255,064	Mar. 14	798	210	21	761
Whittemore, David E. (See Eppler, Andrew, Jr., assignor.)						
Whittemore, David H., Worcester, Mass. Apple parer, corer, slicer, and quarterer	251,992	Jan. 3	350	96	21	61
Whittingham, Joseph, and F. A. Lyman, Cleveland, Ohio. Vapor-burner	255,553	Mar. 28	1398	378	21	898
Whittlesey, William H., and J. C. Cook, Russell, Iowa. Hog-ringing tool	259,067	June 6	946	65	21	1736
Wiard, George, Batavia, N. Y. Velocipede	254,068	Feb. 21	1105	309	21	551
Wiard, George, assignor to Wiard Plow Company, Batavia, N. Y. Plow	255,370	Mar. 21	1170	314	21	854
Wiard Plow Company. (See Wiard, George, assignor.)						
Wickes, James H., New York, N. Y. Grain-car door	254,758	Mar. 7	367	96	21	700
Wicksteed, Charles, Kettering, county of Northampton, England. Stand for bicycles	256,936	Apr. 25	1463	416	21	1227

Winter, Mary E., Galesburg, and C. W. Crary, Chicago, Ill.; said Crary assignor to said Winter. Adding-machine	258,518	May 23	1663	476, 477	21	1604
Winter, Michael, Sr., Union City, Ind. Carpet-stretcher	253,460	Feb. 7	388	91	21	401
Winter, Michael, Sr., Union City, Ind. Car-coupling	253,601	Feb. 14	749	214	21	485
Winterbauer, Louis, New York, N. Y. Beer apparatus	259,625	June 13	933	249	21	1865
Winters, George. (See Miller, David R., assignor.)						
Winters, John C., Mount Morris, N. Y. Method of and apparatus for filling cans and preserving their contents	254,895	Mar. 14	564	151, 152	21	742
Winters, John C., Mount Morris, N. Y. Can-capping machine	256,690	Apr. 4	408	111	21	1019
Winters, Joseph R., Chambersburg, Pa., assignor of one-half to S. B. Reed, New York, N. Y. Fire-escape	256,186	May 16	1275	361	21	1525
Wire, George. (See Baker, George D., assignor.)						
Wires, Edwin O., Boston, Mass. Dish-holder	251,754	Jan. 3	78	22	21	16
Wise, Morris, assignor to West India Manufacturing Company, New York, N. Y. Apparatus for making extracts from vegetable substances	253,802	Feb. 14	751	214	21	485
Wise, Thomas P., Richmond, Va. Plow attachment	255,666	Mar. 14	790	211	21	781
Wiseheugh, Henry, Canton, Ohio. Medical compound for diphtheria	259,670	June 6	250	.....	21	1736
Wiseman, Edmund, Luton, county of Bedford, England. Straw-braid sewing-machine	257,495	May 2	339	95	21	1242
Wisill, William W., Sr., *et al.* (See Horton, Theodore, assignor.)						
Wiswell, Frederick A. (See Ewins and Wiswell.)						
Wiswell, Theodore L., Olathe, Kans. Hanger for clothes	255,746	Mar. 28	1042	445	21	942
Witham, Ephraim, Carritunk, Me. Calk	255,556	Mar. 28	1402	379	21	899
Witherbee, Thomas F., Port Henry, N. Y. Regulator for blowing-engines	257,799	May 9	813	228	21	1433
Witherell, Hermon O., assignor to Eagle Knitting Company, Elkhart, Ind. Mitten	256,337	May 23	1476	420	21	1368
Witherell, Loren R., Davenport, Iowa. Paper-bag file	256,387	Apr. 18	985	277	21	1138
Witherell, William F., Chicago Ill., and B. H. Vary, Ogdensburg, N. Y. Furnace for roasting, desulphurizing, and chlorodizing ores	254,755	Mar. 7	373	98	21	701
Witherington, Willis F., Kenton, Tenn. Device for raising and lowering wagon-bodies	256,187	May 16	1276	361	21	1526
Withey, John F., Lynn, Mass. Sink or hydraulic trap	259,256	June 6	665	123	21	1774
Witmer, Samuel H., Chicago, Ill. Folding cabinet-bed	253,963	Feb. 21	960	240	21	514
Witall, George L., Philadelphia, Pa., assignor to E. C. Edwards, Brooklyn, N. Y. Wool-washing machine	256,762	Apr. 18	1272	358	21	1187
Witall, George L., Philadelphia, Pa., assignor to E. C. Edwards, Brooklyn, N. Y. Roller-skate	257,496	May 2	342	95	21	1242
Witte, Lewis H., Cleveland, Ohio. Manufacture of milk-sugar	256,641	May 30	2077	.....	21	1681
Wittenberg, Charles, assignor to N. S. Byram and E. G. Cornelius, Indianapolis, Ind. Canopy-frame	255,063	Mar. 14	680	219	21	787
Wittenberg, Charles, assignor to N. S. Byram and E. G. Cornelius, Indianapolis, Ind. Child's carriage	258,870	May 23	1401	396	21	1555
Wittich, Frederic A., assignor of two-thirds to R. B. Bullock and W. Hubbard, Ashtabula, Ohio. Side pieces for carriage-bows	259,785	June 20	1154	307	21	1900
Wittmann, Rudolf, New York, N. Y. Automatic lead and crayon holder	253,603	Feb. 14	752	214	21	486
Wittmann, Rudolf, New York, N. Y. Dimension-measure	256,783	Apr. 18	1273	359	21	1188
Witte, Nelson, Alma City, Minn. Snow-plow	259,630	Jan. 24	1156	304	21	215
Wodiaka, Julius, New York, N. Y. Glove-fastening	256,842	May 30	2078	598	21	1682
Wohnlich, Louis J., Detroit, Mich. Speed-indicator for shafting	258,985	Jan. 10	736	205	21	132
Wohnlich, Louis J., and E. J. Scholes, assignors to said Scholes, W. and A. McFarland, Detroit, Mich. Machine for cutting off capsules	255,689	Apr. 4	93	25	21	966
Wolcoski, William, Atlanta, Ill. Spring for vehicles	255,903	Apr. 4	187	46	21	981
Wolcott, Henry J., Albion, Mich. Windmill	256,188	May 16	1277	362	21	1526
Wold, George B., Bridgeport, Conn. Dish-drainer	253,461	Feb. 7	389	91	21	401
Wolf, Abraham, New York, N. Y. Picture-frame. (Reissue)	10,097	Apr. 25	1716	481	21	1273
Wolf, Abraham N., assignor of one-half to J. Barber, Allentown, Pa. Flour-mill	255,747	Mar. 28	1043	445	21	943
Wolf, Augustus, Allentown, assignor of one-half to D. L. Hausaker, East Hempfield, Pa. Dust-collector for middlings-purifiers, &c	251,965	Jan. 3	302	98	21	93
Wolf, Augustus, Allentown, assignor of one-half to D. L. Hausaker, East Hempfield, Pa. Middlings-purifier	259,968	June 20	1364	372	21	1946
Wolfe, Horace S., assignor of two-thirds to F. W. Cornell and C. Kellogg, Kalamazoo, Mich. Stock-car	253,804	Feb. 14	753	215	21	486
Wolfe, Horace S., assignor of two-thirds to F. W. Cornell and C. Kellogg, Kalamazoo, Mich. Stock-car	256,185	Apr. 11	555	151, 152	21	1049

Alphabetical list of patentees, January to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Wolfe, Joseph A. L. (See Rudolph and Wolfe.)						
Wolfenden, Shore & Co. (See Goodyear, Robert B., assignor.)						
Womelsdorff, James W., assignor to himself, A. M. Simms, Guyandotte, and R. T. Oney, Huntington, W. Va. Ratchet-wrench	252,300	Jan. 10	757	210	21	135
Wood, Alfred, Detroit, Mich. Capsule-machine	258,519	May 23	1687	477	21	1605
Wood, Charles D., Lincoln, R. I. Piping for boots and shoes	255,067	Mar. 14	790	211	21	781
Wood, Charles H., Springfield, Mass. Feeding mechanism for sewing-machines	252,568	Jan. 17	1077	300	21	195
Wood, Edward E., Jr., Northampton, Mass. Carving-fork guard	257,427	May 2	343	96	21	1342
Wood, Foster. (See Woodbury, Wood, and Sawyer.)						
Wood, Frank. (See Wood, William A., assignor.)						
Wood, Frank B. (See Brower and Wood.)						
Wood, Frank B., New York, and H. J. Brower, assignors of one-fourth to B. E. Valentine, Brooklyn, N. Y. Automatic electric-signal-printing register	252,409	Jan. 17	867	247	21	163
Wood, Harry B. (See Siekels, Gerard, assignor.)						
Wood, James A., Rochester, N. Y. Cooking-boiler	253,805	Feb. 14	754	215	21	486
Wood, James J., Brooklyn, N. Y. Electric lamp	256,091	Apr. 4	410	112	21	1019
Wood, James J., Brooklyn, N. Y. Electric-light regulator	257,800	May 9	814	236	21	1432
Wood, James P., Philadelphia, Pa. Apparatus for heating air by steam	258,189	May 16	1278	362	21	1536
Wood, John B., assignor to M. M. Wood, Brooklyn, N. Y. Device for slackening and tightening stays, guys, &c.	257,263	May 2	130	39	21	1305
Wood, John R., New Brunswick, N. J. Buckle	257,122	Apr. 25	1672	468	21	1265
Wood, Joseph H., Akron, Ohio. Floor-cloth	259,257	June 6	466	.....	21	1775
Wood, Mary M. (See Wood, John B., assignor.)						
Wood, Mortimer F., San Francisco, Cal. Attachment for furnaces	253,462	Feb. 7	330	91	21	402
Wood Mowing and Reaping Machine Company, Walter A. (See Johnson, John A., assignor.)						
Wood, Myron G., Church's Corners, and W. C. Pratt, Hudson, Mich. Sulky-plow	256,422	Apr. 11	845	{223 234}	21	1100
Wood, Oliver F., Baldwyn, Miss. Car-coupling	255,748	Mar. 28	1644	445	21	943
Wood, Richard V. D., *et al.* (See Aldrich, Harvey C., assignor.)						
Wood, Thomas, and J. Morris, Birmingham, Conn. Auger-bit	254,184	Feb. 28	1223	341	21	578
Wood, W. Dewees, McKeesport, Pa. Manufacture of sheet-iron	252,166	Jan. 10	596	167	21	109
Wood, William A., Youngstown, Ohio, assignor to F. Wood, Albany, N. Y. Harvester	251,986	Jan. 3	392	98, 99	21	63
Wood, William H., Orange, N. J. Nut-lock	256,520	Apr. 18	986	278	21	1138
Wood, William R., and S. Barr, Butler, Iowa. Machine for boring axle-holes in hubs, &c.	252,447	June 13	713	{189 190}	21	1826
Wood, William S., assignor to Colorado Gold Saving Sluice Box Company, Denver, Colo. Ore-washer	252,569	Jan. 17	1078	{300 301}	21	195
Woodard, Stephen, Delano, Minn. Roofing-bracket	258,843	May 30	2079	587	21	1682
Woodard, William H. (See Kline and Woodard.)						
Woodard, William H., and L. D. Benedict, Cleveland, Ohio. Stove-rack	255,068	Mar. 14	791	212	21	781
Woodbridge, James E. (See Gardner, Frederick N., assignor.)						
Woodbury, Clark, F. Wood, and A. J. Sawyer, Old Town, Me. Tubular lantern	252,520	May 23	1688	477	21	1605
Woodbury, William E., *et al.* (See Burns, Wilson C., assignor.)						
Woodfill, Jared R., Aurora, assignor to J. I. Woodfill, Nichols, Mo. Telegraph-relay and repeating-instrument	255,373	Mar. 21	1174	315	21	855
Woodfill, John I. (See Woodfill, Jared R., assignor.)						
Woodford, Charles W., Essex, N. Y. Box-pressing clamp	255,069	Mar. 14	792	212	21	782
Woodhead, Samuel, West Troy, N. Y. Machine for seaming sheet-metal roofs	259,786	June 20	1155	307	21	1909
Woodhill, John. (See Calkins and Woodhill.)						
Woodhouse, Otway E., 90 Upper Phillimore Gardens, Kensington, county of Middlesex, England. Handle for rackets or lawn-tennis bats	259,448	June 13	714	190	21	1826
Woodhull, Morris, Dayton, Ohio. Vehicle-spring	255,904	Apr. 4	188	49	21	981
Woodman, Alvin, assignor to himself and C. I. Barker, Lewiston, Me. Cloth tentering, drying, and calendering machine	253,806	Feb. 14	755	215	21	486
Woodring, Gideon, Du Bois, Pa. Car-coupling	257,801	May 9	817	228	21	1433
Woodring, Henry, and N. C. Cents, Waverly, Iowa. Piston and valve rod packing	259,449	June 13	715	190	21	1826
Woodrough, James R., assignor to Woodrough & McParlin, Cincinnati, Ohio. Handsaw	252,570	Jan. 17	1080	301	21	195
Woodrough, James R., assignor to Woodrough & McParlin, Cincinnati, Ohio. Back-saw	252,571	Jan. 17	1080	301	21	196
Woodrough, James R., assignor to Woodrough & McParlin, Cincinnati, Ohio. Handsaw	257,802	May 9	817	228	21	1433
Woodrough & McParlin. (See Woodrough, James R., assignor.)						
Woodruff Bros. (See Sylvester, Philip L., assignor.)						
Woodruff, John I. D. and L. Y., St. Charles, Ky. Plaiting-machine	252,286	Jan. 10	737	206	21	132
Woodruff, Lemuley Y. (See Woodruff, John I. D. and L. Y.)						
Woodruff, Leslie B., Chicago, assignor to himself, J. Shaw, and A. J. Hopkins, Aurora, Ill. Calipers	252,410	Jan. 17	894	248	21	164
Woodruff, Leslie E., H. P. Wheeler, and J. Pearson, Howell, Mich. Fruit-drier	254,594	Mar. 7	94	24	21	654
Woodruff, M. N., *et al.* (See Pearce, William, assignor.)						
Woods, Alfred, Graniteville, Mass. Awning for windows	259,450	June 13	716	190	21	1827
Woods, Daniel W., St. Louis, Mo. Car-brake	257,803	May 9	818	229	21	1433
Woods, Frank E., Harrisburg, and T. J. Curley, Reading, Pa. Bed-bottom	253,463	Feb. 7	331	92	21	402
Woods, George. (See Jones, John, assignor.)						
Woodward, Abel B. (See Woodward, William and A. B.)						
Woodward, Charles L., Angola, N. Y. Potato planting and fertilizing machine	253,509	Feb. 14	465	132	21	486
Woodward, Erastus, Somerville, assignor to G. W. Copeland, Malden, Mass. Tacking-machine	251,735	Jan. 3	79	23, 24	21	16
Woodward, Erastus, Somerville, assignor to G. W. Copeland, Malden, Mass. Fastening-driving machine	251,736	Jan. 3	82	24	21	17
Woodward, Erastus, Somerville, Mass., assignor to Copeland Tacking and Lasting Company, Paterson, N. J. Preparing beaded tacks for use	253,250	Feb. 7	81	26	21	360
Woodward, Erastus, Somerville, Mass., assignor to Copeland Tacking and Lasting Company, Paterson, N. J. Tacking-machine	254,421	Feb. 28	1495	409	21	625
Woodward, Erastus, Somerville, Mass., assignor to Copeland Tacking and Lasting Company, Paterson, N. J. Tacking-machine	254,776	Mar. 7	375	98	21	702
Woodward, Frank R., Hill, N. H. Making latch-needles	259,989	June 20	1396	373	21	1948
Woodward, George W., New York, N. Y. Hanger for chandeliers	252,919	Jan. 31	1506	419	21	280
Woodward, Joseph, New York, N. Y. Match-box	253,570	Feb. 14	467	132	21	437
Woodward, T. Trask, assignor of one-half to J. F. Flood, Decatur, Ill. Vapor-burner	254,185	Feb. 28	1224	341	21	578
Woodward, William and A. B., Nashville, Tenn. Brick-machine	254,525	Mar. 7	93	24	21	655
Woodward, William C., Marseilles, Ill., assignor of one-half to E. Tolles, Union, Wis. Combined organ and upright piano	253,464	Feb. 7	332	92	21	402
Woodyatt, Augustus R., assignor to Guelph Carriage Goods Company, Guelph, Ontario, Canada. Machine for bending and shaping metal articles	252,853	Jan. 24	1422	396	21	259
Wooldridge, William H., Louisville, Ky. Head-rest	258,338	May 23	1477	420	21	1568
Woolhiser, Charles P., New York, assignor to W. H. H. Rogers, Brooklyn, N. Y. Paper box	255,374	Mar. 21	1177	316	21	855

DISCLAIMERS.

Name, residence, and invention.	No.	Filed.	Official Gazette. Vol.	Page.
Goodman, William, Boston, Mass. Leather-dressing machine	240,997	Mar. 8, 1882	21	716
Harris, Theodore R., Green Bay, Wis., Matthew Graff and William M. Everson, assignees; disclaimer filed by said assignees. Machine for shearing and punching shingle-straps. (Reissue)	4,636	May 5, 1882	21	1450
Le Roy, Tennis V., Le Roy Journal Bearing Company, New York, N. Y., assignee; disclaimer filed by said assignee. Car-axle box. (Reissue)	9,042	Apr. 26, 1882	21	1354
Matthews, John, New York, N. Y. Soda-water apparatus. (Reissue)	9,098	May 2, 1882	21	1354
Nobel, Alfred, Hamburg, Germany, Atlantic Giant Powder Company, San Francisco, Cal., assignee; disclaimer filed by Giant Powder Company, assignee of part interest of Atlantic Giant Powder Company. Exploding nitro-glycerine. (Reissue)	5,798	Dec. 28, 1881	21	78
Reese, Jacob, Pittsburg, Pa., Matthew Graff and William M. Everson, assignees; disclaimer filed by said assignees. Method of making bands for shingle-bundles	92,469	May 5, 1882	21	1450
Sternberg, William, Cicero, Leman W. Tyler, Theresa, N. Y., assignee; disclaimer filed by assignee. Cheese-hoop. (Reissue)	6,632	Apr. 25, 1882	21	1260
Tillinghast, Clark P., Providence, R. I. Railway-car ventilator. (Reissue)	9,573	Mar. 23, 1882	21	868
Welling, William M., New York, N. Y., Welling Compressed Ivory Manufacturing Company, (limited,) assignee; disclaimer filed by assignee and by patentee. Composition resembling horn.	98,727	Mar. 14, 1882	21	794

ALPHABETICAL LIST OF INVENTIONS.

Invention.	Name.	No.	Date.	Monthly volume. Specification.	Monthly volume. Drawing.	Official Gazette. Volume.	Official Gazette. Page.
Abrading-surfaces. Revivifying	J. Renshaw	257,612	May 3	895	166	21	1301
Accordion	R. Bergner	253,010	Jan. 10	417	114	21	79
Acid from bones. Preparing phosphoric	W. H. Hughes and P. O'Rielly	256,423	May 23	1273	447	21	1565
Acids. Removing flocculent matter from spent	F. V. Pool	251,936	Jan. 3	308	.....	21	83
Acids. Treating mineral pyrites and sulphides for the manufacture of sulphurous and sulphuric	H. Wurtz	252,287	Jan. 10	737	.....	21	138
Adding-machine	M. Bouchet	251,883	Jan. 3	173	48, 49	21	32
Adding-machine	J. G. Fischer	255,270	Mar. 21	1044	260	21	833
Adding-machine	F. Plumb	256,501	Apr. 18	1051	267	21	1148
Adding-machine	W. C. Snelling	257,775	May 9	765	219	21	1487
Adding-machine	M. E. Winter and C. W. Crary	258,518	May 23	1663	476	21	1694
Addressing-machine	W. W. W. Belknapp and G. H. Robillard.	258,544	May 30	1726	488	21	1619
Adjustable chair	E. B. Cushing	258,504	June 13	786	203	21	1539
Adjustable chair	J. D. King	256,077	May 16	1143	320	21	1501
Adjustable chair	J. Purcell	257,065	Apr. 25	1663	450	21	1253
Adjustable clamp	C. H. Gere	257,530	May 16	983	275	21	1471
Adjustable wrench	W. R. Godfrey	254,210	Feb. 28	1255	340	21	503
Advertising apparatus	E. M. Fitzgerald	251,855	Jan. 3	213	60	21	30
Advertising apparatus	J. O. Fowler, Jr.	257,664	May 9	662	189	21	1400
Advertising-card	C. M. Finch	259,838	June 20	1212	325	21	1949
Advertising device	E. L. Morris	253,067	Jan. 31	1725	477	21	315
Advertising device for street-cars	H. F. Bridewell	256,494	Apr. 11	847	235	21	1101
Advertising-table	W. Wilson	256,780	Apr. 18	1271	358	21	1167
Adzes. Die for making	W. Evans	258,570	May 30	1754	496	21	1695
Aerial navigation. Vessel for	A. L. Blackman	259,464	June 13	730	194	21	1539
Aeriform fluids. Apparatus for mixing	J. F. Barker	258,089	Jan. 10	415	113	21	79
Aeriform fluids. Apparatus for mixing	J. F. Barker	254,589	Mar. 7	175	44	21	638
Aging and purifying whisky	G. Geewey	257,469	May 9	429	119	21	1354
Agitator or egg-beater	G. W. Richardson	252,800	Jan. 24	1352	378	21	248
Air and gas burner. Combined	J. Lewis	255,875	Apr. 4	147	40	21	975
Air-compressing apparatus	J. B. West	258,348	June 13	586	155	21	1803
Air-compressing apparatus. Hydraulic	J. M. Bois	259,799	June 20	1169	312	21	1911
Air-compressor	J. H. Baker	259,741	June 20	1103	294	21	1901
Air-compressor	M. S. Manning, Jr.	256,232	Apr. 11	889	168	21	1049
Air-compressor	C. Monson	257,895	May 16	916	256	21	1469
Air-compressor	A. C. Rand	255,116	Mar. 21	848	227	21	799
Air-compressor	W. Wang	255,232	Mar. 21	936	264	21	833
Air-compressor	W. Wang	255,901	Apr. 4	184	48	21	951
Air-compressor	J. B. Waring	254,851	Mar. 14	497	133	21	729
Air-compressor	J. B. Waring	255,400	Mar. 21	1219	304	21	861
Air-compressor. Hydraulic	W. A. Babcock	253,630	Feb. 21	791	225	21	499
Air-compressor. Hydraulic	J. Bradley	254,915	Mar. 14	587	156	21	746
Air cooling and purifying apparatus	S. Whitman	254,081	Feb. 21	1104	309	21	551
Air-cooling apparatus	R. S. Jennings	254,981	Mar. 14	674	181	21	761
Air-cooling apparatus	G. W. Stockman	260,089	June 27	1496	404	21	1973
Air-exhauster. Mercury	E. A. Edwards	257,670	May 9	672	187	21	1497
Air-injecting ventilator	P. Mihan	259,025	June 6	994	55	21	1729
Air machine. Cold	H. F. Starbuck	255,895	Apr. 4	171	45, 46	21	979
Air motor. Compressed	R. S. Tice	254,072	Feb. 21	1094	303	21	549
Air-ship	W. G. Krueger	252,955	Jan. 31	1540	433	21	298
Air-ship	C. W. Petersen	256,306	Apr. 11	783	216	21	1099
Alarm: *See* Burglar-alarm. Fire-alarm. Knob-alarm. Locomotive stock-alarm. Millstone-alarm. Telephone-alarm. Till-alarm. Time-alarm.							
Alarm and door-bell	M. Truby	255,356	Mar. 21	1155	300	21	851
Alarm-lock	I. N. Buck	257,545	May 16	988	243	21	1483
Alarm-lock	R. Schade	256,491	May 23	1641	465	21	1597
Alarm-lock	J. E. Wells	253,795	Feb. 14	743	213	21	484
Alarm-signal	H. A. Eaton	253,057	Feb. 14	668	170	21	458
Album-clasp	A. C. Hafely	253,981	Feb. 7	115	36	21	308
Album-clasp	P. Hufeland	257,913	Apr. 25	1549	435	21	1243
Album-clasp	J. C. Koch	259,286	Jan. 10	650	185	21	199
Album-clasp	H. Landsberg	251,901	Jan. 3	209	73	21	47
Album. Photograph and autograph	G. Bartlett	257,203	May 2	65	20	21	1213
Alcohol. Apparatus for the manufacture of	A. Deininger	258,629	May 16	1080	263	21	1491
Alcohol-vessel for watch-maker's use	G. P. Reed	257,695	May 16	931	229	21	1483
Alkali. Grinding and sieving caustic	W. J. Menzies. (Reissue)	10,188	May 9	656	176	21	1441
Alkali. Grinding and sieving caustic	W. J. Menzies. (Reissue)	10,189	May 9	656	220	21	1441
Alkali. Putting up caustic	B. T. Babbitt	256,095	Apr. 4	415	113	21	1089

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Alkali. Putting up caustic	B. T. Babbitt	260,272	June 27	1761	476	21	2014
Alkaline solutions obtained in the manufacture of soda. Purification of	E. Carey, H. Gaskell, Jr., and F. Hurter.	258,850	May 30	2088	.....	21	1683
Alkaline solutions. Purification of	E. Carey, H. Gaskell, Jr., and F. Hurter.	254,918	Mar. 14	591	.....	21	748
Alkaline solutions. Purification of	E. Carey, H. Gaskell, Jr., and F. Hurter.	254,919	Mar. 14	592	150	21	748
Almanac	G. G. Green	256,316	Apr. 11	795	197	21	1079
Alphabet-block	A. D. T. Whitney	257,630	May 9	615	172	21	1395
Alumina. Manufacture of soluble	J. Webster	252,992	Jan. 31	1581	.....	21	293
Aluminous cake. Manufacture of	T. S. Harrison	253,377	Feb. 7	223	.....	21	364
Amalgam of gold and silver containing base metals. Refining	E. N. Riotte	253,888	Feb. 21	863	.....	21	511
Amalgamating and washing ores. Apparatus for	J. Scott	257,618	May 9	602	168	21	1386
Amalgamating apparatus	A. D. Clarke	253,843	Feb. 21	809	220	21	508
Amalgamating apparatus. Ore	C. H. Swain	252,978	Jan. 31	1575	430	21	292
Amalgamating gold and silver ores. Apparatus for	W. Hamilton	258,578	May 30	1764	499	21	1686
Amalgamating ores. Process of and apparatus for	C. E. Ball	253,254	Feb. 7	85	27	21	301
Amalgamator	C. E. Ball	253,255	Feb. 7	86	27	21	301
Amalgamator	W. T. Browne	256,263	Apr. 11	682	185	21	1072
Amalgamator	H. M. Jones	258,429	May 23	1563	449	21	1587
Amalgamator	A. McKellar	254,675	Mar. 7	277	74	21	685
Amalgamator	L. A. Merriam	252,051	Jan. 10	458	126	21	86
Amalgamator	W. Moller	251,914	Jan. 3	285	78	21	49
Amalgamator	W. Moller	253,084	Jan. 31	1721	475	21	314
Amalgamator	C. Pontes	256,733	Apr. 18	1921	342	21	1178
Amalgamator	H. M. Thompson	255,209	Mar. 21	971	260	21	819
Amalgamator	C. E. Topping	260,256	June 27	1742	471	21	2010
Amalgamator	H. C. Train	258,330	May 23	1465	416 / 417	21	1566
Amalgamator and concentrator	A. Oliver	252,793	Jan. 24	1338	374	21	945
Ammoniacal liquors. Treating	H. J. E. Hennebutte and C. J. F. R. de J. Menaid.	259,145	June 6	331	88	21	1752
Ammoniacal salts. Treating	H. J. E. Hennebutte	253,045	Jan. 31	1602	.....	21	306
Ammunition-box	E. G. Parkhurst	259,040	June 6	209	56	21	1730
Anæsthetics. Administering	S. Cooper and E. Dennis	258,632	May 30	1833	517	21	1639
Anæsthetics. Process of and apparatus for administering	S. J. Hayes	257,866	May 16	894	249	21	1467
Anchor-support	E. Robbins	254,160	Feb. 28	1199	335	21	574
Anchor-supporter	E. Robbins	254,161	Feb. 28	1199	335	21	575
Animal-shears	P. Anderson	259,073	June 6	253	67	21	1737
Animal-trap	A. André	253,907	Feb. 21	864	240	21	515
Animal-trap	E. Emmert	254,943	Mar. 14	600	167	21	752
Animal-trap	C. S. Hensley	258,647	May 30	1850	523	21	1642
Animal-trap	H. B. Swartz	257,904	May 16	941	262	21	1464
Animal-trap	A. W. Walker	255,659	Mar. 14	782	209	21	780
Animal-trap	C. G. Wiltse	257,798	May 9	812	227	21	1432
Animal-trap	F. Winslow	252,852	Jan. 24	1421	396	21	250
Animals. Device for holding	J. B. Wilson and J. F. Kortepeter	259,349	June 13	588	156	21	1803
Annunciator	J. G. Arnold	256,190	Apr. 11	562	153	21	1050
Annunciator board and circuit for telephone exchanges.	M. G. Kellogg	258,234	May 23	1358	384	21	1548
Annunciator. Electric	H. B. Porter	255,453	Mar. 28	1278	345	21	878
Annunciator. Electrical	F. E. Fisher	258,735	May 30	1962	555	21	1661
Annunciator. Electrical	A. Lüngen	258,537	May 23	1711	483	21	1609
Annunciator. Speaking-tube	W. R. Ostrander	253,092	Jan. 31	1731	478	21	316
Anvil and vise. Combined	J. J. Glover	258,855	May 30	2092	590	21	1664
Anvil. Hand	W. H. Brown	254,195	Feb. 28	1234	343	21	580
Anvils. Cutter and punch attachment for	G. T. Childs	254,532	Mar. 7	103	26	21	656
Apparatus for administering injections	P. V. Schenck	256,745	Apr. 18	1235	346	21	1181
Aquarium	C. N. Orpen	256,240	Apr. 11	635	171	21	1062
Arch-bars. Machine for bending and punching	C. G. Cross	252,741	Jan. 24	1266	353 / 356	21	233
Arm. Artificial	D. W. Kolbe	255,796	Apr. 4	54	15	21	980
Artistic articles. Manufacturing and decorating	H. F. L. Starcke	242,151	Jan. 10	577	166	21	106
Artist's box	W. H. Brownell	257,285	May 2	164	47	21	1310
Artist's case and easel. Combined	A. E. Van Kirk	259,441	June 13	763	186	21	1894
Artists' use. Board or tablet for	S. J. Freshney	253,030	Jan. 31	1644	.....	21	303
Ash safe and sifter. Combined portable	M. J. Cook	254,110	Feb. 28	1148	320	21	565
Assorting-machine	S. M. Park	254,214	Feb. 28	1283	356	21	589
Atomizer	J. Beggs	256,621	Apr. 18	1090	307	21	1154
Atomizer	P. Lochmann	254,988	Mar. 14	662	183	21	763
Atomizer	R. Lockwood	251,720	Jan. 3	38	11	21	9
Attrition-mill	H. A. Duc, Jr.	252,361	Jan. 17	898	230 / 231	21	153
Attrition-mill	T. L. Sturtevant	255,550	Mar. 28	1395	377	21	898
Auger-bit	T. Wood and J. Morris	254,184	Feb. 28	1293	341	21	578
Auger. Earth	W. Brunner	256,457	Apr. 18	909	252	21	1194
Auger. Earth	C. A. F. Peters	256,039	Apr. 4	350	94	21	1009
Auger. Hollow	F. S. Dellenbaugh	254,980	Feb. 28	1341	370	21	598
Auger-making machine	P. Mackay	253,076	Jan. 31	1708	471 / 472	21	312
Auger-twisting machine	F. A. Snell	257,309	May 2	392	86, 87	21	1336
Augers. Countersink attachment for	C. W. Cutter	252,650	Jan. 24	1169	328	21	217
Automatic gate	R. F. Hageman	251,870	Jan. 3	230	64	21	41
Automatic gate	N. H. Long	259,027	June 6	194	51, 52	21	1727
Automatic gate	E. E. Spitler	253,238	Feb. 7	63	19	21	357
Automatic gate attachment	J. F. Lukens	257,956	May 16	1001	279	21	1478
Automatic lubricator	F. H. Barber	254,902	Mar. 14	573	154	21	744
Automatic lubricator	C. O. Yale	260,344	June 27	1840	499	21	2028
Automatic sprinkler	C. W. Talcott	259,789	June 20	1148	305	21	1906
Averaging-machine	W. S. Auchincloss	257,478	May 2	348	97	21	1343
Awl	T. H. Logan	253,729	Feb. 14	659	188	21	467
Awning	L. Fox and G. Weenink	252,663	Jan. 10	508	141	21	95

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Awning	A. G. Sahlqvist	258,319	May 23	1464	413	21	1564
Awning	J. Willie	253,568	Feb. 14	464	122	21	426
Awning. Window	J. Sands	258,132	May 16	1211	341	21	1514
Awning. Window	A. Weeds	259,450	June 13	716	180	21	1887
Ax	W. Andrews	255,711	Mar. 28	1502	429	21	994
Axes. Machine for making	H. Denton	259,684	June 20	1197	299	21	1917
Axle and wheel. Car	W. S. Pendleton	258,109	May 16	1183	331 / 332 / 333	21	1508
Axle bearing. Car	J. R. Baker	259,258	June 13	801	156	21	1894
Axle-box	O. R. Chaplin	252,017	Jan. 10	492	116	21	99
Axle box. Car	S. A. Bemis. (Reissue)	10,081	Apr. 11	698	246	21	1107
Axle box. Car	H. Bouchard	257,648	May 9	638	178	21	1400
Axle box. Car	C. E. Candee	253,592	Feb. 14	491	126	21	430
Axle box. Car	J. R. Cooper	258,257	Jan. 17	993	289	21	153
Axle box. Car	J. H. Elward	253,698	Feb. 14	803	171	21	459
Axle box. Car	G. F. Godley	251,889	Jan. 3	289	64	21	41
Axle box. Car	G. F. Godley	256,987	Apr. 25	1534	431	21	1240
Axle box. Car	G. F. Godley	260,018	June 27	1449	391	21	1986
Axle box. Car	M. Hayden	257,568	May 9	559	156	21	1384
Axle box. Car	T. F. Hemmich	254,971	Mar. 14	657	178	21	750
Axle box. Car	E. Huber	257,709	May 9	719	199	21	1415
Axle box. Car	F. Keiser	257,790	May 9	730	203	21	1416
Axle box. Car	H. Millholland	260,112	June 27	1567	428	21	1963
Axle box. Car	T. S. Phillips	255,451	Mar. 28	1275	344	21	878
Axle box. Car	J. C. Richardson	252,501	Jan. 17	1100	307	21	199
Axle box. Car	H. Roth	255,675	Mar. 28	1545	416	21	986
Axle box. Car	H. Roth	255,676	Mar. 28	1546	416	21	986
Axle box. Car	J. O. Scott	258,613	May 30	2044	577	21	1675
Axle box. Car	J. N. Smith	253,438	Feb. 7	207	84, 85	21	306
Axle box. Car	J. Soper and J. Slade	254,171	Feb. 28	1208	337	21	576
Axle box. Car	L. H. Tourville	259,948	June 20	1340	300	21	1940
Axle box. Car	W. L. Troup and J. A. C. Gerner	257,109	Apr. 25	1658	444	21	1263
Axle box. Car	G. E. Yost	254,857	Mar. 14	504	135	21	731
Axle box. Carriage	F. A. Carnes	252,733	Jan. 24	1257	353	21	238
Axle box gage	J. A. Myers	253,823	Feb. 14	778	221	21	490
Axle-box jack. Car	R. Robinson	251,850	Jan. 3	230	67	21	55
Axle-box. Vehicle-wheel	J. T. Gardner	255,077	Mar. 14	602	215	21	794
Axle. Carriage	A. E. Smith	256,680	May 30	1898	536	21	1650
Axle-cleaner and wrench. Combined	C. H. Hamilton	254,643	Mar. 7	228	60	21	679
Axle collar. Car	J. Thompson	259,437	June 13	698	185	21	1888
Axle-dust cap	T. W. Squires	256,492	May 23	1656	468	21	1560
Axle-lubricator	G. Brennan	260,277	June 27	1765	477	21	2014
Axle-lubricator	G. D. Young	256,167	Apr. 11	538	152	21	1050
Axle lubricator. Car	C. D. Flynt	256,045	May 16	1108	309	21	1494
Axle lubricator. Vehicle	E. Firth	256,664	Apr. 18	1141	320	21	1164
Axle-skein	J. and P. Herrmann	256,661	Apr. 18	1164	327	21	1166
Axle-skein	D. B. Turnbull	260,130	June 27	1601	438	21	1969
Axle skein. Wagon	J. Sandoe	256,744	Apr. 18	1234	346	21	1180
Axle spindle-protector. Carriage	C. Chamberlin	259,366	June 13	613	169	21	1808
Axle truss. Vehicle	W. A. Galbraith	259,637	June 13	854	254	21	1688
Axle. Vehicle	C. Cook	254,486	Mar. 7	98	6	21	642
Axle. Vehicle	A. Deisher and W. H. Adam	254,625	Mar. 7	217	56	21	675
Axle. Vehicle	J. Du Shane	259,114	June 6	362	89	21	1747
Axle. Vehicle	R. F. Ivey	257,335	May 2	329	85	21	1322
Axles. Device for forming shoulders upon vehicle	G. Brammer and J. R. Swarts	256,279	May 23	1410	389	21	1357
Axles, shafts, and spindles. Pedestal, box, and bearing for	T. F. Hemmich	254,970	Mar. 14	654	177 / 178	21	758
Baby jumper, swing, and bed. Combined	G. C. Klein	257,873	May 16	998	231	21	1493
Baby-walker	I. C. Price	257,185	May 2	45	14	21	1299
Bag: See Canvas bag. Fertilizer-bag. Mail-bag. Paper bag.							
Bag-fastener	C. W. Bradford	255,928	Apr. 4	213	65	21	986
Bag-fastener	C. W. Kurtz	254,449	Feb. 28	1514	414	21	602
Bag-fastener	W. B. Purvis	256,856	Apr. 25	1367	385	21	1218
Bag-fastener	T. Sandford	252,894	Jan. 24	1357	379	21	249
Bag-holder	P. Allen	252,640	Jan. 24	1157	324	21	215
Bag-holder	A. Cultum	257,214	May 2	74	28	21	1294
Bag-holder	J. E. Whitman and E. M. Brown	254,893	Mar. 14	563	151	21	748
Bag or sack for storing or transporting fertilizers	C. E. Buck	252,073	Jan. 10	485	.....	21	91
Bag or satchel	R. Harris	257,003	Apr. 25	1530	432	21	1241
Bag or satchel	L. Lowenbers	253,614	Feb. 14	514	147	21	444
Bagasse-furnace	W. Littlejohn. (Reissue)	9,996	Jan. 3	305	106 / 107	21	66
Bagasse-furnace	M. J. L. Marie	254,351	Feb. 28	1414	399	21	611
Bagasse, plants, &c. Extracting juices from	P. Collier	251,701	Jan. 3	19	5	21	9
Ball-bending machine	S. Vanstone	252,551	Jan. 17	1092	304 / 305	21	198
Ball-hook	K. Müller	253,398	Feb. 7	145	42	21	371
Baker and boiler. Combined	W. B. Billings	260,061	June 27	1586	448	21	1977
Baking plate. Pie	C. T. Hurd	254,770	Mar. 7	396	103	21	705
Baking-powder. Manufacture of	A. Giesecke	256,632	Apr. 25	1287	.....	21	1200
Balance. Proportional	C. Seymour	260,127	June 27	1697	469	21	1997
Bale and box hook	H. A. Dirkes	254,269	Feb. 28	1243	371	21	606
Bale-band cutter	T. C. Doolittle	256,301	Apr. 11	705	192	21	1075
Bale-bands. Machine for making wire	T. A. Weber	257,793	May 9	803	225 / 226	21	1429
Bale-tie	W. H. King	252,953	Jan. 31	1549	431	21	327
Bale-tie	T. F. McNair	253,741	Feb. 14	670	189	21	471
Baling band. Hay and cotton	W. S. Gordon	255,262	Apr. 4	974	71	21	995
Baling machine. Hay	P. Wright	255,759	Mar. 28	1648	446	21	943
Baling-press	G. W. Batchelder	251,990	Jan. 3	370	109 / 110	21	64
Baling-press	A. E. Bloomburg	258,899	June 6	13	4	21	1697

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Baling-press	P. K. Dederick	251,768	Jan. 3	100	28, 29	21	20
Baling-press	P. K. Dederick	257,152	May 2	9	3	21	1263
Baling-press	P. K. Dederick	257,153	May 2	11	4	21	1263
Baling-press	L. Ensinger	252,200	Jan. 10	628	178	21	115
Baling-press	I. V. Jones	255,297	Mar. 21	1062	291	21	839
Baling-press	J. La Dow	252,882	Jan. 31	1458	408 and 409	21	271
Baling-press	A. Leyden	250,561	June 13	856	236	21	1858
Baling-press	G. K. Rice	252,058	Jan. 10	468	129	21	88
Baling-press	W. F. Smith	255,091	Mar. 14	818	218	21	787
Baling-press	J. A. Wagner	256,169	May 16	1254	354	21	1581
Baling-press	P. Wright	253,468	Feb. 7	335	93, 94	21	402
Baling-press. Portable	J. W. Kitchens	260,032	June 27	1465	395 and 396	21	1968
Ball: See Toy ball. Whistling return-ball.							
Ball-and-socket joint	O. C. White	250,957	June 20	1352	365	21	1943
Ball-trap	M. E. Card	257,469	May 9	349	112	21	1358
Ball-trap for billiard-tables	F. Saunders	252,805	Jan. 24	1358	360	21	949
Balloon	C. P. Feat	255,063	Apr. 4	265	69	21	994
Ballot-box	T. F. Dodge	255,951	Apr. 4	250	64	21	991
Ballot-receptacle and satchel. Combined	O. Wells	254,416	Feb. 28	1487	407 and 408	21	624
Band or fly wheel	E. W. Ross	255,196	Mar. 21	949	254	21	816
Banjo	E. J. Cubley	253,849	Feb. 21	816	231	21	503
Bar: See Boring-bar. Harvester cutter-bar. Chain cross-bar. Jail, prison, and grating bar. Grate-bar.							
Barb-holding device	T. W. Eaton	254,292	Feb. 28	1347	371	21	599
Barber's chair	E. Berninghaus	259,660	June 20	987	283	21	1881
Barber's paper-clip	M. Cohen	252,430	Jan. 17	921	254	21	168
Barley-bearding machine	J. Sendall	254,846	Mar. 14	492	138	21	788
Barrel	H. Knight	255,433	Mar. 28	1256	338	21	874
Barrel	J. J. Lück	256,491	Apr. 18	948	265	21	1131
Barrel	W. B. McCormick	254,228	Feb. 28	1275	353	21	567
Barrel	T. J. Loftus	254,667	Mar. 7	269	71	21	684
Barrel. Folding	A. Barksdale	254,259	Feb. 28	1313	363	21	583
Barrel-mover	J. H. Quackenbush	260,049	June 27	1486	400	21	1971
Barrel rolling and handling machine	G. W. Stephens	255,546	Mar. 28	1391	376	21	897
Barrel stopper. Empty	F. Reits	257,187	May 2	48	15	21	1269
Barrel-swing	J. A. Baldwin	253,405	Feb. 14	389	107	21	494
Barrel-truss	J. M. O'Bryan	258,944	June 6	60	23	21	1710
Barrel-trussing machine	H. Wilde	257,260	May 2	136	36	21	1305
Barrels and packages. Apparatus for registering the size and number of	G. W. Wundram	259,739	June 20	1100	293	21	1900
Barrels. Machine for setting up	H. Wilde	257,259	May 2	134	36	21	1304
Base-board. Adjustable	C. H. Willson	256,837	May 30	2074	585	21	1661
Base-burning boiler	A. H. Fowler	259,590	June 13	807	213	21	1843
Basin and sink trap	C. H. Denison	253,852	Feb. 21	819	232	21	504
Basin-bib	E. O. McGlauflin	260,217	June 27	1698	459	21	2003
Basin. Flushing	B. Williams	252,344	Jan. 17	606	225	21	150
Basin-plug	J. C. Ludwig	251,786	Jan. 3	120	34	21	23
Basin. Wash	F. A. Palmer	253,551	Feb. 14	448	126	21	434
Basins. Discharge-pipe plug for wash	J. S. Gilbert	258,048	May 16	1112	310	21	1495
Basket	J. Hibbard	254,479	Mar. 7	40	10	21	645
Basket, &c	G. S. Long	255,177	Mar. 21	987	247	21	819
Basket	W. Phippe	254,326	Feb. 28	1288	357	21	589
Basket. Cotton	G. W. Starr	254,401	Feb. 28	1471	402	21	630
Basket-cover	W. R. Boerner	260,266	June 6	474	125	21	1776
Basket. Wicker	J. G. Miller	254,034	Feb. 21	1050	292	21	541
Bath: See Electric bath. Stock-bath. Shower-bath.							
Bath and camera. Combined	J. Lefeuvrier	256,148	Apr. 11	500	136	21	1040
Bath-tub	F. H. Fickett	254,946	Mar. 14	694	168	21	753
Bath-tub and heater. Portable combined	W. Q. Prewitt	253,783	Feb. 14	700	200	21	476
Bath-tub attachment	F. Schutte	260,654	June 27	1492	402	21	1972
Bath-tub. Cabinet	F. H. Fickett	259,300	June 13	589	130	21	1798
Bathing apparatus	J. B. Crocker	257,151	May 2	7	3	21	1268
Bathing-garment	D. W. J. Hutton	259,020	June 6	187	50	21	1726
Bathing-machine. Portable	T. J. McConnaughay	259,508	June 13	864	229	21	1853
Bathing-tub. Cabinet	E. F. Collins	256,886	Apr. 25	1401	395	21	1218
Battery: See Electric battery. Thermo-electric battery. Galvanic battery. Voltaic battery. Secondary battery.							
Battery-cell	H. J. Brewer	258,213	May 23	1338	377	21	1543
Batting	G. H. Smith and J. H. Beale	256,603	Apr. 18	1063	300	21	1150
Beam-engine. Compound	G. B. Massey	257,355	May 2	254	72	21	1288
Bearing. Anti-friction roller	H. Büssing	253,679	Feb. 14	594	167	21	457
Bearing. Anti-frictional	T. R. Ferrall	252,872	Jan. 31	1450	405	21	270
Bearing. Anti-frictional	T. R. Ferrall	255,498	Mar. 28	1249	336	21	873
Bearing. Anti-frictional	T. R. Ferrall	258,049	May 16	1104	307	21	1494
Bearing pin or stud for machinery	H. M. Hall	253,375	Feb. 7	221	63	21	353
Bed	H. Buckingham	256,969	Apr. 25	1503	402	21	1235
Bed	H. Buckingham	256,970	Apr. 25	1504	402	21	1925
Bed and closet. Folding	M. Hailheimer	256,050	May 16	1122	314	21	1497
Bed and foot warmer	E. F. Brigham	253,861	Jan. 31	1437	404	21	288
Bed and lounge. Sofa	A. S. I. Gabbe	253,596	Feb. 14	494	141	21	441
Bed and wardrobe. Combined folding	J. B. Horne	254,320	Feb. 28	1377	379	21	604
Bed-bottom	W. J. Boda	257,543	May 9	490	136	21	1374
Bed-bottom	A. S. Burnham	253,678	Feb. 14	593	167	21	457
Bed-bottom	C. H. Fitch	252,654	Jan. 24	1174	329	21	218
Bed-bottom	A. H. Frost	255,613	Mar. 28	1474	398	21	912

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Bed-bottom	E. B. Hull	256,694	Apr. 18	1178	331	21	1171
Bed-bottom	W. T. Kosinski	257,953	May 16	998	278	21	1476
Bed-bottom	N. T. Melvin	254,301	Feb. 7	141	40	21	310
Bed-bottom	J. B. Norton	255,657	Mar. 28	1565	410	21	942
Bed-bottom	F. E. Woods and T. J. Curley	254,463	Feb. 7	331	98	21	402
Bed-bottom	D. D. Wyman	254,094	Feb. 21	1167	309	21	551
Bed-bottom	J. H. Lerow	254,344	Feb. 28	1407	387	21	610
Bed-bottom. Elastic	J. A. Thompson and E. Wells	258,613	May 30	1810	511	21	1635
Bed-bottom frame	W. C. Bailey	256,268	Apr. 11	970	181	21	1049
Bed-bottom. Spring	W. Bulkeley	259,810	June 20	1168	316	21	1914
Bed-bottom. Spring	T. Burdick	255,837	Apr. 4	103	27	21	988
Bed-bottom. Spring	D. L. Campbell	258,425	Jan. 17	917	253	21	168
Bed-bottom. Spring	E. A. Cleaveland	252,807	Jan. 31	1444	404	21	249
Bed-bottom. Spring	O. S. and W. S. Foster	252,601	Jan. 24	1115	312	21	209
Bed-bottom. Spring	L. H. Hood and G. H. Fox	254,659	Mar. 7	253	65	21	661
Bed-bottom. Spring	T. Howe. (Reissue)	10,121	May 23	1718	485	21	1611
Bed-bottom. Spring	M. A. Hunt	252,772	Jan. 24	1305	365	21	940
Bed-bottom. Spring	A. J. Landon	256,335	Apr. 11	746	204	21	1081
Bed-bottom. Spring	T. B. Laycock	254,663	Mar. 7	265	69	21	663
Bed-bottom. Spring	W. J. Lowe	254,831	Mar. 14	477	128	21	726
Bed-bottom. Spring	R. W. Lownes	257,170	May 2	31	10	21	1266
Bed-bottom. Spring	W. A. Ober and J. Yagerienner	258,249	May 23	1374	389	21	1561
Bed-bottom. Spring	W. L. Phillips	258,585	May 30	1788	505	21	1631
Bed-bottom. Spring	A. F. Purefoy	254,372	Feb. 28	1439	394	21	614
Bed-bottom. Spring	H. L. Sherwood	258,256	May 23	1362	361	21	1552
Bed-bottom. Spring	G. W. Shotwell	259,594	June 13	883	237	21	1856
Bed-bottom. Spring	M. C. Silver	257,619	May 9	603	169	21	1383
Bed-bottom spring	J. V. Jarrett	258,469	Jan. 17	949	259	21	176
Bed-bottom spring	T. A. and W. H. Rhodes	252,701	Jan. 24	1284	343	21	227
Bed-bottoms. Device for stretching	I. Lorenzen	257,590	May 9	561	169	21	1389
Bed-comfort, blanket, rug, &c	C. D. Murdock	253,484	Feb. 7	357	.....	21	406
Bed. Cot	C. H. Hard	252,450	Jan. 17	954	264	21	174
Bed. Cot	I. S. Pear	253,558	Feb. 14	449	126	21	434
Bed. Cradle	M. Collinson	253,007	Jan. 31	1613	447 and 448	21	908
Bed. Double	J. A. Eldridge	259,518	June 13	799	210	21	1841
Bed. Elastic water	E. J. Bone	254,265	Feb. 28	1319	365	21	594
Bed-fastening	P. Forg	256,590	Apr. 18	1019	287	21	1143
Bed. Folding	E. M. Bement	258,847	May 30	2062	588	21	1962
Bed. Folding	C. M. Morrison	254,678	Mar. 7	261	74	21	686
Bed. Folding	J. Novak and J. Strobel	254,363	Feb. 28	1425	392	21	612
Bed. Folding	W. Zimmerman	260,346	June 27	1851	499 and 500	21	2009
Bed. Folding cabinet	J. Fournier, Jr	254,628	Mar. 7	226	59	21	677
Bed. Folding cabinet	S. H. Witmer	253,983	Feb. 21	860	248	21	514
Bed. Folding cot	J. L. Spencer	254,244	Feb. 28	1297	350	21	569
Bed. Folding cot	C. J. Sundbeck	255,897	Apr. 4	140	47	21	989
Bed-frames. Adjustable connection for woven-wire	C. L. Ames and A. H. Frost	255,405	Mar. 28	1222	327	21	889
Bed. Invalid	L. D. Mott, Jr	254,149	Feb. 28	1186	321	21	573
Bed. Invalid	C. M. Türk	256,176	Apr. 11	530	146 and 147	21	1046
Bed. Iron	A. Herbst	254,548	Mar. 7	123	31	21	650
Bed-lounge	M. Becker	257,640	May 9	667	175 and 176	21	1388
Bed-lounge	F. Fischbeck	257,856	May 16	861	247	21	1455
Bed-lounge	J. L. Newton	252,791	Jan. 24	1336	373	21	945
Bed-lounge	J. D. Westgate	252,983	Jan. 10	734	205	21	138
Bed-lounge frame	W. E. Stiekel and J. Stuckum	259,341	June 13	569	153	21	1668
Bed-pan	W. F. Morgan	257,740	May 9	749	208	21	1420
Bed. Sofa	J. K. Stockton	251,742	Jan. 3	98	18	21	14
Bed. Spring	C. S. Colgrove	254,277	Feb. 28	1231	308	21	506
Bed. Spring	J. T. Elwell	257,303	May 2	185	53	21	1314
Bed. Spring	A. B. Ramey	251,946	Jan. 3	316	85	21	55
Bed-spring	W. Childers and M. M. Eberly	258,018	May 16	1078	299	21	1489
Bed-spring	S. Crossman	257,851	May 16	874	245	21	1454
Bed-spring	H. Fosburgh	256,431	Apr. 11	856	239	21	1103
Bed-spring	W. A. Herfall	259,395	June 13	649	171	21	1815
Bed-spring	J. R. Masters	257,879	May 16	918	254	21	1459
Bed-spring	C. H. McCreery	251,918	Jan. 3	261	77	21	49
Bed-spring	G. S. Mock	259,192	June 6	367	102	21	1782
Bed. Wardrobe or folding	A. W. Stewart	255,548	Mar. 28	1382	376 and 377	21	898
Beds. Table attachment for	R. L. Stokes	258,008	Jan. 31	1483	416	21	977
Bedstead	A. P. Brown	259,354	Jan. 17	850	236	21	158
Bedstead	F. G. Ford	256,606	Apr. 18	1144	321	21	1164
Bedstead	N. T. Melvin	252,490	Jan. 17	985	276	21	180
Bedstead	W. P. Miller	252,123	Jan. 10	541	151	21	109
Bedstead	J. Monzel	254,777	Mar. 7	298	195	21	708
Bedstead	W. J. Myers	255,383	Mar. 21	1117	301	21	845
Bedstead	W. R. Pitt and C. H. Dunks	254,660	Mar. 7	295	78	21	669
Bedstead. Bureau	W. Maasch and F. Bertram	256,712	Apr. 18	1205	336 and 337	21	1175
Bedstead. Cabinet folding	J. H. Holly and J. G. Knapp	259,541	June 13	832	219	21	1847
Bedstead. Folding	C. F. Youngberg	256,942	Apr. 25	1466	412	21	1288
Bedstead. Folding cabinet	F. Steinbrenner	256,440	Apr. 11	678	245	21	1109
Bedstead-hook	J. J. Kennedy	254,335	Feb. 28	1395	384	21	607
Bedstead. Invalid	A. S. Evans	257,483	May 9	421	116 and 117	21	1382
Bedstead. Invalid	H. D. Snyder	254,170	Feb. 28	1207	337	21	576
Bedstead-lock	C. H. Clark	256,269	Apr. 11	693	189	21	1073
Bedstead. Sofa	M. Samuels	258,478	May 23	1540	464	21	1697
Bedstead. Sofa	T. Seden	254,995	Apr. 25	1447	406	21	1235
Bedstead, table, &c. Combined	M. A. McMaster	259,189	June 6	385	101 and 102	21	1761

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Bedstead. Wardrobe	H. O. Bicknell	253,576	Feb. 14	474	134	21	438
Bedstead. Wardrobe	M. Collinson	253,006	Jan. 31	1612	447	21	278
Bedstead. Wardrobe	E. Ortlepp	256,497	Apr. 18	933	267	21	1132
Bedstead. Wardrobe	A. Ortlieb	254,561	Mar. 7	66	17, 18	21	640
Bedstead. Wardrobe	T. Saxton	253,788	Feb. 14	708	201	21	477
Bedstead. Wardrobe	J. Monzel	257,044	Apr. 25	1581	444	21	1940
Bedsteads. Clothes-rack attachment for	F. Morris	257,741	May 9	750	208	21	1420
Bedsteads. Device for strengthening	C. Howard	251,716	Jan. 3	34	10	21	8
Bee-hive	H. L. T. Overbey	252,134	Jan. 10	556	155	21	103
Bee-hive	F. D. Terre	256,938	Apr. 25	1455	409	21	1937
Bee-hive	L. Winterbauer	250,085	June 13	933	249	21	1865
Beer apparatus	P. J. Catterall and E. Birch	253,803	Feb. 14	592	169	21	458
Beer, &c. Apparatus for raising	B. Rice	257,977	May 16	1096	285	21	1479
Beer-chip	L. J. Birgler	255,758	Apr. 4	8	3	21	958
Beer-cooler	C. J. Bopp	255,575	Mar. 28	1494	384	21	904
Beer-cooler	P. J. Darcy	254,180	Feb. 28	1159	291	21	586
Beer-cooler	D. W. Davis	256,550	Apr. 18	1008	264	21	1144
Beer. Cooling	C. A. Maus	256,717	Apr. 18	1209	338	21	1176
Beer-drawing apparatus	L. Becker	256,536	Apr. 18	993	.....	21	1130
Beer. Manufacture of root or tonic	G. W. Goff	254,009	Feb. 21	1004	261	21	833
Bell	J. J. Johnston	253,610	Feb. 14	511	146	21	444
Bell. Door	W. J. Miller and H. Berry	256,722	Apr. 18	1214	320	21	1177
Bell for table-ware. Call	F. W. Brocksieper	252,177	Jan. 10	606	170	21	110
Bell. Gong	R. McShane	256,787	May 30	2020	570	21	1671
Bell. Gong	G. B. Owen	256,737	Apr. 18	1217	341	21	1177
Bell. Gong	J. Walker	257,791	May 9	801	225	21	1430
Bell. Gong	C. E. Scribner	252,266	Jan. 10	711	201	21	198
Bell signal. Electric call	J. F. Kettell	257,342	May 2	238	68	21	1294
Bells. Striking mechanism for electric	G. E. Bowers	252,175	Jan. 10	605	170	21	110
Belt. Abrasive	G. H. P. Flagg and W. Gordon	253,104	Feb. 7	26	8	21	351
Belt attachment	B. Merritt	253,548	Feb. 14	445	126	21	453
Belt-controlling mechanism	G. H. Phelps	255,450	Mar. 28	1274	344	21	878
Belt. Driving	T. Jack	254,109	Jan. 10	594	145	21	97
Belt. Electric	T. W. Williams	256,595	Apr. 18	984	277	21	1137
Belt-fastener	B. Hogan	259,015	June 6	100	48	21	1725
Belt-fastener	A. H. Noble	255,344	Mar. 21	1119	301	21	845
Belt-fastener	J. Shuster	254,167	Feb. 28	1205	336	21	575
Belt-fastener	W. H. Steil	258,148	May 16	1232	346	21	1517
Belt-fastener	A. W. Weed	256,250	Apr. 11	658	177	21	1067
Belt-fastener	A. A. Baldwin	254,769	Mar. 14	493	113	21	717
Belt. Galvanic	J. Mills	256,913	Apr. 25	1433	403	21	1933
Belt guide and tightener	A. B. Pitkin	253,423	Feb. 7	280	80	21	393
Belt-hook	B. Merritt	258,342	May 23	1366	386	21	1549
Belt-idlers. Attachment for	A. Gairing	252,453	Jan. 17	947	262	21	173
Belt-lifter	W. B. Tairo	257,152	May 2	52	16	21	1290
Belt. Machinery	H. C. Hartley	257,323	May 2	212	59	21	1319
Belt-replacing device	E. C. Durand	255,607	Mar. 28	1468	385	21	911
Belt-shifter	W. H. Upham and C. W. Scovill	253,900	Feb. 21	877	247	21	513
Belt-shipper	A. J. Park, Jr	254,698	Mar. 7	201	77	21	698
Belt. Straw-conveyer	P. H. Keim	251,892	Jan. 3	250	71	21	46
Belt-stretcher	J. Porter	252,769	Jan. 31	1567	436	21	291
Belt-tightener	F. Snyder	257,098	Apr. 25	1643	440	21	1980
Belt-trimming machine	A. C. Krueger	255,638	Mar. 28	1505	404 / 405	21	918
Belt. Waist	F. Sternheimer	253,958	Feb. 21	947	263	21	594
Belting	W. N. Hall	250,137	June 6	325	86	21	1751
Belting. Machine for making rubber	J. T. Ridgway	253,428	Feb. 7	284	81	21	394
Belting. Machine for stretching	J. Brady	251,894	Jan. 3	175	49	21	28
Belting. Manufacturing rubber-coated	J. W. Gray	259,850	June 20	1927	398	21	1980
Belting. Method of and implement for uniting the ends of	W. M. Whiting	256,525	Apr. 18	963	277	21	1137
Bench: *See* Wire-rope-splicing bench.							
Bench-dog	W. M. and J. E. Howland	258,067	May 16	1131	317	21	1499
Bending-machine	J. McDowell	253,934	Feb. 21	928	258	21	590
Benzole from gas obtained by distillation of coal. Manufacture of dinitro-	J. A. Kendall	252,473	Jan. 17	973	.....	21	177
Berth. Self-leveling	A. M. Crosby	252,079	Jan. 10	491	136	21	92
Berth. Self-leveling	L. D. Newell	256,239	Apr. 11	633	171	21	1069
Berth. Self-leveling	G. Sickels	253,397	Mar. 21	1208	323	21	860
Berths. Locking-bolt for ships'	G. A. Parks	255,190	Mar. 21	944	258	21	815
Bevel and try square	C. Thomas	257,365	Jan. 10	476	132	21	90
Beveling cloth-boards. Machine for	J. W. Dunham	257,564	May 9	563	146	21	1379
Beverage. Tonic	J. W. Decastro	256,129	Apr. 11	479	.....	21	1037
Bicycle	M. G. Crane	258,559	May 30	1740	492	21	1692
Bicycle	A. F. Curtin	255,775	Apr. 4	28	8	21	955
Bicycle	T. T. Harrison	252,939	Jan. 31	1527	426 / 427	21	284
Bicycle	T. B. Jeffery	250,313	June 13	547	143	21	1706
Bicycle	J. E. Richard	252,694	Jan. 24	1139	319 / 320 / 285 / 286	21	212
Bicycle head-blanks. Die for forging	H. B. Hicks	252,461	Jan. 17	956		21	174
Bicycle-saddle	F. G. Burley	253,504	Feb. 14	397	110	21	425
Bicycle-saddle	A. Rintelman	252,971	Jan. 31	1589	437	21	291
Bicycle-saddle	C. H. Veeder	252,280	Jan. 10	730	204	21	131
Bicycle-seat	J. White	258,333	May 23	1471	419	21	1567
Bicycle seat-spring	C. Wicksteed	256,936	Apr. 25	1463	410	21	1227
Bicycle-stand	G. F. Harwood	259,535	June 13	894	217	21	1846
Bicycle-step	S. Sawyer	260,053	June 27	1491	401 / 402	21	1972
Bicycles. Carrier attachment for	C. H. Lamson	253,211	Feb. 7	42	13	21	354
Bier	C. J. Everhard	256,472	Apr. 18	920	257	21	1136
Bill and file holder	P. K. Shankland and E. A. Brooks	254,395	Feb. 28	1465	401	21	619

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Billiard and pool table pocket	H. Boschen	257,017	May 16	957	266	21	1497
Billiard-cue	H. A. Bowne	255,703	May 30	1869	545	21	1695
Billiard-cue cutter	P. Ryan	254,763	Mar. 7	310	89	21	691
Billiard-cue tip	J. B. Howe	252,573	June 6	492	128	21	1777
Billiard-cue tips. Clamp for holding	J. Recktenwalt	256,561	Apr. 18	957	266	21	1133
Billiard-table	C. W. Allen	256,454	June 13	780	201	21	1827
Billiard-table	M. Bendinger	256,114	Apr. 11	458	124	21	1063
Billiard-table	R. Herman	254,540	Mar. 7	193	51	21	689
Billiard-table	C. W. McLean	253,544	Feb. 14	441	125	21	433
Billiard-table	O. F. Hoover	252,376	Jan. 17	838	236	21	197
Billiard-table adjuster and leveler	P. H. Berry	253,664	Feb. 14	576	163	21	464
Billiard-table pocket	J. F. Babcock	257,541	May 9	487	136	21	1374
Bin: *See* Grain-bin.							
Binder. Temporary	J. A. Barstler	256,686	Apr. 18	1066	302	21	1185
Binder. Temporary	B. Brewer and J. F. Adams. (Reissue.)	10,073	Apr. 4	445	120 / 121	21	1025
Binder. Temporary	J. B. Pitt	255,458	Mar. 28	1276	344	21	878
Binder. Temporary	A. L. Pratt	259,915	June 20	1926	547	21	1933
Binder. Temporary	E. Enos	254,844	Mar. 14	469	131	21	733
Bird-cage feed-cup	J. Maxheimer	259,611	Jan. 24	1123	315	21	1999
Bird-cage perch	J. Baget	254,954	Feb. 28	1308	368	21	888
Bit: *See* Auger-bit. Bridle-bit.							
Bit and washer-cutter. Extension	J. W. Casper	256,979	Apr. 25	1514	425	21	1237
Bit-stock	W. A. Ives	258,764	May 30	1994	563	21	1695
Bitters. Alterative and tonic	D. W. Edwards	258,688	Jan. 24	1171	.....	21	217
Blackboard and map-case. Combined	A. C. Elliott	256,635	May 30	1426	818	21	1539
Blacking-box	A. H. Savage	253,109	Jan. 31	1749	494	21	319
Blacking-box holder and foot-rest. Combined	J. Ross	253,109	Jan. 31	1739	491	21	317
Blanket-fastener	Q. Sweet	256,985	Apr. 25	1378	388	21	1214
Blankets. Putting up	D. A. Swaney	252,549	Jan. 17	1047	291	21	199
Blasting-powder	W. R. Quinan	253,259	Jan. 10	606	.....	21	104
Bleaching and washing linen, &c. Composition for	C. M. Levy and G. Alexandre	254,497	Mar. 7	53	.....	21	647
Bleaching cotton in the form of cops	E. Rasch	254,368	Feb. 28	1452	396	21	617
Bleaching woven fabrics, &c. Apparatus for	W. Birch	256,907	Apr. 25	1402	416	21	1233
Bleaching yarns, &c. Apparatus for	C. E. Bennett	258,385	May 23	1405	425	21	1572
Blind-adjuster	O. C. Velie	256,254	Apr. 11	651	176	21	1066
Blind hanger. Inside	C. M. Young	253,469	Feb. 7	336	94	21	402
Blind-hooks. Machine for making	W. R. Petrie	253,311	Feb. 7	148	43	21	371
Blind. Inside	J. Krehbiel	255,516	Mar. 28	1369	366	21	891
Blind. Inside	F. Rähr	255,538	Mar. 28	1364	373	21	896
Blind. Inside window	E. W. Bowslaugh	258,833	Jan. 24	1195	309	21	254
Blind-slat adjuster	C. H. Phillips and E. C. Greene	254,235	Feb. 28	1225	356	21	589
Blind-slat holder	J. S. Thompson	255,469	Mar. 28	1579	404	21	922
Blind. Window	J. D. Freese	258,873	Jan. 31	1451	408	21	276
Blinds. Support for inside window	C. M. Young	257,125	Apr. 25	1674	469	21	1366
Block: *See* Alphabet-block. Pillow-block. Brake-block. Pulley-block. Building-block. Saw-mill head-block. Chain-block. Shackle-block. Head-block. Tackle-block. Pictorial story-block. Toy building-block.							
Blotter	T. C. Townsend	259,546	Jan. 17	1055	283	21	191
Blotter. Rotary	W. H. Kelly	258,041	Jan. 10	448	122	21	84
Blotting-pad	J. E. Peterson	257,448	May 2	362	101	21	1345
Blouse. Child's	C. C. Link	258,446	May 23	1604	454	21	1599
Blower. Air	O. C. Davis	254,536	Mar. 7	169	50	21	687
Blower. Centrifugal	R. H. Thurston	257,412	May 2	352	97	21	1339
Blowing-engine regulator	T. F. Witherbee	257,799	May 9	613	168	21	1432
Blue. Manufacture of anthracene	H. Brunck	256,530	May 23	1704	.....	21	1646
Bluing-package	E. W. Gillett	256,905	Apr. 25	1531	430	21	1240
Board: *See* Annunciator-board. Game-board. Base-board. Ironing-board. Bosom-board. Paper-board. Dash-board. Plow mold-board. Electric switch-board. Sign-board. Electrical switch-board. Telephone-exchange switch-board. Embalming and cooling board. Vehicle dash-board. Fisting and plaiting board. Vehicle spring-board. Wagon tail-board. Wash-board.							
Board from wood pulp. Manufacture of	R. M. Mason and G. M. Wooster	253,403	Feb. 7	256	74	21	389
Boat: *See* Canal-boat. Tow-boat. Center-board boat. Train-boat.							
Boat-detaching apparatus	M. Bourke	251,680	Jan. 3	7	2	21	4
Boat-frame. Sectional	C. L. and C. W. King	257,301	May 9	573	160	21	1367
Boat-plug	G. A. Leavitt, Jr	260,775	May 30	2007	566	21	1693
Boat raising and lowering apparatus	R. H. Earle	258,198	Jan. 10	686	177	21	114
Boat raising, lowering, and detaching apparatus	G. G. Laurence	258,480	Jan. 17	960	272 / 273	21	178
Bobbin	D. Hambleton	255,508	Mar. 28	1241	333	21	833
Bobbin-shower	J. Warrener	257,419	May 2	338	93	21	1340
Bobbin-winder	R. Steiner	258,494	May 23	1657	468 / 469	21	1600
Bobbin-winding machine	G. Campbell and J. Clute	256,197	Apr. 11	572	157	21	1039
Body-brace	J. W. Anderson	253,251	Feb. 7	83	23	21	360
Bog-cutter	S. W. Brewster and L. Sherwood	255,376	Mar. 21	1179	316	21	835

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Boiler:							
See Base-burning boiler. Range-boiler. Clothes-boiler. Steam-boiler. Cooking-boiler. Sugar-boiler. Locomotive-boiler. Tubular sectional boiler. Marine boiler. Wash-boiler.							
Boiler	A. P. Creque	255,493	Mar. 28	1330	350	21	806
Boiler attachment. Domestic	S. Letchford	253,728	Feb. 14	458	167	21	498
Boiler-cleaner	A. Rogers	254,898	Mar. 7	305	80	21	690
Boiler-cleaner and circulating apparatus	T. Craney	254,118	Feb. 28	1150	331	21	566
Boiler-fittings. Safety-plug and valve for	J. J. Mackedon	256,344	Apr. 11	753	207	21	1065
Boiler for heating purposes	J. Mason	259,586	June 13	862	238	21	1373
Boiler-former	F. Follinger	260,181	June 27	1651	448	21	1996
Boiler-furnace	G. Blackburn	258,597	May 23	1696	480	21	1607
Boiler-furnace	J. Elliott. (Reissue)	10,044	Feb. 28	1521	416	21	630
Boiler-furnace	W. Ennis	252,445	Jan. 17	938	260	21	171
Boiler-furnace	J. Gerber	254,656	Jan. 24	1176	330	21	218
Boiler-furnace	G. R. Ricketts	256,051	Apr. 4	363	99	21	1011
Boiler-furnace. Stationary	W. H. Harris and G. Farr	252,214	Jan. 10	643	181	21	117
Boiler furnace. Steam	C. I. Hall	257,009	Apr. 25	1537	431	21	1241
Boiler furnace. Steam	M. C. Jones	252,040	Jan. 10	447	122	21	84
Boiler furnace. Steam	J. Mahony	259,325	June 13	557	146	21	1788
Boiler furnace. Steam	G. E. Palmer	251,791	Jan. 3	125	36	21	24
Boiler gas-furnace	J. Zellweger	258,525	May 23	1606	480	21	1607
Boiler or other furnace	E. J. Mallett, Jr	258,450	May 23	1608	455	21	1591
Boiler or other furnace	E. J. Mallett, Jr	258,452	May 23	1612	455	21	1592
Boiler-tubes. Apparatus for drawing and replacing	L. N. Denney and A. C. Johnson	254,227	Feb. 28	1341	370	21	598
Boiler-tubes. Device for cutting	J. J. Franklin	256,474	Apr. 18	923	257	21	1127
Boiler-tubes. Metallic stopper for	J. W. Fowler	253,691	Feb. 14	608	172	21	459
Boilers. Apparatus for removing scale, sediment, &c., from	T. J. Jones	259,693	June 20	1032	275	21	1869
Boilers. Connecting sputs to	J. Trageser. (Reissue)	10,022	Jan. 31	1849	500	21	335
Boilers. Sediment-collector for	D. Hanna	254,307	Feb. 24	1366	376	21	662
Bolster-spring	C. A. Howard	252,036	Jan. 10	440	130	21	83
Bolt:							
See Chain-bolt. Plow-bolt. Door-bolt. Rotary bolt. Flour-bolt. Spring-bolt. Locking-bolt. Trace-fastening bolt.							
Bolt	C. H. Goebel	252,310	Jan. 17	773	215	21	144
Bolt and key fastener. Combined	W. White	258,833	May 30	2070	584	21	1680
Bolt and rivet clipper	B. Schmidt	259,052	June 6	228	61	21	1732
Bolt-blanks from cold rods of metal. Machine for forming	W. E. Ward	252,914	Jan. 31	1499	418	21	279
Bolt-cutter	A. Blowers	257,916	May 16	956	266	21	1467
Bolt cutter. Stay	C. V. Rote	254,163	Feb. 28	1201	335	21	575
Bolt cutter. Stay	N. Thomas	253,788	Feb. 14	736	210 / 211	21	483
Bolt-heading machine	J. B. Clark	260,281	June 27	1775	480	21	2016
Bolt-heading machine	J. C. Duckworth	252,440	Jan. 17	932	257 / 258	21	170
Bolt-heading machine	H. J. Johnson	254,484	Mar. 7	49	12	21	646
Bolt-threading machine	C. H. Graham	256,675	Apr. 18	1156	325	21	1166
Bolts. Apparatus for brushing polygonal	F. Stansfield	256,066	Apr. 4	380	104	21	1014
Bolts. Manufacture of	C. Hall	252,661	Jan. 24	1181	301	21	219
Bolting apparatus	O. M. Morse	255,002	Mar. 14	697	188 / 189	21	706
Bolting-cloth. Device for tightening	M. Harmon	259,639	June 13	956	255	21	1869
Bolting-reel	M. Ingraham	259,160	June 6	349	92	21	1756
Bond, check, or other security	J. Scott	257,245	May 2	121	34	21	1362
Bone-black kilns, &c. Automatic discharging apparatus for	A. A. Goubert	254,474	Mar. 7	32	9	21	643
Bone-black-revivifying kilns. Cooler for	F. Wetton	255,828	Apr. 4	92	25	21	966
Book-back. Spring	F. Schubert	256,245	Apr. 11	640	173	21	1064
Book-binders and others. Gage for	J. J. Geiger	253,598	Feb. 14	419	117	21	430
Book-binding	A. J. Magee	256,023	Apr. 4	333	89	21	1006
Book. Blank	A. J. Maxwell. (Reissue)	9,997	Jan. 3	398	107	21	68
Book-case	E. R. Young	258,844	May 30	2080	567	21	1682
Book-case. Revolving	D. M. Schell	256,600	Apr. 18	1050	298	21	1149
Book-clasp	J. Müller and E. Hilpert. (Reissue)	10,133	June 6	501	130	21	1781
Book-clasp. Adjustable	A. C. Hafely	252,100	Jan. 10	315	143	21	96
Book. Copying	C. D. Campbell	259,975	June 20	1392	374	21	1949
Book-cover. Removable	T. D. Price	255,331	Mar. 21	1127	304	21	847
Book. Manifold copying	J. R. Carter	252,646	Jan. 24	1165	327	21	217
Book. Portfolio scrap	A. L. Colton	251,998	Jan. 3	362	103	21	66
Book-protector	O. F. Silcott	254,168	Feb. 28	1205	337	21	576
Book-rack	R. W. Myers	252,053	Jan. 10	463	126	21	87
Book-sewing machine	E. J. Nolin	254,883	Mar. 14	548	146	21	739
Book-stand. Revolving	D. T. Kover	258,442	May 23	1600	453	21	1590
Book-support	M. W. Filley, A. S. Teal, and R. Fields.	259,837	June 20	1911	325	21	1919
Book-support	W. W. Murray	257,970	May 16	1016	283	21	1478
Book support and handle	E. R. Young	259,256	June 6	466	123	21	1775
Boot	G. C. McCoy	254,983	Mar. 14	667	185	21	764
Boot	E. E. Reed	258,316	May 23	1439	412	21	1554
Boot	R. Thompson	254,071	Feb. 21	1004	303	21	548
Boot and shoe crimping machine	J. W. D. Tifield	258,734	May 30	1961	554	21	1661
Boot and shoe exhibitor	W. W. Yokom	254,493	Feb. 28	1496	410	21	825
Boot and shoe heel	H. E. Clinton	253,844	Feb. 21	810	230	21	502
Boot and shoe heel	J. Kieffer	252,474	Jan. 17	974	271	21	177
Boot and shoe heel	J. Kieffer	252,475	Jan. 17	975	271	21	177
Boot and shoe heel plate	H. W. Arnold	255,234	Mar. 21	1000	267	21	824
Boot and shoe heel plate	E. C. Gardner	256,311	Apr. 11	720	195	21	1078

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Boot and shoe heel protector	S. Bergstresser	257,433	May 2	349	97	21	1343
Boot and shoe heels. Machine for securing	F. Richardson	259,799	June 20	1909	284 / 285	21	1895
Boot and shoe heeling machine	E. Fisher	258,905	June 6	45	11	21	1702
Boot and shoe heeling machine	W. J. Heffernan	252,105	Jan. 10	319	144	21	96
Boot and shoe last	C. P. Sherman	256,168	Apr. 11	591	144	21	1044
Boot and shoe lasting machine	G. W. Copeland and M. Brock	254,617	Mar. 7	285	78, 79	21	673
Boot and shoe nailing machine	W. G. Budlong	255,716	Mar. 28	1600	431 / 432	21	986
Boot and shoe piping	C. D. Wood	255,067	Mar. 14	700	211	21	781
Boot and shoe shank lasting apparatus	F. Beverle	259,089	June 6	228	60	21	1730
Boot and shoe shank stiffeners. Machine for cutting	C. B. Webb	252,261	Jan. 10	728	204	21	131
Boot and shoe sole edges. Machinery for burnishing	M. Dadley	255,158	Mar. 21	987	240	21	807
Boot and shoe sole trimming machine	B. F. Wheeler	259,253	June 6	402	122	21	1774
Boot and shoe soles. Air-cushion for	G. F. Butterfield	259,092	June 6	274	73	21	1742
Boot and shoe soles, tops, and heels. Manufacture of	J. L. Thomson	256,077	Apr. 4	385	107	21	1017
Boot and shoe soles. Tool for trimming	J. Mundell and W. J. Gordon	257,366	May 2	286	75, 76	21	1280
Boot-heel. Revolving	W. Craig	253,348	Feb. 7	196	56	21	370
Boot-jack	K. J. Greenawald	254,816	Mar. 14	451	121	21	723
Boot. Moccasin	J. L. Coombs	251,822	Jan. 3	194	54	21	35
Boot or shoe	W. Comey	253,586	Feb. 14	496	138	21	440
Boot or shoe	S. C. Diser	254,636	Mar. 7	217	56	21	675
Boot or shoe	H. C. Holbrook	260,094	June 27	1456	398	21	1986
Boot or shoe	A. Johnson	259,163	June 6	354	94	21	1756
Boot or shoe	H. M. MacDonald	260,304	June 27	1804	449	21	2021
Boot or shoe	C. W. Shippee	256,170	Apr. 11	593	144	21	1045
Boot or shoe	E. L. Sprague	259,230	June 6	432	115	21	1760
Boot or shoe	E. L. Sprague	259,231	June 6	432	113	21	1760
Boot or shoe heel	E. S. Moulton	256,848	Apr. 25	1358	363	21	1210
Boot or shoe heels. Cap or covering for	W. A. Peay	257,377	May 2	277	79	21	1331
Boot or shoe holding jack	E. Bertrand	258,696	May 30	1994	543	21	1654
Boot or shoe. Rubber	W. Cable	256,544	Apr. 18	1009	282	21	1141
Boot or shoe. Rubber	S. Lindsey, Jr	257,169	May 2	30	10	21	1288
Boot or shoe sole	J. D. Stoddard	252,159	Jan. 10	377	103	21	108
Boot or shoe sole-edge protector	W. Gordon	258,226	May 23	1359	362	21	1546
Boot. Seamless felt	M. R. Bissell	256,538	Apr. 18	995	280	21	1140
Boot-strap	J. B. Belcher	254,906	Mar. 14	576	155	21	744
Boot-strap	J. B. Belcher	256,112	Apr. 11	457	123	21	1033
Boot-treeing apparatus	J. H. Burbank	259,811	June 20	1183	310	21	1914
Boots and shoes. Form for making india-rubber	W. C. Watkins	256,513	May 23	1679	475	21	1683
Boots and shoes. Lasting	G. Hawkes	254,906	Mar. 14	649	176	21	758
Boots and shoes. Lasting and uniting the upper and soles of	E. Bertrand	254,501	Mar. 7	181	45	21	669
Boots and shoes. Machine for crimping seamless	T. T. Marshall	255,178	Mar. 21	998	248	21	812
Boots and shoes. Manufacture of	T. Laycock	254,102	Feb. 21	1124	314	21	574
Boots and shoes. Manufacture of	A. Newton	255,009	Mar. 14	707	191	21	768
Boots and shoes. Manufacture of	A. Nichols	254,361	Feb. 28	1423	391	21	612
Boots and shoes. Metallic counter-support for	V. B. Morton	256,030	Apr. 4	340	91	21	1007
Boots and shoes. Securing metal wearing-surfaces to rubber	F. Richardson	255,672	Mar. 28	1542	415	21	985
Boots and shoes. Spring-heel for	M. B. Kerr	255,871	Apr. 4	142	37	21	974
Boots and shoes. Welting	R. D. Tucker and J. H. Anthoine	255,474	Mar. 28	1308	352	21	883
Boots in boot-boxes. Device for supporting	E. H. Slagle	253,436	Feb. 7	206	54	21	364
Boots or shoes. Device for connecting	W. K. Webb	255,480	Mar. 28	1317	355	21	884
Boring and cutting implement	I. Sharp	253,115	Jan. 31	1756	467	21	320
Boring. Apparatus for subaqueous	T. English	256,658	Apr. 18	1131	316	21	1162
Boring axle-holes in hubs, &c. Machine for	W. R. Wood and S. Barr	259,447	June 13	713	189 / 190	21	1686
Boring-bar	L. R. Faught	253,592	Feb. 14	415	116	21	429
Boring-bar	L. R. Faught	256,846	Apr. 4	110	30	21	909
Boring cylinders. Tool for	J. N. Smith	259,727	June 20	1018	287	21	1894
Boring-gage	T. J. Bush	257,366	May 2	168	48	21	1311
Boring-machine	B. F. Allen	251,686	Jan. 3	2	1	21	3
Boring-machine	W. N. Brown	257,919	May 16	950	269	21	1467
Boring-machine	V. Cox	258,716	May 30	1941	548	21	1657
Boring-machine	E. D. Davis	253,913	Feb. 21	891	251	21	516
Boring-machine	C. R. Otis	257,374	May 2	278	78	21	1330
Boring machine. Metal	D. W. Pedrick	255,449	Mar. 28	1278	344	21	877
Boring machine, Metal	J. Wheelock	247,422	May 2	334	104	21	1341
Boring machine. Wood	W. E. Lawrence	256,337	Apr. 11	748	205	21	1084
Bosom-board	W. A. Hilton	257,705	May 9	713	197	21	1414
Bosom-board	F. M. Wright	257,885	May 9	820	229	21	1434
Bosom-stretcher	R. Schmidt	256,384	Apr. 11	799	218 / 219	21	1090
Bottle and bottle attachment	D. Lubin	255,642	Mar. 28	1511	406	21	919
Bottle-caps. Attaching	H. Brooke	255,467	Mar. 28	1324	357	21	885
Bottle-cooler	C. H. Laufkotter	251,988	Jan. 3	270	73	21	48
Bottle-cooler	P. M. Weather	253,798	Feb. 14	744	213	21	484
Bottle cover. Mustard	M. Ams	259,740	June 20	1101	304	21	1900
Bottle. Drop	C. Gebert	258,454	Jan. 17	948	262	21	173
Bottle. Nursing	E. O. Day	253,014	Jan. 31	1634	451	21	500
Bottle. Nursing	S. W. France	252,936	Jan. 31	1525	426	21	363
Bottle-stopper	E. Aldous	252,068	Jan. 10	413	113	21	79
Bottle-stopper	C. Beecher	254,280	Mar. 7	90	25	21	655
Bottle-stopper	J. B. Crawford	251,836	Jan. 3	195	55	21	35
Bottle-stopper	G. F. Heafer	251,779	Jan. 3	114	33	21	33
Bottle-stopper	J. Q. Houts and O. Ericsson	255,627	Mar. 28	1491	409	21	919
Bottle-stopper	P. Mattener	260,726	June 27	1905	469	21	2031
Bottle-stopper	P. Miles	257,049	Apr. 25	1579	443	21	1249
Bottle-stopper	J. Merschbaeser	254,535	Mar. 14	461	129	21	736
Bottle-stopper	S. S. Newton	251,992	Jan. 3	268	79	21	50
Bottle-stopper	S. S. Newton	251,993	Jan. 3	233	80	21	51
Bottle-stopper	S. S. Newton	257,053	Apr. 25	1360	446	21	1251

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page
Bottle-stopper	W. W. Norris	259,418	June 13	677	179	21	1880
Bottle-stopper	F. Praunegger	258,470	May 23	1089	461	21	1595
Bottle-stopper	O. Redmond	251,706	Jan. 3	135	38	21	25
Bottle-stopper	C. Sedgwick	255,821	Apr. 4	22	23	21	904
Bottle-stopper	C. A. Warfield	253,506	Feb. 14	462	131	21	426
Bottle-stopper	A. E. Rich	258,659	Jan. 10	469	130	21	88
Bottle stopper and fastener	J. D. Roberts	260,383	June 27	1921	493	21	2023
Bottle stopper and fastener	G. B. Stuart	252,530	Jan. 17	1046	291	21	190
Bottle-stopper and fastening therefor	B. B. Lewis	254,345	Feb. 28	1407	387	21	610
Bottle-stopper attachment	J. H. Zeilin	254,709	Mar. 7	391	100	21	703
Bottle-stopper. Dose-cup	G. F. Hoeffer	255,506	Mar. 28	1347	361	21	899
Bottle-stopper fastener	H. L. C. Renauld and M. B. Stafford	253,427	Feb. 7	283	81	21	394
Bottle-stopper fastening	J. J. Eastman	256,635	May 16	1096	305	21	1492
Bottle-stopper. Measuring	S. S. Newton	255,655	Mar. 28	1563	410	21	922
Bottle-stopper of celluloid or analogous material	D. Berry	251,819	Jan. 3	168	47	21	31
Bottle-stopper. Self-closing	P. J. Carmien	259,815	June 20	1167	318	21	1915
Bottle-stopping apparatus	G. S. Norris	257,746	May 9	754	210	21	1421
Bottle-stopping device	K. Hofmann	256,579	May 30	1705	469	21	1027
Bottle-washing machine	H. Bell	257,642	May 9	698	176	21	1398
Bottle-wrapper	H. J Mark and W. F. Martinek. (Reissue.)	10,069	Apr. 4	440	119	21	1024
Bottle-wrapper	W. Fox	255,384	Mar. 21	1189	310	21	837
Bottles. Chuck for holding	J. Livor	257,136	Apr. 25	1097	475	21	1270
Bottles. Combined label, guide-slip, and wrapper for	J. M. Thorpe	255,900	Apr. 4	183	48	21	861
Bottles. Cushion-protector for	G. and H. E. G. Luytics	257,600	May 9	582	162	21	1399
Bottles. Device for securing corks in	G. A. Smyth	254,718	Mar. 7	392	87	21	694
Bottles, jars, &c. Stopper for	C. Cheewright	258,890	June 6	30	7	21	1699
Bottles. Machine for capsuling	J. Betjemann	253,361	Feb. 7	90	29	21	363
Bottles, &c. Means or apparatus for securing or locking up the contents of	T. Cockcroft	258,379	May 23	1524	433	21	1577
Bottles, &c. Packing	R. Otten	259,894	Jan. 31	1473	412	21	974
Bottling-machine	A. R. Weiss	255,380	Mar. 21	1160	311	21	858
Bottling-machine	F. D. Hake	254,006	Feb. 21	1009	283	21	534
Bouquet support and former	J. Cooper	258,994	June 6	152	41	21	1721
Bow or scarf holder

Box	W. Livingstone	258,389	Jan. 17	866	241	21	160
Box-corner. Metallic	D. Freeborn and R. B. Perkins	254,436	Feb. 28	1510	413	21	628
Box-cover press	E. Austin	259,414	Jan. 17	900	249	21	165
Box-fastener	B. S. Atwood	254,900	Mar. 14	571	154	21	743
Box-fastener	G. E. Crane	256,823	Apr. 25	1227	375	21	1205
Box-fastener	W. M. Docker	255,958	Apr. 4	258	65	21	902
Box-fastener	W. Lang	256,294	Apr. 11	609	165	21	1058
Box-fastener	M. Mayer	255,313	Mar. 21	1167	298	21	844
Box-fastener	G. S. Randall	256,737	Apr. 18	1226	343	21	1179
Box-fastener	J. M. and S. H. Gardner	259,687	Jan. 10	433	118	21	88
Box or basket	S. H. Smith	257,569	May 9	467	122	21	1371
Box or basket for berries, &c	C. W. Woodford	254,069	Mar. 14	709	212	21	709
Box-pressing clamp	J. F. De Witt	256,368	May 23	1534	435	21	1578
Box-trimming cutter	L. Carpenter	253,639	Feb. 21	808	228	21	501
Boxes and dishes. Machinery for forming and fastening	J. Croak and E. J. Moran	255,841	Apr. 4	105	28	21	868
Boxes. Combined label-holder and handle for	G. Townsend, 2d	250,606	June 13	909	242	21	1469
Boxes, mica lamp-chimneys, &c. Metallic joining for	C. B. Bolton	258,981	June 6	136	36	21	1718
Boxes or packages. Device for handling filled							
Brace: *See* Body-brace. Chair-brace. Machine-brace. Pump-spout brace. Shoulder-brace. Tension-brace.							
Bracelet	W. H. Ball	254,954	Feb. 28	1310	366	21	598
Bracelet	J. V. Diefenthaler	253,017	Jan. 31	1037	459	21	390
Bracelet	C. A. Faas	255,610	Mar. 28	1472	395	21	912
Bracelet	I. L. Garside	255,614	Mar. 28	1475	397	21	913
Bracelet	G. B. Goff and G. Lenau	255,978	Mar. 21	1060	288	21	854
Bracelet	W. A. Johnson	253,612	Feb. 14	513	147	21	444
Bracelet	W. Link	256,434	Apr. 11	867	249	21	1105
Bracelet	C. McIntire	259,187	June 6	363	101	21	1761
Bracelet	H. N. Perveaz	258,111	May 16	1184	334	21	1569
Bracelet	J. Stanley	258,150	Jan. 10	576	168	21	105
Bracelet	J. B. Van Houten	256,165	May 16	1250	368	21	1580
Bracelet	A. Vester	253,942	Feb. 7	79	23	21	350
Bracelet	A. Vester	253,943	Feb. 7	73	22	21	350
Bracelet	W. C. Edge	258,441	Jan. 17	905	250	21	170
Bracelet and clasp	E. Atkins	257,696	May 9	694	174	21	1397
Bracelet and scarf-ring fastening	A. H. Engel	252,444	Jan. 17	937	259	21	171
Bracelet. Spring-hinged	F. Keller and C. Frey	258,676	Jan. 24	1201	336	21	963
Bracelet-stock. Die for striking up

Brake-lock	G. R. Clarke	257,321	May 2	171	48, 49	21	1312
Brake-shoe	J. Denver	256,985	May 23	1417	401	21	1586
Brake-shoe	S. B. Long	259,179	June 6	376	99	21	1760
Brake-shoe	E. Stebbins	256,067	Apr. 4	381	104	21	1014
Brass-flouring machine	W. Warren	254,784	Mar. 7	403	{107 / 108}	21	707
Branding-chute	R. York	258,345	Jan. 17	886	225	21	130
Brazing	M. Jacks	259,274	Jan. 17	402	.....	21	1777
Bread and meat cutter	S. L. Denney	260,267	June 6	1783	483	21	2017
Bread and meat slicer	S. L. Denney	252,300	June 27	887	230	21	153
Bread-box	J. Fournier, Jr.	255,611	Mar. 28	1473	396	21	912
Bread-cutter	A. Moore	258,325	Jan. 17	788	219	21	147
Bread-making machine	P. F. Bryce	255,411	Mar. 28	1231	330	21	870
Bread-making utensil	M. J. Cook	255,255	Mar. 21	1085	275	21	889
Breakwater. Yielding and buoyant pile	R. M. Franklin	260,016	June 27	1446	390	21	1965
Brewing	S. R. Percy and W. S. Wells	254,565	Mar. 7	143	36	21	682
Brick	J. A. Dupuis	257,155	May 2	13	4, 5	21	1263
Brick and fire-proof lining for furnaces. Fire-	H. Uhlmann	258,278	Jan. 10	798	.....	21	131
Brick and mold. Angle-	J. F. Edwards	252,747	Jan. 24	1273	358	21	235
Brick and mortar elevator	W. A. Jordan	259,165	June 6	357	94, 95	21	1767
Brick and other kilns	S. W. Bickley	252,011	Jan. 10	417	114	21	79
Brick and tile machine	A. Wehlaun	252,636	Jan. 24	1153	323	21	214
Brick-burning kiln	J. Johnson	258,583	May 30	1774	501	21	1628
Brick compound. Fire-	E. A. Martin	258,051	May 30	1673	.....	21	1646
Brick. Fire-	W. G. Beyerly	260,155	June 27	1618	437	21	1992
Brick-kiln	A. H. Forbes	258,519	June 13	606	212	21	1843
Brick-kiln	E. N. Hutchison	258,319	Jan. 17	780	217	21	146
Brick-kiln	C. D. Page	255,159	Mar. 21	948	{251 / 252 / 180}	21	615
Brick-machine	H. C. Barker	257,490	May 9	391	{109 / 110}	21	1367
Brick-machine	J. Creager	257,663	May 9	655	163	21	1404
Brick-machine	W. E. Gard	255,385	Mar. 21	1190	320	21	856
Brick-machine	W. H. Judson	260,101	June 27	1555	{418 / 419}	21	1991
Brick-machine	P. H. A. and J. M. Kells	255,670	Apr. 4	141	37	21	874
Brick-machine	W. and A. B. Woodward	254,585	Mar. 7	95	24	21	655
Brick-machine	M. Wright	256,092	Apr. 4	412	113	21	1089
Brick-machine. Hammer	E. F. Andrews	257,196	Apr. 25	1678	{469 / 470}	21	1326
Brick-making machine	S. J. Plant	257,666	May 9	680	164	21	1391
Brick-mold	T. McNicholas	259,680	June 20	1971	341	21	1989
Brick-press	J. Crabtree	255,146	Mar. 21	869	230	21	699
Brick, tile, &c. Compound for making	H. H. Hunt	260,203	June 27	1678	.....	21	2021
Bricks. Mold for making tubular	A. Hahn	255,072	Apr. 4	279	72	21	893
Bridge	J. B. McPherson	258,487	Jan. 17	890	223	21	169
Bridge appliance. Railway draw-	J. Chandler	254,863	Mar. 14	588	{130 / 137}	21	722
Bridge. Draw-	J. Edwards and J. R. F. Kelly	254,627	Mar. 7	219	56, 57	21	675
Bridge. Draw-	M. A. Zürcher	255,851	Apr. 4	96	28	21	907
Bridge lock and signal. Turn-	F. W. Coolidagh	251,836	Jan. 3	139	54	21	34
Bridge. Truss-	W. Ireton	254,978	Mar. 14	629	169	21	720
Bridges. Guard-gate for swing-	F. Beehr	255,626	Mar. 14	729	206	21	171
Bridle-bit	G. J. Letchworth	254,967	Mar. 14	661	183	21	763
Bridle-bit	R. Little	254,698	Mar. 7	367	71	21	694
Bridle-bit	H. S. Squier	255,737	Mar 28	16333	441	21	941
Bridle-bits	T. E. Van Ness and D. Maloney	256,168	May 16	1251	353	21	1580
Bridle-bits. Forming cheek-pieces for	C. B. Mintle	254,256	Feb. 28	1430	390	21	612
Bridle-ring	W. P. Dodson	255,309	Mar. 21	1165	316	21	856
Broiler	H. H. Sheldon	254,709	Mar. 7	316	84	21	699
Broiler	I. F. Betts	258,977	June 6	120	35	21	1717
Broiler for oil or gas stoves	R. E. Dietz	258,989	June 6	156	43	21	1721
Broiler for oil or gas stoves	J. W. Holder	259,201	May 16	1294	367	21	1989
Bronzing-machine	T. Leeming, R. Ray, and F. G. Lynde	260,309	May 23	1444	409	21	1568
Bronzing or otherwise ornamenting paper, &c. Machine for	J. Roth	254,898	Mar. 7	397	78	21	699
Broom-hanger	J. F. Bartlett	258,574	June 6	5	2	21	1686
Brush	D. A. McDaniel	254,568	Apr. 18	1038	294	21	1146
Brush	L. Yvon	257,498	May 2	343	96	21	1348
Brush case. Blacking-	A. L. Seabury	258,615	May 30	2046	578	21	1678
Brush. Circular-	B. F. Quinby	256,117	May 16	1197	338	21	1581
Brush. Dusting-	M. S. W. Brown	259,407	June 20	1179	315	21	1913
Brush. Flue-	J. N. Gibson	253,634	Jan. 31	1050	457	21	394
Brush for cleaning milk-cans	J. K. Odell	253,864	Feb. 21	861	243	21	511
Brush machine. Wire-	J. E. and C. E. Howard	254,655	Mar. 7	256	66	21	681
Brush-making tool	A. P. Smith	258,149	Jan. 10	575	168	21	105

Buckle. Tug	M. T. Shadduck	255,341	Mar. 21	1140	306	21	849
Buckwheat hulling and separating machine	W. A. Cowley	259,670	June 20	996	266	21	1883
Buckwheat-hulling machine	G. S. Cranson. (Reissue)	10,001	Apr. 25	1706	478	21	1271
Buffing and polishing machines. Roll for	G. H. P. Flagg	257,308	May 2	189	54	21	1315
Buffing or polishing machine-roll	G. H. P. Flagg	254,811	Mar. 14	445	120	21	721
Buffing-tool	F. W. Stone	257,903	May 16	940	262	21	1464
Bug-catching machine. Potato	F. D. Casey	254,459	Mar. 7	15	4, 5	21	641
Bugs and worms. Compound for destroying carpet	J. S. Vandenbergh	256,414	Apr. 11	830	.....	21	1008
Buggies. Head-block for side-bar	A. D. Hickok	255,288	Mar. 21	1069	287	21	836
Buggy. Adjustable	W. T. Angus	252,411	Jan. 17	895	248	21	164
Buggy-body	J. L. Dolson	259,270	June 6	479	126	21	1177
Buggy. Side-spring	G. Pennoyer	254,839	Mar. 14	485	130	21	727
Building-block. Foundation	M. R. Marks	254,489	Mar. 7	55	14	21	647
Building-blocks. Manufacture of	J. J. Schillinger	252,283	Jan. 10	704	198	21	127
Building. Fire-proof	J. Arbuckle	253,658	Feb. 14	568	160	21	453
Building-ventilator	J. McDonough	256,021	Apr. 4	332	88	21	1006
Buildings. Construction of	A. J. Chase	255,595	Mar. 28	1457	391	21	959
Buildings. Funnel-block for partitions of	D. Shea and R. Trefethen	257,771	May 9	761	218	21	1496
Bullet-patching machine	H. Borchardt	258,528	May 23	1699	480, 481	21	1107
Bullet-patching machine	A. C. Hobbs	257,584	May 9	562	157	21	1385
Bullet-patching machine	A. C. Hobbs, T. V. Boyden, and C. R. Richards.	257,585	May 9	563	157, 158	21	1385
Bung	H. F. Gaines	252,037	Jan. 31	1596	426	21	983
Bung and bushing for beer-barrels. Combined	P. Madlener	258,448	May 23	1606	454	21	1291
Bung-bush wrench	C. Trapp	257,414	May 2	325	92	21	1239
Bung cutting and compressing machine	J. Franzmann	254,298	Feb. 28	1356	373, 374	21	600
Bung. Racking	J. S. Lippe	253,932	Feb. 21	926	258	21	520
Bureau, &c.	G. F. Richardson	258,604	May 30	1601	508	21	1633
Bureaus, &c. Machine for making rail-pieces for	G. Luppert	259,180	June 6	377	99	21	1760
Burglar-alarm	G. P. Conant	255,722	Mar. 28	1607	435	21	937
Burglar-alarm	J. Giles	252,095	Jan. 10	510	141	21	95
Burglar-alarm	W. B. Howell	256,321	Apr. 11	734	200	21	1081
Burglar-alarm	J. V. Knight	256,145	Apr. 11	497	135	21	1040
Burglar-alarm	S. D. Lake	253,070	Jan. 31	1701	469	21	311
Burglar-alarm	W. D. Maloney	257,356	May 2	285	72	21	1327
Burglar-alarm	P. Moran	258,458	May 23	1618	457	21	1503
Burglar-alarm. Car-door	J. D. Hollister	255,988	Apr. 4	397	78	21	999
Burglar-alarm. cut-out	W. H. Sawyer	252,200	Jan. 10	700	198	21	126
Burglar-alarm. Electric	M. H. Kerner	254,336	Feb. 28	1396	385	21	608
Burglar-alarm. Electric	H. C. Roome	254,699	Mar. 7	305	81	21	690
Burglar-alarm. Portable	J. H. Rose	254,383	Feb. 28	1450	397	21	616
Burglar-alarms. Electrical connection for	J. A. Davis	259,895	June 20	1199	321	21	1917
Burial-case	J. Askins	252,170	Jan. 10	600	169	21	109
Burial-case	J. H. Hedenberg	256,565	Apr. 18	1093	299	21	1144
Burial-cases. Shipping-box for	G. W. Dow	259,961	June 20	1401	377	21	1951
Burial-casket	H. Hutchinson	253,708	Feb. 14	689	178	21	463
Burner: *See* Air and gas burner. Gas-burner. Hydrocarbon-burner. Lamp-burner. Paint-burner. Smoke-burner. Vapor-burner. Vapor-retort burner.							
Burning air and hydrocarbon vapors. Device for	M. G. Fagan	252,307	Jan. 17	770	214	21	144
Burnishing-tool	F. Pease	258,315	May 23	1451	412	21	1564
Butchering apparatus	G. F. Dickinson	252,083	Jan. 10	497	138	21	93
Butter and lard cutter	P. F. Moroney	260,310	June 27	1811	491	21	2022
Butter-cask	J. K. Hamlin	255,974	Apr. 4	581	73	21	997
Butter. Cooling	W. S. Osborn	259,907	June 20	1228	345	21	1952
Butter, &c. Cooling and refrigerating	W. Tunstill	259,783	June 20	1151	305, 306	21	1908
Butter-cutter	J. Porsch, Jr.	252,698	Jan. 24	1222	342	21	296
Butter for cooking purposes. Compound to be used in the place of	S. H. Cochran	258,992	June 6	149	.....	21	1730
Butter-mold	J. De Carly	256,467	Apr. 18	913	255	21	1155
Butter-pail covers. Fastening for	C. L. Stephens	254,848	Mar. 14	494	132	21	729
Butter-pail ear and cover fastening	J. H. Gunn	254,959	Mar. 14	642	175	21	756
Butter-print press	L. Coates and J. T. Criswell. (Reissue.)	10,120	June 6	497	129	21	1780
Butter-tray	W. R. Wilcox and N. E. Brown	256,183	May 16	1271	360	21	1225
Butter. Treating	G. W. Kendall and R. R. Roberts	253,850	Feb. 14	775	.....	21	490

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Butter-worker	G. A. Blanchard	254,068	Feb. 21	1111	310	21	552
Butter, &c. Wrapper and package for	S. H. Smith	256,064	Apr. 4	377	103, 104	21	1014
Button	C. E. Bailey and W. R. Talbot	253,573	Feb. 14	471	133	21	437
Button	B. Block	254,913	Mar. 14	585	157	21	746
Button	W. P. Dolloff	255,787	Mar. 28	1622	436	21	939
Button	C. W. Ehman	259,958	June 13	527	138	21	1792
Button	B. Fischer	258,853	May 30	2001	540	21	1684
Button	F. H. Goldthwait	259,303	June 13	529	140	21	1703
Button	C. H. Goodwin	253,370	Feb. 7	217	62	21	363
Button	F. S. Harrington	259,855	June 20	1238	330	21	1893
Button	M. Loewenthal	255,640	Mar. 28	1509	405	21	919
Button	E. H. Royce, F. W. Allen, and M. H. Fuller.	256,056	Apr. 4	369	101	21	1012
Button	D. M. J. Wall	255,551	Mar. 28	1396	377	21	898
Button	W. H. Ward	256,417	Apr. 11	899	231	21	1099
Button	G. K. Webster	256,775	Apr. 18	1264	356	21	1166
Button	E. Pflug	254,849	Mar. 14	467	131	21	727
Button and button-fastening	S. M. Williams	258,336	May 23	1475	420	21	1508
Button and cravat-fastener. Collar	W. M. Hasel	259,656	June 13	974	260	21	1872
Button and fastening. Combined	J. Wilde	260,267	June 27	1756	474	21	2013
Button and means for attachment	C. Newburgh	252,944	Jan. 10	683	193	21	194
Button attachment	S. H. Benoist	257,644	May 9	630	177	21	1389
Button, &c. Cuff	D. Lubin	256,015	Apr. 4	385	96	21	1004
Button. Cuff	J. G. Kearsing	257,719	May 9	729	203	21	1416
Button-die	F. A. Smith, Jr	253,635	Feb. 14	537	154	21	448
Button-fastener	F. A. Smith, Jr	253,637	Feb. 14	538	155	21	448
Button-fastener	P. H. Sweet, Jr	257,531	May 9	477	133	21	1372
Button-fastener	J. Weidenmann	253,901	Feb. 21	878	247	21	514
Button-fastener	G. W. Prentice	253,096	Jan. 31	1735	479	21	317
Button-fastening	G. W. Prentice	253,627	Feb. 14	527	152	21	447
Button-fastening	F. A. Smith, Jr	253,636	Feb. 14	536	154	21	448
Button-fastening	F. A. Smith, Jr	257,690	May 9	604	169	21	1383
Button-fastening	M. B. Scott and W. F. Bill	260,126	June 27	1586	427	21	1997
Button. Hinged-shoe	C. C. B. Carlton and H. W. Clapp	257,369	May 2	170	48	21	1312
Button-hole cutter	D. S. Smith	259,430	June 13	691	183	21	1692
Button-hole cutter	C. E. Langmaid	252,781	Jan. 24	1316	360	21	242
Button-hole-cutting machine	A. R. Boynton and W. C. Locke	257,464	May 9	394	111	21	1358
Button-making molds. Device for making	F. Van Patten	257,537	May 9	482	134	21	1373
Button-making molds. Device for making	G. E. Adams	254,252	Feb. 28	1307	362	21	562
Button or stud	A. C. Greene	256,211	Apr. 11	583	162	21	1056
Button or stud	J. H. Wright	253,467	Feb. 7	334	93	21	402
Button. Separable	A. H. Alderman	259,972	June 20	1389	373	21	1949
Button. Separable	A. K. Hawley	257,696	May 9	707	195	21	1418
Button. Separable	D. Humphreys	259,159	June 6	348	92	21	1756
Button-setting instrument	G. W. Prentice	252,699	Jan. 24	1229	349	21	298
Button-setting machine	A. Eppler, Jr	256,650	Apr. 18	1152	318	21	1189
Button. Sleeve	F. F. Bloren	254,067	Feb. 21	1150	310	21	552
Button. Sleeve or other	S. Moore	254,035	Feb. 21	1051	293	21	541
Button. Spring	L. Goulding	252,311	Jan. 17	772	215	21	144
Button. Swivel	S. O. Parker	252,500	Jan. 17	1013	282	21	184
Buttons. Attaching	S. D. Jordan	258,880	Jan. 31	1456	407	21	371
Buttons, &c. Composition for	T. Guilford	253,900	Feb. 7	30	.....	21	358
Buttons from plastic material. Manufacture of	P. L. Sylvester	258,502	May 23	1666	.....	21	1691
Buttons. Instrument for attaching	J. W. Davis	256,327	Apr. 11	702	191	21	1075
Buttons. Instrument for setting	F. H. Farnsworth	256,307	Apr. 11	715	194	21	1077
Cab	F. Forder	256,473	Apr. 18	982	257	21	1137
Cable. Anti-induction	W. R. Patterson	259,511	Jan. 17	1015	283	21	185
Cable-roads. Covering the slot of	M. J. Whaley	254,254	Mar. 14	501	134	21	730
Cable-way. Underground	H. Casebolt	256,881	Apr. 25	1395	382, 383	21	1217
Cables. Apparatus for taking in, stopping, and stowing wire and other rope	J. Taylor	251,744	Jan. 3	68	19, 20	21	14
Caddy. Revolving	J. H. Burgess and J. R. Bancroft	257,646	May 16	870	244	21	1453
Cake and confectionery machine	J. H. Mitchell	257,043	Apr. 25	1580	443, 444	21	1240
Cake-pan	J. R. Connor	260,166	June 27	1699	440	21	1993
Cake-pan frame	W. J. Casbeer	258,498	Jan. 17	919	254	21	188
Cakes. Machine for jellying and decorating	D. M. Holmes	259,542	June 13	834	220, 221	21	1860
Calcimine	C. E. Hecht and W. S. Davis	254,647	Mar. 7	249	.....	21	629
Calcining-furnace	E. Protzman, C. Adams, and A. Longmore.	256,168	Apr. 11	516	141, 142	21	1043
Calendar	J. Cassons	258,597	June 6	38	9	21	1701
Calendar	G. F. Goodell	255,078	Mar. 14	603	215	21	784
Calendar	T. H. Hovenden	254,014	Feb. 21	1021	269	21	536
Calendar	T. H. Hovenden	254,015	Feb. 21	1024	276, 277, 278	21	537
Calendar	G. E. Sanford	255,198	Mar. 21	951	254, 255	21	616
Calendar. Time-piece	A. T. Serfert and L. H. Vollert	252,695	Jan. 24	1141	300	21	212
Calender for cloth and other fabrics	H. Feerster	258,285	May 23	1345	361	21	1545
Calipers	G. W. Jesson	259,164	June 6	356	94	21	1757
Calipers	E. C. Smith	256,962	Apr. 4	376	103	21	1014
Calipers	L. B. Woodruff	252,410	Jan. 17	894	248	21	164
Calipers	E. Witham	255,556	Mar. 28	1402	379	21	889
Calk	W. Clark	256,376	May 23	1590	431, 432	21	1278
Cambering-machine							
Camera: *See* Folding camera. Photographic camera. Solar camera.							
Camera attachment	W. L. Brown	256,966	Apr. 25	1500	421	21	1234

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Camera-box	E. B. Barker	253,567	Mar. 28	1415	381, 382	21	902
Can: *See* Cracker and grocer's can. Cream-can. Creaming-can. Fruit-can. Jacketed can. Milk-can. Oil-can. Packing-can. Refrigerating-can. Sheet-metal can. Swinging can.							
Can	J. Simpson	253,318	Feb. 7	188	46	21	373
Can-cap	C. W. Lyon	253,075	Jan. 31	1707	471	21	312
Can-capping machine	J. Roberts	253,104	Jan. 31	1743	482	21	318
Can-capping machine	J. C. Winters	256,090	Apr. 4	408	111	21	1019
Can-covers. Securing	E. Bottenberg	259,800	June 20	1172	313	21	1912
Can-filling apparatus	W. West	259,442	June 13	705	187	21	1895
Can for ivory-black, &c	W. D. Carter	252,076	Jan. 10	488	135	21	91
Can-labeling machine	J. F. Chase	254,864	Mar. 14	511	137	21	738
Can nozzle. Shipping	F. C. Wilson and Z. H. Bools	257,129	Apr. 25	1670	469	21	1265
Can-opener	A. W. Lyman	254,488	Mar. 7	54	13	21	647
Can-opener	W. B. Montgomery	255,300	Mar. 21	1200	321	21	920
Can-opener	F. Sharp	253,433	Feb. 7	291	63	21	395
Can-opener	F. C. Wilson	259,446	June 13	712	189	21	1808
Can-spout	J. C. Winter	254,895	Mar. 14	564	151, 158	21	742
Cans and preserving their contents. Method of and apparatus for filling							
Cans. Apparatus for crimping the ends upon circular	W. West	259,443	June 13	707	157, 188	21	1825
Cans. Sealing	F. B. Ginn	253,036	Jan. 31	1652	458	21	304
Canal-boat	J. Baker	253,965	Feb. 21	964	267	21	526
Candle. Electric	L. Soligneo	257,776	May 9	787	220	21	1498
Candle for electric lighting	J. B. J. Mignon	253,698	Feb. 14	777	221	21	490
Candle holder. Electric	C. A. Cheever	259,367	June 13	614	163	21	1808
Candle holder. Illuminating	R. F. W. Loper	259,500	Jan. 17	1100	307	21	190
Candles. Shade or globe holder for	D. Leary	257,097	Apr. 25	1763	438	21	1246
Candlestick. Miner's	J. C. Hume and T. A. Tate	255,995	Apr. 4	305	80	21	1001
Cane and umbrella. Combined	G. T. Smith	253,897	Feb. 21	874	246	21	513
Cane, cigar-case, pipe-bowl, &c. Combined	D. Crowley	253,011	Jan. 31	1690	450	21	289
Cane-cutting machine. Sugar	F. A. Bonnefin	254,914	Mar. 14	566	157, 158	21	746
Cane-juice, sirup, &c., with sulphuric acid, &c. Bleaching	A. G. Fell	254,471	Mar. 7	28	.....	21	643
Cane-mill	D. Wilde	255,228	Mar. 21	994	266	21	883
Cane-mill and process of extracting saccharine substances	G. W. Soule	254,575	Mar. 7	157	39	21	665
Cane mill. Sugar	D. Stewart	256,739	Apr. 18	1248	351	21	1163
Cane mill. Sugar	J. Stubbs	253,782	Feb. 14	729	209	21	482
Cane-stripper	W. P. Gard	256,047	May 16	1112	310	21	1495
Cane, umbrella-handle, &c	T. V. Keam	255,299	Mar. 21	1084	291, 292	21	839
Canister or store-can	D. F. Goodyear	252,759	Jan. 24	1987	303	21	237
Canopy, awning, and tent frame	W. B. Garver and E. Varian	258,911	June 6	51	13	21	1703
Canopy-frame	C. Wittenberg	255,063	Mar. 14	890	219	21	787
Cant-dog	E. Mansfield	259,564	June 13	859	228	21	1852
Canvas bag for hams	L. V. Walkley	255,221	Mar. 21	985	264	21	882
Cap. Band	S. Simonson	260,332	June 27	1834	495, 496	21	2025
Cap. Boy's	A. Frankenberg	259,521	June 13	809	213	21	1843
Cap or hat	D. Fox	260,185	June 27	1656	449	21	1997
Capstan. Combined steam and hand power	H. J. Johnson	252,039	Jan. 10	446	121, 122	21	84
Capsule-filling apparatus	J. Schmidt	255,660	Mar. 28	1549	417	21	927
Capsule-machine	A. Wood	256,519	May 23	1667	417	21	1605
Capsules. Machine for cutting off	L. J. Wohnlich and R. J. Scholes	255,889	Apr. 4	23	25	21	908
Capsules. Manufacture of metallic	A. Sichel	257,060	Apr. 25	1633	456	21	1258
Car	T. L. Wilson	252,830	Jan. 24	1301	368	21	254
Car air-buffer	W. Crouch	259,634	June 13	949	253	21	1857
Car. Ballast	D. B. Harmon	257,160	May 2	19	6	21	1294
Car-brake	A. Bailey	255,462	Mar. 28	1318	355	21	894
Car-brake	A. E. Beattie	256,353	May 23	1492	405	21	1571
Car-brake	J. B. Bray	256,635	Apr. 18	1104	310	21	1157
Car-brake	J. H. Burks	256,876	Apr. 25	1301	361	21	1216
Car-brake	G. O. S. Conway	257,660	May 9	649	169	21	1403
Car-brake	G. W. Friel	253,031	Jan. 31	1645	456	21	303
Car-brake	C. Higham	252,662	Jan. 24	1169	331	21	219
Car-brake	A. J. Kelly	255,431	Mar. 28	1254	336	21	874
Car-brake	J. W. Kenady	254,434	May 23	1569	451	21	1598
Car-brake	J. F. Mallinckrodt	256,017	Apr. 4	328	87	21	1005
Car-brake	J. F. Mallinckrodt	256,018	Apr. 4	330	87, 88	21	1005
Car-brake	A. F. Martel	251,723	Jan. 3	41	12	21	9
Car-brake	J. Meissner	256,790	Apr. 18	1211	339	21	1176
Car-brake	W. F. Mills and T. Isbister	259,194	Jan. 10	542	151, 158	21	100
Car-brake	W. Nurse	260,116	June 27	1575	494	21	1985
Car-brake	J. L. Poalk	259,773	June 20	1141	302	21	1906
Car-brake	D. P. Prescott	256,160	Apr. 11	514	141	21	1043
Car-brake	J. G. Schiller	255,530	Mar. 28	1384	373, 374	21	896
Car-brake	W. C. Schultze	256,485	May 23	1647	465, 466	21	1598
Car-brake	L. H. Sholder	259,920	June 20	1217	353	21	1836
Car-brake	A. C. Springer	256,484	Apr. 18	1064	300	21	1150
Car-brake	S. H. Terry	256,956	June 6	107	28	21	1713
Car-brake	J. Thompson	259,660	June 6	238	63	21	1794
Car-brake	R. J. Wilson and A. Snyder	253,949	Feb. 7	79	25	21	360

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Car-brake	D. W. Woods	257,803	May 9	818	229	21	1433
Car brake and coupling	N. O. Swenson	256,264	May 23	1493	383, 384	21	1584
Car brake and starter	H. Hinckley and E. Culver	259,013	June 6	177	47, 48	21	1725
Car-brake. Automatic	C. W. Lanpher	253,398	Feb. 7	250	72	21	366
Car-brake. Automatic	S. P. Tallman	256,074	Apr. 4	391	106, 107	21	1016
Car-brake. Automatic	D. Terrey	256,615	May 30	1812	512	21	1635
Car-brake. Automatic	J. A. Millholland	255,633	Mar. 28	1582	409	21	921
Car brake. Coal	C. E. Kendall	256,495	Apr. 18	941	263	21	1130
Car brake. Railway	E. P. Vining. (Reissue)	10,677	Apr. 4	451	128	21	1026
Car brake. Railway	J. G. Klett	254,330	Feb. 28	1400	365	21	699
Car. Cattle	E. Kohler	256,707	Apr. 18	1198	334, 335	21	1174
Car. Cattle	E. Kohler	260,289	June 27	1797	467	21	2030
Car. Cattle	H. Townsend	254,346	Feb. 28	1301	339	21	501
Car. Chair sleeping	M. B. Church	259,485	June 13	769	202, 203	21	1836
Car. Coal	J. B. Collin	253,585	Feb. 14	485	137, 138	21	449
Car. Combined parlor and sleeping	J. A. Schmitz	251,737	Jan. 3	60	17	21	13
Car-coupling	G. H. Adam	260,766	June 20	1157	302	21	1900
Car-coupling	P. A. Aikman	256,531	Apr. 18	1020	270	21	1132
Car-coupling	C. G. A. Alexander	256,943	Apr. 25	1402	419	21	1260
Car-coupling	J. W. Allen and A. B. Poynor	255,907	Apr. 4	191	49	21	984
Car-coupling	L. Anderson	259,972	June 20	1260	373	21	1949
Car-coupling	A. N. Armstrong	251,811	Jan. 3	157	43	21	20
Car-coupling	G. T. Arnold	260,149	June 27	1618	435	21	1991
Car-coupling	J. M. Bailey	256,541	May 30	1732	467	21	1619
Car-coupling	J. E. Barrett	254,290	Feb. 28	1313	364	21	503
Car-coupling	J. Barrett	259,792	June 20	1168	310	21	1910
Car-coupling	L. N. Bedford	259,691	June 6	261	69	21	1730
Car-coupling	M. Bergan	256,953	Apr. 25	1467	417	21	1260
Car-coupling	M. A. Bessette	253,575	Feb. 14	473	134	21	437
Car-coupling	D. Bevis	251,709	Jan. 3	98	25, 28	21	18
Car-coupling	J. and J. Dillon and H. L. Berger	255,940	Mar. 21	1007	269	21	886
Car-coupling	F. J. Blanke	256,277	Apr. 11	676	184	21	1071
Car-coupling	J. C. Bleeker	256,846	May 30	2064	568	21	1668
Car-coupling	G. F. Bond	255,942	Mar. 21	1009	270	21	878
Car-coupling	P. M. Bracelin	256,550	May 30	1731	469	21	1620
Car-coupling	J. Bradley	257,817	May 9	831	231	21	1435
Car-coupling	S. R. Brady	259,356	June 13	594	157	21	1804
Car-coupling	S. Bray	255,761	Apr. 4	11	4	21	953
Car-coupling	S. Bray	258,704	May 30	1930	545	21	1635
Car-coupling	T. Breen	259,999	June 27	1429	388, 389	21	1960
Car-coupling	J. E. Bronson	259,358	June 13	597	158	21	1805
Car-coupling	R. M. Brooks	257,148	May 2	5	2	21	1289
Car-coupling	R. M. Brooks	259,804	June 20	1175	314	21	1919
Car-coupling	R. M. and J. M. Brooks	255,972	Mar. 14	795	213	21	792
Car-coupling	C. Browning	254,106	Feb. 28	1137	317	21	864
Car-coupling	C. Browning	254,107	Feb. 28	1138	318	21	864
Car-coupling	M. W. Bruce	255,508	Mar. 28	1446	389	21	902
Car-coupling	E. J. Burns	257,208	May 2	69	21	21	1294
Car-coupling	G. Butler	253,638	Feb. 21	891	238	21	560
Car-coupling	G. Cade	254,009	Mar. 7	198	50	21	671
Car-coupling	L. L. Chase	254,111	Feb. 28	1143	319	21	865
Car-coupling	S. C. Collins	259,681	June 20	1194	319	21	1916
Car-coupling	E. A. Converse and N. T. Griffin	259,398	June 13	765	207	21	1838
Car-coupling	G. O. S. Conway	257,650	May 9	648	181	21	1403
Car-coupling	C. K. Cordrey	256,882	Apr. 25	1398	375	21	1208
Car-coupling	L. J. Cralle	255,601	Mar. 28	1483	398	21	910
Car-coupling	J. J. Currier	260,171	June 27	1674	441	21	1994
Car-coupling	C. L. Dahlberg	251,819	Jan. 3	198	55	21	35
Car-coupling	H. P. Daly	251,703	Jan. 3	21	6	21	6
Car-coupling	N. L. Davis and J. H. McIntyre	259,495	June 13	561	137	21	1791
Car-coupling	F. F. Dearing	256,128	Apr. 11	478	130	21	1037
Car-coupling	D. Dill	257,923	May 16	965	259	21	1440
Car-coupling	J. N. Doles	256,202	Apr. 11	577	156	21	1054
Car-coupling	W. C. Donaldson	259,549	June 13	793	209	21	1846
Car-coupling	R. H. Dowling	253,197	Jan. 10	625	177	21	114
Car-coupling	D. B. Duncan	257,675	May 9	654	188	21	1402
Car-coupling	W. L. Everit	258,039	May 16	1100	300	21	1493
Car-coupling	W. H. Farra, W. J. Clanahan, and J. Ellis	255,154	Mar. 21	901	241	21	808
Car-coupling	D. Fetters	254,472	Mar. 7	20	8	21	643
Car-coupling	L. H. Finney	260,153	June 27	1653	440	21	1997
Car-coupling	J. C. Fowler	253,399	Jan. 10	747	200	21	134
Car-coupling	D. France	259,841	June 20	1214	326	21	1926
Car-coupling	L. W. Gates	253,998	Feb. 21	1001	280	21	533
Car-coupling	D. M. Geese and J. Sants	254,253	Mar. 14	636	178	21	785
Car-coupling	J. B. Gleason	259,129	June 6	317	84	21	1749
Car-coupling	E. Glover	254,001	Feb. 21	1003	280	21	533
Car-coupling	N. J. Glover	256,996	Apr. 25	1533	430	21	1240
Car-coupling	B. P. Goodrich	253,668	Jan. 14	1116	313	21	208
Car-coupling	L. T. Goss	254,706	Mar. 7	186	168	21	704
Car-coupling	D. A. Grant	257,317	May 2	205	97	21	1318
Car-coupling	E. W. Grant	256,746	May 30	1976	557	21	1663
Car-coupling	J. L. Griffin	253,037	Jan. 31	1652	458	21	304
Car-coupling	W. Hallett	258,656	May 16	1121	314	21	1498
Car-coupling	G. M. Harbaugh	259,534	June 13	823	217	21	1845
Car-coupling	S. A. V. Hartwell	255,623	Mar. 28	1488	399	21	915
Car-coupling	S. A. V. Hartwell	260,195	June 27	1668	458	21	1999
Car-coupling	L. Hatfield	259,307	June 13	540	148	21	1794

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Car-coupling	M. Herrera	253,204	Feb. 7	33	11	21	352

Car-coupling link	J. H. Alker	253,653	Feb. 14	557	159	21	451
Car-coupling links. Machine for bending							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Car coupling. Street	O. A. A. Mödal	254,350	Feb. 28	1421	391	21	612
Car-coupling tongues. Die for manufacturing	W. C. Kreegher	256,147	Apr. 11	499	136	21	1040
Car-coupling tool	B. Askew	256,611	Apr. 18	1076	303	21	1179
Car-door	T. Eubank	257,660	May 9	674	187	21	1407
Car-door fastening	C. C. Kilts	252,384	Jan. 17	839	238	21	139
Car-door fastening. Freight	J. Jackson and J. W. Brockway	254,691	Mar. 14	457	124	21	723
Car door. Freight	T. McNally and W. H. Glasgow	255,648	Mar. 28	1516	406	21	940
Car-door lock	J. W. Kreppe	252,080	May 16	1146	321	21	1501
Car door. Grain	M. Graff	255,980	Mar. 21	1053	293	21	934
Car door. Grain	A. E. Pepper	214,669	Mar. 7	294	77	21	688
Car door. Grain	J. H. Wickes	254,758	Mar. 7	367	96	21	709
Car-door hanger	D. F. Van Liew	254,849	Mar. 14	555	148	21	740
Car. Dumping	T. M. Hall	259,973	June 6	481	126	21	1777
Car. Dumping	F. P. Johnson	254,138	Feb. 28	1172	328	21	570
Car. Dumping	A. Park	251,931	Jan. 3	301	83	21	58
Car. Dumping	J. N. Rice	259,585	June 13	883	235	21	1856
Car. Dumping	I. B. Robbins	255,868	Apr. 4	160	43	21	977
Car. Dumping	S. R. Wheeler	254,188	Feb. 28	1243	340	21	578
Car for railways. Wrecking and construction	L. K. Jewett	252,679	Jan. 24	1194	{334 335	21	221
Car-frame	T. A. Brant and C. D. Harris	258,763	May 30	1870	545	21	1655
Car. Freight	J Dalgneau	259,750	June 20	1112	296	21	1902
Car. Hand	H. H. Sessions	255,664	Mar. 28	1589	420	21	968
Car-heater	P. S. Ewins and F. A. Wiswell	258,394	May 23	1539	437	21	1579
Car-heater	F. S. Heath	257,385	May 2	215	60, 61	21	1319
Car-heater	J. Johnson	253,369	Feb. 7	230	67	21	367
Car-heater	D. M. Kirkpatrick	254,096	Apr. 4	317	83	21	1003
Car-heater	J. E. Steger	255,690	Mar. 28	1567	429	21	959
Car heater. Railway	W. C. Baker	253,253	Feb. 7	84	26	21	361
Car heating and ventilating apparatus	L. B. White and L. Henderson	257,795	May 9	808	{226 227 469 470	21	1431 311
Car-motor. Spring	W. T. Larimore	253,079	Jan. 31	1703			
Car-mover	G. P. Conant	254,801	Mar. 14	435	117	21	719
Car-mover	J. D. Lawrence	255,630	Mar. 28	1508	405	21	919
Car-moving apparatus	P. J. Stone	259,586	June 13	898	239	21	1859
Car-propeller	J. H. Cole	256,292	Apr. 11	697	{189 190	21	1074
Car-propeller	H. E. Depp	255,496	Mar. 28	1355	360	21	887
Car. Railway	I. Blumenthal	257,843	May 16	867	243	21	1458
Car. Railway	C. H. Bradley	256,631	Apr. 18	1100	309	21	1156
Car. Railway	A. Estrado	253,993	Feb. 21	994	{276 277 278	21	531
Car. Railway	M. H. Landers	256,308	May 23	1443	400	21	1563
Car. Railway	J. Maclachlan	256,346	Apr. 11	755	{207 208	21	1085
Car. Railway	J. P. Maher	251,787	Jan. 3	190	34, 35	21	23
Car. Railway	J. Patterson	258,594	May 30	1767	505	21	1631
Car. Railway	W. P. Prewitt	252,855	Jan. 24	1425	397	21	259
Car-replacer	J. Lafferas	254,898	Mar. 14	473	127	21	725
Car-replacer	J. E. Norwood	257,827	May 9	842	235	21	1436
Car-roof	H. Aldridge. (Reissue.)	10,006	Jan. 10	750	211	21	135
Car-roof	G. B. Simonds	252,532	Jan. 17	1039	289	21	166
Car running-gear. Railway	B. C. Wilson	258,918	Jan. 31	1504	419	21	940
Car. Safety	A. A. Starr	256,757	Apr. 18	1247	350	21	1183
Car-seat	E. L. Bushnell	260,168	June 27	1685	439	21	1993
Car-seat	E. T. Starr	253,851	Feb. 21	945	263	21	563
Car-seat attachment	I. M. Van Wagner	258,167	May 16	1253	353	21	1521
Car-seat lock	A. Loeffelbols	254,298	Feb. 28	1273	353	21	567
Car shield. Railway	S. C. Mason and J. L. Hanson	257,231	May 2	104	30	21	1299
Car-shunter	L. Cohina	256,545	Apr. 18	1004	282	21	1141
Car signal and speed-indicator	W. J. Kidd	259,870	June 20	1348	334	21	1925
Car. Sleeping	M. B. Church	259,496	June 13	778	{205 206	21	1837
Car. Sleeping	W. H. Paige	259,382	June 13	571	151	21	1800
Car-spring	J. B. N. Berry	255,835	Apr. 4	101	27	21	968
Car-spring	G. F. Godley	259,381	June 13	631	167	21	1811
Car-spring	C. T. Schoen	255,900	Mar. 21	955	255	24	817
Car-spring	C. Scott and C. T. Schoen	251,730	Jan. 3	63	17	24	13
Car-starter	J. L. Barker and W. D. Slauson	255,238	Mar. 21	1085	289	21	825
Car-starter	L. Helm	253,044	Jan. 31	1661	460	21	306
Car-starter	D. Negrotto, Jr., and W. B. Fleming.	256,941	June 6	87	23	21	1709
Car-starter	J. B. Rohrer and A. Goodhart	259,215	June 6	413	110	21	1765
Car-starter	C. B. Underhill	255,054	Mar. 14	774	207	21	779
Car-step. Safety	T. H. Doyle	258,901	June 6	41	10	21	1701
Car. Stock	W. T. Abbott	259,071	June 6	250	67	21	1738
Car. Stock	G. D. Burton	251,695	Jan. 3	13	3, 4	21	5
Car. Stock	J. S. Butterfield	252,863	Jan. 31	1439	402	21	306
Car. Stock	J. B. Calkins	256,877	Apr. 25	1302	391	21	1216
Car. Stock	G. J. Cline	252,259	Jan. 10	743	207	21	133
Car. Stock	J. Edmonds	260,009	June 27	1439	399	21	1964
Car. Stock	F. W. Franklin and W. F. Flaggs	254,949	Mar. 14	630	{168 170 198	21	774
Car. Stock	J. Heward	257,708	May 9	716	{199	21	1414
Car. Stock	I. Kitsee	252,777	Jan. 24	1312	366	21	241
Car. Stock	J. R. McPherson	256,153	Apr. 11	504	138	21	1041
Car. Stock	G. F. Oehrl	253,418	Feb. 7	274	79	21	493
Car. Stock	G. F. Patterson	259,399	Jan. 17	977	244	21	168
Car. Stock	A. K. Penta	254,448	Feb. 28	1517	415	21	629
Car. Stock	J. H. Shellabarger	256,189	Apr. 11	807	221	21	1051
Car. Stock	H. S. Wolfe	258,804	Feb. 14	753	215	21	466

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Car. Stock	H. S. Wolfe	256,185	Apr. 11	555	151, 158	21	1049
Car-switching system. Street	T. B. Estep	256,675	June 20	1001	266	21	1284
Car. Track-clearing	C. L. Heywood	256,140	Apr. 11	491	133, 134	21	1039
Car-unloaders. Nose-casting for	G. W. Rolph	258,606	May 30	1604	309	21	1633
Car ventilating apparatus. Railway	J. A. Stephan and J. Gieriet	259,938	June 20	1327	356, 357	21	1938
Car-ventilation	J. Shepherd	251,957	Jan. 3	327	89	21	57
Car ventilation. Railway	E. H. Mott	254,148	Feb. 28	1183	331	21	570
Car-ventilator	E. O. Connors	253,188	Feb. 7	17	6	21	340
Car-ventilator and dust-arrester	C. C. MacConnell	252,300	Jan. 17	867	241	21	160
Car-wheel	J. V. Dinsmore	252,745	Jan. 24	1271	357	21	234
Car-wheel	T. R. Knauss	256,841	Apr. 25	1250	361	21	1208
Car-wheel	F. M. Taneyhill	257,625	May 9	610	170	23	1304
Car-wheel	N. Washburn	254,250	Feb. 28	1205	361	21	591
Car-wheel	N. Washburn	258,206	May 23	1306	365	21	1554
Car-wheel	J. N. Smith	259,738	June 20	1081	288	21	1897
Car wheels and axles. Tool for dressing	I. M. Van Wagner	253,241	Feb. 7	71	22	21	359
Car-window screen and blind	J. H. Reynolds	257,068	Apr. 25	1011	458	21	1265
Car windows. Dust-guard for railway	L. Hetfield	255,109	Mar. 21	918	245	21	810
Cars. Apparatus for delivering coal from	W. E. Eastman	253,521	Feb. 14	412	115	21	498
Cars. Apparatus for heating freight	W. E. Chamberlain	254,091	Feb. 21	1114	311	21	558
Cars. Apparatus for lighting the platforms and steps of railway	J. Arkell	253,149	Jan. 31	1796	499	21	388
Cars, &c. Apparatus for ventilating	O. H. Jadwin	258,425	May 23	1576	448	21	1586
Cars. Cable-traction for street	F. W. Marston	252,115	Jan. 10	572	147	21	99
Cars. Draft and buffing apparatus for railway	W. Norris	251,927	Jan. 3	297	81	21	51
Cars from their traction-rope. Connecting and disconnecting	J. R. Sprague	257,099	Apr. 25	1644	460	21	1260
Cars. Grain-door for freight	R. F. Bridewell	253,673	Feb. 14	565	165	21	455
Cars. Gripe for propelling	M. D. Fitzgerald	252,752	Jan. 24	1281	360, 361	21	236
Cars. Heating and ventilating	E. J. Brooks	259,472	June 13	745	197	21	1833
Cars. Label-rack for freight	R. K. Evans	256,929	Apr. 25	1334	377	21	1206
Cars. Lever for starting and moving	G. W. Hunt	260,100	June 27	1554	418	21	1961
Cars or carriages. Device for lighting the steps of	P. McGuire	252,880	Jan. 31	1469	411	21	273
Cars. Pin and link carrying device for railway	M. C. Jones	252,673	Jan. 24	1197	335	21	222
Cars. Ventilating	I. H. Wright	253,466	Feb. 7	334	92, 93	21	402
Caramel-cutter	L. K. Böhm	252,351	Jan. 17	816	227	21	151
Carbon-conductors. Apparatus for the preparation of	H. S. Maxim	255,309	Mar. 21	1100	297	21	842
Carbon conductors. Manufacture of	L. H. Latimer	252,386	Jan. 17	861	238	21	150
Carbons. Manufacturing	E. L. C. D'Ivernois	255,948	Apr. 4	945	63	21	901
Carbureting air. Process of and apparatus for	D. M. Small	254,943	Feb. 28	1296	350	21	590
Carbureting gas or air. Device for	J. Haberstick	253,209	Feb. 7	31	10	21	352
Carburetor	I. W. Shuler	257,947	May 2	128	35	21	1302
Carburetor	G. Resnor	259,921	June 20	1306	350	21	1935
Carburetor. Air	W. M. Jackson	253,713	Feb. 14	638	181	21	465
Carburetors. Oil-distributing mechanism for	B. A. Sheldon	253,895	Feb. 21	872	246	21	513
Card and domino combined. Playing	W. W. Bainbridge	259,076	June 6	256	68	21	1728
Card-case	J. J. Hoey	256,687	Apr. 18	1172	329	21	1169
Card-grinding machine	W. C. Rood	259,216	June 6	414	116	21	1766
Card holder. Show	S. L. Cohen	253,910	Feb. 21	887	250	21	515
Card. Playing	H. Pennington	257,184	May 2	44	14	21	1289
Card-support	J. T. Lemaire	255,519	Mar. 28	1300	366, 367	21	892
Carding-engine feeding device	J. Greaves. (Reissue)	10,054	Mar. 7	411	100	21	708
Carding-engines. Condensing-cylinder for	P. Laflin	258,656	May 30	1863	526	21	1645
Carding-engines. Mechanism for operating doffer-combs of	G. Bernhart	253,260	Feb. 7	93	29	21	362
Carding-machine	J. Wall	252,891	Jan. 24	1363	365	21	252
Carding-machine creel-frame	M. A. Furbush	254,301	Feb. 28	1300	374, 375	21	601
Carding-machine feeding device	E. Geesner	257,313	May 2	198	56	21	1316
Carding-machine rollers. Tooth for cleaning	T. Kershaw and H. E. Cunningham	253,065	Jan. 31	1697	467	21	310
Carding-machine top-flat	W. E. Whitehead	258,620	May 30	1620	514	21	1636
Carding-machines. Mechanism for operating doffer-combs of	H. and H. A. Stone	258,499	May 23	1663	476	21	1601
Carriole	G. Bungars	254,196	Feb. 28	1234	344	21	580
Carpet-cleaning machine	A. P. Stevens	251,806	Jan. 3	145	41	21	97
Carpet-exhibitor	A. Peterson	259,713	June 20	1061	293	21	1893
Carpet-fastener	J. A. Cole	256,918	Apr. 25	1518	425	21	1227
Carpet-fastener	W. E. Henderson	257,163	May 2	94	6	21	1285
Carpet-fastener	S. J. Spitler	257,624	May 9	600	170	21	1394
Carpet fastener and stair-rod securer. Combined stair-	C. D. Stone	252,850	Jan. 24	1430	395	21	258
Carpet fastener. Stair	M. Krickl	258,660	Jan. 24	1287	336	21	224
Carpet fastener. Stair	C. D. Stone	257,251	May 2	126	36	21	1503
Carpet-lining	E. A. Galbraith	260,091	June 27	1536	414	21	1979
Carpet-lining	H. A. Stearns	257,587	May 9	472	131	21	1378
Carpet or oil-cloth fastener	E. E. Johnson	259,864	June 20	1240	333	21	1924
Carpet-stretcher	J. M. Hawley	256,417	May 23	1567	445	21	1584
Carpet-stretcher	W. E. Henderson	256,838	Apr. 25	1347	360	21	1208
Carpet-stretcher	W. E. Henderson	256,839	Apr. 25	1348	360	21	1208
Carpet-stretcher	M. Winter, Sr	253,409	Feb. 7	326	91	21	401
Carpet-sweeper	C. O. Allen	256,343	May 23	1491	422	21	1549
Carpet-sweeper	E. H. Eddy	259,374	June 13	621	165	21	1809
Carpet-sweeper	B. Figer	257,927	May 16	908	271	21	1469
Carpet-sweeper	J. Hinkley	259,856	June 20	1233	331	21	1923
Carpet-sweeper	H. A. Mueller	259,901	June 20	1262	344	21	1931
Carpet-sweeper	R. Soper	255,883	Apr. 4	84	23	21	905
Carpet-sweeper	M. G. Stelp	252,402	Jan. 17	860	245	21	162
Carpet-sweeper	C. L. Travis	254,410	Feb. 28	1481	406	21	6.2

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Carpet-sweeper	C. L. Travis	260,257	June 27	1743	471	21	2001
Carpet-sweeper	H. S. Wing	258,089	June 6	246	66	21	1736
Carpets. Tumbling-reel for cleaning	T. A. Naylor	258,706	May 30	2030	573	21	1672
Carriage-bodies, &c. Reticulated work for	P. Barry	259,461	June 13	726	193	21	1869
Carriage-bow	H. S. Wing	257,988	May 2	138	39	21	1285
Carriage-bow iron	J. B. Platt	254,367	Feb. 28	1498	402	21	614
Carriage-bows. Side piece for	F. A. Wittich	259,785	June 20	1154	307	21	1909
Carriage-brake	W. H. Tufts	258,783	May 30	2027	572	21	1672
Carriage-button	O. Close	258,219	May 23	1539	379	21	1544
Carriage. Child's	J. N. Haselip	253,601	Feb. 14	499	142	21	442
Carriage. Child's	A. Heim	255,855	Apr. 4	198	33	21	971
Carriage. Child's	C. Wittenberg	258,279	May 23	1401	366	21	1565
Carriage. Child's	W. H. Weaver	258,831	May 30	2067	583	21	1689
Carriage-curtain fastening	M. Webster	254,121	Feb. 28	1281	349	21	579
Carriage. Hand	G. C. Bovey	259,876	June 27	1764	477	21	2014
Carriage-jack	W. A. Foster	256,389	Apr. 11	717	195	21	1072
Carriage-jack	W. J. Scott	255,880	Apr. 4	61	22	21	904
Carriage-jack	H. W. Blood	259,985	June 6	474	125	21	1776
Carriage or buggy top mold	P. A. Larivière	259,177	June 6	372	99	21	1709
Carriage-seat	J. W. Sutphin	251,945	Jan. 3	337	91	21	58
Carriage shifting-rail	J. K. Powers	258,268	May 23	1378	360	21	1551
Carriage side-curtain	J. E. Bell	255,375	Mar. 21	1178	316	21	855
Carriage-spring	A. Conner	259,371	June 13	619	164	21	1889
Carriage-spring	G. Pennoyer	259,398	Jan. 17	769	219	21	147
Carriage-spring	R. Butterworth and R. S. Bolles	254,099	Mar. 7	195	49, 50	21	971
Carriage-top	P. Dansereau	251,794	Jan. 3	22	6	21	6
Carriage-top	C. and G. Gross	256,955	May 16	1118	312	21	1496
Carriage-top	F. Meinecke	257,175	May 2	36	12	21	1287
Carriage-top	R. J. Parrett	255,388	Mar. 21	1123	302	21	846
Carriage-top	B. B. Noyes	258,709	May 30	2031	573	21	1672
Carriage-top clamp	G. Asher	254,447	Mar. 7	2	1	21	630
Carriage-top joint	C. M. Fogelquist	253,364	Feb. 7	312	69	21	388
Carriage-tops. Folding bracket for	P. B. Kinsman and J. Merrill	255,637	Mar. 28	1505	404	21	918
Carriage-wrench	E. A. Robbins	257,072	Apr. 25	1618	453	21	1256
Carrier: *See* Cash-carrier. Egg-carrier. Grain-carrier. Hay-carrier. Hose-carrier. Lantern-carrier. Package-carrier. Rolling-mill rail-carrier. Slop and swill carrier. Store-service carrier. Thrashing-machine straw-carrier. Tool-carrier. Trace-carrier.	J. H. Crittenden	254,223	Feb. 28	1236	300	21	557
Cart. Dumping	U. R. Nichols	256,308	Apr. 11	779	214	21	1069
Cart. Dumping	J. M. Jones	258,674	May 16	1139	319	21	1599
Cart. Hand	G. W. Whitson	260,209	May 23	1400	396	21	1955
Cart. Self-loading excavating	H. McGee	255,678	Apr. 4	151	40	21	975
Cartridge	T. Shaw	255,542	Mar. 28	1367	374	21	898
Cartridge	B. B. Stocking	259,537	June 6	442	117	21	1771
Cartridge	F. Chillingworth. (Reissue)	10,190	May 23	1717	485	21	1611
Cartridge-box	J. H. Gill	257,680	May 16	888	246	21	1456
Cartridge capping and decapping implement	A. Werden	254,757	Mar. 7	378	98	21	702
Cartridge capping and uncapping implement	D. Kirkwood	259,172	June 6	368	97	21	1703
Cartridge-extractor. Hand	H. W. Mason	253,213	Feb. 7	44	14	21	354
Cartridge-machine	T. G. Bennett	260,153	June 27	1616	438	21	1991
Cartridge-package	A. J. Hobbs	256,684	Apr. 18	1108	289	21	1149
Cartridge-primer	W. S. Smoot	255,822	Apr. 4	53	23	21	965
Cartridge-primer	G. P. Salisbury	260,362	June 27	1689	494	21	2024
Cartridges. Closing blank	T. A. Shinn	253,634	Feb. 14	536	154	21	449
Carving-fork	J. B. H. Leonard	256,288	Apr. 11	610	169	21	1056
Carving-fork guard	S. S. Ward	258,172	May 16	1267	356	21	1528
Carving-fork guard	E. E. Wood, Jr	257,497	May 2	343	96	21	1342
Carving-fork guard	G. Mathis	257,957	May 16	1001	279	21	1475
Carving machine. Wood							
Case: *See* Artist's case. Book-case. Brush-case. Burial-case. Butter-case. Card-case. Cell-case. Chain show-case. Check-case. Clock-case. Dressing-case. Egg-case. Embroidery-case. File-case. Case for displaying wares	J. R. Hunter	253,290	Feb. 7	126	37	21	388
Case for preserving food	J. J. Hoyt	257,010	Apr. 25	1546	434	21	1243
Cash-box system. Automatic	J. C. Martin	255,985	Mar. 28	1360	369	21	898
Cash-carrier. Automatic	W. S. Lamson	258,584	May 30	1774	501	21	1635
Cash-carrier. Automatic	W. S. Lamson	258,585	May 30	1775	502	21	1635
Cash-registering apparatus	M. Campbell	253,506	Feb. 14	396	110, 111	21	466
Casket trimming or ornament	D. Avery	257,455	May 9	367	100	21	1326
Caster	S. W. Babbitt	257,270	May 2	149	42	21	1277
Caster	E. L. Babcock	257,144	May 2	2	1	21	1251
Caster	J. Scott and F. G. Avers	257,634	May 9	648	178	21	1420
Caster	C. H. Tuxsy	260,259	June 27	1746	473	21	2011
Caster. Furniture	W. T. Kostalski	258,954	Jun. 21	1540	431	21	1957

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'gs.	Official Gazette. Vol.	Official Gazette. Page.
Castor. Salt	J. J. Kittel	253,873	Apr. 4	145	39	21	975
Caster. Trunk	J. J. Cowell	256,078	Jan. 10	490	135	21	98
Caster. Trunk	J. J. Cowell	256,643	Apr. 18	1114	313	21	1139
Casting car-wheels. Mold for	J. Thierry	256,410	Apr. 11	826	229	21	1007
Casting car-wheels. Mold for	L. W. Washburn	254,561	Mar. 7	01	23	21	654
Casting compound ingots. Mold for	P. J. Fitzsimons	257,307	May 2	188	54	21	1315
Casting-flask	J. K. Dimmick	253,854	Feb. 21	822	233	21	504
Casting metals. Device for	R. Cross and J. Gabriel	257,558	May 9	517	144	21	1378
Casting metals. Mold for	J. L. Lewis	254,346	Feb. 28	1408	387	21	610
Casting pipe-elbows. Apparatus for	J. H. Insande	250,161	June 6	350	93	21	1756
Casting printers' leads. Mold for	L. B. Benton	254,792	Mar. 14	426	114	21	718
Casting shovel-blanks. Mold for	E. Smith	251,980	Jan. 3	329	90	21	57
Casting steel ingots. Process of and machine for	G. W. Billings. (Reissue)	10,082	Apr. 11	867	240	21	1108
Casting steel ingots. Process of and machine for	G. W. Billings	253,176	Feb. 7	5	2	21	347
Castings. Apparatus for forming molds for	S. J. Adams	258,206	May 23	1231	373	21	1541
Castings. Forming molds for	S. J. Adams	257,992	May 16	1043	280	21	1462
Castings. Machine for cleaning	S. Wier	254,855	Mar. 14	702	134	21	731
Castings. Making cores for	L. G. Goldsmith	256,309	Apr. 11	591	161	21	1055
Castings. Manufacture of chilled	J. R. Whitney	258,189	May 16	1270	360	21	1524
Castings. Method of and apparatus for forming molds for	S. J. Adams	257,991	May 16	1040	290	21	1462
Catarrh remedy	C. W. Schnell	259,590	June 13	890	.....	21	1857
Catheter. Double	E. Pfarre	256,300	Apr. 18	1050	286	21	1148
Cattle-fastener	C. H. T. Mann	257,172	May 2	32	11	21	1286
Cattle-tie	A. Bynell	252,424	Jan. 17	916	253	21	167
Cattle-tie. Safety	M. J. North	257,747	May 9	755	210	21	1421
Cauterizing apparatus	E. T. Brenot	255,582	Mar. 28	1441	387	21	907
Cell-case	I. Nichols	256,726	Apr. 18	1216	340	21	1177
Celluloid, cellulose, &c. Molded boat and other articles from	M. F. Davis	259,826	June 20	1900	321	21	1917
Celluloid collars. Machine for creasing, bending, and shaping	E. Cary	253,001	Jan. 31	1606	446	21	997
Cellulose and the manufacture of articles therefrom. Treatment of	A. Parker	257,607	May 9	589	.....	21	1390
Cement. Adhesive	S. C. Murray	257,601	May 9	583	.....	21	1390
Cement for uniting veneers, &c. Adhesive	W. Martien	259,181	June 6	378	.....	21	1760
Center-board boat	T. Clapham	258,375	May 23	1519	431	21	1576
Center-board for boats	M. W. Atwood. (Reissue)	10,105	May 9	850	177	21	1440
Center-board for vessels	J. G. W. Havens	259,302	June 13	541	142	21	1795
Centrifugal machine	W. Shears	255,685	Mar. 28	1563	420	21	928
Centrifugal separator	A. D. Bellinger	257,241	May 16	864	242	21	1452
Chain	J. M. Dodge	255,970	Apr. 4	249	64	21	991
Chain attachment. Watch	A. Uebele	259,247	June 6	456	120	21	1773
Chain-block. Differential	J. D. Davies	253,189	Feb. 7	17	6	21	350
Chain-bolt	C. H. Goebel	252,309	Jan. 17	772	215	21	144
Chain cross-bar	S. Davidson	254,531	Mar. 14	606	164	21	770
Chain cross-bar	S. Davidson	256,049	Apr. 18	1120	315	21	1100
Chain. Drive	J. M. Dodge	255,049	Apr. 4	948	64	21	991
Chain. Drive	J. M. Dodge	256,558	Apr. 18	1010	285	21	1142
Chain. Drive	W. D. Ewart	255,059	Apr. 4	261	67	21	993
Chain. Drive	W. D. Ewart	255,060	Apr. 4	262	68	21	993
Chain. Drive	E. L. Howe	255,994	Apr. 4	304	80	21	1001
Chain. Drive	C. H. Low	252,600	Jan. 24	1121	314	21	209
Chain. Drive	C. H. Low	256,014	Apr. 4	394	85	21	1004
Chain. Drive	D. D. McKernan	258,863	May 30	2039	592	21	1665
Chain. Drive	L. M. Rumsey	252,005	Jan. 3	392	106	21	67
Chain. Drive	J. H. Weaver	258,267	May 23	1397	395	21	1556
Chain. Drive	H. Gorman	258,411	May 23	1500	442	21	1583
Chain-link Ornamental	S. Davidson	253,351	Feb. 7	198	57	21	360
Chain machine	W. A. Reid	255,402	Mar. 21	1215	325	21	862
Chain. Neck or bracelet	D. S. Spaulding	254,512	Mar. 7	77	20	21	651
Chain. Ornamental	R. Barker	253,966	Feb. 21	964	268	21	526
Chain. Ornamental	W. W. Briggs	257,466	May 9	396	111	21	1358
Chain. Ornamental	S. Davidson	253,013	Jan. 31	1082	451	21	309
Chain. Ornamental	A. J. Harris	253,903	Feb. 7	33	11	21	392
Chain. Ornamental	H. Knickmann	259,173	June 6	369	97	21	1729
Chain. Ornamental	B. B. Lederer	258,064	May 16	1151	322	21	1502
Chain. Pitch	A. H. Wallis	254,739	Mar. 7	349	93	21	698
Chain show-case. Watch	E. A. Bliss	259,742	June 20	1102	294	21	1901
Chain. Watch	G. W. Clampitt. (Reissue)	10,000	Jan. 3	401	108	21	60
Chain-wheel	W. D. Ewart	253,904	Feb. 21	995	278	21	532
Chain-wrench	W. H. Brock	254,862	Mar. 14	508	136	21	732
Chair: *See* Adjustable chair. Barber's chair. Child's chair. Commode-chair. Dentist's chair. Folding chair. Gynecological chair. Hammock-chair. Invalid-chair. Opera-chair. Photographer's chair. Railway-chair. Reclining-chair. Rocking-chair. Tilting chair. Wheel or nursery chair. Wicker or rattan chair.							
Chair	C. Gallup	251,708	Jan. 3	26	7, 8	21	7
Chair	L. D. Gerwig	257,837	May 16	981	274	21	1471
Chair	J. Green	253,921	Feb. 21	907	253	21	518
Chair	S. L. Saunders	257,390	May 2	291	83	21	1283
Chair and couch. Combined	J. B. Welsh and H. Trudell	259,954	June 20	1348	363	21	1942
Chair and crib. Combined	J. B. Welsh and H. Trudell	259,953	June 20	1347	363	21	1942
Chair attachment	C. S. Bell	256,354	May 23	1494	425	21	1571
Chair back	M. Tonk and G. H. Howe	252,900	Jan. 31	1579	439	21	292
Chair brace	J. A Gallagher	256,562	Apr. 18	1021	288	21	1143
Chandelier	W. A. Hull	256,066	May 16	1132	317	21	1490
Chandelier	C. F. Jacobsen. (Reissue)	10,008	Jan. 10	702	211	21	136
Chandelier	S. S. Newton	256,787	Apr. 18	1044	295	21	1147

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'gs.	Official Gazette. Vol.	Official Gazette. Page.
Chandelier	S. S. Newton	257,054	Apr. 25	1390	446	21	1951
Chandelier	S. S. Newton	258,104	May 16	1176	329	21	1507
Chandelier	S. S. Newton	258,105	May 16	1178	330	21	1507
Chandelier	S. S. Newton	258,106	May 16	1180	331	21	1508
Chandelier	H. Wellington	260,145	June 27	1997	433	21	1999
Chandelier. Drop-light	J. Trigge	258,709	Jan. 24	1211	345	21	288
Chandelier. Extension	J. E. Brown	257,547	May 9	693	137	21	1175
Chandelier. Extension	J. T. Bruen	253,676	Feb. 14	580	166	21	456
Chandelier. Extension	W. Pickhardt and H. Endemann	258,919	Jan. 31	1526	419	21	600
Chandelier-hanger	G. W. Woodward	255,442	Mar. 29	1288	341	21	876
Chandelier-hanger. Adjustable	M. and J. K. McCahill	256,680	Apr. 18	1134	318	21	1162
Chandelier. Lamp	J. A. Evarts	256,323	Apr. 11	735	200	21	1061
Chandeliers. Counter-balance for extension	W. A. Hull	256,454	Apr. 18	900	258	21	1113
Channel and feather cutter	P. F. Barry	259,917	Jan. 31	1504	419	21	870
Channels through sand bars in harbors. Constructing	D. W. Williams	258,507	Jan. 17	1611	262	21	184
Chart. Dress	E. E. Palmer	256,388	Jan. 17	864	240 / 241	21	100
Chart for drafting garments	E. J. Linck	251,863	Jan. 3	334	91	21	58
Chart for drafting ladies' and children's garments	M. A. Start	254,080	Feb. 21	1113	311	21	552
Chasing and engraving machine	L. T. Carr	258,945	June 6	91	24	21	1710
Chatelaine	T. W. Richards	255,641	Mar. 28	1510	406	21	919
Check. Bank	E. S. Loomis	258,717	May 30	1942	549	21	1657
Check-case	J. S. Crane	259,944	June 20	1334	358	21	1919
Check-loop	A. Thilles	256,534	Apr. 18	990	279	21	1139
Check-register	A. H. Austin	258,008	May 16	1008	286	21	1467
Check-register	J. Renner	256,547	Apr. 18	1005	283	21	1141
Check-row attachment	J. H. Cox and J. F. Morrisey	259,217	June 6	414	110	21	1746
Checkers or draughts	F. Sanderson	253,835	Feb. 21	798	227	21	509
Cheese draining-table and mold	J. W. Blair and E. H. Wilder	254,294	Feb. 28	1330	372	21	709
Cheese-turner	A. Engi	253,118	Jan. 31	1739	488 / 489	21	981
Cheese-vat	G. H. Simon	10,046	Feb. 28	1594	417	21	696
Cheese-vat	A. Slaughter. (Reissue)	255,874	Apr. 4	146	39	21	975
Cherry-seeding machine	G. W. Knapp						
Chest: *See* Mail-chest. Medicine-chest. Meat and vegetable preserving chest.							
Child's chair	A. B. Stevens	253,390	Feb. 7	162	46	21	374
Child's chair and carriage	J. W. Kenna	254,023	Feb. 21	1037	289	21	539
Child's chair. Convertible	L. A. Chichester	259,368	June 13	615	163	21	1898
Child's-chair tray	R. L. Best	256,272	Apr. 11	672	182	21	1070
Chimney	J. M. Patterson	256,919	Apr. 25	1430	404	21	1284
Chimney-cap	J. Borland	258,982	June 6	137	38	21	1718
Chimney-cap	W. H. Payne	258,468	May 23	1098	460	21	1595
Chimney-cap	W. J. Pettingell	255,016	Mar. 14	715	193	21	799
Chimney-cap. Metallic	J. C. Schaefer	258,133	May 16	1212	341	21	1214
Chimneys. Apparatus for increasing the draft of	W. Pickhardt and H. Endemann	256,445	Apr. 11	873	.....	21	1106
Chimoline. Benzoate	W. Pickhardt and H. Endemann	254,096	Feb. 21	1119	.....	21	333
Chimoline. Manufacture of	W. Pickhardt and H. Endemann	252,846	Jan. 24	1415	.....	21	258
Chimoline. Preparation of	W. Pickhardt and H. Endemann	253,847	Jan. 24	1416	.....	21	258
Chimoline. Preparation of	W. Pickhardt and H. Endemann	256,444	Apr. 11	873	.....	21	1106
Chimoline. Salicylate of	G. R. Valentine	254,733	Mar. 7	345	91	21	697
Chisel. Mortising	H. McCobb	259,887	June 20	1286	330	21	1908
Chocolate-package							
Chopper: *See* Cotton-chopper.							
Christmas-tree. Imitation	A. Wengenroth	255,902	Apr. 4	186	48	21	981
Chroming fabrics	T. Simpson	254,713	Mar. 7	330	85	21	693
Chuck	E. Knight	253,460	Feb. 7	851	98	21	405
Chuck	E. S. Perot and H. C. Beitenman. (Reissue.)	10,104	May 2	374	105	21	1346
Chuck. Drill	J. A. Parks and G. V. Sheffield	260,314	June 27	1814	492	21	2023
Chuck. Drill	G. Rehfuss	256,720	Apr. 18	1227	344	21	1170
Chuck for screw-machines	H. K. Jones	259,948	Jan. 31	1538	430	21	906
Chuck for turning polygonal bodies. Lathe	H. C. Humphrey	255,060	Mar. 14	804	215	21	784
Chuck for watch-makers' lathes	G. R. Metten	259,892	June 20	1273	341	21	1900
Chuck-jaw. Reversible	C. Maduell	256,783	May 30	2016	569	21	1670
Chuck. Lathe	T. H. Costello	259,991	June 13	518	135 / 136	21	1791
Chuck. Lathe	L. R. Davis	260,005	June 27	1435	387	21	1963
Chuck. Lathe	S. J. Kirk	253,173	Mar. 21	994	247	21	811
Chuck. Lathe	J. N. Skinner	255,039	Mar. 14	757	204	21	776
Chuck. Lathe	J. C. Stevens	255,046	Mar. 14	765	205	21	777

Cigar and cigarette wrapper	J. E. Mergott	258,788	May 30	2021	570	21	1671
Cigar-box catch	E. S. May	256,003	May 16	1108	325	21	1605
Cigar-case	C. Bowman and F. W. Throne	255,921	Apr. 4	212	55	21	985
Cigar coloring and flavoring machine	L. Spindler	256,065	Apr. 4	378	104	21	1014
Cigar coloring and flavoring machine	C. A. Faas	257,925	May 16	967	270	21	1469
Cigar-cutter	G. H. Marsh and H. E. Bedell	253,301	Feb. 7	139	40	21	370
Cigar-cutter	W. J. Fitzgerald	258,753	Jan. 24	1282	361	21	238
Cigar-holder	A. C. Moss	255,320	Mar. 21	1115	309	21	845
Cigar-lighter	E. A. Parker	251,933	Jan. 3	303	83	21	53
Cigar-lighter	E. A. Parker	258,799	May 30	2032	574	21	1673
Cigar-lighter	A. Gordon	257,316	May 2	903	57	21	1317
Cigar-machine	F. Haehnel	259,638	June 13	954	{254 255	21	1868
Cigar-mold	F. C. Miller and H. C. Peters	257,735	May 9	745	207	21	1419
Cigar-mold	F. C. Miller and H. C. Peters	258,940	June 6	85	23	21	1709
Cigar-mold	G. Vollkommer	253,135	Jan. 31	1778	493	21	394
Cigar-mold press	R. Hayden	258,919	June 6	61	16	21	1705
Cigar-reamer	R. N. Oakman, Jr	260,117	June 27	1576	425	21	1985
Cigar-tip cutter	H. A. Cuppia	258,358	Jan. 17	894	249	21	153
Cigarette	S. Jacoby	256,483	Apr. 18	938	262	21	1130
Cigarette	W. Salomon	253,892	Feb. 21	868	245	21	512
Cigarette	H. H. Schleber	256,255	May 23	1361	391	21	1552
Cigarette	G. Golisach	256,673	Apr. 18	1153	323	21	1166
Cigarette-box	A. L. Munson	260,113	June 27	1568	423	21	1984
Cigarette-box	G. Rodrigues	258,140	Jan. 10	565	159	21	104
Cigarette-holder	F. S. Bartram	255,568	Mar. 28	1416	392	21	902
Cigarette-machine	J. Burns and A. Buckman	259,000	June 6	271	73	21	1741
Cigarette-machine	E. Side	252,811	Jan. 24	1305	{381 382 383	21	250
Cigarette-paper	A. V. D'Costa	259,437	Jan. 17	929	256	21	169
Cigarette-wrapper	E. A. G. D'Argy	254,929	Mar. 14	606	163	21	750
Circuits. Testing and breaking	W. R. Notting	260,043	June 27	1420	399	21	1970
Clamp:							
See Adjustable clamp. Box-pressing clamp. Carriage-top clamp. Cultivator-standard clamp. Hose-clamp. Plow-beam clamp. Rope-clamp. Saw-handle clamp. Spindle-clamp. Tubing-clamp.							
Clamp	J. S. Adams	256,530	Apr. 18	987	278	21	1138
Clamp	A. Kruiss	258,779	Jan. 24	1315	368	21	242
Clasp:							
See Album-clasp. Book-clasp. Corset-clasp. Corset-stiffener clasp. Glove and shoe clasp. Hat-clasp. Ticket-clasp.							
Clasp	W. G. Browne	256,364	May 23	1507	428	21	1574
Clasp	D. F. Hale	255,620	Mar. 28	1408	396	21	914
Clasp	B. F. Neal	253,414	Feb. 7	266	76	21	392
Clasp-hook for shirt-collars. Detachable	S. S. Grannis	256,314	Apr. 11	723	197	21	1079
Clasp or dress-supporter	H. C. Frank	259,002	June 6	164	44	21	1723
Clasp-reel for ribbons, &c	S. A. Hale	251,871	Jan. 3	231	64	21	49
Clay-ware. Decoration of	H. Sims	259,794	June 20	1076	296	21	1856
Clay. Lawning and cleaning	S. G. Phillips	258,796	Jan. 24	1342	375	21	246
Cleaner:

Coal. Apparatus for unloading	W. Ilett	258,038	Jan. 10	444	121	21	84
Coal, corn, &c. Machine for reducing	R. Cook	257,061	May 9	650	188	21	1402
Coal-hod	W. M. Boyd	259,743	June 20	1103	294	21	1991
Coal, &c. Method of and apparatus for breaking down or getting	C. S. Smith and T. Moore	255,049	Mar. 14	739	204	21	776
Coal, ores, &c. Device for handling	A. Lawton	253,998	Feb. 21	917	255 256	21	519
Coal-screen	W. F. Dodge and T. M. Righter	256,967	Apr. 25	1582	498	21	1230
Coal-slack. Apparatus for burning	C. Taylor	258,910	Jan. 31	1495	417	21	278
Coat-hanger	W. B. Bisbee	254,451	Mar. 7	5	2	21	639
Coat-hook. Pocket	R. Onderdonk	253,942	Feb. 21	937	260	21	522
Coat. Reversible	J. Simmons	259,931	June 20	1319	354	21	1937
Coat. Water-proof	E. Landstreet and J. F. Towner	257,094	Apr. 25	1592	436	21	1245
Coating and painting exterior surfaces	M. B. Church	259,486	June 13	769	.....	21	1637
Cock. Air-brake	N. J. Paradise	259,710	June 20	1056	291	21	1893
Cock and faucet	S. S. Williams	260,073	June 27	1518	407	21	1975
Cock. Cylinder drain	J. B. Mooney	258,959	Jan. 31	1554	433	21	288
Cock for fire-engines. Relief	J. T. Houchens	253,479	Feb. 7	350	98	21	405
Cock. Steam-cylinder	L. Maxfield	253,405	Feb. 7	257	74	21	390
Cock. Stop and waste	J. Kelly	254,282	Apr. 11	607	165	21	1056
Cock. Waste compression	E. W. McCormick	257,222	May 2	105	30, 31	21	1269
Cocks. Combination instrument for cleaning gas-	M. Prior	259,717	June 20	1096	283	21	1894
Cockle-machine	A. Life	260,212	June 27	1091	457	21	2002
Cockle-separating machine	W. E. Gorton	256,674	Apr. 18	1153	323 324	21	1166
Coffee and nut roaster	T. F. McCaffrey	256,718	Apr. 18	1210	338	21	1176
Coffee and peanut roaster	C. L. Cole	256,498	Apr. 11	851	237	21	1161
Coffee and spice mill	T. A. Andrews	255,559	Mar. 28	1405	379	21	900
Coffee and spice mill	J. F. Lawrence	256,385	Apr. 11	609	165	21	1056
Coffee. Apparatus for cooling roasted	L. A. Ullrich	255,477	Mar. 28	1310	353	21	863
Coffee-beans. Apparatus for drying	W. A. Diesseldorff	258,439	Jan. 17	931	257	21	170
Coffee. Compound for flavoring	F. Bros	258,793	Jan. 24	1048	.....	21	231
Coffee. Machine for treating and bagging	G. W. and G. S. Hungerford	259,545	June 13	838	232	21	1946
Coffee-mill	F. H. Chapman	253,264	Feb. 7	98	30	21	363
Coffee-mill	W. H. Fleming	259,518	June 13	806	212	21	1942
Coffee-mill	S. H. Fountain	251,860	Jan. 3	219	62	21	39
Coffee-mill	T. Strobridge	259,730	June 20	1085	289	21	1890
Coffee-mill	R. L. Webb	254,414	Feb. 28	1465	407	21	623
Coffee-percolator	H. Beebe	257,641	May 9	627	176	21	1398
Coffee-percolator	J. C. Mackey	256,231	Apr. 11	619	168	21	1060
Coffee-pot	E. B. Chamness	251,696	Jan. 3	14	4	21	5
Coffee-pot	H. C. Fish	259,121	June 6	310	82	21	1748
Coffee-pot	J. McAnespey	258,786	May 30	9090	570	21	1670
Coffee-pot	F. Ohm	259,580	June 13	878	233	21	1956
Coffee-pot	M. Thomas	255,697	Mar. 28	1574	494	21	931
Coffee-pot	P. S. Paine	257,513	May 2	456	126	21	1389
Coffee. Preparation for clearing	A. Von Hofmann	256,062	Apr. 4	400	.....	21	1017
Coffee. Process of and apparatus for roasting	F. G. Fleury and E. D. Barker	255,965	Apr. 4	270	69, 70	21	994
Coffee-roaster	C. Abele	254,582	Mar. 7	168	41	21	667
Coffee-roaster	N. Harris	256,130	Apr. 11	490	133	21	1039
Coffee-roaster	E. A. Hartsell	254,547	Mar. 7	121	30	21	650
Coffee-roasting apparatus	H. Faulder	252,933	Jan. 31	1593	424 425	21	283
Coffee-substitute	L. Chiozza	252,429	Jan. 17	920	.....	21	166
Coffer-dam	H. P. Kirkham	253,067	Jan. 31	1606	468	21	310
Coffer-dam	R. P. C. Sanderson	259,218	June 6	415	110 111	21	1766
Coffin	C. H. Olson	255,112	Mar. 21	845	228	21	798
Coffin	C. H. Olson	254,496	Apr. 18	952	266	21	1132
Coffin	W. A. Richey	255,815	Apr. 4	76	21	21	983
Coffin	C. E. Van Duzen	256,161	May 16	1948	351	21	1589
Coffins. Manufacture of cement	T. E. Daniels	259,373	June 13	690	164 165 351 352	21	1899
Collar for railway-heads, carding-machines, &c.	R. Tatham	255,473	Mar. 28	1307	351 352	21	883
Coin-holder	P. O. Kornbeck	258,298	Jan. 10	661	186	21	180
Coin holder and counter	J. W. Elliot	253,979	Feb. 7	107	32	21	365
Coin tester and indicator	G. Smith and J. J. Wells	259,338	June 13	577	153	21	1691
Coke-crusher	J. R. Davis	258,743	Jan. 24	1329	356	21	234
Coke-oven	W. B. Smith	256,469	May 23	1651	467	21	1559
Coke-ovens. Apparatus for extinguishing fires in	J. H. Campbell	253,188	Feb. 7	12	4	21	349
Colander and fruit-press. Combined	L. Brownlow	256,797	May 30	1824	546	21	1654
Collar	F. Beiermeister, Jr	259,353	June 13	598	157	21	1894
Collar	R. S. Norton	253,759	Feb. 14	623	196	21	473
Collar and cuff	C. O. Kanouse	254,675	Mar. 14	529	141	21	735
Collar cap. Horse-	A. Waugh	256,065	Apr. 4	403	109	21	1018
Collar fastening. Horse-	J. W. Albright	258,342	May 23	1469	421	21	1560
Collar fastening. Horse-	O. S. Pitzy	260,048	June 27	1486	409	21	1971
Collar fastening. Horse-	A. B. Robinson	258,677	May 30	1694	535	21	1649
Collar folding and carting machinery	T. S. Wiles	256,334	May 23	1472	419	21	1568
Collar for dogs, &c	J. W. Ricker and T. S. Lewis	254,156	Feb. 28	1195	334	21	574
Collar. Horse-	C. G. Cale. (Reissue)	10,009	May 2	368	103	21	1247
Collar. Horse-	G. P. Cole	256,977	Apr. 25	1512	424	21	1227
Collar. Horse-	M. R. Dewlin	254,290	Feb. 28	1345	371	21	598
Collar. Horse-	W. H. Hall	257,602	Apr. 25	1538	438	21	1241
Collar. Horse-	J. Strama	255,206	Mar. 21	868	236	21	819
Collar or cuff of celluloid, &c.	A. A. Sanborn	258,429	May 23	1641	464	21	1557
Collar-pad	J. N. Neeson	254,499	Mar. 7	64	17	21	649
Collar pad. Horse-	E. L. McClain	259,709	June 20	1042	277	21	1890

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Collars. Combined shoulder and neck pad for horse-	J. R. Hamilton	252,032	Jan. 10	437	119	21	93
Collars. Metallic pad for horse-	A. C. Staples	254,172	Apr. 11	995	145	21	1045
Collyrium	A. Templeton	254,794	Mar. 7	334	.....	21	695
Color-producing acid. Manufacture of a new	C. Rumpff	256,361	Apr. 11	706	.....	21	1060
Colors or dye-stuffs. Manufacture of	H. Keechlin	253,721	Feb. 14	648	.....	21	487
Colors. Treating certain derivatives of coal-tar	E. D. Kendall	256,339	Apr. 11	741	.....	21	1068
Colors upon textile fabrics. Production of blue	H. Brunck	258,531	May 23	1705	.....	21	1666
Colors upon vegetable fiber. Producing azo-	T. Holliday	258,317	Jan. 17	778	.....	21	145
Coloring-matter from naphthylamine. Manufacture of	C. Rumpff	259,942	June 27	1790	.....	21	2008
Coloring-matter. Manufacture of	H. Keechlin	257,498	May 9	638	.....	21	1268
Coloring-matter. Manufacture of blue	J. H. Stebbins, Jr	258,274	Jan. 10	783	.....	21	130
Coloring-matter. Manufacture of blue	J. H. Stebbins, Jr	255,350	Mar. 21	1149	.....	21	859
Coloring-matter. Manufacture of red	E. Jacobsen	257,717	May 9	788	.....	21	1416
Coloring-matter or dye-stuff	J. H. Stebbins, Jr	253,443	Feb. 7	313	.....	21	396
Coloring-matter or dye-stuff	J. H. Stebbins, Jr	253,444	Feb. 7	313	.....	21	396
Coloring-matter or dye-stuff	J. H. Stebbins, Jr	253,445	Feb. 7	313	.....	21	396
Coloring-matter. Preparation of rosaniline-blue	O. Fischer	252,903	Jan. 10	638	.....	21	115
Coloring-matter. Production of	C. H. Rudolph	256,589	Apr. 18	1089	.....	21	1140
Coloring-matter. Rosaniline-red	O. Fischer	252,902	Jan. 10	631	.....	21	115
Coloring-matter to fabrics. Application of	A. Sansone	253,230	Feb. 7	90	19	21	357
Colors-matters. Manufacture of yellow	F. Graessler	253,598	Feb. 14	496	.....	21	448
Colter. Plow-	M. A. Spink	256,250	Apr. 11	647	175	21	1035
Colter. Rolling	F. B. Hunt	255,061	Mar. 14	806	216	21	784
Coltér. Rotary	O. J. Cerneyer	257,092	May 9	651	188	21	1409
Colter. Wheel-	W. B. Young	256,941	Apr. 25	1467	412	21	1238
Column, shaft, girder, &c	H. J. Harrison	256,478	Apr. 18	939	250 260	21	1139
Comb: *See* Curry-comb. Pocket-comb. Folding comb.							
Comb	G. J. Murdock	259,574	June 13	671	231	21	1855
Comb	W. and W. H. Noyes	258,948	May 23	1574	3-9	21	1551
Comb	V. W. Wilson	252,856	Jan. 24	1426	387	21	259
Comb-teeth. Machine for cutting and finishing	C. Poppenhusen	260,320	June 27	1818	493	21	2023
Combing-machine	A. Smith	254,714	Mar. 7	328	85	21	693
Commode	J. Bennor	253,838	Feb. 21	796	236	21	500
Commode	H. Loth	256,067	May 16	1154	323	21	1503
Commode	H. P. Stichter	253,954	Feb. 21	949	264	21	594
Commode	S. A. Emery	254,948	Mar. 14	619	167	21	758
Commode and slop-jar. Combined	J. W. Drew	253,519	Feb. 14	410	114	21	428
Commode and slop-pail combined. Portable	T. Russell. (Reissue)	10,049	Feb. 28	1567	417	21	631
Commode-chair	A. W. Elkins	253,656	Feb. 21	825	234	21	504
Compass. Transit-	G. R. Massey	252,485	Jan. 17	988	275	21	179
Compound engine	J. B. Root	256,055	Apr. 4	368	101	21	1012
Compound engine	J. Burns	260,159	June 27	1683	438	21	1998
Concrete abutments, bridge-piers, &c. Method of and apparatus for the construction of	T. Elcoate	252,939	Jan. 31	1591	424	21	282
Condenser	W. D. Hooker	256,479	Apr. 18	931	261	21	1128
Condenser	J. Wheelock	257,629	May 9	614	179	21	1385
Condenser. Injector-	C. P. Deane	256,651	Apr. 18	1152	315	21	1160
Condenser. Steam-	R. M. Marchant	259,699	June 6	196	58, 53	21	1703
Condensing apparatus. Steam-	J. M. Stearns, Jr	257,778	May 9	789	220	21	1430
Conductor	R. Van Noorden	253,564	Feb. 14	459	131	21	436
Conductor-pipe	H. E. Loane	252,956	Jan. 31	1551	422	21	286
Conductors. Laying subterranean	A. Schwarzschild	260,055	June 27	1493	402	21	1972
Confectionery-wrapper	L. Schutte	259,776	June 20	1144	303	21	1907
Connecting-rod	H. See	254,707	Mar. 7	314	83	21	691
Connecting-rod	J. B. Moorop	253,745	Feb. 14	676	194	21	472
Continuous recorder	H. C. Barker	255,130	Mar. 21	863	238	21	801
Contour gage and tool	A. L. Holley	253,049	Jan. 31	1606	461	21	307
Converter plant. Bessemer-	J. M. Dodge	256,030	May 16	1091	303	21	1491
Conveyers. Attachment-link for	A. M. Amos	255,238	Mar. 21	998	267	21	884
Cooker. Steam-	A. M. Mace	256,230	Apr. 11	618	168	21	1059
Cooker. Steam-	E. Robinson	254,050	Feb. 21	1070	298	21	544
Cooking apparatus	J. H. Linsey	258,884	Jan. 31	1463	409	21	272
Cooking apparatus. Steam	J. A. Wood	253,805	Feb. 14	754	215	21	488
Cooking-boiler	W. E. Arnold	257,810	May 9	826	231	21	1436
Cooking boiler. Grain-	W. C. Baker	257,912	May 16	960	264 265	21	1498
Cooking, heating, and baking apparatus. Steam-	J. W. Ross	252,143	Jan. 10	508	160	21	104
Cooking-pans. Device for handling	W. Archdeacon	260,077	June 27	1583	469	21	1976
Cooking prepared meats, &c. Can for	L. M. S. Ritter and R. Wysong	251,736	Jan. 3	59	18	21	12
Cooking utensil	C. C. P. McCord	254,355	Feb. 28	1418	399	21	611
Cooking-vessel	A. W. Obermeyer	254,500	Mar. 7	65	17	21	649
Cooking-vessel	S. S. Whitmore	255,743	Mar. 28	1630	444	21	943
Cooking-vessel and condenser. Combined	S. G. Rendall	259,718	June 20	1067	284	21	1894
Cooking-vessel attachment	D. M. Small	256,950	June 6	90	25	21	1711
Cooking-vessels. Device for carrying off steam and odors from							
Cooler: *See* Beer-cooler. Milk-cooler. Bottle-cooler. Tire-cooler.							
Cooler for aerated waters	A. D. Puffer	255,457	Mar. 28	1284	346	21	879
Cooling and heating apparatus	J. Tilbury	256,665	May 23	1670	473	21	1669
Cooling and ventilating houses	T. McGrory	253,740	Feb. 14	671	193	21	471
Cooling dwellings. Device for	J. A. B. King	253,535	Feb. 14	430	120	21	431
Cooling. Process of and apparatus for dynamic	L. Allen	258,981	Jan. 31	1589	429	21	289
Cooling syrups, &c. Apparatus for	E. Read	254,159	Feb. 28	1198	334	21	574
Coop. Chicken-	D. E. Davis	256,718	May 30	1943	549	21	1667
Coop. Folding	W. S. Burroughs	255,488	Mar. 28	1365	357	21	886
Coop or crate	L. F. Froescher	259,582	June 13	816	213	21	1942
Cooperage-stuff. Machine for dressing flat	F. H. Kane	259,888	June 20	1045	334	21	1985
Cop or bobbin winding machine	J. H. Gomersall	260,190	June 27	1661	450 451	21	1998
Copper and silver from their ores. Extracting	J. Doby	258,563	Jan. 17	1168	.....	21	199

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Copying. Dampening-bath for press	N. C. Stiles	260,251	June 27	1736	469	21	2009
Copying-press	L. Bailey	256,815	Apr. 25	1318	371	21	1203
Copying-press	W. Bowker	260,083	June 27	1593	410	21	1977
Cordage and twine designed to be used in binding sheaves of grain	S. A. Skinner	255,040	Mar. 14	758	.....	21	770
Cordage. Oleaginous compound used in manufacturing	H. F. Evans	260,179	June 27	1647	.....	21	1996
Core-box	C. H. Lewis	254,850	Mar. 14	470	128	21	796
Core breaker and lifter	H. C. Reichardt	257,896	May 16	932	259	21	1463
Cork. Bottle	T. R. Lowerre	251,808	Jan. 3	279	76	21	40
Cork-extractor	W. Meyer	256,721	Apr. 18	1213	339	21	1177
Cork-protector	F. Hollender	251,780	Jan. 3	115	33	21	22
Cork-screw	R. Hessel	258,420	May 23	1560	446	21	1585
Cork-screw	H. L. Perryman	257,062	Apr. 25	1601	449	21	1253
Cork-shell-cutting machine	B. Gallagher	257,311	May 2	195	55	21	1316
Corn cutter. Green	S. D. Warfield	258,174	May 16	1259	355	21	1582
Corn-husker	J. Nixon	259,197	June 6	394	104	21	1763
Corn-husker	J. Webber, Jr	258,176	May 16	1263	356 357	21	1583
Corn-husker. Hand	A. W. Brinkerhoff	253,970	Feb. 21	971	270	21	598
Corn-husking implement	J. Nixon	254,682	Mar. 7	288	76	21	687
Corn-husking machine	F. Ohmart	253,091	Jan. 31	1730	478	21	316
Corn off the cob. Machine for cutting green	D. B. Speer	257,534	May 9	469	130	21	1371
Corn off the cob. Machine for cutting green	W. Sprague	256,096	Apr. 25	1448	406 407	21	1225
Corn-sheller	H. A. Adams	252,594	Jan. 24	1109	311	21	907
Corn-sheller	J. Q. Adams	256,261	Apr. 11	660	178 179	21	1067
Corn-sheller	M. S. Cook	255,100	Mar. 21	832	232	21	796
Corn-sheller	C. U. Crandall	254,281	Feb. 28	1336	368 369	21	597
Corn-sheller	H. A. Hawkins	252,373	Jan. 17	846	235	21	156
Corn-sheller	L. Kissner and J. P. Outcalt	252,861	Jan. 31	1457	408	21	271
Corn-sheller	F. T. Mallon	259,882	June 20	1283	338	21	1927
Corn-sheller	J. W. Ricker and T. S. Lewis	253,629	Feb. 14	589	152 153	21	447
Corn-sheller	J. S. Waterman	256,175	May 16	1261	356	21	1582
Corn-silking machine	J. M. Hopkins	254,134	Feb. 28	1169	327	21	569
Cornstalk cutter and crusher	W. H. H. Lynn and G. W. Eyler	257,731	May 9	741	206	21	1418
Cornets. Adjustable mouth-piece for	F. F. Ellis and J. R. Rowlands	259,513	June 13	800	211	21	1841
Cornice hook or bracket	C. D. Stone	255,471	Mar. 28	1304	351	21	682
Cornice. Window	C. P. Klingenberg	253,068	Jan. 31	1699	468	21	311
Corpal. Portable	C. A. Tarragon	256,661	Apr. 18	1135	319	21	1168
Corset	M. Adler	257,809	May 9	825	231	21	1434
Corset	C. F. Allen. (Reissue)	10,019	Jan. 31	1846	508	21	335
Corset	W. S. Allen	257,911	May 16	949	264	21	1466
Corset	W. S. Allen	258,622	May 30	1821	514	21	1636
Corset	B. Baldwin	257,810	May 9	830	231	21	1435
Corset	I. W. Birdseye	253,341	Feb. 7	129	54	21	378
Corset	L. S. Bortree	260,062	June 27	1527	410	21	1977

Corset	J. Hilborn	254,650	Mar. 7	258	64	21	661
Corset	J. N. Lemon	253,727	Feb. 14	657	187	21	468
Corset	W. McCabe	254,902	Mar. 14	686	185	21	764
Corset	J. K. Ross	251,725	Jan. 3	58	16	21	18
Corset	I. Strouse	254,657	Feb. 21	1020	301	21	580
Corset	C. H. Williams	254,798	Mar. 7	497	109	21	707
Corset and abdominal and skirt supporter. Combined	F. A. Dietrich	256,889	Apr. 25	1403	396	21	1218
Corset-busk	A. E. Mann	256,310	May 23	1445	410	21	1563
Corset-clasp	W. F. Gilbert	258,756	Jan. 24	1265	368	21	937
Corset-clasp	H. W. Moulton	257,909	May 16	1015	283	21	1478
Corset-clasp	D. H. Tierney	257,106	Apr. 25	1654	463	21	1262
Corset-stay	M. P. Bray	259,064	June 6	365	70	21	1740
Corset-stay	T. S. Gilbert	259,128	June 6	316	64	21	1749
Corset-steel	D. M. Church	254,113	Feb. 28	1145	320	21	585
Corset-stiffener clasp	C. V. Turner	253,642	Feb. 14	545	156	21	449
Corset-stiffeners. Machine for the manufacture of	J. A. House	259,158	June 6	348	92	21	1755
Corsets. Apparatus for forming and shaping	J. A. House	251,884	Jan. 3	247	68, 69	21	44
Corsets. Manufacture of	I. D. Warner	256,140	Apr. 11	536	148	21	1046
Cot and bedstead. Folding	C. T. Segar	257,085	Apr. 25	1629	456	21	1257
Cot. Folding	T. W. B. Murray and C. J. Baker. (Reissue.)	10,025	Jan. 31	1853	510	21	336
Cot. Folding spring	M. B. Church	259,486	June 13	765	203	21	1836
Cot. Folding spring	M. B. Church	259,487	June 13	767	204	21	1836
Cotton-chopper	J. H. Bethune	251,890	Jan. 3	160	47	21	31
Cotton-chopper	J. L. Hughes	252,221	Jan. 10	653	183	21	119
Cotton-chopper	J. B. Lisle	259,770	June 20	1138	301	21	1906
Cotton-chopper	D. W. Massee	255,643	Mar. 28	1512	408	21	919
Cotton-chopper	J. M. Walden	253,656	Mar. 14	781	209	21	780
Cotton-chopper	J. M. Walden	256,312	May 23	1678	474	21	1463
Cotton chopper and cultivator	J. D. Patterson	256,510	Jan. 17	1013	263	21	184
Cotton cleaner. Seed	G. H. Bradley	255,466	Mar. 28	1394	356 357	21	865
Cotton-gatherer. Hand	B. F. Lamb	256,657	May 30	1864	526	21	1645
Cotton-gin	T. Boatwright	256,195	Apr. 11	571	156	21	1052
Cotton-gin	R. M. Brooks	255,926	Apr. 4	217	56	21	986
Cotton-gin	W. L. Crowson	255,943	Apr. 4	238	61, 62	21	989
Cotton-gin	P. V. Westfall	258,515	May 23	1681	475	21	1604
Cotton gin and press. Combined	P. K. Crowell	256,429	Apr. 11	853	237 238	21	1102
Cotton-gin attachment	J. W. Thames and R. I. Riley	254,725	Mar. 7	335	69	21	695

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cotton-gin brush-cylinder	E. Van Winkle	256,618	May 30	1817	513	21	1636
Cotton-gin condenser	W. B. Burdine and J. E. Brewer	258,849	May 30	2065	589	21	1863
Cotton-gin-driving machinery	W. H. Davis	257,057	May 9	657	184	21	1404
Cotton-gin feeder	E. H. Keith	258,927	June 6	79	19	21	1706
Cotton. Implement for siding and thinning	C. P. Dickert and E. M. Heller	255,258	Mar. 21	1027	276	21	830
Cotton, &c. Machine for hulling and ginning	W. L. Crowson	255,942	Apr. 4	236	60, 61	21	989
Cotton, &c. Machinery for opening or preparing	W. E. Whitehead	253,142	Jan. 31	1787	486	21	326
Cotton-opener	R. Kitson	252,563	Jan. 17	1003	305	21	188
Cotton opener or lapper	W. P. Faulkner	258,397	May 23	1543	438	21	1589
Cotton-openers. Trunk for	P. Rowe and J. J. Scanlin	254,385	Feb. 28	1451	397	21	617
Cotton-picker cleaning attachment	D. B. Hamilton	258,080	May 16	1194	314 315	21	1497
Cotton-press	G. E. Judson	254,774	Mar. 7	285	104	21	705
Cotton-press	E. L. Morse	258,946	May 23	1571	269	21	1560
Cotton-press	L. F. R. Reynolds	258,118	May 16	1199	337	21	1511
Cotton-press	M. M. Scherer	257,079	Apr. 25	1634	455	21	1257
Cotton-press	R. I. Kirkpatrick	253,719	Feb. 14	645	184	21	466
Cotton-press feeder	C. C. Davis and W. H. Mercer	257,686	May 9	656	183	21	1404
Cotton-scraper	J. L. Farnsworth	254,629	Mar. 7	232	58	21	676
Cotton-scraper	J. H. Veazey	255,217	Mar. 21	981	263	21	821
Cotton-stalk and weed cutter	F. M. Thompson	254,408	Feb. 28	1460	405	21	622
Cotton-stalk cutter	R. H. Goldsmith	255,279	Mar. 21	1053	282	21	834
Cotton-whipper	H. J. Turner	260,140	June 27	1601	.....	21	1969
Coughs, &c. Remedy for	A. J. Culbertson	253,349	Feb. 7	197	56	21	379
Counter seat. Store	W. H. Metcalf	252,686	Jan. 24	1214	340	21	885
Counter-stiffeners. Treating hide in the manufacture of	W. J. Conrad	253,961	Feb. 21	962	274	21	599
Counter. Store

Cultivator. Corn and cotton	H. Lindsey	251,784	Jan. 3	118	34	21	23
Cultivator. Cotton	J. R. Howard	257,009	Apr. 25	1545	434	21	1242
Cultivator-spring	J. M. Long	256,012	Apr. 4	323	85	21	1004
Cultivator-standard clamp	H. C. Stahl	252,536	Jan. 17	1042	290	21	189
Cultivator. Sulky	J. B. Christian	260,164	June 27	1687	440	21	1983
Cultivator. Sulky	J. W. Rockafellow	257,074	Apr. 25	1619	453	21	1256
Cultivator-tooth	J. Morter	256,356	Apr. 11	769	211	21	1087
Cultivator-tooth	J. S. Rowell. (Reissue)	10,076	Apr. 4	450	128	21	1098
Cultivator-tooth	W. D. Stroud	258,263	May 23	1392	393	21	1554
Cultivator-tooth	W. A. Van Brunt	252,279	Jan. 10	738	204	21	131
Cultivator. Wheel	E. P. Lynch	257,730	May 9	730	205, 206	21	1418
Cultivator. Wheel	A. Messersmith	258,097	May 16	1167	327	21	1505
Cultivator. Wheel	T. A. Palm	258,794	Jan. 24	1340	375	21	246
Cultivator. Wheel	P. F. Wells	252,537	Jan. 24	1154	323	21	214
Cup: *See* Bird-cage feed-cup. Dental impression cup. Grain-drill seed-cup. Mixing and straining cup. Oil-cup.							
Curb for wells. Foundation	G. A. Kingsland	258,078	May 16	1144	321	21	1501
Curbing. Constructing béton or artificial-stone	J. Burns	259,813	June 20	1184	316	21	1014
Currants. Machine for washing	W. M. Ducker	259,110	June 6	997	79	21	1746
Current-wheel	W. M. Coffman	259,606	June 6	980	75	21	1742
Curry-comb	C. C. Egerton	253,262	Feb. 14	415	115	21	499
Curtain-bracket	H. C. Clement	255,773	Apr. 4	98	7	21	955
Curtain-cord tightener	C. Schwalbold	258,097	Jan. 24	1361	380	21	249
Curtain-cord tightener	F. J. Werneth	255,361	Mar. 21	1161	311	21	852
Curtain-fixture	T. M. Burgess	251,709	Jan. 3	93	28	21	19
Curtain-fixture	J. Darling and A. J. Nicholson	259,259	Jan. 17	898	239	21	153
Curtain-fixture	J. Darling and B. H. Griswold	259,742	Jan. 24	1268	356	21	234
Curtain-fixture	H. Farley	256,557	Apr. 18	1017	287	21	1143
Curtain-fixture	T. P. Hopkins	259,136	June 6	345	91	21	1755
Curtain-fixture	J. A. McCutchen	257,988	May 9	841	235	21	1437
Curtain-fixture	W. P. Putnam	256,736	Apr. 18	1294	343	21	1179
Curtain-fixture	H. S. Wing	252,851	Jan. 24	1430	395	21	256
Curtain-fixture	W. H. Schick	260,125	June 27	1585	427	21	1967
Curtain-holder	H. L. Judd	254,963	Mar. 14	678	183	21	763
Curtain-hook pin	G. H. Grimm	259,531	June 13	819	216	21	1845
Curtain-pole	G. T. Bettencurt	255,571	Mar. 28	1420	363	21	903
Curtain-roller. Spring	C. De Quillfeldt. (Reissue)	10,036	Feb. 7	362	101	21	497

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Curtain-roller. Spring	J. M. Osgood	260,044	June 27	1481	309	21	1970
Curtain-roller. Spring	J. M. Osgood	260,045	June 27	1483	309	21	1971
Curtain-roller support	H. Farley	252,023	Jan. 10	499	117	21	81
Cushion: *See* Laundry-cushion. Vehicle-cushion.							
Cuspidor	W. F. Malloy	256,498	Apr. 18	949	265	21	1131
Cuspidor	C. F. Markland	257,137	Apr. 25	1608	415	21	1270
Cuspidor	H. L. Palmer	256,589	Apr. 18	1049	296	21	1148
Cuspidor	G. C. Sterling	256,251	Apr. 11	648	175	21	1085
Cuspidor	W. Westlake	253,455	Feb. 7	383	99	21	480
Cut-off and governor-valve. Combined rotary	L. J. Wing	259,943	June 20	1383	367, 368	21	1944
Cut-off valve	B. Brasselle	255,136	Mar. 21	870	233, 234	21	802
Cut-off valve. Adjustable steam	W. D. Hooker	260,098	June 27	1458	303	21	1967
Cut-off valve and gear	G. F. Burton and N. Shaw	259,747	June 20	1166	295, 296	21	1801
Cut-off-valve gear	F. Schumann	257,392	May 2	283	84	21	1333
Cut-off-valve gear	M. T. Stevens	254,066	Feb. 21	1068	301	21	547
Cut-off-valve gear. Automatic	J. W. Morgan	253,938	Feb. 21	931	259	21	381
Cut-off-valve gear for steam-engines	J. James	254,483	Mar. 7	47	12	21	646
Cutter: *See* Bale-band cutter. Billiard-cue cutter. Bog-cutter. Bolt-cutter. Box-trimming cutter. Bread-cutter. Bread and meat cutter. Butter-cutter. Butter and lard cutter. Button-hole cutter. Caramel-cutter. Cigar-cutter. Cigar-tip cutter. Corn-cutter. Cornstalk-cutter. Cotton-stalk cutter. Cotton-stalk and wood-cutter. Ensilage-cutter. Feed-cutter. Hog-tendon cutter. Meat-cutter. Paper-cutter. Peg-cutter. Pipe cutter. Sewing-machine thread-cutter. Stalk-cutter. Straw-cutter. Tobacco-cutter. Tobacco-scrap cutter. Vegetable-cutter. Wood-splitting-machine cutter.							
Cutter-bars. Elastic cushion for	S. C. Megill	260,040	June 27	1477	306	21	1970
Cutter-head	H. Reyna	259,013	June 6	176	47	21	1725
Cutter-head	E. P. Lorch	257,349	May 2	948	70	21	1295
Cutter-head for wood-working machines	T. Fitzsimmons	253,913	Feb. 7	108	33	21	365
Cutter-head for wood working machines	J. C. Tannielliff	254,738	Mar. 7	344	91	21	697
Cutting and punching machine	R. Kent	257,580	May 9	572	160	21	1367
Cutting-machine	A. Warth	255,256	Mar. 21	1156	310	21	851
Cutting mechanism	S. Daubrim	255,108	Mar. 21	824	223	21	796
Cutting, punching, and swaging. Machine for	W. F. Durfee	260,176	June 27	1641	444, 445	21	1985
Cyanides. Obtaining	C. C. Parsons and E. F. Cruse	259,908	June 20	1289	.....	21	1838
Cyclometer	H. S. Livingston	259,562	June 13	857	227	21	1823
Cyclometer	P. E. McDonnell	251,481	Feb. 7	353	98, 99	21	495
Cyclometer	J. J. Morton	255,004	Mar. 14	701	189	21	767
Cyclometer	W. Hanna	254,309	Feb. 28	1267	377	21	692
Cylinder and piston. Steam	L. Lapyre	253,299	Feb. 7	135	39	21	389
Cylinder engine. Three	D. H. Burrell	258,574	Jan. 17	1088	302	21	198
Dairy-vat	J. W. Funck	258,630	May 30	1840	519	21	1640
Damper-regulator. Automatic	C. W. Pierce	255,331	Mar. 28	1376	371	21	894
Damper. Stove-pipe	R. Hutton	255,967	Apr. 4	126	35	21	973
Dandy-roll stand. Adjustable	J. B. Platt	259,651	June 13	968	256	21	1871
Dash-board	E. Rattey	256,370	Apr. 11	767	210	21	1089
Dash-board	W. Ruby	260,941	June 27	1725	497	21	2008
Dash-board	E. Lee	259,876	June 20	1257	.....	21	1987
Decorating or producing designs on the surfaces of earthenware tiles, &c.	F. A. and D. Bahr	256,987	Apr. 11	889	181	21	1089
Demijohn-covering	L. and J. W. Manker	252,785	Jan. 24	1237	371	21	243
Dental articulator	H. C. Merrill	256,569	Apr. 18	1039	294	21	1146
Dental bracket	J. H. Doyle	257,315	May 2	74	23	21	1295
Dental check-holder	C. M. Richmond	256,650	Apr. 4	302	80	21	1011
Dental drill	S. R. Screven	257,398	May 2	295	85	21	1334
Dental engine	W. H. Kimball	256,575	Apr. 18	1038	291	21	1145
Dental-engine hand-piece	T. S. Phillips. (Reissue)	10,115	May 16	1311	371	21	1591
Dental-engine hand-piece	T. W. Browne	255,098	Mar. 21	830	221	21	785
Dental flask	M. H. Carpenter	256,579	Apr. 25	1393	391	21	1217
Dental flask	G. Rehfuss	255,020	Mar. 14	731	195	21	770
Dental hand-piece	J. V. McManus	257,048	Apr. 25	1576	442	21	1348
Dental impression-cup	J. R. Odell	256,850	Apr. 25	1259	354	21	1210
Dental mallet	F. Abbott	257,264	May 2	140	39	21	1305
Dental plugger	E. Ebi	255,953	Apr. 4	256	66	21	989
Dental plugger	A. Jackson	258,434	May 23	1574	447	21	1565
Dental plugger	A. Johnson and G. B. Hough	256,143	Apr. 11	695	135	21	1040
Dental-plugger	G. Kacher	257,295	May 2	95	27	21	1296
Dental tool-holder	J. S. Thompson	253,640	Feb. 14	543	156	21	449
Dentist's chair	J. E. Moffitt	257,179	May 2	20	13	21	1297
Dentists. Combined cement-case and mixing-tablet for	E. H. Locke	258,658	May 30	2094	591	21	1684
Dentist's flask	L. Duval	254,941	Mar. 14	618	180	21	758
Derrick	I. S. Reeves	256,371	Apr. 11	787	217	21	1090
Derrick	W. C. Brown	257,149	May 2	5	2	21	1293
Derrick-swinger	J. J. Igliehart	254,324	Feb. 28	1231	361	21	685
Desk-lids. Automatic locking-stay for	C. Bascall	251,829	Jan. 3	182	51	21	33
Desk. School	G. Dinsmoor	254,721	May 30	1946	550	21	1658
Desk. School	E. T. Gibson	253,368	Feb. 7	316	88	21	393
Desk. Tracing	J. Dutton	254,940	Mar. 14	617	166	21	758
Desks. Book-rest attachment for school and other							

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Desulphurizing-furnace	A. Blatchly	255,135	Mar. 21	867	233	21	802
Detachable handle for tea-cups, &c	J. W. Davis	256,083	Apr. 25	1580	497	21	1238
Detachable handle for utensils	F. A. Neider and G. Groesmann	258,591	May 30	1763	504	21	1630
Detector: *See* Time-detector.							
Detergent compound	E. Henderson	250,369	June 13	642	.....	21	1813
Device for suspending persons in mid-air without visible support.	E. H. J. Seeman	256,368	Apr. 11	695	221	21	1003
Dial. Sun	H. A. Behn, Jr	252,418	Jan. 17	910	251	21	166
Diamond-cutting machine	F. A. Harkins	254,617	Mar. 14	452	122	21	782
Diamond. Imitation	J. A. Grossiord, Jeune	254,505	Feb. 28	1364	.....	21	601
Diaper	H. Morgan	255,111	Mar. 21	844	225	21	798
Diaphragm. Separating	G. B. Whiting	258,835	May 30	2071	584 / 585	21	1660
Die: *See* Button-die. Pipe-die. Forging and swaging die. Screw-cutting die. Threading-die.							
Die and die-stock	J. Gassmann	256,669	Apr. 18	1147	328	21	1165
Die. Stock	A. J. Signor	256,448	Apr. 11	977	945	21	1106
Die-stock	B. L. Walker	258,060	June 6	112	29	21	1714
Digger: *See* Post-hole digger. Potato-digger.							
Direct-acting engine	G. E. Dow	252,084	Jan. 10	496	136	21	93
Direct-acting engine	A. Thomson	252,913	Jan. 31	1406	418	21	979
Dish. Butter	S. W. Babbitt	250,075	June 6	255	68	21	1737
Dish. Butter	R. Hill	250,148	June 6	336	89	21	1753
Dish. Butter	W. J. Miller, T. L. I. Bulluss, and H. Berry.	250,989	June 20	1412	360	21	1952
Dish. Covered	A. Conradt	256,321	May 23	1342	360	21	1544
Dish. Covered	E. A. Parker	254,687	Mar. 7	292	77	21	668
Dish. Covered	E. A. Parker	256,036	Apr. 4	346	94	21	1038
Dish. Covered	E. A. Parker	256,037	Apr. 4	347	94	21	1 039
Dish-drainer	T. W. McFarland and C. L. Ford	254,230	Feb. 28	1278	354	21	586
Dish-drainer	G. B. Wold	253,461	Feb. 7	329	91	21	401
Dish-holder	E. O. Wires	251,754	Jan. 3	78	28	21	16
Dish-washing machine	S. J. Anderson	254,698	Mar. 14	560	153	21	743
Disinfectant laundry bluing	D. Dunscomb	250,838	June 20	1905	.....	21	1918
Disinfecting apparatus for water-closets	H. Blackman	258,089	May 30	1927	544	21	1654
Disinfecting compound	D. Warren	252,555	Jan. 17	1066	.....	21	193
Disinfecting dead bodies. Method of and apparatus for	J. D. Nietacke	251,925	Jan. 3	295	80	21	51
Disinfecting device. Water-closet	D. Warren	252,556	Jan. 17	1066	297	21	193
Disinfecting waste-pipes. Apparatus for	A. G. W. Rankin	255,019	Mar. 14	790	195	21	770
Disinfecting water-closets, &c. Apparatus for	E. J. Mallett, Jr	253,460	Feb. 7	253	73	21	389
Disintegrating corn-husks, &c. Machine for	J. B. De Young	254,807	Mar. 14	441	119	21	790
Disintegrating grain, &c. Machine for	F. Taggart	256,079	Apr. 4	367	106	21	1015
Disintegrating vegetable substances. Apparatus for	G. O. Goessling	258,912	June 6	52	14	21	1704
Dispatch-tube. Electro-magnetic	C. A. Cheever	250,817	June 20	1186	318	21	1915
Display-rack. Folding	J. T. Smith	256,811	Apr. 18	1309	368	21	1195
Distilling ammonia. Apparatus for	H. J. E. Hennebutte and C. J. F. R. de J. Menard.	259,146	June 6	333	88	21	1753
Distilling hydrocarbons. Process of and mechanism for	T. McGowan	257,961	May 16	1006	281	21	1476
Distillation. Apparatus for fractional	E. F. Dietericha	253,990	Feb. 21	969	276	21	531
Distillation of coal-tar	G. C. Trewby and H. W. Fenner	252,981	Jan. 31	1520	440	21	992
Distilled spirits from grain. Method of and apparatus for manufacturing	T. A. and W. T. Jebb	254,389	Feb. 28	1387	382	21	606
Distilled spirits from grain. Method of and apparatus for manufacturing	W. T. Jebb	254,330	Feb. 28	1368	383	21	606
Distilling oil. Process of and apparatus for	J. N. Martin	254,900	Mar. 14	684	184	21	763
Distilling petroleum. Apparatus for	C. J. Tagliabue	254,176	Feb. 28	1214	339	21	577
Ditching and tile-laying machine	W. Wilson	254,063	Feb. 21	1106	309	21	551
Ditching-machine	J. A. Grant, T. M. McClelland, and J. T. Drummond.	259,304	June 13	533	140 / 141	21	1793
Ditching-machine	S. E. and J. Morral	255,000	Mar. 14	695	187	21	765
Ditching-machine	F. Pidgeon	258,596	May 30	1729	505	21	1631
Ditching-machine	J. Reidhard	254,376	Feb. 28	1444	395	21	615
Ditching-machine	W. T. Wasson	250,948	June 6	457	121	21	1773
Dividers	M. Toulmin	257,413	May 2	323	91	21	1330
Dock. Floating dry	L. C. Watts	256,608	Apr. 18	1071	301 / 302	21	1151
Doffer-rings for card-setting machines. Joining	J. J. Hoey	254,651	Mar. 7	253	64	21	661
Door	G. W. Howell	255,788	Apr. 4	44	12	21	956
Door. Adjustable ventilating	J. S. Du Bois	253,520	Feb. 14	411	115	21	493
Door and window guard	J. L. MacDonald	253,732	Feb. 14	602	169	21	489
Door-bolt	W. B. Purves	257,141	Apr. 25	1709	477	21	1271
Door-check	F. W. Boldt and P. C. A. Vogel	252,983	Jan. 31	1601	444	21	996
Door-check	L. C. Norton	251,700	Jan. 3	193	35, 36	21	24
Door-check	F. V. Phillips	251,732	Jan. 3	54	15	21	12
Door-check	J. Pickering	254,237	Feb. 28	1268	357	21	569
Door-check	I. P. Poulson	256,045	Apr. 4	356	96	21	1010
Door-check	J. E. Rosenthal	256,127	May 16	1266	340	21	1013
Door-check	H. Skerrett	257,966	May 16	1034	288	21	1461
Door-check	W. E. Sparks	255,693	Apr. 4	167	44	21	978
Door-check	J. W. Wetmore	255,286	Mar. 21	908	245	21	823
Door fastening. Pocket	A. Belding	256,007	May 16	1065	296	21	1486
Door-hanger	W. F. Berry	258,547	May 30	1728	449	21	1660
Door-hanger	C. W. Ballard	254,605	Mar. 7	193	49	21	671
Door-hanger	W. B. Cogger	253,471	Feb. 7	338	94	21	403
Door-hanger	R. U. Scoville	252,567	Jan. 17	1034	288	21	188
Door-hanger	A. L. Scranton	259,220	June 6	418	111	21	1767
Door-hanger	A. L. Swett and W. H. Samson	254,347	Feb. 28	1300	360	21	591
Door-hanger	E. Terry	256,958	Apr. 25	1452	402	21	1226
Door hanger and pulley	C. W. Pierce	256,587	May 30	1789	506	21	1631

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Door hanger. Parlor	S. Shreffler, Jr	255,947	Apr. 11	948	173	21	1004
Door. Hanging	E. Prescott	259,716	June 20	1665	363	21	1894
Door lock and latch	O. Flagstad	256,665	Apr. 18	1149	329 / 331	21	1154
Door-mat frame	W. H. Muller	259,195	June 6	299	189	21	1703
Door or window frame	C. H. Wilson	256,539	May 30	2076	595	21	1661
Door-securer. Portable	C. A. Crongeyer	254,604	May 16	1004	281	21	1490
Door-sheave. Sliding	L. Somers	257,401	May 2	385	97	21	1335
Door-spring	W. F. H. Anrwake	253,135	Feb. 7	2	1	21	347
Door-spring	C. R. Clark	252,189	Jan. 10	616	173	21	112
Door-spring	W. C. De Long and A. A. Schroder	253,691	Feb. 21	913	258	21	894
Door-spring	M. C. Mehr	256,791	May 30	2085	571	21	1671
Door-spring	A. B. Tanner	252,541	Jan. 17	1043	291	21	190
Door-spring	J. W. Weddel	257,210	May 16	949	264	21	1466
Door-spring	C. H. Rice	254,694	Mar. 7	696	79	21	669
Door-strip	E. U. Scoville	257,189	May 2	50	14	21	1290
Doors. Stay-roller for sliding	E. Spear	252,535	Jan. 17	1041	290	21	189
Double-tree	J. E. Atwood	254,946	Apr. 25	1476	414	21	1220
Doubling and winding silk, &c. Machine for	A. Yates	256,688	May 23	1491	476	21	1666
Doubling yarn. Machine for	E. Geger	253,997	Feb. 21	980	279	21	533
Dowel-pins. Machine for making	T. J. Slater	260,656	June 27	1495	403	21	1973
Draft apparatus for horses	D. D. Decker	257,296	May 2	177	50	21	1313
Draft attachment. Vehicle	D. Carr	256,372	May 23	1516	430	21	1575
Draft-equalizer	D. M. Harkrader	258,218	Jan. 10	649	180	21	116
Draft-equalizer	J. Herrigan	258,667	Jan. 24	1190	338	21	881
Draft-equalizer	F. B. Hunt	253,656	Jan. 31	1674	463	21	998
Draft-equalizer	J. P. Johnson	260,207	June 27	1663	456	21	1991
Draft-equalizer	J. M. Langston	253,071	Jan. 31	1708	469	21	811
Draft-equalizer	S. and W. T. Marvin	255,387	Mar. 28	1272	370	21	894
Draft-equalizer	J. Sebastian	258,610	Jan. 24	1264	351	21	930
Draft-equalizer	C. L. Spencer	252,613	Jan. 24	1374	394	21	951
Draft-regulator	H. Bisson	251,396	Mar. 7	109	43	21	699
Draft-regulator and ventilator. Automatic	M. B. Church	259,494	June 13	775	205	21	1837
Drafting and cutting clothing	H. A. Jackson	258,103	June 6	251	83	21	1736
Drain-pipe	B. C. Cress	255,398	May 23	1343	360	21	1545
Dramatic effects. Apparatus for producing illusory	J. W. Knoll	256,097	Apr. 4	219	63	21	1003
Draw-heads. Manufacture of	L. Yakel and S. K. Duff	260,242	June 27	1546	426	21	2000
Drawer-lock	F. W. Mix	256,733	Apr. 18	1214	349	21	1177
Drawer-pull	B. J. Blackham	256,660	May 16	1067	296	21	1487
Drawer-pull	E. Drexel	256,888	June 6	15	4	21	1697
Drawer-pull	F. W. Smith	253,437	Feb. 7	307	84	21	396
Drawers and other garments	J. Bitefel and M. Juha	254,788	Mar. 7	402	107	21	707
Drawers. Mechanism for automatically fastening or locking a series of	A. B. Brundrett	256,119	Apr. 11	464	120	21	1034
Drawers. Men's	I. Schnoor	254,566	Mar. 7	72	19	21	630
Drawers or tights	R. M. Appleton	256,532	Apr. 18	960	276	21	1139
Drawing, spinning, and twisting apparatus	F. W. Fox	255,612	Mar. 28	1473	396	21	912
Drawings and designs. Reproducing	M. Tilbet	251,748	Jan. 3	71	.....	21	14
Dredge-box for spices, &c	P. Diamond	254,686	Mar. 14	448	119	21	790
Dredge-dipper	R. Drexel	254,543	Mar. 7	128	35	21	661
Dredge-winder	S. W. Dana	253,613	Jan. 31	1493	459	21	980
Dredger and excavator	R. R. Osgood	257,668	May 16	988	287	21	1461
Dredging apparatus	A. E. and M. W. Hall	258,913	June 6	54	14, 15	21	1704
Dredging-machine	J. Savidge	257,617	May 9	600	169	21	1388
Dredging-machine	Z. Williams	253,145	Jan. 31	1791	497	21	987
Dress cutting and fitting mold	K. Walker	254,674	Feb. 21	1059	303	21	549
Dress-shield	I. B. Kleinert	257,497	May 9	437	122	21	1365
Dressing-case	G. F. Deemling	257,300	May 2	162	58	21	1314
Drier: *See* Clothes-drier. Fruit and vegetable drier. Fruit-drier. Grain-drier.							
Drier	G. F. Robinson	256,503	Apr. 18	960	268 / 269	21	1123
Drill: *See* Dental drill. Rock-drill. Electric drill. Seed-drill. Grain-drill. Wheat-drill.							
Drill	J. W. Webber	252,161	Jan. 10	580	166	21	108
Drill and countersink combined	W. H. Southwick	258,704	Jan. 24	1227	344	21	927
Drill and reamer. Combined	F. H. Baltmann	253,263	Feb. 7	97	30	21	383
Drill-hole cleaner	W. H. Stewart and E. J. Chapman	257,779	May 9	780	220	21	1426
Drill-holding device	J. C. Titus	256,078	Apr. 4	396	108	21	1017
Drill-rod coupling	E. E. Hardy	254,477	Mar. 7	36	10	21	644
Drill-teeth. Machine for making	S. Delano and G. Abel	257,297	May 2	178	51	21	1312
Drilling-machine	H. Hager	255,618	Mar. 28	1469	397	21	913
Drilling-machine	D. B. Hartley	255,079	Mar. 14	694	215	21	784
Drilling-machine	G. W. Longman	254,031	Feb. 21	1047	293	21	541
Drilling-machine	G. C. Taft	257,538	May 9	477	133	21	1378
Drilling-machine. Hand	F. L. Heughes	259,147	June 6	335	88	21	1753
Drilling machine. Multiple	C. T. Parry	257,061	Apr. 25	1099	449	21	1253
Drinks. Shaker for mixing	L. Ward, S. A. Smith, and C. Pashley.	253,451	Feb. 7	318	88	21	399
Drive-pipe and coupling for oil and other wells	L. Smith	255,449	Mar. 28	1298	350	21	898
Driving-wheel	J. A. Hafner	252,457	Jan. 17	961	263	21	172
Drop-light. Extensible	C. S. Westland	256,294	Mar. 21	999	245	21	822
Drop-light pipe for chandeliers	G. P. Schumacher	256,136	May 16	1215	342	21	1014
Dropper: *See* Harvester-dropper. Seed-dropper.							
Drum	G. S. Knapp	254,143	Feb. 28	1178	329	21	571
Drum. Heating	C. H. Chapman	256,963	Apr. 25	1297	383	21	1217
Drum. Heating	A. Skue	254,059	Feb. 21	1052	300	21	546
Drum. Snare	H. C. Delano	256,899	June 6	40	10	21	1701
Drum-strap	A. Voege	256,380	Apr. 18	977	274 / 275	21	1136
Drum. Winding	M. T. Chapman	258,899	June 6	27	7	21	1699

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Dry-kiln	E. M. Flaherty	260,184	June 27	1655	449	21	1997
Drying and heating apparatus	A. Dreyfus	256,655	Apr. 18	1198	316 317	21	1161
Drying and pulverizing offal, &c. Apparatus for	J. F. Gubbins	255,859	Apr. 4	117	31	21	870
Drying apparatus	J. F. Gubbins	257,159	May 2	18	6	21	1294
Drying apparatus	G. W. Rawson	251,734	Jan. 3	57	15, 16	21	12
Drying coffee, grain, &c. Apparatus for	H. Scholfield	253,111	Jan. 31	1752	465 466	21	300
Drying-kiln	G. F. Speer	252,272	Jan. 10	721	203	21	130
Drying-machine. Centrifugal	T. Long	252,483	Jan. 17	966	274	21	179
Drying starch refuse and other substances. Machine for	W. Duryea	251,845	Jan. 3	207	57	21	37
Dummy-form. Leather	R. H. Weir	259,347	June 13	586	155	21	1893
Dumping-platform	G. H. Cormack	257,554	May 9	507	149	21	1377
Dust-collecting machine	A. H. Kirk	259,872	June 20	1250	333	21	1996
Dust-collecting machine	A. H. Kirk	259,873	June 20	1252	335 336	21	1996
Dust-collector	M. Harmon	260,194	June 27	1666	452	21	1999
Dust-collector	N. W. Holt	259,154	June 6	341	90	21	1754
Dust-collector	F. H. McElfresh	258,690	May 16	1166	398	21	1505
Dust-collector	J. Mills	258,099	May 16	1169	367	21	1506
Dust-collector	W. N., J. B., and W. N. Clark, Jr	258,631	May 30	1638	517	21	1630
Dust-pan	S. M. Perry	260,119	June 27	1579	425	21	1995
Dust-pan	S. M. Perry	260,120	June 27	1580	426	21	1996
Dust-pans. Detachable handle and leg for	C. Rumpff	256,375	Apr. 11	793	.....	21	1091
Dye-stuff or coloring-matter	J. H. Stebbins, Jr	254,064	Feb. 21	1087	.....	21	547
Dye-stuff or coloring-matter	J. H. Stebbins, Jr	254,065	Feb. 21	1088	.....	21	547
Dye-stuff or coloring-matter	J. H. Stebbins, Jr	256,401	Apr. 11	817	.....	21	1096
Dye-stuff or coloring-matter. Manufacture of	C. Rumpff	256,370	Apr. 11	793	.....	21	1091
Dye-stuff or coloring-matter. Manufacture of	C. Rumpff	256,377	Apr. 11	794	.....	21	1091
Dye-stuff or coloring-matter. Manufacture of	C. Rumpff	256,378	Apr. 11	794	.....	21	1091
Dye-stuff or coloring-matter. Manufacture of	C. Rumpff	256,379	Apr. 11	795	.....	21	1092
Dye-stuff or coloring-matter. Manufacture of	C. Rumpff	256,380	Apr. 11	795	.....	21	1092
Dye-stuff or coloring-matter. Purple	J. H. Stebbins, Jr	252,273	Jan. 10	722	.....	21	130
Dye-stuffs. Manufacture of brown	C. Rumpff	257,242	May 2	118	.....	21	1302
Dye-stuffs. Manufacture of brown	C. Rumpff	257,243	May 2	119	.....	21	1302
Dyeing and washing hanks of yarn, &c. Apparatus for	E. Boden	250,465	June 13	737	194 195	21	1831
Dyeing blue colors upon textile fabrics	J. H. Stebbins, Jr	255,349	Mar. 21	1148	.....	21	650
Dyeing colors on textile fabrics	T. and R. Holliday	254,550	Mar. 7	124	.....	21	659
Dyeing purposes. Ink for	P. Reid and J. Eastwood	256,506	Apr. 18	1057	.....	21	1149
Ear-ring	H. G. Mackinney	252,610	Jan. 24	1122	315	21	809
Ear-ring	P. K. De Mur	253,472	Feb. 7	340	95	21	404
Ear-wire lock	J. W. Carley. (Reissue)	10,097	Feb. 7	363	101	21	407
Earth borer and excavator	H. J. Behrens	256,006	May 16	1063	395	21	1486
Earth-closet	C. S. Watkins	253,329	Feb. 7	177	50	21	376
Earthenware cover and handle	C. W. Heaton and T. Bolas	254,312	Feb. 28	1369	.....	21	602
Earthenware, glass, &c. Production of vitrified coverings on	W. H. Brownell	257,653	May 9	640	179 180	21	1401
Easel	A. E. Van Kirk	260,068	June 27	1510	405	21	1974
Easel	A. Chappel	258,090	June 6	146	40	21	1730
Easel. Combination	A. A. Reeve	255,534	Mar. 28	1378	372	21	895
Easter egg. Artificial or toy	C. Burdick	255,251	Mar. 21	1021	273	21	899
Eaves-trough hanger	W. Hatch	252,033	Jan. 10	438	120	21	88
Eaves-trough hanger	R. E. Mallory	258,453	May 23	1613	456	21	1592
Eaves-trough hanger	J. B. Barredy	258,693	May 30	1915	541	21	1653
Eccentric. Adjustable	R. Ashe	254,980	Mar. 14	506	136	21	731
Edge-burnishing machine	R. Ashe	254,859	Mar. 14	506	135	21	731
Edge setting and burnishing machine	F. Moulton and C. M. Adams	251,785	Jan. 3	47	13	21	10
Edge-trimming-machine knife	F. H. Lander	254,340	Feb. 28	1403	386	21	609
Edge-trimming tool	J. A. Robb	258,046	June 6	92	24	21	1710
Edger	L. M. Slade	256,304	Apr. 11	811	223	21	1094
Eel-stop	C. Dela	254,540	Mar. 7	119	28	21	657
Egg and sugar beater	G. B. Fowler	256,310	Apr. 11	718	195	21	1078
Egg beater and mixer	O. F. Clark	259,096	June 6	278	74	21	1742
Egg-carrier	J. H. Louder	259,696	June 20	1035	276	21	1969
Egg-carrier	G. T. Riddle	259,213	June 6	411	109	21	1765
Egg-carrier	N. F. Tipton	254,517	Mar. 7	85	22	21	653
Egg-case	J. L. Stevens	255,738	Mar. 28	1633	441 442	21	941
Egg-pail	A. L. Hill and G. S. Simpson	253,866	Feb. 21	837	226	21	506
Egg-preserving apparatus	K. H. Loomis	253,074	Jan. 31	1705	470 471	21	312
Egg-tester	W. Kirkpatrick	259,171	June 6	367	97	21	1758
Egg-tester	T. H. B. Sanders	258,811	May 30	2043	577	21	1675
Egg-tray machine	N. Schroder and J. De Beauvais	252,264	Jan. 10	705	199 200	21	127
Eggs. Apparatus for holding and carrying	J. Halley and A. Barr	253,697	Feb. 14	617	174	21	461
Eggs. Composition for preserving	G. W. Mowry	259,938	June 6	397	.....	21	1770
Ejector for oil-wells	W. O. Robbins	254,361	Feb. 28	1448	397	21	616
Ejector. Steam and air	S. E. Hewes. (Reissue)	10,089	Jan. 31	1247	500	21	335
Elastic material for seats, window-blinds, &c	H. B. Cobb	254,994	Mar. 14	509	161	21	748
Electric bath	G. W. Lawson	257,675	May 16	903	259	21	1459
Electric battery. Polarization or secondary	C. A. Faure	258,088	Jan. 3	208	105	21	67
Electric block signaling apparatus	O. Gassett	251,997	Jan. 3	225	63	21	41
Electric cable	W. J. Phillips	258,949	Jan. 16	667	194	21	194
Electric cable	R. S. Waring	258,634	Jan. 24	1151	288	21	1862
Electric circuits. Safety device for	E. Weston	259,614	June 13	920	246	21	1862
Electric circuits. Safety device for	E. Weston	259,615	June 13	921	246	21	1862
Electric circuits. Safety device for	E. Weston	259,616	June 13	922	246	21	1863
Electric circuits. Signaling on	D. H. and L. C. Rice	255,814	Apr. 4	75	21	21	963
Electric communication. Device for underground	B. F. Teal	256,886	Apr. 25	1379	368	21	1214
Electric conductor. Underground	G. Richardson	259,044	June 6	216	58	21	1741
Electric conductors. Underground conduit for	G. Richardson	259,045	June 6	217	58	21	1731

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Electric detecting apparatus for watchmen	C. W. Hubbard	259,689	June 20	1083	273	21	1997
Electric detecting apparatus for watchmen	C. W. Hubbard	259,690	June 20	1084	273	21	1998
Electric drill	C. E. Ball	255,326	Mar. 21	1008	266	21	885
Electric generator and motor	J. H. Bunnell	255,931	Apr. 4	221	57, 58	21	967
Electric individual signal apparatus	C. E. Buell	258,687	May 30	1637	516	21	1638
Electric individual signaling apparatus	C. E. Buell	258,685	May 30	1883	545	21	1657
Electric light	A. L. Arey	253,898	Feb. 14	781	208	21	491
Electric light	E. A. Edwards	257,678	May 9	660	167	21	1407
Electric light	C. P. Hosmack	256,686	Apr. 18	1170	326 329	21	1169
Electric light	P. O. Jenkins	260,689	June 27	1462	394	21	1967
Electric light carbon	J. B. King	256,683	Apr. 18	1296	365	21	1198
Electric-light circuits. Switch for	S. Bergmann	257,276	May 2	154	44	21	1300
Electric-light guard	W. McDevitt	256,561	Apr. 18	1037	288	21	1146
Electric-light regulator	J. H. Guest	254,546	Mar. 7	119	30	21	656
Electric-light regulator	N. S. Keith	255,795	Apr. 4	52	15	21	940
Electric-light regulator	N. S. Keith	257,566	May 9	586	159	21	1388
Electric-light regulator	J. J. Wood	257,800	May 9	614	200	21	1432
Electric-light systems. Automatic regulator for	W. L. Voelker	251,748	Jan. 3	74	20	21	15
Electric lights, &c. Apparatus for elevating poles for	J. D. A. Measing	253,743	Feb. 14	674	183	21	471
Electric lights. Circuit-regulating device for	C. M. Ball	252,347	Jan. 17	811	206	21	150
Electric lights. Shunting device for	C. J. Van Depoele	257,966	May 16	1035	298	21	1461
Electric lighting apparatus	M. G. Farmer	259,746	Jan. 24	1275	356 359	21	935
Electric lighting apparatus	M. G. Farmer	253,817	Feb. 14	771	220	21	489
Electric lighting apparatus	J. B. Fuller	253,038	Jan. 31	1640	457	21	383
Electric lighting apparatus	E. T. Starr	257,403	May 2	207	86	21	1336
Electric lighting for railway-trains. System of	C. E. Buell	259,302	June 13	908	160 161	21	1806
Electric lighting system	M. G. Farmer	259,836	Jan. 24	1269	291	21	935
Electric lighting system	W. E. Sawyer and A. Man. (Reissue.)	10,134	June 6	503	120 121	21	1781
Electric machine. Dynamo	C. E. Ball	259,677	June 6	257	66	21	1736
Electric machine. Dynamo	C. E. Ball	259,791	June 20	1161	309 310	21	1910
Electric machine. Dynamo	G. H. Bangs	256,618	Apr. 18	1063	305	21	1153
Electric machine. Dynamo	W. Hochhausen	257,097	Apr. 25	1248	433	21	1402
Electric machine. Dynamo	E. J. Houston	256,648	May 30	1656	523	21	1642
Electric machine. Dynamo	E. J. Houston	256,649	May 30	1655	523	21	1642
Electric machine. Dynamo	C. A. Hussey	252,280	Jan. 17	854	237	21	156
Electric machine. Dynamo	C. A. Hussey	253,367	Feb. 7	236	67	21	369
Electric machine. Dynamo	H. J. Müller	256,664	May 30	2160	593	21	1666
Electric machine. Dynamo	W. S. Parker	256,600	May 30	2033	574	21	1673
Electric machine. Dynamo	W. E. Sawyer	254,056	Feb. 21	1077	289	21	546
Electric machine. Dynamo	H. B. Sheridan	256,391	Apr. 11	806	220	21	1094
Electric machine. Dynamo	H. B. Sheridan	256,392	Apr. 11	810	220	21	1094
Electric machine. Dynamo	E. A. Sperry	260,132	June 27	1561	440 439	21	1966
Electric machine. Dynamo	C. J. Van Depoele	259,661	June 6	230	64	21	1734
Electric machine. Dynamo	F. Von Hefner-Alteneck	256,061	Apr. 4	398	106 109	21	1017
Electric machine. Dynamo	E. Weston	255,364	Mar. 21	1164	319	21	653
Electric machine. Dynamo	E. Weston	255,366	Mar. 21	1166	313	21	653
Electric machine. Dynamo	E. Weston	256,778	Apr. 18	1257	357	21	1187
Electric machine. Dynamo	E. Weston	259,617	June 13	923	246	21	1863
Electric machine. Dynamo	E. Weston	259,618	June 13	924	247	21	1863
Electric machine. Dynamo	W. Wheeler	256,188	Apr. 11	838	149	21	1047
Electric machine. Dynamo	L. G. Woolley	256,768	Apr. 18	1277	360	21	1188
Electric machine. Dynamo	R. Thury	260,126	June 27	1568	431	21	1968
Electric machine regulator. Dynamo	W. Hochhausen	252,063	Jan. 24	1163	331	21	919
Electric machine. Short-circuiting switch for dynamo	C. E. Ball	257,099	May 16	1054	323	21	1404
Electric machines. Armature for dynamo	G. H. Brown	255,137	Mar. 21	672	234	21	633
Electric machines. Armature for dynamo	J. J. and T. J. McTighe	260,110	June 27	1565	433	21	10 3
Electric machines. Armature for dynamo	E. T. Starr	257,404	May 2	210	88, 89	21	1336
Electric machines by the motion of a moving vehicle. Mechanism for driving dynamo	C. A. Cooley	258,022	May 16	1063	301	21	1470
Electric machines. Commutator for dynamo	J. J. and T. J. McTighe	260,111	June 27	1566	433	21	1963
Electric machines. Commutator for dynamo	A. G. Waterhouse	252,405	Jan. 17	944	246	21	163
Electric machines. Polarity-protector for dynamo	W. Hochhausen	252,065	Jan. 24	1186	332	21	920
Electric machines. Regulator for dynamo	H. S. Maxim	255,311	Mar. 21	1104	307 308	21	943
Electric machines. Speed-regulator for dynamo	H. S. Maxim	255,310	Mar. 21	1101	307	21	943
Electric meter	C. V. Boys	254,567	Mar. 7	124	46	21	660
Electric meter	C. V. Boys	256,965	Apr. 25	1409	409	21	1224
Electric meter	L. Daft	258,353	May 23	1567	494	21	1577
Electric meter	J. D. Kisky	256,706	Apr. 18	1197	334	21	1174
Electric motor	C. J. Van Depoele	257,999	May 16	1078	299	21	1468
Electric motor and generator. Combined	G. C. Maynard	259,126	June 6	262	101	21	1761
Electric push-button	H. R. Sheridan and H. A. Gorn	259,289	June 13	898	257	21	1858
Electric safety-elevator	R. M. Hunter	257,948	May 16	993	277	21	1472
Electric signal	F. R. Wood and H. J. Brewer	258,489	Jan. 17	987	247	21	163
Electric-signal-printing register. Automatic	J. King	256,488	Apr. 18	948	262	21	1130
Electric signal-transmitter	H. Pickford and H. T. Gregory	258,781	Jan. 24	1343	376	21	947
Electric signaling apparatus	H. J. Brewer and F. B. Wood	258,283	Jan. 17	81[illegible]	228	21	158
Electric-signaling apparatus. Automatic	H. B. Sheridan	253,435	Feb. 7	883	84	21	395
Electric store-house and lights. Regulator for	T. W. Lane	259,556	June 13	853	235	21	1851
Electric switch-board	D. Dewar	256,361	May 30	1742	493	21	1662
Electric switch board and plug	W. C. Allison. (Reissue)	9,989	Jan. 3	460	106	21	69
Electric wires and lamps in cities. Support for	P. J. Duggan	259,831	June 20	1905	383	21	1918
Electric wires. Pipe for underground	S. M. Plush	254,099	Feb. 21	1130	313	21	553
Electric wires. Safety device for	C. H. Goebel	259,130	June 6	215	64	21	1750
Electric wires. Underground conduit for	A. F. McGrew	257,257	May 2	256	72	21	1287
Electric wires. Underground conduit for	W. Paul	255,661	Mar. 28	1538	412	21	963
Electrical apparatus. Device for connecting wires in							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Electrical carbons. Draw-plate for preparing fibrous filaments for	J. H. Guest	256,212	Apr. 11	504	102	21	1056
Electrical carbons. Forming and treating	J. H. Guest	256,213	Apr. 11	506	102	21	1056
Electrical conducting-wires with metallic armor. Machine for covering	W. Halkyard	253,589	Feb. 14	421	117	21	420
Electrical conductor. Underground	G. Richardson	259,046	June 6	219	59	21	1731
Electrical distribution. System of	E. Thomson	255,894	Apr. 4	85	23, 24	21	985
Electrical fixture	L. Stieringer	259,235	June 6	438	116	21	1770
Electrical generation and distribution. System of	H. S. Maxim	256,910	Apr. 25	1430	408	21	1298
Electrical illumination	C. E. Buell	258,178	Jan. 10	007	171	21	111
Electrical meter	H. S. Maxim	255,306	Mar. 21	1095	286	21	841
Electrical meter	H. S. Maxim	255,307	Mar. 21	1097	286	21	842
Electrical meter	H. S. Maxim	255,308	Mar. 21	1099	286	21	843
Electrical purposes. Coating and insulating wire for	J. Taylor	251,970	Jan. 3	343	.....	21	59
Electrical relay	C. Ader	256,268	Apr. 11	688	179	21	1088
Electrical-signal transmitter	G. S. Mott	258,243	Jan. 10	661	193	21	123
Electrical-signaling apparatus	C. E. Buell and J. F. Buel	258,268	Jan. 10	741	208	21	132
Electrical signaling-circuit	T. D. Lockwood	256,934	June 6	80	21	21	1706
Electrical switch-board	J. B. Odell	248,395	Jan. 17	873	243	21	161
Electrical switch-board	C. E. Scribner	254,369	Feb. 28	1456	398	21	617
Electrical switch-board	T. N. Vail	255,656	Mar. 14	776	220	21	779
Electrical switch-board	T. N. Vail	260,067	June 27	1508	405	21	1974
Electrical switch-boards. Plug for	H. W. Leland	256,931	June 6	77	20	21	1706
Electricity. Apparatus for signaling by	J. W. Stover	255,194	Mar. 21	857	230	21	800
Electricity. Distribution of energy by	S. L. Fox	254,948	Mar. 14	686	{168 169	21	753
Electricity. Lighting cars by	W. A. Stern and H. M. Bylleeby	258,140	May 16	1233	347	21	1617
Electro-magnetic brake	L. W. Goss and H. Walter	258,293	Jan. 10	748	208	21	134
Electro-magnetic escapement mechanism	J. M. Gardiner	256,994	Apr. 25	1389	430	21	1240
Electro-magnetic locomotives. Wheel for	E. N. Dickerson, Jr	257,398	May 2	179	51	21	1313
Electro-magnetic motor	G. Little	259,404	June 13	639	174	21	1817
Electro-magnetic motor	L. G. Woolley	250,784	Apr. 18	1274	359	21	1188
Electro-magnetic relay	C. A. Randall	254,045	Feb. 21	1064	296	21	543
Electroplating. Apparatus for	A. Brinckmann	258,314	May 23	1332	377	21	1643
Electroplating with platinum and silver	M. H. Campbell	253,159	Jan. 31	1824	.....	21	331
Elevated way	N. Newman	256,034	Apr. 4	344	93	21	1008
Elevating machinery. Device for stopping the revolutions of the drum in	G. Dryden	259,065	Jan. 10	499	{138 139	21	93
Elevator: *See* Brick and mortar elevator. Hydraulic and pneumatic elevator. Electric safety-elevator. Ice-elevator. Mail-elevator. Freight-elevator. Platform-elevator. Grain-elevator. Pneumatic elevator. Harvester-elevator. Safety-elevator. Hay-elevator. Suction-elevator. Hod-elevator. Water-elevator. Hydraulic elevator. Wood and coal elevator.							
Elevator	J. B. Atwater	256,111	Apr. 11	455	123	21	1033
Elevator	C. W. Baldwin. (Reissue)	10,017	Jan. 31	1843	508	21	334
Elevator	R. Dunbar	254,291	Feb. 28	1346	371	21	508
Elevator	P. Hinkle	257,943	May 16	988	276	21	1478
Elevator	W. H. Patterson	257,188	May 2	42	13, 14	21	1288
Elevator	J. D. Richardson	259,923	June 20	1308	351	21	1935
Elevator	H. Roberts	258,801	Jan. 24	1353	378	21	246
Elevator	G. C. Tewksbury	255,649	Mar. 14	767	208	21	777
Elevator	G. C. Tewksbury	255,651	Mar. 14	770	207	21	778
Elevator	G. C. Tewksbury	260,254	June 27	1741	470	21	2010
Elevator	S. H. Thornton	258,517	Apr. 18	974	273	21	1130
Elevator	P. H. Welsh	260,361	June 27	1747	472	21	2011
Elevator and dumb-waiter	J. Johnston	258,073	May 16	1136	319	21	1500
Elevator-bucket	G. W. Caltrins and J. Woodhill	256,100	Apr. 4	494	118	21	1032
Elevator-door. Self-closing	T. M. Clark	253,345	Feb. 7	193	55	21	379
Elevator-gate. Automatic	J. Cushing	256,981	Apr. 25	1516	{425 426	21	1237
Elevator-gate. Automatic	B. C. Vandusen	258,627	May 30	2063	589	21	1679
Elevator-guard. Automatic	J. F. Abbott	253,178	Feb. 7	1	1	21	347
Elevator-hoisting apparatus	E. Bond	258,011	May 16	1069	297	21	1467
Elevator safety apparatus	C. W. Baldwin	258,091	May 30	1913	540	21	1658
Elevator safety apparatus. Self-acting	J. McCarroll. (Reissue)	10,127	May 30	2111	598	21	1688
Elevator safety apparatus. Self-acting	J. McCarroll	255,646	Mar. 28	1514	407	21	920
Elevator safety attachment	P. D. Harton	255,110	Mar. 21	843	225	21	798
Elevator safety-attachment	C. B. Morgan	256,354	Apr. 11	768	211	21	1067
Elevator safety attachment	F. W. Voerde	250,951	June 20	1344	361	21	1941
Elevator safety attachment	F. T. Ward	259,710	Jan. 24	1238	346	21	226
Elevator safety-brake. Automatic	C. S. Longstreet	256,013	Apr. 4	332	45	21	1004
Elevator-shafts. Automatic floor for	E. L. Demorest	259,105	June 6	290	77	21	1745
Elevator-stop	G. C. Tewksbury	255,650	Mar. 14	769	208	21	778
Elevators. Automatic safety-stop for	J. P. Freeman	260,017	June 27	1448	390	21	1995
Elevators. Safety apparatus for passenger and other	M. N. Hutchinson	259,019	June 6	185	48	21	1726
Elevators. Safety apparatus for passenger and other	M. N. Hutchinson	259,769	June 20	1127	299	21	1904
Elliptograph	E. E. Clark	256,468	Apr. 18	907	254	21	1134
Elliptic spring	G. W. Bell	257,395	May 2	67	20	21	1283
Elliptic spring	H. Gardiner	257,589	May 9	587	147	21	1379
Elliptic springs. Die for making	C. T. Schoen	257,089	Apr. 25	1685	455	21	1257
Embalming and cooling board for corpses	N. T. Shaw	263,330	June 27	1831	495	21	2025
Embroidering	M. Hoffmann	252,377	Jan. 17	851	236	21	157
Embroidering-machine	C. A. v. Gonzenbach	252,659	Jan. 24	1179	330	21	219
Embroidering-machine	A. Hardegger	255,284	Mar. 21	1057	{283 284 285 286}	21	835
Embroidering-machine	A. Heaven	254,367	Mar. 14	651	176	21	756

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Embroidering-machine motor	C. Wenner	255,710	Mar. 28	1301	{429 430}	21	934
Embroidery	J. Wigut	257,220	May 2	123	22	21	1284
Embroidery-case	E. J. V. Earle	260,234	May 16	1695	395	21	1494
Emery grinding and polishing wheel. Elastic-center	M. Halsted	254,611	Feb. 21	1023	294	21	535
Emery-holder	A. N. Matthews	260,109	June 27	1502	401	21	1963
End-gate	J. W. Handayside	256,450	Jan. 17	889	239	21	174
End-gate and shoveling-board. Combined	G. W. Holly	257,339	May 2	220	60, 61	21	1289
End-gate. Wagon	D. B. Bender	258,415	Jan. 17	991	240	21	165
End-gate. Wagon	O. W. Moore	257,235	May 2	110	31	21	1280
End-gate. Wagon	G. Quick	256,563	Apr. 18	1053	297	21	1148
End-gate. Wagon	P. Young	258,259	June 6	497	194	21	1715
Engine: *See* Compound-engine. Reciprocating engine. Cylinder-engine. Road-engine. Dental engine. Rotary engine. Direct-acting engine. Rotary steam-engine. Fire-engine. Steam-engine. Gas-engine. Steam, air, or water engine. Gas-motor engine. Steam and air engine. Logging-engine. Steam and compressed-air engine. Locomotive-engine. Mining-engine. Steam and hot-air engine. Oscillating engine. Traction-engine. Paper-pulp engine. Water-engine. Pulp-engine. Wind-engine. Pumping-engine.							
Engine reversing-gear	G. Krats	258,408	June 13	657	{173 174}	21	1816
Engineering. Electrical	H. S. Maxim	255,312	Mar. 21	1106	290	21	849
Engraving and chasing machine	A. P. Phillips	259,912	June 20	1304	346	21	1932
Ensilage-cutter	J. Y. Smith	258,257	May 23	1353	371	21	1552
Ensilage-cutter	J. Y. Smith	258,256	May 23	1367	388	21	1553
Envelope	D. Lubin	247,358	May 2	251	71	21	1286
Envelope	D. Lubin	256,861	May 30	2090	592	21	1685
Envelope	K. H. Pedrick	254,941	Apr. 11	635	178	21	1063
Envelope fastening. Sample	C. W. Ballard	255,348	May 23	1468	423	21	1570
Envelope for ice-cream, &c. Non-conducting	M. T. Fussell	258,640	May 30	1842	519	21	1641
Envelope-opener	W. A. De Caudry	259,930	Jan. 31	1519	433	21	288
Envelopes. Manufacture of	E. B. Stocking	259,338	June 6	444	{117 118}	21	1771
Eraser. Blackboard	C. M. Lothrop	254,084	Feb. 21	1116	312	21	553
Etching vitreous surfaces. Compound for	P. Bitterlin, Jr	254,383	Feb. 28	1318	.....	21	504
Evaporating and cooling apparatus	A. Gontard	254,003	Feb. 21	1005	{301 302 157 158}	21	534
Evaporating-pan	A. Brear	259,257	June 13	595	156	21	1854
Evaporating-pan	A. B. Heathorn	256,008	May 16	1126	315	21	1497
Evaporating-pan	H. B. Stevens	253,194	Jan. 31	1766	{490 491}	21	322
Evaporating-pans. Broom and scoop mechanism for	C. F. W. Schramm	255,695	Mar. 14	741	200	21	773
Evaporating salt-brine	A. McBean and J. H. Watson	258,612	Jan. 24	1194	315	21	209
Evaporator: *See* Register-evaporator. Sugar-evaporator. Salt-evaporator. Vegetable and fruit evaporator. Steam-heat evaporator.							
Evaporator and heater	R. M. Skiles	259,933	June 20	1320	354	21	1937
Excavating and dredging machine	G. Souther	258,851	June 6	108	26	21	1711
Excavating earth in trenches. Machine for	C. A. Ferry	253,995	Feb. 21	996	{278 279}	21	538
Excavator	S. P. Hunter	259,396	June 13	649	172	21	1815
Excavator and conveyer. Earth	C. A. and F. D. Smith	253,696	Feb. 21	973	248	21	513
Excavator. Coal	H. Wilworth	252,565	Jan. 17	1074	280	21	194
Excavator. Earth	W. A. Nutt	253,751	Feb. 14	694	186	21	473
Exercising apparatus	W. J. O. Bryon, Jr	254,188	Feb. 28	1140	310	21	564
Exercising apparatus	J. M. Ladin	258,773	May 30	2083	585	21	1685
Exercising-club	G. P. Fisher, Jr	259,758	June 20	1114	297	21	1903
Exercising-club	E. M. Folk	257,922	May 16	970	271	21	1422
Exhaust-nozzle	J. F. Marks	254,146	Feb. 28	1122	300	21	571
Exhaust. Utilizing	H. T. Litchfield and D. Renshaw	260,033	June 27	1467	393	21	1992
Exhibiting-rack	J. W. Tuttle	255,215	Mar. 21	869	239	21	809
Expansion-joint	J. J. Moss	258,794	May 30	2069	573	21	1672
Exploder for blasting-cartridges	J. C. Schrader	253,893	Feb. 21	969	245	21	512
Exploder for firing blasts	A. Watson	253,649	Feb. 14	654	152	21	451
Explosive compound	C. Dittmar	256,909	Jan. 24	1114	.....	21	209
Explosives. Tester for	G. S. Dean	253,914	Feb. 21	982	251	21	516
Express signal-call	H. S. Stix	256,689	May 30	2055	580	21	1677
Extension-table	N. Bauer	257,274	May 2	153	43	21	1288
Extension-table	J. A. Proft	255,454	Mar. 28	1240	345	21	878
Extension-table. Circular	J. F. Schultz	254,368	Feb. 28	1455	398	21	617
Extractor: *See* Cartridge-extractor. Spike-extractor. Corn-extractor. Stump-extractor. Fish-hook extractor.							
Extracts from vegetable substances. Apparatus for making	M. Wise	253,892	Feb. 14	751	214	21	485
Eyeglass-frame	F. A. Schorr	256,861	Apr. 25	1374	387	21	1213
Eyeglass-frame	F. Terstegen	254,070	Feb. 21	1092	288	21	546
Eyelet	A. L. Parcelle	257,750	May 9	756	211	21	1421
Eyelet-holes. Device for opening	G. A. Dubreuil	257,391	May 2	182	88	21	1314
Eyelet-stock. Machine for making	S. N. Smith	258,229	June 6	430	114	21	1709
Eyeleting-machine	C. A. Corman	259,100	June 6	288	75, 76	21	1743

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Eyes. Device for protecting the	J. Story	251,743	Jan. 3	67	18	21	14
Fabric: *See* Fringed fabric. Tufted fabric. Fur-faced fabric. Water-proof fabric. Meshed or netted fabric.							
Fabrics. Frame for stretching	E. Conrad	260,086	June 27	1530	411	21	1978
Fabrics from unrolling. Securing rolls or packages of	W. S. Holland	258,309	May 23	1425	407	21	1561
Fabrics. Machine for stretching	G. W. Miller	259,036	June 6	206	55	21	1739
Fabrics. Process of and apparatus for aging	T. Simpson	255,543	Mar. 28	1388	375	21	897
Fan	G. Brueck	256,706	May 30	1935	546	21	1656
Fan	M. Cohen	259,880	June 20	1195	319	21	1916
Fan	L. Jordan	257,950	May 16	996	278	21	1474
Fan	J. North	257,058	Apr. 25	1595	446	21	1329
Fan	J. C. St. John	255,549	Mar. 28	1394	377	21	898
Fan	C. Strickrodt	259,706	Jan. 24	1239	344	21	297
Fan	T. Heaton	256,753	May 30	1963	569	21	1664
Fan. Automatic	G. W. Overall	255,659	Mar. 28	1598	411	21	922
Fan. Automatic	A. A. Selden and W. G. Duckett	253,894	Feb. 11	671	246	21	519
Fan. Automatic	A. Lloyd	252,885	Jan. 31	1463	409	21	272
Fan. Fly	T. A. Martin	256,785	May 30	2019	570	21	1670
Fan. Fly	H. M. Smith	257,779	May 9	783	218	21	1426
Fan. Rotary	M. L. Flowers and D. Talmage	252,367	Jan. 17	836	233	21	155
Fanning-machine	F. M. Bissell	253,908	Feb. 21	967	{269 270	21	527
Fanning-mill	J. D. Bush	256,972	Apr. 25	1505	423	21	1235
Fanning-mill	C. C. Eddy and A. A. Levan	254,409	Mar. 7	96	7, 8	21	643
Fanning-mill	H. E. Keeler	254,140	Feb. 28	1175	398	21	570
Fanning-mill	P. Poyneer	255,812	Apr. 4	73	20	21	963
Fanning-mill	W. H. Buckley, Jr	259,360	June 13	603	150	21	1806
Fare-box	E. W. Andrews	256,271	May 23	1402	397	21	1555
Fare-collector for street-cars	J. B. Benton	259,417	Jan. 17	909	{250 251	21	165
Fare-register	J. N. Maskelyne	259,565	June 13	860	228	21	1852
Fare-register	W. H. Hornum	256,390	Apr. 11	729	{198 199	21	1080
Fare register and recorder	G. W. Fouiger	253,487	Feb. 7	360	100	21	406
Farm and yard gate	H. Gillett. (Reissue)	10,016	Jan. 24	1431	399	21	260
Farm-engine boilers. Fire-box attachment for	G. I. Blynn	258,624	May 30	1923	515	21	1637
Farm-gate	J. J. Johnston	254,020	Feb. 21	1033	286	21	538
Farm-gate	D. Spencer	253,119	Jan. 31	1761	489	21	321
Farm-gate	R. H. Wadlow	253,791	Feb. 14	739	211	21	483
Fastening device	E. Woodward	251,756	Jan. 3	82	24	21	17
Fastening-driving machine	A. J. Huet	255,983	Apr. 4	139	.....	21	973
Fat from slaughter-house scraps, &c. Extraction of animal	H. Mége. (Reissue)	10,137	June 13	961	.....	21	1873
Fats. Treating animal	H. Heckel	255,504	Mar. 28	1343	362	21	889
Fats and oils. Apparatus for decomposing	L. Bergen	255,914	Apr. 4	196	51	21	963
Faucet	U. Bohren	256,873	Apr. 25	1388	390	21	1216
Faucet	J. B. Gathright	251,775	Jan. 3	110	31	21	21
Faucet	J. Giolow	255,168	Mar. 21	911	244	21	809
Faucet	J. Howes	256,490	Apr. 18	938	261	21	1198
Faucet	J. Howes	256,491	Apr. 18	934	261	21	1199
Faucet	J. H. Johnson	260,030	June 27	1463	394	21	1967
Faucet	T. Mackel	258,046	Jan. 10	453	124	21	85
Faucet	D. Morrison	255,681	Apr. 4	153	41	21	976
Faucet	G. A. Naumann	254,089	Mar. 7	983	75	21	686
Faucet	A. Roehe	251,953	Jan. 3	324	88	21	56
Faucet	J. O. Waddell	253,136	Jan. 31	1780	494	21	325
Faucet	A. N. Whiting	256,540	May 23	1716	464	21	1610
Faucet	C. Whittaker	257,538	May 9	483	134	21	1373
Faucet	F. C. Zanetti	256,988	Apr. 25	1380	368	21	1214
Faucet and automatic toy. Combined	W. W. Sweeney	254,577	Mar. 7	162	40	21	646
Faucet attachment	M. Magin	259,606	June 20	1041	276	21	1899
Faucet. Beer	J. Mappes	256,020	Apr. 4	332	88	21	1005
Faucet. Beer	W. M. Sack	253,107	Jan. 31	1748	484	21	319
Faucet. Filtering	F. A. Bishop	255,918	Apr. 4	206	54	21	964
Faucet for regulating the overflow from basins	J. H. Blum	252,644	Jan. 24	1163	{325 326 327	21	216
Faucet. Measuring	J. C. Norris	254,096	Feb. 21	1052	293	21	541
Faucet. Measuring	J. Stephenson	256,510	Apr. 18	966	270	21	1134
Faucet. Water	H. Berger	253,833	Feb. 21	797	226	21	500
Feather pillows, bolsters, &c. Manufacture of	J. W. Bingaman	258,979	June 6	133	35	21	1717
Feather-renovator	E. D. Cole	259,490	June 13	791	206	21	1838
Feather-renovator	J. Hawlowets	258,374	Jan. 17	847	235	21	157
Feather trimming. Ostrich	G. A. and G. W. Sammet	258,607	May 30	1805	509	21	1634
Feathers for bedding, &c. Apparatus for preparing	J. Hawlowets	259,388	June 13	641	170	21	1813
Feathers. Machine for drying	F. Wheaton	255,740	Mar. 28	1636	443	21	941
Feed-bag for horses	A. Brandt	258,013	May 16	1070	298	21	1467
Feed-cutter	W. H. Hallock and A. N. Smith	255,499	Mar. 28	1251	337	21	873
Feed-regulating device	H. F. Brown	258,193	May 16	1292	{363 364	21	1587
Feed-water heater	E. Kendall	258,167	June 6	300	85, 86	21	1757
Feed-water heater	A. Kennedy and J. H. Berkshire. (Reissue.)	10,138	June 13	962	262	21	1873
Feed-water heater	E. L. Morse	259,706	June 20	1054	290	21	1898
Feed-water heater	E. Reynolds	254,047	Feb. 21	1068	297	21	544
Feed-water heater	G. W. Sloane	257,396	May 2	300	85, 86	21	1335
Feed-water heater	G. W. Sloane	258,141	May 16	1282	344	21	1516
Feed-water heater	J. H. Turner	255,475	Mar. 28	1309	352	21	883
Feed-water heater	R. P. Valentine	256,060	Apr. 4	308	108	21	1017
Feed-water heater	R. W. Jones	257,336	May 2	223	66	21	1323
Feed-water heater and purifier	C. H. Shields	252,147	Jan. 10	573	161	21	165

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Feed-water regulator	N. Clute. (Reissue)	10,197	May 9	853	230	21	1440
Feed-water regulator. Boiler	C. O. Wyman	259,787	June 20	1156	307	21	1900
Feeding stock. Time mechanism for	E. Wescelle	259,926	June 6	461	122	21	1774
Felly-connection for vehicle-wheels	O. C. Ross	254,103	Feb. 28	1260	338	21	575
Felly-plate	J. B. Blatt	257,879	May 2	156	44	21	1289
Felt. Apparatus for lasting and treeing wool	A. A. Hawley	256,916	June 6	37	15, 16	21	1704
Felt. Mold for making articles of	S. G. Alexander	259,453	June 13	719	181	21	1837
Felt. Treating animal hair for manufacturing	G. J. Gregersen	254,811	Feb. 28	1255	.....	21	563
Felted articles. Former for supporting hollow	A. A. Hawley	256,917	June 6	39	16	21	1705
Felting-machine	A. Pellese	254,841	Feb. 21	1038	{294 295	21	542
Fence	I. Calvin	258,191	Jan. 10	618	174	21	113
Fence	H. P. Davies	254,286	Apr. 11	702	191	21	1075
Fence	M. French	257,898	May 9	668	191	21	1400
Fence	J. M. Garrison	259,585	June 13	813	215	21	1844
Fence	J. Hoffman	257,944	May 16	989	276	21	1472
Fence	G. A. Horn	254,433	Apr. 11	688	240	21	1103
Fence	H. E. Johnson	257,013	Apr. 25	1560	435	21	1343
Fence	I. L. Landis	258,479	Jan. 17	979	272	21	170
Fence	I. L. Landis	254,284	Feb. 28	1272	352	21	548
Fence	A. D. Robinson and H. W. Thompson.	255,673	Mar. 28	1543	416	21	906
Fence	C. C. Sheldon	255,342	Mar. 21	1141	306	21	849
Fence	H. Smith	258,051	Jan. 10	472	130	21	89
Fence	H. Smith	257,397	May 2	301	85	21	1335
Fence	A. R. Stevenson	253,193	Jan. 31	1769	491	21	333
Fence	T. M. Worthington	259,654	June 13	972	259	21	1671
Fence. Barb	W. M. Harris	258,914	June 6	55	15	21	1704
Fence barb. Wire	H. J. Schneider	253,638	Feb. 14	535	158	21	446
Fence barb. Wire	R. H. Wiles	257,196	May 2	57	17	21	1291
Fence barb. Wire	R. H. Wiles	260,268	June 27	1787	475	21	2013
Fence barbs. Machine for making	E. and A. G. Childress	255,413	Mar. 28	1233	{321 338	21	870
Fence-barbs. Machine for making metal	T. B. Doolittle	255,423	Mar. 28	1245	{334 335	21	872
Fence. Barbed	J. and W. M. Brinkerhoff	258,014	May 16	1071	298	21	1468
Fence. Barbed	J. and W. M. Brinkerhoff	256,706	May 30	1933	546	21	1656
Fence. Barbed	J. Carpenter	256,888	June 6	98	7	21	1699
Fence. Barbed	J. H. Connelly	254,278	Feb. 28	1239	369	21	566
Fence. Barbed	A. J. Upham	255,309	Mar. 21	1211	334	21	861
Fence. Barbed-wire	C. Pieper	259,205	June 6	403	107	21	1764
Fence. Barbed-wire	W. Watkins and H. B. Scutt. (Reissue.)	10,033	Mar. 7	410	109	21	703
Fence. Board and wire	N. and M. Cheney	257,847	May 16	871	244	21	1453
Fence. Electric-wire	J. H. Connelly	259,569	Jan. 24	1113	312	21	297
Fence. Iron	E. G. Dewes	254,086	Mar. 14	513	138	21	724
Fence. Iron	S. W. Martin	254,353	Feb. 28	1417	389	21	611
Fence. Iron	J. H. Waters	257,194	May 2	55	17	21	1291
Fence machine. Barb-wire	F. E. Patterson	258,314	May 23	1440	411	21	1563
Fence nail. Wire	C. W. Dean	256,486	Apr. 18	918	255	21	1195
Fence nail. Wire	S. Leonard	256,488	Apr. 18	945	263	21	1121
Fence. Picket	R. H. McGinty. (Reissue)	10,009	Jan. 3	405	109	21	70
Fence. Portable	W. H. Hay	254,214	Feb. 28	1256	349	21	564
Fence. Portable	S. P. Porter	257,755	May 9	765	213	21	1423
Fence. Portable	S. E. Rahn	258,021	Jan. 24	1138	316	21	211
Fence. Portable	W. H. Randall	254,504	Mar. 7	70	19	21	650
Fence. Portable	O. E. H. M. Reichling	253,765	Feb. 14	703	200	21	477
Fence. Portable	E. Stahl	257,101	Apr. 25	1640	461	21	1361
Fence. Portable	D. B. Wagner	258,830	May 30	2067	583	21	1670
Fence. Portable	H. M. Beecher	255,714	Mar. 28	1596	430	21	925
Fence-post	J. M. Brokaw	254,194	Feb. 28	1233	343	21	560
Fence-post	W. Cline	256,894	Apr. 25	1400	374	21	1218
Fence-post	M. T. Gleason	254,304	Feb. 28	1383	378	21	691
Fence-post	C. Kinney	254,088	Mar. 7	284	69	21	683
Fence-post	M. G. Lewis	251,904	Jan. 3	272	74	21	48
Fence-post	C. A. Mann	254,359	Feb. 28	1413	386	21	619
Fence-post	J. F. Morrison	258,459	May 23	1619	457	21	1593
Fence-post	E. P. Phillips	255,810	Apr. 4	71	19	21	962
Fence-post	J. J. Squire	257,900	May 16	937	261	21	1466
Fence-post	F. F. Wyman	257,109	May 2	89	19	21	1291
Fence-post	A. H. Lucas	257,580	May 9	561	148	21	1369
Fence-post. Iron	G. C. Baker	256,535	Apr. 18	902	260	21	1139
Fence-rail. Barbed metallic	S. W. Martin	255,586	Mar. 28	1271	370	21	893
Fence-rosette	J. Carpenter	258,987	June 6	95	6	21	1699
Fence-strap. Barbed	S. H. Gregg	256,413	May 23	1561	448	21	1583
Fence-strips. Manufacture of barbed	L. Brenizer	259,893	June 20	1174	313	21	1918
Fence. Wire	S. Calhoun	254,796	Mar. 14	430	115	21	716
Fence. Wire	E. Rusco	258,702	Jan. 24	1225	343	21	227
Fence. Wire	J. F. Strong	256,501	May 23	1668	471	21	1601
Fence-wire barb	S. Smallwood	254,846	Mar. 14	555	148	21	749
Fence-wire. Barbed	G. Case	256,899	Apr. 25	1395	392	21	1217
Fence-wire. Barbed	N. Clark	254,923	Mar. 14	596	160	21	748
Fence-wire. Barbed	L. E. Evans	255,738	Mar. 28	1613	436	21	929
Fence-wire-barbing machine	J. Brotherton	253,675	Feb. 14	586	166	21	498
Fence-wire-barbing machine	F. P. Cady	256,121	Apr. 11	466	{125 126 127	21	1035
Fence-wire-barbing machine	H. W. Putnam	253,894	Feb. 14	779	{334 335 336 337	21	490
Fence-wire. Machine for making barbed	M. Converse and F. P. Cady	256,784	Apr. 18	1287	{338 339	21	1190
Fence-wire. Machine for manufacturing barbed	H. W. Putnam, L. Bradbury, and L. Williams.	256,471	May 23	1630	461	21	1596
Fence-wire. Machine for twisting and spooling barbed	H. W. Putnam, L. Bradbury, and L. Williams.	259,917	June 20	1260	348	21	1983
Fence-wire strand. Barbed	A. Ellwood	253,662	Jan. 31	1638	453	21	301

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Fence-wire stretcher	G. Arrowsmith	254,587	Mar. 7	174	43	21	666
Fences. Machine for making wire-barb	A. M. and B. Munson	257,867	May 16	990	{266 267}	21	1461
Fences. Warning-strip for barbed	O. P. Briggs	259,071	Jan. 10	484	134	21	91
Fencing. Machine for making barbed-wire	S. M. Stevens	253,781	Feb. 14	726	{206 207 208}	21	461
Fencing. Machine for making barbed-wire	S. Thompson and W. E. Farrell	254,516	Mar. 7	83	21	21	656
Fencing material. Prodissing barbed	W. S. Bate	254,994	Mar. 14	574	155	21	744
Fencing. Spool for winding barbed	J. D. Curtis	255,147	Mar. 21	890	230	21	896
Fencing-strip. Barbed metal	W. E. Brock	255,762	Apr. 4	12	4	21	953
Fencing-strip. Barbed metal	W. E. Brock	255,763	Apr. 4	13	4	21	953
Fender: *See* Fire-place fender. Vessel-fender. Stove-heat fender. Wheel-fender.							
Fermentation. Apparatus for preparing grain for	F. O. Kuns	260,309	June 27	1797	467	21	2039
Fermenting and storage tanks. Cleaning attachment for	J. Bauer	257,431	May 2	347	97	21	1343
Fermenting malt liquors. Apparatus for	M. A. Maus	253,214	Feb. 7	45	14	21	354
Ferrocyanides from gas-liquor. Obtaining	H. Bower and W. L. Rowland	259,608	June 20	1173	.....	21	1912
Ferrule and gudgeon for wooden rollers. Combined	J. L. Owens	255,188	Mar. 21	942	251	21	815
Ferrule. Wire	H. O. Lothrop	254,350	Mar. 7	136	34	21	661
Fertilizer	I. Brown	253,971	Feb. 21	971	.....	21	548
Fertilizer	I. Eisasser	253,991	Feb. 21	991	.....	21	551
Fertilizer. Apparatus for reducing material to a pulverulent	H. S. Firman	255,269	Mar. 21	1041	279	21	832
Fertilizer-bag	R. R. Zell	256,594	May 23	1606	.....	21	1607
Fertilizer-distributer	J. L. Bergen	256,695	Apr. 18	1095	308	21	1155
Fertilizer-distributer	J. M. Heulings	256,799	Apr. 18	1295	364	21	1191
Fertilizer-distributer	W. Marks	259,396	June 13	559	147	21	1788
Fertilizer-distributer	A. R. Pennington	255,015	Mar. 14	713	192	21	769
Fertilizer-distributer	J. M. Westcott	253,454	Feb. 7	390	89	21	400
Fertilizer distributer and planter	A. B. Farquhar, J. A. Jones, and H. W. Eisenhart.	256,430	Apr. 11	856	{238 239}	21	1102
Fertilizer-distributer and seed-drill. Combined	C. R. Straughn	256,404	Apr. 11	819	226	21	1096
Fertilizer-distributer and seeder	J. W. Spangler	256,249	Apr. 11	644	{174 175}	21	1064
Fertilizers. Apparatus for desiccating animal matter for	H. Breer	255,925	Apr. 4	215	56	21	946
Fertilizers. Reducing and mixing machine for	G. B. Berrell	256,115	Apr. 11	459	194	21	1034
Fertilizers. Treating phosphates for	J. F. Gibbons and G. A. Liebig	252,029	Jan. 10	434	.....	21	82
Fertilizing material. Manufacture of	F. L. Harris	259,140	June 6	398	87	21	1751
Fertilizing substances. Treatment of excreta for the production of	H. Collet	260,165	June 27	1698	.....	21	1993
Fiber. Apparatus for determining the nitrition of cellular	L. White and K. Whitcomb	254,751	Mar. 7	366	96	21	700
Fiber disintegrated from cotton-stalks	F. Wheaton	254,746	Mar. 7	361	.....	21	699
Fiber from the cotton-plant and manufacture of articles therefrom. Separation of	F. Wheaton	254,749	Mar. 7	363	.....	21	700
Fibers of leaves. Machine for cleaning and separating the	E. Beovide	251,818	Jan. 3	165	46, 47	21	30
Field-roller	A. R. Moore	256,098	Apr. 4	338	91	21	1007

Furnace linings and bottoms. Composition for refractory	A. E. Tucker	256,607	Apr. 18	1089	.....	21	1151
Furnace-sheet for steam-boilers	H. C. Darby	253,516	Feb. 14	407	113 114	21	427
Furnaces. Apparatus for injecting air and steam into	A. J. Simmons	251,740	Jan. 3	64	18	21	13
Furnaces. Apparatus for promoting the combustion of fuel in	R. J. Mallett, Jr	256,451	May 23	1609	455	21	1591
Furnaces. Apparatus for utilizing the waste products of combustion in	T. S. Speakman	253,720	Feb. 14	794	206	21	461
Furnaces. Feeding air to	G. B. N. Tower	257,895	May 16	944	263	21	1464
Furnaces. Mechanism for feeding air and steam to	D. Renshaw	251,797	Jan. 3	139	38	21	25
Furniture. Packing-fastener for	M. E. McMaster	252,110	Jan. 10	530	150	21	109
Furniture-caster	C. Haring	254,310	Feb. 28	1267	377	21	698
Furniture-caster and method of making the same	G. Doolittle	254,286	Mar. 14	613	165	21	751
Fure or fur trimmings. Ruler or guide for cutting	G. L. Blow	256,956	Apr. 25	1492	418	21	1823
Gag-runner	W. H. Chapman	258,492	June 13	760	208	21	1635
Gage:							
See Axle-box gage. Boring-gage. Centers-gage. Planing-gage. Pivot-gage. Pressure-gage. Saw-table gage. Shingling-gage. Surface-gage. Water-gage.							
Gaiter	W. A. Quinn	257,066	Apr. 25	1666	461	21	1854
Galvanic battery	W. A. Childs and F. Shaw	255,597	Mar. 28	1459	393	21	910

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's	Official Gazette. Vol.	Official Gazette. Page.
Galvanic battery	G. M. Hopkins	256,691	Apr. 18	1174	320	21	1170
Galvanic battery	J. Kidder	258,857	May 30	2078	591	21	1934
Galvanic battery	A. Misbrod	254,676	Mar. 7	978	74	21	625
Galvanic battery	A. M. G. Schillot	253,709	Feb. 14	797	226	21	473
Galvanic battery	A. J. Holt	252,165	Jan. 31	1631	500	21	335
Galvanic-battery plates. Apparatus for immersing	L. Hochhauser	252,705	Jan. 24	1292	354	21	228
Galvanic pad	H. R. Pond	256,597	June 6	422	120	21	1765
Game apparatus	G. R. Spear	258,736	Apr. 18	1240	340	21	1152
Game apparatus	V. W. Wilson	254,689	Feb. 28	1423	390	21	685
Game apparatus	J. F. Kingwill	259,053	June 20	1642	395	21	1939
Game-board	J. S. Post	256,653	June 6	911	258	21	1732
Game-board	W. B. Silver	255,859	Apr. 4	167	48	21	978
Game-board	J. Storch	256,287	June 13	1084	147	21	1732
Game or parlor race-course. Mechanical	J. Maxfield	258,078	May 30	2080	590	21	1870
Game-piece and method of exhibiting the same	J. Storch	253,084	Feb. 14	394	109	21	445
Game-ring. Sportsman's	E. Bourne	255,367	May 23	1594	435	21	1588
Game-wheel	W. Dunnings	256,264	Apr. 25	1483	409	21	1388
Gang-press	E. Lacey	259,048	June 20	1389	367	21	1938
Gangway for ships	J. P. Gorton	253,735	Feb. 14	680	197	21	470
Garment	G. W. Parker	260,143	June 27	2085	433 433	21	1959
Garment	F. Wallach	255,168	Mar. 21	940	264	21	797
Garment-supporter	A. C. Greene	253,615	Feb. 14	515	149	21	444
Garment-supporter	M. Marcus	256,791	Apr. 18	1186	333	21	1179
Gas and electric-lamp fixture. Combined	R. H. Johnson	260,259	June 27	1760	478 419 348	21	2015
Gas and promoting combustion. Apparatus for generating	W. F. Browne						
Gas apparatus	J. Hanlon	254,212	Feb. 28	1257	349	21	694
Gas apparatus. Automatic	B. C. Vandusen	256,534	Apr. 25	1457	409	21	1527
Gas. Apparatus for burning Illuminating	P. W. Mackenzie and H. W. Rapplaye.	259,981	June 20	1961	398	21	1967
Gas. Apparatus for making carbureted-hydrogen	W. H. Taylor	256,406	Apr. 11	821	235 227	21	1006
Gas. Apparatus for manufacturing	T. G. Springer	253,120	Jan. 31	1761	488	21	331
Gas. Apparatus for the manufacture of	J. S. Pierson	252,987	Jan. 31	1563	435 435	21	289
Gas. Apparatus for the manufacture of combustible	E. Langen	256,774	May 30	2085	592	21	1402
Gas-burner. Electrical	J. Redding	252,845	Jan. 24	1416	395	21	256
Gas-engine	R. Hutchinson	253,709	Feb. 14	659	179 179 180	21	464
Gas-engine	T. McAdoo	253,405	Feb. 7	358	98	21	399
Gas-engine	H. Wiedling	259,736	June 20	1694	491 492	21	1897
Gas-exhaust regulator	R. K. Hunton	257,494	May 9	695	193	21	1395
Gas-fixtures. Clamp for extension	J. F. Brown	256,455	Apr. 11	949	265	21	1161
Gas for hand-lights. Apparatus for generating	H. S. Maxim. (Reissue)	10,101	May 2	373	104	21	1349
Gas for heating and illuminating purposes. Process of and apparatus for manufacturing	H. Y. Asteill and W. Farmer. (Reissue.)	10,098	Mar. 7	413	116	21	709
Gas for preserving food. Preparing	R. R. McCall	256,787	Jan. 24	1381	378	21	944
Gas from acidulous springs. Collecting and utilizing carbonic-acid	C. H. Schultz	259,219	June 6	417	111	21	1767
Gas-furnace	F. Diecksmann	256,122	Apr. 11	828	231	21	1027
Gas-generating apparatus	E. B. Reynolds	256,741	Apr. 18	1269	344	21	1179
Gas-generating furnace for heating retorts	A. Weber	259,982	June 20	1945	391 388 383	21	1941
Gas generator. Hydrogen	A. Durand	254,189	Feb. 28	1267	348	21	709
Gas-governor	N. M. Garland	253,894	Jan. 3	288	80	21	49
Gas-governor for vulcanizers	T. Shaw	256,585	Apr. 18	964	270	21	1134
Gas-heating apparatus	S. Darling	253,650	Feb. 21	617	331 288	21	893
Gas-jets. Electric device for turning on, lighting, and extinguishing	A. L. Bogart	258,267	June 6	475	135	21	1776
Gas-light extinguisher. Automatic	W. Clancey	254,196	Feb. 28	1236	344	21	689
Gas-lighter. Electric	C. D. Haskins	251,777	Jan. 3	111	31	21	12
Gas-lighter. Electric	A. Mahon and W. J. Green	255,594	Mar. 28	1360	380	21	888
Gas-lighter. Electric	W. D. Sebesley	258,136	May 16	1218	340	21	1314
Gas-lighter. Electric	W. H. H. Whiting	257,195	May 2	16	17	21	1221
Gas-lighter. Electric	T. H. Rhodes	257,970	Apr. 25	1615	450	21	1525
Gas-lighting apparatus. Electrical	T. H. Rhodes	257,189	May 2	49	15	21	1220
Gas-lighting apparatus. Electrical	J. Redding	252,849	Jan. 24	1417	395	21	256
Gas-lighting. Electric	J. M. A. Montoiar	259,413	June 13	670	178	21	1619
Gas-lubricator for vehicles, &c	R. C. Burgess	254,572	Mar. 14	700	189	21	788
Gas-machine	R. W. Flower, Jr., and E. C. Burgess	253,088	Jan. 31	1042	295	21	333
Gas-machine	C. M. Kemp	259,249	June 13	644	339	21	1618
Gas-machine	J. P. Clifford	257,246	May 16	873	244	21	1462
Gas machine. Air	G. Lago	257,447	May 9	691	.....	21	1395
Gas. Manufacturing illuminating	W. H. Bradley	257,543	May 9	691	.....	21	1570
Gas. Manufacturing water	M. A. Otto	258,588	Jan. 17	1660	220	21	1169
Gas. Method of and apparatus for the manufacture of combustible	M. H. Burritt	258,894	June 6	17	4	21	1927
Gas-motor engine	T. B. Fogarty	254,294	Feb. 28	1263	346	21	698
Gas. Process of and apparatus for manufacturing	J. W. Hodges	255,788	Apr. 4	39	12	21	977
Gas. Process of and apparatus for manufacturing	T. G. Springer	257,189	Apr. 25	1646	441	21	1580
Gas. Process of and apparatus for producing illuminating and heating	H. C. Shields	259,723	June 20	1674	393	21	1888
Gas. Process of and apparatus for the manufacture of	T. G. Springer. (Reissue)	10,099	Feb. 7	371	103	21	399
Gas-purifying apparatus	S. and J. Chandler	259,277	June 20	1695	378	21	1943
Gas-regulator	L. P. Blair	251,888	Jan. 3	173	49	21	28
Gas-regulator	G. B. Leeny	256,517	Mar. 28	1368	383	21	891
Gas-regulator	L. H. McCullough	260,038	June 27	1474	367	21	1959
Gas-regulator	L. H. McCullough	260,039	June 27	1476	368	21	1570
Gas-regulator	M. Sherman. (Reissue)	10,116	May 16	1215	338	21	1322

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Gas-trap	J. W. Rogers	259,258	Jan. 10	697	197	21	198
Gases for motive power, heating, &c. Process of and apparatus for generating	W. F. Browne	257,560	May 9	496	137 138 139 140	21	1375
Gasolier	J. H. Seaman. (Reissue)	10,070	Apr. 4	441	120	21	1084
Gasolier	J. H. Seaman. (Reissue)	10,071	Apr. 4	443	120	21	1085
Gasoline-furnace	D. Norton	260,294	June 27	1706	461	21	2005
Gate: *See* Automatic gate. Self-opening gate. Elevator-gate. Sliding gate. Hod-gate. Sliding and swinging gate. Farm and yard gate. Swinging gate. Flood-gate. Wire gate.							
Gate	C. H. Allison	255,461	Mar. 28	1317	355	21	884
Gate	H. C. Baker	259,459	June 13	725	193	21	1080
Gate	R. J. Colvin	258,949	Apr. 4	533	80	21	969
Gate	N. C. Cooley	258,433	Jan. 17	994	255	21	189
Gate	J. F. Coppock	253,988	Feb. 21	963	274	21	530
Gate	T. Crane	254,301	Feb. 28	1230	345	21	561
Gate	S. S. Durben	255,482	Mar. 28	1337	361	21	888
Gate	J. Ferguson	255,267	Mar. 21	1040	279	21	832
Gate	W. C. Hooker	257,330	May 2	228	63	21	1281
Gate	O. J. Miller	259,330	June 13	569	159	21	1080
Gate	L. Patterson and I. J. Palmer	251,788	Jan. 3	50	14	21	11
Gate	A. F. Purefoy	257,894	May 16	998	269	21	1402
Gate	J. O. Smith	259,227	June 6	429	114	21	1766
Gate	W. O. Stickler	258,699	Jan. 24	1146	321	21	213
Gate	W. H. Tupper	254,073	Feb. 21	1095	303	21	549
Gate-closer	H. Gross	257,491	May 9	432	119	21	1364
Gate-hanger	W. G. Alexander	253,898	Feb. 21	789	225	21	499
Gate-hanger	J. Wadleigh	257,111	Apr. 25	1660	465	21	1263
Gate-holder	W. H. Mills	257,737	May 9	746	207	21	1419
Gate-post	E. J. Hart	257,388	May 2	212	59	21	1319
Gear. Platform	A. H. Beach	255,834	Apr. 4	100	28	21	967
Gate-roller	C. B. Rice	259,253	Jan. 10	691	195	21	195
Gates. Hanging	W. R. White	259,915	Jan. 31	1502	418	21	279
Gear-cutting machine	A. H. Brainard	255,409	Mar. 28	1227	338 339	21	870
Gear. Spiral bevel	U. Haskin	253,863	Feb. 21	839	236	21	506
Gearing. Adjusting	A. Gordon and G. T. Reiss	256,533	May 23	1707	482	21	1606
Gearing. Flexible	A. S. Gear	258,026	Jan. 10	434	119	21	82
Gelatine and glue from animal refuse or offal. Manufacture of	A. J. Huet	259,771	Jan. 24	1304	.....	21	240
Gem-settings. Manufacturing	J. R. Feeley	253,594	Feb. 14	417	116	21	439
Generator: *See* Electric generator. Ozone-generator. Gas-generator. Steam-generator. Magneto-generator. Telephone-signal generator. Magneto-electric generator.							
Generator	A. D. and A. D. Puffer, Jr.	254,371	Feb. 28	1435	393	21	614
Glass-annealing furnace	C. Tondeur	256,156	May 16	1241	350	21	1519
Glass casks, barrels, &c. Manufacture of	C. W. McLean	253,543	Feb. 14	440	125	21	433
Glass coffin	C. W. McLean	253,545	Feb. 14	441	125	21	433
Glass-coffins, bath-tubs, &c. Manufacture of	C. W. McLean	253,539	Feb. 14	438	122 123	21	432
Glass-cover handle	D. E. Ladd	255,398	Mar. 21	1198	331	21	859
Glass, crystal, &c. Apparatus for molding fancy articles in	C. G. Picard	259,203	June 6	401	107	21	1764
Glass, &c. Decorating	A. G. Paul and J. H. Rouse	258,108	May 16	1182	.....	21	1508
Glass fittings and trimmings of buildings. Manufacture of	C. W. McLean	253,540	Feb. 14	437	123 124	21	432
Glass for use in illuminated windows. Manufacturing	A. Friedrick	256,402	May 23	1553	.....	21	1501
Glass-furnace	J. W. and J. R. Heuchin	254,653	Mar. 7	254	65	21	661
Glass lamp shades and globes. Manufacture of	D. C. Ripley	257,395	May 2	225	62	21	1332
Glass. Machine for blowing window	H. Harris, J. and E. Phillips	255,503	Mar. 28	1342	362	21	866
Glass mantel	C. W. McLean	253,542	Feb. 14	439	125	21	433
Glass-melting furnace	F. Siemens	256,746	Apr. 18	1236	347 348	21	1181
Glass-melting furnace. Continuous	J. W. and J. R. Heuchin	254,654	Mar. 7	255	65, 66	21	661
Glass. Melting, refining, and working out	C. W. Siemens	254,579	Mar. 7	154	36	21	664
Glass. Method of and apparatus for annealing and tempering	J. H. Campbell	254,373	Feb. 28	1325	367	21	595
Glass mold for casting ornamental picture-frames, &c.	J. Haley	260,193	June 27	1668	.....	21	1998
Glass-molds. Frame and treadle for	N. Granger	254,637	Mar. 7	231	60	21	677
Glass ornament for windows, screens, &c	E. Vedder	257,417	May 9	388	93	21	1340
Glass strap-cam and mold for making the same	H. Fuerbake and C. N. Brady	256,063	Apr. 18	1139	320	21	1163
Glass slabs. Manufacture of annealed and toughened	C. W. McLean	253,541	Feb. 14	438	124	21	433
Glass, &c. Staining or enameling	S. J. Newaham	256,916	Apr. 25	1436	.....	21	1294
Glass to imitate wood. Ornamental	J. Budd	251,668	Jan. 3	9	.....	21	4
Glassware. Decorating	B. Benes and J. Flögel	257,643	May 9	668	176	21	1388
Glassware. Ornamentation of	F. Rhind	256,886	May 30	2041	576	21	1674
Gliders' pelots. Machine for setting	G. W. Hubbard	258,379	Jan. 17	853	237	21	156
Glosser and binder	M. G. Hubbard	256,231	May 23	1365	383	21	1547
Globe. Educational	T. McDonough	254,289	Feb. 28	1275	354	21	567
Globe for electric and other lights. Glass	J. D. Muller	256,795	May 30	2080	573	21	1673
Globe-holder	C. A. Kinney	256,436	May 23	1530	451	21	1526
Globes. Mounting for	F. Cheney	253,566	Feb. 14	401	111	21	466
Glove	E. D. Burr	252,972	Feb. 21	972	271	21	498
Glove	H. S. Flood	256,558	Apr. 18	1018	287	21	1143
Glove	W. W. Whitaker	259,660	June 13	996	247	21	1843
Glove-fastener	W. S. Richardson	253,280	Feb. 7	56	18	21	357

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Glove-fastening	W. Gifford	256,466	May 23	1557	441	21	1555
Glove-fastening	S. Montgomery	253,617	Jan. 24	1131	317	21	211
Glove-fastening	F. A. C. J. Quaker	253,889	Feb. 7	747	48	21	366
Glove, &c., fastening	W. S. Richardson	260,689	June 27	1697	488	21	1971
Glove-fastening, &c	J. Wadleigh	260,648	May 30	2076	588	21	1733
Glove-fastening	R. M. Magee	260,653	June 20	1613	479	21	1735
Glove. Hooking	E. W. Burr	260,613	June 20	1595	317	21	1614
Glove or mitten	F. J. Herrick	255,837	Apr. 4	196	59	21	971
Glove or shoe clasp	W. R. Carpenter	256,196	Apr. 11	973	257	21	1232
Glove or shoe fastener	W. H. Rusby	260,668	June 20	1520	388	21	1632
Gloves, &c. Fastening for	A. Hopkins	254,013	Feb. 21	1050	288	21	532
Gloves, gaiters, &c. Fastener for	E. Root, A. K. McKee, and H. Hamlin.	260,650	June 6	1265	30, 31	21	1732
Glucose. Converter for converting starch into	E. Fox	257,880	May 16	970	251	21	1460
Glucose or grape-sugar. Manufacture of	H. Hamlin	255,665	Apr. 25	1344	370	21	1297
Glucose. Process of and means for purifying	G. H. Hopper	255,621	Apr. 4	1120	24, 25	21	973
Gluing barrels. Method of and apparatus for	E. T. Babbitt	256,813	Apr. 18	1073	294	21	1139
Glycerine and apparatus therefor. Process of extracting	E. T. Babbitt	256,614	Apr. 18	1073	294	21	1138
Glycerine from salt soap-lye. Extracting	J. P. Battershall	251,988	Jan. 3	370	.....	21	66
Glycerine from soap-liquor. Manufacturing	C. Thomas, W. J. Fuller, and S. A. King.	258,155	Jan. 10	588	.....	21	167
Glycerine from soap-lyes. Recovery of	W. R. Harris	259,141	June 6	389	.....	21	1762
Gold from ores. Extracting	A. E. Jones	251,718	Jan. 3	36	10, 11	21	9
Gold from quartz and rock-tailings. Apparatus for separating	C. Taylor	253,785	Feb. 14	728	200	21	488
Gold separating and amalgamating apparatus	H. K. Heywood	254,315	Feb. 28	1271	378	21	623
Gold-separator	J. L. Jackson and W. A. Cogswell	254,775	Mar. 7	396	105	21	765
Governor	E. S. Batchelor	251,991	Jan. 3	373	161	21	94
Governor and indicator for fluid-pressure brakes. Electric	A. Hafner	253,695	Feb. 14	614	174	21	489
Governor attachment for elevators	H. Linton	258,289	Apr. 11	612	166 167	21	1030
Governor. Electrical	R. P. Bolton	255,789	Apr. 4	10	3	21	962
Governor. Engine	L. D. Forbes	251,650	Jan. 3	218	61	21	30
Governor for cotton-gins	M. G. Foote	257,408	May 2	295	118	21	1262
Governor for direct-acting engines	G. C. Phillips	257,976	May 16	1004	285	21	1479
Governor for direct-acting engines	G. C. Phillips	257,975	May 16	1003	285	21	1479
Governor for pumping-engines	J. J. Hahn	255,972	Apr. 4	200	72	21	1002
Governor. Steam	L. W. Andrews	256,948	Apr. 25	1475	413	21	1302
Governor. Steam-engine	F. D. Cammer	260,694	June 27	1434	367	21	1965
Governor. Steam-engine	G. Reznor	257,060	Apr. 25	1612	452	21	1265
Governor. Steam-engine	J. E. Sweet	258,276	Jan. 10	725	203	21	150
Governor. Speed	J. Richardson	253,168	Jan. 21	1741	481 488	21	318
Governor-valve	P. W. Green and A. E. Turner	254,604	Feb. 21	1007	282	21	534
Governor. Water	H. S. Miller	257,209	May 9	488	136	21	1360
Governors. Device for operating steam-engine	W. M. Perry	260,689	June 27	1536	413	21	1979
Grade-recording instrument	A. M. Rymer-Jones	254,928	Mar. 14	670	187 188	21	702
Grader for drains	G. F. W. Harris	251,873	Jan. 3	293	66	21	62
Grading and ditching machine	J. C. Prescott	257,756	May 9	709	214 485	21	1401
Grain and cockle separator	P. M. L. Herse	258,287	May 23	1491	486	21	1501
Grain and grass-seed distributer	A. F. Gibboney	256,497	May 23	1557	441	21	1552
Grain and mineral separator	J. Sternberg	256,495	May 23	1556	440	21	1552
Grain-bin	E. Annen	257,207	May 16	1000	282	21	1434
Grain-bin	E. Holmes	255,597	Mar. 28	1348	363	21	880
Grain-binder	J. F. Appleby	255,713	Mar. 28	1396	400	21	925
Grain-binder	J. F. Appleby	256,188	Apr. 11	956	132 133	21	1600
Grain-binder	J. F. Appleby	257,657	May 16	889	241	21	1451
Grain-binder	W. R. Baker	256,374	May 23	1494	397 398	21	1556
Grain-binder	H. J. Case	253,567	Feb. 14	409	111	21	466
Grain-binder	W. Gause and J. F. Selberling	257,934	May 16	975	272 273 274	21	1470
Grain-binder	P. F. Hedges	255,995	Apr. 4	293	77	21	980
Grain-binder	M. G. Hubbard	257,223	May 2	228	64	21	1333
Grain-binder	C. W. Levalley	253,972	Jan. 31	1765	470	21	328
Grain-binder	C. Lidren	253,187	Jan. 21	1734	486	21	323
Grain-binder	S. D. Locke	253,493	Jan. 17	664	274	21	179
Grain-binder	W. Lottridge	254,679	Mar. 14	533	142 143 144 145	21	736
Grain-binder	J. M. McMaster	258,236	Jan. 10	671	189 190	21	198
Grain-binder	J. M. McMaster	258,237	Jan. 10	672	190 191	21	198
Grain-binder	D. McPherson. (Reissue)	10,065	Jan. 9	405	109 110	21	76
Grain-binder	L. Miller	259,266	June 13	561	147 149	21	1790
Grain-binder	G. P. Morton	256,257	Apr. 11	770	211 212	21	1607
Grain-binder	J. D. Nix	260,115	June 27	1570	423 424	21	1964
Grain-binder	N. T. Remy	256,606	Apr. 18	1208	307	21	1169
Grain-binder	J. L. Ware	256,179	Apr. 11	953	146	21	1603
Grain-binder	F. J. Yandle	257,806	May 9	681	220	21	1452
Grain-binder	C. Young	258,687	May 30	1969	522 523	21	1622

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Grain-binder. Automatic	G. F. Green	260,668	June 27	1540	415	21	1979
Grain-binder. Automatic	P. F. Hodges	258,463	Jan. 17	960	416	21	175
Grain-binder cord-knotter	J. H. Dean	260,667	June 27	1531	412	21	1978
Grain-binder cord-knotter	W. N. Whiteley, W. Bayley, and A. Hurd.	255,741	Mar. 28	1637	443	21	941
Grain-binder cord-tyer	J. H. Dean	255,944	Apr. 4	240	68	21	989
Grain-binder knot-tyer	P. Hanson	257,573	May 9	538	148	21	1381
Grain-binder knot-tying device	R. Chamberlain and J. Austin	253,668	Jan. 31	1607	446	21	297
Grain-binder tension	C. Calahan	256,018	Jan. 10	462	116	21	88
Grain-binder tension device	J. F. Appleby	252,930	Jan. 31	1594	449	21	295
Grain-binders. Bundle compressor and ejector for	L. Miller	259,897	June 20	1278	342	21	1830
Grain-binders. Elevator-frame of	I. P. Cadman	254,456	Mar. 7	13	4	21	641
Grain-binding machine	J. R. Prescott	256,114	May 16	1188	335	21	1660
Grain-binding machine	J. R. Prescott	256,594	May 16	1200	362 363	21	1530
Grain-carrier	J. S. Davis	253,661	Jan. 16	494	137	21	92
Grain-cleaner	W. C. Holmes	251,863	Jan. 3	346	98	21	44
Grain-cleaner	J. Russell	255,089	Mar. 14	730	197	21	773
Grain-cleaner	J. Russell	255,090	Mar. 14	732	198	21	773
Grain-cleaner	J. M. Shackelford and J. W. K. McClure.	254,571	Mar. 7	153	39	21	664
Grain-cleaner	I. Snare	257,190	May 2	51	16	21	1290
Grain-cleaner	S. Truax	256,789	Apr. 18	1256	354	21	1185
Grain-cleaner	W. Williamson	251,964	Jan. 3	361	97	21	62
Grain cleaning, separating, and grading machine	J. M. Hawley	253,360	Feb. 7	226	64, 65	21	304
Grain-conveyer	R. Dunbar	257,855	May 16	859	246	21	1465
Grain-conveyer	H. Harrison	259,397	June 13	639	169 170	21	1819
Grain. Decorticating	W. Ager	259,452	June 13	718	191	21	1827
Grain-decorticating apparatus	W. Ager	258,339	May 23	1478	421	21	1560
Grain-decorticating apparatus	W. Ager	258,340	May 23	1479	421	21	1560
Grain-decorticating apparatus	W. Ager	258,341	May 23	1480	421	21	1560
Grain drier	J. H. Catron, R. Foster, and W. R. Graham.	255,009	Mar. 21	831	231	21	795
Grain-drier	H. R. Heffner	254,948	Mar. 14	652	177	21	756
Grain-drier	E. Thompson	259,436	June 13	697	185	21	1823
Grain drier and cleaner	L. C. Porter and C. McNicol	257,064	Apr. 25	1603	450	21	1253
Grain-drill	G. G. Blunt	254,452	Mar. 7	6	2	21	640
Grain-drill	J. F. Keller	257,951	May 16	897	278	21	1474
Grain-drill	S. G. Major	258,449	May 23	1667	455	21	1501
Grain-drill	R. C. Morris	251,794	Jan. 3	44	12, 13	21	10
Grain-drill	A. N. Norris	260,648	June 27	1476	380	21	1970
Grain-drill	G. W., J. R., and S. B Rude	253,891	Feb. 21	867	245	21	519
Grain-drill	C. Schols	257,580	May 9	464	139	21	1370
Grain-drill	H. P. Tenant	256,764	Apr. 18	1253	352 353	21	1184
Grain-drill	W. W. Winegar	257,494	May 2	338	95	21	1341
Grain-drill attachment	H. C. Pratt	255,668	Mar. 28	1538	414	21	925
Grain-drill fertilizer-distributer	G. D. Baker	253,339	Feb 7	186	53	21	378
Grain-drill fertilizer-feeder	A. H. Worrest	256,190	May 16	1279	360	21	1566
Grain-drill. Force-feed	D. M. Parry	260,315	June 27	1815	492	21	2023
Grain-drill. Force-feed	H. P. Tenant	256,763	Apr. 18	1251	353	21	1184
Grain-drill point	D. J. Shults	256,146	Jan. 10	574	162	21	105
Grain-drill seed-cup	J. King	253,986	Feb. 21	916	235	21	519
Grain-drills. Spring-hoe for	J. and T. H. Neron	256,465	May 23	1684	430	21	1494
Grain-drying apparatus	J. Barclay	255,564	Mar. 28	1410	381	21	991
Grain-drying apparatus	F. W. Wiesebrock	255,371	Mar. 21	1171	314	21	854
Grain-drying machine	J Barclay	254,903	Mar. 14	573	155	21	744
Grain-elevator	H. Armington	259,457	June 13	783	192	21	1838
Grain-elevator	F. J. Firth	256,043	May 16	1165	307 308	21	1494
Grain-elevator	F. J. Firth	256,044	May 16	1166	308	21	1494
Grain-elevator	E. C. Hinckley	252,376	Jan. 17	648	226	21	157
Grain-elevator	W. H. Lots	257,446	May 2	300	101	21	1346
Grain-elevator	E. Roberts	256,944	Apr. 11	630	173	21	1664
Grain gathering and binding machine	W. N. Whiteley	256,179	May 16	1265	357 366	21	1562
Grain-header	J. W. and A. B. Jory	252,776	Jan. 24	1311	367	21	941
Grain, &c. Machine for drying and cooling	S. E. Worrell	256,940	Apr. 25	1462	411	21	1236
Grain, &c. Machine for reducing	J. Hollingsworth	254,574	Mar. 14	660	179	21	739
Grain-mill	L. Hottmann	254,921	Mar. 7	134	31	21	639
Grain, ores, &c. Apparatus for pulverizing	L. S. Chichester	253,344	Feb. 7	198	55	21	379
Grain, ores, &c. Apparatus for pulverizing	F. Taggart	256,671	Apr. 4	385	103	21	1615
Grain-packer	W. Bayley	255,569	Mar. 28	1418	382 383	21	992
Grain-packer for binding-machines	W. N. Whiteley	256,180	May 16	1267	359 360	21	1564
Grain-reduction machine	J. M. Case	259,479	June 13	756	200	21	1835
Grain-reduction machine	J. M. Case	259,480	June 13	757	201	21	1835
Grain-reduction machine	J. M. Case	259,481	June 13	758	201	21	1835
Grain-register	W. Stringer	259,942	June 20	1332	356	21	1939
Grain-sampler	L. C. Smith	258,469	May 23	1651	448	21	1506
Grain-sampler. Automatic	W. Hawes	259,398	June 13	685	216	21	1840
Grain-sawing attachment for separators	N. McLean	253,926	Feb. 21	920	250	21	381
Grain-scourer	D. Mann	252,046	Jan. 10	454	125	21	85
Grain-separator	H. A. Barnard, J. B. Cornwall, and J. S. Lees.	256,097	Apr. 4	417	113 114	21	1039
Grain-separator	H. A. Barnard, J. B. Cornwall, and J. S. Lees.	260,150	June 27	1613	435 436	21	1981
Grain-separator	R. D. Brown	257,425	May 2	350	98	21	1344
Grain-separator	J. Brush	254,570	Feb. 28	1304	366	21	665
Grain-separator	J. Grube	252,314	Jan. 17	776	216	21	145
Grain-separator	J. F. Hatfield	255,765	Mar. 21	1064	298	21	838

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Grain-separator	J. F. Hatfield	257,766	May 2	323	89	21	1289
Grain-separator	P. P. Herberg and F. M. Claussen	258,088	Apr. 4	231	64	21	988
Grain-separator	H. J. Hoyle	254,688	Mar. 14	635	175	21	738
Grain-separator	J. A. Krake	253,638	Mar. 28	1535	439	21	938
Grain-separator	C. B. McNeal	253,543	Feb. 14	448	123	21	453
Grain-separator	L. Morgan	253,886	Feb. 14	445	122	21	451
Grain-separator	G. A. Mensch	257,156	May 2	45	15	21	1280
Grain-separator	R. A. Smith and G. Chase	254,974	Mar. 7	157	40	21	664
Grain-separator	D. Young	254,682	Mar. 14	628	173	21	731
Grain-separator	C. B. McNeal	253,547	Feb. 14	444	122	21	451
Grain, &c., separator	D. Salisbury	253,888	Jan. 24	1295	370	21	1013
Grain separator and cleaner	J. Fielding	255,698	Mar. 21	1029	278	21	1012
Grain separator or sieve	J. Gathman	254,812	Mar. 14	646	178	21	741
Grain-splitting machine	J. F. Mauny	258,319	Apr. 11	822	232	21	1012
Grain-transporting device	C. M. Morris	253,686	Jan. 31	1784	493	21	215
Graining device	J. Reed and S. C. Burdick	260,123	June 27	1503	387 388	21	1986
Granulating-machine	J. Sager	257,289	May 9	990	63	21	1393
Grape-shears	J. Lee	252,321	Jan. 17	733	210	21	146
Graphoscope. Folding	A. Palm	253,982	May 16	1262	333	21	1559
Grapple	F. G. Johnson	254,094	Mar. 14	661	185	21	760
Grappling-bucket. Automatic	F. G. Johnson	253,179	Mar. 21	982	246	21	821
Grappling-bucket. Automatic	M. Michael and P. W. Masten	258,024	Apr. 4	235	60, 59	21	1003
Grappling-iron	H. T. Hill	256,021	June 6	68	17	21	1705
Grate	G. Kemp	253,982	Feb. 7	130	39	21	288
Grate	J. Krupps	260,668	Jan. 24	1115	314	21	1980
Grate	J. P. Montgomery	253,889	Feb. 21	858	240	21	518
Grate	A. R. Parkhurst	254,689	Mar. 7	283	77	21	738
Grate and grate-bar	C. C. Hare	256,894	Apr. 25	1413	396	21	1233
Grate and shaker	H. Miller	253,980	Feb. 7	51	16	21	285
Grate-bar	T. F. Van Keuren	260,660	Jan. 10	756	210	21	1824
Grate-bar	F. W. Weaver and D. Herten	255,479	Mar. 28	1384	364	21	967
Grate. Fire-	L. E. Smith	254,082	Feb. 21	1005	281	21	567
Grate. Fire-place	J. G. Smith	254,380	Feb. 28	1468	402	21	630
Grate. Hollow	H. H. Jennes and J. C. Dunbar	256,686	Apr. 18	1169	331	21	1171
Grate. Sifting	J. D. Todd	259,665	June 13	966	248	21	1459
Grater	T. Hyatt	257,888	May 9	826	233	21	1433
Grating and building lighted thereby. Illuminating	T. Hyatt	254,636	Mar. 7	536	67	21	688
Grating. Illuminating	T. Hyatt	255,511	Mar. 28	1353	364	21	966
Grating. Illuminating	T. Hyatt	257,713	May 9	795	208	21	1414
Grating or vault-cover. Illuminating	A. Gent	275,629	May 16	685	248	21	1465
Grave-guard	J. L. Taplin	252,663	Jan. 10	473	131	21	89
Grinding and polishing machine	J. Stevens	259,765	Jan. 24	1288	344	21	1025
Grinding and reducing grain, &c. Mill for	C. Seck	253,113	Jan. 24	1754	466	21	1025
Grinding corn, &c. Roller-mill for	C. G. Burkhardt	251,883	Jan. 3	177	48, 50	21	32
Grinding grain. Roller-mill for	R. Cook	259,194	May 16	1263	334	21	1567
Grinding-machine	J. H. Taylor	255,963	Mar. 21	978	260	21	1567
Grinding-machine	M. B. Church	259,495	June 13	776	205	21	1837
Grinding-mill	J. J. and R. Clark	256,772	Apr. 4	38	7	21	1003
Grinding-mill	J. M. Collier	257,662	May 9	648	151	21	1406
Grinding-mill	L. Gathmann	254,813	Mar. 14	646	171	21	741
Grinding-mill	J. Mateer	255,369	Mar. 21	1022	272	21	1013
Grinding-mill	J. T. Oberschein	253,615	Feb. 7	202	54	21	380
Grinding-mill	G. and A. Raymond	259,267	May 30	2168	574	21	1838
Grinding-mill	T. and C. D. Rees	259,466	Feb. 14	388	103	21	453
Grinding-mill	G. K. Smith	256,617	May 30	2320	615	21	1575
Grinding-mill	A. W. Straub	260,682	June 27	1482	394	21	1979
Grinding-mill	S. P. Walling	252,156	Jan. 10	395	105	21	1575
Grinding-mill	A. S. Weaver	254,826	Apr. 25	1522	403	21	1237
Grinding-mill	J. Fitzgerald	255,954	Apr. 4	267	71	21	1013
Grinding-mill cooling mechanism	S. L. Yeager	258,975	June 6	5	2	21	1705
Grinding-mill dust-collector	C. R. Winger	252,155	Jan. 10	394	104	21	1575
Grinding-mill. Feed	M. B. Church	259,496	June 13	778	206	21	1837
Grinding-mill feed-regulator	G. S. Graves and J. Hoole	252,511	Jan. 10	539	143	21	116
Grinding-mill feed-regulator	R. Birkbeck	256,688	Apr. 18	1257	355	21	1185
Grinding-mill roll	S. L. Bean	254,677	June 6	8	3	21	1705
Grinding-mill. Roller	R. Birkbeck	255,715	Mar. 28	1397	373 374	21	976
Grinding-mill. Roller	C. T. Hanna	253,693	Feb. 14	617	373 374	21	491
Grinding or polishing wheel	C. V. Hunt	258,709	May 23	1650	452	21	1506
Grinding-roll and method of manufacturing the same	R. Birkbeck	257,647	May 9	634	178	21	1399
Grinding-rolls. Machine for cutting spiral grooves in	R. Reynolds	253,663	June 6	213	57	21	1720
Grinding-rolls. Preparing the surfaces of	W. M. Congreve	254,139	Feb. 28	1327	344	21	628
Grindstone trouble-shooter	J. M. Nelson	252,660	Feb. 14	390	149	21	453
Grits. Apparatus for cleaning	A. Bauer	253,934	Apr. 25	1469	417	21	1235
Ground-roller	J. Steinfinger	254,750	Apr. 18	1242	360	21	1163
Grounds. Ornamentation of	H. D. Cogswell	253,189	Feb. 7	15	5	21	289
Guard:							
Ax Carving-fork guard. Mustache-guard. Door and window guard. Pocket-guard. Reaper-guard. Electric-light guard. Safety-pin guard. Elevator-guard. Saw-guard. Fire-guard. Spinning-machine thread-guard. Grave-guard. Insect-guard.							
Gun and gun-carriage	D. M. Medford	259,469	Jan. 17	991	276 277	21	189
Gun and pistol barrels. Machine for rifling	P. Mauser	259,624	June 6	289	79, 81	21	1720
Gun. Breech	F. Cunningham	256,542	Apr. 18	1262	351	21	1241
Gun. Breech-loading	R. Pierce	256,041	Apr. 4	281	78	21	1005
Gun. Breech-loading breech	H. A. A. Thorn	259,245	June 20	1293	329	21	1825
Gun-lock	B. B. Hotchkiss	253,884	Feb. 21	911	264	21	515
Gun. Machine

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Gun. Magazine spring	A. L. Rich	253,688	Feb. 14	529	128	21	447
Gun-register	J. Holcham	258,944	Jan. 31	1532	429	21	285
Gun. Spring	F. Caspar	255,141	Mar. 21	670	236	21	694
Guns. Shield for ship's	N. B. Clark	256,194	Apr. 11	473	128 129	21	1635
Gymnastic apparatus	W. Hecssler	254,215	Feb. 28	1219	340	21	594
Gymnastic apparatus	W. A. Smith	256,146	May 16	1930	346	21	1517
Gynecological chair	G. W. Archer	258,109	Jan. 10	509	168 169	21	169
Hair-crimper	J. M. Corwin and H. D. Butler	255,101	Mar. 21	634	283	21	736
Hair-crimper	M. Swartz	257,784	May 9	794	228	21	1469
Hair-fastener	B. P. Ryder	256,126	May 16	1907	340	21	1513
Hair-front	E. Mittelstaedt	253,412	Feb. 7	206	77	21	301
Hair-fronts. Forming waved	J. B. McCarthy	256,668	May 30	1674	589	21	1646
Hair. Machinery for untwisting and carding curled hores	T. Adcock	254,563	Mar. 7	169	42	21	667
Hair-pin	M. T. Foote	251,856	Jan. 3	217	61	21	30
Hair-pin	C. A. Hussey and W. H. Lyman	255,292	Mar. 21	1075	289	21	837
Hair-tonic	L. Forbes	253,504	Feb. 14	488	.....	21	441
Hair-tonic	W. E. Marold	259,664	June 20	1964	.....	21	1998
Halter	E. Barnard	256,543	May 30	1725	467	21	1619
Halter	E. Ostberg	259,209	June 6	397	105	21	1763
Halter	H. Rorebeck	255,295	Mar. 21	1206	323	21	800
Halter and bridle trimming	J. S. Nelson	260,580	Jan. 17	1004	279	21	182
Halter-hook	F. B. Brown	254,698	Mar. 7	190	47	21	670
Halter or bridle	H. F. Smith	256,325	May 23	1460	415	21	1566
Hame	W. B. Hayden	257,699	May 9	707	196	21	1412
Hame	J. W. Hudson	258,229	Jan. 10	656	183	21	118
Hame	R. W. Jones	256,430	May 23	1524	449	21	1567
Hame	E. G. Latta	256,444	May 23	1602	453	21	1580
Hame	B. S. Seaman	253,949	Feb. 21	944	262	21	583
Hame and collar coupler	J. Moseman	251,917	Jan. 3	226	79	21	50
Hame-clip	F. Fraser	254,290	Feb. 28	1259	374	21	609
Hame-fastener	W. W. Bell	259,253	June 13	506	133	21	1729
Hame-fastener	A. C. Richardson	255,022	Mar. 14	784	195	21	771
Hame-staple	C. Lange	259,780	Jan. 24	1315	360	21	943
Hammer	C. J. Grellner	253,579	Feb. 7	113	34	21	365
Hammer. Blacksmith's forging	M. M. Fish	253,689	Feb. 14	604	171	21	459
Hammer. Drop	A. B. Byrkett	259,267	June 13	519	134	21	1790
Hammer. Drop	C. A. Hague	255,618	Mar. 28	1461	396	21	914
Hammer. Drop	W. Mason	260,215	June 27	1695	456	21	2083
Hammer. Steam drop	J. C. Richardson	255,383	Mar. 21	1203	322	21	800
Hammock and tent frame	G. A. Parker	260,230	June 27	1713	464	21	2086
Hammock-chair	J. Pursell, Sr	257,759	May 9	771	214 215	21	1494
Hammock or bed	C. Moore	254,677	Mar. 7	220	74	21	686
Hammock-support. Adjustable	T. L. Jennison	259,314	June 13	548	144	21	1796
Hand-rake	A. T. Phillips	259,714	June 20	1062	288	21	1983
Hand-support. Writer's	G. W. Henaley	259,390	June 13	643	170	21	1813
Handle:							
See Adjustable handle.	Saucepan-handle.

Door-hanger.							
Harbor defense	R. A. Cheesbrough	254,112	Feb. 28	1142	319	21	565
Harmonica	O. Spaethe	259,976	Jan. 31	1573	436	21	2000
Harmonica. Automatic	R. W. Pain	251,830	Jan. 3	200	81	21	38
Harness	W. H. Joscelyn	259,694	June 20	1633	975	21	1989
Harness	C. B. Matthews	259,184	June 6	360	100	21	1749
Harness	D. Morse	256,914	Apr. 25	1435	403	21	1883
Harness	A. Murray	259,707	June 20	1055	290	21	1998
Harness	C. F. Wiesenmeyer	254,057	Apr. 4	404	110	21	1018
Harness and bridle loop. Metallic	J. Watters	255,709	Mar. 28	1509	422	21	934
Harness and trace coupling	G. W. Hunter	258,106	Jan. 10	503	145	21	97
Harness attachment for vehicle-shafts	J. E. Diefenbacher	257,689	May 9	658	184	21	1404
Harness. Back-strap for plow	G. M. Bowen	259,891	June 20	1173	313	21	1912
Harness box-loop and blind	B. A. Wilson	260,674	June 27	1519	408	21	1976
Harness check-hook	H. C. Buell	258,673	Jan. 10	465	124	21	91
Harness-chime attachment	S. Kirby	257,135	Apr. 25	1496	415	21	1470
Harness. Draft-adjusting device for	J. Hugill	254,558	Mar. 7	125	32	21	659
Harness-fastener	M. Clase	255,416	Mar. 28	1237	333	21	871
Harness-hook	J. J. Wilkins. (Reissue)	10,043	Feb. 21	1149	315	21	555
Harness-trace. Wear-clip for	J. H. Philpott	259,913	June 20	1205	317	21	1933
Harness-loop	D. McMillan. (Reissue)	10,088	Mar. 7	490	113	21	710
Harness. Luminous attachment for	E. F. Pfinegar	254,841	Mar. 14	467	130	21	727
Harness-pad	P. H. Case	257,209	May 2	70	21	21	1294
Harness. Plow and work	A. Sherwood	260,126	June 27	1566	402	21	1967

Harvester	W. N. Whiteley	258,698	Jan. 24	1267	357	21	253
Harvester	W. A. Wood	251,909	Jan. 3	208	88, 89	21	63
Harvester	C. Young	253,909	Feb. 14	709	216 217	21	467
Harvester and binder	W. N. Whiteley and W. Bayley	256,151	May 16	1208	339 340 357 358	21	1504
Harvester-binder	W. R. Baker. (Reissue)	10,105	May 9	892	252	21	1440
Harvester-binder	W. P. Hale	259,306	June 13	627	169	21	1822
Harvester-binder	S. D. Locke	251,906	Jan. 3	274	74, 75	21	66
Harvester-binder	L. Miller	259,269	June 13	595	149 150	21	1730
Harvester. Corn	G. W. Irwin	255,730	Apr. 4	46	13	21	969
Harvester. Corn	R. W. Quincy	258,388	Jan. 17	791	209	21	147
Harvester. Cornstalk	W. I. Ely	253,326	Feb. 7	207	59	21	361
Harvester cutter-bar	N. Beers, Jr	256,279	Apr. 11	678	184	21	1571
Harvester cutting apparatus	E. P. Curtis	258,575	Jan. 17	1035	303	21	196
Harvester-dropper	S. Green	257,318	May 2	103	66	21	1318
Harvester-dropper	I. Richardson	254,370	Feb. 28	1145	320	21	615
Harvester-elevator	J. M. Curtis	256,698	Mar. 28	1495	394	21	911
Harvester-frame	P. Hansen	256,477	Apr. 18	937	259 260	21	1128
Harvester-frames. Adjusting mechanism for	H. A. Adams	256,913	Apr. 25	1315	371	21	1982
Harvester. Grass-seed	H. H. Spears	255,347	Mar. 21	1146	327	21	829
Harvester-aprons. Fabric for	J. B. Kelley and C. S. Smith	259,119	June 6	367	91	21	1742
Harvester pinion-connection	O. M. and M. C. McMillan	254,499	Mar. 7	58	14	21	647
Harvester-rake	J. H. Jones	257,324	May 2	89	26, 27	21	1299
Harvester-rake	J. S. Marsh. (Reissue)	10,094	Apr. 25	1711	479 480	21	1972
Harvester rake	J. S. Marsh. (Reissue)	10,095	Apr. 25	1712	480 481	21	1973
Harvester-rake	R. T. Tuttle	256,476	Mar. 28	1260	363	21	895
Harvester-raking mechanism	M. M. Heaton	255,510	Mar. 28	1262	364	21	895
Harvester reel and rake	J. Keys	260,261	Apr. 25	1490	288 289	21	1981
Harvester-reel. Jointed	F. F. Kause	256,292	Mar. 21	1023	291	21	822
Harvester safety attachment	W. F. Cornell and W. Smith	257,525	May 9	510	143	21	1377
Harvester-sickle	D. Guptill	259,757	June 20	1122	306	21	1962
Harvesters. Driving and supporting wheel of	J. A. Johnson	259,396	June 13	603	173	21	1813
Harvesters. Swathing attachment for	C. C. Dunkel and A. Tschop	251,845	Jan. 3	201	57	21	56
Harvesting-machine	D. W. Estrikin	260,666	Jan. 10	508	139	21	84
Harvesting-machine	J. W. Hull	253,705	Feb. 14	695	197	21	469
Harvesting-machine	A. Hurd	256,434	Apr. 11	893	241	21	1164
Harvesting-machine	J. Keys	255,635	Mar. 28	1394	388	21	910

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Harvesting-machine	L. H. Lee	252,681	Jan. 24	1207	338	21	294
Harvesting-machine	D. Maxwell	256,151	Apr. 11	508	137	21	1041
Harvesting-machine	B. F. Stewart	257,406	May 2	315	99, 99	21	1397
Harvesting-machine	C. M. Young	252,854	Jan. 24	1494	356 / 357	21	299
Harvesting-machines. Adjusting the grain-wheel of	W. K. Miller	256,495	Jan. 17	1009	278	21	182
Hasp-lock	T. Donahue and W. W. Cone	256,568	June 13	792	209	21	1840
Hasp-lock	J. F. Robinson	255,118	Mar. 21	650	227	21	709
Hasp-lock	G. Smith	254,397	Feb. 28	1467	401	21	619
Hat	S. D. Robinson	255,674	Mar. 28	1544	416	21	926
Hat	E. Whitehouse	259,254	June 6	464	123	21	1774
Hat and cap sweat-band	F. W. Smith	254,169	Feb. 28	1296	357	21	576
Hat and coat hanger. Pocket	T. McDonald	253,727	Feb. 14	609	191	21	479
Hat-bodies. Machine for felting	J. S. Taylor. (Reissue)	10,144	June 27	1883	503	21	2030
Hat-bodies. Machine for scalding and sticking furbats to felt	C. A. Mallory	254,349	Feb. 28	1419	388	21	610
Hat-bodies. Machinery for felting	A. Poliseo	253,480	Feb. 7	277	79	21	283
Hat-bodies. Making and uniting bats to	W. A. Baglin	251,750	Jan. 3	88	25	21	18
Hat-brim heater	H. H. Sheldon	254,710	Mar. 7	317	84	21	698
Hat-brims. Apparatus for shaping	L. H. Heyt	253,818	Feb. 14	774	220	21	489
Hat-clasp	W. Ewing	251,853	Jan. 3	212	59	21	36
Hat-curling machine	W. T. Smith and C. R. Hall	254,398	Apr. 11	614	204	21	1065
Hat. Fireman's	I. Cairns	256,285	Apr. 11	694	188	21	1073
Hat-flanging machine	L. S. Plumb and G. W. Marchant	256,648	Apr. 4	353	95, 96	21	1009
Hat-holder	S. E. Browning	253,985	Jan. 31	1513	421	21	351
Hat-holder	J. H. Burns	259,189	June 27	1084	426	21	1899
Hat-holder	C. C. Lyon	256,343	Apr. 11	738	206	21	1035
Hat-nap hats. Apparatus for forming	J. R. Russell	256,991	Jan. 31	1484	415	21	776
Hat or cap. Reversible	S. Simonson	259,333	June 27	1835	496	21	2025
Hat. Police and military	C. Lehmann	257,955	May 16	1000	279	21	1475
Hat-shaping machine	J. R. Kelsey	259,396	June 27	1785	486	21	2019
Hat-sizing machine	M. Chittenden	256,461	Apr. 18	906	254	21	1134
Hat-stretching machine	R. Eickemeyer	256,293	Apr. 11	578	159 / 160 / 193 / 194	21	1054
Hat-stretching machine	R. Eickemeyer	256,305	Apr. 11	709	159 / 160 / 193 / 194	21	1076
Hat-stretching machines. Ribbed former for	R. Eickemeyer	256,304	Apr. 11	563	160	21	1054
Hat-sweat and other corded-edged fabrics	J. S. Hosmer and P. C. Lathrop	255,993	Apr. 4	303	79	21	1000
Hats and other fur-faced fabrics. Manufacturing	W. E. Doubleday	255,289	Mar. 21	1030	277	21	830
Hats. Machine for beating up napped	J. R. Russell	256,477	May 23	1626	463	21	1396
Hats. Method of and apparatus for shaking the cotton from napped	G. Yule	255,694	Mar. 14	881	219	21	787
Hatch-elevator. Automatic	H. R. Tracy	253,383	Feb. 7	166	47	21	374
Hatchets. Die for making	W. Evans	256,566	May 30	1751	495 / 496	21	1694
Hatchway-door operator. Automatic	J. L. Peters	255,663	Mar. 28	1533	413	21	904
Hay and cotton press	D. P. Burkett	256,366	May 23	1619	469	21	1574
Hay and grain cap	J. W. Angus	256,108	Jan. 10	586	168	21	109
Hay and straw stacker	N. Newsom	253,940	Feb. 21	894	260	21	588
Hay and straw stacking machine	J. Q. A. Newsom	256,463	May 23	1622	458 / 459	21	1583
Hay binder, unloader, and stacker	A. L. Thornton	257,534	May 9	479	133	21	1373
Hay-carrier	G. W. King	257,090	Apr. 25	1556	437	21	1945
Hay-carrier	J. R. Porter	254,691	Mar. 7	296	78	21	669
Hay-elevator	P. F. Chambard	254,921	Mar. 14	595	160	21	748
Hay-elevator	J. R. and J. M. Howell	256,312	June 13	546	143	21	1706
Hay elevator and carrier	E. Harrington	257,161	May 2	21	6	21	1295
Hay elevator and conveyor	S. E. Winser	252,566	Jan. 17	1075	299	21	194
Hay elevator and stacker	J. Dain, Jr.	252,363	Jan. 17	766	213	21	143
Hay-fork	L. C. Chase	257,170	May 2	6	3	21	1288
Hay-fork	C. Friberg	252,308	Jan. 17	771	215	21	144
Hay-fork. Grapple	G. Rundle	254,653	Feb. 21	1074	296	21	545
Hay-fork. Horse	W. Andrews	253,657	Feb. 14	567	160	21	453
Hay-knife	G. F. Weymouth. (Reissue)	10,072	Apr. 4	444	120	21	1035
Hay-loader	G. W. Le Vin	254,710	Apr. 18	1288	358	21	1174
Hay-press	J. G. Boyland	256,192	May 16	1260	353	21	1557
Hay-press	P. Lord	253,536	Feb. 14	451	121	21	430
Hay-press. Traveling	P. Wright	254,756	Mar. 7	377	98 / 100	21	702
Hay-presses. Self-adjusting head-block for	J. W. Chambers	259,369	June 6	478	135	21	1776
Hay-rack	J. M. Diffendafer	258,196	Jan. 10	694	177	21	114
Hay-rack	J. Shafer	257,770	May 9	789	217 / 218	21	1486
Hay-rake	M. Butler	258,568	Jan. 17	1066	306	21	196
Hay-rake	P. F. Fleming	259,639	June 20	1219	335	21	1919
Hay-rake	H. L. Shields	260,056	June 27	1493	403 / 403	21	1973
Hay rake and loader	T. R. Shoemaker	259,235	June 13	875	151 / 158	21	1694
Hay rake and loader. Combined	G. F. Coon	259,632	June 13	947	253	21	1867
Hay rake and tedder	A. Eagle	254,134	Apr. 11	494	131	21	1038
Hay rake and tedder. Combined	R. A. Hills	254,139	Feb. 28	1166	308	21	589
Hay rake and tedder. Combined	I. L. Landis	260,301	June 27	1799	466	21	2020
Hay-rake. Horse	D. G. Audley	254,767	Mar. 14	681	113	21	717
Hay-rake. Horse	T. W. Greene	259,063	June 6	165	45	21	1732
Hay-rake. Horse	W. H. Hall	256,660	Apr. 25	1411	397	21	1219
Hay-rake. Horse	M. R. Kenage	259,559	June 13	844	223	21	1849
Hay-rake. Horse	H. Myers	255,321	Mar. 21	1116	301	21	845
Hay-rake. Horse	A. A. Noyes	255,699	Mar. 28	1562	411	21	922
Hay-rake. Horse	C. Schels	255,681	Mar. 28	1550	418	21	927
Hay-rake. Revolving	E. Huber	255,991	Mar. 21	1074	289	21	857
Hay-rake. Revolving sulky	T. Miltenberger	255,445	Mar. 21	1020	343	21	877
Hay-rake. Sulky	W. P. Prall	256,735	Apr. 18	1294	343	21	1179
Hay rake and loader. Combined	L. R. Sample	259,497	June 13	666	202	21	1822

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Hay-stack binder	J. A. Hogg and W. Hall	259,662	June 27	1438	388	21	1988
Hay-stacker	L. W. Cannon	258,457	Jan. 17	919	263	21	180
Hay-stacker	J. C. Teetman	259,244	June 6	453	120	21	1772
Hay-stacking apparatus	G. Richardson	255,867	Apr. 4	130	42	21	977
Hay-tedder	J. W. Rahl	259,289	Jan. 17	1020	285 / 286	21	187
Hay tedder and loader. Combined	H. L. Shields	259,138	May 16	1218	343	21	1515
Hay tedder and rake. Combined	W. R. Johns	255,994	Mar. 21	1078	288	21	858
Hay tedder and rake. Combined	I. L. Landis	256,238	Apr. 11	743	203	21	1033
Head-block	C. Keeler	259,551	June 13	946	264	21	1910
Head-covering	R. H. Trested	255,440	Feb. 7	215	62	21	359
Head-covering	R. H. Trested	257,727	May 9	797	223	21	1439
Head-light. Locomotive	G. Clet	259,619	June 20	1193	333	21	1910
Head-rest	W. H. Wooldridge	256,228	May 23	1477	450	21	1502
Head-rest. Passenger	E. Scharpe	251,706	Jan. 3	137	39	21	35
Header and thrasher. Combined	W. H. Parrish	259,291	June 6	397	105 / 106	21	1763
Heat-observing apparatus	W. M. Miner	253,413	Feb. 7	267	77	21	282
Heat. Apparatus for utilizing solar	G. W. Datesler	257,560	May 9	519	145	21	1376
Heater: See Car-heater. Feed-water heater. Flat-iron heater. Hat-brim heater. Laundry-heater. Oil-heater. Photographic silver-bath heater. Steam-heater. Steam-boiler heater. Water-heater. Wheat-heater.							
Heater	P. Brocker	253,989	Feb. 21	909	270	21	387
Heater	E. E. Gold	255,949	Apr. 4	114	31	21	970
Heater	J. H. Mackintosh	254,345	Apr. 11	754	227	21	1035
Heating air and water for buildings. Apparatus for	A. K. Brown	257,650	May 9	537	176	21	1402
Heating air by steam. Apparatus for	J. P. Wood	256,189	May 16	1276	368	21	1555
Heating and cooking apparatus	G. M. Venable	257,769	May 9	789	222 / 224	21	1489
Heating apparatus	J. F. Pease	257,183	May 2	43	14	21	1292
Heating apparatus	L. T. Terwilliger	258,864	Jan. 10	674	182	21	99
Heating apparatus	M. W. Williams	256,089	Apr. 4	498	111 / 116	21	1018
Heating apparatus. Generator for steam	T. C. Joy	258,675	May 16	1148	329	21	1569
Heating apparatus. Mechanical	S. J. Linn	257,720	May 9	630	205	21	1412
Heating apparatus. Steam	M. P. Hathaway	255,167	Mar. 21	916	245	21	810
Heating bath-tubs by steam	J. Reilly	255,535	Mar. 28	1370	372	21	895
Heating buildings. Apparatus for	J. A. Bochem	256,932	Apr. 25	1405	416 / 417	21	1258
Heating-furnace	T. Kaylies, Sr.	253,130	Jan. 31	1780	488	21	388
Heating-furnace	G. R. Brown	259,898	June 20	1177	314 / 315	21	1913
Heating furnace. Air	V. Bade	258,017	May 16	1075	289	21	1466
Heating railway-trains. Apparatus for	B. Chamberlain	259,976	June 20	1283	374 / 375	21	1949
Heating system	B. R. Hawley	258,918	June 6	49	10	21	1705
Heddle-frame	J. Ashworth	253,335	Feb. 7	183	62	21	377
Hedge	E. H. Fleming	253,262	Feb. 7	211	69	21	393
Hedge fastening. Pleached	W. Baldwin	254,167	Feb. 28	1298	341	21	579
Hedge. Pleached	W. Young	254,695	Feb. 21	1160	310	21	551
Hedge-trimmer	W. F. Throckmorton	260,255	June 27	1748	470	21	2019
Hedge-trimmer and mower. Combined	J. V. Latimer	253,794	Feb. 14	624	186	21	457
Heel-burnishing machine	J. W. Carver	253,622	Feb. 14	597	180	21	457
Heel-counters. Die for shaping	M. Hynes	260,295	June 27	1660	435	21	2001
Heel-forming apparatus	F. A. Widger	252,916	Jan. 31	1503	418	21	270
Heel-machine	F. Pease	253,758	Feb. 14	698	196	21	475
Heel-nailing machine	H. A. Henderson	252,215	Jan. 10	644	161 / 162	21	117
Heel-nailing machine	H. A. Henderson	259,657	June 20	1018	278	21	1896
Heel-plate	M. D. Williams	256,989	Apr. 25	1405	411	21	1256
Heel-plate. Revolving	J. L. Thomson	256,676	Apr. 4	395	107	21	1016
Heel-trimmer	F. Moulton and C. M. Adams	252,243	Jan. 10	632	183	21	134
Heel-trimming machine	M. A. Tyler and H. D. Stone	252,819	Jan. 24	1300	395	21	228
Heliotrope	E. W. Bogbie	254,790	Mar. 14	684	113	21	717
Hemp-beater	T. J. Ferguson	253,154	Feb. 7	25	8	21	351
Hemp-cleaning machine	T. J. Ferguson	253,195	Feb. 7	25	8	21	351
Hemp-washer	T. J. Ferguson	252,345	Jan. 17	634	228	21	154
Hides and skins. Machine for treating	J. W. Jansen	257,495	May 9	435	121	21	1388
Hides and skins. Machine for treating	J. M. Jones	256,386	Apr. 11	738	208 / 209	21	1033
Hides or animal membranes and tissues. Treating	J. M. and G. F. Ordway	255,226	Mar. 21	1121	.....	21	846
Hinge	J. G. Beck	256,016	Apr. 25	1316	378	21	1283
Hinge	C. Pfannts and H. Franck	255,969	Apr. 4	10	10	21	982
Hinge	A. Sweetland	254,695	Apr. 11	621	202	21	1032
Hinge. Awning-blind	E. P. Pierce	253,895	Jan. 31	1474	413	21	274
Hinge for boxes and crates	H. Kirk	259,310	June 13	838	148	21	1757
Hinge for shutters. Lock-	J. P. Maher	260,020	June 27	1470	397	21	1990
Hinge. Gate-	M. J. Barrow	258,060	May 16	1097	284	21	1494
Hinge. Gate-	I. Gaston	258,670	Apr. 18	1140	328	21	1165
Hinge. Gate-	M. B. Hudson	251,982	Jan. 3	240	60	21	44
Hinge. Gate-	I. L. Landis	256,263	Apr. 11	744	204	21	1033
Hinge. Gate-	I. L. Landis	259,176	June 6	373	98	21	1720
Hinge. Lock-	F. Minard	253,264	Feb. 7	148	41	21	270
Hinge. Lock-	S. Needles	256,261	Apr. 11	778	214	21	1030
Hinge. Spring-	E. Ale	257,365	May 2	148	40	21	1.30
Hinge. Spring-	T. Butler	254,160	Feb. 28	1148	319	21	581
Hinge. Spring-	C. B. Clark	255,838	Apr. 4	288	89	21	982
Hinge. Spring-	I. S. Davis	254,438	Feb. 28	1268	448	21	627
Hinge. Spring-	I. S. Davis	255,257	Mar. 21	1068	278	21	838
Hinge. Spring-	H. Howson	252,790	Jan. 24	1290	385	21	240

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Hinge. Spring	W. Hull. (Reissue)	10,694	Jan. 31	1851	516	21	226
Hinge. Spring	G. M. Jewett	258,470	Jan. 17	908	270	21	170
Hinge. Spring	P. K. O'Lally	257,373	May 2	271	77	21	1239
Hinge. Spring	C. S. Van Wagener	258,519	May 23	1675	474	21	1683
Hinge. Spring	W. H. Williams	258,164	Jan. 10	568	166	21	108
Hinge. Spring	W. M. Kurtz	257,622	Apr. 25	1580	457	21	1245
Hinge. Strap	F. Bonelli	256,974	Mar. 28	1468	394	21	968
Hitching-strap	H. M. Small	253,557	Feb. 14	454	130	21	435
Hobby horse or rocker motive	J. Powers. (Reissue)	10,636	Mar. 7	416	120	21	760
Hod-elevator	J. Powers	253,943	Feb. 21	936	261	21	588
Hod-elevator	E. W. Watson	258,613	June 13	919	245	21	1688
Hod-elevator	G. W. Brown	258,473	June 13	747	197	21	1633
Hod-elevator. Safety	J. L. Hudson	253,653	Jan. 21	1671	488	21	307
Hoe	U. Wassmer	255,708	Mar. 28	1569	457	21	804
Hoe	A. Schwehr	257,669	Apr. 25	1627	456	21	1257
Hoes. Machine for making	E. Major	258,647	Jan. 10	454	124	21	65
Hog-nose ring	H. C. Hill	257,698	May 16	897	239	21	1457
Hog-ring	J. P. Ewan	255,185	Mar. 21	530	204	21	797
Hog-ringing device	W. H. Whittlesey and J. C. Cook	258,687	June 6	946	65	21	1736
Hog-ringing tool	R. C. Tompkins	255,386	Mar. 21	1329	364	21	861
Hog-scraping machine	O. Ewing	253,359	Feb. 7	288	89	21	361
Hog-tendon cutter	G. A. Lowry and M. Crawford	258,119	Jan. 10	888	146	21	99
Hogs. Apparatus for catching and suspending	J. S. Smithson	256,147	May 16	1231		21	1517
Hogs. Dressing	W. F., Sr., and W. F. Sexton, Jr	254,942	Feb. 28	1394	356 / 359	21	590
Hoist	J. Cunningham	256,980	Apr. 11	576	158	21	1028
Hoist. Hog	F. A. Clarkson	258,740	Jan. 24	1263	355	21	233
Hoisting and conveying apparatus	F. A. Gardner	253,385	Feb. 14	418	116	21	439
Hoisting and winding drum	R. B. Mentyard	259,198	June 6	396	108	21	1761
Hoisting apparatus	W. S. Rockwell	260,304	June 27	1668	424	21	2024
Hoisting apparatus	E. L. Stocking	255,351	Mar. 21	1149	308	21	850
Hoisting apparatus	A. C. Ellithorpe	255,956	Apr. 4	257	68	21	992
Hoisting apparatus. Safety device for	J. F. Taylor	258,543	Jan. 17	1049	288	21	120
Hoisting-bucket and dump-car. Combined	A. Debilde	255,844	Apr. 4	199	39	21	949
Hoisting-machine	V. C. Jarboe	253,714	Feb. 14	630	161	21	485
Hoisting-machine	F. Murgatroyd	254,496	Mar. 7	62	16	21	640
Hoisting-machine drums	F. Murgatroyd	253,861	Feb. 21	856	242	21	516
Hoisting machinery. Hydraulic	A. Lafarguo	259,175	June 6	372	98	21	1730
Hoisting. Stand-frame for	W. S. Blunt	258,548	May 30	1730	469	21	1690
Holdback. Vehicle	A. J. Bacon	251,814	Jan. 3	161	44	21	99
Holder:							
See Bag-holder.	Lead and crayon holder.						
Bill and file holder.	Mop-holder.						
Blacking-box holder.	Music-holder.						
Blind-slat holder.	Paper-bag holder.						
Bow or scarf holder.	Pen-holder.						
Candle-holder.	Photographic-plate holder.						
Card-holder.	Pillow-sham holder.						
Cigar-holder.	Pin-jewel holder.						
Cigarette-holder.	Pistol and carbine holder.						
Coin-holder.	Pool-ball holder.						
Cow-tail holder.	Rein-holder.						
Cuff-holder.	Sash-holder.						
Curtain-holder.	Shade-holder.						
Dental check-holder.	Shoe-holder.						
Dental tool-holder.	Spectacle-holder.

Hoop-cutting machine	L. Holt	258,698	Jan. 24	1198	338	21	221
Hoop-cutting machine	W. B. Noyes	259,419	June 13	678	179	21	1880
Hoop-cutting machine. Barrel	J. B. Pike	260,094	May 30	2036	575	21	1674

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Hoop-dressing machine	S. E. Garner	258,207	Jan. 10	695	178	21	115
Hoop-driving machine. Horizontal	M. L. Deering	257,139	Apr. 25	1695	473 / 478	21	1268
Hoop-locks. Machine for cutting	H. Wilde	257,589	May 9	404	124 / 125	21	1372
Hoop-making machine	J. B. Dougherty	258,468	Apr. 18	914	238	21	1196
Hoop-splints. Mechanism for and method of forming	H. F. Campbell	255,413	Mar. 28	1251	331	21	976
Hoops from poles. Machine for sawing barrel	W. Bowker	257,918	May 16	900	227 / 228	21	1497
Hoops. Machinery for manufacturing barrel	N. P. Stevens	260,234	June 13	1698	426	21	2035
Hoops upon casks. Machine for driving	M. R. Beasley	256,951	Apr. 25	1462	415 / 416	21	1288
Hopper. Feed	J. R. Walsh	258,633	Jan. 24	1130	288	21	214
Hopple	C. J. Gustavesen	253,272	Feb. 7	288	69	21	362
Horn and peg cutter	J. B. Bickford	253,134	Mar. 21	897	232	21	838
Horse-blanket fastener. Adjustable	M. E. Brown	260,315	May 23	1333	377	21	1542
Horse-detacher	H. Fleischhauer	253,690	Feb. 14	606	171	21	459
Horse-detacher	J. Gesemann	253,397	Feb. 7	315	84	21	345
Horse-detacher	J. P. May	259,567	June 13	888	229	21	1833
Horse-detacher	A. Pilenky	252,148	Jan. 31	1165	426	21	899
Horse-detacher	J. T. Walker	256,961	June 6	113	30	21	1714
Horse-hoof pad	W. F. Raymond	258,351	Jan. 10	689	185	21	126
Horse-power	G. F. Reis	260,154	June 27	1618	457	21	1991
Horse-power	T. A. Brewer	255,583	Mar. 28	1443	387	21	997
Horse-power	W. Deering	254,634	Mar. 7	215	55	21	675
Horse-power	J. Ellis	259,634	June 20	1397	364	21	1846
Horse-power	W. O. Frost	259,370	June 13	888	157	21	1811
Horse-power	J. T. Graves	259,649	June 20	1395	362	21	1852
Horse-power	J. Schweiger	255,992	Mar. 21	963	254	21	817
Horse-power whip attachment	J. L. Crawford	254,619	Mar. 7	208	54	21	673
Horses. Check for	M. M. Markussen	255,992	Apr. 4	135	41, 42	21	976
Horses from running away. Device for preventing	M. Rothschild	258,218	May 23	1433	413	21	1554
Horses. Vehicle device for checking	E. S. Bowen	259,354	June 13	888	157	21	1804
Horses. Vehicle device for checking	W. P. Kirkland	259,765	June 20	1130	300	21	1885
Horseshoe	H. Bland	255,919	Apr. 4	207	54	21	965
Horseshoe	G. R. Brown	259,640	June 13	941	250	21	1802
Horseshoe	J. R. Cossin	254,531	Mar. 7	198	38	21	656
Horseshoe	J. N. Clarke	254,594	Mar. 7	195	37	21	664
Horseshoe	J. R. Finch	258,750	Jan. 24	1270	338	21	226
Horseshoe	R. A. Goodenough	259,210	Jan. 10	637	169	21	114
Horseshoe	J. M. Kibner	254,327	Feb. 28	1393	365	21	592
Horseshoe	P. J. Layden	257,599	May 9	441	120	21	1366
Horseshoe	W. Leech	253,930	Feb. 21	994	257	21	589
Horseshoe	P. McCabe	258,382	Jan. 17	871	240	21	161
Horseshoe	G. W. M. Stones	260,057	June 27	1494	403	21	1973
Horseshoe	W. Vandervoar	260,260	June 27	1746	476	21	2011
Horseshoe-fastening device	G. Bryden	255,785	Apr. 4	15	5	21	953
Horseshoe-machine	Z. V. Purdy	257,450	May 2	264	102	21	1246
Horseshoe-nail blanks. Machine for cutting and forming	W. F. Durfee	260,177	June 27	1643	445 / 446 / 447	21	1995
Horseshoe-nails. Machine for forging	C. R. Ellicott	257,308	May 2	183	50	21	1214
Horseshoe toe-weight	C. H. Burbidge, Jr	259,746	June 20	1105	295	21	1891
Horseshoes. Die for making	G. Dunning	257,994	May 16	908	229 / 230	21	1466
Hose carriage. Fountain	I. W. McGaffey. (Reissue)	10,647	Feb. 28	1295	417	21	631
Hose-carrier	C. Calahan	251,996	Jan. 3	361	103	21	66
Hose-clamp	J. Shepherd and J. V. Miller	255,465	Mar. 28	1297	340	21	861
Hose-coupler	J. H. and C. Clay	258,269	June 13	616	163	21	1686
Hose-coupling	E. A. Rix	255,335	Mar. 21	1134	305	21	848
Hose coupling and support	J. W. Regan	256,163	Apr. 11	517	149	21	1044
Hose. Device for repairing ruptures in water	L. Nessinger	257,668	May 9	584	163	21	1390
Hose-nozzle	F. W. Robertshaw	254,648	Feb. 21	1089	297	21	544
Hose or pipe. Flexible	M. J. Walsh	255,357	Mar. 21	1156	309	21	851
Hose-pipe	B. Holland, Jr	255,720	Mar. 28	1625	436 / 438	21	939
Hose-pipe nozzle	T. Gould	259,131	June 6	319	85	21	1750
Hose-pipe. Stand	B. Holland, Jr	255,430	Mar. 28	1293	337 / 338	21	873
Hose to pump-spouts. Attachment for connecting	C. Powell	260,128	June 27	1569	428	21	1998
Hosiery. Manufacturing	S. Berton and C. H. Willcox	255,579	Mar. 28	1434	385	21	905
Hosiery. Method of and apparatus for exhibiting	J. M. Kennard	256,767	May 30	1966	544	21	1667
Hot-air furnace	W. P. Brewin	258,616	Jan. 10	488	115 / 116	21	89
Hot-air furnace	J. F. Peace. (Reissue)	10,113	May 16	1269	371	21	1881
Hot and cold air register	R. S. T. Cassel	258,689	May 30	1630	516	21	1689
Hot-water or steam main or pipe	R. H. Buel	256,543	Apr. 18	1081	289	21	1140
House:							
See Frame house.	Portable summer-house.						
Ice-house.	Starch-drying house.						
Malt-house.							
Houses for purpose of ventilation, &c. Construction of	P. G. Eaton	255,660	Mar. 28	1466	395	11	912
Household utensil	T. W. Sims and F. Fischer	259,838	June 20	1289	354	21	1837
Hub	A. McKellar	254,966	Mar. 14	691	186	21	765
Hub	J. D. Terrence	254,720	Mar. 7	241	59	21	686
Hub	J. S. Reid	255,670	Mar. 28	1539	415	21	935
Hub-block-boring machine	J. T. Richmond and H. J. Cordesman, Jr.	255,384	Mar. 21	1304	362	21	889
Hub-boring machine. Wheel	N. Clark	256,587	May 30	1727	498	21	1669
Hub-fastener	F. M. Hurtle	257,363	May 2	88	22	21	1236
Hub. Vehicle	J. R. Foster	251,794	Jan. 3	133	33	21	94
Hub. Vehicle	F. M. Priestley	259,916	June 20	1269	348	21	1823

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No	Date	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Hub. Vehicle-wheel	J. Newman	255,008	Mar. 14	707	191	21	709
Hub. Vehicle-wheel	F. T. Riegel	255,084	Mar. 14	726	196	21	771
Hub. Wagon	J. A. Hodgens	253,858	Jan. 31	1070	468	21	307
Hub. Wheel	R. W. and D. Davis	251,849	Jan. 3	197	55	21	35
Huller: *See* Clover-huller.							
Hydrant	S. R. C. Mathews	258,689	Jan. 31	1466	410	21	273
Hydrants and water-mains. Electric alarm for	U. Thompson	256,516	Apr. 18	972	272 273	21	1135
Hydraulic and pneumatic elevator	H. H. Day. (Reissue)	10,681	Feb. 7	309	108	21	406
Hydraulic and pneumatic elevator	G. Johnson and W. M. Bailey	256,788	Apr. 18	1187	333	21	1172
Hydraulic brake	W. A. Myers	256,536	May 23	1714	484	21	1616
Hydraulic elevator	C. A. Chandler	252,048	Feb. 21	967	289	21	502
Hydraulic elevator	A. Granville	259,048	June 20	1284	369	21	1021
Hydraulic elevator	W. E. Hale	253,049	Jan. 31	1056	459	21	305
Hydraulic elevator	G. L. Pierce	256,964	Jan. 31	1503	425	21	290
Hydraulic elevator	G. H. Pond	257,754	May 9	764	213	21	1468
Hydraulic elevator	C. T. Wildstrand	253,799	Feb. 14	747	213	21	465
Hydraulic press	C. Kimplan	255,872	Apr. 4	143	38, 39	21	974
Hydraulic press. Automatic	G. A. Lawrence and E. J. Frost	255,360	Mar. 21	1085	282 283 284	21	630
Hydrocarbon-burner	E. N. Dickerson, Jr.	256,551	Apr. 18	1009	265	21	1142
Hydrocarbon-burner	E. A. Edwards	251,849	Jan. 3	207	58	21	37
Hydrocarbon-burner	E. A. Edwards	256,294	Apr. 11	767	199	21	1078
Hydrocarbon burner. Liquid-	S. H. Douglas	256,133	Apr. 11	683	131	21	1036
Hydrocarbon burner. Liquid-	A. S. Munger	259,618	Jan. 24	1139	317	21	211
Hydrocarbon-furnace	G. Daryee	253,970	Feb. 7	186	33	21	364
Hydrocarbon-furnace	B. Sloper	259,234	June 20	1321	354	21	1037
Hydrocarbon-furnace	M. Zeck	251,959	Jan. 3	389	109	21	63
Hydrocarbon to burners. Apparatus for supplying	A. M. Brainard	255,944	Mar. 21	1011	271	21	987
Hydrocarbons. Burning	H. T. Litchfield and D. Renshaw	251,785	Jan. 3	118	34	21	23
Ice and cooling in general. Cooling air for making	O. Parker	259,621	June 13	660	169	21	1030
Ice. Apparatus for making clear	F. Gergens	256,286	May 23	1346	361	21	1545
Ice-cream freezer	C. L. Dexter. (Reissue)	10,089	Feb. 21	1125	314	21	554
Ice-cream freezer	M. Richelmer	253,254	Jan. 10	692	195	21	195
Ice-creeper, &c.	H. Bland	253,349	Jan. 17	814	227	21	151
Ice-creeper	J. P. Herbert and P. Wrin	256,419	May 23	1566	446	21	1595
Ice-creeper	A. Herewitz	259,311	June 13	545	143	21	1796
Ice-cutting machine	C. N. Cutter	254,431	Feb. 28	1563	413	21	687
Ice-cutting machine	F. L. D. Pearson	253,283	Feb. 7	54	17	21	356
Ice-cutting machine	J. Stork	259,941	June 20	1331	357 358	21	1039
Ice-elevator	S. A. Morton	256,155	Apr. 11	507	139	21	1042
Ice-floor for cold storage-houses	H. C. Cain	255,469	Mar. 28	1388	357	21	805
Ice-house	A. Von Krause and M. Kuhnen	253,790	Feb. 14	738	211	21	453
Ice-house, ice-box, and refrigerator	J. Brauer. (Reissue)	10,138	June 13	979	282	21	1673
Ice-machine	E. Fixary	254,263	Feb. 28	1541	346	21	521
Ice-machine	F. Gergens	256,287	May 23	1347	361	21	1545
Ice-machine	G. W. Stevens	256,038	May 30	1501	537	21	1650
Ice-machine and refrigerating apparatus	T. and C. E. Davis	256,081	Jan. 10	667	117	21	51
Ice-machine and refrigerating apparatus	T. and C. E. Davis	257,476	May 9	810	115	21	1361
Ice. Manufacture of	W. W. Dusenbury	256,586	May 30	1748	495	21	1694
Ice. Manufacture of	S. D. Lount	259,027	June 20	1327	374	21	1690
Ice marker and plow	J. B. Fischer	256,637	May 30	1636	518	21	1640
Ice. Method of and apparatus for making	O. Parker	255,060	Mar. 28	1527	411 419	21	983
Ice-scraper	T. W. Botts	259,397	June 27	1428	395	21	1988
Illuminated structure	E. Vedder	259,346	June 13	564	155	21	1802
Incrustation-preventive	C. B. Boyce	259,355	June 13	563	.....	21	1804
Incrustation-preventive	F. M. Collet	260,003	June 27	1453	.....	21	1963
Incrustation-preventive	H. Kolker	258,235	May 23	1389	.....	21	1548
Incubator	A. M. Halstead	258,395	May 23	1488	465	21	1660
Incubator	P. G. and G. A. Muenchinger	260,219	June 27	1700	459 460	21	2004
Indicator: *See* Line-indicator. Power-indicator. Railway time-indicator. Scale-indicator. Speed-indicator. Station-indicator. Valve-indicator. Visual indicator.							
Indicator	W. Stephens	253,319	Feb. 7	161	46	21	373
Indicator-lock	J. McNeven	252,189	Jan. 10	536	150	21	149
Indicator-pistons. Spring-connection for	G. W. Brown	256,281	Apr. 11	668	185	21	1071
Indigo. Artificial	A. Beeyer and V. B. Drewsen	257,615	May 9	830	.....	21	1435
Indigo-blue. Manufacture of	A. Beeyer	259,209	June 6	448	.....	21	1778
Indigo-blue. Manufacture of	A. Beeyer	259,261	June 6	449	.....	21	1775
Indigo. Manufacture of artificial	A. Beeyer	258,669	June 13	629	.....	21	1662
Indigo. Manufacture of artificial	A. Beeyer and V. B. Drewsen	257,614	May 9	829	.....	21	1435
Indigo. Preparation of material for the manufacture of artificial	A. Beeyer and V. B. Drewsen	257,613	May 9	828	.....	21	1435
Indigo. Preparation of material used in the manufacture of artificial	A. Beeyer and V. B. Drewsen	257,612	May 9	828	.....	21	1435
Ingot-mold shield	J. Pedder	256,638	Apr. 4	346	94	21	1009
Ingots cast in molds. Apparatus for stripping	L. G. Lauraun	254,341	Feb. 28	1494	388	21	689
Inhaler	J. H. Nelson	256,695	Apr. 18	951	288	21	1138
Inhaler	W. F. Semple	254,391	Feb. 28	1456	380	21	616
Injector	H. B. Murdock	259,649	June 13	567	288	21	1679
Injector	D. Renshaw and G. B. N. Tower	257,697	May 16	933	260	21	1463
Injector. Liquid-fuel	F. A. Meyer	253,216	Feb. 7	47	15	21	355
Injector. Steam-engine	S. Berlund	255,988	Apr. 4	288	54, 55	21	985
Ink-fountain	A. Gage	256,209	May 23	1431	408	21	1559
Ink-fountain and pen-holder. Combined	A. Desbleday	251,765	Jan. 3	23	7	21	7
Ink. Manufacture of	A. F. Stoddart	256,388	Mar. 21	1150	.....	21	659

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Inkstand	G. C. Miller	257,736	May 9	746	227	21	1419
Instand. Calendar	J. G. Smith	256,396	Apr. 11	813	222	21	1095
Inlaid jewelry, &c. Making	C. P. Fest	254,945	Mar. 14	663	167	21	833
Inlaying horn, &c., with pigment colors	F. A. Hickerson	251,824	Jan. 3	204	.....	21	51
Insect-destroyer	F. T. Pinter	253,685	Feb. 14	588	151	21	446
Insect-destroyer	W. L. Waddy	256,771	Apr. 18	1089	255	21	1165
Insect-guard	H. W. Flood and H. Kromwell	255,499	Mar. 28	1393	361	21	808
Insect poison and fertilizers. Distributer for	D. R. Darnell	254,894	Mar. 14	436	118	21	720
Insecticide	G. W. Tucker	258,567	May 23	1573	.....	21	1622
Insecticide compound	W. B. Nettle	253,823	Apr. 4	156	.....	21	976
Insecticide for poultry, pests, &c	R. D. Hill	254,317	Feb. 28	1574	.....	21	682
Insulated electrical conductor	W. H. Sawyer	253,261	Jan. 10	703	198	21	192
Insulated electrical conductor	W. H. Sawyer	253,262	Jan. 10	703	198	21	197
Insulating and protecting telegraph-wires, &c. Device for	W. E. Banta	259,273	June 27	1703	476	21	2014
Insulating conductors. Alarm for detecting defects in	L. Finger	257,663	May 9	679	189	21	1406
Insulating material for electrical conductors	F. Borel	256,549	May 30	1730	.....	21	1680
Insulating underground lines	E. A. Hill	257,165	May 2	25	9	21	1265
Insulation of electrical conductors	H. C. Strong	253,446	Feb. 7	313	87	21	389
Insulation. Preparation of materials for use in electric	J. A. Fleming	259,271	June 6	480	.....	21	1777
Insulator and protector for underground lines	W. A. French	253,669	Jan. 31	1043	456	21	303
Insulator for electrical conductors	A. C. Lewis	255,809	Apr. 4	61	16	21	961
Insulator for telegraph-wires	W. H. Capewell	254,610	Mar. 7	197	50	21	671
Insulator for telegraph-wires	C. L. Gere	259,857	Jan. 24	1487	398	21	209
Integrating apparatus	C. V. Boys	258,380	May 23	1501	406 407 408 409	21	1573
Interlocking eyes. Machine for forming	R. Furies	259,677	June 20	1004	268 269	21	1684
Interlocking switch and signal mechanism	E. H. Johnston	253,391	Feb. 7	248	69	21	367
Invalid-chair. Folding	W. Armstrong	253,233	Feb. 7	180	51	21	377
Invalids. Apparatus for lifting and turning	G. W. Robbins	256,194	May 16	1304	330	21	1512
Iron: *See* Carriage-bow iron. Flat-iron. Grappling-iron. Rod-iron. Wagon rub-iron. Wagon-seat corner-iron. Whiffletree-iron.							
Iron and other plates. Apparatus for galvanizing and coating sheet	J. Mulholland, Jr.	256,494	Apr. 18	950	266	21	1132
Iron and steel. Treating	A. H. Siegfried	254,599	Mar. 7	73	.....	21	651
Iron breaker. Pig	T. A. Blake	254,940	Apr. 25	1406	419	21	1234
Iron from ferruginous saline solutions. Removing	C. Dahlberg and C. Semper	257,567	May 9	595	.....	21	1370
Iron. Machine for straightening round bar	L. Brightman	260,278	June 27	1766	477	21	2015
Iron. Manufacture of puddled	W. Smith	257,698	May 16	933	260	21	1463
Iron. Manufacture of sheet	W. D. Wood	258,188	Jan. 10	686	167	21	189
Iron or steel. Plating	M. Bennah	256,119	May 16	1190	.....	21	1611
Ironing-board	J. R. Hilton	259,118	June 6	366	81	21	1746
Ironing-board	J. T. King	260,240	June 27	1669	457	21	2008
Ironing-board	T. R. King and W. H. Saxton	253,285	Feb. 7	138	36	21	369
Ironing board or table. Reversible	C. W. Powers, Jr.	260,234	June 27	1718	465	21	2007
Ironing-machine	W. L. Hall	256,260	May 23	1350	362	21	1546
Ironing-table and clothes-horn combined	M. Kesler	252,675	Jan. 24	1300	336	21	223
Irrigating-ditch	D. D. Mallvey	254,674	Mar. 7	276	73	21	665
Ivory. Manufacture of material to form artificial	F. W. Cottrell	254,399	Feb. 28	1334	.....	21	597
Jacks: *See* Axle-box jack. Carriage-jack. Boot-jack. Boot or shoe holding jack. Lasting-jack. Lifting-jack. Painter's jack. Shoemaker's jack. Wagon-jack. Wagon or lifting jack.							
Jack	M. J. Walsh	254,741	Mar. 7	329	93	21	696
Jack or last-holder	J. R. Kimball	254,221	Feb. 28	1569	351	21	566
Jack-screws	C. M. Crandall	254,430	Feb. 28	1568	412	21	627
Jacketed can	L. Sexton	259,502	June 13	691	227	21	1856
Jail, prison, and grating bar	G. Kinsey	258,980	June 6	76	19	21	1707
Jar: *See* Fruit-jar.							
Jars and bottles. Shipping-case for	B. S. Atwood	254,290	Mar. 14	570	153	21	742
Jars and other receptacles. Cover for pickle	T. Leach	253,736	Feb. 14	687	187	21	462
Jars of pickle-casters and other receptacles. Cover for	T. Leach	253,735	Feb. 14	686	187	21	462
Jewel-box	G. Gough	253,473	Feb. 7	241	95	21	404
Jeweler's braided metallic stock	A. S. Crane	253,567	Feb. 14	466	126	21	440
Jeweling-tool	W. B. Atkinson	256,490	May 30	1912	549	21	1652
Jewelry	J. B. Van Houten	253,450	Feb. 7	217	58	21	399
Jewelry-catch	P. A. Leimbach	256,776	May 30	2060	586	21	1660
Jewelry. Machine for combining the backs and fronts of articles of	D. S. Cooke and J. Hagerty	254,117	Feb. 28	1149	281	21	505
Jewelry-setting	H. B. Smith	258,663	Apr. 4	377	103	21	1014
Jewelry-stock	C. F. Heckmann	260,085	June 27	1544	416	21	1990
Joint: *See* Carriage-top joint. Expansion-joint. Fish-plate joint. Pipe-joint. Railway-rail joint. Universal joint. Vehicle-top joint.							
Joint for pipes and fittings	J. R. Moore	253,734	Mar. 28	1499	449	1	849
Journal-bearing	W. L. Clark	256,463	Apr. 18	949	264	21	1126
Journal-bearing	H. A. Griffith	256,413	May 23	1483	443	21	1599
Journal-bearing	T. V. Le Roy	260,163	June 27	1727	482	21	2009
Journal-bearing	J. Reese	256,317	May 30	1489	452	21	1664
Journal-bearing	G. J. Skinner	253,117	Jan. 31	1739	487 488	21	321
Journal-bearing	G. W. Williams	259,955	June 6	695	199	21	1774

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Journal-bearing for stone and ore crushers	P. W. Gates	220,681	June 20	1010	270	21	1865
Journal-box	S. E. Pettee	253,225	Feb. 7	56	17	21	356
Journal-lubricator	G. Jackson	254,771	Mar. 7	302	104	21	705
Journals. Oil-hole cover for	S. A. Skinner. (Reissue)	10,084	Mar. 21	1217	385	21	982
Jug	J. Cook	252,649	Jan. 24	1108	308	21	217
Keg. Lager-beer	J. B. Hayden. (Reissue)	10,081	Mar. 14	823	219	21	787
Kettle and urn. Combined	H. C. Rice	256,921	Apr. 25	1441	465	21	1234
Kettle. Steam-jacket	E. Whiteley	251,751	Jan. 3	76	21	21	16
Key: *See* Musical-instrument key. Telegraph-key. Pole-changing key.							
Key for bolts, &c	B. W. De Courcy	255,843	Apr. 4	107	29	21	969
Kiln: *See* Brick-kiln. Lime-kiln. Brick-burning kiln. Pottery-kiln. Dry-kiln. Tile-kiln. Drying-kiln.							
Kiln for burning articles manufactured from clay	J. Dawson	253,517	Feb. 14	408	114	21	428
Kiln for enamel work	A. Tees	256,407	Apr. 11	923	237	21	1097
Kitchen-cabinet	W. R. Craig	256,851	May 30	2067	589	21	1883
Kitchen implement	J. W. Koss. (Reissue)	10,086	Apr. 11	694	250	21	1109
Kitchen utensil	B. F. Adams	254,427	Feb. 28	1560	411	21	698
Kneading and mixing machine	P. Pfeiderer	254,042	Feb. 21	1060	285	21	543
Knife: *See* Edge-trimming-machine knife. Pocket-knife. Pruning-knife. Hay-knife. Skinning-knife. Paper-knife.							
Knife	S. S. Ward	256,173	May 16	1258	355	21	1562
Knife-scales. Apparatus for riveting	H. H. Francis	257,685	May 9	684	190	21	1409
Knitting-loom. Circular weft-thread	N. W. Westcott	254,079	Feb. 21	1101	{306 {307	21	559
Knitting-machine	W. H. Abel. (Reissue)	10,112	May 16	1303	{369 {370 {371	21	1531
Knitting-machine	W. Aiken	253,652	Feb. 14	556	150	21	451
Knitting-machine	J. Byfield	252,864	Jan. 31	1440	{402 {403	21	988
Knitting-machine	J. Denton	255,945	Apr. 4	941	62	21	980
Knitting-machine	H. J. Griswold	255,971	Apr. 4	977	79	21	985
Knitting-machine	H. Günther	253,988	Feb. 21	906	254	21	518
Knitting-machine	H. W. Harley	253,530	Feb. 14	422	118	21	430
Knitting-machine	W. D. Huse	255,996	Apr. 4	996	80, 81	21	1001
Knitting-machine	G. E. Nye	253,758	Feb. 14	685	196	21	474
Knitting-machine	H. C. Shaw	259,499	June 13	660	{182 {183	21	1822
Knitting-machine	G. A. White	254,750	Mar. 7	363	96	21	709
Knitting-machine	C. Young	256,583	May 23	1092	{478 {479	21	1606
Knitting machine. Circular	P. I. Harvey	253,531	Feb. 14	483	{118 {119	21	430
Knitting-machine needle	F. E. Gilford	253,880	Feb. 21	889	235	21	565
Knitting-machine needles. Manufacture of	S. Peberdy	255,808	Apr. 4	69	19	21	962
Knitting machines. Stop-motion for circular	R. M. Appleton	256,583	Apr. 18	989	270	21	1136
Knitting-machines. Thread-guide mechanism for	W. H. Pearson and J. Bradley	253,294	Feb. 7	55	17	21	356
Knob alarm. Door	W. F. Cook	253,006	Jan. 31	1614	446	21	986
Knob alarm. Door	J. Simon	254,924	Apr. 25	1446	465	21	1225
Knob attachment	J. A. Giese	254,000	Feb. 21	1002	260	21	553
Knob attachment	O. M. Hidden	255,858	Apr. 4	188	33	21	971
Knob attachment	B. H. Lockwood	256,668	Jan. 24	1280	338	21	894
Knob attachment	E. L. Phippe. (Reissue)	10,066	Mar. 28	1651	447	21	944
Knob attachment	W. H. Taylor	253,956	Feb. 21	951	264	21	594
Knob attachment	H. R. Towne	253,138	Jan. 31	1774	493	21	994
Knob attachment	H. R. Towne	253,789	Feb. 14	737	211	21	488
Knob attachment	J. W. Young	251,998	Jan. 3	308	99	21	63
Knob. Door	J. Bardsley	253,831	Feb. 21	795	226	21	500
Knob. Door	J. Collins	260,367	June 27	1853	500	21	2089
Label-band for dry-goods packages	B. E. Kingman	251,894	Jan. 3	261	71	21	46
Label for animals	P. P. Johnston	255,793	Apr. 4	49	14	21	939
Label-holder	J. F. Burgdorf	256,863	June 6	16	5	21	1697
Label-holder	H. E. Clinton	252,189	Jan. 10	617	173	21	113
Label holder. Car	C. J. Slafter	256,948	Apr. 11	643	174	21	1064
Labeling machine. Packet	G. Pritchard	252,137	Jan. 10	538	{156 {157 {158	21	103
Lace. Desk for making macramé	T. Barbour	254,256	Feb. 28	1311	363	21	583
Lace. Desk for making macramé	C. W. Dimmick	254,266	Feb. 28	1343	370	21	598
Lace-fastening	T. Green	256,989	Apr. 25	1538	431	21	1241
Lace fastening. Shoe	E. C. C. Henderson and T. A. McDonald.	260,196	June 27	1672	453	21	2090
Laces, &c. Machine for purling manufactured	O. L. Deschamps	253,915	Feb. 21	884	251	21	516
Lacing for wearing-apparel, bags, and other articles	J. Nathan	255,866	Apr. 4	68	18	21	948
Lacing-hook	E. C. Lequin	254,343	Feb. 28	1408	388	21	610
Lacing-hooks for shoes. Machine for making	S. N. Smith	259,397	June 13	595	{229 {230	21	1858
Lacing-hooks. Machine for feeding and setting	A. Eppler, Jr	255,676	Mar. 14	799	214	21	783
Lacing-hooks. Machine for manufacturing	S. N. Smith	260,250	June 27	1735	469	21	2089
Lacing-stud	S. Montgomery	254,565	Apr. 18	1049	294	21	1146
Lacing-stud blank	L. Goldu	253,533	May 23	1706	462	21	1606
Lacing-stud for shoes	J. L. Joyce	253,717	Feb. 14	642	182	21	46
Lacing stud or button	R. D. Steele	257,526	May 9	673	181	21	1374
Lacing stud. Shoe	J. L. Joyce	259,887	June 20	1944	353	21	1945
Lacing-studs. Making	M. Bray	256,116	Apr. 11	461	135	21	1034

Lamp. Electric	L. G. Woolley	256,765	Apr. 18	1275	350	21	1188
Lamp. Electric-arc	F. H. Burger	259,477	June 13	758	199	21	1834
Lamp. Electric-arc	J. H. Guest	259,067	June 6	169	46	21	1734
Lamp. Electric-arc	R. J. Gülcher	259,756	June 20	1121	298	21	1903
Lamp. Electric-arc	C. A. Hussey	258,561	May 30	1770	500 / 501	21	1687
Lamp. Electric-arc	C. A. Hussey	260,204	June 27	1678	455	21	2001
Lamp. Electric-arc	R. R. Moffatt	258,344	May 23	1367	367	21	1550
Lamp. Electric-arc	M. J. O'Sullivan	258,468	May 23	1625	440	21	1594
Lamp. Electric-arc	R. J. Pratt	258,985	May 30	2037	575	21	1674
Lamp. Electric-arc	E. Thomson	258,694	May 30	1905	538	21	1651
Lamp. Electric-arc	C. J. Van Depoele	257,999	May 16	1036	289	21	1481
Lamp. Electric incandescent	E. Berliner	258,546	May 30	1797	488	21	1680
Lamp. Electric incandescent	A. Bernstein	258,976	June 6	129	35	21	1717
Lamp. Electric incandescent	M. G. Farmer	258,903	June 6	43	11	21	1704
Lamp. Electric incandescent	J. H. Guest	258,747	May 30	1977	558	21	1663
Lamp. Electric incandescent	J. H. Guest	259,008	June 6	171	46	21	1734
Lamp. Electric incandescent	E. J. Houston	259,017	June 6	182	49	21	1736
Lamp. Electric incandescent	E. A. Scribner	254,780	Mar. 7	401	106	21	706
Lamp. Electrical	A. J. B. Cance	252,188	Jan. 10	611	173	21	111
Lamp-extinguisher	W. H. Baldwin	257,838	May 16	802	241	21	1451
Lamp-fixture	W. A. Hull	253,706	Feb. 14	698	177	21	463
Lamp-fixture	J. A. Hull	260,201	June 27	1675	454	21	2000
Lamp-fixture, &c	W. A. Hull	253,707	Feb. 14	698	178	21	463
Lamp-fixture. Extension	J. A. Evarts	258,038	May 16	1099	306	21	1493
Lamp-fixture. Extension	A. H. Jones	254,088	Feb. 21	1036	289	21	538
Lamp for lighting railway-carriages	J. F. Shallis and T. C. J. Thomas	254,708	Mar. 7	315	83	21	692
Lamp for miner's use. Safety	J. M. Dolen	257,670	May 9	650	184	21	1405
Lamp for railway-cars, &c	C. P. Howard	253,997	Feb. 7	37	19	21	353
Lamp-fount	J. J. Nichols	257,055	Apr. 25	1592	447	21	1251
Lamp. Gas	C. W. Muchall	252,698	Jan. 24	1217	341	21	925
Lamp globe and chimney. Combined	P. Schneider	257,768	May 9	779	217	21	1496
Lamp. Hanging	E. L. Bryant	259,067	June 6	289	71	21	1741
Lamp. Hanging	E. C. Lawrence. (Reissue)	10,075	Apr. 4	448	124	21	1096
Lamp hoisting-frame	J. W. Melvin	258,457	May 23	1617	457	21	1593
Lamp. Incandescent	J. V. Nichols	256,943	June 6	89	23	21	1710
Lamp. Incandescent	E. Weston	258,966	June 6	118	31	21	1715
Lamp. Incandescent electric	P. Diehl	255,497	Mar. 28	1337	361	21	887
Lamp. Incandescent electric	J. Jameson	259,763	June 20	1128	299	21	1904
Lamp. Incandescent electric	J. W. Swan	260,335	June 27	1837	496	21	2026
Lamp. Incandescent electric	W. L. Voelker	253,646	Feb. 14	549	157	21	450
Lamp. Incandescent electric	W. L. Voelker	253,647	Feb. 14	550	157	21	450
Lamp. Incandescent electric	W. L. Voelker	255,219	Mar. 21	983	263	21	891
Lamp. Inextinguishable self-igniting signal	T. Curtis	253,350	Feb. 7	197	57	21	380
Lamp lighter and extinguisher	T. Z. Magarrell	259,645	June 13	964	257	21	1870
Lamp-lighting implement	E. Morrison	259,765	June 20	1054	280	21	1892
Lamp. Mill	J. L. Forsaith and A. S. Kreiter	257,857	May 16	862	247	21	1455
Lamp. Miner's	D. D. Williams	252,284	Jan. 10	735	205	21	132
Lamp or cigar-lighter. Hydrogen	F. Rhind	252,518	Jan. 17	1022	284	21	186
Lamp or lantern globes, chimneys, &c. Manufacture of	A. W. Paall and J. F. Miller	256,158	Apr. 11	511	140	21	1043
Lamp-regulator. Electric	B. B. Brewer and A. G. Waterhouse	254,763	Mar. 7	362	101	21	703
Lamp. Safety	C. G. Tingry and G. A. Siffait	255,059	Mar. 14	772	207	21	778
Lamp. Safety	C. S. Westland	258,963	June 6	115	30	21	1714
Lamp. Safety car	C. E. Grannise	252,006	Jan. 10	513	142	21	95
Lamp safety device. Electric	J. J. Wright	258,921	May 23	1689	478	21	1605
Lamp. Self-extinguishing	J. Harris	260,021	June 27	1452	391	21	1996
Lamp-shade	A. C. Blayney	257,434	May 2	349	98	21	1343
Lamp-shade	W. Day	256,695	Apr. 25	1269	375	21	1205
Lamp shade and chimney	W. M. Marshall	253,679	Jan. 31	1713	473	21	313
Lamp-shade holder	E. H. Gothberg	254,536	Mar. 7	331	69	21	677
Lamp-shade holder	W. A. Hull	253,731	Mar. 28	1697	439	21	939
Lamp-shade holder	C. Votti. (Reissue)	10,067	Apr. 11	895	250	21	1109
Lamp-shade holder. Electric	S. Bergmann	257,146	May 2	3	1	21	1321
Lamp socket. Electric	S. Bergmann	257,377	May 2	156	44	21	1309
Lamp, soldering-iron heater, and paint-burner. Self-acting blow-pipe	T. Poyser	257,360	May 2	980	80	21	1331
Lamp-stand	T. Garceau	258,571	May 30	1755	497	21	1685
Lamp. Street	C. T. Ham	259,758	June 20	1123	298	21	1903
Lamp. Study	A. H. Jones	256,437	May 23	1579	448	21	1567
Lamp-support	H. Raapp	258,674	May 30	1891	534	21	1649
Lamps. Absorbent for electric	E. Weston	255,302	Mar. 21	1161	311	21	859
Lamps and carbons. Manufacture of incandescent	W. L. Voelker	251,749	Jan. 3	74	21	21	15

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lamps and dies therefor. Manufacture of coach-	F. C. Cannon	254,873	Feb. 28	1287	367	21	895
Lamps. Apparatus for manufacturing carbon filaments for incandescent	M. M. M. Slattery	260,247	June 27	1733	469	21	2000
Lamps. Apparatus for suspending electric	C. C. Jennings	260,206	June 27	1691	455 / 456	21	2001
Lamps. Carbon for electric	H. S. Maxim	254,872	Mar. 7	374	73	21	695
Lamps. Carbon-holder for electric	J. Tregoning	253,394	Feb. 7	168	47	21	375
Lamps. Carbon-holder for electric	A. G. Waterhouse	252,494	Jan. 17	953	246	21	163
Lamps. Carbon for incandescent	J. V. Nichols	256,942	June 6	88	23	21	1710
Lamps. Device for suspending electric-arc	A. G. Waterhouse	259,612	June 13	918	245	21	1888
Lamps. Globe-supporter for electric	J. Tregoning and L. H. Latimer	255,212	Mar. 21	974	259 / 261	21	880
Lamps, &c. Lighting apparatus for	S. Russell	254,701	Mar. 7	308	81	21	689
Lamps. Rheostat for electric	P. H. Fox	254,764	Mar. 7	364	101	21	704
Lamps. Spring-balance for	C. G. Miller	256,912	Apr. 25	1438	403	21	1223
Lamps. Weight for extension	E. L. Bryant	258,988	Apr. 25	1503	422	21	1225
Land and lawn roller	A. Barrows, &c	259,469	June 13	798	198	21	1839
Lands. Reclaiming low	G. Howell	254,362	Feb. 28	1279	360	21	694
Lantern	C. F. Anderson	259,455	June 13	781	192	21	1837
Lantern	A. L. Baron, W. T. Rafer, and B. F. Cookayne.	252,642	Jan. 24	1149	324 / 325	21	915
Lantern	C. A. Kinney	259,179	June 6	265	67	21	1758
Lantern	F. McLowee	253,362	Feb. 7	149	40	21	370
Lantern	W. M. Phelps	252,697	Jan. 24	1221	342	21	928
Lantern-carrier	A. J. Curtis	258,647	Apr. 18	1119	314	21	1139
Lantern. Dark	J. Z. Stone and L. E. Ling	257,191	May 2	51	16	21	1320
Lantern for bicycles	P. Gray	252,371	Jan. 17	949	524 / 525	21	126
Lantern for electric and other lights	L. Stieringer	253,955	Feb. 21	950	264	21	894
Lantern. Hand	L. Henkle	253,985	Feb. 21	954	266	21	895
Lantern-holder	E. Lafkin	252,393	June 27	1603	450	21	2021
Lantern. Railway	W. O. Seaquinson	256,498	Apr. 11	818	226	21	1096
Lantern. Signal	B. W. Begbie	254,791	Mar. 14	425	114	21	717
Lantern. Signal	L. G. Huntington	251,781	Jan. 3	116	33	21	28
Lantern. Tubular	E. J. Hale	252,315	Jan. 17	777	217	21	145
Lantern. Tubular	C. Woodbury, F. Wood, and A. J. Sawyer.	256,380	May 23	1668	477	21	1605
Lard and tallow tank	J. K. Martin	256,715	Apr. 18	1207	337 / 338	21	1175
Laryngoscope	C. Boecler	257,646	May 9	633	177	21	1389
Last	W. O. Nichols	254,159	Feb. 28	1187	332	21	573
Last. Darning	G. A. Cochrane	256,378	May 23	1643	433	21	1577
Lasting-jack	I. Hall	251,714	Jan. 3	31	9	21	8
Lasting-jack	G. W. Hutchins	254,437	Feb. 28	1510	414	21	698
Latch	J. Kaye	256,431	May 23	1595	449	21	1567
Latch	T. Laler	257,725	May 9	733	204	21	1417
Latch and lock	O. Ewers	252,670	Jan. 31	1447	405	21	229
Latch. Carriage-door	W. Gates	256,391	May 23	1628	453	21	1589
Latch. Gate	G. E. Chandler	253,976	Feb. 21	978	273	21	899
Latch. Gate	L. L. Lightcap	256,577	Apr. 18	1033	288	21	1145
Latch. Gate	J. Meesman	257,988	May 16	1014	283	21	1477
Latch. Gate	P. J. Winn. (Reissue)	10,138	May 30	9113	556	21	1668
Latch. Locking	R. Burk	255,898	June 6	141	38	21	1719
Latch-needles. Making	F. R. Woodward	259,869	June 20	1268	373	21	1948
Latch. Sliding-gate	I. S. Sherwin	254,658	Feb. 21	1060	298	21	546
Lath-holder	I. Miles	253,319	Feb. 7	50	16	21	355
Lathing. Metallic	A. Knisely	252,679	Jan. 24	1225	337	21	929
Lathe	A. W. Norton	255,911	Mar. 14	710	191	21	799
Lathe and drilling-machine. Combined	J. F. Rakes	251,945	Jan. 3	314	85	21	54
Lathe attachment	H. Richmann	253,314	Feb. 7	156	44	21	379
Lathe. Button-turning	G. L. Pallett	256,568	Apr. 18	1047	295 / 296	21	1147
Lathe cutter-holder	F. H. Gardner	256,668	Apr. 18	1147	322	21	1164
Lathe. Engine	G. A. Gray, Jr	252,780	Jan. 24	1208	353	21	937
Lathe. Engine	J. Richards	256,121	May 16	1001	336	21	1512
Lathe for turning eccentric or polygonal forms	W. H. Lambert	252,481	Jan. 17	968	272	21	170
Lathe for turning fluted and similar work	F. Hansen	257,451	May 2	306	103	21	1347
Lathe for turning irregular forms	W. S. Huntington	254,420	Mar. 7	41	11	21	645
Lathe for turning irregular forms	E. Myers	256,632	Apr. 4	341	93	21	1097
Lathe for turning polygonal bodies	J. H. Fisher and C. C. Peck	256,991	Apr. 25	1505	420	21	1230
Lathe for turning polygonal forms	C. C. Peck	260,118	June 27	1578	425	21	1995
Lathe-head	E. T. Starr	254,719	Mar. 7	389	97	21	694
Lathe. Metal-working	F. Eccabert	257,676	May 9	645	181	21	1402
Lathe-rest	E. S. Fuller	256,910	June 6	50	13	21	1703
Lathe. Railway-car-axle	A. Gordon	252,630	Jan. 10	435	119	21	82
Lathe sizing-tool	J. Flower	256,907	June 6	47	12	21	1702
Lathe sizing-tool	J. Flower	259,377	June 13	696	182	21	1810
Lathe tail-stock	M. F. McMahon	257,083	May 16	914	255	21	1469
Lathe tail-stock. Turning	A. Hyde	258,562	May 30	1773	501	21	1682
Lathe-tool	H. O. Lund	253,073	Mar. 14	698	216	21	765
Lathe. Turning	H. C. Balsbaugh	260,090	May 16	1055	293	21	1494
Lathe. Watch-maker's	F. Eccabert	256,067	Jan. 10	508	139	21	94
Lathe. Watch-maker's	D. L. Pettipierre	256,669	May 30	1684	524 / 525	21	1647
Lathe. Wood-turning	C. W. Wilder	254,419	Feb. 28	1491	409 / 410	21	694
Lathes. Taper attachment for	F. B. Miles	253,410	Feb. 7	264	76, 77	21	391
Laundry-cushion	J. A. B. Lovett	254,999	Mar. 14	542	145	21	720
Laundry-heater	D. C. Griffin	259,132	June 6	280	69	21	1730
Laying-out machine	J. A. Brownfield	256,015	May 16	1072	296	21	1498
Lead and crayon holder	C. W. Benson	256,951	Apr. 25	1497	419	21	1234
Lead and crayon holder	A. Goetz	257,215	May 2	288	87	21	1317
Lead and crayon holder	J. Hoffman	259,739	June 20	1124	296	21	1904
Lead and crayon holder	J. Ilfelder	256,688	Apr. 18	1297	345	21	1192

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Lead and crayon holder	G. Küstermann	256,223	Apr. 11	606	165	21	1058
Lead and crayon holder, Automatic	R. Wittmann	253,603	Feb. 14	758	214	21	488
Lead. Apparatus for the manufacture of red	N. B. Gregg	255,970	Apr. 4	276	72	21	906
Lead by the old Dutch process. Corroding-house for the manufacture of white	W. H. Wetherill	258,883	Jan. 24	1365	368	21	253
Lead. Manufacture of oxides of	G. T. Lewis	259,086	June 6	193	.....	21	1727
Lead pipe	P. Langhammer	256,068	May 16	1149	382	21	1502
Lead-traps. Machine for making	J. Robertson	254,697	Mar. 7	304	69	21	690
Leading-staff for bulls	S. M. Wells	252,638	Jan. 24	1155	293	21	215
Leaf and plant. Artificial	C. I. Hahn	252,702	Jan. 24	1291	363	21	238
Leather boarding and graining machine	J. H. Hovey	253,533	Feb. 14	426	119 / 120	21	431
Leather box	A. and H. Hoff	253,605	Feb. 14	505	144	21	443
Leather-buffing machine	J. H. Stevens	256,258	Apr. 11	648	175	21	1065
Leather. Composition for improving lace	L. Junior	253,210	Feb. 7	41	.....	21	354
Leather-dressing machine	L. J. Baker	259,995	June 27	1492	383 / 384	21	1961
Leather-dressing machine	W. Goodmin	253,369	Jan. 17	837	233 / 234	21	155
Leather. Edge-blacking powder for	J. H. Garrett	258,404	May 23	1554	.....	21	1562
Leather fastening	G. W. Freeman	257,818	May 9	838	238	21	1436
Leather scouring, setting, or glassing machine	F. A. Lockwood	258,659	May 30	1865	526 / 527 / 528	21	1645
Leather shaving and whitening machine	J. G. Bussell	253,998	Jan. 31	1517	423	21	289
Leather-skiving machines. Adjusting device for	G. M. Ludlow	256,844	Apr. 25	1353	369	21	1200
Leather-splitting machine	G. L. Tyler	253,449	Feb. 7	315	89	21	390
Leather substitute	E. C. F. Günther	255,957	May 16	1120	314	21	1496
Leather-whitening machines. Cutter for	J. E. Clement	259,497	June 13	760	206	21	1836
Legging	M. E. Cory	259,986	June 6	153	42	21	1721
Lemon-squeezer	J. Fanning	252,671	Jan. 31	1449	405	21	270
Lemon-squeezer	F. D. F. Müller	259,902	June 20	1983	344	21	1931
Lemon-squeezer	A. C. Rex	256,372	Apr. 11	788	217	21	1090
Lemon-squeezer	A. Schlapbach	256,812	May 30	2044	577	21	1675
Lemon-squeezer	J. Trickel	260,258	June 27	1745	471	21	2011
Letter-box. Street	T. McLaughlin	252,842	Jan. 24	1410	393	21	257
Letter-box. Street	S. Strong	253,236	Feb. 7	66	20	21	358
Letter-case. Revolving	A. S. Currier	256,296	Apr. 11	701	191	21	1075
Letters, cards, photographs, &c. Device for holding	W. H. Jones and C. L. Middleton	253,392	Feb. 7	243	69	21	367
Letters or designs in metal for signs. Making depressed	J. F. Cluley	259,097	June 6	279	74	21	1742
Levee	J. W. Crump	256,025	May 16	1095	302	21	1490
Level-rod. Surveyor's self-reading	T. M. Jackson	254,060	Mar. 14	673	181	21	761
Leveling-instrument. Hydrostatic	J. Macdonald	259,408	June 13	863	176	21	1818
Lever. Interlocking	H. F. Cox	255,774	Apr. 4	27	8	21	955
Lever. Steam	J. B. Collin	252,536	Jan. 24	1112	312	21	207
Life-preserver	F. W. Brewster	254,589	Mar. 7	187	46	21	670
Life-preserver	A. McDonald	252,394	Jan. 17	787	219	21	146
Life-preserver	B. J. Willard	254,560	Mar. 7	166	41	21	666
Life-preserving garment	C. Williams	252,898	Jan. 24	1388	387	21	253
Life-raft	M. E. Beasley	256,191	May 16	1279	368	21	1587
Lifter: *See* Belt-lifter. Pattern-lifter. Pot-lifter. Stove-lifter. Transom and skylight lifter. Water-lifter.							
Lifter	C. F. Fellows	252,025	Jan. 10	431	118	21	81
Lifting device	A. Borne	257,261	May 2	160	45	21	1310
Lifting-fork	G. W. McDannold	256,719	Apr. 18	1211	339	21	1176
Lifting-jack	S. M. Baird	254,255	Feb. 28	1300	382	21	502
Lifting-jack	J. Beihl	254,393	Feb. 28	1317	384	21	583
Lifting-jack	J. Church	258,556	May 30	1737	492	21	1622
Lifting-jack	L. H. Davis	259,506	June 13	789	208 / 209	21	1839
Lifting-jack	C. Gracey	254,615	Mar. 14	450	121	21	722
Lifting-jack	J. Hogeland	259,383	June 13	646	171	21	1814
Lifting-jack	T. J. Jenne and C. S. Harmon	254,033	Mar. 14	469	124	21	783
Lifting-jack	J. O. Joyce	256,002	Apr. 4	314	82	21	1002
Lifting-jack	W. Kightlinger	253,394	Feb. 7	132	36	21	369
Lifting-jack	F. Lehman	253,309	Feb. 7	136	40	21	369
Lifting-jack	J. Nixon	255,658	Mar. 28	1384	410	21	922
Lifting-jack	G. A. Ohl	253,753	Feb. 14	666	197	21	474
Lifting-jack	W. Schenker	257,833	May 9	847	236	21	1439
Lifting-jack	J. Weathers	254,076	Feb. 21	1098	304	21	549
Lifting-jack	H. J. Wilson	253,964	Feb. 21	962	267	21	536
Light: *See* Drop-light. Electric light. Head-light. Skylight.							
Light. Combined shade and concentrator for artificial	J. S. Goldsmith and H. H. Smith	251,711	Jan. 3	29	8	21	7
Light. Concentrator for artificial	J. S. Goldsmith and H. H. Smith	251,712	Jan. 3	29	9	21	8
Lightning-arrester	T. Ahearn	252,050	Jan. 31	1434	401	21	267
Lightning-arrester	A. R. Prescott	256,046	Apr. 4	357	97	21	1016
Lightning-arrester protector	C. T. Fitch	256,269	May 23	1402	403	21	1550
Lightning. Protecting oil-tanks from	F. G. Sacket	259,120	May 16	1210	340	21	1513
Lightning. Protecting oil-tanks from	G. G. Smith	255,943	Mar. 14	709	204	21	776
Lightning-rod coupling	W. B. Munn	258,590	May 30	1782	503	21	1630
Lightning-rod coupling	T. H. Patse	257,889	May 16	923	257	21	1461
Lightning-rod coupling	T. H. Patse	257,890	May 16	924	257	21	1461
Lightning-rod coupling	T. H. Patse	257,891	May 16	925	258	21	1462
Limb-rest for railway travelers	F. M. Gregg	257,032	May 16	898	248	21	1456
Lime for bricks and tiles. Utilizing spent	E. L. Ransome	257,220	May 2	116	.....	21	1301
Linchpin	J. Drucker	258,725	May 30	1959	531	21	1650
Line-fastener	F. Kittell and S. J. Boise	259,766	June 20	1132	300	21	1905

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Line, cord, rope, cables, and cahlum. Manufacture and treatment of	J. Coulson	255,660	Mar. 28	1403	.....	21	919
Link. Attachment	J. M. Dodge	260,720	May 30	1947	520	21	1950
Link-bending machine	L. Ashcom	254,696	Mar. 14	340	128 / 129	21	743
Link-bending machine	E. H. Johnston	253,289	Feb. 7	240	69	21	367
Link-bending machine. Metal	R. D. Evans and R. M. Green	256,194	Apr. 4	340	118	21	1063
Link-heating device	R. Smith	259,259	June 13	870	179	21	1801
Link. Open	S. Shotter	251,256	Jan. 3	287	69	21	57
Link. Swivel	D. F. Crowley	256,735	Apr. 18	1244	339	21	1183
Link-welding device	P. H. Sheahan	256,482	May 23	1657	466	21	1560
Links. Manufacture of open	D. Hults	255,987	Apr. 4	135	36	21	973
Liquids in kegging. Apparatus for observing the quality of	P. Mühlhäuser	257,049	Apr. 25	1065	445	21	1950
Load-binder	S. S. Conkling	255,941	Apr. 4	285	60	21	969
Lock: *See* Alarm-lock. Bedstead-lock. Brake-lock. Bridge-lock. Car-door lock. Casket lock. Door-lock. Drawer-lock. Ear-wire lock. Fire-arm lock. Gun-lock. Hasp-lock. Indicator-lock. Mortise-lock. Nut-lock. Nut and bolt lock. One-lock. Padlock. Permutation-lock. Piano-tuning-pin lock. Seal-lock. Robe-lock. Seal-lock. Time-lock. Trace-lock. Traveling-bag lock. Trunk-lock. Vehicle seat-lock. Wagon-seat lock.							
Lock	H. C. Aldrich	256,283	Apr. 11	664	189	21	1068
Lock	E. Anderson	257,326	May 16	1048	291	21	1468
Lock	W. H. Taylor. (Reissue)	10,012	Jan. 17	1106	289	21	209
Lock and dam	J. Du Bois	251,771	Jan. 3	105	29	21	29
Lock-escutcheon	J. E. Barnes	253,683	Feb. 14	578	163	21	454
Lock-nut	H. Howson	256,488	May 23	1673	447	21	1565
Locket	W. H. Blaney	253,688	Feb. 14	580	164	21	455
Locket	J. Reichefeld	255,977	Mar. 28	1546	417	21	926
Locket-rims. Manufacture of	G. R. W. Kantee	256,963	Apr. 25	1488	400	21	1221
Locking-belt	T. J. Bush	257,267	May 2	167	47	21	1311
Locking mechanism for the drawers of desks, &c. Automatic	A. Cutler	257,475	May 9	409	115	21	1360
Locomotive	B. F. Hudson	253,289	Feb. 7	195	37	21	367
Locomotive ballast-crushing machine	A. B. Austin	253,466	Feb. 14	394	105 / 106	21	433
Locomotive-boiler	J. E. Wootten	254,561	Mar. 7	166	41	21	666
Locomotive-brake	W. B. Guernsey	259,995	June 6	166	46	21	1733
Locomotive-brake	W. B. Guernsey and W. B. Turner	259,994	June 6	166	45	21	1733
Locomotive-brake	W. B. Guernsey and W. B. Turner	259,995	June 6	167	45	21	1733
Locomotive-engine	H. F. Shaw	252,231	Jan. 17	794	221	21	146
Locomotive fire-box	M. Kearney and M. C. Hawley	255,869	Apr. 4	130	37	21	974
Locomotive-frames. Manufacture of	C. T. Parry	255,389	Mar. 21	1194	308 / 309	21	848
Locomotive-furnace	T. A. Buckland	258,888	Jan. 31	1436	402	21	269
Locomotive-furnace	T. A. Buckland	253,179	Feb. 7	9	3	21	343
Locomotive-furnace	T. A. Buckland	256,709	May 30	1936	547	21	1656
Locomotive-furnace	A. J. Cromwell	259,394	June 13	581	139	21	1791
Locomotive-recorder	A. L. Pengot	256,672	May 30	1888	535 / 536	21	1648
Locomotive reversing-gear	W. P. Hennessy	259,536	June 13	828	218	21	1847
Locomotive. Road	E. P. Bryson	256,120	Apr. 11	495	126	21	1034
Locomotive sand-distributer	P. B. Viele	256,888	May 30	2005	568	21	1679
Locomotive stock-alarm	W. A. Place	253,095	Jan. 31	1725	479	21	317
Locomotives and chute therefor. Coaling	C. Gorham and W. Bartlett	259,389	June 13	816	216	21	1844
Locomotives. Attaching brooms to	W. S. Barrie and J. R. Groves	260,060	June 27	1525	410	21	1977
Locomotives. Cow-catcher for	O. P. Johnson	253,208	Feb. 7	30	12	21	353
Log-dressing machine	W. D. Hatch	257,492	May 9	433	120	21	1364
Log feeder and turner	H. M. Loud	257,638	Apr. 25	1570	440	21	1947
Log-turner	F. McDonough	259,701	June 20	1043	327 / 328	21	1886
Logging-engine	J. Dolbeer	256,553	Apr. 18	1011	285	21	1142
Loom	C. Cross	253,010	Jan. 31	1617	449 / 450	21	220
Loom	C. Gehrua	257,210	May 2	391	54, 55	21	1315
Loom	O. Smith	251,801	Jan. 3	139	39, 40	21	35
Loom	M. Murray	256,461	May 23	1660	460	21	1393
Loom-beater	J. and C. Rothwell	257,547	May 9	459	128	21	1390
Loom for weaving pile fabrics	C. B. Knight	259,254	June 13	846	224	21	1850
Loom-gear	J. O. Fryer	257,669	May 9	668	191	21	1419
Loom. Jacquard	J. O. Fryer	257,670	May 9	671	192	21	1419
Loom Jacquard mechanism	J. Denton	253,436	Jan. 17	930	256 / 257	21	189
Loom-shedding mechanism	R. R. Goodyear	255,650	Apr. 4	115	34	21	970
Loom-shedding mechanism	S. A. Dudley	255,998	Apr. 4	264	66	21	972
Loom-shuttle	C. N. Tucker	251,973	Jan. 3	340	94	21	69
Loom-shuttle	J. Barker. (Reissue)	10,119	May 23	1716	484 / 485	21	1619
Loom-shuttle-box motion	J. W. T. Davidson and D. Green	256,968	Apr. 25	1515	422 / 423	21	1538
Loom stop-motion	W. H. Noble	257,687	Apr. 25	1594	447	21	1552
Loom-temple	J. B. Stimpson	256,659	Mar. 28	1593	452	21	970
Loom-temple roller	T. B. Miller	256,885	May 30	1992	562	21	1673
Loom warp-stop mechanism	J. C. Burke	253,313	Feb. 14	707	214	21	460
Loom weft-fork							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Loom weft stop-motion	E. M. Cole	251,699	Jan. 3	17	5	21	5
Looms. Back roll and support therefor for	L. J. Knowles	254,027	Feb. 21	1049	290	21	540
Looms. Picking-shoe for	H. B. Murlless	253,619	Feb. 14	519	149	21	445
Lounge-frame	J. F. Komp	252,604	Jan. 24	1117	313	21	208
Lounges. Folding leg-fixture for extension	J. Graeser	255,781	Apr. 4	34	10	21	956
Lozenge-machine	T. Robertson	257,615	May 9	598	167	21	1399
Lubricant	W. J. L. Hollis	259,760	June 20	1125	.....	21	1904
Lubricant	W. Parkinson	252,686	Jan. 24	1230	.....	21	226
Lubricating bearing for axles. Self	P. Decauville	253,015	Jan. 31	1624	451	21	300
Lubricating-journal	G. Krats	258,635	May 30	1868	525	21	1644
Lubricating mechanism	W. M. Brinkerhoff	259,470	June 13	743	196	21	1839

Manger	C. H. Willson	258,636	May 30	2075	{ 585 / 586	21	1661
Mangle	J. F. Baldwin	253,661	Feb. 14	579	162	21	454

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Mangle	J. G. Crawford	254,987	Mar. 14	688	168	21	749
Mantel. Adjustable	R. H. Gudgeon	254,598	Mar. 14	518	139	21	733
Measure-hook	S. R. Minnich	254,147	Feb. 28	1163	330	21	571
Map and chart exhibiter	A. Dean	257,671	May 9	630	185	21	1405
Map and chart supporter. Adjustable	H. E. Hayes	259,197	June 27	1670	453	21	1819
Map-rack	G. A. McLane	253,538	Feb. 14	434	128	21	432
Maps, charts, &c. Device for displaying	A. Dean	256,627	Apr. 25	1330	376	21	1205
Marble or other stone. Machine for cracking or splitting	C. A. Wellington	254,415	Feb. 28	1488	407	21	689
Marine boiler	G. B. N. Tower	251,747	Jan. 3	72	20	21	14
Marking and cutting instrument. Combined	E. C. Helsely	256,689	Apr. 18	1173	329	21	1170
Marking cloth, &c. Device for	A. W. Allen	253,490	Feb. 14	398	105	21	423
Marquetry by painting. Imitation of	W. Schroeder	257,021	Apr. 25	1606	455	21	1267
Masher and strainer. Vegetable	L. Becker	255,570	Mar. 28	1419	393	21	983
Mashing malt and malt substitutes. Method of and apparatus for	G. Seitz	255,903	Mar. 21	958	256	21	617
Mat: *See* Foot-mat. Oil-mat.							
Match-box	J. Woodward	253,570	Feb. 14	467	132	21	437
Match-box and cigar-cutter. Combined	C. F. Pierce	252,036	Jan. 10	665	198	21	66
Match-card machine	G. Hargreaves	253,631	Mar. 28	1468	399	21	914
Match. Friction	W. H. Pitt	256,920	Apr. 25	1449	404	21	1264
Match-igniter	J. E. Donnelly	255,605	Mar. 28	1467	394	21	911
Match-safe	G. Franke	260,187	June 27	1656	459	21	1997
Match-splints. Machine for cutting	H. L. Hapgood	258,414	May 23	1563	{ 443 / 444	21	1563
Match-sticks. Machine for setting	C. F. Benbeck	254,198	Feb. 28	1231	343	21	579
Matches after drying. Machine for unloading friction-	C. F. Benbeck	254,191	Feb. 28	1230	343	21	579
Matches. Manufacture of friction-	H. H. Baker	255,895	Mar. 21	899	231	21	795
Mattress	G. S. Meek	257,178	May 2	30	12	21	1267
Mattress	J. F. Young	254,750	Mar. 7	340	100	21	703
Mattress. Bed-	A. Schenk	252,973	Jan. 31	1570	437	21	291
Mattress. Spring-	A. L. Burley	254,455	Mar. 7	11	3	21	640
Mattresses, bed-quilts, &c. Machine for filling	C. Scherer	253,633	Feb. 14	535	154	21	448
Measure and funnel. Combined	C. C. Becker and P. Jacob	255,139	Mar. 21	865	230	21	808
Measure and scales. Liquid	T. F. Dodge	254,834	Mar. 14	609	{ 164 / 165	21	770
Measure and tally. Grain	R. Wittmann	256,783	Apr. 18	1073	359	21	1188
Measure. Dimension-	J. W. Young	258,845	May 30	1840	567	21	1683
Measure. Earthenware liquid	F. Weber	257,421	May 2	333	94	21	1340
Measure. Liquid	E. P. Haff	258,161	Jan. 10	515	143	21	96
Measure. Pocket tape	J. H. Webster	257,114	Apr. 25	1664	468	21	1264
Measuring and discharging apparatus for cooling tubes of char-furnaces	O. Huffman	254,574	Mar. 14	598	141	21	735
Measuring apparatus. Rotary cloth-	E. F. Osborne	255,884	Apr. 4	157	42	21	970
Measuring heat supplied from steam	E. G. McClure	254,661	Mar. 14	544	146	21	726
Measuring-line reel	A. Winter	258,567	Jan. 17	1076	300	21	195
Measuring machine. Cloth-	W. A. Sawyer	256,656	Apr. 4	3:2	108	21	1013
Measuring machine. Leather-	J. H. Peters	251,836	Jan. 3	305	83	21	53
Measuring reel. Cloth-	E. Steere	260,050	June 27	1496	463	21	1973
Measuring, rigging, fastening, and finishing machine	W. Chesterman	260,163	June 27	1627	430	21	1973
Measuring-tape	D. T. Winter	258,970	June 6	194	33	21	1716
Measuring the area of hides, &c. Machine for	D. T. Winter	258,969	June 6	121	33	21	1715
Measuring the area of hides, surfaces, &c. Machine for	J. Coffin	258,993	June 6	150	41	21	1750
Measuring the average breadth of irregular planes. Averagometer or instrument for	T. J. Rockwood	254,392	Feb. 28	1440	397	21	616
Meat and lard press	J. Chapman	257,211	May 2	71	23	21	1274
Meat and vegetable preserving chest	S. W. Bowne	256,350	May 23	1499	428	21	1573
Meat. Apparatus for dissolving and digesting	J. Patchel	259,711	June 20	1059	261	21	1893
Meat-cutter	C. E. Deany	258,719	May 30	1944	549	21	1656
Meat for transportation. Packing	T. A. Gardner	258,577	Jan. 17	1087	303	21	197
Meat-roaster	A. and A. Ike	253,819	Feb. 14	775	220	21	489
Meat-slicer	J. Eckart	251,772	Jan. 3	107	.....	21	21
Meats and fish. Compound for preserving	N. Adams	260,075	June 27	1509	466	21	1976
Mechanical movement	O. G. Alderman	254,168	Feb. 28	1225	341	21	573
Mechanical movement	C. A. Benton	254,097	Mar. 14	577	156	21	744
Mechanical movement	J. B. Bray	256,833	Apr. 18	1109	310	21	1157
Mechanical movement	R. E. Breed	252,170	Jan. 10	666	170	21	110
Mechanical movement	P. T. Canfield	253,660	Feb. 14	565	168	21	457
Mechanical movement	C. Herrschaft	254,648	Mar. 7	350	64	21	650
Mechanical movement	W. H. and C. A. Holcomb	257,398	May 2	219	62	21	1320
Mechanical movement	J. A. Johnson	256,653	May 30	1861	525	21	1644
Mechanical movement	H. Lord	252,251	Jan. 10	665	{ 167 / 168	21	121
Mechanical movement	J. H. Osborne	256,583	May 30	1765	504	21	1630
Mechanical movement	J. W. Reid	253,688	Feb. 7	992	81	21	394
Mechanical movement	C. H. Roberts	256,125	May 16	1308	330	21	1513
Mechanical movement	A. E. Rush	256,362	Apr. 11	797	218	21	1062
Mechanical movement	C. H. Trask	258,339	Jan. 17	902	253	21	149
Mechanical movement	R. W. Whitney	253,788	Feb. 14	746	213	21	494
Mechanical movement for churns	E. L. Marsnville	256,859	May 23	1260	365	21	1540
Mechanical movement for ore-crushing machines	J. David	257,668	May 16	875	{ 245 / 246	21	1454
Medical compound	J. Averhoff	254,449	Mar. 7	2	.....	21	630
Medical compound	P. R. Levings	257,689	Apr. 25	1567	.....	21	1949
Medical compound	W. R. Mead	254,256	Feb. 28	1419	.....	21	611
Medical compound	W. Pickhardt and H. Endemann	254,696	Feb. 21	1110	.....	21	853
Medical compound	W. Pickhardt and H. Endemann	254,697	Feb. 21	1110	.....	21	853
Medical compound for diphtheria	H. Wiesbaugh	259,670	June 6	850	.....	21	1736
Medical purposes. Electrical apparatus for	W. Humann	259,691	June 20	1035	{ 273 / 274	21	1866
Medical use. Electrical apparatus for	J. Butler	252,120	Jan. 10	650	171	21	111

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Medicine chest and case	H. H. Peacock	254,838	Mar. 14	484	130	21	727
Medicinal tonic	L. Rouden	254,384	Feb. 28	1451	.....	21	616
Meshed or netted fabric	A. Beals	255,407	Mar. 28	1294	398	21	980
Metal articles. Machine for bending and shaping	A. R. Woodyatt	252,853	Jan. 24	1492	306	21	259
Metal bending and straightening machine	A. Wilke	258,260	Apr. 11	650	178	21	1067
Metal-breaker. Drop	E. S. Wenrich	256,777	Apr. 18	1966	357	21	1187
Metal. Chill for chilling	J. P. Warner	256,257	Apr. 11	655	177	21	1066
Metal-cutting machine	W. F. Durfee	260,173	June 27	1636	448	21	1994
Metal. Electroplated yellow	A. O'Neill	257,605	May 9	597	.....	21	1390
Metal plates. Bending	P. Medart	257,963	May 16	1010	269	21	1477
Metal rods. Machine for straightening and polishing iron, steel, and other	J. Illingworth	253,710	Feb. 14	634	180	21	464
Metal-shearing machine	U. Haskin	260,022	June 27	1454	398	21	1966
Metal-shearing machines. Device for clamping and holding plates in	W. F. Durfee	260,178	June 27	1646	447	21	1996
Metal strips or rods. Mechanism for reducing	W. F. Durfee	260,174	June 27	1637	442, 443	21	1995
Metal surfaces. Composition for cleaning and protecting	C. W. Trickey	257,535	May 9	480	.....	21	1373
Metal tubes and pipes. Machine for making	S. Fox	258,740	May 30	1967	556	21	1662
Metal while being tempered. Apparatus for shaping and holding	J. Jacobs	256,898	Apr. 25	1417	399	21	1290
Metals. Apparatus for brazing	J. C. Stevens	260,133	June 27	1594	430	21	1988
Metals. Bath for treating	J. Mensdorf	253,937	Feb. 21	930	.....	21	521
Metals. Gilding	P. A. Dodé	255,491	Mar. 28	1941	.....	21	872
Metals. Hardening	C. M. Daboll	255,725	Mar. 28	1690	.....	21	938
Metals. Ornamenting	J. D. Planchamp	256,732	Apr. 18	1221	342	21	1178
Metallic case	D. Moore	259,889	June 20	1260	343	21	1930
Metallic fastener	G. W. McGill	251,911	Jan. 3	282	77	21	49
Metallic fastening	G. W. McGill	251,912	Jan. 3	283	77	21	49
Metallic fastener	G. W. McGill	259,685	Jan. 24	1211	330	21	294
Metallurgical gas-furnace	W. W. Waplington	259,653	June 13	970	259	21	1671
Meter: *See* Electric meter. Electrical meter. Foci-meter. Water-meter.							
Microtome. Freezing	T. Taylor	256,173	Apr. 11	596	145	21	1045
Middlings-detacher	C. Brown	258,552	May 30	1732	490	21	1691
Middlings. Machine for separating	W. R. Middleton. (Reissue)	10,059	Mar. 7	418	111	21	709
Middlings-purifier	P. S. Brown	254,004	Mar. 7	199	48	21	671
Middlings-purifier	T. B. Osborne	254,038	Feb. 21	1055	294	21	542
Middlings-purifier	T. B. Osborne	254,039	Feb. 21	1056	294	21	542
Middlings-purifier	A. J. Seyler	255,036	Mar. 14	743	200, 201	21	774
Middlings-purifier	G. T. Smith	256,142	May 16	1293	344	21	1516
Middlings-purifier	A. Wolf	259,908	June 20	1384	372	21	1948
Middlings-purifiers. Dust-catching apparatus for	J. McDaniel	259,898	June 20	1266	339, 340	21	1928
Middlings-purifiers, &c. Dust-collector for	W. S. Russell	252,144	Jan. 10	569	160	21	104
Middlings-purifiers, &c. Dust-collector for	A. Wolf	251,965	Jan. 3	302	98	21	62
Milk-aerators. Double-acting bellows for	N. G. Stebbins	253,123	Jan. 31	1765	490	21	392
Milk-boiling vessel	J. Renson	258,475	May 23	1637	463	21	1586
Milk-can	C. S. Shepard	256,948	June 6	97	25	21	1711
Milk-cooler	A. H. Brill	253,178	Feb. 7	8	3	21	348
Milk-cooler	C. Colby and E. Brammall	256,976	Apr. 25	1510	424	21	1236
Milk-cooler	E. F. Smith	252,534	Jan. 17	1041	290	21	189
Milk-pan cover	C. C. Fairlamb	255,263	Mar. 21	1034	277	21	831
Mill: *See* Attrition-mill. Cape-mill. Cider-mill. Coffee-mill. Coffee and spice mill. Fanning-mill. Flour-mill. Grain-mill. Grinding-mill. Hominy-mill. Pulverizing-mill. Quartz-mill. Roller-mill. Rolling-mill. Saw-mill. Stamping-mill. Sugar-mill. Windmill.							
Mill-disk	L. Gathmann	254,814	Mar. 14	448	121	21	721
Mill-packer register	G. L. Williams	258,636	May 30	2073	585	21	1681
Mill-spindle bearing	G. F. Senter	255,541	Mar. 28	1386	374	21	896
Milling cutter-blank	M. G. Crane	258,560	May 30	1741	483	21	1622
Milling-machine	A. H. Campbell	253,974	Feb. 21	975	271, 272	21	528
Milling-tool	W. N. Buckley	255,589	Mar. 28	1450	390	21	908
Millstone	R. Moody	255,660	Apr. 4	153	41	21	976
Millstone-alarm	W. Lauboff	253,673	Feb. 21	847	230	21	508
Millstone-dress	E. Cyrus	259,143	June 6	287	77	21	1744
Millstone-dress	J. M. Speer, Jr.	257,693	May 9	609	170	21	1394
Millstone-dressing machine	W. W. Cleaveland	253,511	Feb. 14	403	112	21	457
Millstone-driver	A. Callahan	253,681	Feb. 14	586	168	21	457
Millstone-driver	L. P. Weaber, Jr. (Reissue)	10,118	May 16	1318	372	21	1532
Millstone-driver	L. P. Weaber, Jr	258,557	Jan. 17	1067	297	21	193
Millstone-driver	J. H. Wooster	256,787	Apr. 18	1278	360	21	1189
Mine-water. Apparatus for purifying	T. Shaw	252,974	Jan. 31	1571	436	21	291
Miners, &c. Prospecting-tool for	J. B. T. Chase	252,184	Jan. 10	613	173	21	112
Mines, &c. Electrical device for operating submerged	G. E. Haight	257,695	May 9	798	194, 195	21	1412
Mining apparatus	O. S. Presbrey	253,697	Jan. 31	1736	489	21	517
Mining-engine	B. Yoch	251,957	Jan. 3	287	99	21	63
Mining implement	T. M. Gallaher	252,266	Jan. 10	634	179	21	115
Mining-machine	X. Kern, Jr	260,021	June 27	1464	395	21	1966
Mining machine. Coal	J. Du Bois	259,168	June 6	285	79	21	1746
Mining machine. Coal	T. Murray	253,747	Feb. 14	660	185	21	473
Mining machine. Coal	G. D. Whitcomb	259,856	June 20	1351	365	21	1942
Mirror-handle	P. Wiederer	253,457	Feb. 7	385	99	21	401

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Mirror. Illuminated	P. Loth and J. Sladic	259,563	Jan. 17	1669	264	21	197
Miter-box	J. W. Angus	252,267	Jan. 31	1566	448	21	295
Miter box or gage	J. J. Meyers	257,041	Apr. 25	1577	403	21	1245
Mitts. Driving	J. E. Schmidt	254,164	Feb. 28	1262	336	21	575
Mitten	H. O. Witherell	256,257	May 23	1478	422	21	1162
Mitten and the art of knitting the same	J. Nelson	254,283	Jan. 31	1471	419	21	274
Mixing and straining cup	A. Eggers	251,773	Jan. 3	267	89	21	21
Mixing pulverized substances with liquids. Device for	C. F. Binder	256,274	Apr. 11	674	183	21	1070
Mold: *See* Brick-mold. Butter-mold. Carriage or buggy top mold. Cigar-mold. Dress cutting and fitting mold. Fire-kindler mold. Pipe-mold. Pottery-mold.							
Molding and paneling machines. Templet for	L. Wenchel	260,264	June 27	1751	473	21	2012
Molding car-wheels and other castings in sand. Machine for	J. Lane	257,345	May 2	249	68, 69	21	1294
Molding. Former for plaster	T. B. Tucker	251,774	Jan. 3	350	94	21	60
Molding-machine cutter-head	E. K. Jenkins	259,693	June 20	1630	375	21	1969
Molding machine. Sand	F. Ley	257,030	Apr. 25	1566	439, 440	21	1246
Molding machine. Wood	L. Wenchel	260,265	June 27	1753	473, 474	21	2012
Molding-machines. Guard for variety	G. Grill	252,313	Jan. 17	775	216	21	145
Mole-trap	J. Edge	260,348	June 27	1654	500	21	2029
Mole-trap	W. S. Harmon	254,963	Mar. 14	646	176	21	757
Monkey-wrench	J. S. Greenleaf	260,268	June 27	1766	454	21	2018
Monkey-wrench. Ratchet	W. F. McGregor	258,251	Apr. 11	709	200	21	1068
Mop-holder	H. Baughman	257,636	May 9	625	175	21	1393
Mop-holder	F. Davis	257,994	May 2	176	50	21	1313
Mop-holder and scraper. Combined	J. R. Tillis	253,131	Jan. 31	1774	492	21	394
Mop holder and wringer	J. S. Mills	259,889	June 20	1579	363	21	1930
Mop holder and wringer. Combined	J. H. Omo	255,449	Mar. 28	1273	363	21	877
Morter-mixing machine	R. T. Van Valkenburg	257,887	May 9	612	171	21	1395
Mortise-lock	S. P. Stoddard	254,402	Feb. 28	1472	483	21	680
Mortising-machine	W. H. Deane and G. W. Bugbee	259,698	June 6	127	43, 44	21	1721
Mosaics of glass, porcelain, or stone. Making	G. Stanley	257,886	May 9	471	.....	21	1371
Mosquito-bar frame and canopy. Combined	C. P. Howe	252,769	Jan. 24	1302	365	21	240
Mosquito-netting. Frame or support for	A. M. D. Smith	259,357	June 13	576	152	21	1691
Motion. Apparatus for transmitting	A. Semper	259,867	June 20	1313	358	21	1936
Motion. Device for converting	J. W. Anderson	252,531	Jan. 24	1393	389	21	254
Motion. Device for converting	W. T. Kosinski	257,344	May 2	240	66	21	1294
Motion. Device for converting	G. W. Richardson	259,526	June 13	664	235	21	1697
Motion. Device for converting	W. H. Ryther	256,159	May 16	1297	340	21	1513
Motion. Device for converting reciprocating into rotary	J. W. Chamberlain	256,712	May 30	1936	547	21	1656
Motion. Device for converting reciprocating into rotary	W. T. Kosinski	257,674	May 16	902	252	21	1458
Motion. Device for converting reciprocating into rotary	W. H. Ryther	255,735	Mar. 28	1631	449, 441	21	940
Motion. Device for converting reciprocating into rotary	A. G. Smyth	252,297	Jan. 10	753	209	21	124
Motion. Device for transmitting	W. H. Bi[illegible]a	256,627	Apr. 18	1097	308	21	1156
Motion. Device for transmitting	E. L. Smith	256,395	Apr. 11	819	233	21	1025
Motion. Mechanism for converting	H. Wyman	260,349	June 27	1654	501	21	2029
Motion. Mechanism for converting rotary into oscillating	J. Hornig	252,708	Jan. 24	1391	385	21	249
Motion. Mechanism for reversing	C. Dancel	260,265	June 27	1750	468	21	2016
Motion. Power-converter for converting reciprocating into rotary	H. Creft, Jr	253,515	Feb. 14	406	113	21	467
Motion. Reversible link	E. Huber	257,710	May 9	720	200	21	1415
Motion. System for transmitting	A. Semper	253,492	Feb. 7	326	88	21	395
Motion. Yoke for converting	M. Schultz	252,905	Jan. 31	1469	416	21	277
Motive mechanism or gearing	O. N. Eaton	256,788	May 30	1952	550	21	1659
Motive power	E. H. Drake	253,618	Jan. 31	1687	456	21	390
Motive power	N. A. Penland	253,623	Feb. 14	503	139	21	446
Motor: *See* Air-motor. Car-motor. Chain-motor. Electric motor. Electro-magnetic motor. Embroidering-machine motor. Ratchet-motor. Sewing-machine motor. Spring-motor. Steam-motor. Tide-wave motor. Tread-motor. Water-motor. Wind-motor. Windmill-motor.							
Motor	J. L. Dobbs	253,695	Feb. 14	630	169	21	456
Motor	W. J. Gurd	257,884	May 16	891	249	21	1468
Motor	A. Iske	253,587	Feb. 21	830	227	21	507
Motor	A. and A. Iske	253,588	Feb. 21	830	227	21	507
Motor	A. and A. Iske	254,468	Apr. 18	930	251, 252	21	1120
Motor	S. N. Silver	254,712	Mar. 7	318	86	21	668
Motor	J. Sutliff, Sr	257,103	Apr. 25	1051	283	21	1262
Motor	C. Stine	254,788	Mar. 7	333	88	21	685
Motor and thrasher connection	H. H. Hobart	258,561	Jan. 17	1091	304	21	197
Motor-escapement	H. L. Norton	258,131	Jan. 10	550	154	21	102
Mouse-trap	K. H. C. Preston	257,683	May 16	907	256	21	1462
Mower and harvester knives. Machine for grinding	C. W. Henshaw	255,980	Apr. 4	986	75	21	988
Mower and reaper knives. Machine for sharpening	E. Beckwith	255,913	Apr. 4	196	51	21	983
Mower. Grass-	H. C. Bender and H. C. Bruner	256,537	Apr. 18	994	269	21	1130
Mower. Lawn-	M. Bruns	258,398	Jan. 17	817	267	21	151

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Mower. Lawn	G. F. Johnson	251,890	Jan. 3	255	70	21	45
Mower. Lawn	C. Newhall	259,904	June 20	1284	{344 345	21	1931
Mower. Weed and lawn	A. T. Pike and P. A. Loy	253,694	Feb. 14	594	{150 151	21	446
Mowers and reapers. Cutter-bar for	A. M. Lackey	255,387	Mar. 21	1197	321	21	859
Mowing and reaping machine	A. Rank	256,048	Apr. 4	350	97, 98	21	1011
Mowing and reaping machines. Sickle-bar for	E. T. Spottswood	255,688	Mar. 28	1566	421	21	929
Mowing-machine	J. A. Carlès	255,718	Mar. 28	1604	{433 434	21	936
Mowing-machine	C. W. Cheney	258,555	May 30	1736	491	21	1621
Mowing-machine	W. F. Cochrane	255,939	Apr. 4	270	59, 60	21	989
Mowing-machine	W. Gause	257,856	May 16	983	947	21	1455
Mowing-machine	W. M. Webber and C. O. Campbell	257,113	Apr. 25	1662	{465 466	21	1263
Mowing-machine	J. D. Wilber	254,753	Mar. 7	388	97	21	700
Mowing-machine seat	J. Fulton	254,360	Feb. 28	1369	374	21	640
Mucilage-receptacle	W. Kenniah	258,603	Jan. 24	1117	313	21	206
Mug. Shaving	P. H. Leonard	258,777	May 30	2009	567	21	1669
Multiflue pipe and coupling-section	G. Richardson	259,048	June 6	223	60	21	1732
Music-chart	M. Wagner	257,790	May 9	799	224	21	1430
Music-holder	A. H. Merrill	255,649	Mar. 28	1517	408	21	921
Music holder. Sheet	F. E. Putnam	251,942	Jan. 3	312	84	21	54
Music-leaf turner	A. Heilprin	253,043	Jan. 31	1660	460	21	306
Music-leaf turner	E. B. Robinson	254,569	Mar. 7	149	37	21	663
Music-leaf turner	H. D. Wheatley	260,071	June 27	1514	406	21	1975
Music-paper for automatic organs. Perforating	R. T. Smith	259,340	June 13	579	153	21	1801
Music scale and chord indicator	C. H. Hauschel	255,979	Apr. 4	287	75	21	998
Music-sheet for orguinettes	L. Brauer	255,946	Mar. 21	1015	271	21	827
Music-sheet. Perforated	W. Johnson	258,072	May 16	1138	319	21	1500
Musical chart	E. E. Threaber	253,562	Feb. 14	457	130	21	435
Musical instrument. Automatic	J. McTammany, Jr	252,614	Jan. 24	1127	316	21	210
Musical instrument. Automatic	J. McTammany, Jr	260,109	June 27	1563	421	21	1983
Musical-instrument key	A. Caesar	256,973	Apr. 25	1507	423	21	1216
Musical instrument key-boards. Making	J. W. Hyatt	254,438	Feb. 28	1512	414	21	625
Musical instrument. Mechanical	J. H. Chase	256,101	Apr. 4	425	117	21	1022
Musical instrument. Mechanical	A. Durkee	251,846	Jan. 3	302	57	21	37
Musical instrument. Mechanical	A. Fowler	251,861	Jan. 3	320	62	21	40
Musical instrument. Mechanical	A. H. Hammond	254,644	Mar. 7	338	62, 63	21	679
Musical instrument. Mechanical	A. H. Hammond	254,645	Mar. 7	943	63	21	679
Musical instrument. Mechanical	G. W. Ingalls	256,219	Apr. 11	604	164	21	1057
Musical instrument. Mechanical	J. McTammany, Jr	259,412	June 13	668	177	21	1818
Musical instrument. Mechanical	H. B. Morris and L. A. Brott	252,644	Jan. 24	1412	394	21	257
Musical instrument. Mechanical	O. H. Needham	258,667	May 30	1878	{529 530	21	1647
Musical instrument. Mechanical	R. W. Pain	251,727	Jan. 3	49	13	21	11
Musical instrument. Mechanical	R. W. Pain	251,929	Jan. 3	299	81	21	52
Musical instrument. Mechanical	O. Spaethe	259,977	Jan. 31	1574	439	21	292
Musical instrument. Mechanical	H. S. Taylor	258,955	June 6	105	28	21	1712
Musical instrument. Mechanical	G. W. Van Dusen	258,508	May 23	1673	473	21	1602
Musical instrument. Mechanical	H. Wegman	251,977	Jan. 3	352	95	21	61
Musical-instrument reed	M. Bray	253,962	Feb. 7	97	30	21	363
Musical instruments. Electro-magnetic action for	C. N. Andrews	258,871	June 6	2	1	21	1695
Musical instruments. Key-board attachment for	G. R. Elliott	255,609	Mar. 28	1470	395	21	912
Musical instruments. Metallic reed for	W. Munroe	254,882	Mar. 14	546	146	21	739
Musical instruments. Music-rack for	W. H. Ivers	252,587	Jan. 17	1097	306	21	199
Musical instruments. Temperament-adjuster for	W. K. Wheeler	256,524	Apr. 18	962	276	21	1137
Musical instruments. Pneumatic lever for mechanical	A. Durkee	251,706	Jan. 3	94	7	21	7
Musical wind-instrument valve	G. C. Hugg	254,136	Feb. 28	1170	327	21	570
Mustache-guard	G. P. Hall	258,204	May 23	1427	404	21	1560
Mustache-guard	C. Miller	258,243	May 23	1367	386	21	1550
Muzzle	N. Gallinger	254,302	Feb. 28	1361	375	21	601
Nail: *See* Fence-nail.							
Nail-box	T. L. Smith and W. S. Doig	253,559	Feb. 14	455	130	21	435
Nail-driving machine	J. J. Burk	259,834	Jan. 24	1396	390	21	955
Nail-plates. Pile for	O. P. Cobb	251,834	Jan. 3	188	59	21	34
Nailing-machine	A. Knowlton	257,237	May 2	98	28	21	1298
Nailing-machine	G. McKay	257,174	May 2	34	11	21	1287
Nailing-machine	G. H. Perkins	254,566	Mar. 7	145	36	21	663
Nailing-machine	A. Van Wagenen	260,141	June 27	1602	439	21	1969
Nailing-machine	A. Van Wagenen	260,142	June 27	1603	432	21	1969
Nailing-machine nail-feed attachment	F. Rochow	254,570	Mar. 7	150	37, 38	21	663
Naphthaline into a form for carbureting. Manufacturing	J. Livesey and J. Kidd	258,778	May 30	2010	567	21	1669
Naphthyl-sulphate soda salt. Production of	J. H. Stebbins, Jr	256,400	Apr. 11	817	.....	21	1085
Neckwear shield and fastener	A. Komp	258,769	May 30	1999	564	21	1667
Necktie	H. H. Thayer and G. W. Hayes	257,105	Apr. 25	1653	463	21	1262
Necktie and collar fastener	A. Platky and E. Finsterer	259,563	June 13	881	234	21	1856
Necktie-fastener	J. Goldberg	252,456	Jan. 17	951	263	21	173
Necktie-fastener	I. Noar	254,368	Feb. 28	1424	391	21	612
Necktie-fastener	P. H. Rew	256,740	Apr. 18	1238	344	21	1179
Necktie-fastening	L. Michaux	253,409	Feb. 7	264	76	21	391
Neckties. Machine for folding and pressing	M. Steinbock	254,576	Mar. 7	160	39, 40	21	665
Needle-bars. Device for the compensation of wear in	R. H. St. John	256,698	Apr. 4	362	105	21	1014
Needle-blanks. Machine for swaging	J. Berry	257,645	May 9	630	177	21	1399
Needle-case	J. J. Parsons	256,918	Apr. 25	1438	404	21	1294
Needle-eyes. Machine for polishing	I. T. Smith	255,044	Mar. 14	761	{294 295	21	777
Needles. Machine for grooving	J. Berry	259,982	June 6	469	134	21	1775
Negatives. Apparatus for retouching	T. N. Herger	253,824	Feb. 21	797	227	21	500
Net for horses. Fly	J. R. Rhenbottom and F. M. Mack	257,709	May 9	772	215	21	1494
Net. Gill	M. and T. Reynolds	255,671	Mar. 28	1541	415	21	985

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Net. Sponge-fishing	R. Arapian	255,561	Mar. 28	1467	389	21	989
Nets. Machine for making fish	J. Chesnier	254,367	Apr. 11	695	{165 167 169	21	1072
Nippers. Cutting	T. G. Hall. (Reissue)	10,088	Feb. 7	365	101	21	407
Nippers for opening bottles	J. A. Schmidt	257,988	May 16	1631	397	21	1480
Nozzle	T. C. Chamberlain	259,697	June 20	983	265	21	1868
Numbering-machine	W. P. Kidder	254,887	Mar. 14	471	127	21	725
Nut and bolt lock	B. Marks	255,998	Apr. 4	62	17	21	981
Nut-lock	S. A. Bailey	258,873	June 6	4	2	21	1695
Nut-lock	J. C. Beamer and J. M. Richardson	258,716	Jan. 24	1236	347	21	239
Nut-lock	A. Berryhill	258,719	Jan. 24	1241	348	21	239
Nut-lock	L. D. Best	258,994	Jan. 31	1512	420	21	291
Nut-lock	J. Breen and E. Baker	259,469	June 13	742	196	21	1838
Nut-lock	J. H. Burrows	256,971	Apr. 25	1504	422	21	1235
Nut-lock	S. E. S. Chapleau	257,226	May 2	170	48	21	1319
Nut-lock	S. M. Churchill	255,839	Apr. 4	104	30	21	968
Nut-lock	B. F. Click	258,647	Jan. 24	1103	307	21	217
Nut-lock	W. Courtenay	256,642	Apr. 18	1113	313	21	1150
Nut-lock	C. H. Denison	259,898	Jan. 31	1446	404	21	289
Nut-lock	W. S. F. Dillon	257,854	May 16	979	946	21	1454
Nut-lock	J. Frederick	258,655	Jan. 24	1175	329	21	218
Nut-lock	S. Gheisinger	255,790	Apr. 4	33	10	21	956
Nut-lock	J. Graham	255,498	Mar. 28	1250	337	21	873
Nut-lock	G. B. Hill	259,462	Jan. 17	950	267	21	175
Nut-lock	W. Hogue and J. R. Davis	259,003	Jan. 3	301	105	21	67
Nut-lock	J. M. Holland	256,666	Apr. 18	1172	329	21	1170
Nut-lock	W. B. Johnson	257,014	Apr. 25	1550	435	21	1243
Nut-lock	P. Jones	254,773	Mar. 7	394	104	21	705
Nut-lock	W. C. Kelly	256,574	Apr. 18	1031	291	21	1145
Nut-lock	A. T. Kingsley	259,562	June 13	846	224	21	1850
Nut-lock	D. M. Kirkpatrick	258,930	June 6	76	20	21	1707
Nut-lock	A. L. Lincoln	255,801	Apr. 4	68	17	21	961
Nut-lock	L. Long and E. M. Richardson	256,149	Apr. 11	501	137	21	1041
Nut-lock	A. F. MacDonald	255,439	Mar. 28	1263	341	21	876
Nut-lock	W. H. Paige	254,685	Mar. 7	290	76	21	688
Nut-lock	L. G. Pool	256,730	Apr. 18	1219	341	21	1178
Nut-lock	D. P. Prescott	259,295	Jan. 10	751	208	21	134
Nut-lock	J. Preston	254,154	Feb. 28	1192	333	21	573
Nut-lock	J. Sherman	256,169	Apr. 11	522	144	21	1044
Nut-lock	J. A. Simpson	258,530	Jan. 17	1036	289	21	188
Nut-lock	R. C. Smith	260,131	June 27	1581	429	21	1988
Nut-lock	R. C. Smith	260,949	June 27	1733	489	21	1600
Nut-lock	J. L. Stevens	258,497	May 23	1640	469	21	1163
Nut-lock	J. W. Stringfellow	256,760	Apr. 18	1249	351	21	1179
Nut-lock	J. B. Sutch	257,128	May 9	793	221	21	1435
Nut-lock	T. F. Timby	256,767	Apr. 18	1256	354	21	1185
Nut-lock	C. D. Tyler	257,788	May 9	796	223	21	1439
Nut-lock	W. C. Watson	257,499	May 2	333	94	21	1340
Nut-lock	W. Weaver	259,250	June 6	459	121	21	1773
Nut-lock	J. M. Williams	252,564	Jan. 17	1073	299	21	194
Nut-lock	W. H. Wood	256,599	Apr. 18	988	278	21	1138
Nut-lock	J. Smith	253,638	Feb. 14	539	155	21	448
Nut-locking plate	A. Marland	257,126	Apr. 25	1669	476	21	1270
Nut-machine	J. P. Mason	256,845	Apr. 25	1354	{382 383	21	1009
Nut-machine	S. Darling	253,986	Feb. 7	109	31	21	364
Nut. Screw	H. A. Harvey	251,875	Jan. 3	237	65, 66	21	43
Nut-tapping machine	W. R. Ward	255,478	Mar. 28	1311	353	21	883
Nut-tapping machine	A. R. Clark	258,186	Jan. 10	615	173	21	113
Nuts upon bolts. Locking	S. Irwin	256,394	Apr. 11	736	201	21	1061
Oar-lock	R. D. Williams	260,341	June 27	1846	498	21	2027
Oar-lock	W. Eberhard and R. Turner. (Reissue.)	10,084	Apr. 11	891	249	21	1108
Oatmeal-machine	A. Heins	255,987	Mar. 21	1067	287	21	836
Oatmeal-machine	J. McDougall	253,881	Feb. 14	776	.....	21	490
Oil-cake. Manufacture of	F. L. Clark	251,838	Jan. 3	185	58	21	34
Oil-can	W. G. Durham	260,008	June 27	1439	398	21	1964
Oil-can	L. A. Harker	255,109	Mar. 21	841	225	21	799
Oil-can	A. W. Plumb	256,654	Apr. 25	1366	385	21	1211
Oil-can	T. M. Righter and T. R. Griffith	258,519	Jan. 17	1094	295	21	198
Oil-can	C. B. Wilson	253,146	Jan. 31	1703	497	21	327
Oil-can	A. P. Ordway and A. F. Ryder	257,748	May 9	756	210	21	1421
Oil-can educt	H. C. Smith	253,558	Feb. 14	454	129	21	435
Oil-can. Tilting	T. Ferguson	256,294	May 23	1344	361	21	1545
Oil-can vent	D. N. Melvin	258,891	Jan. 31	1469	.....	21	274
Oil-cloths. Manufacture of composition of floor	J. E. Gilligan	256,049	May 16	1113	310	21	1496
Oil-cup	J. G. McBride	257,173	May 2	33	11	21	1287
Oil-cup	T. D. Ruggles	259,925	June 20	1312	351	21	1936
Oil-cup	W. W. Ramsey	257,611	May 9	594	{165 166	21	1301
Oil-cup. Lubricating	J. R. Lonergan	256,239	Apr. 11	617	167	21	1060
Oil-cup. Steam-engine	F. M. Reed	258,516	Jan. 17	1091	.....	21	186
Oil for mixing paints. Treatment of resin	J. Kaschau	257,340	May 9	826	67	21	1223
Oil fount or reservoir	M. Lancaster	253,723	Feb. 14	648	{184 185	21	467
Oil from vegetable substances. Apparatus for the separation or extraction of	R. N. McKlum	259,186	June 6	364	.....	21	1761
Oil. Harness	J. S. Rowland	254,052	Feb. 21	1073	298	21	545
Oil heater. Coal	G. W. Banker	255,098	Mar. 21	889	.....	21	793
Oil. Manufacture of	G. Leder	257,738	May 9	737	206	21	1418
Oil-mat	T. B. Bowers	259,467	June 13	739	195	21	1831
Oil. Process of and apparatus for obtaining	J. D. Arnold	253,334	Feb. 7	181	52	21	377
Oil-tank	W. J. Hall	256,749	May 30	1980	558	21	1064
Oil-tank protector							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Oils for burning and illuminating purposes. Compound for absorbing	J. A. Wright	255,230	Mar. 21	997	.....	21	694
Oils. Liquid drier for	A. W. Pratt. (Reissue)	10,040	Feb. 21	1127	.....	21	555
Oils, &c. Treating mineral	R. Irvine	256,220	Apr. 11	605	.....	21	1056
Oiler	D. L. Columbia	259,290	June 13	516	135	21	1790
Oiler	W. H. Williams	258,184	May 16	1278	369	21	1395
Oiler. Locomotive	A. O. Brooks and P. A. Bowen	253,579	Feb. 14	479	135	21	438
Oiler-nozzle	S. S. Newton	254,564	Apr. 18	1044	285	21	1147
Oiler. Watch	W. W. Martin	259,189	June 6	379	99	21	1780
Oiling-box for rolls and pinions	J. Hunter and U. Haskin	257,047	May 16	998	277	21	1473
Oleaginous seeds and meal for extracting the oil therefrom. Moistening	J. B. Field	260,189	June 27	1658	448	21	1996
Opera-chair	S. N. Johnson and A. M. Dé Souchet	255,668	Apr. 4	136	36, 37	21	973
Opera-chair	E. J. Smith	259,533	Jan. 17	1040	284	21	189
Opera-chair	A. W. Adams	258,668	May 30	1910	539	21	1628
Opera-chair. Folding	J. Jackson	254,325	Feb. 28	1363	361	21	605
Opera-chair. Folding	J. Waterhouse	256,721	Apr. 18	979	275	21	1137
Opera-glass	G. D. Edmondson	253,645	Apr. 4	100	30	21	969
Optometer	G. Johnston	254,129	Feb. 28	1174	298	21	570
Optometer	S. B. Dean	258,326	May 23	1531	435	21	1578
Ordnance. Breech-loading	H. F. Mann	257,230	May 2	109	29, 30	21	1289
Ordnance. Breech-loading	H. F. Mann	257,893	May 9	838	{233 234	21	1437
Ordnance. Breech-loading	G. Quick	258,116	May 16	1194	336	21	1511
Ordnance. Sight for	A. H. Russell	257,077	Apr. 25	1022	454	21	1366
Ore concentrating and separating apparatus	M. J. Butzel	258,731	Jan. 24	1355	{352 353	21	232
Ore-concentrating apparatus	H. B. Meech	251,913	Jan. 3	984	77, 78	21	49
Ore-concentrator	A. Blatchly and G. Kustel	258,679	June 6	11	3, 4	21	1697
Ore-concentrator	G. S. Burr	251,828	Jan. 3	181	51	21	53
Ore-concentrator	J. S. Duncan	254,123	Feb. 28	1154	289	21	567
Ore-concentrator	B. Hershey	259,083	June 20	1403	378	21	1951
Ore-concentrator	J. F. Sanders	252,121	May 16	1210	341	21	1513
Ore-concentrator	A. M. G. Sébillot	253,771	Feb. 14	709	202	21	478
Ore-concentrator	E. Stahl	254,173	Feb. 28	1209	338	21	576
Ore concentrator and separator	J. Garvin	255,160	Mar. 21	907	243	21	809
Ore concentrator and separator	E. Warne	258,332	May 23	1468	418	21	1567
Ore concentrator. Dry	W. B. Farwell	257,661	May 9	675	188	21	1408
Ore-crusher	A. N. Cameron	255,935	Apr. 4	296	59	21	988
Ore-crusher	J. M. Courtenay	253,009	Jan. 31	1616	448	21	999
Ore-crusher	H. H. Scoville	253,231	Feb. 7	61	19	21	357
Ore-crushing machine	S. R. Krom. (Reissue)	10,085	Apr. 11	802	{249 250	21	1109
Ore-furnace. Desulphurizing and oxidising	W. T. Browne	259,475	June 13	749	198	21	1833
Ore grinding and amalgamating machine	W. E. Harris	259,011	June 6	175	47	21	1794
Ore grinding and amalgamating machine	T. A. Readwin	259,424	June 13	683	181	21	1891
Ore-grinding mill	W. E. Harris	253,476	Feb. 7	346	96, 97	21	404
Ore, &c. Machinery for crushing	F. J. and W. H. Hoyt	255,892	Apr. 4	131	35	21	973
Ore, &c. Machinery for pulverising	F. J. and W. H. Hoyt	256,332	Apr. 11	734	200	21	1061
Ore, &c. Machinery for reducing	F. J. and W. H. Hoyt	256,570	Apr. 18	1027	290	21	1144
Ore pulverizer and amalgamator. Combined	F. J. and W. H. Hoyt	253,051	Jan. 31	1670	462	21	307
Ore-reducing machine	B. Hershey	257,139	Apr. 25	1091	{473 474	21	1369
Ore-roasting apparatus	C. Hornbostel	256,569	Apr. 18	1026	290	21	1144
Ore-roasting apparatus	H. O. Reinhardt	255,537	Mar. 28	1361	373	21	895
Ore roasting, desulphurising, and chloridising furnace	W. F. Witherell and B. H. Vary	254,735	Mar. 7	372	98	21	701
Ore-separating apparatus. Concentrator for	J. F. Sanders	253,229	Feb. 7	60	18	21	357
Ore-separating machine. Centrifugal	G. Glass	255,967	Apr. 4	273	71	21	985
Ore-separator	D. Car-Skaden	257,470	May 9	400	112	21	1359
Ore-separator	D. Car-Skaden	257,471	May 9	402	112	21	1359
Ore-separator	H. E. Henwood	259,962	June 20	1402	377	21	1951
Ore-separator	G. A. Metcalf	253,651	Mar. 28	1520	408	21	981
Ore-separator	S. G. Rollins	254,505	Mar. 7	71	19	21	650
Ore-separator	J. H. Wilhelm	256,183	Apr. 11	541	{149 150	21	1047
Ore-separator. Amalgamating	D. O. Crane	259,633	June 13	948	253	21	1867
Ore separator and concentrator	J. H. Wilhelm	256,184	Apr. 11	547	{150 151	21	1048
Ore-separator. Magnetic	S. E. St. O. Chapleau	256,639	Apr. 18	1107	{311 312	21	1158
Ore-washer	S. P. Speers	252,812	Jan. 24	1373	383	21	251
Ore-washer	W. S. Wood	258,569	Jan. 17	1078	{300 301	21	195
Ores. Apparatus for the extraction of precious metals from	B. G. Noble	259,709	June 20	1057	281	21	1898
Ores, &c. Apparatus for treating and reducing	A. C. Lippitt	259,769	June 20	1136	301	21	1905
Ores, &c. Machine for pulverising	A. L. Fish	259,373	June 13	693	165	21	1809
Ores, &c. Machine for pulverising	J. J. Storer	254,403	Feb. 28	1474	403	21	681
Ores, &c. Separator and concentrator for	E. Warne	256,331	May 23	1466	417	21	1567
Ores. Slime-table for concentrating	W. Nichols	257,056	Apr. 25	1503	447	21	1251
Ores. Treatment of	A. De Figaniére	259,104	June 6	266	77	21	1744
Organ	C. Fogelberg and G. W. Graves	256,708	June 6	48	12, 13	21	1703
Organ	W. L. Merrin	255,650	Mar. 28	1518	408	21	981
Organ-action. Pneumatic	M. Reiter and G. Sander	254,046	Feb. 21	1085	{296 297	21	544
Organ and upright piano. Combined	W. C. Woodward	253,464	Feb. 7	332	92	21	402
Organ-bell attachment	R. W. Blake	254,910	Mar. 14	579	156	21	745
Organ-bellows	J. W. Trainer	258,338	Jan. 17	800	223	21	149
Organ-bellows. Mechanism for working	J. Wagner	254,736	Mar. 7	349	92	21	697
Organ-case	W. H. Brearley	258,963	June 6	138	36, 37	21	1716
Organ case and pedal	S. B. J. Bryant	255,416	Mar. 28	1229	330	21	870
Organ case. Cabinet	O. C. Whitney	251,752	Jan. 3	77	21	21	16

Package-covering	J. W. Marsh	255,017	Mar. 14	716	193	21	769
Package for oysters, &c	C. L. Pond	258,565	May 30	1746	495	21	1623
Packer. Oil-well	S. E. Dresser	258,547	Jan. 17	1055	283	21	191
Packing and lining fabrics. Machinery for manufacturing	R. H. Thompson						
Packing-band	J. Z. Gifford	254,635	Mar. 7	339	89	21	677
Packing-box	M. B. Church	259,402	June 13	772	204	21	1857
Packing-box	A. P. Nash	254,670	Mar. 7	362	75	21	666
Packing-box. Folding	N. F. Tipton	252,544	Jan. 17	1050	282	21	190
Packing-box for fruit-jars, &c	F. C. Rockwell	255,458	Mar. 28	1326	346	21	879
Packing-box. Knockdown	J. W. M. Shattuck	254,166	Feb. 28	1204	326	21	575
Packing can and box	R. S. Jennings. (Reissue)	10,100	May 9	371	104	21	1347
Packing-case	R. S. Jennings. (Reissue)	10,198	May 30	2110	586	21	1687
Packing-case	L. Stewart	252,875	Jan. 10	783	223	21	130
Packing. Deep-well	B. Holland, Jr	255,739	Mar. 28	1694	438	21	939
Packing for pump-pistons, &c	J. G. Hill and J. L. Lee	256,065	May 16	1128	317	21	1496
Packing for underground steam-mains	J. A. Heydrick	254,649	Mar. 7	351	64	21	689
Packing. Oil-well	H. Woodring and N. C. Coats	259,449	June 13	715	190	21	1836
Packing. Piston and valve rod	H. W. Johns	257,187	May 2	27	9	21	1288
Packing. Steam	C. M. Van Tine	254,736	Mar. 7	347	92	21	697
Packing. Steam	A. N. Matthews	252,957	Jan. 31	1538	438	21	988
Packing valve-stems for steam and other engines							
Pad: *See* Blotting-pad. Collar-pad. Galvanic pad. Harness-pad. Horse-hoof pad. Saddle-pad. Shoar-pad.							
Pad-press	E. S. Kirst	254,336	Feb. 28	1399	365	21	609
Paddle-wheel. Feathering	G. F. Freedman	253,277	Feb. 7	111	34	21	365
Padlock	E. L. Perkins	256,150	Apr. 11	519	141	21	1043
Padlock	W. W. Shallus	257,026	Apr. 25	1630	437	21	1256
Padlock	G. D. Spielman	256,399	Apr. 11	616	294	21	1095
Padlock	G. E. Kirk	256,902	Apr. 25	1422	400	21	1221
Padlock-cover	J. E. Dean	254,364	Feb. 28	1339	360	21	597
Padlock. Permutation	C. P. Grout	255,104	Mar. 21	913	244	21	810
Padlock. Permutation	F. J. Power	251,795	Jan. 3	134	38	21	25
Pail. Dinner	D. S. Willard and H. D. Dunbar	254,153	Feb. 28	1292	340	21	578
Pail. Milk	A. C. Tracy	255,709	Mar. 28	1563	425	21	933
Pail. Milking	E. Bennett	256,978	June 6	128	.....	21	1716
Paint	F. E. Grout	253,228	Feb. 7	114	34	21	366
Paint and other cans and tubes	J. Irving	255,789	Apr. 4	45	12	21	938
Paint-burner	W. E. Norris	257,510	May 9	454	.....	21	1360
Paint composition	W. J. McDonald	256,663	May 30	1875	.....	21	1646
Paint compound							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Paint. Distemper	W. S. and L. F. Welch	252,558	Jan. 17	1068	.....	21	191
Paint-distributer	A. Peeler	256,868	Apr. 25	1359	384	21	1211
Paint for roofing, &c	G. J. Cline	253,978	Feb. 21	980	.....	21	589
Paint for roofs	J. B. Barnard	252,171	Jan. 10	601	.....	21	109
Paint-pail	J. Thomas	255,696	Mar. 28	1573	453	21	931
Paint. Roofing	A. McDonnell	257,881	May 16	912	.....	21	1460
Paint. Water and fire proof roof	W. Sleeper	255,041	Mar. 14	750	.....	21	776
Paints and oils. Composition for drying	A. W. Pratt. (Reissue)	10,039	Feb. 21	1196	.....	21	555
Painter's jack. Carriage	E. Cook	258,558	May 30	1736	492	21	1662
Painters' use. Compound tool for	J. Thomas	250,945	June 6	454	120	21	1772
Palette and reservoir for stencilling-ink	L. R. Rockwood	257,386	May 2	986	82	21	1332
Pan: *See* Bed-pan. Cake-pan. Dust-pan. Evaporating-pad. Patty-pan. Refrigerator drip-pan.							
Pan-cleaning machine	W. S. Ovens	255,113	Mar. 21	845	226	21	796
Panels with artistic designs. Producing metallic	H. R. Cassel	256,286	Apr. 11	685	.....	21	1072
Pantaloons	W. Hyams	255,631	Mar. 28	1496	401	21	917
Pantaloon-protector	J. L. Thomson	256,154	May 16	1240	349	21	1518
Pantaloon-protector	J. L. Thomson	258,155	May 16	1240	349	21	1518
Pantaloons-protector	J. T. Langan	257,036	Apr. 25	1563	438	21	1946
Pantaloons-protector	C. J. McDermott	257,036	Apr. 25	1574	441	21	1948
Pantry, dresser, and sideboard. Combined portable	L. O. Hudson	252,318	Jan. 17	779	217	21	145
Paper and other bags	J. H. Holmes	258,925	June 6	68	18	21	1706
Paper and other boxes	C. Beiser	254,592	Mar. 7	179	44	21	668
Paper and pasteboard. Method of and apparatus for manufacturing	N. Kaiser. (Reissue)	10,074	Apr. 4	447	121	21	1025
Paper. Apparatus for reducing wood, &c., to pulp for	S. M. Allen	253,654	Feb. 14	562	159	21	452
Paper bag	H. R. Oliver	250,198	June 6	395	104	21	1763
Paper-bag holder	T. J. Graham	256,138	Apr. 11	489	133	21	1039
Paper-bag machine	C. A. Chandler	251,997	Jan. 3	381	{102 103	21	66
Paper-bag machine	C. A. Chandler	256,123	Apr. 11	469	{127 128	21	1035
Paper-bag machine	W. C. Cross	254,928	Mar. 14	604	{162 163	21	749
Paper-bag machine	J. McCullough	255,316	Mar. 21	1110	299	21	844
Paper-bag machine	C. B. Stilwell	255,204	Mar. 21	960	{256 257 258	21	817
Paper-bag machines. Folding mechanism for	D. Appel	252,412	Jan. 17	896	{246 249	21	164
Paper bags. Machine for making	E. Stanley	253,441	Feb. 7	383	96	21	397
Paper bags. Making	C. Van Hoesen	256,177	Apr. 11	531	147	21	1046
Paper bags. Manufacture of	M. L. Deering. (Reissue)	10,063	Apr. 11	660	949	21	1108
Paper bags. Manufacture of satchel-bottomed	E. B. Stocking	259,290	June 6	489	128	21	1779
Paper bags. Manufacturing	D. Appel	258,579	May 23	1403	397	21	1556
Paper blankets. Manufacture of	M. B. Church	259,489	June 13	770	.....	21	1837
Paper-board for dressing wounds	P. Koch	257,793	May 9	732	.....	21	1417
Paper box	C. P. Woolhiser	255,374	Mar. 21	1177	316	21	855
Paper-box covering and trimming machine	H. Inman	253,711	Feb. 14	635	{180 181	21	464
Paper-box machine	W. J. Keefe	254,826	Mar. 14	463	{125 126	21	734
Paper-box machine	C. Pruner	255,018	Mar. 14	717	{193 194	21	769
Paper-box machine	A. Stearns	258,819	May 30	2052	579	21	1677
Paper cap	F. R. Buck	251,995	Jan. 3	380	102	21	65
Paper, card-board, &c. Manufacture of boxes from	E. B. and H. S. Munson	259,416	June 13	674	179	21	1819
Paper collars. Machine for folding and pasting the ends of	E. Cary	258,711	May 30	1937	547	21	1656
Paper-cutter	H. Johnson	257,949	May 16	995	277	21	1474
Paper-cutting machine	R. Binns	253,987	Feb. 21	965	{938 939	21	587
Paper-cutting machine	H. P. Feister	257,699	May 9	677	188	21	1408
Paper-cutting machine	A. Malm	258,882	May 30	2099	592	21	1645
Paper-cutting machines. Feeding mechanism for	J. Walker, Jr.	259,735	June 20	1043	291	21	1899
Paper-feeding machine	J. C. Kneeland	252,477	Jan. 17	977	273	21	177
Paper-folding machine	J. H. Stonecmets	258,778	June 20	1146	304	21	1907
Paper for making gelatine-bromide of silver prints. Preparation of photographic	J. J. D. Hutinet and P. E. Lamy	253,887	Feb. 14	784	.....	21	491
Paper-hanging machine	R. H. Miner	254,494	Mar. 7	60	15	21	648
Paper-hanging or wall-paper	E. Leissner	255,437	Mar. 28	1262	340	21	875
Paper-hanging. Water-proof	C. T. Kemmer	256,765	Apr. 18	1196	.....	21	1173
Paper-knife	B. Brower	260,157	June 27	1621	438	21	1902
Paper-machine dandy-roll	D. McKay	258,050	Jan. 10	457	125	21	86
Paper, &c. Machine for cleaning	F. J. Emmerich	253,998	Feb. 21	991	276	21	531
Paper-machine. Fourdrinier	F. Curtis	260,172	June 27	1635	442	21	1904
Paper made from the fiber of the cotton-plant	F. Wheaton	254,747	Mar. 7	261	.....	21	699
Paper-making machine	B. A. Hickox	259,391	June 13	644	170	21	1814
Paper-making machines. Roll suction-box for	J. Randall	256,047	Apr. 4	357	97	21	1010
Paper-making. Treating wood in order to obtain fiber suitable for	C. D. Ekman. (Reissue)	10,131	June 6	498	.....	21	1780
Paper-making, &c. Treating wood in order to obtain fiber suitable for	C. D. Ekman	253,357	Feb. 7	305	.....	21	381
Paper. Manufacture of	C. M. Burnett	258,710	May 30	1937	547	21	1656
Paper. Manufacture of	D. R. Burns	253,814	Feb. 14	768	210	21	488
Paper-manufacture. Seam for wire-cloth for	M. A. Martin	259,837	June 6	83	21	21	1709
Paper matrix for stereotyping	B. B. Huntoon	258,877	Jan. 31	1454	.....	21	878
Paper. Mode of and machine for waxing	J. T. Bedford	254,193	Feb. 28	1134	317	21	563
Paper pails. Manufacture of	A. J. Grinnell	254,127	Feb. 28	1100	304	21	566
Paper. Photographic	G. Eastman	253,354	Feb. 7	201	58	21	389
Paper plaques. Manufacture of	G. P. Helfrich	255,108	Mar. 21	917	245	21	810

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Paper, &c. Process of and machine for reducing fibers in the manufacture of	D. R. Burns	259,974	June 20	1391	374	21	1949
Paper-pulp-digester sliding valve	T. Atcheson	259,658	June 20	985	263	21	1881
Paper-pulp engine	J. R. Abbe	254,251	Feb. 28	1286	361	21	591
Paper-pulp engine	M. R. Fletcher	256,399	May 23	1545	439	21	1599
Paper-pulp engine	W. E. Taylor	253,447	Feb. 7	314	87	21	399
Paper-pulp engine	G. L. Jaeger	254,387	Feb. 28	1265	368	21	605
Paper-pulp from straw, stalks, and other fibrous material. Making	S. M. Allen	253,655	Feb. 14	564	160	21	452
Paper-pulp. Manufacture of	S. M. Allen	253,656	Feb. 14	565	.....	21	453
Paper-pulp, &c. Manufacture of	S. M. Allen	258,654	May 30	1921	565	21	1644
Paper-pulp pails. Form for making	D. C. Jones	258,854	May 23	1398	374	21	1541
Paper-pulp, &c. Washer for	C. Anderson and T. Patten	256,209	May 23	1419	383	21	1961
Paper-pulp. Wood-grinder for making	S. M. Allen	259,992	June 27	539	147	21	99
Paper scoring and cutting machine	J. C. Marshall	252,114	Jan. 10	1364	368	21	606
Paper-stock, &c. Machine for crushing and compacting	G. L. Jaeger	254,388	Feb. 28	1364	368	21	605
Paper-stock and other vegetable fibers for transportation. Compacting	G. L. Jaeger	254,386	Feb. 28	1364	368	21	605
Paper stock, &c. Treating fibrous materials for	J. O. Klimach	256,436	Apr. 11	865	.....	21	1104
Paper. Tension device for unwinding rolls of	E. Anthony	259,789	June 20	1158	308	21	1909
Paper. Treating tan-bark, &c., to render the same suitable for use in manufacturing	W. Guest and C. Court	254,958	Mar. 14	641	{174 175 318 319	21	726 1499
Paper vessels. Apparatus for making	H. A. Johnson	256,971	May 16	1126	299	21	1501
Paper. Water-proof	W. B. Carpenter	253,840	Feb. 21	985	.....	21	1104
Paper. Waterproofing	J. H. Bidgway	257,761	May 9	773	215	21	1404
Paper-waxing machine	G. W. Bancroft	255,129	Mar. 21	888	231	21	801
Parasol	H. Maul and F. Landenberger	256,589	Apr. 18	1057	282	21	1146
Parasol or umbrella	J. T. Smith	256,754	Apr. 18	1244	349	21	1169
Parer. Apple	J. W. Hudson	252,670	Jan. 24	1152	323	21	321
Parer. Apple	R. P. Scott	254,059	Apr. 4	373	102	21	1013
Parer. Apple	C. R. Heinsman	256,214	Apr. 11	566	163	21	1056
Parer, corer, and slicer. Apple	C. Holton	256,690	Apr. 18	1296	365	21	1192
Parer, corer, and slicer. Apple	J. F. Rakes	260,226	June 27	1720	466	21	1907
Parer, corer, slicer, and quarterer. Apple	C. R. Heinsman	255,256	Apr. 4	122	33	21	971
Parer, corer, slicer, and quarterer. Apple	D. H. Whittemore	251,989	Jan. 3	376	96	21	61
Parer. Fruit and vegetable	M. A. and W. Tripp	259,342	June 13	589	154	21	1809
Paring machine. Fruit	D. H. Weeks	256,776	Apr. 18	1265	357	21	1189
Pasteboard, &c. Machine for cutting and scoring	D. H. Weeks	255,632	Mar. 28	1496	402	21	917
Pattern-lifter	G. L. Jaeger	258,382	Jan. 17	852	236	21	158
Patty-pan	W. J. Innis and P. H. Kane	255,045	Mar. 14	764	205	21	777
Patty-pan	J. Smith	255,706	Mar. 28	1567	457	21	934
Patty-pan	A. Vuillier	256,511	May 23	1677	474	21	1693
Pavement	A. Vuillier	257,613	May 2	985	266	21	1299
Pavement	W. D. Richardson	255,687	Mar. 28	1565	421	21	930
Pavement. Cobble-stone and grout	C. A. Snyder	256,460	May 23	1660	456	21	1593
Pavement. Concrete	J. Murphy	256,393	Apr. 11	799	218	21	1092
Pavement-plate or vault-cover	J. J. Schillinger	257,715	May 9	726	208	21	1416
Pavements. Manufacture and laying of composite	T. Hyatt	259,650	June 6	237	.....	21	1734
Pavements or floors. Slab or block for	P. Stuart	254,980	Feb. 28	1262	386	21	595
Paving and building material	C. Brown	254,386	Feb. 28	1497	.....	21	613
Pea-shelling machine	A. Pelletier	258,616	Jan. 24	1139	317	21	210
Peanut picker and cleaner	F. Maifai	258,136	Jan. 10	537	156	21	103
Pearls on finger-rings, &c. Setting	E. H. Powell	253,667	Feb. 14	579	164	21	455
Pedicycle	J. Bergfels	256,765	Apr. 18	1254	353	21	1184
Peg-cutter. Rotary	E. Thompson	258,337	Jan. 17	799	223	21	149
Peg-cutting machine	H. C. and J. N. Tower	253,944	Feb. 7	74	23	21	359
Pegging-machine	N. S. Wakefield	255,064	Mar. 14	788	210	21	781
Pelts. Machine for cutting up	D. Whittemore and A. Eppler, Jr	257,314	May 2	980	56	21	1317
Pen. Fountain	T. Gibson and E. Armstrong	251,993	Jan. 3	10	3	21	4
Pen. Fountain	H. Burckas, I	256,208	Apr. 11	867	161	21	1055
Pen. Fountain	P. P. Flournoy	253,283	Feb. 7	117	35	21	346
Pen. Fountain	G. F. Hawkes	257,756	May 9	768	213	21	1402
Pen. Fountain	F. X. Pomeranski	254,174	Feb. 28	1211	330	21	570
Pen-holder	W. W. Stewart	255,961	Apr. 4	962	68	21	983
Pen-holder	E. Faber	255,779	Mar. 21	1046	280	21	833
Pen-holder	B. A. Fiske	256,254	May 23	1309	309	21	1538
Pen-holder	L. Schevenell	255,227	Mar. 21	893	238	21	823
Pen-holder	J. W. Wetmore	253,953	Feb. 21	947	263	21	994
Pen-holder. Fountain	W. W. Stewart	255,205	Mar. 21	987	256	21	879
Pen-holder. Fountain	M. C. Stone	260,134	June 27	1585	430	21	1909
Pen-holder. Fountain	M. C. Stone	258,634	Jan. 10	438	120	21	63
Pen-holder. Reservoir	T. A. Hampson	254,175	Feb. 28	1212	330	21	577
Pen-holder. Reservoir	W. W. Stewart	254,958	Apr. 25	1494	419	21	1233
Pen. Writing	E. D. Blackwell	256,899	May 23	1434	407	21	1561
Pens. Writing-point for stylegraphic	J. Holland	256,898	May 23	1433	406	21	1561
Pencil-case	J. Holland	254,699	Apr. 18	1099	300	21	1156
Pencil-point protector and twine-cutter. Combined	C. W. Beman	254,738	Apr. 18	1286	343	21	1179
Pencil-point protector, twine-cutter, and whistle. Combined	J. Reckzeederfer and C. W. Boman	254,986	Mar. 14	620	168	21	703
Pencil-sharpener	F. F. Kullrich	255,909	Apr. 4	192	50	21	988
Pendulum. Compensating	J. Asher	257,177	May 2	37	12	21	1287
Pendulum. Compensating	F. A. Mills and T. A. Mossop	256,564	Apr. 18	961	260	21	1133
Percolator	N. Rosenwasser	253,289	Feb. 7	300	89	21	381
Percolator and still. Combined	B. Fraser	258,559	Jan. 17	1000	264	21	192
Perforating checks and drafts. Machine for	S. Ullman	259,910	June 20	1292	346	21	1932
Perforating device	E. T. Pettit	254,450	Mar. 7	4	1	21	639
Permutation-lock	F. S. Baldwin	259,376	June 13	694	186	21	1810
Permutation-lock	B. F. Flint	251,676	Jan. 3	320	86	21	43
Permutation-lock	G. M. Hathaway	251,677	Jan. 3	320	86	21	43
Permutation lock	G. M. Hathaway	255,067	Mar. 14	769	197	21	771
Permutation-lock	W. Rowe	255,462	Mar. 28	1393	348	21	889
Permutation-lock. Removable	C. Seybold	259,398	Jan. 17	798	223	21	148
Permutation-lock. Removable	M. W. Thurman	257,696	May 9	611	171	21	1394
Perspective delineator	R. W. Thurman	254,178	Feb. 28	1217	330	21	577
	G. M. P. Van Lith						

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Petroleum. Apparatus for rectifying	L. Daul	256,284	May 23	1416	600	21	1559
Photo-engraving metallic plates	A. Michaud	254,908	Mar. 14	693	167	21	765
Photograph-coloring	H. Austin and L. J. Kimball	257,811	May 9	627	.....	21	1435
Photographers. Background-frame for	G. H. Richards	253,101	Jan. 31	1740	461	21	318
Photographer's chair	J. A. Anderson	253,829	Feb. 21	790	225	21	489
Photographic apparatus	S. R. Stoddard	257,408	May 2	318	90	21	1338
Photographic background or accessory	W. H. Morhiser	256,573	June 13	870	230	21	1854
Photographic camera	T. H. Blair	257,206	May 2	68	26	21	1293
Photographic camera	A. Huffnagle	257,946	May 16	891	277	21	1473
Photographic camera	J. C. Merrell	254,997	Mar. 14	693	167	21	765
Photographic camera	H. C. Price	260,235	June 27	1719	465	21	2007
Photographic camera	W. H. Walker	259,064	June 6	243	64, 65	21	1735
Photographic-camera shutter	M. Flammang	256,199	May 16	1200	366	21	1599
Photographic cameras. Focusing attachment for	E. B. Barker	258,350	May 23	1468	424	21	1571
Photographic cameras. Plate-holder for	W. H. Walker	254,109	Feb. 28	1218	340	21	578
Photographic copies or fac-similes of drawings, &c. Making	S. Chadwick	259,094	June 6	277	74	21	1742
Photographic lantern	J. Carbutt	256,974	Apr. 25	1508	{493 / 494}	21	1236
Photographic negatives. Producing	A. Peck	252,964	Jan. 31	1560	.....	21	390
Photographic-plate holder	E. B. Barker	255,506	Mar. 28	1414	361	21	992
Photographic-printing frames. Vignetting attachment for	J. F. Singhi	256,509	Apr. 18	965	270	21	1134
Photographic purposes. Head and back rest for	W. S. Laighton	258,443	May 23	1601	453	21	1590
Photographic silver-bath heater	B. F. Powelson	256,592	Apr. 18	1052	297	21	1148
Photographs. Apparatus for vignetting	C. Seaver, Jr	254,845	Mar. 14	491	131	21	723
Photographs. Exhibiting	J. Dewe	254,806	Mar. 14	440	118	21	720
Photographs on porcelain. Producing indelible	A. Tournoux and F. Schmalz	260,065	June 27	1506	.....	21	1974
Photographs. Producing colored	J. B. Germeuil-Bonnaud	253,669	Feb. 14	581	.....	21	455
Piano-action	G. Philipp	253,491	Feb. 7	277	79	21	393
Piano action-frame. Upright	P. Gmehlin	252,370	Jan. 17	841	234	21	156
Piano-case	J. and J. P. Becker	252,717	Jan. 24	1239	348	21	239
Piano-forte	E. McCammon	258,455	May 23	1615	456	21	1592
Piano-forte players. Legato-monitor for	S. A. Emery	253,857	Feb. 21	826	234	21	505
Piano-forte tuning attachment	J. H. Lowen	258,935	June 6	62	21	21	1708
Piano-fortes. Sounding-board for upright	F. Pitt	256,670	May 30	1085	539	21	1648
Piano sounding-board attachment	J. G. Seebold	253,146	Jan. 10	573	161	21	165
Piano-tuning-pin lock	J. S. Thorpe	259,604	June 13	807	241	21	1880
Pianos. Repetition-action for	J. Hardman	256,751	May 30	1092	559	21	1664
Pianos. Wrest-block bridge for	P. Gmehlin	254,300	Feb. 28	1254	347	21	583
Pick	W. L. Blythe	256,276	May 23	1406	398	21	1556
Pick	E. R. Ray	255,533	Mar. 28	1377	378	21	895
Pick for mill and other stones	L. Lafayette	256,905	Apr. 25	1495	401	21	1231
Picker: *See* Fruit-picker. Peanut-picker.							
Pictorial story-blocks	W. Stranders	257,102	Apr. 25	1650	{461 / 462}	21	1261
Picture and card supporter	C. Beck	257,542	May 9	469	136	21	1374
Picture. Changeable	J. W. Stockton	258,261	May 23	1390	393	21	1563
Picture-exhibitor	A. Lueckel	253,730	Feb. 14	660	188	21	468
Picture-exhibitor	E. McLoughlin	259,771	June 20	1139	302	21	1906
Picture-frame	J. H. Downes and L. Turk	259,751	June 20	1113	297	21	1902
Picture-frame	S. W. Poulton	252,898	Jan. 31	1481	414	21	976
Picture-frame	A. Wolf. (Reissue)	10,097	Apr. 25	1716	481	21	1273
Picture-frame	W. H. Zinn and E. Edwards	254,761	Mar. 7	381	100	21	703
Picture-hanging device	A. Campbell	256,460	Apr. 18	905	253	21	1124
Picture-hook	F. P. Baker	257,457	May 9	389	109	21	1356
Pictures. Coloring and finishing	C. H. Myers	257,051	Apr. 25	1588	.....	21	1250
Pictures. Method of and device for exhibiting	F. E. Mills	256,353	Apr. 11	764	210	21	1086
Pigeon-hole for desks, &c. Adjustable	F. H. Cutler	256,884	Apr. 25	1338	375	21	1205
Pile-driver	A. L. Gilbert	254,955	Mar. 14	638	{172 / 173}	21	756
Pile-driver	S. H. Tarbell and G. Souther	258,854	June 6	104	27	21	1719
Pile for use in construction of wharves, &c	R. M. Franklin	260,015	June 27	1444	390	21	1985
Piles. Heating	J. Haldeman	253,589	Feb. 14	497	.....	21	442
Piles. Machine for sawing off and tenoning	A. L. Gilbert	254,954	Mar. 14	637	172	21	755
Pill-boxes. Process of and die for making	P. Cauhapé	259,365	June 13	612	168	21	1807
Pill packing-box	P. Cauhapé	259,364	June 13	611	168	21	1807
Pills, lozenges, &c. Machine for making	J. T. and C. T. Jones	256,573	Apr. 18	1089	291	21	1145
Pills, &c. Machine for manufacturing	J. A. Whitney	256,490	Apr. 11	838	{232 / 233}	21	1009
Pills. Process of and apparatus for making	J. A. Whitney	256,419	Apr. 11	834	{231 / 232}	21	1009
Pillow-block	G. K. Orrell	258,312	May 23	1447	410	21	1563
Pillow-sham frame	J. A. Knight	258,436	May 23	1592	452	21	1569
Pillow-sham holder	J. J. Kelsey	252,952	Jan. 31	1546	431	21	987
Pillow-sham holder	A. H. Phelps	259,911	June 20	1293	346	21	1932
Pillow-sham holder	J. A. Wanless	253,136	Jan. 31	1781	494	21	385
Pin: *See* Bearing-pin. Curtain-hook pin. Clothes-pin. Hair-pin. Coupling-pin. Safety-pin.							
Pin	D. Lubin	257,351	May 2	251	71	21	1306
Pin-jewel holder	F. Gundorph	259,660	Jan. 24	1180	331	21	219
Pin-package	W. C. Howard	259,018	June 6	185	49	21	1726
Pins. Safety-catch for	G. W. Washburn	252,159	Jan. 10	567	165	21	107
Pinchers. Hand	M. V. B. Ethridge	259,674	June 20	1001	267	21	1884
Pinchers. Hog-ring	E. Major	256,713	Apr. 18	1206	337	21	1175
Pipe: *See* Conductor-pipe. Multiflue-pipe. Drain-pipe. Sheet-metal pipe. Drive-pipe. Smoking-pipe. Drop-light pipe. Stove-pipe. Hose-pipe. Tobacco-pipe.							
Pipe-bending machine	J. M. Evarts	256,690	Apr. 25	1404	396	21	1218

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Pipe-coupling	L. De Nacyer	253,986	Feb. 21	826	275	21	530
Pipe-coupling	J. C. Githens	256,657	Jan. 24	1177	320	21	218
Pipe-coupling	T. J. Goldschmid	255,163	Mar. 21	913	244	21	810
Pipe-coupling	S. Lightburne, Jr	255,363	Mar. 28	1367	366	21	982
Pipe-coupling	E. Nunan	254,151	Feb. 28	1189	338	21	573
Pipe-coupling	L. T. Scofield	257,985	May 16	1651	397	21	1421
Pipe-coupling	J. C. Telfer	254,850	Mar. 14	636	153	21	720
Pipe-coupling	C. Fenton	252,749	Jan. 24	1273	360	21	235
Pipe-cutter	A. Saunders. (Reissue)	10,081	Jan. 31	1548	390	21	335
Pipe-cutter	F. Armstrong	256,973	June 6	1265	33, 34	21	1716
Pipe-cutting machine	W. L. Ogden	253,683	Jan. 24	1218	341	21	888
Pipe die. Drain	W. B. Tuttle	253,630	Jan. 24	1146	322	21	814
Pipe-gripe	J. K. Dimmick	258,031	Jan. 3	397	105	21	67
Pipe-joint	W. Furman	255,497	Mar. 28	1250	336	21	672
Pipe-joint	C. Japtok	258,764	June 20	1130	280	21	1894
Pipe-joints. Drain and other	L. Richardson and F. J. Nettleton	258,132	May 16	1266	330	21	1512
Pipe-mold	F. Shickle	255,891	Apr. 4	165	44	21	978
Pipe molding and casting apparatus	C. G. Mayer	256,340	Apr. 11	761	209	21	1066
Pipe-section for tanks. Removable	J. Naughton	256,633	Apr. 4	343	93	21	1090
Pipe-stem and cigar-holder. Combined	M. T. Chapman	254,460	Mar. 7	18	5	21	641
Pipe-wrench	A. Campbell	253,181	Feb. 7	11	4	21	349
Pipes and wires. Protecting and inground	C. W. Durham	256,391	May 23	1537	426	21	1579
Pipes. Elbow-fitting for drainage	L. S. Flatten	258,448	Jan. 17	948	260	21	172
Pistol and carbine holder	D. Meore	253,221	Feb. 7	38	16	21	355
Pistol-handle	J. Dykeman and J. G. Corbin	255,289	Mar. 21	1653	277	21	831
Piston	J. C. Hale	254,960	Mar. 14	643	175	21	757
Piston	F. McFadden	260,308	June 27	1869	490	21	2028
Piston	J. Preston	258,569	May 30	1791	503	21	1631
Piston	A. P. Emery	256,554	Apr. 18	1013	283	21	1143
Piston for water-meters, &c	H. D. Garrett	254,951	Mar. 14	633	{170 / 171 / 172}	21	755
Piston-head	H. D. Garrett	256,319	Apr. 11	781	{184 / 185}	21	1078
Pitchfork	F. L. Brandon	256,638	Apr. 18	1101	310	21	1156
Pitcher	L. C. Hiller	253,783	Feb. 14	662	178	21	469
Pitcher or jug. Glass or earthenware	W. Zimmer	258,696	May 23	1696	469	21	1607
Pitcher top. Sirup	C. H. Tallman and B. F. Day	255,696	Mar. 28	1570	422	21	950
Pitcher. Water	T. L. L. Ballous	259,698	June 6	970	71	21	1741
Pitman. Adjustable	W. E. Hawkins	257,004	Apr. 25	1539	428	21	1241
Pivot-gage	T. S. Miller	256,025	Apr. 4	338	90	21	1066
Plaiting-machine	S. I. Echols	256,308	Apr. 11	706	193	21	1076
Plaiting-machine	J. I. D. and L. Y. Woodruff	259,986	Jan. 10	737	205	21	139
Plane. Bench	W. S. Case	256,988	June 6	144	39	21	1730
Plane. Bench	S. R. Rust	257,981	May 16	1630	396	21	1469
Plane. Bench	F. A. Humphrey	257,870	May 16	998	250	21	1407
Plane. Cavity	L. D. Bussell	256,628	May 30	1829	516	21	1638
Plane. Edge	F. V. Yeager	258,971	June 6	125	33	21	1716
Plane. Reed	A. Fales	254,542	Mar. 7	114	28	21	639
Plane. Variable bench	C. T. Lamman	260,211	June 27	1890	457	21	2003
Planer. Metal	B. F. Radford	255,115	Mar. 21	847	236	21	799
Planer. Metal	W. H. Stinson	256,864	Apr. 25	1376	367	21	1214
Planing-gage. Adjustable	W. S. Holland	255,787	Apr. 4	49	19	21	958
Planing-machine for planing thin pieces of wood	J. Richards	258,199	May 16	1209	{337 / 338 / 365}	21	1511
Planing machine. Metal	B. D. Whitney	259,958	June 20	1353	366	21	1943
Planing-machines. Bed and presser for	S. W. Byers and H. W. Knight	256,554	May 30	1735	491	21	1621
Planter	H. P. Hall	254,198	Feb. 21	1161	304	21	508
Planter and check-rower. Corn	B. F. Barnes	254,188	Feb. 28	1226	342	21	579
Planter and fertilizer-distributer. Combined	J. Franta	254,207	Feb. 28	1251	347	21	583
Planter and fertilizer-distributer. Combined corn	O. Stoddard	256,069	Apr. 4	383	105	21,	1015
Planter and fertilizer-distributer. Combined hand seed	W. Cassill	258,736	Jan. 24	1259	354	21	238
Planter and fertilizer-distributer. Corn	B. S. Evans	259,299	June 13	528	139	21	1792
Planter and fertilizer-distributer. Cotton-seed	N. R. Wilson	259,693	June 13	931	248	21	1864
Planter and fertilizer-distributer. Seed	B. P. Morgan	256,087	Apr. 4	336	90	21	1007
Planter and guano-distributer combined. Cotton	C. A. Anderson	257,499	May 2	344	96	21	1349
Planter and marker. Corn	O. L. Hall	254,961	Mar. 14	644	175	21	757
Planter. Check-row	L. J. Bosworth	254,287	Feb. 28	1281	365	21	594
Planter. Check-row corn	A. A. McIntosh	257,037	Apr. 25	1574	441	21	1248
Planter. Check-row corn	J. Mecava	259,193	June 6	366	103	21	1782
Planter. Check-row corn	E. W. Quincy	251,944	Jan. 3	313	85	21	54
Planter. Check-row corn	J. Stuart	255,207	Mar. 21	989	259	21	819
Planter check-rower. Corn	R. W. Alexander	256,610	Apr. 18	1074	{302 / 303}	21	1151
Planter check-rower. Corn	G. W. Brown	258,216	May 23	1334	378	21	1543
Planter check-rower. Corn	G. W. Brown	258,217	May 23	1337	378	21	1544
Planter check-rower. Corn	W. R. Campbell and W. J. Chambers.	251,830	Jan. 3	188	51	21	33
Planter check-rower. Corn	C. E. Sweney	254,515	Mar. 7	81	21	21	650
Planter. Corn	G. W. Brown	253,589	Feb. 14	478	{125 / 126}	21	436
Planter. Corn	C. U. Crandall	258,194	Jan. 10	690	{175 / 176}	21	113
Planter. Corn	A. C. Evans	257,156	May 2	14	5	21	1283
Planter. Corn	A. C. Evans	258,037	May 16	1008	305	21	1493
Planter. Corn	J. Feldmier	255,982	Apr. 4	264	66	21	983
Planter. Corn	T. A. Galt and G. S. Tracy	259,679	June 20	1006	268	21	1885
Planter. Corn	M. Harris	255,782	Apr. 4	35	10	21	956
Planter. Corn	W. A. Haselrigg	251,879	Jan. 3	242	67	21	43
Planter. Corn	W. L. Hutson	255,630	Mar. 28	1495	401	21	917
Planter. Corn	W. H. Kunsmaul and F. Heiger	256,467	Apr. 18	943	263	21	1110
Planter. Corn	J. Lehges	257,876	May 16	905	258	21	1459
Planter. Corn	A. Ramstetler	254,054	Feb. 21	1075	299	21	545

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Planter. Corn	L. Scofield	252,265	Jan. 10	710	200	21	126
Planter. Corn	L. Scofield	252,596	Jan. 17	1031	267 / 268	21	127
Planter. Corn	L. Scofield	252,808	Jan. 24	1361	351	21	250
Planter. Corn	L. Scofield	253,110	Jan. 31	1749	485	21	319
Planter. Corn	W. H. Swartout	254,512	Apr. 18	966	271	21	1135
Planter. Corn	J. Turner	251,975	Jan. 3	350	94	21	60
Planter. Corn	C. W. Vogel and H. Beltzell	254,444	Feb. 28	1580	416	21	689
Planter. Cotton	A. W. Byers and J. C. Dorser	252,738	Jan. 24	1354	353	21	238
Planter. Cotton	H. C. Tillery	252,543	Jan. 17	1049	282	21	190
Planter. Cotton and corn	J. M. Turley	252,618	Jan. 24	1378	365	21	251
Planter. Cotton-seed	R. M. and J. M. Brooks	255,566	Mar. 28	1445	369	21	909
Planter, coverer, and fertilizer-distributer. Seed	L. S. Hefner	255,286	Mar. 21	1066	267	21	636
Planter, cultivator, and double-shovel, single-shovel, and turning plow. Combined cotton	C. J. Le Roy and J. W. Henson	200,302	June 27	1801	468 / 469	21	2080
Planter. Hand corn	T. Horton	257,880	May 9	834	233	21	1436
Planter. Hand corn	T. Horton	257,881	May 9	835	238	21	1436
Planter. Seed	J. W. Bunch	254,607	Mar. 7	194	49	21	671
Planter. Seed	R. Hoffheins	254,818	Mar. 14	453	123	21	722
Planter. Seed	E. P. Morris	256,794	Apr. 18	1215	340	21	1177
Planter. Seed	A. W. Pagett	254,153	Feb. 28	1190	332 / 333 / 530 / 533	21	573
Planter. Seed	L. E. Porter	258,671	May 30	1898	530 / 533	21	1648
Planter. Seed	J. W. Robertson	252,808	Jan. 24	1354	378	21	948
Planter. Seed	E. Spiller	257,899	May 16	935	260 / 261	21	1463
Planters. Check-line guide for corn	G. D. Haworth	253,538	Feb. 14	425	119	21	431
Planters. Check-row attachment for corn	C. E. Sweney	254,514	Mar. 7	70	21	21	651
Planters. Check-row attachment for corn	F. B. Tait	255,472	Mar. 28	1305	351	21	883
Planters. Device for connecting check-rowers to	J. E. Bering	250,796	June 20	1166	311	21	1911
Planters. Device for connecting check-rowers to	W. B. Rush	250,652	June 13	968	258 / 259	21	1871
Planters. Furrow attachment for seed	I. P. Watson	255,069	Mar. 14	784	210	21	780
Planting and fertilizing machine. Potato	C. L. Woodward	253,560	Feb. 14	465	132	21	496
Planting machine. Corn	J. H. Jones	254,321	Feb. 28	1300	383	21	667
Plastic composition and vulcanite	G. S. Evans	256,470	Apr. 18	919	.....	21	1196
Plastic composition for the cores of billiard-balls and for other purposes	C. S. Lockwood	250,878	June 20	1259	.....	21	1907
Plastic compound	B. Harrass	254,964	Mar. 14	646	.....	21	757
Plastic compound and vulcanite	G. S. Evans	256,471	Apr. 18	919	.....	21	1196
Plastic compounds. Apparatus for applying solutions of chloride of sulphur in bisulphide of carbon to sheets of	J. D. Cheever	254,464	Mar. 7	90	5	21	642
Plastic material	M. B. Church	255,937	Apr. 4	228	.....	21	988
Plastic material. Drying sheets of	J. W. Hyatt	254,439	Feb. 28	1513	414	21	698
Plastic material. Process of and apparatus for molding	J. W. Hyatt and C. S. Lockwood	259,964	June 20	1407	379	21	1958
Plastic materials. Manufacture of articles from	T. Guilford	256,476	Apr. 18	926	256	21	1197
Plate. Dinner	J. David	255,796	Mar. 28	1621	437	21	936
Platform: *See* Dumping-platform. Stove-platform.							
Platform-elevator	T. Keith	257,016	Apr. 25	1552	436	21	1944
Pliers for attaching buttons	W. H. Ward	256,416	Apr. 11	831	231	21	1098
Plow	J. J. Adcock, G. J. Lumpkin, and M. White	253,489	Feb. 14	381	105	21	423
Plow	A. Ball	259,659	June 20	986	263	21	1881
Plow	M. M. Beard	257,630	May 9	626	175	21	1398
Plow	B. S. Benson	259,991	Jan. 31	1507	443	21	295
Plow	D. P. Bigelow	258,419	Jan. 17	911	251	21	167
Plow	A. G. Christman	254,553	Mar. 7	103	26, 27	21	656
Plow	F. R. Cooper and J. Lemmon	253,347	Feb. 7	195	56	21	379
Plow	M. Cooper. (Reissue)	10,007	Jan. 10	761	211	21	136
Plow	A. G. Cox and R. A. Johnson	259,292	June 13	519	136	21	1791
Plow	C. Domschke	258,092	Jan. 10	429	117	21	81
Plow	W. A. Estes	258,201	Jan. 10	745	207	21	123
Plow	F. Fenske	253,155	Mar. 21	988	248	21	808
Plow	F. Gautier	254,952	Mar. 14	654	171	21	755
Plow	J. George	254,634	Mar. 7	229	59	21	677
Plow	L. Gibbs	259,198	June 6	315	83	21	1749
Plow	T. E. Golden	257,661	May 16	897	249	21	1456
Plow	M. T. Hancock	255,983	Mar. 21	1056	283	21	935
Plow	F. B. Hunt	253,055	Jan. 31	1673	463	21	308
Plow	E. D. Meagher	253,408	Feb. 7	281	76	21	391
Plow	O. E. Miles	259,894	June 20	1275	342	21	1930
Plow	C. L. Moss	259,900	June 20	1281	343	21	1931
Plow	F. Nitschmann	258,585	Jan. 17	1095	305	21	196
Plow	P. Petersen	253,094	Jan. 31	1734	479	21	316
Plow	A. F. Purefoy	256,115	May 16	1191	336	21	1510
Plow	J. S. and E. C. Robinson	253,139	Jan. 10	563	156	21	103
Plow	M. Ross	257,941	May 9	117	33	21	1308
Plow	N. Sanders	252,979	Jan. 31	1570	437	21	291
Plow	N. Shaffstall	254,394	Feb. 28	1464	400 / 401	21	610
Plow	F. Simonds	256,750	Apr. 18	1240	348	21	1188
Plow	J. Vandegrift	254,734	Mar. 7	345	91	21	697
Plow	L. B. White	260,078	June 27	1515	407	21	1975
Plow	G. Wiard	255,370	Mar. 21	1170	314	21	854
Plow and cotton-scraper. Sulky	S. C. Bancum	257,914	May 16	954	265 / 266	21	1466
Plow and cultivator. Combined	F. Cremer	254,680	Mar. 7	289	54	21	674
Plow and drag. Combined sulky	M. Robinson	257,763	May 9	774	216	21	1425
Plow and planter. Combined	E. A. Wright	257,194	May 2	619	229	21	1433
Plow attachment	P. P. Herberg and P. H. Claussen	255,891	Apr. 4	290	75	21	998
Plow attachment	R. V. Kennedy	253,395	Feb. 7	247	71	21	388

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Plow attachment	P. Kettenring	259,317	June 13	851	144	21	1797
Plow attachment	W. D. Lindsley	256,804	Apr. 18	1260	369	21	1198
Plow attachment	R. Updike	259,880	Jan. 24	1362	365	21	228
Plow attachment	T. P. Wise	255,086	Mar. 14	799	211	21	788
Plow attachment	J. A. McNeal	253,497	Feb. 7	269	75	21	389
Plow-beam clamp	T. M. Bissell	256,275	Apr. 11	675	183	21	1070
Plow-bolt. Chilled	D. R. Matheny	256,348	Apr. 11	709	209	21	1082
Plow. Cotton	M. Kite	251,895	Jan. 3	261	78	21	46
Plow coupling. Sulky	F. A. Hill and M. J. Church	258,004	May 16	1127	316	21	1462
Plow. Ditching and grading	B. S. Benson	251,817	Jan. 3	164	45, 46	21	29
Plow. Gang	D. B. Tanger	254,406	Feb. 28	1478	404	21	681
Plow-governor	W. P. Brown	258,728	Jan. 24	1347	349	21	240
Plow-handle	F. Hacke	259,133	June 6	321	95	21	1729
Plow-handle	G. C. Avery	258,718	Jan. 24	1334	346	21	239
Plow-handles. Bedding	J. C. Moss	257,385	May 2	264	74, 75	21	1388
Plow, harrow, and cultivator. Combined	J. G. Anderson	254,585	Mar. 7	171	42	21	661
Plow. Hillside	J. H. Feldmann	259,836	June 20	1210	324	21	1919
Plow. Hillside	H. Hunteman	259,851	June 20	1227	332	21	1924
Plow-jointer	J. Quin	256,026	May 30	9636	575	21	1674
Plow mold-board	T. Pates	257,376	May 2	276	79	21	1331
Plow. Planting	H. H. Spencer	255,349	Mar. 21	1147	308	21	857
Plow-seeding attachment	G. S. Agee	253,331	Feb. 7	179	51	21	376
Plow. Shovel	J. H. Feldmann	259,515	June 13	808	211	21	1842
Plow. Shovel	W. H. Durfee	256,288	May 23	1419	401 / 402 / 309 / 310	21	1558
Plow. Side-hill	J. H. Fogarty	258,046	May 16	1109	309 / 310	21	1464
Plow. Steam	W. L. Casaday	258,987	June 6	142	38, 39	21	1719
Plow. Sulky	T. A. Coulee and J. H. Kenneth	251,786	Jan. 3	97	27, 28	21	19
Plow. Sulky	T. T. Harrison	255,977	Apr. 4	265	74	21	997
Plow. Sulky	J. I. Hoke	257,387	May 2	217	61, 62	21	1389
Plow. Sulky	J. I. Hoke	258,998	May 16	1396	388	21	1520
Plow. Sulky	F. R. Hunt	254,481	Mar. 7	42	11, 12	21	645
Plow. Sulky	F. B. Hunt	256,695	Apr. 18	1179	331	21	1171
Plow. Sulky	C. E. Kneberg	254,555	Mar. 7	128	36	21	669
Plow. Sulky	A. Lindgren	254,558	Mar. 7	134	33	21	661
Plow. Sulky	I. Lodge	257,508	May 9	443	122	21	1386
Plow. Sulky	H. Miller	258,615	Jan. 24	1129	316 / 317	21	210
Plow. Sulky	G. Moore	255,391	Mar. 21	1201	333	21	859
Plow. Sulky	J. Nicewood	257,603	May 9	585	163	21	1399
Plow. Sulky	J. Nixon	257,971	May 16	1016	284	21	1478
Plow. Sulky	A. P. Osborn	257,749	May 9	757	211	21	1441
Plow. Sulky	J. M. Phillips	257,063	Apr. 25	1008	449 / 450	21	1883
Plow. Sulky	T. V. Plies	253,761	Feb. 14	607	169	21	476
Plow. Sulky	J. R. Pollock	259,715	June 20	1063	293 / 295	21	1893
Plow. Sulky	O. A. Stoneman	256,362	May 23	1391	393	21	1583
Plow. Sulky	J. Ward	257,256	May 2	131	37	21	1304
Plow. Sulky	M. G. Wood and W. C. Pratt	256,493	Apr. 11	845	233 / 234	21	1140
Plow. Sulky	J. K. Worthington	253,607	Feb. 14	737	216	21	467
Plow. Sulky	W. B. Young	255,557	Mar. 28	1403	379	21	900
Plow. Sulky	A. C. Taylor	255,896	Apr. 4	181	47	21	909
Plow. Vineyard	F. S. Davenport	260,266	June 27	1781	482 / 483	21	2017
Plow. Wheel	J. W. Nelson	257,371	May 2	269	76, 77	21	1399
Plow. Wheel	W. H. Wilde	254,418	Feb. 28	1490	408	21	684
Plow. Wheel	T. M. Bissell	256,686	May 30	1998	544	21	1654
Plow wheel. Sulky	T. M. Bissell	260,274	June 27	1768	476	21	2014
Plow wheel. Sulky	H. H. Sater	253,963	Jan. 31	1486	415	21	276
Plows. Device for attaching roller-colters to	F. B. Brutschke	255,567	Mar. 28	1447	369	21	908
Plowing. Steam	C. Vaicer	257,697	May 9	683	230	21	1434
Plowshare	J. Myers and T. B. Simonton	260,221	June 27	1763	461	21	2004
Plowshares and landsides. Machine for welding	L. McKinnies	256,938	June 6	84	22	21	1709
Plowshares. Manufacture of	J. H. Newbury and G. A. Chapman	259,963	June 20	1263	344	21	1931
Plugs. Device for shredding	E. C. Ford	256,638	May 30	1639	519	21	1640
Plumber's pipe-hanger	J. W. McArdell	257,035	Apr. 25	1573	441	21	1947
Plumbers' shave-hooks. Guard for	P. Connolly	253,845	Feb. 21	810	230	21	598
Plumber's trap	C. Fahlberg and C. Semper	257,508	May 9	567	.....	21	1379
Plumbic dioxide from ferruginous solutions. Recovery of	C. E. Buell	256,009	Apr. 4	402	116	21	1021
Pneumatic elevator	D. Lubin	257,350	May 2	249	70	21	1388
Pocket	P. Schrader	255,009	Mar. 14	616	218	21	786
Pocket-book	H. Walther	255,041	Mar. 14	784	209	21	789
Pocket-book	A. Y. Andrews and H. Burk	256,094	Apr. 4	414	113	21	1020
Pocket-book blank	T. B. Dunston	259,507	June 13	791	200	21	1849
Pocket-book securer	A. P. Yates	256,083	Apr. 4	413	119	21	1020
Pocket-case and cigar-clipper. Combined	J. H. Walbridge	256,170	May 16	1256	354	21	1521
Pocket-comb	F. W. Brooks	258,997	Jan. 31	1694	445	21	296
Pocket-guard	J. M. Palmer	253,667	Feb. 21	883	244	21	511
Pocket-knife	H. Story	254,404	Feb. 28	1476	403	21	681
Pocket-knife	S. R. Beckwell	256,196	Apr. 11	572	156	21	1058
Pocket. Safety	D. Bristmal and W. Harrison	257,147	May 2	4	2	21	1281
Poke. Animal	L. T. Wing	259,624	June 13	878	240	21	1885
Poke. Animal	F. P. Athey	253,326	Feb. 7	188	52	21	377
Poke. Horse	D. B. Terrell	256,988	Apr. 25	1452	407	21	1226
Pole and shaft for vehicles	D. W. Odlorne	260,236	June 27	1710	463	21	2015
Pole-changer	W. E. Athearn	253,346	Jan. 17	899	235	21	150
Pole-changing key	W. Boughton	260,275	June 27	1763	477	21	2014
Pole. Vehicle	H. H. Richards	253,179	Jan. 31	1841	507	21	234
Pole. Vehicle	E. P. Shetter	257,384	May 2	297	85	21	1334
Polish and pump rods. Connection for	J. Kahl	256,076	May 16	1142	360	21	1501
Polishing apparatus							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Polishing-head	H. Blundell	251,689	Jan. 3	6	2	21	4
Polishing-machine laps. Machine for grinding	A. Hessels	258,943	Jan. 31	1531	428	21	285
Polishing-wheel	E. Thayer	260,336	June 27	1838	497	21	2096
Pool-ball holder	W. H. Marshall and C. H. Anderson	256,998	Apr. 25	1427	401	21	1222
Pool-rack	A. S. Hean and G. H. Jennings	255,695	Mar. 28	1489	400	21	915
Porcelain and china paste-boxes. Making	E. Leak	256,008	Apr. 4	319	84	21	1003
Porch-iron	H. S. Stauffer	252,401	Jan. 17	880	245	21	169
Portable furnace and boiler. Combined	B. L. Ryder	255,462	Mar. 28	1292	348	21	860
Portable summer-house	N. G. Rood	256,860	Apr. 25	1373	386	21	1213
Post:							
See Fence-post. Gate-post.							
Post-hole digger	J. Lee	253,929	Feb. 21	923	256	21	590
Post-hole digger	T. Tanner and H. H. Fischer	251,968	Jan. 3	339	92	21	59
Post-office box	P. R. Temple and G. W. Pierce	252,154	Jan. 10	561	164	21	106
Post-office box	C. S. Thompson	252,301	Jan. 10	758	211	21	135
Post-office lock-box	W. H. Taylor	252,706	Jan. 24	1230	345	21	298
Pot:

Pump. Air	M. W. Kidder	258,535	May 23	1709	483	21	1609
Pump and motor. Rotary	H. Clayton	256,125	Apr. 11	475	139	21	1036
Pump attachment	R. M. Adam	257,633	May 9	990	173	21	1396
Pump attachment. Dredging	J. D. Cowan and R. E. Lee	255,402	Mar. 28	1399	359	21	898
Pump. Barge	J. J. Harris	257,321	May 2	811	59	21	1319
Pump bucket. Chain	D. E. Shaw	256,167	Apr. 11	590	144	21	1044
Pump. Chain	W. D. Hooker	259,304	June 13	647	171	21	1814
Pump. Deep-well	J. Houpt	254,321	Feb. 28	1378	360	21	604
Pump for steam-boilers. Feed	P. A. Myers. (Reissue)	10,048	Feb. 28	1596	417	21	631
Pump. Force	M. L. G. Wheeler	253,141	Jan. 31	1786	496	21	396
Pump. Force	J. Preston	256,855	Apr. 25	1367	365	21	1212
Pump-frame	W. H. Cloud	257,473	May 9	405	113	21	1360
Pump. Lifting and force	J. Bowie and W. C. Brown	254,596	Mar. 7	183	45	21	669
Pump. Lubricating	D. W. Brunton	255,928	Apr. 4	218	57	21	987
Pump. Mining	A. J. Weith	258,988	June 6	114	30	21	1714
Pump. Oil	G. Miller	254,357	Feb. 28	1490	390	21	611
Pump-piston	J. A. Throp	258,066	Jan. 10	477	132	21	96
Pump-piston	S. Bonser	254,266	Feb. 28	1320	365	21	594
Pump. Portable force	W. F. Toothaker	258,958	June 6	110	29	21	1713
Pump-rods of deep-well pumps. Pneumatic counterbalance for	D. Ross	256,585	Apr. 18	963	269	21	1134
Pump. Rotary	J. M. Taylor	254,069	Feb. 21	1001	282	21	548
Pump. Rotary	T. Winkler	256,781	Apr. 18	1272	356	21	1187
Pump-spout	S. J. Adams	259,451	June 13	717	191	21	1897
Pump-spout brace	S. J. Adams	259,698	June 13	938	250	21	1896
Pump. Steam	E. R. Eaton and C. Tufts	253,686	Feb. 14	601	169 / 170	21	458
Pump. Steam	M. R. Hall	259,136	June 6	394	86	21	1751
Pump. Steam	C. H. Hudson and E. Smedley	260,069	June 27	1553	418	21	1981
Pump. Steam	C. H. Osborn	254,804	Mar. 7	899	76	21	688
Pump. Steam	G. B. N. Tower	256,157	May 16	1943	360	21	1519
Pump. Steam	S. W. Martin	254,358	Feb. 28	1416	389	21	611
Pump-strainer	H. Goebel	256,658	Jan. 24	1178	330	21	916
Pump. Vacuum	P. C. Du Bois	259,830	June 20	1204	242	21	1910
Pump-valve gear	J. Giles	255,976	Mar. 21	1049	281	21	833
Pump-valve. Waste	C. Powell	251,939	Jan. 3	389	63	21	53
Pumps. Wooden	G. J. Orr	252,133	Jan. 10	355	155	21	169
Pumps. Automatic relief device for	W. D. Hooker	251,715	Jan. 3	32	9	21	9
Pumps. Hand-lever attachment for steam	E. W. Grant	259,847	June 20	1223	328	21	1961
Pumps. Rubber bucket for chain	H. A. Jamieson	252,110	Jan. 10	504	146	21	97
Pumping-engine	W. A. Perry	251,730	Jan. 3	51	14	21	11
Pumping-engine. Duplex	D. S. Hines	253,604	Feb. 14	592	143 / 144	21	442
Pumping-engine. Duplex	G. H. Reynolds and T. J. Rider	252,517	Jan. 17	1021	284	21	188
Pumping-engine. Steam	R. C. Vanduzen	260,337	June 27	1630	437	21	2000
Punching-machine	W. C. Barr	252,969	Jan. 31	1596	442	21	395

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Punching-machine	J. M. Long and C. E. McBeth	252,111	Jan. 10	357	146	21	93
Punching-machine	J. M. Riley	257,940	May 2	116	33	21	1301
Punching-machine feeding device	F. Marggraff	258,786	Jan. 24	1389	371 / 372	21	944
Punching machine. Metal	A. J. Johnson	253,608	Feb. 14	598	145	21	443
Punching metallic tubes. Device for	O. B. Olmsted	252,947	Jan. 10	685	194	21	194
Quartz-crusher	A. Oliver	259,799	Jan. 24	1337	373	21	945
Quartz-crusher	C. P. Stamford	253,121	Jan. 31	1783	499	21	389
Quartz crushing and pulverizing machine	J. R. Sweetland	256,688	May 30	2057	589	21	1678
Quartz-mill	J. Day	254,805	Mar. 14	430	118	21	720
Quilting-frame	C. C. Bramow	257,263	May 2	163	46	21	1319
Quilting-frame	H. T. Davis	253,358	Feb. 7	190	57	21	369
Quilting-frame	P. S. Hickman	257,948	May 16	968	276	21	1473
Quilting-frame	J. Happe and W. Newman. (Reissue.)	10,069	Jan. 17	1163	306	21	199
Quilting-machine	J. R. Sheldon	255,037	Mar. 14	745	201	21	774
Rack: *See* Book-rack. Clothes-rack. Display-rack. Exhibiting-rack. Hay-rack. Map-rack. Pool-rack. Sheep-rack. Stove-rack. Towel-rack. Track-rack.							
Radiator	J. Mason	258,092	May 16	1161	305	21	1594
Radiator. Indirect	E. T. Weymouth	258,947	June 6	119	31	21	1715
Radiator. Steam	J. C. Andrews and J. F. Sunderland	255,071	Mar. 14	794	213	21	782
Radiator. Steam	J. Chapman and R. Brass	256,374	May 23	1518	131	21	1376
Radiator. Steam	T. P. Hardy	259,589	Jan. 17	1091	304	21	197
Radiators. Automatic air-valve for steam	G. L. Allen	260,148	June 27	1611	434	21	1990
Raft. Timber	R. E. Terry	255,040	Mar. 14	787	206	21	777
Rag-beater	G. Miller	256,330	Apr. 11	783	208	21	1068
Rag-washing machine for rag and paper washing engines	J. Tyler. (Reissue)	10,042	Feb. 21	1126	315	21	555
Rail-joint fastening	M. Thibaul	256,812	Apr. 18	1319	360	21	1195
Railway	D. Smith	259,795	June 20	1077	287	21	1896
Railway alarm-signal	T. H. Gibbon	258,578	Jan. 17	1068	303	21	197
Railway and canal. Combination of elevated	B. T. Babbitt	255,935	Mar. 21	1091	288	21	825
Railway-brake. Fluid-pressure	A. Wenger	253,130	Jan. 31	1788	494 / 495	21	395
Railway-brakes. Electric apparatus for working	F. A. Achard	253,148	Jan. 31	1792	496	21	398
Railway-brakes. Regulating-valve for	G. Westinghouse, Jr	251,980	Jan. 3	355	98	21	61
Railway. Cable	T. Duffy	257,674	May 9	983	185	21	1405
Railway. Cable	W. McCall	258,809	Jan. 31	1466	411	21	573
Railway. Cable	L. J. Wing	257,121	Apr. 25	1071	466	21	1295
Railway-chair	W. W. Dawley	256,964	Apr. 25	1260	427	21	1230
Railway-chair	L. Haas	253,374	Feb. 7	220	63	21	353
Railway chair and tie	L. Haas	257,572	May 9	538	146	21	1360
Railway clutches. Guide-rail for rope	C. S. Drake	258,582	May 30	1744	493	21	1623
Railway construction-tender	E. N. Wing	259,908	June 20	1261	357	21	1944
Railway cross-tie	A. L. Cubberlery	259,683	June 20	1196	339	21	1918
Railway cross-tie	J. H. Meacham	259,691	June 20	1273	341	21	1920
Railway-crossing	D. C. Pierce	255,811	Apr. 4	73	19, 20	21	963
Railway-crossing. Automatic	D. Lee, Jr	256,437	Apr. 11	686	241	21	1104
Railway-crossings. Frog or block for	J. Reed	254,693	Mar. 7	298	78	21	669
Railway-crossings. Signaling apparatus for	J. H. Hayes	257,563	May 9	540	156	21	1384
Railway-curves. Rail for	L. Brigham	254,793	Mar. 14	427	115	21	718
Railway danger-signal apparatus	G. A. Asturias	251,812	Jan. 3	156	43	21	29
Railway. Electric	C. H. Rudd	259,569	June 13	886	236	21	1857
Railway. Electrical	E. H. Cowles	252,193	Jan. 10	619	175	21	113
Railway. Elevated	A. P. Ingerson	258,302	May 23	1437	407	21	1561
Railway. Elevated	L. E. Mansfield and M. D. Moore	257,034	Apr. 25	1578	441	21	1947
Railway-frog	T. Breen	253,177	Feb. 7	7	2, 3	21	347
Railway-frog	W. M. Eccles and J. C. O'Melveney	258,789	May 30	1954	558	21	1689
Railway-frog	J. Staples	258,250	May 23	1389	392	21	1563
Railway-frog safety attachment	E. S. Eveleigh	256,135	Apr. 11	485	122	21	1038
Railway-joint and manner of working the same	H. Whitehead and T. Dodd	254,699	Feb. 21	1163	307 / 308	21	551
Railway. Portable	G. W. Thomas	257,410	May 2	320	91	21	1336
Railway-rail	W. W. Dawley	256,085	Apr. 25	1581	437	21	1210
Railway-rail. Compound	D. D. Weisell	260,263	June 27	1749	473	21	2019
Railway-rail joint	J. M. Adams	255,905	Apr. 4	189	49	21	982
Railway-rail joint	W. J. Stevens	259,234	June 6	437	116	21	1770
Railway-rails. Clamp for holding	W. J. Morden	256,088	Apr. 4	227	60	21	1006
Railway-rails. Roll for longitudinally slitting	J. Holub	260,096	June 27	1553	417	21	1981
Railway rolling stock	G. Thomas	258,504	May 23	1668	472 / 473	21	1601
Railway safety device	J. Gogarty	252,308	Jan. 17	836	233	21	155
Railway safety-signal	P. C. Houck	253,343	Feb. 7	199	55	21	378
Railway-semaphore	W. Zimmerman	254,486	Feb. 28	1499	411	21	623
Railway-signal	W. W. Gary	257,619	May 9	833	232	21	1426
Railway-signal	H. Morris	255,901	Mar. 14	695	188	21	765
Railway-signal. Automatic	W. W. Gary	257,933	May 16	974	272	21	1470
Railway-signal. Electric	H. Lebiane and E. V. A. Loiseau	258,367	Jan. 17	968	239	21	159
Railway-signal. Electric	C. J. Means	257,233	May 2	106	31	21	1329
Railway-signal. Electric	T. A. B. Putnam	258,660	May 30	1762	506	21	1633
Railway-signal. Electric	C. D. Tisdale	258,845	Jan. 17	1058	298	21	189
Railway-signal. Magneto-electric	J. B. and O. B. Johnson	259,547	June 13	841	228 / 229	21	2040
Railway-signals. Apparatus for operating	H. Johnson	259,985	June 20	1241	333	21	1924
Railway-signals. Magneto-generator for	W. W. Gary	258,742	May 30	1971	556	21	1682
Railway-signaling apparatus	W. H. Bechtel	256,986	Apr. 11	668	180 / 181	21	1059
Railway signaling apparatus	E. Gscnde	259,385	June 13	835	168	21	1819
Railway-signaling apparatus	F. L. Pope	253,702	Feb. 14	698	199	21	476
Railway-spike	H. Greer	258,053	May 16	1116	311	21	1496

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Railway-spike	J. H. Morgan	252,892	Jan. 31	1470	411	21	274
Railway-switch	J. B. Carey	254,707	Mar. 14	431	116	21	719
Railway-switch	W. P. Dodson	257,299	May 2	180	51, 52	21	1313
Railway-switch	W. P. Dodson	259,001	June 6	161	44	21	1792
Railway-switch	N. Eaton	253,271	Feb. 7	106	32	21	364
Railway-switch	T. H. Fennell	252,234	Jan. 31	1323	425	21	263
Railway-switch	J. Gray and W. Hollenback	256,796	Apr. 18	1293	364	21	1191
Railway-switch	A. Harley	254,008	Feb. 21	1011	283	21	534
Railway-switch	J. H. Hortman	257,606	Apr. 25	1544	433	21	1942
Railway-switch	M. Marshall and H. J. McDevitt	258,090	May 16	1157	324	21	1504
Railway-switch	A. E. McDonald	252,684	Jan. 24	1210	339	21	294
Railway-switch	P. Nolan	253,749	Feb. 14	662	195	21	473
Railway-switch	O. A. Reynolds and J. A. Shepherdson.	256,856	Apr. 25	1370	386	21	1912
Railway-switch	F. S. Scheffler	256,482	May 23	1643	465	21	1507
Railway-switch	J. H. Walt	253,792	Feb. 14	740	212	21	483
Railway switch and signal locking apparatus	C. H. Jackson	255,908	Apr. 4	308	81	21	1001
Railway-switch. Safety	P. G. Hanson	254,870	Mar. 14	521	139	21	734
Railway switch-stand	J. H. Greenwood and W. H. Cowell	253,861	Feb. 21	830	235	21	505
Railway switch. Street	R. H. Ricker	254,379	Feb. 28	1446	396	21	616
Railway-switches, &c. Electric safety appliance for	T. A. B. Putnam	258,601	May 30	1793	507	21	1632
Railway-switches. Mechaniam for operating	C. C. Williams	251,963	Jan. 3	358	97	21	68
Railway-tie	J. Clark	256,199	Apr. 11	575	157	21	1053
Railway-tie	J. Conley	254,902	Mar. 14	436	117	21	719
Railway-tie	C. F. Herbst	252,361	Feb. 7	229	65	21	365
Railway-tie	P. Pendleton	255,302	Mar. 21	1202	328	21	859
Railway-tie and fastening. Metallic	H. De Zavala	257,437	May 2	352	99	21	1344
Railway-tie and fastening. Metallic	F. A. Williams	255,554	Mar. 28	1399	378	21	899
Railway-tie. Metallic	J. Clark	259,095	June 6	278	74	21	1742
Railway time and speed pre-indicator	J. E. Wells	258,968	May 23	1398	396	21	1555
Railway time-indicator	J. S. Scheidell	258,484	May 23	1646	465	21	1508
Railway time-signal	W. V. Wilson	259,961	June 20	1359	{366 367}	21	1943
Railway time-table	R. Alexander	257,836	May 16	851	241	21	1451
Railway-tracks. Machinery for laying	D. S. Moore	252,960	Jan. 31	1556	{433 434}	21	289
Railway-trains. Apparatus for producing signals and lights upon	E. T. Starr	253,442	Feb. 7	307	86, 87	21	366
Railway-trains. Electrical connection for	J. B. Low	258,659	May 30	2095	591	21	1685
Railway-vehicle	A. Estrade	253,592	Feb. 14	490	{139 140}	21	441
Railways. Apparatus for covering slots in cable	C. S. Drake	258,564	May 30	1746	494	21	1623
Railways. Attachment for wire-rope	C. S. Drake	258,563	May 30	1745	494	21	1623
Railways. Clearing slots of wire-rope	J. Powers	255,191	Mar. 21	945	252	21	815
Rake: *See* Hand-rake. Hay-rake. Harvester-rake.							
Rake	O. Bergstrom	254,583	Mar. 7	180	45	21	669
Rake and tedder. Combined	R. J. Colvin	251,835	Jan. 3	189	53, 54	21	34
Rakes. Teeth-cleaning attachment for garden	C. D. Miller and G. L. Eason	253,307	Feb. 7	144	42	21	377
Range	J. H. Codding	256,885	Apr. 25	1400	394	21	1218
Range boiler. Kitchen	T. Hepe	254,973	Mar. 14	650	179	21	759
Range. Cooking	W. E. Prall	252,057	Jan. 10	466	{128 129}	21	88
Range-grate	J. Martino	250,183	June 6	379	100	21	1760
Ranges. Elevated oven for	J. J. H. Schlag, T. J. Graff, and J. F. McKee.	253,631	Feb. 14	532	153	21	447
Rat-trap	H. Younger	253,470	Feb. 7	330	94	21	403
Ratchet-and-pawl device	J. S. O'Brien	252,993	Jan. 31	1558	434	21	289
Ratchet-motor. Friction	A. Lee	255,309	Mar. 21	1199	321	21	859
Ratchet-pawl for power-converters	H. Croft, Jr.	256,465	Apr. 18	911	255	21	1195
Ratchet-wrench	J. W. Womelsdorff	252,300	Jan. 10	757	210	21	135
Razor-strop	H. B. Emerson	252,199	Jan. 10	627	177	21	114
Razor-strop	J. Lamont. (Reissue)	10,029	Feb. 7	366	101	21	408
Razor-strop	C. H. Wilcox	256,937	Apr. 25	1464	411	21	1228
Razor-strop	J. R. Torrey	258,959	June 6	111	29	21	1714
Razor-strop. Double	G. W. Dudley	258,390	May 23	1537	436	21	1579
Reamer	A. Saunders	252,903	Jan. 31	1487	415	21	277
Reamer	F. J. Hazard	253,477	Feb. 7	348	97	21	405
Reaper and mower	H. E. Trumble and F. A. Ketchum	256,933	Apr. 25	1456	409	21	1227
Reaper guard. Extension	R. A. Kelly	259,316	June 13	550	144	21	1796
Reapers and mowers. Life-guard for	T. Taylor	259,602	June 13	904	241	21	1800
Reaping and mowing machine cutter-bar	J. Harris	252,764	Jan. 24	1294	364	21	238
Reaping-machine	W. K. Miller	252,494	Jan. 17	998	{277 278}	21	161
Reaping-machine	L. B. Greer	252,579	Jan. 17	1089	{303 304}	21	197
Reciprocating engine	M. S. Allen	255,908	Apr. 4	191	50	21	968
Reclining-chair	G. Chelini	256,793	Apr. 18	1296	362	21	1190
Reclining-chair	G. F. Holt	254,133	Feb. 28	1168	327	21	569
Reclining-chair. Ajustable	J. F. Warner	256,773	Apr. 18	1261	{355 356}	21	1186
Reclining-chair. Folding	A. B. Upham	253,899	Feb. 21	876	247	21	513
Recorder: *See* Continuous recorder. Steam-engine recorder.							
Recording-gage	E. A. Thissell	253,786	Feb. 14	734	210	21	482
Reel: *See* Bolting-reel. Clasp-reel. Clothes-reel. Fishing-reel. Fisherman's reel. Harvester-reel. Measuring-reel. Measuring-line reel.							
Reel-lock	L. A. Kiefer	254,025	Feb. 21	1041	289	21	530
Reflector	C. W. Jenks	258,659	May 30	1859	{594 595}	21	1644

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Reflector	W. Wheeler	254,578	Mar. 7	184	46	21	668
Reflector and its support. Electric-light	W. Wheeler	254,583	Mar. 7	93	23	21	654
Reflector for electric lamps. Adjustable	J. R. F. Kelly	255,514	Mar. 28	1355	365	21	891
Reflectors. Supporter for electric-light	W. Wheeler	254,582	Mar. 7	92	23	21	654
Refrigerating and preserving meat, &c	E. N. Dickerson, Jr	256,260	Apr. 11	703	.....	21	1075
Refrigerating apparatus	C. G. Mayer	256,370	Apr. 11	761	.....	21	1096
Refrigerating apparatus	A. D. Puffer	254,370	Feb. 28	1433	382	21	613
Refrigerating apparatus	J. T. Reed	252,682	Jan. 24	1137	319	21	211
Refrigerating apparatus	T. and C. E. Davis	256,650	Apr. 18	1191	315	21	1140
Refrigerating apparatus. Apparatus for utilizing waste heat in ammonia	E. Hill	252,786	Jan. 24	1297	364	21	239
Refrigerating apparatus. Dynamic dry-air	C. P. Jackson	251,659	Jan. 31	1478	444	21	308
Refrigerating-bedstead	P. Kearins	256,795	May 30	1986	563	21	1668
Refrigerating bottle-safe	J. W. Kepler	259,401	June 13	655	173	21	1816
Refrigerating-building	F. M. McMillan and H. C. Johnson.	257,505	May 9	445	124	21	1367
Refrigerating buildings, cars, vessels, &c	J. R. McCall	259,689	June 20	1042	277	21	1890
Refrigerating butter-safe	J. Hedley, Sr	256,566	Apr. 18	1084	289	21	1144
Refrigerating-can	T. S. Very	252,553	Jan. 17	1064	286	21	198
Refrigerating. Method of and apparatus for	W. M. Mixer	253,488	Feb. 7	355	99	21	406
Refrigerating or ice-making machinery. Flange-union for	H. A. Roberts	256,659	Apr. 4	364	99	21	1041
Refrigerating-room	F. M. McMillan and H. C. Johnson	257,506	May 9	446	{124 125}	21	1367
Refrigeration for cooling cars, ships, buildings, &c. System of	C. Boss	253,836	Feb. 21	799	227	21	509
Refrigerator	J. Castell	255,142	Mar. 21	880	236	21	804
Refrigerator	H. C. Goodell	252,097	Jan. 10	511	148	21	95
Refrigerator	G. J. Harrer	258,758	May 30	1983	{529 530}	21	1664
Refrigerator	G. C. Hodgdon	251,861	Jan. 3	344	96	21	44
Refrigerator	G. H. Hurd	254,976	Mar. 14	685	180	21	760
Refrigerator	P. L. Maibie	259,028	June 6	196	52	21	1736
Refrigerator	J. McMurtry	252,613	Jan. 24	1195	{315 316}	21	210
Refrigerator	R. A. Masservey	257,361	May 2	289	73	21	1302
Refrigerator	A. D. Puffer	255,455	Mar. 28	1361	346	21	879
Refrigerator	A. D. Puffer	255,456	Mar. 28	1363	346	21	879
Refrigerator	F. S. Eastman	257,216	May 2	75	23, 24	21	1295
Refrigerator-car	H. McCray	253,333	Feb. 21	867	228	21	530
Refrigerator-car	C. F. Pierce	257,630	May 9	944	235	21	1438
Refrigerator-car	R. A. Masservey	256,623	Apr. 4	334	89	21	1036
Refrigerator cooled by ammonia, &c	G. F. Holmes	255,299	Mar. 21	1073	266	21	837
Refrigerator drip-pan	S. F. Cosco	254,498	Feb. 28	1501	411	21	695
Refrigerator. Sick-room	W. Swindell	259,909	Jan. 31	1404	417	21	278
Regenerative furnace							
Register: *See* Check-register. Fare-register. Flue-register. Grain-register. Gun-register. Hot and cold air register. Mill-packer register. Telephone call-register. Watchman's electric register.							
Register and ottoman. Combined	J. A. and A. L. Graham and E. C. Ransch.	254,867	Mar. 14	517	138	21	733
Register-evaporator	J. F. Meyer	254,493	Mar. 7	60	15	21	648
Regulator: *See* Blowing-engine regulator. Damper-regulator. Draft-regulator. Electric-light regulator. Feed-water regulator. Gas-regulator. Gas-exhaust regulator. Grinding-mill feed-regulator. Lamp-regulator. Pressure-regulator. Sewing-machine take-up regulator. Tank and reservoir regulator. Watch-regulator. Windmill-regulator.							
Reheating-furnace	J. F. Duffy	253,916	Feb. 21	895	251	21	516
Rein. Driving	A. T. Peirce	253,553	Feb. 14	459	128	21	434
Rein-holder	C. M. Grannis and J. L. Thomson	254,545	Mar. 7	116	30	21	656
Rein-holder	J. Murphy	260,041	June 27	1476	398	21	1970
Rein-holder	L. Pentz	259,333	June 13	573	151	21	1809
Rein-holder	R. E. Shannon	258,679	May 30	1896	{535 536}	21	1649
Rein-holder	J. C. W. Stout	259,589	June 13	899	240	21	1859
Rein holder or buttons. Driving	S. A. Marker	256,714	Apr. 18	1268	337	21	1175
Rein hook. Check	C. M. Reynolds	254,377	Feb. 28	1445	395	21	615
Rein-protector	C. Parker	251,926	Jan. 3	339	88	21	58
Rein-spread and attachment. Check	D. Schoonmaker. (Reissue)	10,110	May 9	657	230	21	1441
Relay and sounder	C. G. Burke	252,927	Jan. 31	1515	{431 432}	21	981
Relay and sounder	C. G. Burke	256,627	Apr. 11	850	236	21	1101
Rendering and bleaching animal-fats. Method of and apparatus for	G. Cosine	254,279	Feb. 28	1233	366	21	596
Rendering apparatus	G. Bayha	254,168	Feb. 28	1131	317	21	563
Rendering apparatus	R. Whelan	260,366	June 27	1755	474	21	2012
Reservoir. Automatic storage pressure	R. R. Coggin	256,291	Apr. 11	696	189	21	1074
Reservoir. Portable distributing	D. R. Miller	252,690	Jan. 24	1215	340	21	225
Retort-furnace	W. A. Stedman and I. N. Stanley	257,501	May 16	936	261	21	1494
Retort-furnace. Spelter	D. W. Jaseon	256,105	Apr. 4	430	118	21	1023
Reversible seat	R. B. Bridgman	253,437	Feb. 21	860	227	21	501
Rice-hulling machine	S. B. Denney	256,653	Apr. 18	1125	316	21	1160
Rice, &c. Machine for cleaning and scouring	D. L. Shoemaker	255,343	Mar. 21	1142	307	21	849
Rice, &c. Machine for polishing	H. B. Stevens	257,495	May 9	313	89	21	1337
Rifle. Amalgamating and concentrating	G. R. Evans	256,555	Apr. 18	1014	286	21	1142
Rifle-barrel. Auxiliary	R. Morris	258,941	Jan. 10	669	193	21	193

Ring: *See* Bridle-ring. Ear-ring. Finger-ring. Finger and scarf ring. Game-ring. Hog-nose ring. Hog-ring. Spinning-ring.							
Rivet	E. L. Babcock	253,494	Feb. 14	366	106	21	434
Rivet for belts, &c	S. A. Marker	251,786	Jan. 3	123	35	21	93
Rivets. Manufacture of tubular	M. N. Bray	256,117	Apr. 11	462	125	21	1034
Riveting-machine	R. Kent	257,589	May 9	571	160	21	1367
Roach-trap	M. Cohen	254,860	Mar. 14	434	116	21	719
Road-engine	H. H. Bridenthal	252,720	Jan. 24	1942	{348 {349	21	330
Road-engines. Compensating-gear for	F. F. Landis	252,044	Jan. 10	451	{123 {124	21	85
Roaster: *See* Coffee-roaster. Coffee and nut roaster. Coffee and peanut roaster. Meat-roaster.							
Roasting or renovating furnace	J. Campbell	255,592	Mar. 28	1453	{390 {391	21	909
Robe-lock for vehicles	H. C. McFarland	257,892	May 16	913	256	21	1460
Rock and ore crusher	J. Tayler	251,909	Jan. 3	340	92	21	59
Rock-boring machine. Rotary diamond	J. B. Johnson	259,281	June 6	493	129	21	1779
Rock-drill	J. F. Allen	252,920	Jan. 31	1507	419	21	980
Rock-drill	E. A. Armstrong	256,623	May 30	1821	{514 {515	21	1636
Rock-drill	W. J. Barber	255,937	Mar. 21	1004	268	21	825
Rock-drill	J. L. McClughen	258,094	May 16	1163	326	21	1505
Rock-drill	A. J. Mershon	251,723	Jan. 3	42	12	21	19
Rock-drill	J. Perdue	259,278	June 6	487	127	21	1779
Rock-drill	W. H. Silsby	256,749	Apr. 18	1239	348	21	1161
Rock-drill	T. H. Stoner	259,779	June 20	1147	304	21	1907
Rock-drill. Hand	E. Moreau	257,739	May 9	748	208	21	1419
Rock-drill. Machine hand	E. Moreau	258,100	May 16	1171	328	21	1506
Rock-drill rest. Adjustable	W. T. Browne	256,540	Apr. 18	997	281	21	1140
Rock-drill. Steam	W. T. Bell	256,974	June 6	127	34	21	1716
Rock-drill. Steam	G. M. Githens	257,938	May 16	982	274	21	1471
Rock-drills. Core lifter and guide for annular	S. W. Douglass	254,939	Mar. 14	616	166	21	751
Rock-drills. Core-lifter for annular	G. F. Case	255,719	Mar. 28	1605	434	21	936
Rock-drills. Device for clearing cylindrical	A. Ball	256,790	Apr. 18	1261	361	21	1181
Rock-drills. Hoisting apparatus for steam	M. C. Bullock	258,985	June 6	139	37, 38	21	1718
Rock-drilling machine	A. Shedlock	254,393	Feb. 28	1459	{399 {400	21	618
Rocking-chair	H. Dryfoos, S. and R. Strauss	255,104	Mar. 21	837	223	21	797
Rocking-chair	W. H. Haman	252,031	Jan. 10	436	119	21	82
Rocking-chair. Base	L. Heywood	257,221	May 2	86	25	21	1206
Rocking-chair. Base	W. and R. McCabe	258,239	May 23	1363	385	21	1549
Rocking-chair. Folding and reclining	W. W. and J. Y. Johnson	251,783	Jan. 3	117	33	21	22
Rocking-horse	C. Shepardson	256,390	Apr. 11	808	222	21	1004
Rod: *See* Connecting-rod. Cross-section rod. Fishing-rod. Stair-rod.							
Roller: *See* Curtain-roller. Field-roller. Gate-roller. Ground-roller. Land and lawn roller. Loom-temple roller. Saw-mill log-roller. Shade-roller.							
Roller for moving houses	J. C. Welsch	252,922	Jan. 10	733	205	21	131
Roller, harrow, and cultivator. Combined	G. M. Heim	258,418	May 23	1567	445	21	1584
Roller-mill	J. R. Davis, Jr.	258,027	May 16	1067	302	21	1491
Roller-mill	C. Gates	252,755	Jan. 24	1284	{361 {362	21	836
Roller-mill	N. W. Holt	252,945	Jan. 31	1533	426	21	925
Roller-mill	N. W. Holt	255,859	Apr. 4	126	34	21	972
Roller-mill	N. W. Holt	255,860	Apr. 4	126	34	21	972
Roller-mill	N. W. Holt	255,969	Apr. 4	286	78	21	1000
Roller-mill	N. W. Holt	259,858	June 20	1235	331	21	1923
Roller-mill	U. H. Odell. (Reissue)	10,139	June 20	1416	381	21	1953
Roller-mill	U. H. Odell	260,283	June 27	1707	468	21	2005
Roller-mill	H. N. Pomeroy	254,043	Feb. 21	1061	295	21	543
Roller-mill	J. Weber	253,339	Feb. 7	177	50, 51	21	376
Roller-mill	I. Wescott and J. S. Karns	258,838	May 30	2086	{583 {584	21	1660
Roller-mill feed mechanism	C. B. Campbell	256,678	Apr. 25	1302	391	21	1216
Rolling finger-rings. Mechanism for	C. R. Smith	253,950	Feb. 21	944	263	21	583
Rolling machine. Sheet-metal	A. J. Demmler	256,658	Apr. 18	1123	{315 {316	21	1160
Rolling metal bars	L. Miller and F. Bishop	256,564	Apr. 18	1039	294	21	1146
Rolling metals. Roll for	F. Holub	252,464	Jan. 17	964	267	21	175
Rolling-mill	W. E. Harris	252,460	Jan. 17	955	{264 {265	21	174
Rolling-mill	J. T. Hastings	260,196	June 27	1669	453	21	1909
Rolling-mill	J. Ostrander	253,734	Feb. 14	667	197	21	474
Rolling-mill	J. F. Sandberg	252,323	Jan. 17	1087	{305 {307	21	187
Rolling-mill	C. B. Sill	260,246	June 27	1731	466	21	2009
Rolling-mill	J. Thomas	252,911	Jan. 31	1496	417	21	978
Rolling-mill	W. Wenstrom	254,745	Mar. 7	359	95	21	630
Rolling-mill for rolling wire and rods	A. Hughes	252,467	Jan. 17	966	{266 {269	21	176
Rolling-mill for tapering spring-points	W. Evans	255,958	Apr. 4	260	67	21	963
Rolling-mill. Iron	C. Forster and B. Weaver	253,395	Feb. 14	493	{140 {141	21	441

Rotary engine	H. W. Potter	254,044	Feb. 21	1062	296	21	543
Rotary engine	A. W. Von Schmidt	256,178	Apr. 11	539	{147 {148	21	1046
Rotary engine	L. J. Wing	259,984	June 20	1367	{368 {369	21	1945
Rotary engine	L. J. Wing	259,985	June 20	1372	{369 {370 {371	21	1946
Rotary engine	L. J. Wing	259,986	June 20	1379	371	21	1947
Rotary engine	L. J. Wing	259,987	June 20	1380	371	21	1947
Rotary engine. Orbital	D. D. Hardy	256,534	May 23	1707	492	21	1609
Rotary screen for stone, &c	W. C. Oastler	255,295	Mar. 21	1119	308	21	845
Rotary steam-engine	E. W. Ellsworth	256,738	May 30	1878	554	21	1689
Rotary steam-engine	P. T. Hydne and A. Larson	252,773	Jan. 24	1306	366	21	240
Rotary steam-engine	G. W. Wade and J. M. Wardell	254,737	Mar. 7	348	98	21	627
Rotary steam-engine	A. O. Tower	255,127	Mar. 21	890	231	21	801
Rotary study-table or book-case	T. Fearon	255,985	Mar. 21	1037	278	21	831
Row-boats. Sliding seat for	L. A. Cook	259,420	Jan. 17	983	255	21	160
Rowing-gear	C. Poppenhusen	256,043	Apr. 4	354	.....	21	1010
Rubber and other vulcanizable gums. Molding articles of india-	H. W. Burr	255,130	Mar. 21	877	235	21	804
Rubber-coated fabrics. Curing	W. Garrity and N. Avery	251,866	Jan. 3	294	.....	21	40
Rubber. Coating metallic articles with vulcanized	C. Conner	256,081	May 16	1069	.....	21	1490
Rubber compound	C. Adams	257,638	May 9	617	173	21	1396
Rubber-cutting machine	H. T. Cushman	254,982	Mar. 7	213	55	21	674
Rubber for erasive purposes. Preparing vulcanized	J. J. C. Smith	254,716	Mar. 7	383	82, 88	21	695
Rubber, &c. Manufacture of articles of india-	E. Nelson	254,498	Mar. 7	63	16	21	640
Rubber-molds. Apparatus for filling	F. Richardson	259,721	June 20	1073	265	21	1895
Rubber to metal. Securing	S. Grescen	260,088	June 27	1451	.....	21	1988
Rubber to metals. Attaching	W. Beukler	255,916	Apr. 4	260	58, 53	21	984
Rulling-machine	E. W. Blackhall	255,578	Mar. 28	1423	383	21	909
Ruling-machine	S. A. Grant	258,642	May 30	1844	520	21	1641
Ruling-machine	D. Buckler and W. Keyes	252,989	Jan. 31	1685	445	21	997
Running-gear	C. U. Yates and P. Dugener	255,830	Apr. 4	95	.....	21	967
Saccharine juices. Treatment of	C. F. Mansur	256,484	May 23	1613	456	21	1593
Saccharine liquids. Self-regulating feeder for	J. M. Edmunds	256,657	Apr. 18	1130	317	21	1161
Sad iron	A. L. F. Mitchell and W. F. Dame	255,733	Mar. 28	1629	449	21	940
Sad-iron	T. C. Mullaix	257,267	May 9	592	78	21	1359
Sad-iron	W. Hilton	259,149	June 6	537	99	21	1733
Sad-iron	I. I. Bush	253,973	Feb. 21	974	271	21	588
Sad-iron and fluter. Combined	G. H. Carpenter	253,975	Feb. 21	977	272	21	589
Saddle-bags. Medical	W. H. Coolidge	258,982	June 6	34	8	21	1709
Saddle. Gig	A. Ortmayer. (Reissue)	10,095	Mar. 7	412	110	21	708
Saddle. Gig	G. E. and C. C. Bender	259,783	June 20	1163	310	21	1910
Saddle. Harness	P. J. Vehlen	255,918	Mar. 21	982	263	21	881
Saddle. Harness	L. Dare	253,694	Feb. 14	509	169	21	458
Saddle loop. Harness	F. A. Hake	258,748	May 30	1979	558	21	1664
Saddle-pad	J. Bassler	257,273	May 2	153	43	21	1308
Saddle. Riding	L. A. Reister	255,334	Mar. 21	1133	304	21	847
Saddle. Side	M. Sedlacek	253,114	Jan. 31	1755	467	21	1009
Saddle-tree	N. Tena	256,514	Apr. 18	970	272	21	1125
Saddle-tree	E. P. Waters	260,262	June 27	1748	472	21	2011
Saddle-tree and pad. Harness	W. M. Mann	253,401	Feb. 7	254	73	21	389
Saddle-trees. Girth attachment for

Safe	D. W. Smith	257,094	Apr. 25	1638	459	21	1259
Safe	R. W. Tees	253,129	Jan. 31	1772	492	21	393
Safe. Burglar-proof	G. L. Damon	252,435	Jan. 17	926	255 256	21	169
Safe. Fire and burglar proof	H. Gross	258,577	May 30	1762	498 499	21	1626
Safe for preserving fruit and vegetables	G. A. Cochrane	258,020	May 16	1079	300	21	1489
Safe. Kitchen	R. B. Ayres	254,449	Mar. 7	3	1	21	639
Safe. Marine	A. D. Roth	260,395	June 27	1885	494	21	2024
Safe. Provision	R. R. Sykes	258,397	May 23	1468	415 416	21	1506
Safe. Sectional kitchen	C. Kade	256,328	Apr. 11	739	202	21	1069
Safe, &c. Suspended	S. Mason	255,179	Mar. 21	929	248	21	812
Safety-elevator for hatchways	J. B. Atwater	258,211	May 23	1398	375 376	21	1542
Safety-pin	W. F. Hyatt	255,393	Mar. 21	1075	289	21	837
Safety-pin	J. Jenkins	254,657	Mar. 7	259	67	21	662
Safety-pin	E. L. Paine	254,837	Mar. 14	484	129	21	727
Safety-pin	H. M. Paine	256,917	Apr. 25	1438	404	21	1234
Safety-pin	E. Williams	254,445	Feb. 28	1521	416	21	630
Safety-pin catch	S. Moore	256,799	May 30	9098	573	21	1671
Safety-pin guard	J. Jenkins	254,656	Mar. 7	960	67	21	662
Sail-hank	T. Haggerty	253,598	Feb. 14	421	117	21	430
Sail-traveler	J. Rand	259,309	June 6	407	108	21	1789
Sails. Reefing	W. N. Griswold	253,371	Feb. 7	218	62	21	383
Salt-evaporator	S. Dobbs	255,075	Mar. 14	798	214	21	783
Salt-grainer	H. N. Hewlett	259,539	June 13	830	219	21	1847
Salt. Making	J. M. Laing	254,839	Mar. 14	475	127 128	21	736
Salt. Process of and apparatus for manufacturing	O. L. F. Browne	254,916	Mar. 14	569	158	21	747
Salve	J. Mayer	256,847	Apr. 25	1358	.....	21	1210
Sample-displaying lid	W. H., T. F., and J. B. Wheelor, and C. M. Slack.	255,063	Mar. 14	785	210	21	780
Sample-exhibiting case	J. C. Scott	258,814	May 30	2045	578	21	1675
Sample-fastener for packages	W. R. Perry	254,840	Mar. 14	486	130	21	727
Sand-band	F. S. Rolfe and W. Cooley	259,924	June 20	1311	351	21	1935
Sand-bars in rivers, cutting channels in harbors, &c. Apparatus for removing	J. H. Huffer	260,200	June 27	1673	454	21	2000
Sandpapering wheel rims or fellies and other articles. Machine for	G. A. Brown and B. Holt	258,553	May 30	1733	490 491	21	1621
Sap-feeding apparatus. Automatic	M. C. Barden	255,565	Mar. 28	1412	381	21	901
Sash-balance	T. H. Bonham	257,142	Apr. 25	1703	477	21	1271
Sash-balance	F. B. Cochran	255,721	Mar. 28	1607	434	21	937
Sash-balance	J. A. Quick	251,943	Jan. 3	313	84	21	54
Sash-cord fastener	C. Bush	260,161	June 27	1694	439	21	1992
Sash-fastener	E. B. Attwell	260,271	June 27	1759	476	21	2013
Sash-fastener	F. E. Bailey	257,145	May 2	2	2	21	1281
Sash-fastener	J. A. Curtin	258,026	May 16	1066	302	21	1490
Sash-fastener	J. E. Howard	253,534	Feb. 14	429	120	21	431
Sash-fastener	A. Johnson	256,144	Apr. 11	496	135	21	1040
Sash-fastener	E. Kempshall	257,722	May 9	731	204	21	1417
Sash-fastener	D. P. Morrell	257,048	Apr. 25	1565	445	21	1250
Sash-fastener	E. S. Morton	255,003	Mar. 14	700	189	21	768
Sash-fastener	T. Orton	254,239	Feb. 28	1220	355	21	598
Sash-fastener	A. Quimby	252,138	Jan. 10	561	158	21	103
Sash-fastener	H. L. Robertson	255,194	Mar. 21	948	253	21	816
Sash-fastener	H. P. Tyler and J. B. Atwood	253,563	Feb. 14	458	131	21	435
Sash-fastener	H. Greenfield	255,282	Mar. 21	1055	283	21	834
Sash fastener and holder	J. B. Montague	251,915	Jan. 3	286	78	21	50
Sash fastener and holder	J. B. Montague, J. T. Booker, and E. C. Dinning	251,916	Jan. 3	287	78	21	50
Sash-holder	J. Campbell and G Simonson	256,637	Apr. 18	1106	311	21	1157
Sash-holder	F. W. Quitman	257,382	May 2	281	81	21	1338
Sash-holder	J. V. Risk	255,025	Mar. 14	727	196	21	771
Sash-holder	J. G. Slater	254,510	Mar. 7	76	20	21	651
Sash-holder	H. A. Stone	258,611	May 30	1808	511	21	1634
Sash holder and fastener. Combined	A. J. Davis	258,866	June 6	38	10	21	1701
Sash-holder and frame	C. Loewenstein	260,213	June 27	1693	457	21	2003
Sash holder and tightener	C. A. Judd	252,472	Jan. 17	972	271	21	177
Sash-weight	C. W. Levalley	259,560	June 13	835	226	21	1852
Sash-weights. Core for	P. H. Griffin	254,126	Feb. 28	1150	324	21	566
Sash. Window	J. F. Cox	256,644	Apr. 18	1115	313	21	1159
Saucepan-handle	C. Ezard	258,733	May 30	1900	554	21	1661
Saucer for mugs	F. L. Weber	252,406	Jan. 17	888	246	21	163
Saw. Back	J. R. Woodrough	252,371	Jan. 17	1068	301	21	198
Saw. Compass	C. Bush	252,179	Jan. 10	609	171	21	111
Saw. Crosscut	E. M. Boynton	253,671	Feb. 14	563	165	21	455
Saw. Drag	R. R. Earnest	256,499	Apr. 18	917	257	21	1128
Saw. Drag	T. Lowden	259,879	June 20	1900	337	21	1927
Saw. Drag	G. A. Moffat	260,218	June 27	1699	459	21	2004
Saw. Drag	J. F. Scherer	258,928	June 20	1315	352	21	1936
Saw-filing machine	T. Muncaster	258,380	Apr. 11	777	213 214	21	1068
Saw-filing machine	F. Myers	255,007	Mar. 14	705	190	21	768
Saw-filing machine	W. H. Shutte	251,950	Jan. 3	328	90	21	57
Saw-filing machine. Gin	E. W. South	254,400	Feb. 28	1470	402	21	620
Saw frame. Buck	F. L. Hemmer	257,701	May 9	716	196	21	1413
Saw guard. Circular	J. Sill	252,369	Jan. 10	717	202	21	129
Saw-guide	J. P. Hall	254,212	Feb. 28	1256	348	21	583
Saw-guide	W. E. Hill	257,704	May 9	712	197	21	1413
Saw guide. Band	W. Bowker	259,661	June 20	967	263	21	1861
Saw. Hand	J. R. Woodrough	252,370	Jan. 17	1060	301	21	195
Saw. Hand	J. R. Woodrough	257,802	May 9	817	228	21	1433

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Saw-handle	E. Andrews. (Reissue)	10,135	June 13	978	261	21	1872
Saw-handle	W. Clemson	257,657	May 9	645	181	21	1408
Saw-handle	W. Clemson	257,926	May 16	980	268	21	1480
Saw-handle	C. W. Robinson	257,978	May 16	1036	286	21	1480
Saw-handle	W. McNiece	256,483	Apr. 18	950	265	21	1131
Saw-handle clamp	M. Covel	257,312	May 2	72	21	21	1294
Saw jointer and gage	A. Long	256,011	Apr. 4	282	84	21	1004
Saw jointer. Circular	M. Covel	259,373	June 13	819	164	21	1880
Saw-jointing and swaging device	H. Ferguson	252,089	Jan. 10	536	146	21	94
Saw-jointing device	E. Preston	253,555	Feb. 14	452	129	21	434
Saw-jointing device	E. Holderman	256,755	May 30	1985	560	21	1665
Saw-jointing machine	G. G. Seeger	256,601	Apr. 18	1060	289	21	1149
Saw machine. Drag	C. J. L. Meyer	252,988	Jan. 10	715	203	21	139
Saw machine. Rim	J. Campbell	254,110	Feb. 28	1142	319	21	565
Saw mill. Circular	T. L. Carley	258,689	Jan. 24	1215	340	21	225
Saw mill. Circular	J. B. Finch	254,458	Mar. 7	14	4	21	641
Saw-mill dog	F. E. Frey	259,516	June 13	803	211	21	1849
Saw-mill dog	D. Hallman and H. Wadham	258,451	Jan. 17	945	261	21	172
Saw-mill dog	J. Mote	259,144	June 6	331	86	21	1758
Saw-mill dog	T. J. Reasny	258,496	Jan. 17	1001	278	21	188
Saw-mill feed mechanism	D. C. Prescott	257,384	May 2	283	81	21	1338
Saw-mill frame. Gang	J. T. Crush	256,499	Apr. 18	955	267	21	1132
Saw-mill head-block	E. and I. D. Parker	259,102	June 6	286	76	21	1744
Saw-mill head-block	D. Parkhurst	256,157	Apr. 11	509	140	21	1042
Saw-mill head-block	J. W. Stokoe	257,080	Apr. 25	1508	448 449	21	1269
Saw-mill head-block	S. R. Smith and E. Myers	254,513	Mar. 7	78	21	21	651
Saw-mill knees. Device for operating	P. Musser	259,936	June 20	1394	385	21	1936
Saw-mill log-deck	J. Lucia	252,499	Jan. 17	1003	279	21	189
Saw-mill log-roller	D. C. Prescott	254,671	Mar. 7	273	73	21	685
Saw-mill-setting mechanism	J. H. Watson. (Reissue)	257,757	May 9	706	213 214	21	1423
Saw-mills. Feed and gig works for	A. Rodgers	10,140	June 20	1417	382	21	1954
Saw mills. Presser-roller for gang	J. M. Draper	257,979	May 16	1037	286	21	1480
Saw-set	H. H. Hitchcock	254,467	Mar. 7	23	6	21	649
Saw-set	N. J. Webb	256,217	Apr. 11	601	163	21	1057
Saw-set	G. W. Amesbury	253,794	Feb. 14	762	212	21	484
Saw-setting machine	A. W. Broughton	257,901	May 2	61	19	21	1292
Saw sharpening and clamping device	M. Covel. (Reissue)	259,805	June 20	1175	314	21	1912
Saw-sharpening machine	W. H. Halladay	10,099	May 2	369	103 104	21	1347
Saw-sharpening machine	A. P. Gathright and A. W. Potts	254,889	Mar. 14	519	130	21	734
Saw-sharpening machine. Gin	T. S. Wilkin	259,125	June 6	314	83	21	1749
Saw-stretching machine	J. L. Pitts	259,068	June 6	247	66	21	1736
Saw-swage	F. S. Smith	254,715	Mar. 7	322	85	21	693
Saw-swage	J. Connell and V. Dengler	253,513	Feb. 14	405	113	21	427
Saw. Swing	B. G. Luther	255,302	Mar. 21	1069	274	21	240
Saw-table gage. Bevel	R. E. Poindexter	257,631	May 9	645	236	21	1436
Saw teeth. Device for dressing	W. E. Brooke	259,471	June 13	744	196 197	21	1838
Saw-tooth	W. E. Brooke	256,363	May 23	1505	438	21	1573
Saw-tooth. Detachable	J. Kitz	254,142	Feb. 28	1177	330	21	571
Saws. Hanging circular	J. F. Kemp	259,605	Jan. 24	1118	313	21	206
Saws. Machine for brazing band	J. B. Gemin	257,936	May 16	981	274	21	1471
Saws. Planer-tooth for	F. M. Covell	256,464	Apr. 18	919	254 255 262	21	1125
Sawing and grooving shakes. Machine for	G. W. Wilkins	259,737	June 20	1097	305	21	1900
Sawing and outgaging material for barges. Machine for	W. H. Gordon and P. J. Boost	260,019	June 27	1450	391	21	1998
Sawing ellipses. Gage for	S. C. Kennedy	260,209	June 27	1667	456	21	2009
Sawing-machine	L. F. Kettler	252,043	Jan. 10	456	123	21	85
Sawing machine. Band	A. Euston	254,302	Feb. 28	1240	345	21	581
Sawing machine. Circular	W. H. Smith	252,353	Jan. 17	796	222	21	148
Sawing machine. Crosscut	A. J. and J. N. Smith	256,394	May 23	1456	414	21	1565
Sawing machine. Drag	F. McDonough	259,703	June 20	1050	279	21	1691
Sawing-machine. Edger	C. B. Halstead and J. A. Carpenter	251,878	Jan. 3	338	64	21	42
Sawing machine. Log	W. Ford	257,309	May 2	190	54	21	1315
Sawing machine. Scroll	A. Showalter	253,777	Feb. 14	719	205	21	480
Sawing-machine. Scroll and circular	J. Gorman	259,530	June 13	818	216	21	1845
Scaffold-support	J. Gorman	256,998	Apr. 25	1535	431	21	1241
Scaffold-supports. Extension-leg for	W. W. Reynolds	256,502	Apr. 18	958	268	21	1133
Scale	B. C. Mayer	258,789	May 30	2022	571	21	1671
Scale. Automatic	F. D. Payn	254,502	Mar. 7	67	18	21	650
Scale. Automatic weighing	V. M. Fulcher	258,458	Jan. 17	946	261	21	173
Scale-indicator	W. E. Selleck	258,627	Jan. 24	1143	321	21	213
Scale-platform support	J. B. Atwater	253,650	Feb. 14	589	161	21	453
Scale. Weighing	J. Dolph	256,267	May 23	1418	401	21	1558
Scales. Barrel	R. Torres	256,708	Apr. 18	1257	354	21	1185
Scales. Pendulum	W. W. Hopkins	256,692	Apr. 18	1175	330	21	1170
Scales. Platform	F. Casse	259,093	June 6	275	73	21	1743
Scales. Railway weighing	J. P. Haggett	256,892	Apr. 25	1410	397	21	1219
Scales. Weighing	W. W. Wright	256,423	Apr. 11	946	264	21	1100
Scales. Weighing	C. H. Crossette	257,850	May 16	873	245	21	1454
Scarf. Neck	H. Selvage	253,485	Feb. 7	356	100	21	406
Scarf. Neck	F. W. Collins	258,190	Jan. 10	617	174	21	118
Scarfs. Stand for displaying	W. S. Van Hoesen	254,735	Mar. 7	346	98	21	697
Scissors and shears. Corrugated	N. Finck	255,158	Mar. 21	903	249	21	808
Scissors. Manufacture of	G. Cladin	255,254	Mar. 21	1024	275	21	829
Scoop and fork	A. B. Matteon	256,150	Apr. 11	501	137	21	1041
Scoop for grain, sugar, &c	T. J. Blake	255,483	Mar. 28	1319	356	21	884
Scoop. Grain	J. J. Bradner	255,923	Apr. 4	214	55	21	966
Scoop. Grocer's	C. H. Roberts	258,476	May 23	1636	463	21	1586
Scoop. Grocer's	W. C. Luts	259,407	June 13	663	175	21	1817
Scoop or shovel							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Scourer: *See* Grain-scourer.							
Scouring coffee, &c. Machine for	G. W. and G. S. Hungerford	253,054	Jan. 31	1672	463	21	307
Scraper and grader. Road	A. H. Kimball and C. H. Littleton. (Reissue.)	10,068	Apr. 18	1311	369	21	1195
Scraper and grader. Triangular road	A. L. Griffith	256,054	May 16	1117	313	21	1486
Scraper and scoop. Combined road	H. H. Messenger	253,205	Feb. 7	142	41	21	370
Scraper. Dirt	J. Johnson	254,485	Mar. 7	49	13	21	647
Scraper. Drag	J. Cosgrove and S. F. Welch. (Reissue.)	10,090	Apr. 25	1705	478	21	1971
Scraper. Earth	R. W. Chambers	258,373	May 23	1517	431	21	1575
Scraper. Earth	W. Haslup. (Reissue)	10,045	Feb. 28	1562	416	21	630
Scraper. Earth	J. W. Skillen	256,752	Apr. 18	1249	340	21	1169
Scraper. Earth	P. Smith	257,773	May 9	783	216	21	1487
Scraper. Foot	R. B. Hough	259,089	Jan. 24	1198	333	21	201
Scraper. Foot	G. P. Turner	259,734	June 20	1092	290	21	1869
Scraper. Road	W. E. and H. L. Jacobs	254,137	Feb. 28	1171	308	21	570
Scraper. Road	W. Patterson	253,310	Feb. 7	147	43	21	371
Scraper. Road	S. Pennock. (Reissue)	10,083	Jan. 31	1650	509	21	336
Screen: *See* Car-window screen. Rotary screen. Coal-screen. Window-screen.							
Screw	C. D. Rogers	255,459	Mar. 28	1226	347	21	880
Screw	C. D. Rogers	255,816	Apr. 4	76	21	21	964
Screw-cutting die	W. D. Forbes	253,906	Feb. 21	908	279	21	539
Screw-cutting die	J. Sherman	252,080	Jan. 10	471	130	21	89
Screw-cutting die-stocks. Pipe-cutting attachment for	A. H. Jarecki	252,671	Jan. 24	1194	334	21	221
Screw-cutting machine	J. Delker	253,987	Feb. 21	967	275	21	530
Screw-cutting machine	L. W. Stockwell	259,435	June 13	605	164	21	1823
Screw-driver	J. Swan	260,135	June 27	1597	431	21	1968
Screw-driver	C. Thomas	258,339	May 23	1464	416	21	1566
Screw-heads. Machine for grinding or polishing	C. D. Rogers	253,890	Feb. 21	865	244	21	512
Screw. Jack	W. R. Coats and W. H. Vibbard	251,698	Jan. 3	10	5	21	5
Screw. Jack	S. C. Megill	253,617	Feb. 14	516	148	21	445
Screw machine. Metal	H. K. Jones	259,949	Jan. 31	1540	420	21	958
Screw machine. Metal	M. W. Redshaw	259,515	Jan. 17	1018	284	21	165
Screw machine. Wood	A. S. Cook	256,157	Apr. 11	477	130	21	1037
Screw machine. Wood	A. S. Cook	256,546	Apr. 18	1084	283	21	1141
Screw-press	W. D. Carter	252,075	Jan. 10	467	134	21	91
Screw-threading machine	L. W. Stockwell	259,433	June 13	605	184	21	1823
Screw-threads. Machine for cutting	I. S. Schuyler	256,166	Apr. 11	519	143	21	1044
Screw wrench	J. H. and F. L. Coes	252,597	Jan. 24	1112	311	21	207
Screws. Device for molding cast	E. W. Seeger	257,246	May 2	121	34	21	1362
Screws or bolts. Machine for rolling threads of	H. A. Harvey	251,874	Jan. 3	234	65	21	48
Sculpture, statuary, &c. Machine for copying	A. B. Holstein	255,508	Mar. 28	1349	363	21	890
Sea-wall	D. H. Budlong	254,454	Mar. 7	10	3	21	640
Seal and tag	E. J. Brooks	258,278	May 23	1408	388 / 389	21	1557
Seal-lock	E. J. Brooks	256,791	Apr. 18	1282	361 / 362	21	1119
Seal-lock	F. P. Iannarone	253,398	Feb. 7	237	67	21	366
Seal-lock	L. M. Junkin	253,870	Feb. 21	843	238	21	567
Seal. Metallic	E. J. Brooks	253,674	Feb. 14	567	166	21	456
Seal. Metallic	E. J. Brooks	260,279	June 27	1767	478	21	2015
Seal set, cutter, and extractor. Car	H. M. Foote	254,435	Feb. 28	1509	413	21	628
Sealing-press	E. J. Brooks	254,601	Mar. 7	189	47	21	670
Seaming-cylinders for cans. Endless track for	J. P. Haller	257,219	May 2	84	25	21	1336
Seaming sheet-metal roofs. Machine for	S. Woodhead	258,786	June 20	1155	307	21	1909
Seams of garments, &c. Machine for trimming	N. H. Bruce	257,226	May 2	105	47	21	1511
Seams of sheet-metal cans. Closing the	G. H. Perkins	252,795	Jan. 24	1341	.....	21	946
Seams of sheet-metal pipes. Machine for closing down	W. A. Wheeler	254,801	Mar. 14	559	150	21	741
Seat: *See* Bicycle-seat. Reversible seat. Car-seat. Vehicle-seat. Counter-seat. Vehicle shifting seat. Folding seat. Wagon-seat. Mowing-machine seat. Wagon spring-seat.							
Seat	H. S. Hale	256,676	Apr. 18	1158	395 / 396	21	1167
Seat	H. S. Hale	259,533	June 13	661	217	21	1845
Secondary batteries. Automatic circuit-breaker for	J. A. Maloney and F. Burger	252,004	Jan. 3	392	105	21	67
Secondary batteries. Charging	C. E. Buell	255,949	Mar. 21	1017	272	21	888
Secondary batteries. Charging and discharging	C. E. Buell	255,949	Mar. 21	1018	272 / 273	21	888
Secondary batteries. Device for charging and discharging	C. E. Buell	256,450	Apr. 11	870	345 / 346	21	1106
Secondary battery	J. S. Sellon	259,657	June 13	975	261	21	1872
Secondary voltaic cells	J. W. Swan	256,070	Apr. 4	394	.....	21	1015
Seed-case	R. P. Carpenter	255,771	Apr. 4	24	7	21	954
Seed-cleaner. Flax	G. Beal	254,590	Mar. 7	177	44	21	689
Seed-drill and fertiliser	H. M. Keith	258,998	June 6	71	19	21	1767
Seed dropper. Cotton	R. Cantelou	255,520	Mar. 28	1455	391	21	909
Seed from grain. Machine for removing	D. Talmage and M. L. Flowers	259,334	Jan. 17	797	222	21	149
Seed gatherer. Clover	J. P. Rimel	254,109	Feb. 21	1121	319	21	554
Seeder and cultivator	J. E. Henrie	253,995	Feb. 7	190	56	21	367
Seeder or cultivator tooth	J. S. Rowell	256,982	Apr. 25	1442	405	21	1224
Seeding-machine	H. W. Scott	258,588	Jan. 17	1035	288	21	188
Seeding-machine	J. W. Sohn, C. O. Richter, and R. S. Carr.	257,622	May 9	907	179	21	1394
Seeding-machine and cultivator	J. W. Thomas and A. R. Ludlow	256,854	May 30	2059	581	21	1678
Seeding-machine and fertiliser-distributer	C. H. Thompson	256,153	May 16	1238	349	21	1518

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Seeding-machine force-feed	S. Rotan	255,119	Mar. 21	851	238	21	770
Seesaw	L. J. Adams	253,571	Feb. 14	488	133	21	437
Self-massage or flesh-kneading. Apparatus for	C. A. Angstrom	259,456	June 13	783	192	21	1820
Self-opening gate	W. R. Hambleton	258,750	May 30	1861	520	21	1654
Separator: *See* Centrifugal separator. Ore-separator. Gold-separator. Spinning-machine yarn-separator. Grain-separator. Starch-separator. Grain and cockle separator. Water and steam separator. Grain and mineral separator.							
Server	R. J. Carson	256,636	Apr. 18	1167	311	21	1157
Settee. Folding	C. B. Dunscomb	253,925	Feb. 14	709	200	21	491
Setting-tank	A. R. Jones	251,717	Jan. 3	35	10	21	6
Sewage. Apparatus for the disposal of	A. S. Glover	256,744	May 30	1974	557	21	1683
Sewage. Treating	F. Field	259,282	June 6	299	100	21	1783
Sewer, drain, and water pipes, &c. Composition for	J. D. Gorman	255,921	Mar. 21	1054	.....	21	834
Sewer-gas. Apparatus for consuming	W. H. Ogilvie and W. L. Beaucn	259,499	June 13	679	189	21	1859
Sewer-trap	A. J. Erwin	252,889	Jan. 31	1447	404	21	289
Sewer-trap	J. F. O'Grady	254,264	Feb. 28	1466	386	21	613
Sewed fabrics, &c. Machine for trimming hems and seams of	J. F. Thomas	256,890	Apr. 4	198	47	21	990
Sewing and other machines. Driving mechanism for	T. S. Tongue	253,940	Feb. 7	70	22	21	328
Sewing. Book	D. M. Smyth	259,656	June 6	236	63	21	1734
Sewing buttons to cloth, &c. Machine for and method of	J. Mathieon	258,117	Jan. 10	534	148 / 149	21	90
Sewing buttons to fabrics. Machine for	A. Borchardt	256,878	Apr. 11	877	194	21	1071
Sewing flat buttons to fabrics. Machine for	J. H. Morley	253,615	Feb. 14	517	148 / 149	21	445
Sewing harness. Guide for	W. C. Duffey	256,003	Apr. 25	1283	400	21	1220
Sewing heavy materials. Machine for	E. H. Smith	260,130	June 27	1590	466	21	1957
Sewing-machine	C. A. Dearborn	259,396	June 13	583	137 / 138	21	1792
Sewing-machine	J. L. Eck	256,628	Apr. 25	1322	377	21	1226
Sewing-machine	C. H. Gifford	255,509	Mar. 28	1389	381	21	898
Sewing-machine	G. Grisel	257,940	May 16	994	276	21	1471
Sewing-machine	L. E. Higby	256,141	Apr. 11	493	134	21	1039
Sewing-machine	C. E. L. Holmes	254,975	Mar. 14	693	180	21	730
Sewing-machine	J. S. Hosmer	260,027	June 27	1439	362 / 364	21	1957
Sewing-machine	A. J. Hurtu	256,761	May 30	1991	568	21	1696
Sewing-machine	A. J. Hurtu and V. J. Hautin. (Reissue.)	10,195	May 30	2108	595	21	1827
Sewing-machine	W. Johnson	254,466	Mar. 7	80	13	21	647
Sewing-machine	J. T. Jones	256,296	Mar. 21	1060	296	21	893
Sewing-machine	D. L. Kaeler	255,533	Mar. 28	1490	402	21	917
Sewing-machine	G. A. Mayo	258,235	Jan. 10	670	188	21	122
Sewing-machine	N. Meyers	256,911	Apr. 25	1431	402	21	1233
Sewing-machine	D. Melly	257,026	Apr. 25	1389	440	21	1351
Sewing-machine	G. F. Newell	253,228	Feb. 7	93	16	21	356
Sewing-machine	G. M. Pratt	254,779	Mar. 7	209	106	21	706
Sewing-machine	T. B. Roberts	260,240	June 27	1783	487	21	2008
Sewing-machine	W. Roberts	254,696	Mar. 7	209	78, 80	21	689
Sewing-machine	G. S. Ressinger	256,743	Apr. 18	1281	349	21	1130
Sewing-machine	H. F. Schlueter	257,301	May 2	988	88	21	1333
Sewing-machine	J. B. Secor	253,772	Feb. 14	710	200 / 201	21	478
Sewing-machine	J. B. Secor	253,773	Feb. 14	713	200	21	479
Sewing-machine	F. R. Smith	255,544	Mar. 28	1390	378	21	897
Sewing-machine	J. Stern	254,721	Mar. 7	231	62	21	694
Sewing-machine	J. Tripp and J. H. Osborn	259,736	June 20	1066	279 / 280	21	1886
Sewing-machine	W. Wendell	253,946	Feb. 7	79	24	21	329
Sewing-machine attachment	G. Doolittle	254,825	Mar. 14	611	165	21	729
Sewing-machine attachment	A. A. Fisher and A. Hart	256,693	Apr. 25	1527	422	21	1229
Sewing-machine attachment	J. F. Smeltzer	253,400	Feb. 7	259	100	21	368
Sewing-machine attachment	J. F. Smeltzer	254,499	May 23	1562	427	21	1289
Sewing-machine attachment for making fringe	D. Shaplin	253,775	Feb. 14	715	204	21	479
Sewing-machine bobbin-winder	J. C. Goodwin	259,263	June 13	633	168	21	1811
Sewing-machine bobbin winding attachment	G. A. Brady	257,844	May 16	980	243	21	1483
Sewing machine. Boot and shoe	J. W. Reniedon	259,918	June 20	1288	346 / 347	21	1934
Sewing-machine. Button-hole	W. W. Abbott	258,984	Jan. 31	1384	440 / 441	21	293
Sewing-machine. Button-hole	H. Charmbury	255,143	Mar. 21	861	227	21	804
Sewing-machine button-hole attachment	W. H. Carr	256,617	Apr. 25	1319	370 / 373	21	1203
Sewing-machine button-hole attachment	J. K. Harris	255,688	Mar. 28	1404	380	21	814
Sewing-machine button-hole attachment	G. M. Morris and J. P. Hollenbeck	258,668	Jan. 10	489	126	21	96
Sewing-machine coatings. Numbering	E. T. Thomas	251,745	Jan. 3	70	20	21	14
Sewing-machine cutter	E. T. Thomas	255,125	Mar. 21	859	226	21	801
Sewing-machine cutting and trimming attachment	S. W. Storey. (Reissue)	10,097	Mar. 28	1458	417	21	944
Sewing-machine driving-gear	F. Lahmann	256,008	Apr. 25	1281	361	21	1220
Sewing-machine feed mechanism	S. Bertschmid C. H. Willcox	255,577	Mar. 28	1400	383	21	894
Sewing-machine feed mechanism	C. Lucesen	253,731	Feb. 14	686	189 / 190	21	469
Sewing-machine feeding mechanism	C. H. Wood	258,568	Jan. 17	1077	290	21	198
Sewing-machine for quilting, &c	F. N. Cottle	254,988	Mar. 14	661	182 / 183	21	749
Sewing-machine for quilting	J. Thomas	257,786	May 9	786	209 / 210	21	1489
Sewing-machine fringing attachment	W. A. Estever	251,858	Jan. 3	211	59	21	26

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sewing-machine gage attachment	H. Fisher	256,726	May 30	1963	555	21	1661
Sewing-machine guide	J. F. J. Gunning	253,372	Feb. 7	219	68	21	388
Sewing-machine guide	J. F. J. Gunning	255,617	Mar. 28	1479	387	21	913
Sewing-machine guides. Gage for setting	J. F. J. Gunning	256,056	May 16	1119	313	21	1496
Sewing-machine guiding attachment	E. J. Fritsche	257,932	May 16	973	273	21	1470
Sewing-machine hemmer	C. E. Rice	253,786	Feb. 14	704	200	21	477
Sewing-machine hemmer	E. Stern	256,908	June 6	108	27	21	1712
Sewing-machine hemmer and tacker. Combined	J. H. Bean	254,501	Mar. 7	178	44	21	668
Sewing-machine hook	C. M. Hine	256,915	Apr. 11	699	163	21	1697
Sewing-machine lamp attachment	F. E. Frey	251,853	Jan. 3	228	62	21	49
Sewing-machine motive power	G. W. Sowles	254,172	Feb. 28	1289	336	21	876
Sewing-machine motor	C. Nicholson	255,694	Mar. 14	899	217	21	725
Sewing-machine motor	W. Trabue	260,066	June 27	1507	405	21	1974
Sewing-machine motors. Treadle for	G. A. Heath	257,066	Apr. 25	1541	413	21	1942
Sewing-machine needle	H. A. Blanchard	252,998	Jan. 31	1680	443	21	206
Sewing-machine needle blanks. Mechanism for grooving	P. M. Beers	258,695	May 30	1919	{542 / 543}	21	1653
Sewing-machine needle-threader	F. G. Altmann and F. Pommer	258,007	Jan. 10	414	113	21	79
Sewing-machine needle-threading attachment	F. G. Altmann and F. Pommer	258,345	May 23	1463	421	21	1660
Sewing-machine needle-threading attachment	F. G. Altmann and F. Pommer	258,670	June 6	1	1	21	1696
Sewing-machine plaiting attachment	J. L. Coles	254,538	Mar. 7	167	37	21	657
Sewing-machine power-transmitter	C. W. Foster	255,393	Mar. 21	1157	310	21	897
Sewing-machine presser-foot	H. C. Stone	260,061	June 27	1496	404	21	1973
Sewing-machine ruffler	F. P. Chesney	252,355	Jan. 17	891	226	21	152
Sewing-machine ruffler	E. F. Edgecomb	259,511	June 13	797	210	21	1841
Sewing-machine ruffler	T. B. Garretson	259,134	June 6	313	83	21	1749
Sewing-machine ruffler	M. Weiner	251,808	Jan. 3	151	40	21	98
Sewing-machine ruffling and shirring attachment	F. O. Farwell	254,543	Mar. 7	116	30	21	659
Sewing-machine ruffling attachment	H. C. Goodrich and R. S. Barnum	256,834	Apr. 25	1241	370	21	1927
Sewing-machine ruffling attachment	A. Johnston	259,975	June 6	463	126	21	1777
Sewing-machine ruffling attachment	A. Johnston	259,643	June 13	969	256	21	1860
Sewing-machine ruffling attachment	A. McMullen	256,939	June 6	84	23	21	1709
Sewing-machine ruffling attachment	J. S. Sackett	257,518	May 9	462	123	21	1370
Sewing-machine ruffling or plaiting attachment	E. D. Fellows	252,446	Jan. 17	939	239	21	171
Sewing-machine ruffling or plaiting attachment	E. D. Fellows	252,447	Jan. 17	940	240	21	171
Sewing-machine ruffling or plaiting attachment	J. S. Sackett	257,519	May 9	463	123	21	1370
Sewing-machine shuttle	M. D. Audrus	256,346	May 23	1484	423	21	1570
Sewing-machine shuttle	F. Becker	257,294	May 2	65	20	21	1293
Sewing-machine shuttle	C. Fate	257,926	May 16	967	270	21	1469
Sewing-machine shuttle	F. N. Hathaway and C. A. Loomis	256,318	Apr. 11	797	198	21	1679
Sewing-machine shuttle	J. Hoefler	256,896	Apr. 25	1415	398	21	1939
Sewing-machine shuttle	W. H. Keeler	253,871	Feb. 21	844	236	21	509
Sewing-machine shuttle	W. R. Parsons	253,621	Feb. 14	521	150	21	446
Sewing-machine shuttle	W. R. Parsons	254,040	Feb. 21	1057	294	21	543
Sewing-machine shuttle	G. Rehfuss. (Reissue)	10,103	May 2	375	105	21	1346
Sewing-machine shuttle	J. Sigwalt, Jr	254,509	Mar. 7	75	20	21	651
Sewing-machine shuttle	J. Sigwalt, Jr	256,949	June 6	97	25	21	1711
Sewing-machine shuttle	J. Tripp and J. H. Osborn	259,459	June 13	700	186	21	1894
Sewing-machine shuttle-driver	G. W. Lord	252,045	Jan. 10	452	124	21	85
Sewing-machine shuttle. Revolving	E. H. Hull	254,217	Feb. 28	1260	350	21	584
Sewing-machine-spool tension	J. G. Sandford	259,334	June 13	574	151	21	1800
Sewing-machine. Straw-braid	E. Wiseman	257,425	May 2	339	95	21	1342
Sewing-machine take-up	G. W. Baker	254,788	Mar. 14	422	113	21	717
Sewing machine take-up	J. V. D. Eldredge	255,425	Mar. 28	1248	336	21	873
Sewing-machine take-up regulator	G. A. Mayo	259,646	June 13	964	257	21	1870
Sewing-machine tension	D. L. Keeler	255,634	Mar. 28	1501	403	21	918
Sewing-machine tension device	D. W. Brown	254,603	Mar. 7	191	47	21	670
Sewing-machine tension device	G. W. Burgess	254,794	Mar. 14	428	115	21	716
Sewing-machine tension device	W. Duchemin	257,583	May 9	581	146	21	1379
Sewing-machine thread-controlling apparatus	S. Borton and C. H. Willcox	255,581	Mar. 28	1436	387	21	900
Sewing-machine thread-cutter	C. H. Green	253,474	Feb. 7	349	95	21	404
Sewing-machine thread-cutter	A. Johnston	257,718	May 9	738	203	21	1416
Sewing-machine thread cutter	J. D. Lawlor	253,212	Feb. 7	48	13	21	354
Sewing-machine treadle	I. E. Myrick	255,383	Mar. 21	1118	301	21	845
Sewing-machine treadle	J. Sigwalt, Jr	256,171	Apr. 11	593	145	21	1045
Sewing-machine treadle-support	G. W. Gregory	258,563	Apr. 18	1081	288	21	1144
Sewing-machine trimmer	S. Borton and C. H. Willcox	255,578	Mar. 28	1429	{385 / 386}	21	904
Sewing-machine trimmer	T. J. Holton	254,319	Feb. 28	1376	379	21	604
Sewing-machine trimmer	T. S. Parker	257,751	May 9	759	{211 / 212}	21	1421
Sewing-machine trimmer	A. Warren	255,767	Mar. 28	1568	427	21	934
Sewing-machine trimming attachment	B. F. Gilbert	260,291	June 27	1787	484	21	2018
Sewing-machine trimming attachment	G. H. Inman	258,669	May 16	1133	318	21	1490
Sewing-machine trimming attachment	R. W. Riese	259,715	June 20	1143	303	21	1908
Sewing-machine trimming attachment	T. C. Robinson	255,336	Mar. 21	1134	305	21	846
Sewing-machine trimming attachment	T. R. Wright and T. B. Hill	257,124	Apr. 25	1673	460	21	1906
Sewing-machine tuck-marker	H. C. Goodrich	256,833	Apr. 25	1398	379	21	1927
Sewing-machine upper-feed and button-hole attachment	J. W. Blodgett	256,871	Apr. 25	1383	{369 / 390}	21	1215
Sewing-machine. Wax-thread	F. and E. E. Bean	255,713	Mar. 28	1506	4 0	21	935
Sewing-machine. Wax-thread	C. F. Bosworth	259,063	June 6	953	70	21	1740
Sewing-machine. Wax-thread	D. H. Campbell	253,156	Jan. 31	1611	{502 / 503}	21	330
Sewing-machine. Wax-thread	D. H. Campbell	253,157	Jan. 31	1680	503	21	331
Sewing-machine. Wax-thread	H. F. Nason	256,156	Apr. 11	507	{139 / 140}	21	1042
Sewing-machine work-basket	J. L. Parkinson	258,695	Jan. 24	1239	369	21	228
Sewing-machines. Adjustable table and driving mechanism for	R. Ley	256,336	Apr. 11	748	205	21	1064
Sewing-machines. Automatic presser-foot lifter for	C. G. Stratton	256,612	May 30	1889	511	21	1634
Sewing-machines. Device for converting motion in	D. Porter	257,009	May 9	592	165	21	1391
Sewing-machines. Feeding mechanism for button-	W. E. Bennett	259,986	June 27	1437	385	21	1966
Sewing-machines. Looper for button-hole	F. E. Schmidt	255,634	Mar. 14	746	200	21	773

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sewing-machines. Mechanism for applying power to	I. Lecoeur	254,925	Feb. 28	1276	353	21	597
Sewing-machines. Reverse-seaming guide for	J. W. Chambers	257,656	May 9	643	151	21	1403
Sewing slip. Book	W. S. Neal	257,149	Apr. 25	1722	477	21	1371
Sewing the mouths of bags. Machinery for	W. H. Martin	256,833	Apr. 11	691	164	21	1699
Sewing up mouths of bags. Machine for	O. R. Van Vechten	256,518	Apr. 18	974	{273 / 274}	21	1136
Sewing welts or hems on fabrics. Machine for	S. Borton and C. H. Willcox	255,578	Mar. 28	1428	386	21	904
Sewing welts or hems on fabrics. Machine for	S. Borton and C. H. Willcox	255,580	Mar. 28	1428	386	21	905
Sewing wire into hats. Attachment for use in	J. M. Curry	259,749	June 20	1111	299	21	1902
Shackle	J. M. Trackwell	256,979	Apr. 4	397	103	21	1677
Shackle-block	J. W. Norcross	259,576	June 13	972	261	21	1835
Shade-holder	E. L. Bryant	255,568	Mar. 28	1449	389	21	903
Shade-holder	C. Maschmeyer	252,567	May 30	1779	488	21	1680
Shade. Revolving pneumatic	W. H. Staats	252,907	Jan. 31	1691	446	21	277
Shade-roller. Spring-balance	D. E. Kempster	251,893	Jan. 3	239	71	21	56
Shaft-coupling	F. O. Deschamps	255,103	Mar. 21	1038	283	21	797
Shaft-coupling	C. Q. Hayes	251,876	Jan. 3	241	67	21	53
Shaft-coupling	C. C. Klein	253,670	Feb. 21	745	199	21	503
Shaft-coupling	Jos. H. Riddle	260,709	Jan. 24	1263	343	21	227
Shaft-coupling	J. H. Riddle	254,116	Apr. 11	635	173	21	1633
Shaft for grindstones, &c. Adjustable	W. J. Arndt	259,573	May 30	1735	497	21	1925
Shaft-hanger	R. G. Gibson	257,346	May 2	466	69	21	2289
Shaft hitch. Vehicle	J. S. Layton	259,883	June 20	1274	341	21	1909
Shaft. Machinery	B. H. Miles	10,079	Apr. 11	698	287	21	1197
Shaft-prop. Buggy	J. T. Baker. (Reissue)	256,738	Apr. 18	1218	341	21	1177
Shafts. Bearing and coupling for screw-conveyer	H. Palmer	256,797	May 30	2030	573	21	1973
Shafts. Device for clamping wheels or pulleys upon	A. Newell	259,573	June 13	809	230	21	1854
Shafts. Reversible mechanism for counter	C. E. L. Mosbius	256,069	May 16	1155	324	21	1502
Shear-pad	A. P. Mann						
Shears:							
See Animal-shears. Pruning-shears. Grape-shears. Tinner's shears.							
Shears	A. J. Lytle	260,035	June 27	1469	393	21	1949
Shears and scissors. Manufacture of	R. A. Goodchild	258,696	Jan. 10	511	141	21	95
Shears for cutting flowers, plants, &c	J. S. Badia	253,258	Feb. 7	83	26	21	361
Shears for cutting sheet metal. Separator for squaring	W. R. Dennals	253,896	Feb. 21	986	275	21	530
Shearing attachment for beading-machines	T. J. Bray	258,705	May 30	1939	546	21	1625
Shearing, punching, and riveting machine	W. A. Palmer	257,059	Apr. 25	1596	448	21	1359
Sheep rack and trough. Combined	A. R. Yost	256,789	Apr. 18	1240	351	21	1189
Sheet-metal can	E. Norton	255,012	Mar. 14	711	193	21	703
Sheet-metal can	I. and H. T. Porter	259,774	June 20	1142	302	21	1904
Sheet-metal can	F. A. Walsh	256,348	Jan. 17	894	224	21	149
Sheet-metal pipe	W. Austin	253,483	Feb. 7	367	100	21	434
Sheet-metal pipe	L. F. Betts	256,955	Apr. 25	1499	418	21	1233
Sheet-metal pipes. Machine for forming circumferential crimps in	W. A. Wheeler	254,890	Mar. 14	536	140	21	740
Sheet-metal shaping-machine	I. Van Hagen	253,398	Feb. 7	173	49	21	375
Sheet-metal shaping-machine	I. Van Hagen	257,255	May 2	180	37	21	1303
Sheet-metal vessel	J. Hale	255,165	Mar. 21	915	244	21	810
Sheet-metal vessel	E. H. Whitney	254,417	Feb. 28	1459	408	21	694
Sheet-metal vessels. Attaching bottoms and tops to	G. W. Knapp	251,896	Jan. 3	262	73	21	47
Sheller:							
See Corn-sheller.							
Shelf or stand. Revolving	J. Danner	258,283	May 23	1414	400	21	1557
Shelving-bracket	D. Gerow	258,672	Apr. 18	1152	323	21	1185
Shingle-jointer. Gang	R. Holbon	259,151	June 6	326	89	21	1754
Shingling-gage	G. B. Clark	253,616	Feb. 14	771	219	21	489
Ship. Armor-clad	N. B. Clark	255,144	Mar. 21	885	{237 / 238}	21	665
Ship-railway and dry-dock	J. B. Eads	258,797	May 30	1951	551	21	1659
Ship-ventilator	P. Mihan	257,507	May 9	636	125	21	1397
Ships. Apparatus for raising sunken	J. F. Spearing	259,937	June 20	1295	358	21	1920
Ships. Auxiliary power-wheel for	K. Anunsen	255,160	Mar. 28	1408	389	21	900
Ships. Construction of	R. P. Pictet	251,793	Jan. 3	132	37	21	94
Ships. Construction of	R. Wilcox	251,753	Jan. 3	78	23	21	16
Ship's log	W. S. Hogg	253,267	Feb. 7	123	36	21	367
Shirt	J. G. Barker	253,256	Feb. 7	88	27, 28	21	368
Shirt	A. Baxter	253,574	Feb. 14	472	{133 / 134}	21	437
Shirt	F. A. Diedrich	254,887	Apr. 25	1402	395	21	1918
Shirt	G. E. Fenno	256,041	May 16	1103	307	21	1484
Shirt	J. M. Harrison and J. H. Marley	259,640	June 13	957	255	21	1869
Shirt	G. D. Hull	255,864	Apr. 4	134	35	21	973
Shirt	H. W. Messer	254,623	Mar. 14	479	129	21	738
Shirt	F. C. Mott	253,483	Feb. 7	366	99	21	433
Shirt	A. R. Perkins	254,443	Apr. 11	678	243	21	1165
Shirt	A. R. Perkins	256,498	Apr. 18	955	267	21	1138
Shirt	A. R. Perkins	257,892	May 16	930	256	21	1462
Shirt	A. R. Perkins	258,110	May 16	1184	334	21	1509
Shirt	A. R. Perkins	260,316	June 27	1816	492	21	2029
Shirt	I. Schneer	254,267	Feb. 28	1454	396	21	617
Shirt	I. Schneer. (Reissue)	10,096	Apr. 25	1715	461	21	1973
Shirt	S. Sternberger	259,431	June 13	692	183	21	1853
Shirt-bosom	I. Schneer	254,705	Mar. 7	319	82	21	691
Shirt-bosom	W. H. Mora	257,267	May 16	1013	283	21	1477
Shirt. Hunting	C. E. Shedaker	258,747	Apr. 18	1227	347	21	1191
Shirt. Reversible	D. Lubin	258,880	May 30	2027	572	21	1925
Shoe	G. H. Bass	258,715	Jan. 24	1235	377	21	229
Shoe	J. C. Bennett	255,133	Mar. 21	902	256	21	1000
Shoe	W. Causey	257,849	May 16	975	264	21	1462
Shoe	C. B. Daniels	255,495	Mar. 28	1233	340	21	887
Shoe	W. Linscott	255,429	Mar. 28	1232	339	21	875
Shoe	D. Lubin	255,201	Mar. 21	1029	287	21	949
Shoe-buttons. Implement for putting on	A. G. Wilkins	258,563	Jan. 17	1072	299	21	194

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Shoe-exhibitor	D. J. Rex	259,210	June 6	498	108	21	1765
Shoe exhibitor. Sample	O. F. Langenbach	260,102	June 27	1356	419	21	1962
Shoe-fastener	I. and R. B. Banister	256,453	Apr. 18	699	251	21	1123
Shoe-fastening	R. P. Bryant	260,745	June 20	1105	295	21	1901
Shoe-fastening	W. Wegner	260,144	June 27	1066	433	21	1900
Shoe-heel rands. Machine for making	G. Farnham and J. T. Farwell	256,830	Apr. 25	1335	{377 / 378}	21	1206
Shoe-holder	W. P. Holliday	255,980	Apr. 4	294	77	21	990
Shoe-nails. Making	J. Hyslop, Jr	255,997	Apr. 4	308	81	21	1001
Shoe or glove fastener	S. Needles	256,442	Apr. 11	671	243	21	1105
Shoe. Plow	J. W. D. Fifield	255,989	Mar. 21	1041	279	21	832
Shoe-polish	M. Hackett	259,009	June 6	174	.....	21	1794
Shoe. Rubber	A. Hutchinson	251,782	Jan. 3	110	33	21	22
Shoe. Skating	W. J. Barber	254,257	Feb. 28	1311	362	21	902
Shoe-sole-channeling machine	C. Chabot	254,619	Mar. 7	300	51	21	972
Shoe-sole-channeling tool	W. Crain	260,109	June 27	1631	441	21	1994
Shoe-soles. Device for beating out	S. W. Winslow	256,981	May 30	1698	514	21	1636
Shoe. Turned	W. Comey	253,167	Feb. 7	16	5	21	349
Shoe-upper	J. L. Joyce	259,106	June 6	359	95	21	1757
Shoe-uppers. Apparatus for turning the edges of	J. McGuigan	251,789	Jan. 3	129	35	21	23
Shoe-uppers. Machine for pasting	M. E. Beasley and S. L. Wiegand	258,004	May 16	1059	{394 / 395}	21	1405
Shoes. Ankle-supporter for	S. G. Wallace	260,069	June 27	1512	406	21	1974
Shoes. Toe-piece for the heels of rubber	J. L. Thomson	254,781	June 20	1150	305	21	1908
Shoemaker's jack	G. W. Hutchins	254,468	Mar. 7	45	12	21	646
Shoe-maker's jack	F. Schipper and L. Dobel	252,535	Jan. 17	1031	267	21	187
Shooting-gallery. Portable	J. Holahan	254,819	Mar. 14	455	123	21	722
Shot-case	C. C. Henderson	251,860	Jan. 3	243	67	21	44
Shot-case. Revolving	H. F. Hoesman	259,540	June 13	831	219	21	1847
Shot. Kettle for making drop	J. Farrell	259,120	June 6	366	83	21	1748
Shot. Kettle for making drop	J. E. Reddy	253,764	Feb. 14	701	200	21	477
Shot-polishing machine. Lead	J. Farrell	259,835	June 20	1300	324	21	1919
Shot show-case	C. Palmer	258,467	May 23	1027	460	21	1594
Shoulder-brace and suspenders	C. W. Stevens	251,805	Jan. 3	144	41	21	26
Shoulder-brace and corset	C. A. Williamson	257,261	May 2	137	39	21	1305
Shoulder-brace and suspenders. Combined	J. D. Hanbury and C. H. Clifton	257,686	May 9	704	195	21	1412
Shovel: *See* Snow-shovel.							
Shovel	J. A. Johntry	256,325	Apr. 11	737	201	21	1081
Shovel for lifting and sifting ashes	W. Enticott	255,777	Apr. 4	30	9	21	956
Shovel, spade, or scoop	R. T. Pettebone	257,752	May 9	761	212	21	1422
Show-box	I. Birgé	257,015	May 16	956	266	21	1467
Show-box	W. C. Thompson	259,438	June 13	899	185	21	1833
Show-case	G. W. and J. F. Simons	255,986	Mar. 28	1564	421	21	920
Show-case. Revolving	H. Westphal	256,181	Apr. 11	537	149	21	1047
Show-stand	G. S. Roath	258,123	May 16	1203	336	21	1512
Show-stand. Revolving	F. Pearce and J. Jones	253,757	Feb. 14	692	198	21	475
Shower-bath. Wardrobe	E. N. McKimm	255,317	Mar. 21	1113	300	21	844
Shutter-fastener	C. Altemüller	256,344	May 23	1498	428	21	1589
Shutter-fastener	H. J. Fisher, Jr.	251,854	Jan. 3	213	59	21	36
Shutter-fastener	T. F. Langley	259,539	June 13	854	226	21	1851
Shutter-fastener	F. O. Matthiessen	257,694	May 9	839	234	21	1457
Shutter-fastener	S. E. Swanson	259,601	June 13	903	241	21	1859
Shutter-fastener	F. O. Matthiessen	256,430	Apr. 11	868	242	21	1105
Shutter-fastening. Destructible	C. E. Garey	255,848	Apr. 4	113	30	21	989
Shutter. Window	L. Huntoon	257,711	May 9	721	{200 / 201}	21	1415
Shutter-worker	T. N. Lupton	252,784	Jan. 24	1356	371	21	943
Shutter-worker and blind-slat operator. Combined	B. G. Merrill	259,191	June 6	306	102	21	1762
Shutters. Unlocking and opening	J. C. Horton	258,006	May 16	1130	317	21	1498
Shuttle-race lubricator	J. Bolton	252,013	Jan. 10	419	115	21	79
Sieve-cleaning attachment	J. Harvey	254,009	Feb. 21	1013	284	21	535
Sieve. Rotary	W. L. Heuser	258,217	Jan. 10	648	188	21	118
Sifter	G. T. Finley	257,928	May 16	989	271	21	1469
Sifter	A. J. Frank	255,875	Mar. 21	1048	281	21	833
Sifter and receptacle. Ash	J. Henrich and G. Schaefer	256,840	Apr. 25	1349	361	21	1208
Sifter. Ash	J. F. Condon	254,616	Mar. 7	204	58	21	673
Sifter. Ash	J. Graves	254,638	Mar. 7	232	60	21	678
Sifter. Ash	A. Schiefer	255,989	Apr. 4	108	43	21	977
Sifter. Ash	C. Steel	254,720	Mar. 7	330	87	21	694
Sifter. Ash	J. Wells	256,068	Apr. 4	403	109	21	1018
Sifter. Automatic coal and ash	J. H. Roy	256,506	Apr. 18	983	269	21	1134
Sifter. Combined flour and meal	N. Du Brul	254,434	Feb. 28	1508	413	21	627
Sifter. Flour	M. R. Chavere	259,484	June 13	748	200	21	1836
Sifter. Revolving ash	E. G. Schultz	254,688	Mar. 14	551	147	21	740
Sign	M. B. Church	259,491	June 13	771	204	21	1837
Sign	H. S. Crooke	256,876	June 6	37	9	21	1701
Sign	E. Grah. (Reissue)	10,014	Jan. 24	1429	396	21	389
Sign-board	G. B. Wilbur	252,408	Jan. 17	987	247	21	163
Sign. Glass	F. Tuchfarber	259,733	June 20	1091	299	21	1809
Sign or name-plate. Illuminated	A. B. Keith	256,304	May 23	1440	406	21	1562
Signal: *See* Alarm-signal; Car-signal; Electric signal; Railway-signal; Railway alarm-signal; Railway safety-signal; Railway time-signal; Telephone-signal.							
Signal	T. J. Costello	251,700	Jan. 3	18	5	21	6
Signal for railway and other purposes	O. F. Wilbur and D. Sanford	256,827	Jan. 24	1367	367	21	253
Signaling and circuit-connecting apparatus	T. A. Watson	251,897	Jan. 3	147	42	21	27
Signaling apparatus	W. C. Seaton	255,683	Mar. 28	1555	419	21	922
Signaling-cable. Marine	W. B. Barker	257,913	May 16	966	265	21	1466
Silex. Preserving smeltage in	C. H. Roberts	257,782	May 9	773	215	21	1424
Sleeping apparatus	N. McMillan	260,309	June 27	1810	491	21	2022
Sleigh-breaking	J. E. Porter	254,794	Apr. 18	1223	342	21	1178

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Sink or hydraulic trap	J. F. Withey	259,256	June 6	485	123	21	1774
Sinker and fish-hook holder. Combined	S. R. Smith	258,038	Jan. 24	1145	321	21	213
Siphon	F. W. Marshall	257,685	May 9	841	234	21	1437
Sirup. Composite corn	A. Giesecke and H. Hamlin	253,909	Feb. 21	905	253	21	517
Sirup from cane-juice. Manufacture of	A. H. Isaacson	253,712	Feb. 14	677	.....	21	464
Sirup. Manufacturing corn	A. Giesecke and H. Hamlin	253,910	Feb. 21	903	253	21	517
Skating-machine. Roller	A. L. Warshauer	253,565	Feb. 14	489	131	21	438
Skate	J. Barthelt	256,603	May 16	1008	284	21	1495
Skate	S. C. Gault	256,161	Mar. 21	910	243	21	805
Skate	A. S. Hunter. (Reissue)	10,008	Apr. 4	420	119	21	1004
Skate	T. Tracy and C. E. Hart	256,695	May 16	1007	282	21	1521
Skate	W. H. Rushforth	255,819	Apr. 4	80	22	21	964
Skate. Combined roller and runner	C. Herder	257,941	May 16	987	275	21	1473
Skate. Roller	O. E. Luther	258,484	Jan. 17	987	274	21	179
Skate. Roller	C. E. Marshall	253,735	Feb. 14	687	194	21	479
Skate. Roller	T. A. Neely	260,708	June 20	1656	421	21	1962
Skate. Roller	G. B. Price and G. W. Smith	258,070	Jan. 31	1249	347	21	321
Skate. Roller	J. K. Rees	255,469	Mar. 28	1497	409	21	889
Skate. Roller	H. Tapper	253,704	Feb. 14	723	200	21	488
Skate. Roller	E. W. Tayler	255,694	Mar. 28	1571	423	21	889
Skate. Roller	S. Winslow	255,985	Mar. 14	720	211	21	781
Skate. Roller	G. L. Witall	257,426	May 2	349	95	21	1349
Skate. Roller	G. Tischer	255,196	Mar. 21	859	{320 / 321}	{21	891
Skid	M. Jiseks	256,709	Apr. 18	1188	338	21	1173
Skinning-knife	E. V. Whitaker and J. Hull	258,459	Jan. 17	1066	297	21	193
Skins. Machine for extracting grease from	W. F. Turnbull	259,440	June 13	781	196	21	1694
Skipping-hoop. Metallic	J. Schoenhof	257,789	May 9	789	217	21	1486
Skirt and pannier	C. Hotels	260,294	June 27	1790	485	21	2012
Skylight	F. H. Leadley	255,626	Mar. 28	1561	340	21	875
Skylight	G. Hayes	258,275	Jan. 17	946	236	21	157
Skylight. Photographic	S. W. Kent	258,040	Jan. 10	449	123	21	65
Slat-iron blanks. Bar of	C. B. and J. M. Hays	253,864	Feb. 21	853	236	21	506
Slate	D. S. Cooke	253,814	Feb. 14	406	113	21	427
Slate attachment. Drawing	P. S. Cory and M. E. Moore	257,988	May 2	175	50	21	1312
Slate-cleaner	W. H. Metcalf	255,659	Mar. 28	1581	429	21	921
Slate-cleaner and pencil-holder. Combined	F. W. Mallett	256,916	Apr. 4	386	88	21	1005
Slate-dressing machine	A. W. Stoesmeister	253,234	Feb. 7	64	20	21	357
Slate-frame	W. R. Gross and J. S. George	255,851	Apr. 4	116	31	21	970
Slate-washer	C. M. Amsden	253,388	Feb. 7	179	51	21	376
Sled	C. M. Hinman	258,107	Jan. 10	583	145	21	97
Sled	A. S. Russell	255,197	Mar. 21	961	254	21	816
Sled	A. Sanford	260,943	June 27	1736	467	21	2000
Sled	M. Hoffman	254,318	Feb. 28	1325	379	21	603
Sled-brake	J. A. Conwell	259,288	June 20	1195	320	21	1916
Sled. Folding	J. Ernster and W. Gardt	260,010	June 27	1441	389	21	1954
Sled-knee	V. T. Briggs	252,482	Jan. 17	214	238	21	167
Sled. Stone	S. S. Applegate	256,285	Apr. 11	686	179	21	1078
Sleep. Device for waking persons from	L. P. Webster	255,558	Mar. 28	1397	378	21	880
Sleeve-gripe. Lady's	J. T. Gurney	253,604	Feb. 14	613	173	21	469
Sleigh	J. Jackson	255,791	Apr. 4	47	13	21	959
Sleigh	R. J. Talbot	253,560	Feb. 14	456	129	21	455
Sleigh	H. Mollroy	257,258	May 2	267	73	21	1267
Sleigh. Bob	F. Yager	254,656	Mar. 14	563	154	21	721
Sleigh. Bob	B. F. Brown	257,651	May 9	626	170	21	1401
Sleigh-knee	F. Jones and W. Woolsey	256,001	Apr. 4	316	88	21	1003
Sleigh-shaft attachment	J. F. McCreary	254,994	Mar. 14	667	185	21	784
Sliding and rolling gate	W. R. White	258,343	Jan. 17	995	264	21	150
Sliding and swinging gate	A. Nicol	254,625	Apr. 4	245	68	21	1008
Sliding gate	W. R. White	256,517	May 23	1623	478	21	1604
Sliding gate	O. O. Adams	259,078	June 6	329	87	21	1727
Slop and swill carrier. Automatic	J. Bell	253,529	Feb. 7	92	29	21	362
Smelting-furnace	C. W. Bliss	255,758	Apr. 4	9	3	21	958
Smelting-furnace	W. Q. Mastin	254,347	Apr. 11	750	.....	21	1066
Smelting iron and other ores. Composition for use in	P. Kilroy and J. A. Flick	260,189	June 6	363	96	21	1758
Smoke and gas consuming furnace	R. Huber	253,365	Feb. 7	235	68	21	366
Smoke-box. Water-jacket	T. Murley	259,277	June 6	486	127	21	1778
Smoke-burner	C. Olson	254,037	Feb. 21	1053	283	21	541
Smoke-consumer	S. Parker and J. D. Bennett	257,606	May 9	586	164	21	1390
Smoke-consuming apparatus	J. C. Calbertson and W. A. Eudaly	260,170	June 27	1632	441	21	1994
Smoke-consuming furnace	J. J. Hall	254,987	Feb. 21	1010	283	21	534
Smoke-consuming furnace	M. D. Leggett	259,767	June 20	1133	{300 / 301}	{21	1905
Smoke-consuming furnace	A. J. Simmons	257,692	Apr. 25	1636	455	21	1459
Smoke-consuming furnace	E. W. Vaudusen	258,696	June 13	911	243	21	1851
Smoke-consuming furnace	E. W. Vaudusen	259,699	June 13	911	243	21	1851
Smoke-filter for pipes and cigarettes	F. S. Kinney	253,296	Feb. 7	153	39	21	389
Smoke-purifying furnace	A. J. Simmons	257,691	Apr. 25	1634	455	21	1458
Smoke-stack and spark-arrester	W. F. Cengreve. (Reissue)	10,013	Jan. 24	1429	396	21	389
Smoking-pipe	J. Cole	253,512	Feb. 14	404	112	21	427
Smoking-pipe	J. Cole	254,114	Feb. 28	1146	308	21	595
Snap and buckle. Combined	J. Anderson	257,143	May 2	1	1	21	1251
Snap-hook	A. Bernd	258,528	Jan. 24	1294	359	21	254
Snap-hook	A. N. Bragg	260,015	Jan. 10	461	115	21	59
Snap-hook	L. A. Clark	259,668	June 20	994	275	21	1822
Snap-hook	F. Fraser	251,822	Jan. 3	231	63	21	40
Snap-hook	A. S. Hess	257,666	Apr. 25	1540	428	21	1240
Snap-hook	R. Kempshall	257,731	May 9	720	200	21	1417
Snap-hook	J. W. Regan	256,164	Apr. 11	540	149	21	1044
Snap-hook	G. B. N. Tower	256,195	May 16	1044	289	21	1519
Snap-hook	F. C. Wright	253,904	Feb. 21	891	249	21	514
Snath-fastener	A. Schultze	256,365	Apr. 11	800	{219 / 220}	{21	1092
Snow from railway-tracks. Machine for removing	H. T. Stock	258,150	May 16	1236	{342 / 343}	{21	1517

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Snow loader and dumper	J. Davies	257,550	May 9	517	144, 145	21	1378
Snow-plow	S. Adams	256,451	Apr. 18	897	251	21	1123
Snow-plow	R. M. Mitchell	255,903	Apr. 4	63	17	21	961
Snow-plow	H. Reasley	252,258	Jan. 10	690	195	21	125
Snow-plow	N. Witts	252,639	Jan. 24	1156	394	21	215
Snow-shovel	C. Ames	255,408	Mar. 28	1223	397	21	809
Snow-shovel	H. W. Staples	258,980	May 23	1300	392	21	1553
Snow-shovel	C. A. Way	252,622	Jan. 24	1384	366	21	276
Snuff. Packing	M. T. Forsyth, Sr	252,205	Jan. 10	633	179	21	115
Soap from fats. Making	H. Heckel	255,505	Mar. 28	1345	363	21	889
Soap-making machinery	R. Freeland	259,642	June 20	1216	326	21	1920
Soap. Manufacture or treatment of	W. Green	259,755	June 20	1119	.....	21	1903
Soap. Neutral potash	W. J. Menzies	254,832	Mar. 14	478	.....	21	736
Soap-powder and apparatus therefor. Manufacture of	W. Wright and T. Bintliff	255,070	Mar. 14	793	212	21	782
Soap-sheet for general use and for disinfecting purposes.	H. Bucskowski	259,986	June 6	477	.....	21	1776
Soap-slotting machine	J. Atkins	252,711	Jan. 24	1233	346	21	998
Socket-wrench. Adjustable	F. Chantrell	254,875	Feb. 28	1330	367	21	996
Sockets. Soft metal-lining for dovetail	J. A. Sandford	253,430	Feb. 7	298	88	21	393
Soda. Manufacture of	E. Solvay	251,902	Jan. 3	338	90	21	58
Soda-water, &c. Draft-tube for	W. P. Clark	257,472	May 9	483	113	21	1339
Soda-water fountain	J. Matthews	260,037	June 27	1471	397	21	1980
Sodium hyposulphite. Apparatus for manufacturing	W. H. Whitmore and G. H. Pratt	253,143	Jan. 31	1788	496	21	336
Sofa or lounge	T. Hofstatter, Jr	259,642	June 13	959	256	21	1869
Soil to obtain useful products therefrom. Treatment of prairie	C. L. Fleischmann	256,737	May 30	1965	.....	21	1661
Solar camera	B. Titcomb	230,950	Feb. 21	957	265	21	525
Solder coated with flux. Wire	E. Small	255,344	Mar. 21	1144	.....	21	849
Soldering apparatus	A. Lusk	251,909	Jan. 3	280	76	21	49
Soldering cans. Flat-seam knife for use in	R. Neil	252,845	Jan. 24	1414	394	21	258
Soldering-furnace. Vapor-burning	L. B. Snow	254,511	Mar. 7	77	20	21	651
Soldering-machine	G. R. Gleason	254,908	Feb. 28	1258	347	21	563
Soldering-machine. Automatic	J. A. Forbes	254,194	Feb. 28	1156	320, 321	21	567
Soldering machine. Can	W. D. Brooks. (Reissue)	10,141	June 27	1856	502, 501	21	2039
Soldering machine. Can	W. D. Brooks	256,098	Apr. 4	420	113, 114	21	1021
Soldering-pot	J. W. Farrell	259,635	June 13	958	254	21	1898
Soldering-tool. Fruit-can	J. F. Weitzel	257,794	May 9	807	226	21	1431
Sole and heel protector. Combined in-	W. T. Schenck	252,698	Jan. 24	1143	320	21	213
Sole buffing, cleaning, and edge setting machine	E. Patten and T. Davey	253,109	Jan. 31	1840	507	21	334
Sole-buffing machine	B. C. Young	253,106	Feb. 14	750	216	21	457
Sole-edge-burnishing machine	G. A. Fullerton	252,874	Jan. 31	1451	406	21	270
Sole-edge-burnishing machine	J. W. Maloy	259,409	June 13	965	176	21	1818
Sole-edge plane	W. F. Bullock	253,180	Feb. 7	10	3	21	348
Sole-edge trimmer and trimming-tool grinder. Combined	S. N. Corthell	253,911	Feb. 21	866	250	21	515
Sole-edge-trimming machine	J. R. Moffitt	254,495	Mar. 7	61	16	21	648
Sole pricking and trimming machine	H. L. Drew	259,929	June 20	1903	392, 393	21	1918
Soluble matter from substances containing it, and apparatus therefor. Extracting by volatile solvents	E. B. Hart	253,379	Feb. 7	225	64	21	364
Solvents which have been used in extracting soluble matter. Recovering volatile	E. B. Hart	253,378	Feb. 7	223	64	21	364
Sounding apparatus. Deep-sea	A. G. Delanoy	257,154	May 2	12	4	21	1293
Sower. Seed	T. Parks	252,398	Jan. 17	577	244	21	168
Sower. Seed	J. C. Wright	256,788	Apr. 18	1279	360	21	1189
Sowing fertilizers. Machine for	E. D. Mead. (Reissue)	10,001	Jan. 3	408	100, 101	21	69
Spark-arrester	J. D. Akley	255,556	Mar. 28	1404	379	21	900
Spark-arrester	G. S. Cook	253,346	Feb. 7	194	56	21	379
Spark-arrester	J. L. Kautner	254,659	Mar. 7	261	67	21	622
Spark-arrester	A. M. Kerr	256,065	Apr. 4	317	63	21	1003
Spark-arrester	C. F. Lochner. (Reissue)	10,003	Apr. 25	1710	479	21	1973
Spark-arrester	G. W. Moore and A. O. Frick	252,239	Jan. 10	678	193	21	153
Spark-arrester	G. B. Nichols	253,883	Feb. 21	880	245	21	511
Spark-arrester	J. W. Trammell and A. H. Slaughter	254,730	Mar. 7	342	90	21	696
Spark-extinguisher	I. Devell	254,128	Feb. 28	1153	303	21	566
Spark extinguishing and discharging device	W. K. Schermerhorn	255,679	Mar. 28	1548	417	21	927
Spectacle-frame	W. H. Peckham	255,530	Mar. 28	1375	371	21	894
Spectacle-holder	J. A. Shone	256,383	Apr. 11	611	233	21	1094
Spectacle-lens case	G. D. Edmondson	253,356	Feb. 7	204	56	21	361
Speculum	W. Autenrieth and J. M. Thurston	255,756	Apr. 4	6	2	21	958
Speculum	J. R. Caps	254,457	Mar. 7	14	4	21	641
Speech. Apparatus for transmitting and reproducing	C. A. Hussey	259,397	June 13	650	173	21	1815
Speed-changing machine	J. J. Bergmann and C. E. Hüttemeier.	256,973	Apr. 11	673	168	21	1070
Speed-gearing	J. Stewart	252,537	Jan. 17	1043	290	21	189
Speed-indicator	N. P. Bowsher	260,156	June 27	1619	437	21	1999
Speed indicator and recorder	W. O. Dunbar	257,480	May 9	416	116	21	1392
Speed-indicator for shafting	L. J. Wohnlich	252,283	Jan. 10	726	205	21	130
Speed-regulator	F. T. Mallon	252,704	May 30	2017	560	21	1670
Spike	W. Goldie	252,362	June 13	633	168	21	1811
Spike-extractor	W. B. Turner and A. P. Prout	254,411	Feb. 28	1482	408	21	622
Spindle: *See* Spinning and twisting machine spindle. Spinning-frame spindle. Spinning machine spindle. Spinning-machine spindle.							
Spindle	W. T. Carroll	255,074	Mar. 14	797	213	21	783
Spindle and bearing therefor	W. T. Carroll	256,129	Apr. 11	468	127	21	1035
Spindle and bearing therefor	A. S. Hopkins	259,016	June 6	181	49	21	1726

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Spindle and bearing therefor	J. and J. A. Marsh	253,078	Jan. 31	1711	473	21	313
Spindle and device for lubricating the same	C. H. Chapman	256,208	Apr. 11	692	189	21	1073
Spindle-bearing	G. Draper	253,080	Jan. 31	1630	452	21	301
Spindle-bearings. Packing for	W. F. Draper	253,079	Jan. 31	1630	452	21	301
Spindle-bolster	G. Draper	251,949	Jan. 3	199	56	21	36
Spindle-clamp. Stationary	L. R. Faught	257,187	May 2	15	5	21	1284
Spindles, &c. Step and bush for	T. F. Hemmich	254,972	Mar. 14	636	178, 179	21	759
Spinning and doubling yarn or thread. Machinery or apparatus for	T. Briggs	257,284	May 2	163	46	21	1310
Spinning and twisting machine spindle	T. Mayor	258,486	Jan. 17	989	275	21	169
Spinning and twisting machine spindles. Bearing for	T. Mayor	255,644	Mar. 28	1512	406	21	980
Spinning and twisting machines. Ring-holder for	T. Coulthard	254,616	Mar. 7	207	54	21	673
Spinning, doubling, and twisting fibrous materials. Machine for	F. Seymour	253,421	Feb. 7	289	88	21	395
Spinning, doubling, and twisting machine	W. J. Conlon and H. B. King	255,417	Mar. 28	1237	333	21	871
Spinning frame. Ring	E. Harris	257,290	May 2	209	58, 59	21	1318
Spinning-frame spindle	R. C. Fay	253,025	Jan. 31	1637	454	21	389
Spinning-frame spindles. Mechanism for supporting and lubricating rings	W. L. Tinkham	253,239	Feb. 7	60	24	21	358
Spinning-frame spindles. Mechanism for supporting and lubricating rings	J. W. Wattles	257,969	May 16	948	264	21	1685
Spinning-frames. Spindle-step rail for	F. Leclère	255,518	Mar. 28	1361	369	21	892
Spinning-machine. Domestic	J. P. Gaines	259,369	June 13	930	167	21	1811
Spinning machine. Ring	G. P. Hazard	257,169	May 2	28	7, 8	21	1295
Spinning machine. Ring	J. F. Worrall	257,189	May 2	57	18	21	1297
Spinning-machine spindle and bolster	W. F. Draper	253,081	Jan. 31	1631	453	21	302
Spinning-machine spindle and support therefor	W. T. Carroll	256,799	Apr. 18	1264	362	21	1189
Spinning-machine spindles. Support for	J. K. Atwood	253,578	Feb. 14	469	133	21	427
Spinning-machine thread-guard	E. S. Stimpson	252,814	Jan. 24	1375	384	21	251
Spinning-machine thread-guard	H. E. Swift	253,321	Feb. 7	183	46	21	374
Spinning-machine thread-guard	W. A. Wright	259,687	June 13	937	250	21	1865
Spinning-machine thread-guard	C. E. Thomas and J. F. Worrall	256,174	Apr. 11	567	146	21	1045
Spinning-machine yarn-separator	F. H. Wheat	253,140	Jan. 31	1785	495	21	325
Spinning machines. Thread-separator for ring	H. L. Pairce	257,226	May 2	115	32	21	1301
Spinning-ring and holder therefor	G. H. Allen	254,586	Mar. 7	96	25	21	655
Spinning-spindles. Bearing for	R. C. Fay	253,026	Jan. 31	1637	454, 455	21	389
Spinning-spindles in and assisting in removing them from their sockets. Device for retaining	F. Stittael	253,125	Jan. 31	1788	491	21	333
Spirits. Process of and apparatus for improving	E. T. Gesselin	256,210	Apr. 11	592	162	21	1069
Spittoon	O. Messenger	253,746	Feb. 14	679	195	21	473
Spittoon	A. B. Nett	255,065	Mar. 14	811	217	21	765
Spittoon	J. Camper	256,370	May 23	1514	430	21	1576
Spittoon-holder	W. H. Doane and G. W. Bugbee	256,632	May 30	2008	569, 570	21	1923
Spoke tenoning and chamfering machine	C. B. Holmes	256,897	Apr. 25	1417	398	21	1280
Spoke-tenoning machine	W. H. Doane and G. W. Bugbee	256,631	May 16	1692	480, 481	21	1498
Spoke-throating machine	R. Allen and J. H. Morrison	256,945	Apr. 25	1471	413	21	1289
Spool-turning machine	J. Maris	253,077	Jan. 31	1711	473	21	313
Spoke. Wagon	R. Kerr	254,694	Feb. 21	1040	290	21	530
Spool shew-box	H. R. Silliman	253,770	Feb. 14	721	206	21	469
Spools, &c. Machine for making	T. C. Entwistle	256,967	May 30	1780	495	21	1694
Spooling-machine bobbin-holder	A. C. Falsberg	256,969	Apr. 25	1284	469	21	1230
Spoon	C. W. Oleson	255,013	Mar. 14	772	198	21	788
Spoon-rest	G. J. Record	258,514	Jan. 17	1017	284	21	185
Spout. Sap	I. H. Spolman	257,585	May 9	471	131	21	1371
Spout. Sap							
Spring: *See* Bed-spring. Bed-bottom spring. Bicycle seat-spring. Bolster-spring. Car-spring. Carriage-spring. Cultivator-spring. Door-spring. Elliptic spring. Umbrella retention-spring. Vehicle-spring. Wagon-spring. Wagon-bolster spring. Wagon platform-spring. Watch-click spring.							
Spring	R. A. McLean	258,668	Jan. 24	1212	339	21	994
Spring-bolt	W. Schenker	255,198	Mar. 21	954	264	21	877
Spring-bolt. Adjustable	P. Ferg	256,239	Apr. 18	1018	267	21	1142
Spring for keeping pitmen off dead-centers	C. A. Van Allen	254,948	Feb. 28	1302	360	21	994
Spring-motor	G. Underhill	256,189	May 16	1945	551	21	1819
Spring-setter	J. Creagan and C. D. Tyler, Jr.	258,268	May 23	1508	433, 434	21	1577
Spring-washer	T. W. Broomall	259,665	June 20	991	264	21	1892
Spring-washer	E. Over	258,208	Feb. 21	889	244	21	511
Springs and rings. Machine for making	E. F. Landis	256,328	May 30	1777	502	21	1689
Springs. Machine for making	G. W. Williford	256,068	Apr. 4	405	110	21	1018
Sprinkler: *See* Automatic sprinkler. Clothes-sprinkler.							
Sprocket-wheel	F. M. Lochner	257,445	May 2	259	101	21	1346
Sprocket-wheel	F. M. Lochner	259,675	June 20	1265	327	21	1926
Sprocket-wheel	S. C. Smith	256,145	May 16	1620	446	21	1517
Sprout-pulling machine	R. E. Osgood	255,187	Mar. 21	939	261	21	814
Spud-fixture	A. McManus	255,679	Apr. 4	158	41	21	975
Spur	J. L. Thomson	256,666	Apr. 18	1089	301	21	1151
Spur. Riding	F. H. Richards	252,945	Feb. 21	939	261	21	532
Square blades. Clamp for try	R. Pope	257,515	May 9	498	127	21	1369
Square. Carpenter's	S. Darling	258,436	Jan. 17	985	266	21	169
Square. Metallic try	S. N. Clevenger	254,276	Feb. 28	1230	337	21	788
Stacks. Device for inclosing and protecting	E. F. Preston and L. A. Whitney	257,361	May 2	261	.....	21	1323
Stains. Compound for removing	F. E. Heinig and M. Lindenthal	258,942	Jan. 31	1880	497	21	334
Stair-rod	N. McDuffie	257,734	May 9	744	207	21	1419
Stalk-breaker							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Stalk-cutter	J. Q. Adams	257,993	May 16	1045	200 201	21	1463
Stalk-cutter	H. G. Cady	252,181	Jan. 10	610	171	21	111
Stalk-cutter	A. A. Kellogg	254,334	Feb. 28	1394	364	21	607
Stamp cabinet. Rubber	C. A. Klinkner	253,365	Jan. 17	660	238	21	159
Stamp-cabinet. Rubber	J. Murdock, Jr	256,685	May 30	1677	599	21	1646
Stamp-canceler	C. C. Egerton	254,541	Mar. 7	112	29	21	657
Stamp. Canceling and dating	G. W. Levin	255,799	Apr. 4	69	16	21	981
Stamp. Hand	J. Murdock, Jr	256,686	May 30	1677	599	21	1647
Stamp. Hand	W. H. Poole	256,242	Apr. 11	636	178	21	1063
Stamp. Hand	W. H. Poole	256,243	Apr. 11	636	178	21	1063
Stamp. Hand	A. H. Rogers	256,196	May 16	1395	339	21	1513
Stamp. Hand	C. C. Wilson	255,289	Mar. 21	906	286	21	894
Stamp-mill ore-feeder	I. N. Templeton	256,503	May 23	1067	471	21	1691
Stamp-mills. Guide for stems of	W. Raup	253,009	Jan. 31	1737	480 481	21	317
Stamp-mills. Guide for the stems of	J. B. Lucas	257,353	May 2	259	71	21	1336
Stamp-moistener	F. V. Davis	257,395	May 2	176	50	21	1513
Stamping-mill	H. O. Reinhardt	255,536	Mar. 28	1379	373	21	895
Stanchion	S. J. Adams	255,231	Mar. 21	998	267	21	894
Stand: *See* Bicycle-stand. Flower-stand. Book-stand. Lamp-stand. Croquet-stand. Railway switch-stand. Dandy-roll stand. Show-stand. Filter-stand.							
Staple	W. Young	254,425	Feb. 28	1408	416	21	606
Staple for suspending papers, &c. Ring	G. W. McGill	253,676	Feb. 21	852	240	21	520
Staple. Wire	P. Dunn and T. Harris	257,565	May 9	584	147	21	1370
Staples. Blank for wagon-box	J. C. Herman	257,104	May 2	25	8	21	1325
Staples. Machine for inserting and clinching	G. W. McGill	258,241	Jan. 24	1409	393	21	257
Stapling-machine	B. E. Miller	253,168	Jan. 31	1630	507	21	353
Starch and apparatus therefor. Manufacturing	E. Roat	254,239	Feb. 28	1389	357	21	569
Starch. Apparatus for the manufacture of	A. Atkinson	253,337	Feb. 7	183	53	21	377
Starch-drying house	G. E. Full	258,188	June 27	1650	450	21	1907
Starch for laundry and other purposes	R. W. Traylor	257,108	Apr. 25	1657	.....	21	1363
Starch from grain. Method of and apparatus for obtaining	G. Burkhardt	251,897	Jan. 3	160	50	21	33
Starch from grain, &c. Method of and apparatus for obtaining	T. A. and W. T. Jebb	258,070	May 16	1134	318	21	1499
Starch machinery	E. Roat	254,158	Feb. 28	1197	334	21	574
Starch-mangle	J. and J. M. Crawshaw	256,895	June 6	35	9	21	1701
Starch. Manufacturing	H. Hamlin	253,983	Feb. 21	989	.....	21	518
Starch, &c. Process of and apparatus for treating the refuse of	E. Roat and H. Hamlin	254,240	Feb. 28	1201	358	21	569
Starch-separator	W. T. Booth and A. H. Bell	256,630	Apr. 18	1099	309	21	1156
Starch-separator	C. S. Graves and J. Heede	256,315	Apr. 11	734	197	21	1079
Starch-settling tanks. Stirrer for	J. J. Toukin	258,265	May 23	1395	395	21	1654
Starch-table	T. A. and W. T. Jebb	256,221	Apr. 11	606	164	21	1058
Starch-table	C. Lauts	254,089	Feb. 21	1045	291	21	540
Starch-table	M. J. Stark	254,063	Feb. 21	1066	301	21	547
Starch-tables. Method of and apparatus for emptying	F. O. Matthiessen and A. Behr	257,959	May 16	1003	280 281	21	1475
Starch-troughs. Washing out	F. O. Matthiessen and E. E. Quimby	257,958	May 16	1002	280	21	1475
Starch-washing apparatus	E. Roat	254,157	Feb. 28	1196	334	21	574
Starting and stopping mechanism	B. Merritt	259,492	Jan. 17	997	277	21	161
Station-indicator	E. S. Boynton	257,282	May 2	161	45, 46	21	1310
Station-indicator	J. S. Brown	256,262	Apr. 11	681	185	21	1071
Station-indicator	J. B. and C. H. Drake	259,107	June 6	283	78	21	1745
Station-indicator	J. P. Edwards	251,707	Jan. 3	25	7	21	7
Station-indicator	M. Farley	257,306	May 2	187	53	21	1315
Station-indicator	S. R. Graves and D. J. Kirkman	255,949	Apr. 4	275	71	21	906
Station-indicator	D. H. Klots	254,354	Mar. 7	195	39	21	600
Station-indicator	H. J. Wenzel	254,078	Feb. 21	1090	304 305 306	21	550
Stave-bending machine	H. De Bus	256,966	Apr. 25	1502	398	21	1238
Stave-dressing machine	W. C. McCormack	255,647	Mar. 28	1515	407	21	920
Stave-jointing machine	W. Brown	257,659	May 9	630	179	21	1401
Stave-jointing machine	C. T. Tuero	258,549	Jan. 17	1058	294	21	193
Staves, &c. Closing the pores of knots in	B. Holmes	256,568	Apr. 18	1085	296	21	1144
Stay-busk	H. and B. G. Simpson	253,779	Feb. 14	794	206	21	481
Stays, guys, &c. Device for slackening and tightening	J. B. Wood	257,283	May 2	130	30	21	1305
Steam, air, or water engine	J. A. Adams	257,458	May 9	370	107	21	1355
Steam and air engine. Combined	E. M. Strange	252,630	Jan. 24	1146	321	21	213
Steam and compressed-air engine. Combined	H. E. Depp	256,896	Apr. 25	1389	376	21	1205
Steam and hot-air engine	E. G. Frykberg	255,779	Apr. 4	32	9, 10	21	956
Steam and other power engines. Frame for	L. Schuttle	259,053	June 6	229	62	21	1733
Steam. Apparatus for superheating	A. Estrade	254,698	Mar. 7	221	57, 58	21	676
Steam. Apparatus for superheating	R. Lehmann	253,931	Feb. 21	985	257	21	530
Steam, &c. Apparatus for supplying cities with	C. E. Emery	253,917	Feb. 21	806	232	21	516
Steam-boiler	J. L. Begert	255,464	Mar. 28	1329	356	21	885
Steam-boiler	J. F. Cauney and D. F. Toucey	259,288	June 13	515	135	21	1780
Steam-boiler	W. B. Dunning	255,954	Apr. 4	255	65, 66	21	902
Steam-boiler	C. J. Galloway	253,365	Feb. 7	213	61	21	352
Steam-boiler	J. Long	256,469	Apr. 18	945	264	21	1131
Steam-boiler	G. F. Major	252,113	Jan. 10	530	146	21	98
Steam-boiler	T. McDonough	258,786	Jan. 24	1332	378	21	945
Steam-boiler	J. H. Meisenzer	253,668	Jan. 21	1717	474	21	314
Steam-boiler	W. R. Michener	258,843	Jan. 24	1411	394	21	257
Steam-boiler	J. W. Moore	257,045	Apr. 25	1382	444	21	1349
Steam-boiler	D. Renshaw	256,446	Apr. 11	874	243	21	1166
Steam-boiler	G. Sewell	256,688	Apr. 18	1062	300	21	1150

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Steam-boiler attachment	P. F. McDonnell	252,956	Jan. 31	1553	433	21	266
Steam-boiler attachment	N. B. Pottier	256,113	May 16	1116	324 325	21	1089
Steam-boiler cleaner	E. H. Ashcroft	254,446	Mar. 7	1	1	21	630
Steam-boiler cleaner	D. Renshaw	256,675	May 30	1393	534	21	1640
Steam-boiler. Fire-tube	F. A. Meyer	253,218	Feb. 7	49	15	21	353
Steam-boiler heater and feeder	W. H. Harris and G. Farr	258,213	Jan. 10	641	181	21	116
Steam-boiler. Locomotive	W. R. Michener	255,183	Mar. 21	838	249	21	813
Steam-boiler. Portable	R. Schwartzkopff	254,067	Mar. 14	328	103	21	740
Steam-boiler safety apparatus	H. Pinder and G. W. Clark	255,538	Mar. 28	1378	371	21	895
Steam-boilers. Apparatus for feeding scaling compounds to	J. B. Weeks	253,453	Feb. 7	319	89	21	399
Steam-boilers. Cleaning	J. Anderson and J. McDonald	257,396	May 16	1049	288	21	1483
Steam-engine	T. F. Flinn	256,231	Apr. 25	1336	378	21	1206
Steam-engine	E. G. Frykberg	254,125	Feb. 28	1158	323	21	567
Steam-engine	M. W. Hall	253,686	Feb. 14	615	174	21	489
Steam-engine	M. W. Hall	255,854	Apr. 4	120	32	21	971
Steam-engine	R. W. Myers and C. D. Bradley	251,989	Jan. 3	280	79	21	50
Steam-engine	W. P. and C. H. Norton	259,906	June 20	1287	345	21	1938
Steam-engine	J. W. Pilmpton	258,686	May 30	2162	603	21	1668
Steam-engine	H. See	256,207	Jan. 10	713	201	21	129
Steam-engine	A. F. Vallotton and H. Legnay	256,617	May 30	1816	512 513	21	1635
Steam-engine	J. O. Baird	259,456	June 13	794	198	21	1886
Steam-engine. Balanced	R. E. Williams	258,378	Mar. 21	1173	315	21	854
Steam-engine condenser	D. C. Wilgus and G. H. Beebe	257,540	May 9	488	135	21	1374
Steam-engine cross-head	W. J. Allen	251,809	Jan. 3	152	40	21	30
Steam-engine cylinder	J. B. Root	254,054	Apr. 4	369	100	21	1013
Steam-engine. Double-cylinder	F. Jarecki	259,662	June 6	188	49	21	1737
Steam-engine lubricator	G. H. Crosby	254,324	Apr. 11	690	190	21	1074
Steam-engine recorder	G. H. Crosby	254,325	Apr. 11	702	193	21	1074
Steam-engine recorder	W. E. Good	253,199	Feb. 7	39	10	21	352
Steam-engine reversing apparatus	A. E. Francis	257,251	May 16	923	273	21	1469
Steam-generating tube	O. F. Burton	253,020	Jan. 31	1686	465	21	297
Steam-generator	G. W. Comstock	258,982	June 6	33	9	21	1700
Steam-generator	W. F. Cox	259,263	June 13	519	136	21	1791
Steam-generator	C. Gerton	255,107	Mar. 21	838	224	21	797
Steam-generator	C. Gerton	257,217	May 2	61	24	21	1295
Steam-generator	D. Hess	256,268	Apr. 18	1165	327	21	1169
Steam-generator	W. D. Hooker	255,300	Mar. 28	1351	364	21	880
Steam-generator	D. Kelly and W. H. Hoffman	257,134	Apr. 25	1698	474 475	21	1289
Steam-generator	T. McGregor	253,736	Feb. 14	989	198	21	470
Steam-generator	T. G. Morse	257,338	May 2	111	32	21	1300
Steam-generator	D. Renshaw	260,321	June 27	1859	693	21	2083
Steam-generator and agricultural boiler	J. and H. J. Fleming and J. Broadbent	256,080	Jan. 10	632	118	21	68
Steam-generator and feed-cooker	W. W. Scott	256,802	Apr. 25	1375	367	21	1215
Steam-generator furnace	C. H. Candler and J. Whitehead	256,271	May 23	1515	430	21	1575
Steam-heat evaporator	S. W. Lowell	254,080	Mar. 7	370	72	21	624
Steam-heater	E. E. Gold	253,683	Feb. 14	610	173	21	480
Steam-heater	W. H. Page	260,046	June 27	1463	369	21	1971
Steam-heater	B. Helly	260,007	June 27	1546	417	21	1969
Steam in cities. Apparatus for supplying	S. W. Hudson	256,360	May 30	1708	600	21	1647
Steam-motor	W. Kane	254,333	Feb. 28	1393	364	21	607
Steam-pipe hanger	J. D. Pierce	256,409	Jan. 17	870	245	21	183
Steam-pipes, &c. Covering for	A. R. Seward	256,616	May 30	2047	578	21	1676
Steam-pipes. Drainage apparatus for	H. C. Bradley	259,744	June 20	1184	295	21	1901
Steam-pipes, &c. Non-conducting covering for	J. W. Hyatt	258,768	May 30	1983	562	21	1622
Steam-table	G. B. Bonner	253,670	Feb. 14	988	164	21	455
Steam-trap	M. Curtis	253,984	Feb. 21	984	274	21	539
Steam-trap	N. Curtis	253,985	Feb. 21	985	274	21	539
Steam-trap	J. L. Hastings and J. S. Stewart	256,915	June 6	58	15	21	1704
Steam-trap	H. T. Litchfield	259,389	June 13	556	146	21	1797
Steam. Utilizing exhaust	H. T. Litchfield and D. Renshaw	258,832	June 6	78	20	21	1706
Steam. Utilizing exhaust	H. T. Litchfield and D. Renshaw	260,634	June 27	1469	366	21	1969
Steam. Utilizing exhaust	H. T. Litchfield and D. Renshaw	258,833	June 6	79	20	21	1706
Steam. Utilizing waste	J. L. Haven and J. B. Mooney	259,625	June 20	1015	271	21	1886
Steamboat-staging	J. Fesco	255,157	Mar. 21	804	242	21	806
Steamer	C. T. Hanna	254,362	Feb. 28	1395	377	21	622
Steamer and heater. Wheat	O. M. Causey	257,538	May 9	508	141	21	1276
Steamer. Domestic	S. G. Thomas	253,139	Jan. 31	1773	.....	21	394
Steel. Basic process of treating iron in the manufacture of	A. H. Siegfried	257,962	May 2	183	.....	21	1309
Steel. Compound for tempering	E. J. Watson and H. W. Willson	258,625	Jan. 24	1156	.....	21	814
Steel for watch-springs. Preparing	W. M. Henderson	253,046	Jan. 31	1663	460 461	21	306
Steel plant. Bessemer	W. T. Block	258,268	May 23	1460	488	21	1578
Steel. Welding Bessemer	J. Enos	253,228	Feb. 7	57	18	21	356
Steering apparatus	H. Richardson	256,689	May 30	2041	576	21	1674
Steering mechanism	W. C. Williamson and H. O. Fladvad	257,726	May 9	810	227	21	1436
Steering mechanism. Steam	D. A. McDonald	254,695	Mar. 14	688	188	21	764
Steering tow-boats and tows	W. C. Tyler	253,644	Feb. 14	547	157	21	490
Steering-wheel friction-brake	J. T. Williamson	257,433	May 2	327	94	21	1341
Stencil-plate	M. M. Bartholomew	255,910	Apr. 4	193	50	21	988
Stenographic machine	W. E. Lawrence	254,336	Apr. 11	747	206	21	1093
Step-cover	C. H. Gould	251,713	Jan. 3	20	5	21	9
Step or stair	A. J. Clare	253,510	Feb. 14	488	137	21	427
Stereoscope-view case	A. Overend	258,694	Jan. 24	1319	341	21	288
Stereotype-plate holder	G. E. Lloyd	256,490	Apr. 18	948	265	21	1131
Stereotype-shaving machine	W. F. Ford	257,467	May 9	488	118	21	1363
Stethoscope	J. E. Dubler	251,770	Jan. 3	104	28	21	30
Still and attachment. Oil	L. Bellingrath	251,816	Jan. 3	163	45	21	30
Still. Turpentine	G. P. Bunce	260,158	June 27	1883	638	21	1902
Stirrup							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Stirrup. Safety	J. L. Cox	259,101	June 6	285	76	21	1743
Stitching fabrics	J. H. Morley	257,047	Apr. 25	1584	445	21	1250
Stock-bath	J. H. Lea Mond	257,386	May 9	578	161	21	1398
Stocking	B. Vermilyea and C. E. Norris	258,538	Jan. 17	1063	296	21	199
Stocking and method of manufacturing the same	J. Adams	251,665	Jan. 3	1	1	21	3
Stocking and method of manufacturing the same	W. Aiken	255,753	Apr. 4	2	1	21	951
Stocking. Elastic	D. D. M. Master	255,180	Mar. 21	988	246	21	813
Stocking-supporter	C. G. Foote	257,485	May 9	494	118	21	1363
Stone and marble. Manufacture of artificial	D. H. Budlong	254,530	Mar. 7	101	.....	21	656
Stone and marble. Manufacture of artificial	T. Jewell	256,000	Apr. 4	311	.....	21	1009
Stone and marble. Manufacture of artificial	H. C. Jewell	259,863	June 20	1230	332	21	1994
Stone and ore crusher	H. B. Meech	253,742	Feb. 14	673	193	21	471
Stone. Apparatus or means for turning or shaping	J. D. Brunton and F. H. J. Trier	259,728	Jan. 24	1253	358	21	231
Stone. Artificial	G. W. Chamberlin and A. S. Comerer	255,936	Apr. 4	227	.....	21	988
Stone. Artificial	C. F. Leidboldt	254,342	Feb. 28	1405	.....	21	616
Stone composition. Artificial	W. W. Patterson	254,365	Feb. 28	1497	.....	21	613
Stone-crusher	T. A Blake	256,959	Apr. 25	1495	419	21	1234
Stone-crusher	S. P. M. Tasker	260,064	June 27	1503	405	21	1974
Stone-cutting machine	W. Birss	252,172	Jan. 10	601	169	21	109
Stone-cutting machine	J. Warren	254,519	Mar. 7	87	22	21	653
Stone-cutting tool	J. Warren	254,520	Mar. 7	89	23	21	654
Stone-dressing machinery	J. D. Brunton and F. H. J. Trier	259,734	Jan. 24	1248	350	21	231
Stone-dressing machinery	J. D. Brunton and F. H. J. Trier	259,735	Jan. 24	1250	350 351	21	231
Stone dressing or polishing machine	C. J. Hall	259,134	June 6	322	85	21	1751
Stone. Manufacture of artificial	V. Einsigl	256,103	Apr. 4	429	.....	21	1023
Stone. Manufacture of artificial	W. H. Hoopes	255,991	Apr. 4	302	79	21	1000
Stone. Manufacture of artificial	W. H. Hoopes	255,992	Apr. 4	302	79	21	1000
Stone. Manufacture of artificial	S. Tronc	254,947	Feb. 28	1302	.....	21	591
Stone. Turning or shaping	J. D. Brunton and F. H. J. Trier	259,736	Jan. 24	1250	351	21	231
Stone. Turning or shaping	J. D. Brunton and F. H. J. Trier	259,737	Jan. 24	1250	351	21	231
Stool and chair. Combined	E. Worch. (Reissue)	10,005	Jan. 3	412	111	21	71
Stool back. Piano	W. S. Liscomb	256,711	Apr. 18	1903	336	21	1175
Stool. Piano	J. Emerson	257,304	May 2	186	53	21	1314
Stool, table, &c. Adjustable	J. Pursell	259,308	June 6	406	108	21	1765
Stopper: *See* Barrel-stopper. Flue-stopper. Bottle-stopper.							
Stopper for jars, &c	H. W. Putnam	256,857	Apr. 25	1368	385 386	21	1212
Store-service appliance	H. H. Hayden	255,694	Mar. 28	1487	399	21	915
Store-service carrier	H. H. Hayden	253,700	Feb. 14	691	175	21	461
Store-service system	P. Kennelly	253,396	Feb. 7	247	71	21	398
Stove	G. M. Bull	255,930	Apr. 4	230	57	21	987
Stove	J. L. Gobeille	256,908	Apr. 11	500	161	21	1055
Stove	I. W. Harlow	259,306	June 13	530	141	21	1794
Stove	J. Magee	258,936	June 6	82	21	21	1709
Stove	J. G. Smith. (Reissue)	10,117	May 16	1316	372	21	1539
Stove	T. Willi	253,144	Jan. 31	1789	496 497	21	396
Stove and fire-grate. Franklin	A. Greenaway	258,575	May 30	1760	498	21	1036
Stove and furnace grate	O. W. Noble	257,745	May 9	753	209 210	21	1490
Stove and range grate	T. Kearns	258,766	May 30	1997	563	21	1666
Stove attachment	J. O. Neilson	256,311	May 23	1446	410	21	1563
Stove attachment. Magazine	T. D. Woolson	253,465	Feb. 7	333	92	21	409
Stove. Car	W. H. Baldwin	258,542	May 30	1794	487	21	1619
Stove center. Cooking	A. Trollope	255,895	Apr. 4	86	24	21	965
Stove. Coal-oil	G. W. Billings	254,539	Mar. 7	100	26	21	656
Stove. Coal-oil	W. Hailes	253,030	Jan. 31	1654	458 459	21	395
Stove. Coal-oil	W. Petersen	257,378	May 2	278	80	21	1331
Stove. Cook	W. N. Vining and E. A. Quesnel	255,896	Apr. 4	88	24	21	965
Stove. Cooking	J. A. Horton	253,926	Feb. 7	37	12	21	353
Stove. Cooking	M. A. Nicholson	259,575	June 13	671	231	21	1855
Stove-doors. Device for opening	W. H. Shear	257,087	Apr. 25	1631	467	21	1256
Stove for heating air. Regenerative	J. M. Hartman	257,574	May 9	534	149	21	1381
Stove. Gas	J. H. Baumgardner	255,912	Apr. 4	195	51	21	982
Stove. Gas	C. Rupert	253,767	Feb. 14	705	201	21	477
Stove. Gas cook	J. H. Bean	253,499	Feb. 14	393	108	21	485
Stove-grate	R. Galbraith	254,765	Mar. 7	395	101	21	704
Stove-grate	L. S. Scott	256,923	Apr. 25	1444	405	21	1225
Stove-grate. Adjustable	F. H. De Guerre and W. W. De Lano	256,130	Apr. 11	480	130	21	1037
Stove. Hay and straw burning	W. Teeple	256,398	May 23	1463	416	21	1596
Stove heat-feeder	J. A. Cowles	254,803	Mar. 14	437	117	21	719
Stove. Heating	O. B. Keeley	254,660	Mar. 7	262	68	21	662
Stove. Heating	A. L. Savage	258,904	Jan. 31	1498	415	21	377
Stove. Heating	J. Strazzer	254,783	Mar. 7	403	107	21	707
Stove-hood	W. J. Hankins	260,004	June 27	1543	416	21	1980
Stove. Hot-blast	J. M. Hartman	254,131	Feb. 28	1165	325 326	21	569
Stove. Hydrocarbon-gas	A. M. Brainard	255,945	Mar. 21	1013	271	21	827
Stove-knob	J. Chester	253,509	Feb. 14	402	119	21	427
Stove-knob	J. C. Kohler	256,576	Apr. 18	1632	202	21	1145
Stove. Lamp	D. F. Trefry	255,703	Mar. 28	1584	425	21	933
Stove. Lamp or gas	J. H. Irwin	254,979	Mar. 14	671	181	21	761
Stove-leg	J. A. Risdon	251,949	Jan. 3	319	87	21	55
Stove-lid	B. S. Koll	251,899	Jan. 3	266	73	21	47
Stove-lifter	G. Dee	254,833	Mar. 14	609	164	21	750
Stove. Magazine	J. and F. A. Magee	258,238	Jan. 10	668	188	21	121
Stove. Oil	O. E. Clark	258,630	May 30	1831	516 517	21	1639
Stove. Oil	A. S. Dinsmore	260,006	June 27	1436	387	21	1963
Stove. Oil	J. Iredale	259,546	June 13	840	222	21	1849

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Stove. Oil	J. H. Irwin	253,607	Feb. 14	597	145	21	443
Stove. Oil	R. M. Merrill	253,744	Feb. 14	675	193	21	472
Stove. Oil	J. L. Sharp	259,035	June 6	231	62	21	1723
Stove. Oil	J. S. Van Buren	257,116	Apr. 25	1608	464	21	1263
Stove. Oil	A. Velguth	256,519	Apr. 18	976	274	21	1138
Stove. Oil	T. E. Dudley	256,788	May 2	1951	551	21	1620
Stove. Oil-gas	P. Martin	258,091	May 16	1159	305	21	1594
Stove or furnace for burning hydrocarbon and other oils	D. K. Alden	258,239	May 23	1395	373	21	1541
Stove or oven door	N. Watts	259,949	June 6	459	121	21	1775
Stove. Parlor cook	G. W. Graves	258,512	Jan. 17	774	216	21	144
Stove. Parlor heating	G. G. Thomas	256,411	Apr. 11	687	229	21	1080
Stove. Petroleum cooking	C. Riessner	254,209	Feb. 28	1447	396	21	616
Stove. Petroleum cooking	C. Riessner	258,676	May 30	1823	535	21	1649
Stove-pipe	A. Flohr	251,857	Jan. 3	217	61	21	39
Stove-pipe	E. Robinson	254,949	Feb. 21	1070	287	21	544
Stove-pipe	A. O. Briggs	255,826	Apr. 4	102	27	21	983
Stove-pipe retainer	H. Clayton	256,389	Apr. 11	604	169	21	1073
Stove-pipe shelf	T. Schafer	255,339	Mar. 21	1138	306	21	846
Stove-pipe shelf	G. McAdams	255,441	Mar. 28	1265	341	21	876
Stove-pipe shelf and stove-lid holder	E. W. L. Rice	256,682	May 30	1786	507	21	1638
Stove-platform. Tile	R. Hess	253,660	Feb. 14	689	188	21	448
Stove plates or tablets. Device for attaching	W. Ayling	257,456	May 9	368	.....	21	1356
Stove-polish. Liquid water-proof	W. H. Woodard and L. D. Benedict	255,068	Mar. 14	781	212	21	781
Stove-rack	H. C. Bascom	256,361	May 23	1469	404	21	1571
Stove-support	J. R. Burchfield	255,767	Apr. 4	19	5	21	954
Stove. Tailor's	H. M. Ryder	258,330	Jan. 17	784	220	21	147
Stove-urn	W. B. Blake	253,576	Feb. 14	676	136	21	438
Stove. Vapor	C. F. Kline and W. H. Woodard	258,476	Jan. 17	976	271	21	177
Stove. Vapor	W. Miller	256,606	May 16	1166	287	21	1505
Stove water-back	C. Reeves	254,375	Feb. 28	1443	395	21	615
Stove. Wood	R. A. Gardner	254,653	Mar. 7	288	80	21	677
Stoves. Automatic draft-regulator for oil and gas	O. N. Kyle	259,319	June 13	532	145	21	1797
Stoves. Extension-top for oil	J. L. Morgan	256,101	May 16	1173	322 323	21	1506
Stoves. Portable oven for gas and vapor	A. B. Bowden	254,193	Feb. 28	1298	343	21	589
Stoves. Steam-discharging apparatus for cooking	G. Lindner and J. Dorsch	258,883	Jan. 31	1482	409	21	372
Strainer. Food	D. M. Weston	256,516	May 23	1662	475	21	1604
Strainer-plate. Manufacture of							
Strap: *See* Boot-strap. Hitching-strap. Drum-strap. Suspender-strap. Fence-strap.							
Strap-fastener	J. B. Gathright	251,776	Jan. 3	111	31	21	21
Strap-holder	P. Flack	258,092	Jan. 10	567	149	21	85
Strap splice or clasp	W. L. Hoover	257,915	May 16	999	276	21	1478
Straw-cutter	J. W. Baughman	254,985	Mar. 14	575	155	21	744
Straw-cutter	D. M. Cummings and N. E. Frary	259,563	June 13	705	197	21	1639
Straw-cutter	E. C. Northrop	259,579	June 13	677	223	21	1655
Straw-cutter	C. Roehl	257,368	May 2	266	68, 69	21	1333
Straw-stacker	H. Cortelyow	257,556	May 9	512	143 144	21	1377
Straw-stacker	D. Rankin	256,595	Apr. 18	1055	266	21	1140
Straw-stacking machine	M. T. Reeves	258,023	Jan. 24	1130	319	21	219
Stud and button fastening	P. P. Flournoy	255,273	Mar. 21	1047	269	21	833
Stuffing-box. Steam-engine	T. Walker	253,060	Mar. 14	783	200	21	760
Stump-extractor	J. D. Chesneweth	254,613	Mar. 7	201	51	21	672
Stump-extractor	J. G. Pence	258,512	Jan. 17	1015	268	21	185
Stump-puller	T. Rice	259,928	June 20	1397	350	21	1985
Suction-elevator	H. R. Dulaney	251,844	Jan. 3	200	56	21	36
Sugar. Apparatus for crystallizing grape	E. Rost	256,809	Apr. 18	1307	328	21	1194
Sugar. Apparatus for the manufacture of lump	G. and J. Lebaudy	259,874	June 20	1253	326	21	1926
Sugar-boiler	T. W. Lanier	259,381	June 13	554	145	21	1797
Sugar centrifugal machine	S. M. Lillie	258,783	Jan. 24	1318	329 330	21	943
Sugar. Crystallized anhydrous grape	A. Behr	259,794	June 20	1164	.....	21	1911
Sugar-evaporator	G. H. Grimm and H. M. Clark	254,476	Mar. 7	34	9	21	644
Sugar from molasses and strups. Obtaining	C. Scheibler	256,463	May 16	1044	.....	21	1500
Sugar from molasses, &c. Extracting crystallizable	A. Wernicke and W. Pfitzinger	260,340	June 27	1845	.....	21	2027
Sugar from molasses, &c. Separating	C. Scheibler	260,344	June 27	1727	.....	21	2026
Sugar from plant-juices. Obtaining	C. Scheibler	260,327	June 27	1527	.....	21	2024
Sugar from plant-juices. Obtaining	C. Scheibler	260,326	June 27	1529	.....	21	2024
Sugar from a watery solution of grape-sugar. Manufacturing crystallized anhydride of grape	A. Behr	256,682	Apr. 18	1091	.....	21	1155
Sugar-granulating machine	E. Fox	259,753	June 20	1115	297	21	1908
Sugar in plates, sticks, &c. Method of and apparatus for the production of refined	M. Weinrich	253,359	Mar. 21	1156	310	21	858
Sugar. Manufacture of milk	L. H. Witte	258,841	May 30	1977	.....	21	1661
Sugar. Manufacturing crushed anhydrous grape	A. Behr	256,683	Apr. 18	1093	.....	21	1155
Sugar-mill	C. G. Johnson	258,774	Jan. 24	1308	366 367	21	941
Sugar-mixing apparatus	A. C. Harrison	259,694	June 20	1013	271	21	1868
Sugar. Refining	G. A. Drummond	257,673	May 9	662	.....	21	1405
Sugar. Refining and purifying	B. H. Rasmers and J. Williamson	255,921	Mar. 14	783	.....	21	771
Sulky	F. Doherty and J. Collins	259,698	June 20	1392	382	21	1917
Sulky	W. S. Frazier	253,575	Feb. 7	110	33	21	385
Sulky	W. S. Frazier	253,576	Feb. 7	111	33	21	386
Sulky	M. Payne	251,934	Jan. 3	304	82	21	53
Sulky	J. V. Upington	255,955	Mar. 14	775	208	21	779
Superheater	J. Fish	255,871	Mar. 21	1045	269	21	833
Superheater	D. Renshaw	260,238	June 27	1722	408	21	2000
Superheating steam or heating air. Apparatus for	S. N. Carvalho. (Reissue)	10,194	May 30	2107	606	21	1657
Supporter: *See* Anchor-supporter. Garment-supporter. Brush-supporter. Map and chart supporter.							
Surcingle	E. Barnard	255,757	Apr. 4	7	2	21	956

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Sarcingle	M. R. Dowlin	257,672	May 9	661	185	21	1405
Surface-gage	L. S. Starrett	255,123	Mar. 21	856	230	21	890
Surface-gage	C. W. Smith	259,586	June 13	894	236	21	1856
Surgical-needle holder	G. E. Jones	253,209	Feb. 7	40	13	21	363
Surveying-instrument	G. W. Hill	256,142	Apr. 11	494	135	21	1040
Suspender-braces. Tab-connector for	T. Walker	253,245	Feb. 7	75	23	21	364
Suspender-end	J. C. Hyde	256,783	May 30	1004	263	21	1606
Suspender-end	J. Lauferty	255,175	Mar. 21	926	247	21	911
Suspender-end	J. W. Smith	256,467	May 23	1650	406	21	1508
Suspender-loop	S. E. Moore	257,738	May 9	747	200	21	1419
Suspender-strap	A. Netzner	255,654	Mar. 28	1583	{409 / 410}	21	923
Suspender-trimming	M. Altmann	255,404	Mar. 26	1231	307	21	889
Suspenders	J. W. Holtring	259,543	June 13	836	221	21	1849
Suspenders. Button-hole device for	B. J. Greely	254,956	Mar. 14	639	173	21	756
Suspensory-bandage	J. Cadman	254,799	Mar. 14	433	116	21	719
Swages. Manufacture of blacksmiths'	J. F. Duffy	259,113	June 6	301	80	21	1747
Swing. Portable	G. W. Mason	254,991	Mar. 14	665	{184 / 185}	21	764
Swinging and sliding gate	M. F. Caltrider	252,386	Jan. 24	1111	311	21	397
Swinging can	F. C. Wilson	259,738	June 20	1090	283	21	1940
Swinging gate	L. M. Evans	253,588	Feb. 14	491	140	21	441
Swinging gate	G. King	256,306	May 23	1441	409	21	1502
Swinging gate	C. E. Lamb	256,307	May 23	1442	409	21	1502
Swinging gate	I. L. Landis	256,331	Apr. 11	749	203	21	1062
Swinging gate	W. B. Tatman and W. C. Davis	254,407	Feb. 28	1479	404	21	822
Swinging gate	J. W. Zentmyer	253,810	Feb. 14	761	217	21	497
Switch: *See* Interlocking switch. Railway-switch. Telephone-switch. Telephone-exchange switch.							
Switch and signal locking apparatus	O. Gassett	256,797	Apr. 18	1202	363	21	1191
Switch-operating device	A. G. Cummings	256,102	Apr. 4	427	{117 / 118}	21	1039
Syringe-box	T. F. Matthews	256,716	Apr. 18	1203	338	21	1176
Syringe. Urethral	F. Wilhöft	254,579	Mar. 7	165	41	21	686
Table: *See* Advertising-table. Billiard-table. Cheese-draining table. Extension-table. Folding table. Ironing-table. Printing-machine delivery-table. Pulley-fitting table. Railway time-table. Starch-table. Steam-table. Telegraph-table. Tobacco-booking table. Tracing-table. Turn-table. Veterinary-table.							
Table	F. T. Knauss	257,343	May 2	239	66	21	1324
Table	O. Nilsson	256,649	Apr. 25	1359	363	21	1210
Table-leaf support	J. W. Allison	257,206	May 2	143	40	21	1306
Table-leaf support	J. H. Mosher and G. E. Crane	254,778	Mar. 7	399	106	21	706
Table-leaf supporter	W. F. Weltman	257,116	Apr. 25	1066	406	21	1264
Table or stand for machines, &c	A. F. Gerald	256,671	Apr. 18	1150	323	21	1165
Tablet. Information	E. S. Boynton	258,589	May 23	1702	{481 / 482}	21	1606
Tablet. Writing	M. W. Brown	258,984	June 6	138	37	21	1716
Tablet. Writing	F. S. Hasbrouck	256,636	Apr. 25	1346	360	21	1207
Tablet. Writing	E. P. Wentworth	257,117	Apr. 25	1067	467	21	1264
Tack	A. J. Culbertson	257,313	May 2	73	22	21	1324
Tack-puller	R. Hayden	258,920	June 6	61	17	21	1705
Tacking-machine	J. E. Crisp	254,021	Mar. 7	219	55	21	674
Tacking-machine	E. Woodward	251,755	Jan. 3	79	23, 24	21	16
Tacking-machine	E. Woodward	254,421	Feb. 28	1485	409	21	685
Tacking-machine	E. Woodward	254,756	Mar. 7	375	98	21	702
Tacks for use. Preparing beaded	E. Woodward	253,250	Feb. 7	61	22	21	340
Tackle-block	J. W. Norcross	251,986	Jan. 3	226	69	21	51
Tag	S. B. Fleisher	253,274	Feb. 7	109	33	21	335
Tag. Marking	S. D. Shattuck	254,857	Feb. 21	1079	290	21	746
Tag or ticket. Garment	J. Keller	257,617	Apr. 25	1353	436	21	1344
Tag. Shipping	W. S. and J. A. Upshur and W. R. Royster.	259,343	June 13	861	154	21	1888
Talc and coating articles therewith. Preparing	H. McCormick	253,616	Feb. 14	515	.....	21	444
Tally. Grain	J. Griffith	254,005	Feb. 21	1007	269	21	534
Tally-machine	J. W. Elliot	251,850	Jan. 3	209	58	21	36
Tank: *See* Lard and tallow tank. Oil-tank. Settling-tank.							
Tank and reservoir regulator. Automatic	O. N. Evans	254,594	Mar. 14	621	167	21	738
Tannate of chinoline. Acid	W. Pickhardt and H. Endemann	260,317	June 27	1817	.....	21	2063
Tannate of chinoline. Basic	W. Pickhardt and H. Endemann	260,319	June 27	1818	.....	21	2063
Tannate of chinoline. Neutral	W. Pickhardt and H. Endemann	260,318	June 27	1817	.....	21	2063
Tannic acid. Apparatus for extracting	O. Kohlrausch	259,555	June 13	849	225	21	1850
Tannin extracts. Manufacturing	P. Gondolo	258,573	May 30	1757	.....	21	1625
Tannin extracts. Process of and apparatus for the manufacture of	P. Gondolo	258,574	May 30	1757	497	21	1625
Tanning	J. W. Hammond	254,982	Mar. 14	645	.....	21	757
Tanning hides	J. Head	257,442	May 2	358	.....	21	1345
Tanning hides and skins. Preparing a solution for	C. Richter	260,323	June 27	1821	.....	21	2063
Tape-line and sheave. Combined	J. C. Kuisen	259,566	June 13	850	225	21	1851
Tapping and drilling machine	G. W. Longman	259,406	June 13	668	175	21	1817
Tapping and reaming machine	C. C. Walworth	258,068	Jan. 10	479	{132 / 133}	21	90
Target	J. A. Crandall	254,909	Feb. 28	1526	345	21	801
Target	R. Morris	258,849	Jan. 10	670	169	21	153
Target. Flying	G. Ligowsky. (Reissue)	10,122	May 23	1719	406	21	1611
Target. Flying	G. Ligowsky	256,227	Apr. 11	611	166	21	1050

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Target-trap	G. Ligowsky	252,220	Jan. 10	234	187	21	121
Tea and coffee pot	J. B. Daniel	255,776	Apr. 4	29	9	21	933
Tea-kettle	H. L. Palmer	252,243	Jan. 31	1538	434	21	439
Tea-kettle	J. B. Clarke	255,840	Apr. 4	195	52	21	933
Tea or coffee pot lid	F. B. Richardson	259,049	June 6	234	60	21	1733
Tea-pot and cover	I. W. Nichols	255,125	Mar. 21	825	220	21	913
Tea. Purifying and drying	S. L. Russell	255,620	Mar. 14	723	190	21	772
Tender. Rocking	G. A. Fowler	254,925	Feb. 28	1250	.....	21	1228
Tenth. Temporary stopping for	C. N. Talbot	256,159	May 16	1527	349	21	1212
Telegraph and messenger service box	J. B. Stearns. (Reissue)	10,033	Feb. 7	373	102	21	429
Telegraph apparatus. Duplex	J. B. Stearns. (Reissue)	10,034	Feb. 7	375	103	21	429
Telegraph apparatus. Duplex	J. B. Stearns. (Reissue)	10,035	Feb. 7	377	103	21	430
Telegraph apparatus. Duplex	J. B. Stearns. (Reissue)	10,036	Feb. 7	377	103	21	430
Telegraph. Automatic	C. A. Randall	255,330	Mar. 21	1288	294	21	947
Telegraph. Automatic	G. Smith	259,986	June 6	485	113	21	1760
Telegraph. Automatic	W. R. Patterson	251,780	Jan. 3	51	14	21	11
Telegraph-cable terminal	W. C. Temske	256,253	Apr. 11	649	176	21	1066
Telegraph. Chemical	R. Carter	254,611	Mar. 7	197	50	21	672
Telegraph-circuit. Fire-alarm	C. L. Buckingham	253,154	Jan. 31	1686	501	21	389
Telegraph. Duplex	H. Van Hoevenbergh	253,134	Jan. 31	1776	488	21	384
Telegraph. Duplex	C. L. Buckingham	256,306	May 23	1506	469	21	1574
Telegraph. Duplex	C. L. Buckingham	256,307	May 23	1510	469	21	1574
Telegraph. Duplex	B. F. Dillon and J. W. Brown	259,106	June 6	291	76	21	1745
Telegraph. Duplex	J. E. Funn	258,636	May 30	1837	518	21	1640
Telegraph. Duplex	F. W. Jones	258,498	May 23	1560	448	21	1587
Telegraph. Duplex	F. W. Jones	260,208	June 27	1884	450	21	2001
Telegraph. Duplex	G. S. Mott	256,163	May 16	1175	309	21	1207
Telegraph. Duplex	B. Thompson and C. Selden	256,967	June 6	109	29	21	1713
Telegraph. Duplex	E. Berliner	256,304	May 23	1496	425	21	1572
Telegraph. Harmonic	G. Cumming	256,645	Apr. 18	1110	314	21	1139
Telegraph-key	J. A. Timmerman	258,580	May 30	2000	522	21	1679
Telegraph-keys. Circuit-closer for	D. Brooks. (Reissue)	10,123	May 30	2106	565	21	1697
Telegraph line. Underground	D. Brooks	254,989	Feb. 28	1523	395	21	894
Telegraph line. Underground	W. D. Smith	256,397	Apr. 11	814	224	21	1095
Telegraph lines. Support for underground	T. B. Atterbury	258,210	May 23	1287	{374 / 375}	21	1542
Telegraph-messages. Instrument for preparing and transmitting secret	A. F. and F. B. Johnson	253,664	Jan. 31	1688	467	21	510
Telegraph. Multiple	B. Thompson and C. Selden	255,696	Mar. 28	1575	424	21	931
Telegraph. Printing	A. A. Knudson	258,439	May 23	1563	458	21	1589
Telegraph. Printing	J. H. Longstreet and J. B. Wright	257,577	May 16	906	{253 / 254}	21	1459
Telegraph. Quadruplex	S. D. Field	253,687	Jan. 31	1638	455	21	502
Telegraph. Quadruplex	S. D. Field	254,397	Feb. 28	1292	373	21	589
Telegraph. Quadruplex	F. W. Jones	255,395	Mar. 21	1077	300	21	938
Telegraph. Quadruplex	H. C. Nicholson	257,181	May 2	41	13	21	1268
Telegraph. Quadruplex	J. R. Woodfill	255,373	Mar. 21	1174	315	21	955
Telegraph relay and repeating-instrument	A. F. and F. B. Johnson	253,668	Jan. 31	1668	{465 / 466}	21	509
Telegraph. Secret-printing	A. F. and F. B. Johnson	253,669	Jan. 31	1669	{466 / 467}	21	509
Telegraph. Secret-printing	A. F. and F. B. Johnson	253,670	Jan. 31	1670	{466 / 467}	21	509
Telegraph. Secret-message	F. W. Jones	254,980	Feb. 28	1528	{350 / 351}	21	905
Telegraph. Sextuplex	G. M. Phelps	253,730	Feb. 14	495	128	21	475
Telegraph signal-box. District and alarm	J. H. Bunnell	255,838	Apr. 4	223	58	21	987
Telegraph-sounder. Mechanical	C. F. McCullah	253,689	Jan. 31	1714	473	21	513
Telegraph system. District	J. L. Garber	253,326	Feb. 7	214	61	21	382
Telegraph-table. Revolving	T. J. Agnew	259,971	June 20	1387	373	21	1949
Telegraph, telephone, and other wires. Underground conduit for	H. Van Hoevenbergh	258,610	June 13	912	{943 / 944}	21	1881
Telegraph transmitter. Printing	H. A. Chase	256,816	Apr. 25	1383	374	21	1204
Telegraph-wires. Apparatus for sustaining	W. Reason	260,005	May 16	1668	395	21	1468
Telegraph-wires, &c. Balloon-support for	A. J. Haviland	258,651	May 16	1195	315	21	1467
Telegraph-wires. Screw for fastening	S. Turner	253,643	Feb. 14	546	156	21	449
Telegraph-wires. Supporting	E. D. Parker	253,419	Feb. 7	276	79	21	393
Telegraphs. Electric coupling for trains	S. M. Plank and W. P. Phelps	256,896	Jan. 31	1475	412	21	874
Telegraphs. Self-adjusting relay for printing	B. Thompson and C. Selden	253,957	Feb. 21	958	264	21	534
Telegraphic apparatus	H. A. Clark	258,720	Jan. 24	1268	355	21	333
Telegraphic cables. Vulcanizing india-rubber and gutta-percha coverings and coatings of	G. Cumming and C. M. Brinkerhoff	256,646	Apr. 18	1117	314	21	1139
Telegraphic electrode	M. D. Connally	255,378	Mar. 21	1181	317	21	856
Telegraphic instrument protector	A. F. and F. B. Johnson	253,061	Jan. 31	1685	465	21	389
Telegraphic messages. Apparatus for preparing and transmitting secret	W. H. Markland	260,308	June 27	1895	490	21	2021
Telegraphic receiving-instrument	G. Smith	254,661	Feb. 21	1063	300	21	547
Telegraphic receiving-instrument	G. Smith	259,057	June 6	233	62	21	1723
Telegraphic receiving-instrument	G. Smith	259,585	June 6	404	113	21	1768
Telegraphic receiving-instrument	M. W. Pope	258,796	Jan. 24	1245	376	21	347
Telegraphic signal-boxes. Automatic time-recorder for	G. S. Mott	258,497	Jan. 17	1020	278	21	188
Telegraphic sounder	G. S. Mott	258,496	Jan. 17	1023	279	21	188
Telegraphic sounder	E. L. Hutchinson	254,977	Mar. 14	660	169	21	803
Telegraphic transmitter. Automatic	J. W. Lavish	257,469	May 9	420	153	21	1292
Telegraphy. Multiple	M. Buell	256,456	Apr. 18	903	233	21	1134
Telegraphy. Rheostat for multiple	E. H. Amet and W. S. D. Hunt	255,734	Apr. 4	3	2, 3	21	931
Telephone	J. W. Clark	258,591	June 6	20	7, 8	21	1760
Telephone	T. A. Edison	258,448	Jan. 17	998	269	21	171
Telephone	T. A. Edison	257,677	May 9	389	104	21	1407
Telephone	E. T. Greenfield	258,294	Jan. 10	749	202	21	134
Telephone	A. H. Hinctmann	257,133	Apr. 25	1064	474	21	1060
Telephone	J. H. Rogers	258,255	Jan. 10	692	186	21	125
Telephone	J. H. Rogers	258,256	Jan. 10	693	186	21	125
Telephone							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Telephone	H. S. Thornberry	255,354	Mar. 21	1158	308	21	851
Telephone. Acoustic	J. A. Lakin	255,174	Mar. 21	985	247	21	811
Telephone. Alarm	J. F. Kettell	257,019	Apr. 25	1555	438	21	1944
Telephone attachment	J. C. Chambers	256,989	June 6	145	39, 40	21	1739
Telephone call-register	W. J. Denver and W. W. Sawyer	253,653	Feb. 21	891	233	21	504
Telephone call-register	J. W. See	259,429	June 13	669	188	21	1938
Telephone central-office switch	M. J. Carney	256,886	June 6	21	6	21	1696
Telephone central-office system	G. M. Hopkins	257,351	May 9	283	63	21	1301
Telephone-circuit	G. H. Bliss	259,326	June 13	511	134	21	1789
Telephone-circuits. Utilising secondary batteries on	C. E. Buell	255,377	Mar. 21	1180	316	21	856
Telephone-circuits. Utilising secondary batteries on	C. E. Buell	259,809	June 20	1161	315	21	1913
Telephone. Compound	G. L. Anders	252,641	Jan. 24	1157	304	21	215
Telephone. Compound	T. A. Watson	252,109	Jan. 10	588	165	21	107
Telephone. Electric	J. P. Freeman	257,606	May 9	685	190	21	1409
Telephone. Electric	T. T. Prosser and J. P. Freeman	257,610	May 9	383	165	21	1301
Telephone. Electric	J. H. Rogers	252,381	Jan. 17	1025	265	21	185
Telephone. Electric speaking	A. W. Rose and C. A. Cheever	252,142	Jan. 10	588	159	21	104
Telephone-exchange apparatus	G. L. Anders	252,986	Jan. 31	1588	441	21	394
Telephone-exchange apparatus	C. E. Buell	255,706	Apr. 4	16	5	21	953
Telephone-exchange circuit	C. W. Rose	252,259	Jan. 10	699	197	21	126
Telephone-exchange circuit and apparatus	J. I. Sabin	255,031	Mar. 14	734	{198 / 199}	21	778
Telephone-exchange switch	H. W. Breckenridge	258,421	Jan. 17	918	258	21	167
Telephone-exchange switch-board	C. W. Rose and G. H. Twiss	256,888	May 30	2105	594	21	1698
Telephone-exchange system	G. W. Coy	257,664	May 9	653	183	21	1403
Telephone-exchange system	E. T. Greenfield	256,432	Apr. 11	859	{239 / 240}	21	1103
Telephone-exchange system	T. A. Watson	256,258	Apr. 11	656	177	21	1096
Telephone-exchange system and apparatus	G. B. Scott	253,316	Feb. 7	153	45	21	373
Telephone-exchanges. Automatic signaling-circuit for	C. E. Scribner	251,955	Jan. 3	385	88, 89	21	56
Telephone-exchanges. Multiple switch-board for	L. B. Firman	252,576	Jan. 17	1066	302	21	196
Telephone-exchanges. Signaling apparatus for	J. G. Smith	256,661	May 30	1699	536	21	1650
Telephone-line signal-call	F. R. Richmond	254,155	Feb. 28	1198	333	21	573
Telephone-lines. Individual signaling apparatus for	H. D. Sisson	254,573	Mar. 7	154	36	21	684
Telephone-lines. Signaling apparatus for	J. G. Smith and C. E. Buell	257,621	May 9	695	189	21	1303
Telephone. Mechanical	G. K. and H. C. Farrington	252,694	Jan. 10	430	118	21	81
Telephone-receiver	G. L. Anders	253,491	Feb. 14	362	105	21	483
Telephone-receiver	S. H. Bartlett and H. E. Waite	253,612	Feb. 14	766	218	21	488
Telephone-receiver	R. M. Lockwood	256,906	Apr. 25	1436	401	21	1221
Telephone-receiver	R. M. Lockwood	256,907	Apr. 25	1437	401	21	1222
Telephone-relay	C. A. Randall	255,333	Mar. 21	1130	304	21	847
Telephone-relay	H. E. Waite	253,783	Feb. 14	741	218	21	484
Telephone-repeater	J. G. Smith	256,753	Apr. 18	1943	548	21	1168
Telephone-signal	G. L. Anders	251,810	Jan. 3	153	43	21	26
Telephone-signal generator	J. F. Gilliland	253,597	Feb. 14	495	141	21	441
Telephone signaling and receiving apparatus	C. Ewing	260,180	June 27	1648	{447 / 448}	21	1906
Telephone signaling-circuit	G. H. Bliss	259,325	June 13	510	133	21	1789
Telephone-signaling. Magneto-electric machine for	G. L. Anders	251,758	Jan. 3	83	25	21	17
Telephone-station apparatus	G. W. Coy	253,912	Feb. 21	849	250	21	515
Telephone-switch. Automatic	J. B. Odell	253,941	Feb. 21	935	269	21	522
Telephone system	E. Berliner	255,239	Mar. 21	1006	289	21	826
Telephone systems. Individual signaling apparatus for	C. E. Buell	258,686	May 30	1895	516	21	1636
Telephone-transmitter	S. H. Bartlett and H. E. Waite	252,714	Jan. 24	1236	347	21	229
Telephone-transmitter	S. H. Bartlett and H. E. Waite	253,665	Feb. 14	577	163	21	454
Telephone-transmitter	E. Berliner	254,190	Feb. 28	1269	342	21	579
Telephone-transmitter	C. Ewing	256,040	May 16	1101	306	21	1403
Telephone-transmitter	J. P. Freeman, T. T. and H. B. Prosser.	257,607	May 9	686	190	21	1409
Telephone-transmitter	G. M. Hopkins	257,338	May 2	225	63, 64	21	1323
Telephone-transmitter	G. M. Hopkins	258,757	May 30	1967	561	21	1665
Telephone-transmitter	J. Olmsted	252,122	Jan. 10	553	155	21	109
Telephone-transmitter. Battery	C. E. Scribner	251,800	Jan. 3	136	39	21	25
Telephone-transmitter. Carbon	G. D. Clarke	253,977	Feb. 21	979	273	21	529
Telephone-transmitters. Carbon of	C. E. Scribner and G. D. Clarke	252,296	Jan. 10	752	209	21	134
Telephones and other purposes. Electric call for	W. C. Lockwood	258,322	Jan. 17	784	218	21	146
Telephonic and telegraphic signaling apparatus	A. C. Brown and H. A. C. Saunders	259,359	June 13	598	{158 / 159}	21	1805
Telephonic apparatus and circuit	J. H. Rogers	252,257	Jan. 10	685	196	21	125
Telephonic receiver	C. Cuttriss and G. F. Milliken	256,795	Apr. 18	1989	363	21	1191
Telephonic receiving-instrument	W. B. Hale	254,642	Mar. 7	236	62	21	678
Telephonic switch apparatus	H. W. Cozzens	258,494	June 6	36	8	21	1709
Telephonic transmission of sound from theaters	C. Ader	257,453	May 9	383	{107 / 108}	21	1355
Telephony. Electric	A. W. Rose	252,141	Jan. 10	565	159	21	104
Tellurian	T. H. Costello	255,491	Mar. 28	1388	358	21	868
Tempering pot. Edge-tool	C. E. Dixon	256,291	Apr. 11	577	158	21	1053
Tender and other brakes	D. S. Randolph	253,319	Feb. 7	149	43	21	371
Tendon-cutting implement	O. Ewing	252,306	Jan. 17	769	214	21	144
Tenoning-machine	J. Shetler	260,331	June 27	1633	485	21	2025
Tension-brace	A. Lawson	253,987	Feb. 21	916	255	21	510
Tent	E. S. Farrow	255,108	Mar. 21	838	234	21	797
Textile fabrics. Machine for pressing and finishing	G. W. Miller	257,508	May 9	451	125	21	1289
Textile fabrics. Ornamenting	P. A. Dailey	257,921	May 16	961	266	21	1408
Textile fabrics. Treating	P. A. G. Juel	252,363	Jan. 17	630		21	159
Theater-stage	C. A. Needham	258,530	May 23	1715	484	21	1610
Theaters. Exit from	J. H. Smith	254,717	Mar. 7	327	87	21	694
Theaters. Fire-proof curtain for	K. Von Falkenhausen	256,083	June 6	941	64	21	1735
Theatrical scenery	G. F. Fuller	259,301	June 13	530	140	21	1783
Thermo-electric battery	A. Patterson	253,865	Apr. 4	157	42	21	976
Thermometer. Volute-tube	M. Immisch	251,869	Jan. 3	254	70	21	45
Thermostatic coil	H. W. Axford	252,069	Jan. 10	482	133	21	90

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Thill-coupling	I. G. Beaver	258,700	May 30	1908	544	21	1656
Thill-coupling	A. Brown	255,927	Apr. 4	217	56	21	980
Thill-coupling	A. Gipe	259,308	June 13	508	140	21	1782
Thill-coupling	W. A. Hendryx	258,316	Jan. 17	773	217	21	145
Thill-coupling	E. Hexis	254,016	Feb. 21	1000	267	21	537
Thill-coupling	H. F. King	253,088	Jan. 31	1097	295	21	310
Thill-coupling	H. A. Lattgnau	260,107	June 27	1851	498	21	1898
Thill-coupling	R. J. Mitchell	253,411	Feb. 7	298	77	21	397
Thill-coupling	H. T. Perrun	251,835	Jan. 3	305	83	21	33
Thill-coupling	C. N. Smith and T. Murphy	260,048	June 27	1733	466	21	2020
Thill-coupling	C. C. Wason	257,186	May 2	54	17	21	1290
Thill-coupling	G. E. Wilson	254,894	Mar. 14	563	151	21	762
Thill-coupling	W. A. Walentz	256,772	Apr. 18	1991	535	21	1160
Thill loop or tag	N. T. Folsom	254,763	Mar. 7	304	102	21	983
Thill-tug	D. M. Small	259,336	June 13	578	152	21	1921
Thill-tug	C. H. Horton	259,157	June 6	340	81	21	1735
Thrasher and clover-seed huller. Grain-	W. Pierpont	254,238	Feb. 28	1260	307	21	599
Thrasher and separator	F. W. Robinson	251,951	Jan. 3	360	87	21	54
Thrasher and separator. Combined	C. Bliss	259,264	June 6	473	104	21	1775
Thrasher and separator. Grain	S. Caldwell and J. Burgess	253,615	Feb. 14	770	215	21	489
Thrasher band-cutting and feeding attachment	J. C. Dupee	253,591	Feb. 14	460	130	21	440
Thrasher band-cutting attachment	C. G. Case	258,077	Jan. 10	460	135	21	98
Thrashing and clover-hulling machine frame	J. R. Birdsell	255,087	Mar. 21	690	221	21	795
Thrashing and hulling machine. Combined clover	R. H. Oeon	259,749	June 20	1160	296	21	1902
Thrashing-machine	H. M. Dalton	257,998	May 16	994	289	21	1462
Thrashing-machine	J. L. MacDonald and G. E. Sly	253,674	Feb. 21	848	240	21	506
Thrashing-machine	H. W. Matthews	259,185	June 6	361	{109 / 110}	21	1761
Thrashing-machine	S. E. Oviatt	257,978	May 16	1018	264	21	1476
Thrashing-machine	J. L. Phillips	257,753	May 9	781	212	21	1422
Thrashing-machine	A. A. Russell	255,199	Mar. 21	853	{230 / 231}	21	790
Thrashing-machine	M. Sullivan	259,999	June 20	1412	369	21	1933
Thrashing-machine	J. Westinghouse and W. Webber	259,955	June 20	1349	{362 / 364}	21	1942
Thrashing-machine band-cutter and feeder	R. Stalcup and G. W. Stewart	259,238	June 6	434	115	21	1720
Thrashing-machine band-cutting and feeding attachment	G. W. Sharp	255,464	Mar. 28	1395	349	21	881
Thrashing-machine feeder	M. Thomas, Jr.	254,177	Feb. 28	1216	330	21	577
Thrashing-machine grain-feeder and band-cutter	T. J. Barlow	256,690	Apr. 18	1969	{362 / 367}	21	1154
Thrashing-machine separator attachment	M. A. Keller. (Reissue)	10,658	Mar. 7	417	111	21	709
Thrashing-machine straw-carrier	P. Philippi	258,689	Jan. 24	1134	318	21	611
Thrashing-machine. Straw carrier and shaker	J. Fahrney	254,810	Mar. 14	444	{119 / 120}	21	721
Thrashing-machine tooth	L. Carrier	258,486	Jan. 17	918	253	21	169
Thrashing-machines. Cylinder and concave tooth for	H. P. White	251,981	Jan. 3	359	96	21	61
Thrashing-machines. Self-feeder for	J. Scholl	251,799	Jan. 3	137	39	21	25
Thread holder and cutter	F. S. Williams	255,745	Mar. 28	1641	444	21	942
Threading-die	C. D. Rogers	255,617	Apr. 4	77	21	21	964
Ticket-case	S. S. Cross	256,198	May 16	1807	505	21	1558
Ticket case. Combined coupon and local	M. A. Smith	254,399	Feb. 28	1408	400	21	620
Ticket-clasp	L. J. Blades	259,324	June 13	509	139	21	1789
Ticket-holder	J. G. Tait	251,946	Jan. 3	338	91	21	58
Ticket. Pin-	A. T. Lundqvist	256,349	Apr. 11	754	206	21	1025
Ticket. Price-	J. Keller	259,399	Jan. 17	761	218	21	146
Tide-wave motor	R. Humphreys	259,160	June 20	1237	338	21	1904

Tile. Drain and irrigating	M. Payne, W. P. Foust, and R. M. Thomas.	253,093	Jan. 31	1753	479	21	316
Tile. Floor-	J. Siebel	254,396	Feb. 28	1406	401	21	619
Tile for plastering, &c. Porous penetrable	S. E. Loring. (Reissue)	10,630	Feb. 7	369	.....	21	488
Tile for steam-boilers	J. C. Stevens	256,462	Apr. 11	810	225	21	1096
Tile furring. Fire-proof	G. M. Moulton and E. V. Johnson	257,396	May 2	285	75	21	1289
Tile. Illuminated	L. C. Tiffany	255,210	Mar. 21	973	260	21	819
Tile. Illuminating	J. K. Ingalls	258,228	May 23	1756	363	21	1547
Tile-kiln	E. A. and J. F. Brown	255,247	Mar. 21	1016	278	21	822
Tile machine. Drain-	G. S. Tiffany	256,614	May 30	1811	511	21	1635
Tile of glass, porcelain, &c., for decorating walls	E. Vedder	256,415	Apr. 11	631	200	21	1060
Tile-plate. Illuminating	W. A. Lindsay	259,708	June 20	1135	301	21	1905
Tiles. Composition for the manufacture of artificial	R. Skinner	257,082	Apr. 25	1657	.....	21	1229
Till. Alarm-	G. A. Colton	255,145	Mar. 21	867	236	21	805
Tiller	H. Walker and A. Miltner	254,179	Feb. 28	1218	330	21	577
Tilting chair	J. W. Kenna	258,325	Jan. 10	656	185	21	119
Timber for preserving it. Apparatus for the treatment of	H. Find	253,361	Feb. 7	210	60	21	362
Time-alarm	J. Pomeroy and J. Winslow, Jr.	259,564	June 13	661	224	21	1886
Time-detector. Electric	J. E. Richards	256,609	May 30	1797	{507 / 508}	21	1630
Time-detector. Watchman's	O. Hansburg	256,837	Apr. 25	1346	380	21	1208
Time-detector. Watchman's	H. J. Wenzel	253,983	Feb. 21	961	267	21	535
Time-lock	S. Shaw	253,317	Feb. 7	156	45	21	373
Tin and galvanized coating. Apparatus for removing	T. H. Campbell	255,238	Mar. 21	1021	{272 / 274}	21	810
Tinman's furnace	J. F. Lockwood	256,779	May 30	2011	{507 / 508}	21	1629
Tinner's shears	J. F. Brayer	257,465	May 9	396	111	21	1240
Tip for flexible cords	J. K. Hamilton	257,865	May 16	898	240	21	1497
Tire-bending machine. Wagon-	E. C. Trombly	259,607	June 13	910	262	21	1901

Tire-cooler	D. Ammerman, T. Baird, and E. M. Foreman.	254,897	Mar. 14	568	159	21	743
Tire-cooling device	I. L. Umstead	257,536	May 9	481	134	21	1373
Tire-tightener	A. P. Gathright and A. W. Potts	256,137	Apr. 11	488	133	21	1036
Tire-tightener	H. N. Lindler	256,339	Apr. 11	749	205	21	1084
Tire-tightener	J. T. McEnaney	253,935	Feb. 21	920	258	21	561
Tire-tightener	S. B. Robison	259,568	June 13	885	230	21	1857
Tire-tightener and spoke-extractor	G. W. Linck	251,985	Jan. 3	273	74	21	48
Tire-upsetter	C. Stevens	251,984	Jan. 3	335	91	21	58
Tire-upsetter	A. Womack	256,589	Apr. 18	985	277	21	1138
Tire-upsetting and stretching machine	R. E. Alexander	256,944	Apr. 25	1470	412	21	1289
Tire-upsetting machine	F. S. Carr	252,868	Jan. 31	1449	403	21	939
Tire. Vehicle-wheel	A. Dickinson and J. Warden	252,304	Jan. 17	767	214	21	143
Tire. Wagon-wheel	L. Yakel	254,422	Feb. 28	1496	410	21	885
Tobacco and match box. Combined	S. E. Scott	256,946	Apr. 11	641	173	21	1084
Tobacco. Apparatus for darkening	A. P. Poladura	252,397	Jan. 17	790	219	21	147
Tobacco. Apparatus for treating leaf	L. Kruckemeyer	257,794	May 9	733	204	21	1417
Tobacco-booking table	C. Seel	255,540	Mar. 28	1365	374	21	896
Tobacco-curing apparatus	E. A. Bardick	252,946	Jan. 31	1514	421	21	981
Tobacco-cutter	W. Seranton	254,367	Apr. 11	804	221	21	1069
Tobacco-drying machine	L. Lottier	257,651	Apr. 25	1569	440	21	1947
Tobacco. Labeling plug	D. W. De Forest	254,985	Feb. 28	1340	370	21	997
Tobacco-leaves. Device for sizing	J. D. Brubaker	255,764	Apr. 4	13	4	21	953
Tobacco-leaves. Treating	J. D. Miller	254,989	Mar. 14	894	.....	21	765
Tobacco. Machine for attaching tags and labels to plug.	E. R. Hearn	253,994	Feb. 7	118	35	21	306
Tobacco. Machine for opening and feeding	C. L. Curtis and B. Adriance	255,494	Mar. 28	1338	{359 / 360}	21	897
Tobacco machine. Plug	J. Ramming	252,889	Jan. 31	1492	414	21	976
Tobacco. Method of and apparatus for curing	R. Kisseling	259,553	June 13	846	224	21	1850
Tobacco. Method of and apparatus for treating	G. Clark	253,584	Feb. 14	482	137	21	439
Tobacco package. Plug	S. C. Shelton	253,434	Feb. 7	292	83	21	305
Tobacco-pipe	I. W. Giles	259,870	Jan. 31	1453	407	21	971
Tobacco-pipe	G. Lockhart	260,105	June 27	1558	430	21	1908
Tobacco-pipe	J. J. Weber	255,401	Mar. 21	1215	334	21	892
Tobacco-pouch frame	M. I. Weller	256,177	May 16	1264	357	21	1283
Tobacco-press	R. L. Alexander	257,454	May 9	366	106	21	1256
Tobacco-scrap cutter	A. Ingram	255,519	Mar. 28	1354	364	21	890
Tobacco-stem-crushing machine	C. Hemje	254,989	Mar. 14	653	177	21	756
Tobacco-sweating apparatus	W. Foss	256,739	May 30	1906	555	21	1661
Tobacco-sweating apparatus	F. W. Smalley and R. G. J. Kennard, Jr.	252,270	Jan. 10	717	202	21	120
Toe-weight	L. C. Chase	259,463	June 13	760	208	21	1836
Toe-weight	G. E. Twambley	257,907	May 16	945	263	21	1446
Toilet-case	H. Pattberg	257,973	May 16	1019	284	21	1476
Tonga. Carpenter's flooring	W. R. Forester	256,726	May 30	1906	555	21	1661
Tonga. Cattle	C. Brühl	251,985	Jan. 3	177	49	21	39
Tonga. Pipe	C. H. Miller	259,895	June 20	1876	542	21	1890
Tonga. Tinman's	C. R. Everson	256,538	Apr. 18	1015	146	21	1143
Tonga. Universal	J. M. L. Matthey	259,898	June 20	1905	550	21	1892
Tongue-depressor	E. C. Merrill	253,197	Jan. 10	545	153	21	101
Tongue for agricultural implements	J. I. Hoke	253,794	Feb. 14	694	176	21	442
Tongue. Jointed plow	W. L. Cassday	253,986	Jan. 31	1443	403	21	969
Tongue-support	W. B. McFall	253,875	Feb. 21	851	240	21	560
Tongue-support. Vehicle	J. N. Holem	259,156	June 6	339	69	21	1754
Tongue support. Wagon	J. W. Wetmore	253,902	Feb. 21	879	248	21	514
Tool. Adjustable	A. A. Pease	252,948	Jan. 10	686	194	21	194
Tool-carrier	C. L. Wentworth	256,178	May 16	1265	357	21	1283
Tool. Combination	F. Emmenegger, Jr.	251,851	Jan. 3	210	56	21	36
Tool. Combination	H. Fisher	254,631	Mar. 7	225	59	21	676
Tool. Combined	T. D. Isbell	255,513	Mar. 28	1355	365	21	891
Tool-handle	T. Bates	259,979	June 6	259	69	21	1739
Tool-handle	T. Bolton	254,861	Mar. 14	507	136	21	733
Tool-holder	A. Long	259,405	June 13	661	175	21	1817
Tool-holder	N. H. Snider	257,490	May 2	304	87	21	1335
Top. Spinning	J. Hill	253,788	Feb. 14	622	176	21	440
Torpedo and detonating signal. Railway	F. Gerrard	251,988	Jan. 3	226	63	21	41
Torpedo-boats. Current-controlling device for	G. E. Haight	257,693	May 9	695	{183 / 194}	21	1411
Torpedo-boats. Device for controlling	G. E. Haight	257,694	May 9	701	194	21	1411
Torpedo. Submarine	M. Hubbe and M. A. Hardy	255,366	Mar. 21	1185	330	21	858
Torpedoes. Apparatus for propelling	W. F. Johnston	254,021	Feb. 21	1033	286	21	530
Tow-boat	A. McDougall	259,889	June 20	1899	340	21	1889
Towel-rack	T. C. Clapp	253,563	Feb. 14	463	130	21	439
Toy	L. P. Converse	256,361	May 23	1565	433	21	1577
Toy	S. Lewis	256,010	Apr. 4	301	84	21	1094
Toy	E. R. Morrison	257,743	May 9	750	209	21	1420
Toy	J. M. Holmes	255,698	Mar. 28	1491	409	21	916
Toy. Acrobatic	F. C. Zanetti	251,737	Jan. 3	88	24	21	17
Toy and bottle-stopper. Combined	W. H. Reiff	259,980	June 20	1386	259	21	1935
Toy and puzzle. Spelling	W. Kenniah	257,958	May 16	997	276	21	1474
Toy animal. Mechanical	J. E. Selden	259,981	June 6	419	111	21	1767
Toy. Automatic	E. E. Haynes	254,708	Mar. 7	380	103	21	705
Toy ball	J. Murray	255,184	Mar. 21	933	249	21	813
Toy bank	F. W. Carpenter	251,763	Jan. 3	94	26	21	19
Toy building-block	J. A. Crandall	260,264	June 27	1779	{431 / 432}	21	2016
Toy cannon	A. Turnbull	256,157	Jan. 10	564	164	21	107
Toy-cap exploder	E. Aldom	256,973	June 6	126	33	21	1716
Toy catapult	C. F. Pohlman and H. Thompson	257,379	May 2	279	80	21	1331
Toy chariot	L. Kyser and A. C. Rex	256,772	May 30	2002	565	21	1667
Toy. Child's	S. L. Heckert	254,769	Mar. 7	391	103	21	705
Toy circus or arena	W. W. Barnes	256,193	Apr. 11	565	156	21	1061

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Toy. Electric	R. N. Dyer and H. W. Seely	259,415	June 6	393	89	21	1747
Toy elevated railway	J. A. Crandall	254,537	Mar. 7	198	38	21	657
Toy fire-arm	G. W. Eddy	260,269	June 27	1765	484	21	2017
Toy furniture	G. W. Lewis	251,993	Jan. 3	271	74	21	48
Toy gun	C. C. P. McCord and C. D. Churchill	255,588	Mar. 28	1372	370	21	894
Toy hoop-stick	W. L. Teter	257,785	May 9	795	220	21	1429
Toy horse. Trundling	E. J. B. Whitaker	255,367	Mar. 21	1167	313	21	853
Toy house or structure. Combination	W. W. Barnes	256,212	May 23	1230	376	21	1549
Toy locomotive	W. S. Reed. (Reissue)	10,114	May 16	1310	371	21	1531
Toy. Mechanical	J. L. Given	256,743	May 30	1973	557	21	1663
Toy. Mechanical	J. W. Perkins	255,866	Apr. 4	139	43	21	976
Toy. Mechanical	W. A. Webber	257,118	Apr. 25	1520	465	21	1263
Toy. Mechanical	T. M. Wilkins	256,355	May 23	1474	419	21	1588
Toy merry-go-round	C. F. Cornelius	260,167	June 27	1630	440	21	1898
Toy money-box	L. Kyser and A. C. Rex	252,067	Jan. 24	1120	314	21	999
Toy money-box	L. Kyser and A. C. Rex	259,403	June 13	650	174	21	1817
Toy musical wheel	L. Kyser and A. C. Rex	256,771	May 30	2001	565	21	1667
Toy. Optical	H. Van Hoevenbergh	258,164	May 16	1240	338	21	1289
Toy. Optical	H. Van Hoevenbergh	259,950	June 20	1363	361	21	1941
Toy or child's carriage in combination with a musical box.	C. M. Crandall	254,439	Feb. 28	1502	411	21	886
Toy or doll house	W. W. Barnes	256,191	Apr. 11	563	154	21	1051
Toy or puzzle	A. D. Campbell	257,455	May 9	642	180	21	1401
Toy or toy box	W. Strong	256,761	Apr. 18	1250	{351 / 352}	21	1163
Toy picture. Dissected	G. H. Ireland	258,651	May 30	1856	504	21	1644
Toy pistol	C. F. Ritchel	256,510	May 30	2042	577	21	1675
Toy pistol	H. H. Whitcomb	259,560	Jan. 17	1070	297	21	198
Toy railway-train	F. W. Carpenter. (Reissue)	10,063	Mar. 14	687	230	21	786
Toy savings-bank	C. G. Shepard and P. Adams, Jr	255,690	Mar. 14	816	218	21	786
Toy scales	L. Kyser and A. C. Rex	252,608	Jan. 24	1121	314	21	999
Toy theater or Punch-and-Judy show	N. E. Marshman	256,909	Apr. 25	1498	402	21	1282
Toy watch	R. J. Clay	256,998	May 23	1411	389	21	1537
Toy wheelbarrow	J. A. Crandall	253,646	Feb. 21	612	230	21	508
Toy. Whistling	T. E. Bulger	255,250	Mar. 21	1080	973	21	886
Trace-carrier	G. F. Eberhard	255,388	Mar. 21	1187	319	21	857
Trace-carrier	W. H. Main	259,967	June 20	1411	369	21	1932
Trace-carrier	D. S. Moore	252,126	Jan. 10	544	153	21	101
Trace-carrier	J. W. O'Daniel and C. E. Walls	259,772	June 20	1140	302	21	1906
Trace-carrier	M. E. Simmons	258,130	May 16	1221	343	21	1515
Trace-carrier	A. R. Wilhelm	255,744	Mar. 28	1640	444	21	942
Trace-coupling	I. H. Randall	256,584	Apr. 18	1054	293	21	1140
Trace-fastener	E. A. Pollard	251,987	Jan. 3	307	83	21	53
Trace-fastening bolt	C. Woolnough	253,147	Jan. 31	1793	498	21	987
Trace-fastening for single-trees	L. S. Ellebbute	254,363	Feb. 28	1349	372	21	889
Trace-lock	J. A. Bassett	254,271	Apr. 11	971	182	21	1070
Trace-lock	J. R. Connell	259,919	Jan. 10	425	116	21	80
Trace-supporter	J. Brunson	259,908	June 20	1180	315	21	1913
Trace-supporter	T. Meyer	259,634	June 6	204	55	21	1729
Trace-trimming machine	H. F. Osborne	258,313	May 23	1448	410	21	1563
Tracing-table	N. Solt	258,906	Jan. 31	1490	416	21	977
Traction-engine	M. W. Bushnell	259,614	June 20	1186	{317 / 318}	21	1914
Traction-engine	J. H. Elward	253,023	Jan. 31	1634	{453 / 454}	21	301
Traction-engine	A. O. Frick	256,993	Apr. 25	1298	430	21	1230
Traction-engine	A. O. Frick	258,401	May 23	1549	{439 / 440}	21	1561
Traction-engine	H. N. Land and H. Campbell	254,223	Feb. 28	1270	358	21	866
Traction-engine	H. N. Land and H. Campbell	257,444	May 2	368	100	21	1345
Traction-engine	J. V. Stribling	259,600	June 13	909	240	21	1859
Traction-engine	E. J. Taylor	256,983	May 30	1903	537	21	1650
Traction-engines. Steam-separator for	G. H. Helvey	259,686	June 20	1017	{271 / 272}	21	1886
Traction-wheel	B. S. Benson	252,348	Jan. 17	812	226	21	151
Traction-wheel	C. D. Bussong	257,467	May 9	367	111	21	1256
Traction-wheel	L. Hall	259,135	June 6	323	86	21	1751
Traction-wheel	T. T. Prosser	253,009	Jan. 31	1737	490	21	1317
Train-boat	W. J. Little	254,878	Mar. 14	538	142	21	736
Tramway clip. Rope	C. H. Abbott and A. W. Harrington.	255,738	Apr. 4	1	1	21	954
Transom-adjuster	G. J. Dickson	259,287	June 13	286	136	21	1792
Transom and skylight lifter	F. A. Reiher	259,495	June 13	685	181	21	1861
Transplanter	J. C. Tennent	252,403	Jan. 17	861	245	21	183
Trap: *See* Animal-trap. Ball-trap. Basin and sink trap. Fish-trap. Fly-trap. Gas-trap. Mole-trap. Mouse-trap. Plumber's trap. Rat-trap. Roach-trap. Sewer-trap. Steam-trap. Target-trap. Waste-pipe trap.							
Traveling-bag lock	V. Huppe	257,334	May 2	239	65	21	1288
Tray for holding fruit-cans	J. Taylor	253,896	Feb. 21	875	247	21	513
Tray. Metallic	J. Taylor	254,649	Mar. 14	495	138	21	729
Tread-motor	O. Leimbrock	254,685	Mar. 7	206	70	21	683
Treadle	H. Kamgrath	254,685	Mar. 14	462	125	21	794
Treadle	G. W. Zeigler	255,751	Mar. 28	1640	446	21	944
Treadle mechanism	E. S. Mann	255,738	Mar. 28	1636	{439 / 440}	21	940
Tree: *See* Double-tree. Saddle-tree.							
Tree-protector	T. Bower	256,701	May 30	1989	545	21	1655

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Tree-protector	A. Hornung and A. H. Fuos	254,135	Feb. 26	1169	327	21	569
Tree-protector or insect-barrier	O. M. Fuller	256,561	Apr. 18	1020	288	21	1143
Trees. Implement for bleeding	M. Christmiller	253,185	Feb. 7	15	5	21	249
Trees. Treating fruit	J. H. Askin	256,947	Apr. 25	1476	.....	21	1220
Trellis. Vine	J. Nellis	257,370	May 2	269	76	21	1329
Trichinoscope	C. F. Lomb and E. Bausch	251,721	Jan. 3	30	11	21	9
Tricycle	P. E. Collins	259,099	June 6	251	73	21	1743
Tricycle	E. C. F. Otto	252,504	Jan. 17	1008	{290 / 291}	21	183
Tricycle	A. H. Overman	257,375	May 2	274	78, 79	21	1331
Trimmer: *See* Hedge-trimmer. Heel-trimmer. Sewing-machine-trimmer. Sole-edge trimmer. Wick-trimmer.							
Trimmings. Machine for making	F. Martens	256,579	Apr. 18	1035	293	21	1146
Trough: *See* Watering-trough.							
Truck	J. Esch	252,363	Jan. 17	831	231	21	154
Truck	N. Rogers	255,818	Apr. 4	78	28	21	964
Truck	T. J. Scarff	253,948	Feb. 21	942	262	21	523
Truck	A. Robinson	254,865	Mar. 14	550	147	21	739
Truck and derrick. Combined	J. Knudsen	255,797	Apr. 4	56	15	21	960
Truck. Barrel	A. A. E. and H. Blackman	254,908	Mar. 14	578	156	21	745
Truck. Car	E. L. Cleveland	259,498	June 13	781	206	21	1838
Truck. Car	C. W. Hunt	256,571	Apr. 18	1028	290	21	1145
Truck. Car	G. B. Simonds	252,531	Jan. 17	1038	289	21	188
Truck. Car	J. N. Smith	253,439	Feb. 7	300	85	21	397
Truck. Car	W. H. Turner	258,616	May 30	1815	512	21	1635
Truck for moving harvesters	G. P. Clark	253,004	Jan. 31	1609	446	21	397
Truck. Hand	G. B. St. John	254,723	Mar. 7	334	98	21	695
Truck. Plow	J. C. Tauber	255,693	Mar. 28	1571	429	21	930
Truck. Stair	A. C. Hinson	252,218	Jan. 10	649	182	21	118
Trucks. Stock for plow	T. W. Boyle	252,070	Jan. 10	492	133	21	99
Trucks. Weighing attachment for hand	H. Waldstein	258,171	May 16	1256	354	21	1562
Trumpet and cane-handle. Combined ear	J. M. Smith	257,095	Apr. 25	1641	459	21	1260
Trumpet for railway heads	C. Mantz	256,578	Apr. 18	1034	292	21	1145
Trunk	W. B. Worger and E. M. Richford	257,123	Apr. 25	1672	{468 / 469}	21	1265
Trunk, box, &c	J. A. Rigby	260,051	June 27	1489	401	21	1972
Trunk, desk, table, &c. Combined	B. Andrews. (Reissue)	10,069	Apr. 25	1703	478	21	1271
Trunk-fastener	J. H. Sessions, Jr	253,123	Mar. 21	855	239	21	800
Trunk-fastener	C. Jenkins	256,609	Apr. 18	1185	332	21	1170
Trunk-handle	T. Donahue and G. N. Waterbury	256,300	Apr. 11	704	191	21	1075
Trunk-lock	W. H. Ertell	253,094	Jan. 31	1636	454	21	398
Trunk-rack. Portable	C. Clutire	254,865	Mar. 14	512	137	21	732
Truss	J. Edson	259,116	June 6	305	81	21	1747
Truss	J. Fry	258,854	May 30	2001	590	21	1684
Truss	T. W. Carter	252,999	Jan. 31	1518	423	21	982

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Type and space holder	L. K. Johnson	254,019	Feb. 21	1631	288	21	538
Type-cases from paper-pulp or other plastic material. Mechanism for forming	J. T. Edson	260,089	June 27	1535	413	21	1979
Type-distributer. Hand	J. North	259,578	June 13	874	{292 / 293}	21	1855
Type-forms. Locking-up device for	S. D. Webb	259,251	June 6	489	128	21	1773
Type-forms. Preparing	J. P. Hunt	253,657	Jan. 31	1675	469	21	398
Type setting and distributing apparatus	E. W. Brackelsberg	253,153	Jan. 31	1594	500	21	399
Type-setting machine	T. J. Porter	255,867	Mar. 28	1527	414	21	694
Type-writer	J. B. Hammond	253,475	Feb. 7	342	95, 96	21	404
Umbrella	A. Malmros	257,334	May 2	259	71, 72	21	1329
Umbrella	J. Minière	257,694	May 16	915	256	21	1459
Umbrella	B. Mohr	256,945	May 23	1370	387	21	1559
Umbrella	G. Neu	260,223	June 27	1795	491	21	2004
Umbrella	J. W. Watson	256,774	Apr. 18	1022	286	21	1136
Umbrella and parasol tie	D. W. Osborne	260,227	June 27	1799	492	21	2005
Umbrella-dripper	C. L. L. Emery	257,395	May 2	187	53	21	1314
Umbrella. Folding	C. L. Hurd	254,218	Feb. 28	1241	350	21	585
Umbrella or parasol	A. Iehl	257,572	May 16	900	251	21	1452
Umbrella or parasol runner	S. W. Evans, Jr	259,678	June 20	1903	268	21	1984
Umbrella or parasol support	J. Forster	256,366	Apr. 11	715	194	21	1077
Umbrella retention-spring	W. H. Belknap	258,990	Jan. 31	1580	449	21	295
Under-garment	T. B. Farrington	259,201	Jan. 10	630	178	21	115
Under-garment for infants	C. K. Lightcapp	259,877	June 20	1956	337	21	1997
Underskirt	F. W. Heese	257,702	May 9	710	196	21	1413
Underwaist	E. W. Philbrook	259,422	June 13	681	169	21	1820
Universal joint	E. Garrigues	258,208	Jan. 10	636	179	21	116
Universal joint	J. J. Greenough	258,576	May 30	1701	498	21	1636
Universal-joint coupling	W. Johnston	259,389	June 13	653	173	21	1816
Universal joint for shafts. Extensible	E. W. Rees	254,843	Mar. 14	488	131	21	726
Upholstery of felt. Fastenings for	W. K. Parker	256,729	Apr. 18	1219	341	21	1178
Upright drill	E. A. Hare	259,138	June 6	326	86	21	1751
Vaccinator	J. N. Dickson	257,668	May 9	657	184	21	1404
Vagina. Instrument for washing the	W. B. Sims	258,140	May 16	1223	344	21	1515
Valise	F. G. Nichols	259,905	June 20	1938	345	21	1931
Valise. Metallic	A. M. Gardner and J. North	259,594	June 13	812	214	21	1843
Valve: *See* Fire-extinguisher valve. Float-valve. Governor-valve. Musical wind-instrument valve. Pump-valve. Water-closet valve. Water-closet-cistern valve. Water-pipe valve.							
Valve	W. Decker	258,195	Jan. 10	623	176	21	114
Valve	W. Gardner	258,094	Jan. 10	509	141	21	95
Valve	T. R. Harrison	254,130	Feb. 28	1164	325	21	568
Valve	M. Mickelborough	256,237	Apr. 11	630	171	21	1062
Valve	J. O'Meara	258,582	May 30	1764	504	21	1630
Valve	J. P. Pfau	253,066	Mar. 28	1536	414	21	924
Valve	E. R. Tomlinson	259,981	June 20	1415	361	21	1953
Valve and operating mechanism. Balanced	G. W. Stever	258,500	May 23	1665	471	21	1601
Valve and valve-gear	W. W. St. John	259,432	June 13	693	{183 / 184}	21	1888
Valve apparatus for steam-boilers. Safety	J. D. Churchill	256,863	Apr. 25	1386	394	21	1218
Valve. Automatic steam	J. H. Blessing	257,280	May 2	159	45	21	1309
Valve. Balanced	D. Hogan	259,398	June 13	645	171	21	1814
Valve. Balanced	W. D. Hooker	253,106	Jan. 31	1633	505	21	338
Valve. Balanced slide	W. S. Brewer	259,688	June 20	998	264	21	1661
Valve. Balanced slide	E. A. Burnap	259,686	June 20	992	265	21	1888
Valve. Balanced slide	J. J. De Lancey. (Reissue)	10,142	June 27	1860	398	21	2030
Valve. Balanced slide	H. C. Kriete	256,146	Apr. 11	498	126	21	1040
Valve. Cheek	A. M. Brainard	256,875	Apr. 25	1380	390	21	1216
Valve. Foot	G. Shepard	257,068	Apr. 25	1431	457	21	1268
Valve for faucets. Self-closing	J. E. Mooney	252,790	Jan. 24	1235	373	21	945
Valve for injectors. Steam	H. F. Colvin	254,615	Mar. 7	203	52	21	672
Valve for oil and water wells	A. J. Lewis	255,528	Mar. 28	1368	398	21	898
Valve for steam-engines. Exhaust	C. B. Richards	251,948	Jan. 3	318	88	21	55
Valve-gear	H. L. Berger	255,915	Apr. 4	197	51, 52	21	963
Valve-gear. Locomotive	L. Anderson	254,508	Mar. 7	172	42, 43	21	640
Valve-gear. Steam-engine	R. W. Aitken and D. Farquhar	257,994	May 16	1047	291	21	1462
Valve-gear. Steam-engine	E. Dugar	258,851	Jan. 24	1170	322	21	217
Valve-gear. Steam-engine	D. Joy	258,294	Jan. 10	655	{184 / 185}	21	119
Valve-gear. Steam-engine	J. O'Donnell	253,417	Feb. 7	373	79	21	382
Valve. Globe	A. P. Broomell	260,080	June 27	1439	389	21	1969
Valve. Globe	J. Christ	259,019	May 16	1078	300	21	1469
Valve. Globe	F. Lunkenheimer. (Reissue)	10,010	Jan. 17	1165	326	21	200
Valve indicator. Check	E. G. Felthousen	258,396	May 23	1544	429	21	1580
Valve. Locomotive throttle	S. J. Hayes, H. Schlacks, and G. F. Starkweather	254,873	Mar. 14	304	140	21	725
Valve mechanism	D. S. Keith	258,438	May 23	1566	450	21	1588
Valve-motion	W. C. Pennock	259,909	June 20	1899	346	21	1938
Valve-operating mechanism	L. C. Lagomyr	258,683	Jan. 24	1309	336	21	994
Valve. Piston	W. Foley	258,449	Jan. 17	943	261	21	173
Valve. Piston	W. Foley	258,450	Jan. 17	944	261	21	173
Valve. Pop safety	W. E. Pearson	253,668	Feb. 14	502	130	21	446
Valve. Relief	S. E. Kneeland	251,897	Jan. 3	283	78	21	47
Valve rod and stem for steam-engines	W. Dawson	257,477	May 9	512	145	21	1381
Valve. Safety	W. Duchemin	259,169	June 6	308	79	21	1748
Valve. Safety	J. R. Mitchell	258,598	May 30	1780	542	21	1689
Valve. Safety	A. D. Puffer	254,398	Feb. 28	1469	382	21	613
Valve-seat. Steam-engine	A. Blood	258,612	Jan. 10	618	154	21	79
Valve. Slide	W. S. Hughes	254,233	Feb. 28	1261	326	21	605
Valve. Steam	C. S. Detre	259,897	June 20	1891	{287 / 288}	21	1976

Vapor-burner	J. F. Daniels	256,633	May 30	1635	517	21	1639
Vapor-burner	Z. Davis	254,023	Mar. 7	214	55	21	675
Vapor-burner	Z. Davis	258,365	May 23	1530	434	21	1578
Vapor-burner	E. O. Garland	251,709	Jan. 3	27	8	21	7
Vapor-burner	M. Mahony	252,584	Jan. 17	1094	305	21	198
Vapor-burner	P. Schneider and H. Trenkamp	251,738	Jan. 3	61	17	21	13
Vapor-burner	F. W. Swetman	252,631	Jan. 24	1147	322	21	213
Vapor-burner	J. Whittingham and F. A. Lyman	255,553	Mar. 28	1398	378	21	898
Vapor-burner	T. T. Woodward	254,185	Feb. 28	1234	341	21	578
Vapor-burner. Self-generating	W. P. Patton	254,564	Mar. 7	141	35	21	662
Vapor from liquid hydrocarbons. Apparatus for generating	H. F. Hayden	254,871	Mar. 14	523	140	21	735
Vapor-retort burner	H. H. Sheldon	254,711	Mar. 7	318	84	21	692
Vase for cultivating strawberry and other plants	J. J. Johnston	253,715	Feb. 14	640	182	21	465
Vase for flowers. Monumental	J. J. Johnston	253,611	Feb. 14	512	{146 147}	21	444
Vase for window-gardening. Flower-	J. J. Johnston	253,716	Feb. 14	641	182	21	465
Vat: *See* Cheese-vat. Dairy-vat.							
Vault. Burial	J. F. Winchell	258,889	May 30	2106	504	21	1687
Vault-cover or grating. Illuminating	T. Hyatt	257,714	May 9	725	209	21	1418
Vault for coffins. Safety	B. G. Devoe	255,149	Mar. 21	853	239	21	896
Vault for underground conduits	W. B. Murray	257,743	May 9	751	209	21	1420
Vegetable and fruit evaporator. Steam	S. W. Lowell	258,526	May 23	1710	483	21	1609
Vegetable-cutter	G. H. Beckmire	259,713	Jan. 24	1235	346	21	229
Vegetable-cutter	C. Raible	256,389	Apr. 11	788	216	21	1090
Vegetable-cutter. Rotary	D. Strasser	257,259	May 2	198	36	21	1303
Vegetable-cutting machine	M. C. Morts	252,128	Jan. 10	546	153	21	101
Vegetable-slicing machine	J. W. Anderson	252,595	Jan. 24	1110	311	21	207
Vehicle	J. E. Heller	254,873	Mar. 14	527	141	21	735
Vehicle	G. M. F. Molesworth	253,065	Jan. 31	1723	{475 476}	21	315
Vehicle-body support	C. Comstock	256,880	Apr. 25	1395	374	21	1204
Vehicle-bolster	D. Shelton	255,736	Mar. 28	1639	441	21	940
Vehicle-brake	W. Claypool	258,713	May 30	1939	548	21	1657
Vehicle-brake	W. T. Johnson	257,337	May 2	239	65	21	1322
Vehicle-brake	B. R. Welch	258,514	May 23	1680	475	21	1604
Vehicle-buffer. Hydraulic	J. B. G. A. Canet	254,917	Mar. 14	591	159	21	747
Vehicle-cushion	K. W. Holmes	258,756	May 30	1966	561	21	1665
Vehicle-dash attachment	M. P. Ford	259,378	June 13	627	166	21	1810
Vehicle dash-board	L. E. McKinnon	258,456	May 23	1616	457	21	1592
Vehicle-dash frames. Clamp for holding	F. C. Ayer	259,351	June 13	590	156	21	1803
Vehicle. Passenger	J. T. Gurney	260,293	June 27	1789	485	21	2018
Vehicle-reach	C. K. Robinson	257,073	Apr. 25	1618	453	21	1256
Vehicle-reach	J. Le Roy	256,009	Apr. 4	391	84	21	1004
Vehicle running-gear	M. Barry	260,151	June 27	1615	436	21	1991
Vehicle running-gear	A. J. Beach	254,104	Feb. 28	1132	317	21	563
Vehicle running-gear	H. A. Logan and F. R. Wright	252,886	Jan. 31	1464	410	21	273
Vehicle running-gear	H. G. Morgan	254,238	Apr. 11	639	171	21	1002
Vehicle running-gear	K. C. Parvin	260,047	June 27	1485	400	21	1971
Vehicle-seat	F. A. Comstock	254,115	Feb. 28	1147	320	21	565
Vehicle-seat	O. Vanorman	254,412	Feb. 28	1483	408	21	622
Vehicle-seat lock	G. L. Crandal	258,997	June 6	154	42	21	1781
Vehicle shifting-rail	J. A. Nisonger	258,464	May 23	1603	459	21	1594
Vehicle shifting seat	J. W. Hewitt	256,683	Apr. 18	1166	{397 398}	21	1168
Vehicle shifting-seat	J. C. Theakston	253,238	Feb. 7	68	21	21	358
Vehicle. Side-bar	C. E. Lee	254,664	Mar. 7	265	70	21	683
Vehicle. Side-bar	P. Lugenbell	259,899	June 20	1961	537	21	1927
Vehicle. Side-bar	A. F. Shuler	259,595	June 13	893	238	21	1858
Vehicle-spring	A. A. Abbott	255,403	Mar. 28	1291	367	21	889
Vehicle-spring	J. H. and C. S. Baldwin	256,969	Apr. 11	670	181	21	1069
Vehicle-spring	C. C. and J. A. Bishop	252,173	Jan. 10	603	160	21	110
Vehicle-spring	C. C. and J. A. Bishop	259,797	June 20	1167	{311 312}	21	1911
Vehicle-spring	J. M. Bromley	259,663	June 20	990	264	21	1892
Vehicle-spring	J. M. Bromley	259,664	June 20	990	264	21	1892
Vehicle-spring	G. G. Buckland	256,984	Apr. 11	683	186	21	1072
Vehicle-spring	J. K. Chew	251,764	Jan. 3	95	27	21	19
Vehicle-spring	A. Gummer	253,901	Feb. 7	31	10	21	358
Vehicle-spring	L. A. Melburn	257,040	Apr. 25	1577	443	21	1248
Vehicle-spring	R. Mulholland	254,231	Feb. 28	1279	355	21	588
Vehicle-spring	J. S. Munn	259,648	June 13	966	257	21	1870
Vehicle-spring	N. Nilson	252,946	Jan. 10	604	194	21	194
Vehicle-spring	J. Priest	256,161	Apr. 11	515	141	21	1043
Vehicle-spring	D. A. Roe	257,267	May 2	267	68	21	1333
Vehicle-spring	W. D. Rumsey	255,461	Mar. 28	1391	347	21	860
Vehicle-spring	C. L. Thomas	258,923	May 30	2058	531	21	1678
Vehicle-spring	H. Timken	255,211	Mar. 21	973	260	21	839
Vehicle-spring	J. W. Wetmore	252,895	Jan. 24	1366	367	21	253

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Vehicle-spring	W. Weiceski	255,903	Apr. 4	187	68	21	991
Vehicle-spring	M. Woodhull	255,904	Apr. 4	188	69	21	991
Vehicle-spring-board	G. E. Norris. (Reissue)	9,906	Jan. 3	389	106	21	69
Vehicle-spring gear	C. P. Sykes	256,151	May 16	1236	348	21	1518
Vehicle-step	A. K. Ovrum	255,327	Mar. 21	1122	308	21	846
Vehicle-top joint	H. Reutchler	253,313	Feb. 7	151	43	21	378
Vehicle-top prop	W. Lepper	255,590	Mar. 28	1363	367	21	888
Vehicle. Two-wheeled	O. Hebert	253,042	Jan. 31	1659	459	21	306
Vehicle. Two-wheeled	P. Herdic	259,310	June 13	543	{142 143}	21	1795
Vehicle. Two-wheeled	R. Ross	257,076	Apr. 25	1691	484	21	1226
Vehicle. Two-wheeled	S. G. Thompson	257,254	May 2	198	36	21	1303
Vehicle. Two-wheeled	P. B. Cunningham	256,434	Jan. 17	995	255	21	169
Vehicle turning-gear	C. W. Ball and T. Davis. (Reissue)	9,904	Jan. 3	383	105	21	68
Vehicle-wheel	C. W. Ball and T. Davis. (Reissue)	9,905	Jan. 3	384	106	21	68
Vehicle-wheel	P. Lincoln	254,145	Feb. 28	1161	330	21	571
Vehicle-wheel	W. Nehring	257,744	May 9	756	220	21	1429
Vehicle-wheel	J. Pearce	259,718	June 20	1951	522	21	1922
Vehicle-wheel	S. S. Rembert	256,474	May 23	1626	466	21	1596
Vehicle-wheel	J. A. Schuler	256,618	May 30	1997	510	21	1634
Vehicle-wheel	S. Whitehall and W. Newlin	256,634	May 30	2071	564	21	1689
Vehicle-wheel	J. Ahlert	256,207	May 23	1594	372	21	1541
Velocipede	W. C. Beckwith	254,670	Apr. 25	1269	369	21	1215
Velocipede	J. O. Brown	256,118	Apr. 11	463	125	21	1034
Velocipede	E. Edwards	256,903	Apr. 11	706	198	21	1076
Velocipede	W. W. Giles	259,465	Jan. 17	946	{362 363 369}	21	173
Velocipede	W. H. Hull and J. W. O'Rear	259,853	June 20	1930	{330 331}	21	1902
Velocipede	J. M. Lowrey	258,447	May 23	1605	454	21	1590
Velocipede	P. McCombs	259,411	June 13	667	{176 177}	21	1618
Velocipede	T. McGregor	253,739	Feb. 14	670	192	21	470
Velocipede	A. H. Overman	257,512	May 9	455	128	21	1366
Velocipede	E. O. and J. E. Richard	258,389	Jan. 17	792	220	21	147
Velocipede	J. Richter	259,212	June 6	410	109	21	1765
Velocipede	C. Shelburne	259,288	June 6	461	112	21	1767
Velocipede	O. Umsicker	257,415	May 2	328	82	21	1329
Velocipede	F. White	259,444	June 13	708	188	21	1826
Velocipede	G. Wiard	254,668	Feb. 21	1105	309	21	551
Velocipede-pedal	J. S. Murray	260,114	June 27	1569	433	21	1964
Velocipede. Railway	G. A. Mosher	256,569	May 30	1782	503	21	1632
Velocipede-sleigh	J. B. Bray	256,634	Apr. 18	1103	310	21	1137
Velocipedes. Differential gear for	W. H. J. Grout	254,630	Mar. 7	233	61	21	672
Veneer. Compressed	H. E. Moore	254,834	Mar. 14	499		21	726
Veneer. Ornamental composite	N. C. Newell	252,945	Jan. 10	604	193	21	194
Vent. Automatic	F. Messmer	253,306	Feb. 7	143	41	21	370
Vent for beer-kegs. Air	J. P. Gruber	259,692	June 20	1911	970	21	1885
Vent for casks	R. Gornall	257,078	May 9	692	183	21	1411
Vent for vessels containing liquids. Air	G. Janeway	256,697	Apr. 18	1183	328	21	1179
Ventilating and purifying sewers. Apparatus for	J. Stratford	259,729	June 20	1984	559	21	1907
Ventilating apparatus	S. W. Hudson	255,698	Mar. 28	1492	{400 401}	21	916
Ventilating attachment to hearths	J. E. Howard	260,199	June 27	1678	454	21	2000
Ventilating grain in bulk	J. M. Fennerty	260,011	June 27	1441	389	21	1964
Ventilating sewers and traps	J. G. Trenear	256,548	Jan. 17	1057	283	21	191
Ventilation	J. Comstock and T. E. Jefferson	259,631	June 13	941	{251 252 253}	21	1886
Ventilator: *See* Air-injecting ventilator. Building-ventilator. Car-ventilator. Ship-ventilator. Window-ventilator.							
Ventilator	G. Fenn	257,484	May 9	423	117	21	1363
Ventilator	J. M. Fennerty	260,012	June 27	1442	389	21	1965
Ventilator	W. E. Moore	254,389	Feb. 28	1423	391	21	619
Ventilator	J. G. Pennycuick	254,894	Mar. 14	549	147	21	730
Ventilator	L. T. Bew	256,943	Apr. 25	1498	420	21	1234
Ventilator for grain, fruit, &c	J. Rose	259,466	June 13	736	196	21	1831
Vessel-fender	R. A. Messervey	257,389	May 2	289	72	21	1288
Vessel-hull	T. Nordenfelt	257,694	May 9	565	{163 164}	21	1389
Vessel. Submarine	J. Scott and J. H. Riddel	253,112	Jan. 31	1733	466	21	320
Vessels. Anchor-well for	M. J. Walsh	254,740	Mar. 7	350	93	21	698
Vessels. Apparatus for stowing cargoes in	M. Maher	256,227	May 23	1382	365	21	1549
Vessels. Apparatus for unloading	W. Cappin	255,589	Mar. 28	1461	393	21	910
Vessels. Construction of	T. W. Phinney	258,893	May 30	2025	575	21	1672
Vessels. Construction of	E. H. Farrar	254,630	Mar. 7	223	58	21	676
Vessels. Device for securing grain, guano, coal, &c., from shifting in							
Vessels with coal shot from. Machinery for loading	W. Dunn and A. Beckert	260,007	June 27	1437	388	21	1963
Veterinary-table	J. L. Sneesevelt	258,942	June 6	451	119	21	1773
Violin	N. B. Dennys	252,744	Jan. 24	1370	357	21	224
Violin shoulder-rest	F. L. Becker	253,923	Jan. 31	1511	420	21	320
Vise	J. A. Blake	258,909	June 6	134	38	21	1710
Vise	C. L. Butler	253,561	Feb. 14	489	136	21	439
Vise. Bench	J. L. Parker	253,736	Feb. 14	691	198	21	475
Vise. Bench	J. Thomson	255,709	Mar. 28	1589	464	21	898
Vise. Bench	J. Thomson	259,603	June 13	905	241	21	1860
Vises. Bevel-jaw for	H. D. West	256,407	Jan. 17	886	468	21	163
Vises. Milling attachment for	E. E. Schermerhorn	254,704	Mar. 7	211	60	21	691
Visual indicator. Electrical	C. H. Pond	258,897	Jan. 31	1477	{413 414}	21	274
Voltaic battery	A. F. W. Parts	258,619	Jan. 24	1133	318	21	211

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume		Official Gazette.	
				Spec.	Dr's.	Vol.	Page.
Vulcanizing heaters, &c. Fluid-pressure regulating and indicating apparatus for	J. H. Gartrell	253,699	Feb. 14	606	178 / 173	21	459
Wagon-bodies. Device for raising and lowering	W. F. Witherington	258,187	May 16	1276	361	21	1598
Wagon-body	C. Comstock	260,268	June 27	1777	481	21	2016
Wagon-body	I. E. Phelps and W. F. Siefers	259,513	Jan. 17	1016	283	21	185
Wagon-body corner-iron	C. Comstock. (Reissue)	10,111	May 9	858	239	21	1441
Wagon-bolster	D. B. Turnbull	260,127	June 27	1509	431	21	1969
Wagon-bolster spring	J. W. Wetmore	252,894	Jan. 24	1385	386	21	253
Wagon-brake	J. D. Bratton and H. H. Good	259,408	June 13	741	196	21	1832
Wagon-brake	J. C. Kimes	253,613	Feb. 14	513	147	21	444
Wagon-brake	C. J. Le Roy and J. W. Henson	258,445	May 23	1663	454	21	1590
Wagon-brake	J. Massey	257,733	May 9	744	206	21	1419
Wagon-brake	W. B. Padgett and W. J. Brock	258,505	Jan. 17	1009	281	21	183
Wagon-brake	C. F. Quast	258,253	May 23	1379	380	21	1551
Wagon-brake	R. E. Zellers	253,906	Feb. 21	863	249	21	514
Wagon-brake. Automatic	E. I. Burton	255,140	Mar. 21	678	236	21	804
Wagon-brake lever	J. L. Barker and W. D. Slauson	253,668	Feb. 14	575	162	21	454
Wagon-brake lever	G. L. Slater	254,781	Mar. 7	401	107	21	706
Wagon. Buckboard	F. A. Hill	258,063	May 16	1137	316	21	1497
Wagon. Buckboard	I. Joubert and S. W. Yattaw	254,339	Feb. 28	1363	384	21	997
Wagon. Cotton-picker's	C. P. Collins	253,960	Feb. 21	961	273	21	529
Wagon. Dumping	H. S. Bernhart and I. R. Ritter	258,357	May 23	1497	426	21	1572
Wagon. Dumping	J. Mills	259,790	May 30	2094	571	21	1671
Wagon. Dumping	D. S. Watson	257,906	May 16	946	263	21	1465
Wagon. Dumping	L. Winslow	260,269	June 27	1757	475	21	2013
Wagon. Dumping	J. D. Dennis	259,673	June 20	999	267	21	1883
Wagon handle and seat support	W. M. White	253,650	Feb. 14	554	158	21	451
Wagon. Hay	W. G. Harper	259,139	June 6	327	87	21	1751
Wagon-hound	J. Clark	255,490	Mar. 28	1397	358	21	886
Wagon-jack	J. V. Phillips	258,469	May 23	1638	460	21	1595
Wagon-jack	L. B. Hoit	251,882	Jan. 3	245	68	21	44
Wagon or lifting jack	E. Clark	259,187	Jan. 10	615	173	21	119
Wagon-platform gear	J. P. Johnson	254,919	Feb. 28	1262	350	21	565
Wagon platform-spring	T. C. Thompson	259,731	June 20	1067	289	21	1890
Wagon-reach coupling	D. B. Turnbull	260,126	June 27	1600	431	21	1969
Wagon rub-iron	A. Barnes	251,687	Jan. 3	4	1	21	3
Wagon running-gear	I. E. Bennett	258,545	May 30	1727	488	21	1690
Wagon running-gear	S. Bowers	252,994	Jan. 31	1602	444	21	296
Wagon-seat	D. H. Harris	253,376	Feb. 7	223	64	21	363
Wagon-seat corner-iron	E. H. Booth	256,962	Apr. 25	1497	420	21	1234
Wagon-seat lock	H. M. Jacobs	258,303	May 23	1438	408	21	1562
Wagon-seat support	N. Botsford	251,994	Jan. 3	379	102	21	65
Wagon-spring	G. A. Elliott	252,443	Jan. 17	936	250	21	171
Wagon. Spring	J. W. Harrison	256,564	Apr. 18	1023	288	21	1144
Wagon-spring	S. G. Hill	252,025	Jan. 10	440	120	21	83
Wagon-spring	W. V. Kish	258,437	May 23	1501	451	21	1589
Wagon-spring	S. E. Oviatt	260,313	June 27	1813	492	21	2032
Wagon spring-seat	L. A. Bringier	252,996	Jan. 31	1603	444	21	296
Wagon tail-board	H. R. Robbins	256,773	Apr. 11	789	217	21	1091
Wagons. Corn-husking platform for	W. Hyre	252,381	Jan. 17	857	237	21	158
Walking-stick	J. Draper	251,843	Jan. 3	200	56	21	36
Walking-stick and music-stand. Combined	W. H. Rushforth	257,960	May 16	1098	306	21	1480
Wall-covering	M. B. Church	259,493	June 13	774	.....	21	1837
Wall-paper. Apparatus for drying	H. Hilbers	257,703	May 9	711	197	21	1413
Wall-paper-hanging device	W. Geist	258,406	May 23	1555	441	21	1582
Wall-paper-trimming machine	R. Steel	254,443	Feb. 28	1518	415	21	629
Wall. Plastered	A. H. Becker	256,456	Apr. 18	902	252	21	1124
Wall. Plastered	A. H. Becker	257,840	May 16	864	242	21	1452
Walls and ceilings of buildings. Material for the decoration of the interior	F. Beck	260,152	June 27	1616	.....	21	1991
Walls and ceilings of houses. Material for the decoration of the interior	F. Beck	259,462	June 13	798	.....	21	1829
Walls, floors, &c. Moisture-proof coating and covering for	R. Von Petersen	258,890	May 30	2066	.....	21	1679
Wardrobe-hook	W. G. Foster	253,918	Feb. 21	902	253	21	517
Wardrobe-hook	R. Hayden	252,940	Jan. 31	1529	427	21	284
Wardrobe-hook	F. Taylor	257,533	May 9	678	133	21	1373
Warp-threads. Machine for drawing in	L. P. Sherman, R. H. Ingersoll, and G. Moore.	255,038	Mar. 14	746	201 / 202 / 203	21	775
Warper	T. C. Entwistle	256,305	Apr. 11	585	160	21	1055
Warping and beaming machines. Drop-wire for	T. C. Entwistle	257,131	Apr. 25	1690	473	21	1968
Warping or beaming machines, &c. Expansion comb or reed for	T. C. Entwistle	252,089	Jan. 10	504	140	21	94
Wash-board	P. T. Gates	251,710	Jan. 3	28	8	21	7
Wash-board	A. W. Geisel	256,405	May 23	1554	441	21	1588
Wash-board	J. Myers	256,915	Apr. 25	1435	403	21	1223
Wash-board	J. H. Nellis	260,222	June 27	1764	461	21	2004
Wash-board	C. H. Williams	255,555	Mar. 28	1401	378	21	840
Wash-board plate. Metallic	M. H. Farnsworth	258,396	May 23	1542	438	21	1580
Wash-board protector	M. H. Farnsworth	258,904	June 6	44	11	21	1702
Wash-boiler	T. F. Timby	256,766	Apr. 18	1254	353	21	1144
Wash-boiler fountain	E. Pittet	256,731	Apr. 18	1220	342	21	1178
Wash-bowl	L. H. McCormick	256,235	Apr. 11	694	169 / 170	21	1061
Wash bowl and stand	J. B. Atwater	259,074	June 6	254	67	21	1737
Washer: See Hemp-washer. Ore-washer. Root and vegetable washer. Slate-washer. Spring-washer. Tumbler-washer. Window-washer. Wool-washer.							
Washing-machine	K. Anunsen	257,987	May 9	144	40	21	1306
Washing-machine	J. H. Atwater	255,562	Mar. 28	1408	380	21	901

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr's.	Vol.	Page.
Washing-machine	R. G. Baldwin	254,568	Mar. 7	174	43	21	663
Washing-machine	E. R. Barnes	257,830	May 16	883	242	21	1451
Washing-machine	A. H. Bell and W. L. Hess	256,113	Apr. 11	657	194	21	1033
Washing-machine	A. W. Burke	257,551	May 9	805	140 / 141	21	1276
Washing-machine	B. F. Cekely	255,598	Mar. 28	1400	382	21	910
Washing-machine	M. C. Cummings	253,568	Feb. 14	427	128	21	449
Washing-machine	J. G. Dinkelbaker	255,947	Apr. 4	944	253	21	909
Washing-machine	W. F. Durall	256,633	May 16	1094	294	21	1498
Washing-machine	W. G. Flanders	260,636	June 13	1833	514	21	1988
Washing-machine	J. Fox	254,926	Feb. 28	1459	398	21	988
Washing-machine	B. F. Fuchs	258,741	May 30	1999	538	21	1688
Washing-machine	G. W. Glick	256,469	May 23	1559	449	21	1568
Washing-machine	J. W. Kennon, Sr	258,786	May 30	1999	564	21	1697
Washing-machine	M. C. Malone	256,019	Apr. 4	331	98	21	1085
Washing-machine	T. J. Meroney	258,491	Jan. 17	998	276 / 277	21	181
Washing-machine	W. Meyer	258,493	Jan. 17	997	277	21	181
Washing-machine	I. Munson	260,630	June 6	206	58	21	1730
Washing-machine	N. W. Murphy	255,446	Mar. 28	1270	343	21	877
Washing-machine	J. Robinson	260,851	June 6	227	61	21	1732
Washing-machine	C. T. Stadbelt	255,340	Mar. 21	1139	306	21	849
Washing-machine	H. A. Shaw	253,433	Feb. 7	221	63	21	305
Washing-machine	R. P. Smith	257,774	May 9	784	210	21	1427
Washing-machine	G. M. and A. Strain	259,240	June 6	449	118	21	1773
Washing-machine	V. Van Denburgh	255,216	Mar. 21	961	260	21	821
Washing-machine	E. J. Whitlow	255,743	Mar. 28	1636	444	21	942
Washing-machine	O. W. Barnard	252,416	Jan. 17	901	239	21	165
Washing-machine gear	A. M. Dolph	255,498	Mar. 28	1342	334	21	872
Washing-machine reversing mechanism	P. N. Burke	252,974	Jan. 10	488	134	21	91
Wash-stand and fixtures. Stationary	E. A. Tuttle	257,906	May 16	944	263	21	1465
Waste-pipe trap	A. Heberle	252,941	Jan. 31	1529	427	21	284
Watch	J. Bachner	254,901	Mar. 14	572	154	21	744
Watch. Alarm	A. Cerdin	256,521	Apr. 25	1325	374	21	1204
Watch canopa-pinion	C. W. Harman	254,646	Mar. 7	347	93	21	659
Watch-case	F. Reinhert	253,355	Feb. 7	203	58	21	309
Watch-case centers. Device for making	G. Speckhart	253,440	Feb. 7	203	58	21	307
Watch-case. Rubber	C. Schwitter	257,083	Apr. 25	1038	456	21	1257
Watch-cases. Making	W. P. Dolleff	260,088	June 27	1734	472	21	1978
Watch-chain charm	W. W. Dodge	258,783	May 30	1048	550	21	1656
Watch-charm	A. L. G. Buys	252,645	Jan. 24	1165	307	21	216
Watch-click spring	J. Laurent	259,178	June 6	275	99	21	1709
Watch-covers. Machine for forming swage on	N. Clark	254,640	Apr. 18	1109	312	21	1158
Watch-crystals. Case or cabinet for the display of	A. Ilieberle	256,644	May 30	1049	221	21	1642
Watch-escapement	J. A. Marin	254,355	Apr. 11	769	211	21	1067
Watch-gear. Machinery for beveling	W. H. Lamb	257,736	May 9	734	204	21	1417
Watch-maker's combination-tool	G. W. Johnson	252,322	Jan. 10	454	124	21	119
Watch-maker's tool	E. C. Fitch	259,517	June 13	804	213	21	1842
Watch pendant	R. Oliver	257,511	May 9	455	126	21	1396
Watch-regulator	S. F. Stover	252,008	Jan. 10	473	130	21	89
Watch staff and jewel protector	C. W. Groscbe	258,761	Jan. 24	1280	363	21	237
Watch. Stem-winding	C. H. Audemars	253,336	Feb. 7	184	53	21	277
Watch. Stop	J. H. Gerry	253,989	Feb. 21	1001	289	21	533
Watch-train plate	W. E. Huguenin	256,218	Apr. 11	603	164	21	1057
Watches. Repeating movement for	G. G. Wefts	253,962	Feb. 21	960	266	21	556
Watchman's electric register	D. B. James	257,166	May 2	27	9	21	1285
Water and air wheel	D. M. Lamb	256,106	Apr. 4	432	.....	21	1083
Water and moth repellent. Compound for treating goods, &c., to render them	D. M. Lamb	256,107	Apr. 4	434	.....	21	1083
Water and moth repellent. Compound for treating goods, &c., to render them	E. H. Ashcroft	258,872	June 6	3	1	21	1695
Water and steam separator	A. G. Alexander	254,068	Feb. 21	1110	310	21	552
Water-closet	H. W. Atwater	251,813	Jan. 3	182	44	21	39
Water-closet	A. F. Bleech	256,541	Apr. 18	998	281	21	1140
Water-closet	D. T. Bostel	253,151	Jan. 31	1801	499	21	588
Water-closet	D. T. Bostel	258,152	Jan. 31	1803	499	21	588
Water-closet	J. E. Doyle	255,465	Mar. 28	1321	356	21	885
Water-closet	J. Budde	253,677	Feb. 14	590	167	21	459
Water-closet	W. Bunting, Jr	255,933	Apr. 4	924	59	21	908
Water-closet	J. C. Daggett	251,909	Jan. 3	363	103	21	66
Water-closet	W. H. Daniell	251,767	Jan. 3	99	28	21	19
Water-closet	T. Hansen	255,975	Apr. 4	953	73	21	907
Water-closet	D. S. Keith	256,433	May 23	1567	450	21	1708
Water-closet	S. Peters and W. Denald	260,238	June 27	1715	465	21	2004
Water-closet	R. Resch	254,560	Apr. 18	956	267 / 268 / 463 / 464 / 345 / 346	21	1139
Water-closet	W. M. Sack	253,109	Jan. 31	1746		21	319
Water-closet	R. D. O. Smith	258,144	May 16	1295		21	1516
Water-closet	W. H. Daniell	256,549	Apr. 18	1007	284	21	1141
Water-closet and garbage-sink	W. S. Carr	252,734	Jan. 24	1257	343	21	238
Water-closet-cistern valve	W. S. Carr	252,735	Jan. 24	1258	354	21	238
Water-closet-cistern valve	H. S. Lord and R. E. Day	254,668	Mar. 7	389	71	21	664
Water-closet drip-tray	W. Scott	255,668	Mar. 28	1532	418	21	977
Water-closet valve	J. P. Hyde	259,905	June 20	1468	370	21	1939
Water-closets and urinals. Apparatus for flushing	H. Dickinson	255,946	Apr. 4	943	63	21	909
Water-elevator	F. A. Grunow	259,851	June 20	1826	369	21	1922
Water-elevator	H. P. Kauffer	258,233	May 23	1357	363	21	1546
Water-engine	J. B. Redmond	255,096	Mar. 14	812	217	21	785
Water from condensers. Apparatus for purifying the	J. Cook	252,648	Jan. 24	1197	308	21	217
Water-gage	T. Amphlett	256,264	Apr. 11	685	189	21	1068
Water gage and alarm	A. D. Fuller	254,309	Feb. 28	1431	393	21	613
Water-gage for closed vessels. Revolving							

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Water heater and circulator	P. Smith	251,741	Jan. 3	65	18	21	13
Water-lifter. Automatic	A. G. Waterhouse	253,648	Feb. 14	551	158	21	450
Water-meter	P. Wells	254,744	Mar. 7	356	94, 95	21	699
Water meter and register. Piston	S. W. Hoag, Sr	255,389	Mar. 21	1069	267 268	21	837
Water-meter. Piston	J. A. Tilden	251,971	Jan. 3	344	93	21	59
Water-meter. Rotary	B. Fitts	256,197	May 16	1267	366	21	1598
Water-meter. Rotary	E. C. Terry	256,469	Apr. 11	825	238	21	1097
Water-meter. Three-chambered float	J. Leede	257,028	Apr. 25	1564	439	21	1246
Water-meter with automatic governor	J. Leede	252,230	Jan. 10	661	186 187	21	199
Water-motor	G. A. Henderson	252,106	Jan. 10	521	144 145	21	97
Water-pipe valve	W. Kaiser	252,951	Jan. 31	1545	430	21	997
Water-pipes. Air-valve for	J. L. Dibble	257,853	May 16	877	246	21	1454
Water-proof and plastic composition	J. D. Cheever	254,462	Mar. 7	18	.....	21	649
Water-proof and plastic compound	J. D. Cheever	254,463	Mar. 7	19	.....	21	642
Water-proof and plastic compound	J. D. Cheever	254,465	Mar. 7	21	5	21	642
Water-proof cloth	E. B. Collins and L. P. Converse	256,360	May 23	1595	.....	21	1577
Water-proof composition	J. D. Cheever	254,461	Mar. 7	17	.....	21	641
Water-proof fabric	G. Streat	260,063	June 27	1502	.....	21	1973
Water-proof gum from flax. Producing	J. Boyd	256,277	May 23	1407	.....	21	1556
Waterproofing and preservative compound	J. E. Gillespie	253,369	Feb. 7	216	.....	21	383
Waterproofing compound	J. E. Gillespie	255,615	Mar. 28	1477	.....	21	913
Waterproofing material. Process of and apparatus for applying	R. M. Caffall	253,505	Feb. 14	398	110	21	426
Water repellent. Compound for treating goods to render them	D. M. Lamb	256,108	Apr. 4	436	.....	21	1023
Water-tower. Portable	W. H. Cogswell and T. H. Melvin	259,669	June 20	994	265 266	21	1869
Water-wheel	W. T. Christy and E. C. Sheridan	255,720	Mar. 28	1606	434	21	937
Water-wheel	R. N. Davidson	253,367	Feb. 7	104	31	21	364
Water-wheel	D. Donnelly	255,359	Mar. 21	1069	276	21	830
Water-wheel. Turbine	J. Humphrey	260,302	June 27	1676	454	21	2000
Water-wheel. Turbine	C. R. Tompkins	259,947	June 20	1536	360	21	1940
Watering animals	I. Welty	256,619	May 30	1619	513	21	1636
Watering stock. Apparatus for	D. Brigham	254,600	Mar. 7	198	47	21	670
Watering stock. Apparatus for	J. M. Eirich	256,036	May 16	1097	305	21	1492
Watering stock. Device for	F. Funk	259,843	June 20	1218	326	21	1920
Watering trough. Stock	S. H. Moore	259,414	June 13	679	178	21	1819
Weaner. Calf	J. C. Dupee	257,481	May 9	417	116	21	1302
Weaner. Calf	A. J. Taylor and M. A. Hamilton	257,253	May 2	127	36	21	1303
Weather-strip	W. Thompson	253,561	Feb. 14	456	130	21	435
Weather-strip and door-sill. Combined	J. Singer	258,486	May 23	1649	466	21	1598
Weather-strip and door-spring. Combined	A. Lathrop	258,063	May 16	1151	322	21	1502
Weaver's harness. Machine for making	J. H. Crowell	253,848	Feb. 21	814	231	21	503
Weaving the fiber of the stalk of the cotton-plant into fabrics	F. Wheaton	254,748	Mar. 7	362	.....	21	699
Wedge-driver	O. Moosberger	256,359	Apr. 11	775	213	21	1008
Weeds and beans. Implement for cutting	W. H. Clark	251,765	Jan. 3	96	27	21	19
Weighing and registering machine. Grain	W. H. Allen	255,832	Apr. 4	97	26	21	967
Weighing machine. Automatic grain	C. Wais	257,418	May 2	329	93	21	1340
Weighing-machine. Automatic liquid	E. Crawley	257,474	May 9	406	114	21	1360
Welding compound	E. S. Fraley	260,014	June 27	1444	.....	21	1965
Well baller. Oil	W. H. Birge	255,917	Apr. 4	204	54	21	984
Well-boring apparatus	F. Whelan	254,892	Mar. 14	561	150 151	21	741
Well. Cement-pipe	G. D. Pettingill	255,664	Mar. 28	1535	413	21	924
Well-curb and water-drawer	L. M. Doudna	255,606	Mar. 28	1467	394	21	911
Well-drilling machine	O. Rust	257,766	May 9	777	216	21	1425
Well-drilling machine	O. Rust	257,767	May 9	777	217	21	1425
Well-lining apparatus	A. W. Morgan	257,046	Apr. 25	1563	444	21	1250
Well-tubes. Device for raising and lowering	I. H. Palmer	259,581	June 13	879	234	21	1856
Well tubes. Implement for driving drive	M. Itin	259,878	Jan. 31	1455	407	21	971
Well. Tubular	R. E. Strait	255,092	Mar. 14	819	219	21	787
Wells. Device for treating the walls and tubing of oil	B. F. Averill	257,127	Apr. 25	1678	470	21	1906
Wells, &c. Portable drilling-machine for oil	R. M. Downie	251,841	Jan. 3	198	56	21	36
Wells. Temper-screw box for oil	J. D. Cameron	255,591	Mar. 28	1458	390	21	909
Wells. Temper-screw for drilling	O. A. Knox	254,876	Mar. 14	530	142	21	736
Welting or hemming fabrics	J. Bigelow	257,278	May 2	157	44	21	1309
Whalebone. Artificial	G. H. Phelps	251,731	Jan. 3	53	14	21	12
Wheat-drill	A. L. Reese	256,049	Apr. 4	360	99	21	1011
Wheat-feeder	F. J. Grow	254,957	Mar. 14	640	174	21	756
Wheat-heater	D. W. Marmon	257,139	Apr. 25	1701	476	21	1270
Wheat-heater	J. E. Welch	254,077	Feb. 21	1098	304	21	550
Wheel.							
See Band or fly wheel.	Plow-wheel.						
Car-wheel.	Polishing-wheel.						
Chain-wheel.	Power-wheel.						
Current-wheel.	Sprocket-wheel.						
Driving-wheel.	Toy musical wheel.						
Fifth-wheel.	Traction-wheel.						
Fish-wheel.	Vehicle-wheel.						
Game-wheel.	Water-wheel.						
Grinding or polishing wheel.	Water and air wheel.						
Paddle-wheel.	Wind-wheel.						
Wheel	J. F. Snyder and G. J. Blinzler	257,583	May 9	468	130	21	1371
Wheel	A. J. Taplin	253,337	Feb. 7	67	21	21	358
Wheel fender. Vehicle	M. Wheeler	259,619	June 13	925	247	21	1863
Wheel or nursery chair	C. O. Collignon	259,431	Jan. 17	922	254	21	168
Wheel scraper. Vehicle	F. C. Mercer	255,444	Mar. 28	1286	342	21	877
Wheelbarrow	A. D. Peck	255,602	Mar. 28	1532	413	21	923

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Wheelbarrow	G. M. Strumaker	256,303	May 23	1459	414	21	1565
Wheelbarrow and cultivator. Combined	W. W. Kelly	256,305	May 23	1441	409	21	1563
Whiffletree-coupling	H. A. Luttgens	257,171	May 2	21	11	21	1295
Whiffletree-coupling	J. Pendergast	256,354	Apr. 11	780	225	21	1009
Whiffletree-hook	T. W. De Tray	251,799	Jan. 3	169	39	21	39
Whiffletree-hook	F. Eggers	256,392	May 23	1336	406	21	1579
Whiffletree-hook	N. Hill	253,040	Jan. 31	1026	451	21	266
Whiffletree-hook	J. H. Hunt reas	256,856	May 30	2000	591	21	1884
Whiffletree-hook	H. M. Wilcox	256,849	May 30	1977	586	21	1881
Whiffletree-hook	O. Vesterman	255,705	Mar. 28	1597	457	21	933
Whiffletree-iron	J. H. Combs	259,509	June 13	783	227	21	1839
Whiffletree-plate	A. Scharff	257,078	Apr. 25	1682	454	21	1256
Whip	L. C. Seltner	256,061	Apr. 4	375	108	21	1013
Whip and cane. Combined	H. Bunch	258,789	Jan. 24	1264	338	21	231
Whip and rein holder. Combined	V. B. Barstow and S. H. Mallory	255,131	Mar. 21	884	252	21	808
Whip-cord	H. Mullen and J. Noble, Jr.	256,631	Apr. 4	341	91	21	1007
Whip-cord	F. Hopf	259,681	June 6	187	39	21	1727
Whip-holder	G. W. Eddy	253,190	Feb. 7	19	6	21	339
Whip-socket	J. A. Lakin	259,239	June 13	853	145	21	1787
Whip-stock loop-fastening	O. M. Scott	257,694	Apr. 25	1666	466	21	1257
Whips. Device for exhibiting or holding	C. M. Johnson	258,471	Jan. 17	972	270	21	176
Whisky. Rack for storing and aging	W. F. Heath	253,701	Feb. 14	602	175 176	21	402
Whistle blank. Steam	C. E. Baldwin	257,456	May 9	399	109	21	1256
Whistling return-ball	G. Beck	253,006	Feb. 14	376	104	21	454
Wick. Lamp	W. C. Seaton	254,390	Feb. 28	1456	399	21	617
Wick-trimmer	C. A. Kinney	257,021	Apr. 25	1559	437	21	1245
Wick-tube	G. A. Ellis	257,439	May 2	354	99	21	1344
Wicker or rattan chair	G. J. Dudley	257,436	May 2	353	99	21	1344
Willow-peeler	Z. B. Macomber	253,733	Feb. 14	603	189 190	21	480
Winch	J. W. Arthurs and J. C. Fick	258,980	Jan. 31	1436	401	21	997
Wind-engine	W. Casterline	257,210	May 2	70	21	21	1294
Wind-engine	G. Garside	259,680	June 20	1009	270	21	1895
Wind-engine	P. Goring	254,363	Feb. 28	1388	375	21	601
Wind-engine	H. N. Hill	260,086	June 27	1545	417	21	1990
Wind-engine	E. Howland	258,650	May 30	1667	523	21	1643
Wind-engine	F. McClintock	256,234	Apr. 11	698	189	21	1061
Wind-engine	F. McClintock	257,880	May 16	911	256	21	1460
Wind-engine	T. T. Miller	259,704	June 20	1033	278 280	21	1892
Wind-engine	F. W. Shellabarger	257,835	May 9	840	227	21	1439
Wind-engine	H. R. Stevens	259,466	May 23	1669	469	21	1660
Wind-engine	J. Stitcel	259,838	June 6	441	117	21	1770
Wind-engine	R. E. Strait	259,941	June 6	450	115	21	1778
Wind-engine	A. Thomson	258,912	Jan. 31	1467	417	21	976
Wind-motor	J. McLachlan	259,569	June 13	685	200	21	1853
Wind-power machine	M. Colomey	259,065	June 27	1589	411	21	1976
Wind-wheel	E. Buckley	255,126	Mar. 21	874	225	21	808
Wind-wheel	R. G. Kirkwood	254,865	Mar. 14	679	169	21	782
Wind-wheel	B. H. Klein	255,636	Mar. 28	1255	339	21	874
Wind-wheel machinery	A. G. Carman	259,899	June 13	516	135	21	1799
Winding and twisting machines. Stop-motion for	J. S. Utley	255,720	Mar. 28	1634	449	21	941
Winding silk. Machine for	J. E. Atwood	256,949	Apr. 25	1479	414	21	1230
Winding silk, &c. Machine for	J. E. and E. Atwood	257,269	May 2	167	41, 42	21	1307
Windlass	T. Mason	260,307	June 27	1806	490	21	2021
Windlass. Vertical	S. J. Miller and T. R. Ballard	259,571	June 13	898	229	21	1854
Windmill	J. N. Adams	253,651	Feb. 14	555	158	21	451
Windmill	G. H. Andrew	254,527	Mar. 7	98	25	21	655
Windmill	W. S. Baugh	251,698	Jan. 3	4	1, 2	21	4
Windmill	G. M. Beard	258,358	May 23	1491	424	21	1571
Windmill	C. C. Bomberger	254,264	Feb. 28	1318	364	21	594
Windmill	B. J. Bragdon	257,640	May 9	636	178	21	1400
Windmill	W. N. Bryan	259,476	June 13	750	188 189	21	1832
Windmill	B. Chamberlain	252,835	Jan. 24	1308	300	21	235
Windmill	S. P. Coan	257,392	May 2	173	49	21	1312
Windmill	J. E. and J. M. Galloway	259,123	June 6	312	82, 83	21	1748
Windmill	A. W. Jones and A. H. Smith	252,947	Jan. 31	1525	429	21	985
Windmill	S. U. King	257,496	May 9	636	121 122	21	1365
Windmill	C. Kunkel	259,557	June 13	851	225	21	1854
Windmill	L. D. Lowther	259,563	June 13	868	227	21	1866
Windmill	T. E. Martin	252,116	Jan. 10	529	149	21	99
Windmill	G. W. Miller	256,154	Apr. 11	705	199	21	1042
Windmill	E. M. Schrock	256,810	Apr. 18	1703	209	21	1194
Windmill	E. B. Smith	255,345	Mar. 21	1145	307	21	849
Windmill	S. D. Straw and A. J. Signor	254,485	Feb. 28	1476	403 404	21	621
Windmill	W. N. Trumble	258,886	May 30	2008	588	21	1879
Windmill	J. Warwick and W. C. Westaway	254,675	Feb. 21	1097	304	21	549
Windmill	H. J. Wolcott	256,189	May 16	1277	368	21	1585
Windmill attachment	A. J. Gary	259,538	June 13	614	215	21	1844
Windmill for pumping	L. B. Denton	253,016	Jan. 31	1026	454	21	269
Windmill. Horizontal	W. H. Ash	255,189	Mar. 21	891	231	21	801
Windmill-motor	B. Chamberlain	258,737	Jan. 24	1261	254	21	223
Windmill-regulator	J. Lamont and H. White	256,374	Apr. 11	745	204	21	1063
Windmill-regulator	J. H. Newell	256,468	May 23	1661	456	21	1909
Windmill-shafts. Mechanism for transmitting power from	A. S. Baker	256,616	Apr. 18	1699	304 305	21	1153
Window-cleaning chair and fire-escape. Combined	A. Dernitzer	256,654	Apr. 18	1188	316	21	1161
Window. Colored-glass	L. C. Tiffany	254,409	Feb. 28	1469	403	21	621
Window-frame	W. Sturm	254,666	Feb. 21	1099	302	21	548

Alphabetical list of inventions, January to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Window frame and sash	F. W. Hettinger	251,778	Jan. 3	112	32	21	21
Window frame and sash	M. W. Mahar	257,503	May 9	443	123	21	1366
Window-frame pocket	A. S. Bangs	257,637	May 9	625	175	21	1367
Window-glass fastener	T. Tanner	252,707	Jan. 24	1230	344	21	227
Window. Reversible	H. Becker	259,080	June 6	260	69	21	1730
Window-screen	H. C. Hart	254,965	Mar. 14	648	170	21	757
Window-screen	D. W. Hersey	253,047	Jan. 31	1665	461	21	306
Window-screen	S. Mead	254,561	Mar. 7	136	34	21	661
Window-screen	E. B. Walter and J. P. Voelker	253,137	Jan. 31	1781	494	21	365
Window-screen	E. L. Lloyd	257,348	May 2	947	70	21	1725
Window-screen. Adjustable	J. H. Bradford	258,551	May 30	1732	490	21	1691
Window-screen. Permanent	B. L. Goldsmith	258,410	May 23	1559	442	21	1583
Window-shade	H. B. S. Norman. (Reissue)	10,015	Jan. 24	1430	399	21	910
Window-shade	F. M. Tinkham	256,419	Apr. 11	298	230	21	1698
Window-shade exhibitor	H. H. Craig	258,289	May 23	1414	400	21	1557
Window-ventilator	G. A. Keene	258,996	June 6	69	18	21	1706
Window-washer	C. H. Salisbury	255,033	Mar. 14	739	199	21	773
Wire and clothes-line tightener	W. Hewitt	254,478	Mar. 7	39	10	21	645
Wire and collecting the waste hydrogen-gas. Apparatus for cleaning iron	A. C. Decker	254,539	Mar. 7	111	28	21	657
Wire. Barbed	J. Ayres and A. C. Decker	253,660	Feb. 14	570	161	21	453
Wire-barbing machine	J. J. Hathaway	254,767	Mar. 7	387	{102 / 103}	21	704
Wire-barbing machine	J. F. Gilpin and E. V. Clemens	250,528	June 13	815	215	21	1844
Wire-dasher	C. O. Thompson	252,816	Jan. 24	1377	.....	21	251
Wire. Drawing	L. Williams	256,779	Apr. 18	1269	358	21	1187
Wire-drawing apparatus	G. and E. Ashworth	252,413	Jan. 17	898	249	21	165
Wire for cards. Apparatus for hardening and tempering	E. H. Hill	255,785	Apr. 4	38	11	21	957
Wire-galvanizing apparatus	A. T. Morrow	259,194	June 6	390	103	21	1762
Wire gate. Flexible	H. Roberts	259,214	June 6	411	109	21	1766
Wire. Holding and transporting	J. A. Charnley	254,197	Feb. 28	1235	344	21	580
Wire. Machine for ornamenting	W. T. Glover and G. F. James	258,292	May 23	1423	{403 / 404}	21	1559
Wire, &c. Machinery for twisting	W. E. Rice	253,227	Feb. 7	58	18	21	356
Wire. Manufacture of zinc-coated	T. H. Dodge and C. G. Washburn	252,746	Jan. 24	1272	357	21	235
Wire. Manufacturing barbed	G. Pickhardt	259,969	June 20	1412	380	21	1953
Wire-netting	J. A. Charnley	253,194	Feb. 7	14	4	21	349
Wire. Ornamental	H. Channon	253,909	Feb. 21	886	250	21	515
Wire-rope-splicing bench	A. Collins	253,979	Feb. 21	989	273	21	529
Wire screen-work	W. T. Lemon	254,144	Feb. 28	1180	330	21	571
Wire-splicing tool	C. T. Christmas	252,185	Jan. 10	614	172	21	112
Wire-stretcher	G. S. Dean	259,671	June 20	998	267	21	1883
Wire-stretcher	S. P. Harbaugh	252,104	Jan. 10	518	144	21	96
Wire-stretcher	H. H. Hutchins	253,058	Jan. 31	1676	464	21	308
Wire-stretcher	J. Rohr	255,337	Mar. 21	1136	305	21	848
Wire-stretcher	C. H. Salisbury	255,032	Mar. 14	739	199	21	773
Wire-stretchers. Windlass for	R. Eastabrooks	258,634	May 30	1835	518	21	1739
Wire-stretching apparatus	G. Richardson	259,047	June 6	221	59, 60	21	1723
Wood and coal elevator	G. B. Allis	256,459	Apr. 18	998	251	21	1123
Wood and metal. Compound for preserving	L. D. Mott	251,918	Jan. 3	289	.....	21	50
Wood-bending machine	G. H. Preston	254,568	Mar. 7	148	37	21	663
Wood composition for staining	A. F., Jr., and J. P. Gloger	258,050	May 16	1114	.....	21	1495
Wood for floor-coverings, &c. Uniting	C. E. Rider	255,023	Mar. 14	725	195	21	771
Wood. Incasing knots or other defects in	B. Holmes	256,567	Apr. 18	1024	269	21	1144
Wood. Method of and machine for ornamenting rods of	O. Cleveland	254,535	Mar. 7	106	27	21	656
Wood. Preserving	J. P. Card	254,274	Feb. 28	1329	.....	21	596
Wood-preserving composition	J. C. Marshall	259,030	June 6	200	.....	21	1728
Wood pulp. Manufacture of	G. Werner	252,983	Jan. 31	1583	440	21	283
Wood-splitting machine	R. G. Brock	256,425	Apr. 11	849	235	21	1101
Wood-splitting-machine cutter	W. M. Hall	259,010	June 6	174	47	21	1724
Wood-splitting machine. Kindling	H. Midwood	257,986	May 16	1012	282	21	1477
Wood, &c., to fiber. Reducing	G. H. Pond	259,206	June 6	404	107	21	1764
Wood-turning machine	G. P. Loomis	251,907	Jan. 3	277	76	21	49
Wood-working factories. Dust-arrester for	A. Backus, Jr	257,271	May 2	150	42	21	1308
Wooden bowls. Machine for making	C. Neff	259,196	June 6	392	104	21	1763
Wooden pipes. Construction of	J. D. Seegrove and F. W. Lewis	256,060	Apr. 4	375	102	21	1013
Wool-combing machine	J. Austin	259,790	June 20	1139	309	21	1910
Wool from mixed fabrics. Recovering	C. and J. B. Lennig	259,025	June 6	192	.....	21	1787
Wool-washer	F. G. and A. C. Sargent	256,057	Apr. 4	370	101	21	1012
Wool-washing machine	J. Clough	251,833	Jan. 3	187	52	21	24
Wool-washing machine	F. G. and A. C. Sargent	258,399	May 23	1456	{413 / 414}	21	1565
Wool-washing machine	G. L. Witall	256,788	Apr. 18	1279	356	21	1187
Work-bench attachment	J. B. Richards	259,211	June 6	409	109	21	1765
Work-box	H. S. Dickson	258,790	May 30	1945	549	21	1658
Work-holder	G. R. Tyler	253,053	Mar. 14	773	207	21	778
Woven fabrics. Machine for turning and pressing	W. H. H. Tracy and G. E. Stillman	251,972	Jan. 3	346	93, 94	21	60
Wrench: *See* Adjustable wrench. Bung-bush wrench. Carriage-wrench. Chain-wrench. Monkey-wrench. Pipe-wrench. Ratchet-wrench. Screw-wrench. Socket-wrench.							
Wrench	W. H. Bielefeld and D. C. Hinkle	253,500	Feb. 14	394	108	21	425
Wrench	W. Bushey	259,363	June 13	611	{161 / 162}	21	1807
Wrench	M. E. Campfield	257,468	May 9	308	112	21	1328
Wrench	J. C. Gunn	255,853	Apr. 4	119	32	21	970
Wrench	M. H. McNair	255,182	Mar. 21	931	249	21	813
Wrench	W. O'Connell, Jr	253,069	Jan. 31	1728	478	21	316
Wrench	J. E. Preston	258,673	May 30	1891	534	21	1649
